Subject: Vote YES on S50G

Attention: This email originated from outside the County of Orange. Use caution when opening attachments or links.

Dear Chair and Members of the Orange County Board of Supervisors,

I am writing to respectfully request that the Board vote YES on S50G and authorize the addition of the County-owned portion of Aliso Creek to the vegetation-management pilot program already approved by the Board.

This is a relatively small section of Aliso Creek that remains under County ownership and maintenance responsibility. The City is simply asking for the ability to maintain this section using the same practices it already uses to successfully maintain the surrounding portions of the creek under its control.

Adding this section to the existing pilot would be a reasonable and limited next step. It would not require the County to adopt a new countywide policy or make a permanent change to its vegetation-management program. Rather, it would allow the County and City to evaluate an alternative maintenance approach, in a defined area and compare the results with existing County practices.

There is also a practical benefit to treating the creek as one connected system. Having one small County-owned section maintained differently from the surrounding City-maintained areas can create unnecessary inconsistency. Allowing the City to maintain this portion in the same manner as the rest of the creek would provide a more cohesive approach while giving the County valuable information about effectiveness, cost, labor requirements, vegetation control, and environmental outcomes.

Because a pilot program has already been approved, we believe Aliso Creek presents an excellent opportunity to expand the County's evaluation without making a large commitment. If the alternative approach works well, the County gains useful real-world data. If challenges arise, those can be identified and evaluated before considering any broader changes.

This is exactly what a pilot program should allow us to do: test practical alternatives on a manageable scale and gather real-world information.

We appreciate the Board's willingness to explore improved vegetation-management practices and respectfully ask that Aliso Creek be included in that effort.

Sincerely,
Maddy Sando

There is also a practical benefit to treating the creek as one connected system. Having one small County-owned section maintained differently from the surrounding City-maintained areas can create unnecessary inconsistency. Allowing the City to maintain this portion in the same manner as the rest of the creek would provide a more cohesive approach while giving the County valuable information about effectiveness, cost, labor requirements, vegetation control, and environmental outcomes. Because a pilot program has already been approved, we believe Aliso Creek presents an excellent opportunity to expand the County's evaluation without making a large commitment. If the alternative approach works well, the County gains useful real-world data. If challenges arise, those can be identified and evaluated before considering any broader changes. This is exactly what a pilot program should allow us to do: test practical alternatives on a manageable scale and gather real-world information. We appreciate the Board's willingness to explore improved vegetation-management practices and respectfully ask that Aliso Creek be included in that effort. Sincerely, Shaune Hand Irvine Creek Team Supporter

Subject: Agenda Item S50G — Support for a YES Vote (Aliso Creek)

Attention: This email originated from outside the County of Orange. Use caution when opening attachments or links.

Dear Chair and Members of the Orange County Board of Supervisors,

I am writing to respectfully request that the Board vote YES on S50G and authorize the addition of the County-owned portion of Aliso Creek to the vegetation-management pilot program already approved by the Board.

This is a relatively small section of Aliso Creek that remains under County ownership and maintenance responsibility. The City is simply asking for the ability to maintain this section using the same practices it already uses to successfully maintain the surrounding portions of the creek under its control.

Adding this section to the existing pilot would be a reasonable and limited next step. It would not require the County to adopt a new countywide policy or make a permanent change to its vegetation-management program. Rather, it would allow the County and City to evaluate an alternative maintenance approach, in a defined area and compare the results with existing County practices.

There is also a practical benefit to treating the creek as one connected system. Having one small County-owned section maintained differently from the surrounding City-maintained areas can create unnecessary inconsistency. Allowing the City to maintain this portion in the same manner as the rest of the creek would provide a more cohesive approach while giving the County valuable information about effectiveness, cost, labor requirements, vegetation control, and environmental outcomes.

Because a pilot program has already been approved, we believe Aliso Creek presents an excellent opportunity to expand the County's evaluation without making a large commitment. If the alternative approach works well, the County gains useful real-world data. If challenges arise, those can be identified and evaluated before considering any broader changes.

This is exactly what a pilot program should allow us to do: test practical alternatives on a manageable scale and gather real-world information.

We appreciate the Board's willingness to explore improved vegetation-management practices and respectfully ask that Aliso Creek be included in that effort.
