This Mitigation Monitoring Program has been developed to ensure that mitigation measures outlined in the Draft EIR 566 for Saddleback Meadows and related permits are implemented as required. The Mitigation Monitoring Program has been prepared in conformance with Section 21081.6 of the Public Resources Code and the County of Orange Mitigation Monitoring requirements. Section 21081.6 of the State Public Resources Code states:

Section 1: Section 21081.6 is added to the Public Resources Code, to read:

(a) When making the findings required by Paragraph (1) of subdivision (a) of Section 21081 or when adopting a mitigated negative declaration pursuant to paragraph (2) of subdivision (c) of Section 21080, the following requirements shall apply:

(1) The public agency shall adopt a reporting or monitoring program for the changes made to the project or conditions of project approval, adopted in order to mitigate or avoid significant effects on the environment. The reporting or monitoring program shall be designed to ensure compliance during project implementation. For those changes which have been required or incorporated into the project at the request of a responsible agency or a public agency having jurisdiction by law over natural resources affected by the project, that agency shall, if so requested by the lead agency or a responsible agency, prepare and submit a proposed reporting or monitoring program.

(2) The lead agency shall specify the location and custodian of the documents or other material which constitute the record of proceedings upon which it's decision is based.

(b) A public agency shall provide that measures to mitigate or avoid significant effects on the environment are fully enforceable through permit conditions, agreements, or other measures. Conditions of project approval may be set forth in referenced documents which address required mitigation measures or, in the case of the adoption of a plan, policy, regulation, or other public project, by incorporating the mitigation measures into the plan, policy, regulation, or project design

(c) Prior to the close of the public review period for a draft environment impact report or mitigated negative declaration, a responsible agency, or a public agency having jurisdiction over natural resources affected by the project, shall either submit to the lead agency complete and detailed performance objectives for mitigation measures which would address the significant effect on the environment identified by the responsible agency or agency having jurisdiction over natural resources affected by the project, or refer the lead agency to appropriate, readily available guidelines or reference documents. Any mitigation measures submitted to a lead agency by a

> responsible agency or an agency having jurisdiction over natural resources affected by the project shall be limited to measures which mitigate impacts to resources which are subject to the statutory authority of, and definitions applicable to, that agency. Compliance or noncompliance by a responsible agency or agency having jurisdiction over natural resources affected by a project with that requirement shall not limit the authority of the responsible agency or agency having jurisdiction over natural resources, affected by a project, or the authority of the lead agency, to approve, conditions, or deny projects as provided by this division or any other provision of law.

The project design features, standard conditions of approval, and additional mitigation measures contained in this document are categorized according to the primary environmental impact designations listed in the DEIR 566. These include: land use, soils & geology, water & hydrology, transportation/circulation, air quality, noise, biological resources, aesthetics, cultural/scientific resources, recreation, hazards, public services, and public utilities and service systems. In all, 213 mitigation measures are contained in this document.

Mitigation Measures are apportioned into three (3) separate categories in the Draft EIR, outlined as follows:

- (PDF) – Project Design Features: provide mitigation through avoidance, reduction or offset of impacts. Because these features are part of the project design, they do not constitute additional mitigation measures, but are in effect mitigation through project design. These mitigation measures and other conditions of approval imposed in connection with prior approvals have been incorporated into the design of the proposed project as PDF's. The Orange County P&DS will ensure compliance with all PDF's through the standard procedures for the approval of permits and applications.

- (SC) – Standard County Conditions: Standard Conditions (SC) include project requirements mandated by the County of Orange and State and federal agencies with authorization for environmental regulations. Standard Conditions typically include project compliance with the County of Orange Standard Conditions of Approval, the Uniform Building Code, South Coast Air Quality Management District, school fees, Alquist-Priolo Act, requirements and other standard measures for hillside residential development projects, various development fees including fire, sheriff, schools, parks and transportation.

- (AM) – Additional Mitigation Measures: Project specific mitigation measures are prescribed as necessary to further mitigate project impacts beyond the mitigation provided by the PDF's and applicable Standard Conditions. For those impacts with no County Standard Conditions, project specific mitigation measures, will be imposed to reduce project impacts to the maximum extent possible.

In addition, to the mitigation measures contained in the Draft EIR, project specific conditions of approval (COP) have been developed for the Saddleback Meadows project and are also included in

the mitigation monitoring program. In all, 213 mitigation measures are contained in this document.

Mitigation Matrix

In order to effectively track and document the status of mitigation measures, a mitigation matrix has been prepared and includes the following components:

- Mitigation Measures
- Timing of Verification
- Implementation Actions, conditions or Mechanism
- Method of Verification
- Responsible Party

Mitigation measure timing of verification has been apportioned into several specific timing increments. Of these, the most common are:

1. Prior to Map Recordation
2. Prior to Tentative Tract Map (TTM) approval
3. Prior to issuance of grading permit
4. During grading operations
5. Prior to completion of grading operations
6. Prior to issuance of building permit(s)
7. During construction
8. Prior to issuance of certificate of use and occupancy

Unless otherwise stated in the DEIR, preparation of all plans, exhibits, reports, or studies described herein and payment of any plan check fees are the responsibility of the Applicant. Plan checking and verification of mitigation compliance shall be the responsibility of the County of Orange.

Information pertaining to compliance with mitigation measures or any necessary modifications or refinements will be documented in the comments portion of the matrix.

Mitigation Monitoring Procedures

The Orange County Planning & Development Services is the designated lead agency for the Mitigation Monitoring Program The County is responsible for review of all monitoring report, enforcement actions, and document disposition. The County will rely on information provided by the monitor as accurate and up to date and will field check mitigation measure status as required.

A. In-Field Monitoring

Project monitors shall exercise caution and professional practices at all times when monitoring

construction. Protective wear (hard hats, glasses, etc.) shall be worn at all times in construction areas. Injuries shall be reported immediately to the mitigation monitor.

B. Coordination with Contractors

The construction manager/superintendent is responsible for coordination of contractors, and is also responsible for contractor completion of required measures in accordance with the provisions of this program.

C. Recognized Experts

The use of recognized experts as a component of the monitoring team is required to ensure compliance with scientific and engineering based mitigation measures While the mitigation monitoring team recognized experts assess compliance with required mitigation measures, consultation with the County of Orange planning staff shall take place in the event of a dispute.

D. Arbitration/Dispute Resolution

If the mitigation monitor has identified an action which, in the opinion of the monitor, has not been implemented or has not been implemented correctly, the problem will be brought to the attention of the County of Orange for resolution. If the problem cannot be satisfactorily resolved by County staff, it will be brought before the Planning Director or designee for resolution. The County will have the authority to issue stop work orders until the dispute is resolved.

E. Enforcement

Agencies may enforce conditions of approval through their existing police power, using stop work orders, fines, infraction citations, loss of entitlements, refusal to issue building permits or certificates of use and occupancy or, in some cases, notice of violation for tax purposes. Criminal misdemeanor sanctions could be available where the agency has adopted an ordinance requiring compliance with the monitoring program, similar to the provision in many zoning ordinances which affirm the enforcement power to bring suit against violators of the ordinances provisions.

MITIGATION MONITORING AND REPORTING PROGRAM
SADDLEBACK MEADOWS – FEIR 566

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
LAND USE				
Project Design Features				
No PDF's have been proposed				
Standard Conditions of Approval				
SC 1-1 Prior to the issuance of any building permits for residential construction, the developer shall comply with Board of Supervisors Resolution 82-1368 (Buyer Notification Program) which requires the developer to prepare a map denoting the existing and proposed land uses, arterial highways, and public facilities within the surrounding area for the approval of the Manager, Current Planning Services The map content, display, and distribution shall be in accordance with the Buyer Notification Program guidelines approved by the Board of Supervisors and available at the Development Processing Center.	Building Permit	Document Review	Prior to Issuance of Building Permit	Mgr. Current Planning
SC 1-2 Prior to the issuance of any certificates of use and occupancy, the developer shall provide evidence to the Manager, PDS/Building Inspection Services Division, that the Department of Real Estate has been notified that the project area is within the boundaries of a Community Facilities District (CFD), and will be subject to special taxes for public facilities and/or services.	Certificate of Occupancy	Document Review	Prior to Issuance of Certificate of Occupancy	Mgr P&DS Building Inspection

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
Additional Mitigation Measures No additional mitigation measures have been proposed				
SOILS AND GEOLOGY **Project Design Features**				
PDF 2-1 A comprehensive remedial grading mitigation plan has been designed to stabilize the project site, in accordance with OCPDS requirements The plan is depicted in Exhibit 22, included in Appendix D and proposes measures including shear keys, buttresses, removals/recompaction to reduce hazards associated with landslides, erosion and subsidence.	Completed	Grading Plan	Prior to G P I. Approval	Mgr. PDS Subdivision & Grading Service
Standard Conditions of Approval				
SC 2-2 Prior to the issuance of a grading permit, the applicant shall submit a geotechnical report to the Manager, PDS/Subdivision and Grading Services Division, for approval. The report shall include the information and be in a form as required by the Grading Manual	Submit Report	Document Review	Prior to Issuance of Grading Permit	Mgr. PDS Subdivision & Grading Service
SC 2-3 Prior to the issuance of any grading permits, the Manager, PDS/Subdivision and Grading Services Division, shall determine if the Proposed grading complies with the grading illustrated in the plans approved by the decision-maker with regard to grading concepts, slope heights, slope ratios, and pad elevations and configuration. Significant deviations shall be reviewed by the decision-maker for a finding of substantial conformance. Failure to achieve such a finding will require processing a revised application per Orange County Zoning Code Section 7-9-139 and 7-9-150.	Grading Plan Review	Document Review	Prior to Issuance of Grading Permit	Mgr. Subdivision & Grading

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
SC 2-4 Prior to the issuance of the first grading permit, for projects located immediately adjacent to or including portions of regional parks, significant open space corridors, or other environmentally sensitive areas, the project proponent shall provide evidence acceptable to the Manager, PDS/Subdivision and Grading Services Division, in consultation with the Manager, PF&R/Harbors Beaches & Parks Division, that graded areas will be compatible with natural land characteristics of the adjacent open space areas including techniques to enhance a smooth and gradual transition, urban edge treatment plans and incorporating view enhancement through architectural and design techniques.	Grading Permit	Grading Plan Review	Prior to Issuance of Grading Permit	Mgr PDS Subdivision & Grading Service
SC 2-5 Prior to the issuance of any grading permit, offsite grading and/or drainage shall be conducted in a manner meeting the approval of the Manager, PDS/Subdivision and Grading Services Division	Grading Plan	Grading Plan Review	Prior to Issuance of Grading Permit	Mgr. PDS Subdivision & Grading Service
SC 2-6 Prior to the issuance of a grading permit, substantial compliance with the following shall be certified by a registered engineer in a manner meeting the approval of the Manager, PDS/Subdivision and Grading Services Division: • Fill soils shall be placed in layers that are less than 8 inches thick and moisture-conditioned generally 1- to 2-percent above optimum moisture content. The existing diatomaceous soils should be moisture-conditioned to 125-percent of optimum moisture content. • For preliminary earthwork computations, the following shrinkage/bulking factors are recommended for the onsite material (these do not include handling losses): Bedrock - 5% bulking; slopewash - 5% shrinkage; and Other Soils - 15% shrinkage. Grading plans shall include an area where finish grades can be raised or lowered to accommodate changes in actual material quantities.	Grading	Field Check	During Grading	Mgr. PDS Subdivision & Grading Service

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
• Dewatering shall be achieved using sumps and pumps located strategically within the excavated area. However, the excavation shall be carefully observed; if the conditions warrant, supplementary dewatering provisions shall be made. It is the responsibility of the contractor to provide an adequate dewatering system during construction.				
Seismic				
SC 2-7 Conformance with the Uniform Building Code and Orange County codes will insure that seismic considerations are incorporated into the structural designs. All recommendations of the geotechnical report shall be incorporated and utilized in the final construction plans for the parcels in a manner meeting the approval of the Manager, PDS/Building Permit Services Division. Larger buildings, structures with extraordinary architectural configurations, or those of tilt-up construction may require seismic analysis.	Building Plan Review	Review Building Plans	Prior to Issuance of Building Permit	Mgr. PDS Subdivision & Grading Service
SC 2-8 The seismic exposure of the site shall be considered in the design of the proposed structures in a manner meeting the approval of the Manager, PDS/Building Permit Services Division.	Building Plan Review	Building Plans Review	Prior to Issuance of Building Permit	Mgr PDS Subdivision & Grading Service
SC 2-9 Geologic inspections shall be required during site grading for each parcel to confirm the absence of major faults in the local area in a manner meeting the approval of the Manager, Subdivision Grading	Grading	Site Inspection	During Grading	Mgr PDS Subdivision & Grading Service
SC 2-10 Prior to the issuance of any grading permits, if review of the grading plan for this property by the Manager, PDS/Subdivision and Grading Services Division, indicates significant deviation from the proposed grading illustrated on the approved tentative tract map, specifically with regard to slope heights, slope ratios, and pad elevations and configuration, the plan shall be reviewed	Grading Plan Conformance	Review Grading Plans	Prior to Grading Plan Approval	Mgr. PDS Subdivision & Grading Service

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
by the Subdivision Committee for a finding of substantial conformance. Failure to achieve such a finding will require processing a revised tentative tract map; or, if a final tract/parcel map has been recorded, a new tentative tract/parcel map or a site development permit application per Orange County Zoning Code Section 7-9-139 and 7-9-150 Additionally, a new environmental assessment and determination is required.				
SC 2-11 Prior to the issuance of any grading permit, and if determined necessary by the Manager, PDS/Subdivision and Grading Services Division, a letter of consent, in a form approved by the Manager, PDS/Subdivision and Grading Services Division, suitable for recording, shall be obtained from the affected property owners for offsite grading and/or drainage The owner/applicant shall record said letters of consent for offsite drainage and/or cross-lot drainage prior to recordation of the tract/parcel map or prior to the issuance of any grading permit, whichever comes first	Obtain Letter	Document Review	Prior to Issuance of Grading Permit	Mgr. PDS Subdivision & Grading Service
SC 2-12 Prior to the issuance of any preliminary grading permits, the subdivider shall request that the Vector Control District initiate the survey process of the tract/parcel map site to determine if vector control measures are necessary. If warranted, such measures shall be conducted by the developer in a manner meeting the approval of the Manager, PDS/Subdivision and Grading Services Division.	Conduct Survey	Document Review	Prior to Issuance of Grading Permit	Mgr. PDS Subdivision & Grading Service
SC 2-13 Prior to the issuance of any grading permits, a Water Quality Management Plan (WQMP) shall be submitted to and approved by the Manager, PDS/Subdivision and Grading Services Division. The WQMP shall identify, at a minimum, the application and incorporation of those routine structural and non-structural BMPs outlined in the Countywide NPDES Drainage Area Management Plan (DAMP) Appendix G detailing implementation of BMPs not dependent on specific land uses, in a manner meeting the approval of the Manager, PDS/Subdivision and Grading Services Division.	Submit WQMP	Document Review	Prior to Issuance of Grading Permit	Mgr. PDS Subdivision & Grading Service

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
SC 2-14 Prior to the issuance of any grading or building permits, the applicant shall provide, in accordance with criteria supply by EMA, a "Hazardous Materials Assessment" and a "Disclosure Statement" covering the property (both fee and easement) which will be offered for dedication to the County of Orange, for review and approval by the Manager, PDS/Subdivision and Grading Services Division, in consultation with the Manager, PF&R/Monitoring Programs Division.	Submit Statements	Document Review	Prior to Issuance of Grading Permit	Mgr. PDS Subdivision & Grading Service
Additional Mitigation Measures				
The following additional mitigation measures (AM) shall be implemented and enforced through the provisions of existing codes and regulations in a manner meeting the approval of the Manager, PDS/Subdivision and Grading Services Division.	Grading Permit	Site Inspection Field Review	Prior to Issuance of Building Permit	Mgr. PDS Subdivision & Grading Service
Grading				
AM 2-15 Multiple cuts and fills (2.6 million cubic yards) to achieve planned elevations and profiles, and associated access roadways shall be required.	Grading Permit	Site Inspection Field Review	Prior to Issuance of Building Permit	Mgr. PDS Subdivision & Grading Service
AM 2-16 Remedial grading (8.9 million cubic yards) to stabilize the proposed slopes by means of buttresses, shear keys, and stabilization fills shall be required Back cut failure guidelines shall be provided to the Grading Services Division prior to issuance of grading permits.	Grading Permit	Site Inspection Field Review	Prior to Issuance of Building Permit	Mgr. PDS Subdivision & Grading Service
AM 2-17 Removal (clean out) of all or major portions of the graben materials and softer alluvium and colluvium under most of the variable thickness fills shall be required	Grading Permit	Site Inspection Field Review	Prior to Issuance of Building Permit	Mgr. PDS Subdivision & Grading Service
AM 2-18 Installation of appropriate subdrain systems within natural drainage courses and within stability fills prior to fill placement shall be required.	Grading Permit	Site Inspection Field Review	Prior to Issuance of Building Permit	Mgr. PDS Subdivision & Grading Service

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
AM 2-19 Adequate foundation and slab subgrade conditioning for the proposed development, including over excavation, capping and measures related to expansive soils shall be required.	Grading Permit	Site Inspection Field Review	Prior to Issuance of Building Permit	Mgr. PDS Subdivision & Grading Service
AM 2-20 Achieving suitable surface gradients to preclude ponding anywhere onsite and to control water run-off via paved/closed drainage devices shall be required.	Grading Permit	Site Inspection Field Review	Prior to Issuance of Building Permit	Mgr PDS Subdivision & Grading Service
Compaction				
AM 2-21 Wherever structural fills are to be placed, the upper 6 to 8 inches of the exposed subgrade (after stripping and/or over excavation/clean-out) shall first be scarified and reworked. In general, the dry density of the in-situ (native) material shall be at least 85 percent of maximum. In the event that lower densities are determined by field testing to exist, the depth of over excavation will be determined onsite, given due consideration to the geology of the exposed material, as well as its relative location. It is at present expected that typical depths of over excavation will be on the order of 4 to 5 feet.	Grading Permit	Site Inspection Field Review	Prior to Issuance of Building Permit	Mgr PDS Subdivision & Grading Service
AM 2-22 Fill shall be placed in lifts of 6 to 8 inches (loose) in thickness Rocks exceeding 4 inches in maximum dimension are best not incorporated within the upper fill zone (say 3 feet) where foundations and most utility systems are expected to be housed.	Grading Permit	Site Inspection Field Review	Prior to Issuance of Building Permit	Mgr. PDS Subdivision & Grading Service
AM 2-23 In all fill areas where active gradients are steeper than 5:1 (horizontal:vertical), those surfaces shall be prepared to receive fill by excavating standard keyways and benches in a stair-step configuration.	Grading Permit	Site Inspection Field Review	Prior to Issuance of Building Permit	Mgr. PDS Subdivision & Grading Service
AM 2-24 Any loosening of reworked or in-place (native material, consequent to	Grading Permit	Site Inspection Field Review	Prior to Issuance of Building Permit	Mgr PDS Subdivision &

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
weathering and/or passage of construction traffic, shall be made competent.				Grading Service
AM 2-25 Temporary fills, typically associated with access ramps built to accommodate grading equipment shall be subject to removal when their use is discontinued.	Grading Permit	Site Inspection Field Review	Prior to Issuance of Building Permit	Mgr. PDS Subdivision & Grading Service
AM 2-26 The depths of excavation shall be subject to onsite monitoring by the Soil Engineer, normally during the actual removal operations. Any surface or subsurface obstructions, or questionable material encountered during grading, shall be brought immediately to the attention of the Soil Engineer, for his determination as to proper exposure, removal and/or processing as directed	Grading Permit	Site Inspection Field Review	Prior to Issuance of Building Permit	Mgr PDS Subdivision & Grading Service
Material Selection				
AM 2-27 After the site has been stripped of any debris, vegetation and organic soils, such exposed onsite shall be considered satisfactory for reuse in the construction of onsite fills, provided the organic content does not exceed 3% by volume. It is recommended that highly expansive soils not be placed within the upper 4 to 5 feet thick zone underlying final pad and street grades. More importantly, no such soil is to be placed (as backfill)within a horizontal distance equal to the wall height immediately behind retaining walls.	Grading Permit	Site Inspection Field Review	Prior to Issuance of Building Permit	Mgr. PDS Subdivision & Grading Service
AM 2-28 Any objectionable material, as determined by the Soil Engineer, shall be subject to relocation in deeper fill areas or removal offsite.	Grading Permit	Site Inspection Field Review	Prior to Issuance of Building Permit	Mgr. PDS Subdivision & Grading Service
AM 2-29 All borrow sites shall be approved by the Soil Engineer/Geologist prior to onsite delivery This will permit the timely allocation of such available materials for use on the project site.	Grading Permit	Site Inspection Field Review	Prior to Issuance of Building Permit	Mgr. PDS Subdivision & Grading Service

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
Compaction Requirements				
AM 2-30 Reworking/compaction shall include water addition or drying-out as needed, to bring the soils close to their optimum moisture content. All such reworked soils, placed as structural fills, shall be densified to achieve at least 90 percent relative compaction with reference to the laboratory compaction standard The optimum moisture content and maximum dry density, for each identified soil type, will be determined in the laboratory in accordance with ASTM Test Designation D1557	Grading Permit	Site Inspection Field Review	Prior to Issuance of Building Permit	Mgr. PDS Subdivision & Grading Service
Shrinkage/Subsidence				
AM 2-31 For preliminary earthwork computations, an approximate (overall) shrinkage factor of 12 percent shall be required, for the existing site soils. The above value does not include allowance for stripping nor handling losses.	Grading Permit	Site Inspection Field Review	Prior to Issuance of Building Permit	Mgr. PDS Subdivision & Grading Service
AM 2-32 Subsidence shall be assumed as 3/4 to 1-1/2 inches for grading design purposes	Grading Permit	Site Inspection Field Review	Prior to Issuance of Building Permit	Mgr PDS Subdivision & Grading Service
Excavating Conditions				
AM 2-33 Excavation of onsite soils shall be accomplished with standard heavy duty earthmoving or trenching equipment. Some hard cemented sandstone beds were encountered during the field exploration on portions of the site and some minor, isolated blasting may be required to remove these hard materials	Grading Permit	Site Inspection Field Review	Prior to Issuance of Building Permit	Mgr. PDS Subdivision & Grading Service
AM 2-34 Heavy seepage was encountered, as indicated on the Boring Logs, at multiple elevations. Consequently, considerable water can be expected within planned excavations, typically reaching maximum discharge within 2 to 5	Grading Permit	Site Inspection Field Review	Prior to Issuance of Building Permit	Mgr PDS Subdivision & Grading Service

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
days after exposure Additional nuisance water (seepage) is foreseen in nearly all major cuts decreasing in volume with time, and being less at higher site elevations as well as in cuts made late in the year. All nuisance water shall be accommodated in accordance with County requirements.				
Expansion Potential				
AM 2-35 Onsite materials are considered to be moderately expansive, generally. Soils of high and low expansivity are expected to comprise less than 25% of the overall pad areas. The expansivity of the actual soils placed within structural areas shall be verified during grading, prior to construction.	Grading Permit	Site Inspection Field Review	Prior to Issuance of Building Permit	Mgr PDS Subdivision & Grading Service
Utility Trenching				
AM 2-36 The typical walls of temporary construction trenches shall stand nearly vertical, with only minor sloughing, provided the total depth does not exceed 4 to 5 feet. Shoring of excavation walls and/of flattening of side slopes may be required, if greater depths are necessary.	Grading Permit	Site Inspection Field Review	Prior to Issuance of Building Permit	Mgr PDS Subdivision & Grading Service
AM 2-37 Trenches shall be located so as not to impair the bearing capacity nor settlement under planned foundations. As a guide, trenches shall be aligned perpendicular to foundations, and the Structural Engineer so informed to modify the foundation at the crossing, as needed. All other trenches shall observe a lateral off-set equal to their total depth.	Grading Permit	Site Inspection Field Review	Prior to Issuance of Building Permit	Mgr. PDS Subdivision & Grading Service
AM 2-38 Existing soils shall be utilized for trench backfill, provided they are essentially free of organic materials and oversized materials (rock, gravel, etc. in excess of 1-inch maximum size, unless within an approved soil matrix) Alternately, select granular materials (sand equivalent of 30 or greater) may be imported as backfill. Compaction should be accomplished	Grading Permit	Site Inspection Field Review	Prior to Issuance of Building Permit	Mgr. PDS Subdivision & Grading Service

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
entirely by mechanical means, subject to onsite assessment during pipeline installation.				
Surface Drainage				
AM 2-39 Positive surface gradients shall be provided away from slope tops per approved grading plans and adjacent to the future buildings, so as to direct surface water run-off away from structural areas and toward suitable discharge facilities.	Grading Permit	Site Inspection Field Review	Prior to Issuance of Building Permit	Mgr. PDS Subdivision & Grading Service
Sulphate Content				
AM 2-40 The soils sulphate content shall be ascertained during the concluding stages of rough grading, and the type of cement to be used determined at that time.	Grading Permit	Site Inspection Field Review	Prior to Issuance of Building Permit	Mgr PDS Subdivision & Grading Service
Grading Control				
AM 2-41 All grading and earthwork shall be subject to on-going testing and observation by the applicants geotechnical consultant, including engineers, engineering geologists and/or technicians.	Grading Permit	Site Inspection Field Review	Prior to Issuance of Building Permit	Mgr PDS Subdivision & Grading Service
Slabs-on-Grade				
AM 2-42 Concrete slabs shall be founded on approved (reworked) in-place soils and/or on properly compacted fill. The subgrade shall be proof-rolled just prior to construction to provide a firm, unyielding surface, especially if the surface has been disturbed by the passage of time and/or exposure to construction traffic.	Grading Permit	Site Inspection Field Review	Prior to Issuance of Building Permit	Mgr. PDS Subdivision & Grading Service
AM 2-43 Floor slabs shall be at least 4 inches thick. The Finished Floor Level should	Grading Permit	Site Inspection Field Review	Prior to Issuance of Building Permit	Mgr. PDS Subdivision &

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
be at least 6 inches above highest adjacent exterior grade Joints shall be provided.				Grading Service
AM 2-44 If flooring that would be affected by moisture is to be used, the slab shall be underlain by 2 inches of sand, with a 10-mil plastic sheet between the sand and the subgrade.	Grading Permit	Site Inspection Field Review	Prior to Issuance of Building Permit	Mgr. PDS Subdivision & Grading Service
AM 2-45 Precautions in respect of expansive soils shall be taken.	Grading Permit	Site Inspection Field Review	Prior to Issuance of Building Permit	Mgr. PDS Subdivision & Grading Service
Foundations				
AM 2-46 The proposed structures shall be supported on conventional spread footings, supported into approved compacted fill and/or reworked native material	Grading Permit	Site Inspection Field Review	Prior to Issuance of Building Permit	Mgr. PDS Subdivision & Grading Service
Long Term Settlements				
AM 2-47 The grading concept, as presently proposed, includes several areas where deep fill will result, exceeding 50 feet in depth. These soil masses may experience significant settlements, with time, of 4 to 6 inches or more Such downward movements can be tolerated by most improvements, provided these occur at a reasonably uniform rate and rather evenly over a well distributed area However, the degrees and rates of settlement shall be analyzed during the final design phase.	Grading Permit	Site Inspection Field Review	Prior to Issuance of Building Permit	Mgr PDS Subdivision & Grading Service
Phasing of Earthwork				
AM 2-48 Unstable Ground Initial stability evaluations have determined that several natural slopes subject to grading are inherently unstable Removals, therefore, shall be	Grading Permit	Site Inspection Field Review	Prior to Issuance of Building Permit	Mgr PDS Subdivision & Grading Service

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
planned and carried out with care in order to minimize deep-seated, in-construction failures Statistically, about 10 percent of back cuts for buttresses will fail during grading Allowances for schedule and budget contingencies should be made.				
AM 2-49 Required Clean-Out Work Prior to improving the gross stability of hillsides, clean-out work will be necessary along their lowest (toe) elevations. Whereas such selective removals are essential prior to placement of additional fill, this process can trigger undesired slippage Therefore, selective unloading of the slide mass shall be required before stabilization can effectively begin.	Grading Permit	Site Inspection Field Review	Prior to Issuance of Building Permit	Mgr. PDS Subdivision & Grading Service
AM 2-50 Slide Unloading Where existing slope faces are marginally safe in their present condition, the higher portions of each such slide shall require removals toward the top, prior to clean-out, and subsequent loading at the toe	Completed	VTTM Review	Prior to Approval of Tentative Tract Map	Mgr. PDS Subdivision & Grading Service
WATER/HYDROLOGY				
Project Design Features				
PDF 3-1 A master drainage concept has been incorporated into the project design to mitigate hydrology impacts to existing OCP&DS requirements and standards. The master drainage concept, shown in Exhibit 22 and contained in its entirety in Appendix L of this EIR, proposes a series of storm drains, catch basins, inlet/outlet structures, energy dissipators and slope drains to control project drainage	Grading Permit	Document Review	Prior to Issuance of Grading Permit	Mgr. PDS Subdivision & Grading Service

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
Standard Conditions of Approval				
SC 3-2 Prior to the issuance of any grading permits, the applicant shall, in a manner meeting the approval of the Manager, PDS/Subdivision and Grading Services Division: a A drainage study determining the effect the proposed development and associated drainage patterns will have on existing drainage facilities. b Mitigate either by on-site retardation or by providing improvements appropriately to impacted existing drainage facilities	Grading Permit	Review G.P.	Prior to Issuance of Grading Permit	Mgr. PDS Subdivision & Grading Service
SC 3-3 Prior to the issuance of any grading permits, the applicant shall in a manner meeting the approval of the Manager, PDS/Subdivision and Grading Services Division· a Design and convey construction funds for surface drainage improvements; and b. Design all necessary storm drain facilites extending to a satisfactory point of disposal for the proper control and disposal of storm runoff; and c Dedicate the associated easements to the County of Orange, if determined necessary	Drainage Plan	Review Drainage Plan	Prior to Issuance of Grading Permit	Mgr. PDS Subdivision & Grading Service

BMPs whenever they are applicable to a project, the assignment of long-term maintenance responsibilities (specifying the developer, parcel owner, maintenance association, lessee, etc); and, shall reference the location(s) of structural BMPs.				
SC 3-9 Prior to the issuance of precise grading permits or building permits, whichever comes first, the applicant shall submit and obtain approval from the Manager, PDS/Subdivision and Grading Services Division, of a Water Quality Management Plan (WQMP) specifically identifying Best Management Practices (BMPs) that will be used on-site to control predictable pollutant runoff. This WQMP shall identify, at a minimum, the routine, structural and non-structural measures specified in the Countywide NPDES Drainage Area Management Plan (DAMP) Appendix which details implementation of BMPs whenever they are applicable to a project, the assignment of long-term maintenance responsibilities (specifying the developer, parcel owner, maintenance association shall reference the location(s) of structural BMPs.	Submit WQMP	Document Review	Prior to Issuance of Grading Permits	Mgr. PDS Subdivision & Grading Services
Flood Plain Elevation				
SC 3-10 Prior to issuance of any grading permits, the applicant shall submit evidence to the Manager, PDS/Subdivision and Grading Services Division, that the applicant has obtained coverage under the NPDES statewide General Stormwater Permit from the State Water Resources Control Board.	NPDES Clearance	Document Review	Prior to Issuance of Grading Permits	Mgr. PDS Subdivision & Grading Services
Easements				
SC 3-11 Prior to the issuance of any certificates of use and occupancy, the applicant shall not grant any easements over any property subject to a requirement of dedication or irrevocable offer to the County of Orange or the Orange County Flood Control District, unless such easements are expressly made subordinate	Easement Dedication	Document Review	Prior to Issuance of Grading Permits	Mgr. PDS Subdivision & Grading Services

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
to the easements to be offered for dedication to the County. Prior to granting any of said easements, the subdivider shall furnish a copy of the proposed easement to the Manager, PDS/Subdivision and Grading Services Division, for review and approval. Further, a copy of the approved easement shall be furnished to the Manager, PDS/Building Inspection Services Division, prior to the issuance of any certificate of use and occupancy.				
Additional Mitigation Measures No additional mitigation measures have been proposed				
TRANSPORTATION/CIRCULATION **Project Design Features**				
PDF 4-1 The onsite circulation system is proposed as to accommodate project related traffic generation, including design of the entry street as a Collector roadway with a curb-to-curb width of 58 feet at its intersection with El Toro Road. This provides for two 12-foot exiting lanes and two 12-foot entering lanes with a 10-foot median The entry's cross-section shall be maintained for approximately 160 feet where it could then be transitioned to a standard 40-foot wide curb-to-curb width Collector roadway. Secondary emergency only access will be provided via a gated connection to existing Valley Vista Way Minimum fire access roadway width of 28 feet shall be required	Circulation System Design	Grading Plan Review	Prior to Issuance of Grading Permit	Mgr PDS Subdivision & Grading Services
PDF 4-2 The entry street will be designed with a traffic signal and a southbound left-turn pocket and northbound right-turn lane The applicant shall provide a cash deposit for the design and construction of the traffic signal	Cash Deposit Traffic Signal	Deposit	Prior to Issuance of Certificate of Occupancy	Mgr. PDS Subdivision & Grading Services Mgr. PDS

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
PDF 4-3 All weather access to the proposed water tank shall be provided by the applicant. This access shall be designed with a minimum 28 foot width and a maximum grade of 10%.	Access	Grading Plan Review	Prior to Issuance of Grading Permits	Mgr. PDS Subdivision & Grading Services
Standard Conditions of Approval				
SC 4-4 Prior to the issuance of any building permits, the applicant shall participate in design, construction, and/or financing of the cost of a traffic signal in the project vicinity in a manner meeting the approval of the Manager, PDS/Subdivision and Grading Services Division	Traffic Signal Construction	Plan Review	Prior to Issuance of Building Permits	Mgr. PDS Subdivision & Grading Services
SC 4-5 Prior to the issuance of building permits, the applicant shall pay fees for the Major Thoroughfare and Bridge Fee Program listed below, in a manner meeting the approval of the Manager, PF&RD/Program Division a. Foothill Circulation Phasing Program b Prior to recordation of a final tract map, the subdivider shall enter into an agreement with the County of Orange for participation in a fee program (if adopted by the Board of Supervisors) for implementation of the Foothill/Eastern Transportation Corridor Said agreement shall provide that 1. The fee shall be $158 00 per trip end times the County standard trip end generation rate for the type of development proposed, times the number of units (footage) proposed, or the fee payable under the program, whichever is less 2. Subdivider's obligation to pay fees would arise only after	Deposit Fees	Deposit	Prior to Issuance of Building Permits	Mgr. PF&RD Program Division

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
the County establishes the fee program, prior to issuance of building permits. 3 Subdivider's obligation to pay the fee would be extinguished if the fee program were not established within three (3) years of the date of issuance of the first building permit for subject development. 4 Subdivider shall furnish surety bond, letter of credit, money or such other security approved by the Director, PF&RD, to assure payment of the fees related to subject development. 5 This condition shall be void if a trial court of competent jurisdiction, in a final judgement, or an appellate court, if the matter is appealed, sets aside a condition imposed by the County which was substantially the same as said condition c El Toro Road d Santiago Canyon Road				
SC 4-6 Building permit issuance shall be phased in accordance with the Foothill Circulation Phasing Plan (FCPP) Development Phasing Plan, and shall also be subject to any other Board of Supervisors approved growth management phasing plan pertaining to the timely provision of public services and facilities.	Permit Phasing	Plan Review	During Building Permit Issuance	Mgr. PDS Subdivision & Grading Services
SC 4-7 Building permit issuance shall be phased in accordance with any Board of	Permit Phasing	Plan Review	During Building Permit Issuance	Mgr. PDS Subdivision &

Supervisors approved Growth Management Phasing Plan pertaining to the timely provision of public services and facilities.				Grading Services
SC 4-8 Prior to the issuance of any grading permits, adequate sight distance shall be provided at all street intersections per Standard Plan 1117, in a manner meeting the approval of the Manager, PF&R/Program Division. This includes any necessary revisions to the plan such as removing slopes or other encroachments from the limited use area.	Circulation System Improvements	Plan Review	During Building Permit Issuance	Mgr. PDS Subdivision & Grading Services
SC 4-9 Prior to the issuance of any certificates of use and occupancy, the developer shall construct the approved internal circulation improvements in a manner meeting the approval of the Manager, PF&R/Construction Division Further, a copy of the approved plans shall be furnished to the Manager, PDS/Building Inspection Services Division, prior to the issuance of any certificates of use and occupancy	Construct Circulation Improvements	Field Check	Prior to Issuance of Certificate of Occupancy	Mgr PDS Subdivision & Grading Services
SC 4-10 When monuments exist which control the location of subdivisions, streets or highways, or provide survey control, the monuments shall be located and referenced prior to any street construction or relocation, and shall be reset after construction as required by Section 8771 of the Business and Professions Code, in a manner meeting the approval of the Manager, PDS/Subdivision and Grading Services Division	Monument Location	Field Check	Prior to Grading Operations	Mgr PDS Subdivision & Grading Services
SC 4-11 Prior to issuance of a building permit, the applicant shall pay a cash fair share contribution for the design and construction of improving Santiago Canyon Road from Live Oak Canyon Road to Jamboree Road, in a manner meeting the approval of the Manager, PF&RD/Program Division. In addition, the applicant shall participate in the Santiago Canyon Road Safety Improvement Program.	Fee Payment	Document Review	Prior to Building Permit	Mgr. PF&RD Program Division

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
SC 4-12 Prior to issuance of a building permit, the applicant shall design and construct roadway improvements to El Toro Road including a deceleration lane and a left turn pocket into the project entrance based on a 60 mph minimum design speed in a manner meeting the approval of the Manager, PF&RD/Program Division	Construct Roadway Improvement	Field Check	Prior to Issuance of Building Permit	Mgr. PF&RD Program Division
SC 4-13 Prior to issuance of a building permit, the applicant shall provide a cash deposit for the difference in cost of designing and constructing the roadway improvements proposed with the project as compared to the costs associated with the ultimate configuration of El Toro Road, as determined by PDS/Environmental & Project Planning Services Division, all in a manner meeting the approval of the Manager, PF&R/Programs Division.	Building Permit	Document Review	Prior to Issuance of Building Permit	Mgr. Traffic Engineering
Additional Mitigation Measures The following additional mitigation measures (AM) shall be implemented and enforced through the provisions of existing codes and regulations in a manner meeting the approval of the Manager, Transportation Planning				
AM 4-14 The El Toro Road turn lane improvements needed at the Project Entrance to serve Year 2020 conditions shall be completed in conjunction with development.	Construct Improvements	Field Check	Prior to Issuance of Building Permit	Mgr. Transportation Planning
AM 4-15 Traffic signing/striping should be implemented in conjunction with detailed construction plans for the project. Verification of adequate parking should be analyzed for the project site in conjunction with approval of the site plan.	Construct Improvements	Field Check	Prior to Issuance of Building Permit	Mgr. Transportation Planning
AM 4-16 The project shall participate in existing road fee programs, including the Foothill/Eastern Transportation Corridor Fee Programs, Foothill Circulation Phasing Program (FCPP), El Toro Road Fee Program and the Santiago Road Fee Program.	Roadway Fees	Document Review	Prior to Issuance of Building Permits	Mgr. Transportation Planning

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
Both existing traffic patterns and SCTM traffic projections for Years 2000 and 2020 indicate the attraction of Glenn Ranch Road, Portola Parkway, and the Foothill Transportation Corridor (SR-241) for increased traffic volumes in the project study area. North of the Foothill Transportation Corridor, El Toro Road can accommodate projected traffic volumes with the proposed project on four travel lanes divided by a raised or striped median Implementation of a full Major Arterial cross-section is not needed to serve future traffic volumes. This alternative section represents a modification of the typical cross-section for a Primary Arterial Appropriate transitions would be required between this cross-section and other modified cross-sections along El Toro Road south of Glenn Ranch Road.				
AIR QUALITY				
Project Design Features				
No PDF's have been proposed				
Standard Conditions of Approval				
SC 5-1 Grading and excavation shall be halted during periods of high winds meeting the approval of the Manager, EA, Subdivision and Grading Services Division. According to AQP Measure F-4, high winds are defined as 25 mph or greater. This level occurs only under unusually extreme conditions, such as Santa Ana wind conditions. Notations in the above format, included with other notations on the front sheet of grading plans, will be considered as adequate evidence of compliance with this condition.	Grading Operation Control	Field Check	During Grading	Mgr. PDS Subdivision & Grading Services
SC 5-2 Prior to issuance of grading permits, the project applicant shall demonstrate	Prepare Report	Document Review	Prior to Issuance of Grading Permit	Applicant

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
measures to ensure compliance with SCAQMD Rule 403, and shall identify the dust suppression measures, such as regular watering, which shall be implemented to reduce emissions during construction and grading in a manner meeting the approval of the Manager, PDS/Subdivision and Grading Services Division. This will help reduce the short-term impacts from particles which could result in nuisances that are prohibited by Rule 403.				
Additional Mitigation Measures				
AM 5-3 As previously noted, no credit was taken for mobile source emissions reductions either from technology improvements (reformulated gasoline, alternative fuels and/or electric cars), nor from transportation behavior modification in response to programs such as South Coast AQMD Reg. XV or by the trip reduction programs These programs will mitigate the identified significant growth-related cumulative air quality impact to some extent. Because the projected effectiveness of such programs and because the time frame for technology development is uncertain, the degree of possible mitigation can not be quantified with certainty. Similarly, the buildout date for Saddleback Meadows will depend on economic forces that can not be predicted The following discussion structures the recommended mitigation as comprehensively as possible, but quantification of mitigation effectiveness is speculative at currently known levels of detail.	Air Quality Compliance	Document Review	Prior to Issuance of Grading Permit	Mgr. PDS Subdivision & Grading Services
AM 5-4 Contractors will comply with SCAQMD Rule 403	Prepare Report	Document Review	Prior to Issuance of Grading Permit	Applicant
AM 5-5 Contractors will utilize measures to prevent dirt from being tracked, washed, blown or otherwise conveyed onto paved roadways, and will wash or sweep the construction access points at El Toro Road on a routine basis on a frequency specified by the County of Orange as well as whenever dirt is visible more than 50 feet from the access point independent of the routine clean-up schedule	Grading Control	Field Check	During Grading	Applicant

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
AM 5-6 Trucks hauling dirt on public roads to and from the site will be covered or will maintain a six inch differential between the maximum height of any hauled material and the top of the haul trailer Haul truck drivers will water the load prior to leaving the site to prevent soil loss during transport.	Haul Truck Monitoring	Field Check	During Grading	Applicant
AM 5-7 Construction management procedures required by the County of Orange and other jurisdictions shall be implemented. Contractor personnel responsible for supervision and the appropriate actions to be taken for the following measures shall be identified: • Cessation of activities during a Stage-2 smog episode. Call 1-800-242-4022 for the daily forecast. • Truck routes and schedules for receipt of materials shall be coordinated with County of Orange staff. • Where feasible, on-road vehicles and off-road equipment shall be turned off and subsequently restarted if the anticipated duration of idling is expected to exceed five (5) minutes.	Construction Management	Field Check	During Grading	Applicant
AM 5-8 Graded surfaces used for off-road parking, materials lay-down or awaiting future construction shall be stabilized for dust control as needed. Frequently accessed unpaved areas shall be paved as early as possible to minimize dirt trackout to public rights of way.	Dust Suppression	Field Check	During Grading	Applicant
AM 5-9 Equipment will be maintained in proper tune to prevent visible soot from reducing light transmission through the exhaust stack exit by more than 20 percent for more than three (3) minutes per hour and use low-sulfur fuel as required by SCAQMD regulation	Air Quality Compliance	Field Check	During Grading	Applicant

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
AM5-10 Flag persons and appropriate traffic control devices will be used as needed to minimize construction activity interference with off-site traffic	Traffic Control	Field Check	During Construction	Mgr. Transportation Planning
AM5-11 Implementation of the above measures is expected to maintain construction activity air quality impacts at less than significant levels. <u>Operational Activities</u> • Traffic flow at the project access will be maintained at acceptable levels of service through mitigation measures identified in the project traffic study. • 220v electric power for future use to charge electric-powered vehicles will be made available in homeowner garages.	Air Quality Compliance	Field Check	During Grading	Applicant
AM 5-12 Emissions calculations and the corresponding ambient air quality impact assessment for project-related construction and Saddleback Meadows operations presumed compliance with SCAQMD rules regarding dust control. The potential for additional emissions reduction beyond the mandatory requirements of existing rules and regulations was evaluated based on Appendix 11 of the SCAQMD Air Quality Handbook which quantifies reduction potential of a variety of project construction and operation emissions control measures. Dust emissions can be controlled from their 50 percent control assumed for Rule 403 compliance by an additional 50-80 percent of the uncontrolled fraction. The net effective dust control level is therefore 75-90 percent Unless the entire project site is under simultaneous massive grading, attaining the optimum level of dust control will maintain dust impacts at less than significant levels.	Emissions Control	Field Check	During Grading	Applicant

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
Operational emissions reduction from mobile sources of 5 percent of their non-TCM implementation level can not reduce the substantial emission level to less than the SCAQMD advisory level significance thresholds. A number of secondary considerations were identified, however, that would either allow for a finding of an individually less than significant air quality impact.				
NOISE				
Project Design Features				
No PDF's have been proposed				
Standard Conditions of Approval				
SC 6-1 All residential lots and dwellings shall be sound attenuated against present and projected noise which shall be the sum of all noise impacting the project so as not to exceed a composite interior standard of 45 dBA CNEL all habitable rooms and a source specific exterior standard of 65 DBA CNEL in outdoor living areas. Evidence prepared by a County-certified acoustical consultant, that these standards will be satisfied in a manner consistent with Zoning Code Section 7-9-137 5, shall be submitted as follows:				
a. Prior to the issuance of grading permits, as determined by the Manager, PDS/Building Permits Services Division, the applicant shall submit an acoustical analysis report to the Manager, PDS/Building Permits Services Division, for approval The report shall describe in detail the exterior noise environment and preliminary mitigation measures Acoustical design features to achieve interior noise standards may be included in the report, in which case it may also satisfy "B" below.	Submit Acoustical Report	Report Review	Prior to Issuance of Grading Permit	Mgr. PDS, Building Permits Services Division

	Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
b.	Prior to the issuance of any building permits for residential construction, the applicant shall submit an acoustical analysis report describing the acoustical design features of the structures required to satisfy the exterior and interior noise standards to the Manager, PDS/Building Permits Services Division, for approval along with satisfactory evidenced which indicates that the sound attenuation measures specified in the approved acoustical report have been incorporated into the design of the project	Submit Acoustical Report	Report Review	Prior to Issuance of Grading Permit	Mgr. PDS Building Permits Services Division
c.	Prior to the issuance of any building permits, the applicant shall show all freestanding acoustical barriers on the project's plot plan illustrating height, location and construction in a manner meeting the approval of the Manager, PDS/Building Permits Services Division	Grading Plan	Review Grading Plan	Prior to Issuance of Building Permit	Mgr PDS Building Permits Services Division
SC 6-2	Prior to the issuance of grading permits, as determined by the Manager, PDS/Building Permits Services Division, an acoustical analysis report shall be submitted to the Manager, PDS/Building Permits Services Division, for approval. The report shall describe in detail the exterior noise environment and preliminary mitigation measures Acoustical design features to achieve interior noise standards may be included in the report in which case it may also satisfy SC 6-3 below	Acoustical Report	Report Review	Prior to Issuance of Grading Permit	Mgr PDS Building Permits Services Division
SC 6-3	Prior to the issuance of any building permits for residential construction, an acoustical analysis report describing the acoustical design features of the structures required to satisfy the exterior and interior noise standards shall be submitted for review and approval to the Manager, PDS/Building Permits Services Division, along with satisfactory evidence which indicates that the sound attenuation measures specified in the approved acoustical report have been incorporated into the design of the project.	Acoustical Analysis	Document Review	Prior to Issuance of Building Permit	Mgr. PDS Building Permits Services Division

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
SC 6-4 Prior to the issuance of any building permits, all freestanding acoustical barriers must be shown on the project's plot plan illustrating height, location and construction in a manner meeting the approval of the Manager, PDS/Building Permits Services Division.	Grading Plan	Plan Review	Prior to Issuance of Building Permit	Mgr. PDS Building Permits Services Division
SC 6-5 Prior to the issuance of any certificates of use and occupancy, the developer shall produce evidence acceptable to the Manager, PDS/Building Inspection Services Division, that information stating this property is subject to the overflight, sight, and sound of aircraft operating from (El Toro Marine Corps Air Station) has been provided to the Department of Real Estate of the State of California for inclusion into the Final Subdivision Public Report.	Acoustical Report	Document Review	Prior to Issuance of Certificate of Occupancy	Mgr. PDS Building Inspection Services
SC 6-6 Prior to the issuance of any certificates of use and occupancy, the applicant shall post aircraft noise impact notification signs in all sales offices associated with new residential development located within an aircraft 63 dB CNEL contour The number and location of said signs shall be as approved by the Manager, PDS/Building Permits Services Division	Acoustical Notice	Document Review	Prior to Issuance of Certificate of Occupancy	Mgr. PDS Building Permits Services Division
SC 6-7 Prior to the issuance of any building permit, an aviation easement over this property shall be offered for dedication to the County of Orange in a manner meeting the approval of the Manager, PDS/Building Permits Services Division.	Aviation Easement Dedication	Grading Plan	Prior to Issuance of Building Permit	Mgr. PDS Building Permits Services
SC 6-8 Prior to the sale, lease or rental of any structure or portion thereof, the applicant/owner shall provide to each prospective purchaser, lessee, or tenant a notice and statement of acknowledgment that the property is subject to overflight, sight, and sound of aircraft operating from (El Toro Marine Corps Air Station). The form and method of distribution of said notice and statement of acknowledgment shall be as approved by the Manager, PDS/Building Permits Services Division.	Acoustical Report	Report Review	Prior to the Sale of Units	Mgr. PDS Building Permits Services

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
A. Prior to the issuance of any grading permits, the proponent shall produce evidence acceptable to the Manager, PDS/Building Permits Services Division, that: (1) all construction vehicles or equipment, fixed or mobile, operated within 1000 feet of a dwelling shall be equipped with properly operating and maintained mufflers (2) All operations shall comply with Orange County "Codified Ordinance Division 6 (Noise Control); and (3) Stockpiling and/or vehicle staging areas shall be located as far as practicable from dwellings. B. Notations in the above format, appropriately numbered and included with other notations on the front sheet of grading plans, will be considered as adequate evidence of compliance with this requirement				
SC 6-9 Prior to issuance of any grading permits, the project proponent shall produce evidence acceptable to the Manager, PDS/Building Permits Services Division that excavation, grading and other construction-related activities shall be restricted to daytime hours as promulgated in the County's Codifide of Ordinance Division 6 (Noise Control).	Grading Operations	Document Review	Prior to Issuance of any Grading Permit	Mgr PDS Building Permits Services
SC 6-10 Prior to issuance of any grading permits, the project proponent shall produce evidence acceptable to the Manager, PDS/Building Permits Services Division that all construction equipment, stationary or mobile, shall be equipped with properly operating and maintained mufflers.	Grading Operations	Document Review	Prior to Issuance of any Grading Permit	Mgr. PDS Building Permits Services

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
SC 6-11 Prior to the issuance of any grading permits, the project proponent shall produce evidence acceptable to the Manager, PDS/Building Permits Services Division, that: a) All construction vehicles or equipment, fixed or mobile, operated within 1,000-feet of a dwelling shall be equipped with properly operating and maintained mufflers b) All operations shall comply with Orange county Codified Ordinance Division 6 (Noise Control). c) Stockpiling and/or vehicle staging areas shall be located as far as practicable from dwellings Notations in the above format, appropriately identified and included with other notations on the front sheet of grading plans, will be considered as adequate evidence of compliance with this condition.	Grading Operations	Document Review	Prior to Issuance of any Grading Permit	Mgr. PDS Building Permits Services
Additional Mitigation Measures The following additional mitigation measures (AM) shall be implemented and enforced through the provisions of existing codes and regulations, in manner meeting approval of the Manger, Building Permits.				
AM 6-12 Prior to the issuance of Building Permits, all operative windows exceeding 6 sq ft. of glazing shall be rated SR=25 or greater	Construction Specification	Building Plan Review	Prior to Issuance of Building Permit	Mgr. PDS Building Permits Services

BIOLOGICAL RESOURCES				
Project Design Features				
No PDF have been proposed.				
Standard Conditions of Approval				
SC 7-1 Pursuant to Section 711.4 of the Fish and Game Code, the applicant shall comply with the requirements of AB 3158, prior to the filing of the Notice of Determination for the project, in a manner meeting the approval of the Manager, PDS/Environmental and Project Planning Services.	Payment of Fees	Document Review	Prior to Issuance of Grading Permit	Mgr PDS Environmental & Project Planning
SC 7-2 Prior to the issuance of any grading permits, the applicant shall obtain a Streambed Alteration Agreement covering the affected water courses and wetland areas within the proposed project area from the California Department of Fish and Game A 1603 Streambed Application has been submitted to CDFG. All streambed alteration activities shall be carried out in accord with the requirements of an approved Streambed Alteration Agreement	CDFG 1603 Agreement Grading Permit	Document Review	Prior to Issuance of Grading Permit	Mgr PDS Environmental & Project Planning
SC 7-3 Prior to the issuance of any grading permits, the applicant shall obtain the necessary individual or nationwide permit (pursuant to Section 404 of the Federal Clean Water Act) covering all affected wetland areas from the U.S Army Corps of Engineers, Los Angeles District All wetland areas shall be subject to the specifications of the 404 permit as determined by the Corps of Engineers. A copy of the 404 permit shall be submitted with the first grading permit application for the proposed project to the Manager, PDS/Subdivision and Grading Services Division.	ACOE 404 Permit Grading Permit	Document Review	Prior to Issuance of Grading Permit	Mgr PDS Environmental & Project Planning

	Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
SC 7-4	Prior to the issuance of any grading permits, as required by participation in the Natural Community Conservation Planning/Coastal Sage Scrub (NCCP) agreement signed by the County on May 1, 1992, the project applicant shall provide an accounting summary, in acres or portions thereof, of coastal sage scrub scheduled to be impacted by removal through grading in a manner meeting the approval of the Administrator Planning & Zoning. (See Section 4.7.3.)	NCCP Compliance	Document Review	Prior to Issuance of Grading Permit	Mgr. PDS Environmental & Project Planning
SC 7-5	Prior to the issuance of a grading permit, the applicant shall provide proof that the appropriate Federal approvals required for impacts to Coastal Sage Scrub have been obtained from the U.S. Fish and Wildlife Service, in a manner meeting the approval of the Administrator, Planning & Zoning and Manager, PDS/Grading Services Division, in consultation with the Administrator, Planning & Zoning.	Coastal Sage Scrub	Document Review	Prior to Issuance of Grading Permit	Mgr. PDS Grading Services Division
SC 7-6	Notwithstanding the tentative map, no grading shall occur within the Natural Community Conservation Plan (NCCP) enrolled area except as in a manner meeting the approval of the Administrator, Planning and Zoning.	NCCP Compliance	Document Review	Prior to Issuance of Grading Permit	Administration Planning & Zoning
SC 7-7	Prior to the issuance of any grading permit, approval of any activity that involves removal of any native vegetation from subject site including clearing, grubbing, mowing, discing, trenching, grading, fuel modification, or other related construction-related activities, the applicant shall obtain written proof from the U.S. Fish and Wildlife Service that said activity complies with the Federal Endangered Species Act. This evidence shall be submitted to the Manager, PDS/Subdivision and Grading Services Division, for review and approval, in consultation with the Administrator, Planning and Zoning.	ESA Compliance	Document Review	Prior to Issuance of Grading Permit	Mgr. PDS Subdivision & Grading Services
SC 7-8	Prior to the issuance of grading permits the applicant shall submit a landscape	Landscape Plan	Plan Review	Prior to Issuance of Grading Permit	Mgr. PF&R Harbors, Beaches

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
and tree preservation plan to the Manager, PF&R/Harbors Beaches and Parks Division, for review and approval in accordance with the following guidelines: A. To the maximum extent feasible, all existing native and exotic trees and other significant vegetation shall be preserved in conjunction with any development activity. B. A tree preservation plan shall be prepared by a landscape architect for all development projects which identifies the location, size and species of all trees having a trunk diameter of 5 inches or greater (measured at four and one-half feet above ground level) and shrubs having a trunk or branch diameter of 3 inches or greater. The plan shall show which plants are proposed for removal and where transplanted and/or replacement plants will be located. Tree preservation plans shall be approved prior to issuance of grading permits, or where grading permits are not required, prior to issuance of building permits. C. Trees removed in accordance with an approved tree preservation plan shall be replaced by a combination of transplanting to another location on the subject property and/or replacement by a combination of 1 and 15-gallon plants at a minimum ratio of 5:1. The following sliding scale shall also be used for trees to determine if more than the minimum number of replacement trees are required. Tree Replacement Scale Trunk Diameter (inches) of Tree Removed				& Parks Division

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
At 4½ Feet Above Ground Level 5 to 11 5 (1-15 gal / 4-1 gal) 12 to 17 18 to 23 10 (2-15 gal / 8-1 gal) 24 to 35 12 (2-15 gal / 10-1 gal) Any oak exceeding 35 inches in diameter should be preserved, transplanted or replaced in accordance with the provisions outlined in Section E of the mitigation measure. In the event that all required replacement trees will not fit on the property, increase in container size will be considered in conjunction with reductions in replacement quality D. Significant shrubs removed in accordance with an approved tree preservation plan should be replaced by a combination of transplanting to another location on the subject property and/or replacement by 5-gallon plants at a minimum ration of 3.1. E. All other plants not specified in Guidelines C and D above that are removed in accordance with an approved tree preservation plan should be either transplanted to another location on the subject property or replaced by 15-gallon plants for trees and 5-gallon plants for shrubs at a minimum ration of 1 1 The two 35" + oak trees impacted by project implementation, will be mitigated by an				

	Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
	enhanced replacement ratio (5-15 gal/10-1 gal) to the satisfaction of the Manager, PF&R/Harbors Beaches and Parks Division.				
F	All transplanting of trees shall be performed by an experienced nursery or other landscape contractor, who shall care for the trees for at least six months after transplanting				
G.	Prior to issuance of final certificates of use and occupancy, all transplanted or replacement trees and shrubs shall be installed in accordance with the tree preservation plan.				
H.	Oak trees shall not be subjected to increased runoff from irrigation systems, impermeable surfaces, storm drain discharge, etc				
I.	Natural drainage courses and natural grades in proximity of, and providing seasonal irrigation to oak trees shall not be altered.				
J.	Grading, placement of fill, storage of building materials and heavy equipment, structural development, and hardscape (e.g., roads, sidewalks, patio slabs and pool decks) shall be prohibited within the drip line (outer edge of branches) of any tree. During grading and construction operations, all trees shall be temporarily fenced off with chain link fencing to protect such areas.				
K.	Use of pre-emergent weed killers shall be prohibited within 10 feet of the drip line of any individual tree and within any natural drainage course which seasonally irrigates trees.				
L.	Use of soil sterilizers shall be prohibited because they kill everything in the soil.				

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
SC 7-9 Specify areas/lots to be dedicated or irrevocably offered to the County in fee or easement for landscape maintenance purposes, scenic or resource preservation purposes or resource replacement shall be landscaped, equipped for irrigation, and improved in accordance with an approved plan as stated below:	Open Space Dedication	Plan Review	Prior to Issuance of Grading Permit	Mgr PF&R Harbors, Beaches & Parks Division
a) Preliminary Plan -An agreement shall be entered into and financial security posed guaranteeing landscape improvements and the maintenance thereof based on a preliminary landscape plan showing major plant material and uses, with a cost estimate for the landscape improvements. The preliminary plan and cost estimates shall be reviewed and approved by the Manager, PDS/Subdivision and Grading Services Division, in consultation with the Manager, PF&R/Harbors Beaches and Parks Division. Said plan shall take into account the previously approved landscape plan for AP 95-7, the EMA Standard Plans for landscape areas, adopted plant palette guides, applicable scenic and Specific Plan requirements, Water Conservation Measures contained in Board Resolution 90-487 (Water Conservation Measures), and Board Resolution 90-1341 (Water Conservation Implementation Plan).				
b) Detailed Plan - Prior to the issuance of any building permit(s), a detailed landscape plan shall be submitted to and approved by the Manager, PDS/Subdivision and Grading Services Division, in consultation with the Manager, PF&R/Harbors Beaches and Parks Division. Detailed plans shall show the detailed irrigation and landscaping design.	Open Space Dedication	Plan Review	Prior to Issuance of Grading Permit	Mgr. PF&R Harbors, Beaches & Parks Division
c) Installation Certification - Prior to the issuance of final certificates of use and occupancy and the release of the financial security guaranteeing the landscape improvements, said improvements shall	Open Space Dedication	Plan Review	Prior to Issuance of Grading Permit	Mgr PF&R Harbors, Beaches & Parks Division

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
be installed and shall be certified by a licensed landscape architect or licensed landscape contractor, as required, as having been installed in accordance with the approved detailed plans. Said certification, including an irrigation management report for each landscape irrigation system, and any other required implementation report determined applicable, shall be furnished in writing to the Manager, PF&R/Construction Division, and the Manager, PDS/Building Inspection Services Division, prior to the issuance of any certificates of use and occupancy.				
SC 7-10 Prior to the issuance of precise grading permits, landscaping for privately maintained areas shall be designed in accordance with a plan. The plan shall be certified by a licensed landscape architect or a licensed landscape contractor, as required, as taking into account approved preliminary landscape plan (if any), EMA Standard Plans, area plan 95-7, scenic corridor and Specific Plan requirements, Grading and Excavation Code erosion control requirements, Subdivision Code, Zoning Code, and conditions of approval, Water Conservation Measures contained in Board Resolution 90-487 (Water Conservation Measures) and Board Resolution 90-1341 (Water Conservation Implementation Plan). Said plan shall be reviewed by the future homeowners association and be reviewed and approved by the Manager, PDS/Subdivision and Grading Services Division.	Landscape Plan	Plan Review	Prior to Issuance of Grading Permit	Mgr PDS Subdivision & Grading Services
SC 7-11 Prior to the issuance of grading permits, the applicant shall provide additional evidence that the onsite coastal sage scrub habitat is not occupied by California gnatcatchers, in accordance with current USFWS protocol (7 in season/9 out of season pass surveys) to the satisfaction of the USFWS and the Administrator, Planning and Zoning. Should occupied coastal sage scrub habitat be identified onsite by the surveys consultation shall be initiated with the USFWS, and a coastal sage scrub/gnatcatcher mitigation plan shall be	Gnatcatcher Clearance	Document Review	Prior to Issuance of Grading Permit	Mgr. PDS Subdivision & Grading Services

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
developed to the satisfaction of the USFWS and the Administrator, Planning and Zoning prior to the issuance of grading permits				
SC 7-12 Prior to the issuance of grading permits, the applicant shall provide appropriate measures to mitigate the project related impacts to onsite wildlife movement, to the satisfaction of the USFWS, CDFG and the Administrator, Planning and Zoning Mitigation shall consider onsite as well as offsite mitigation options, and established fee programs	Wildlife Corridors	Document Review	Prior to Issuance of Grading Permit	Mgr. PDS Subdivision & Grading Services
SC 7-13 Prior to the issuance of grading permits, the applicant shall provide assurances to the satisfaction of the County NCCP coordinator and the Administrator, Planning and Zoning, that the proposed project will participate in the NCCP planning process and not preclude the finalization of the Southern Subregional reserve component of the NCCP.	NCCP Compliance	Document Review	Prior to Issuance of Grading Permit	NCCP Coordination
SC 7-14 Prior to the issuance of grading permits, the applicant shall prepare a relocation and establishment mitigation plan, designed to mitigate impacts to Riverside fairy shrimp/pond habitat, wetlands, and southern sycamore woodland, to the satisfaction of the Administrator, Planning and Zoning, in consultation with USFWS and CDFG. Mitigation shall consider onsite as well as offsite mitigation options, as well as, established fee programs.	Habitat Mitigation Plan	Plan Review	Prior to Issuance of Grading Permit	Administration, Planning & Zoning
Additional Mitigation Measures				
AM 7-15 The following recommendations are proposed to further minimize some of the proposed impacts				
• Where possible, bulbs of individual Catalina Mariposa Lily and Intermediate Mariposa Lily that are to be impacted shall be dug up and transplanted to a suitable habitat with similar soil, slope exposure, etc.	Plant Relocation	Document Review	Prior to Issuance of Grading Permit	Applicant

Project Design Features Standard Conditions of Approval Additional Mitigation Measures		Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
•	Lighting within development projects adjacent to conserved habitat should be selectively placed, shielded, and directed away from that habitat. In addition, lighting from homes abutting conserved habitat should be screened with vegetation, and large spotlight-type lighting that may affect conserved habitat should be prohibited. These lighting restrictions should be incorporated into the project's CC&Rs	Lighting Plan	Document Review	Prior to Issuance of Grading Permit	Applicant
AESTHETICS					
Project Design Features

Standard Conditions of Approval					
SC 8-5	Prior to the issuance of any building permits, an agreement shall be entered into and financial security posted guaranteeing landscape improvements and the maintenance thereof based upon a detailed landscape plan showing	Landscape Agreement	Document Review	Prior to Issuance of Building Permit	Mgr. PDS Subdivision & Grading Services

	Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
	landscape design and irrigation with a cost estimate for the landscape improvements approved by tPhe Manager, PDS/Subdivision and Grading Services Division, in consultation with the Manager, PF&R/Harbors Beaches & Parks Division. Said plan shall take into account previously approved landscape plan(s), PF&RD Standard Plans for landscape areas, adopted plant palette guides, applicable scenic and specific plan requirements, water conservation measures contained in Board Resolutions 90-487 (Water Conservation Measures), and 90-1341 (Water Conservation Implementation Plan).				
SC 8-6	Prior to the issuance of preliminary grading permits, landscaping for privately maintained areas shall be designed in accordance with a plan certified by a licensed landscape architect or a licensed landscape contractor, as required, as taking into account approved preliminary landscape plan(s), PF&RD Standard Plans, area plan 95-7 scenic corridor and Specific Plan requirements, Grading and Excavation Code erosion control requirements, Subdivision Code, Zoning Code, and conditions of approval, Water Conservation Measures contained in Board Resolutions 90-487 (Water Conservation Measures) and 90-1341 (Water Conservation Implementation Plan) Said plan shall be reviewed and approved by Manager, PDS/Building Permits Services Division, Manager, PDS/Subdivision and Grading Services Division, in consultation with the Manager, PF&R/Harbors Beaches & Parks Division, Environmental and Projects Planning Division.	Landscape Plan	Plan Review	Prior to Issuance of Grading Permit	Mgr. PF&RD
SC 8-7	Prior to the issuance of certificates of use and occupancy and release of financial security, applicant shall install the approved landscaping and irrigation system and shall have a licensed landscape architect or licensed landscape contractor, as applicable, certify that it was installed in accordance with the certified plan. Said certification, including an irrigation management report for each landscape irrigation system, and any other implementation	Landscape Installation	Field Check	Prior to Issuance of Certificate of Occupancy	Mgr. PDS Building Inspection Services Division

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
report determined applicable, shall be furnished in writing to the Manager, PDS/Building Inspection Services Division, prior to the issuance of any certificates of use and occupancy.				
SC 8-8 Prior to issuance of any building permit, the applicant shall demonstrate that all exterior lighting has been designed and located so that all direct rays are confined to the property in a manner meeting the approval of the Manager, PDS/Building Permits Services Division.	Lighting	Plan Review	Prior to Issuance of Building Permit	Mgr PDS Building Permit Services
Additional Mitigation Measures The following additional mitigation measures (AM) shall be implemented and enforced through the provisions of existing codes and regulations:				
AM 8-9 Prior to issuance of any grading permit, the project proponent shall provide evidence to the Manager, PDS/Subdivision and Grading Services Division that indicates that graded areas will be compatible with natural landform characteristics. Criteria to achieve the desired effect shall include a) Recontouring the existing landforms to provide a smooth and gradual transition between graded slopes and existing grade while preserving the basic topographic character of the site. b) Variation and combination of slopes 2:1, 3:1 and 4:1 to create a more natural character wherever possible within the graded areas c) Attempting to balance between cut and fill within the overall area to eliminate an offsite and import/export situation. d) Obscuring slope drainage structures with a variety of plant materials.	Grading Compatibility	Grading Plan Review	Prior to Issuance of Grading Permit	Mgr PDS Subdivision & Grading Services

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
e) Incorporation of architectural and design techniques into the project in order to minimize grading and enhance offsite views (e.g., split levels, clustering)				
f) Preservation of visual opportunities from hillsides by providing for panoramic views from selected locations (e g , view corridors, sensitive landscape placement)				
AM 8-10 Manufactured slopes shall be replanted with vegetation native to the site to blend the new topography with existing natural on site vegetation, immediately following precise grading operations.	Landscaping	Plan Review	Immediately Following Grading	Applicant
AM 8-11 Fuel modification areas shall be planted with fire resistant vegetation.	Landscaping	Plan Review	Immediately Following Grading	Applicant
AM 8-12 Use of the California Sycamore or other species similar to trees currently existing onsite shall be used in appropriate common area and street landscape locations where feasible.	Landscaping	Plan Review	Immediately Following Grading	Applicant
AM 8-13 Common area landscaping and habitat transition zones shall utilize the FTSP recommended plant palette (appendix E) when selecting plant material	Landscaping	Plan Review	Immediately Following Grading	Applicant
AM 8-14 Slope landscaping shall occur as soon as feasible after grading and be maintained by the applicant until a homeowners association has been organized and assumes long term maintenance responsibility.	Landscaping	Plan Review	Immediately Following Grading	Applicant
Light and Glare				
AM 8-15 Prior to issuance of any certificate of use and/or occupancy, the potentially adverse impact of night lighting on surrounding land use shall be mitigated to the satisfaction of the Manager, PDS/Subdivision and Grading Services Division by the following measures:	Night Lighting	Plan Review	Prior to Issuance of Certificate of Occupancy	Mgr. PDS Subdivision & Grading Services

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
a) Street lights shall only be installed at intersections and as required to insure public safety. b) Low intensity halogen street lamps shall be used. c) Street lights shall be shielded to direct the light beam downward and to avoid direct glare into open space areas and adjacent property **CULTURAL/SCIENTIFIC RESOURCES** **Project Design Features** No project design features were included in this project. **Standard Conditions of Approval** **Archaeology** SC 9-1 Prior to the issuance of any grading permit, a County-certified archaeologist shall be retained by the applicant to complete a literature and records search for recorded sites and previous surveys. In addition, a field survey shall be conducted by a County-certified archaeologist unless the entire proposed project site has been documented as previously surveyed in a manner which meets the approval of the Manager, PF&R/Harbors Beaches and Parks Division. A report of the literature and records search and the field survey shall be submitted to and approved by the Manager, PF&R/Harbors Beaches and Parks Division Mitigation measures may be required depending upon the recommendations of this report This mitigation measure has been completed as part of the Draft EIR.	Cultural Resources Report	Report Review	Prior to Issuance of Grading Permit	Mgr. PF&R, Harbors, Beaches & Parks

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
SC 9-2 Prior to issuance of any grading permit, a county-certified archaeologist shall be retained by the applicant to perform a subsurface test level investigation and surface collection as appropriate. The test level report evaluating the site shall include discussion of significance (depth, nature, conditions and extent of the resources), final mitigation recommendations and cost estimates and shall be approved by the Manager, PF&R/Harbors Beaches and Parks Division. Excavated finds shall be offered to the County of Orange, or designee, on a first refusal basis.	Cultural Resources Report	Report Review	Prior to Issuance of Grading Permit	Mgr. PF&R, Harbors, Beaches & Parks
SC 9-3 Prior to the issuance of any grading permit, the project applicant shall provide written evidence to the Manager, PDS/Subdivision and Grading Services Division, that a County-certified archaeologist has been retained to conduct pre-grade salvage excavation of the archaeological resources in the permit area. Excavated finds shall be offered to the County of Orange, or designee, on a first refusal basis. A final report of the salvage operation shall submitted to and approved by the Manager, PF&R/Harbors Beaches and Parks Division, prior to any grading.	Cultural Resources Report	Report Review	Prior to Issuance of Grading Permit	Mgr. PF&R, Harbors, Beaches & Parks
SC 9-4 Prior to the issuance of any grading permit, the project applicant shall provide written evidence to the Manager, PDS/Subdivision and Grading Services Division, that a County-certified archaeologist has been retained, shall be present at the pre-grading conference, shall establish procedures for archaeological resource surveillance, and shall establish, in cooperation with the project developer, procedures for temporarily halting or redirecting work to permit the sampling, identification, and evaluation of the artifacts as appropriate If the archaeological resources are found to be significant, the archaeological observer shall determine appropriate actions, in cooperation with the project developer, for exploration and/or salvage. The archaeologist shall submit a follow-up report to the Manager, PF&R/Harbors Beaches and Parks Division, which shall include the period of inspection, an analysis of	Cultural Resources Report	Report Review	Prior to Issuance of Grading Permit	Mgr. PF&R, Harbors, Beaches & Parks

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
any artifacts found and the present repository of the artifacts Excavated finds shall be offered to the County of Orange, or designee, on a first refusal basis These actions, as well as final mitigation and disposition of the resources, shall be subject to the approval of the Manager, PF&R/Harbors Beaches and Parks Division.				
Additional Mitigation Measures				
The following additional mitigation measures (AM) shall be implemented and enforced through the provision of existing codes and regulations in a manner acceptable to the Manager, PF&R/Harbors Beaches and Parks Division Facilities				
AM 9-5 Prior to site grading the project site shall be examined by a qualified archeologist, all potential archeological sites identified, and surface collection and documentation of artifacts be conducted	Cultural Resources Report	Report Review	Prior to Issuance of Grading Permit	Mgr. PF&R, Harbors, Beaches & Parks
AM 9-6 As indicated by the project archeologist, sites warranting further study shall be disced to ascertain the extent and significance of the deposit. If the project archeologist determines that a site is potentially of cultural worth, then additional excavation in a manner determined by the project archeologist shall occur prior to further grading or construction activities at these locations.	Cultural Resources Report	Report Review	Prior to Issuance of Grading Permit	Mgr PF&R, Harbors, Beaches & Parks
AM 9-7 During initial grading, the project site shall be monitored by a qualified archeologist who shall have the authority to order a temporary cessation of grading activities and take appropriate action to preserve any culturally significant materials if uncovered.	Cultural Resources Report	Report Review	Prior to Issuance of Grading Permit	Mgr. PF&R, Harbors, Beaches & Parks
AM 9-8 If human remains of Native American origin are encountered during the project the County Coroner's Office and the Native American Heritage Commission shall be contacted for preservation and protection of the remains.	Cultural Resources Report	Report Review	Prior to Issuance of Grading Permit	Mgr PF&R, Harbors, Beaches & Parks

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
Paleontology				
SC 9-9 Prior to the issuance of any grading permit, a County-certified paleontologist shall be retained by the applicant to complete a literature and records search for recorded sites and previous surveys. In addition, a field survey shall be conducted by a County-certified paleontologist unless the entire proposed project site has been documented as previously surveyed in a manner which meets the approval of the Manager, PF&R/Harbors Beaches and Parks Division. A report of the literature and records search and field survey shall be submitted to and approved by the Manager, PF&R/Harbors Beaches and Parks Division, Future mitigation shall depend upon the recommendations of the report This mitigation measure has been completed	Cultural Resources Report	Report Review	Prior to Issuance of Grading Permit	Mgr. PF&R, Harbors, Beaches & Parks
SC 9-10 Prior to the issuance of any grading permit, the project applicant shall provide written evidence to the Manager, PDS/Subdivision and Grading Services Division, that a County-certified paleontologist has been retained by the applicant to conduct pre-grade salvage and prepare a catalogue of the exposed resources. Excavated finds shall be offered to the County of Orange, or designee, on a first refusal basis. The paleontologist shall submit a follow-up report for approval by the Manager, PF&R/Harbors Beaches and Parks Division, for review and approval, which shall include methodology, an analysis of artifacts found, a catalog of artifacts, and their present repository This mitigation measure has been completed.	Cultural Resources Report	Report Review	Prior to Issuance of Grading Permit	Mgr. PF&R, Harbors, Beaches & Parks
SC 9-11 Prior to the issuance of any grading permit, the project applicant shall provide written evidence to the Manager, PDS/Subdivision and Grading Services Division, that a County-certified paleontologist has been retained to observe grading activities and salvage and catalogue fossils as necessary. The paleontologist shall be present at the pre-grading conference, shall establish procedures for paleontological resource surveillance, and shall establish, in	Cultural Resources Report	Report Review	Prior to Issuance of Grading Permit	Mgr. PF&R, Harbors, Beaches & Parks

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
cooperation with the project developer, procedures for temporarily halting or redirecting work to permit sampling, identification, and evaluation of the fossils. If major paleontological resources are discovered, the paleontologist shall determine appropriate actions, in cooperation with the project developer, which ensure proper exploration and/or salvage. Excavated finds shall be offered to the County of Orange, or its designee, on a first-refusal basis. The paleontologist shall submit a follow-up report for approval by the Manager, PF&R/Harbors Beaches and Parks Division, which shall include the period of inspection, a catalogue and analysis of the fossils found, and present repository of the fossils. These actions, as well as final mitigation and disposition of the resources, shall be subject to approval by the Manager, PF&R/Harbors Beaches and Parks Division				
Additional Mitigation Measures The following additional mitigation measures (AM) shall be implemented and enforced through the provisions of existing codes and regulations in a manner acceptable to the Manager, a Coastal and Historical Facilities				
AM 9-12 A qualified paleontologist shall be retained to perform periodic inspections of excavations and, if necessary, salvage exposed fossils. The frequency of inspections will depend on the rate of excavation, the materials being excavated, and the abundance of fossils. Initially, monitoring shall be on a full time basis in all excavations because of the high potential for the discovery of fossils in all the rock units present in the study area.	Cultural Resources Report	Report Review	Prior to Issuance of Grading Permit	Mgr. PF&R, Harbors, Beaches & Parks
AM 9-13 The paleontologist shall be allowed to divert or direct grading in the area of an exposed fossil to facilitate evaluation and if necessary, salvage.	Cultural Resources Report	Report Review	Prior to Issuance of Grading Permit	Mgr. PF&R, Harbors, Beaches & Parks
AM 9-14 To recover small fossils, it will be necessary to collect sediment samples	Cultural Resources Report	Report Review	Prior to Issuance of Grading Permit	Mgr. PF&R, Harbors, Beaches

	Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
	from promising horizons discovered during grading monitoring for processing through fine mesh screens Once the samples have been screened, they will be examined microscopically for small fossils				& Parks
AM 9-15	Fossils shall be prepared to the point of identification and catalogued before they are donated to their final repository	Cultural Resources Report	Report Review	Prior to Issuance of Grading Permit	Mgr PF&R, Harbors, Beaches & Parks
AM 9-16	All fossils collected should be donated the County of Orange's designated repository.	Cultural Resources Report	Report Review	Prior to Issuance of Grading Permit	Mgr. PF&R, Harbors, Beaches & Parks
AM 9-17	A report detailing the results of these efforts, listing the fossils collected, and naming the repository shall be submitted to the lead agency at the completion of the project.	Cultural Resources Report	Report Review	Prior to Issuance of Grading Permit	Mgr. PF&R, Harbors, Beaches & Parks
Historical Resources					
SC 9-18	Prior to issuance of a grading permit, project applicant shall provide written evidence to Manager, PF&R/Harbors Beaches and Parks Division that an historian has been retained by the applicant to implement final mitigation measures. A final report shall be submitted to and approved by the Manager, PF&R/Harbors Beaches & Parks Division prior to any alteration of the historical site area.	Cultural Resources Report	Report Review	Prior to Issuance of Grading Permit	Mgr. PF&R, Harbors, Beaches & Parks
SC 9-19	Development adjacent to a place, structure, or object of historic significance shall be designed so that permitted uses and architectural design will protect the visual setting of the historic site. Such design shall be submitted to and approved by the Manager, PF&R/Harbors Beaches & Parks Division prior to any alteration of the historical site area.	Cultural Resources Report	Report Review	Prior to Issuance of Grading Permit	Mgr PF&R, Harbors, Beaches & Parks

RECREATION				
Project Design Features				
PDF 10-1 The Live Oak and Aliso Creek riding and hiking trail shall be located on the Project Site as shown in Exhibit 7 and Exhibit 63 Site Plan.	Trails	Plan Review	Following Grading Operations	Mgr. PF&R Harbors, Beaches & Parks
PDF 10-2 Live Oak Canyon Trail shall be constructed onsite, connecting O'Neill Regional Park to the Aliso Creek riding and hiking trail, as shown in Exhibit No. 7, Site Plan.	Trails	Plan Review	Following Grading Operations	Mgr. PF&R Harbors, Beaches & Parks
PDF 10-3 Eight onsite private parks shall be constructed as shown on Exhibit 7 Site Plan, to offset project demand.	Park Construction	Field Check	Following Grading Operations	Mgr. PF&R Harbors, Beaches & Parks
Standard Conditions of Approval				
SC 10-4 The developer or his assigns and successors in interest shall maintain offered park site(s) until such time as the County or its designer accepts the offer of dedication, all in a manner of meeting the approval of the Manager, PF&R/Harbors Beaches & Parks Division.	Park Maintenance	Field Check	Following Construction	Mgr. PF&R Harbors, Beaches & Parks
Additional Mitigation Measures				
The following additional mitigation measures (AM) shall be implemented and enforced through the provisions of existing codes and regulations:				
AM 10-5 Prior to the first building occupancy, the applicant shall pay all park mitigation as required by the Department Manager, PF&R/Harbors Beaches & Parks Division.	Park Fee	Document Review	Prior to Issuance of Certificate of Occupancy	Mgr. PF&R Harbors, Beaches & Parks

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
AM 10-6 Prior to final building occupancy the applicant shall dedicate and construct all required regional trail connections and improvements as approved and required by the Department Manager, PF&R/Harbors Beaches & Parks Division.	Park Dedication	Document Review	Prior to Issuance of Certificate of Occupancy	Mgr. PF&R Harbors, Beaches & Parks
HAZARDS				
Project Design Features				
PDF 11-1 Implement a comprehensive fuel modification program in accordance with Section 27 of Appendix II-A of the 1994 Uniform Fire Code as adopted by County Ordinance 3954 (the Wildland Urban Interface Task Force report was not adopted and is not enforced by the OCFA). Exhibits 9 and 64 illustrate the fuel modification zones and, although adequately described, it should be noted that the distances are horizontal measurements rather than vertical and, therefore, may actually be larger zones as measured vertically up or down a slope (based on topography).	Future Modification	Document Review	Following Grading	Mgr. PF&R Harbors, Beaches & Parks
PDF 11-2 Incorporate the use of native, low fuel plant species into the landscape plan for both manufactured slope areas and remedial grading areas where appropriate as approved by the OCFA.	Future Modification	Document Review	Following Grading	Mgr. PF&R Harbors, Beaches & Parks
PDF 11-3 Provide for the construction of a water tank off site to ensure adequate on site water supply and OCFA fire flow requirements. The minimum fireflow requirements for this project of 1500 gpm for a minimum of 2 hours at 20 psi residual pressure. This flow must be available 24 hours per day .	Water Tank Construction	Field Check	Following Grading	Mgr. PF&R Harbors, Beaches & Parks
PDF 11-4 Wet and dry utilities shall be constructed on opposite sides of the project streets to minimize land closure during maintenance periods.	Utility Construction	Plan Review	Following Grading	Mgr. PF&R Harbors, Beaches & Parks

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
PDF 11-5 Residential structures shall be constructed of fire-resistant material, including but not limited to "Class A roof assemblies", closed eaves and offsets, double paned or dual glazed windows, and the exterior walls of structures will be constructed of " 1-hour fire resistant materials", and all structures will have fire sprinklers.	Unit Construction	Plan Review	Following Grading	Mgr. PDS Building Permit Services
PDF 11-6 All residential structures shall be required to have automatic interior fire sprinkler systems.	Fire Sprinkler	Plan Review	Prior to Issuance of Building Permit	Mgr PDS Building Permit Services
PDF 11-7 The interface area between residential lots and open space areas within the project boundary shall be wrought iron fenced to minimize intrusion of wildlife into the built portions of the project site	Fencing	Plan Review	Prior to Issuance of Building Permit	Mgr. PDS Building Permit Services
Standard Conditions of Approval				
SC 11-8 Prior to the issuance of any preliminary grading permits, applicant shall request that the Manager, HCA/Environmental Health, determine if vector control measures are necessary. If warranted, such measures shall be conducted by the developer in a manner meeting the approval of the Manager, HCA/Environmental Health.	Vector Control	Plan Review	Prior to Issuance of Grading Permits	Mgr. HCA Environmental
SC 11-9 Prior to the issuance of any building permits for combustible construction, a letter and plan from the developer shall be submitted stating that water for fire fighting purposes and an all weather fire access road shall be in place before any combustible materials are placed on the site. Said letter shall be approved by the Fire Chief prior to the issuance of any building permits.	Water Supply	Plan Review	Prior to Issuance of Building Permit	Fire chief
SC 11-10 Prior to the issuance of any building permits on those lots determined applicable by the Fire Chief, plans for an automatic fire sprinkler system shall be submitted to and approved by the Fire Chief prior to installation.	Fire Sprinkler	Plan Review	Prior to Issuance of Building Permit	Fire chief

	This system shall be operational prior to the issuance of a certificate of use and occupancy				
SC 11-11	Prior to the issuance of any building permits, the applicant shall submit a detailed letter of intended use for each building to the Fire Chief for review and approval	Building Summary	Plan Review	Prior to Issuance of Building Permit	Fire chief
SC 11-12	Prior to the issuance of any grading permits, preliminary plans for all street and courts, public or private, shall be submitted to and approved by the Fire Chief. The plans shall include the plan view, sectional view, and indicate the width of the street or court measured flow line to flow line. All proposed fire apparatus turnarounds shall be clearly marked.	Street Plans	Plan Review	Prior to Issuance of Grading Permits	Fire chief
SC 11-13	Prior to the issuance of any certificates of use and occupancy, street improvement plans with fire lanes shown shall be submitted to and approved by the Fire Chief. The plans shall indicate the locations of red curbing and signage, and provide a drawing of the proposed signage with the height, stroke and color of lettering and the contrasting background color	Street Plans	Plan Review	Prior to Issuance of Certificate of Occupancy	Fire chief
SC 11-14	Prior to the issuance of any grading permits, construction details for any emergency access gate shall be submitted to and approved by the Fire Chief. Contact the Orange County Fire Department at (714)744-6623 for a copy of the "Guidelines for Fire Department Emergency Access".	Street Plans	Plan Review	Prior to Issuance of Grading Permits	Fire chief
SC 11-15	Prior to the issuance of any grading permits, a fuel modification plan and program shall be submitted and approved by the Fire Chief in consultation with the Manger, Environmental and Project Planning. The Planning and Development Section shall be contacted at 744-0403 for requirements to be met and clearance of this condition. The plan shall indicate the	Fuel Modification	Plan Review	Prior to Issuance of Grading Permits	Fire chief

	Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
	proposed means of achieving an acceptable level of risk to structures by vegetation, include the method (mechanical or hand labor) for removal of flammable vegetation and provide for the planting of drought tolerant fire resistant plants				
SC 11-16	Prior to the issuance of any building permits, the developer shall have completed, under the supervision of the Fire Chief, that portion of the approved fuel modification plan determined to be necessary by the Fire Chief before the introduction of any combustible construction material into the project area.	Fuel Modification	Plan Review	Prior to Issuance of Building Permit	Fire chief
SC 11-17	Prior to the issuance of any certificates of use and occupancy, the remaining fuel modification shall be installed and completed under the supervision of the Fire Chief. Further, the installed fuel modification shall be established to a degree meeting the approval of the Fire Chief.	Fuel Modification	Plan Review	Prior to Issuance of Certificate of Occupancy	Fire chief
Additional Mitigation Measures					
No additional mitigation measures have been proposed.

PDF 12-2 Implement a comprehensive fuel modification program in accordance with the guidelines established by the Wildland Urban Interface Task Force, July 1994, as approved by the Orange County Fire Authority (OCFA)	Fuel Modification	Plan Review	Prior to Issuance of Certificate of Occupancy	OCFA
PDF 12-3 Incorporate the use of native, low fuel plant species into the landscape plan for both manufactured slope areas and remedial grading areas where appropriate as approved by the OCFA.	Fuel Modification	Plan Review	Prior to Issuance of Certificate of Occupancy	OCFA
PDF 12-4 Provide for the construction of a 1.4 million gallon water tank offsite to ensure adequate onsite water supply for water supply and fire flow use.	Water Tank Construction	Plan Review	Prior to Issuance of Certificate of Occupancy	OCFA
PDF 12-5 Wet and dry utilities shall be constructed on opposite sides of the project streets to minimize land closure during maintenance periods.	Utility Construction	Plan Review	Prior to Issuance of Certificate of Occupancy	OCFA
PDF 12-6 Residential structures shall be constructed of fire resistant material as approved by the OCFA. In addition, no ventilation openings shall be allowed on the side of residential structures facing natural areas	Unit Construction	Plan Review	Prior to Issuance of Building Permits	OCFA
PDF 12-7 OCFA shall have the ability to enter the property through the secondary access road located off of Valley Vista Way	Emergency Access	Plan Review	Prior to Issuance of Building Permits	OCFA
Education				
No PDF's have been proposed.				
Library				
PDF 12-8 The developer shall pay any development fees required by the County of Orange Development Fee Program for libraries	Library Fee	Document Review	Prior to Issuance of Certificate of	County Librarian

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
			Occupancy	
Solid Waste				
No PDF's proposed.				
Standard Conditions of Approval				
SC 12-9 Prior to issuance of building permits, the applicant shall pay development fees for general County facilities if an applicable fee program has been adopted by the Board of Supervisors pursuant to Section 7-9-700 through 7-9-713 of the Codified Ordinances of the County of Orange, and such fee program is in effect at the time of issuance of building permits, all, in a manner meeting the approval of the Manager, PDS/Environmental and Project Planning Services.	Development Fee	Document Review	Prior to Issuance of Building Permits	Mgr. PDS Environmental & Project Planning Division
Sheriff				
SC 12-10 Prior to the issuance of the first building permit, the project proponent shall enter into an agreement to (a) participate in funding the provision of the Saddleback Sheriff's Station; and (b) fund the provision of patrol and investigator cars needed to serve the project	Sheriff Agreement	Document Review	Prior to Issuance of Building Permits	OC Sheriff
Fire				
SC 12-11 Prior to the issuance of any certificates of use and occupancy, all onsite fire protection devices, including fire sprinklers, fire hydrants, alarm systems and fire suppression facilities, shall be installed and maintained in good condition by the property owner in a manner meeting the approval of the Fire Chief.	Fire Suppression Equipment	Field Check	Prior to Issuance of Certificate of Occupancy	Fire Chief
SC 12-12 Prior to issuance of any building permits for combustible construction, a	Water Supply	Plan Review	Prior to Issuance of Building	Fire Chief

	Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
	plan from the developer shall be submitted to and approved by the Fire Chief indicating that water for fire fighting purposes and an all weather fire access road shall be in place before any combustible materials are placed on the site			Permits	
SC 12-13	Prior to issuance of certificates of use and occupancy, emergency access shall be constructed in a manner meeting the approval of the Fire Chief.	Emergency Access	Plan Review	Prior to Issuance of Certificate of Occupancy	Fire Chief
SC 12-14	The approved fuel modification plan shall be installed prior to the issuance of building permits, under the supervision of the Fire Chief, and completed prior to the issuance of any use and occupancy permits. The CC&R's shall contain provision for maintaining the fuel modification zones including the removal of all dead and dying vegetation and the inspection and correction of any deficiencies in the irrigation system three times a year.	Fuel Modification	Plan Review	Prior to Issuance of Building Permits	Fire Chief
SC 12-15	Prior to the issuance of any grading permits, as part of the area plan, a fuel modification plan and program shall be submitted and approved by the Fire Chief Contact the Wildland Fire Defense Planning Section at 744-0498 for requirements and clearance of this condition The plan shall indicate the proposed means of achieving an acceptable level of risk to structures by vegetation. Include the method (mechanical or hand labor) for removal of flammable vegetation and the planting of drought tolerant fire resistant plants	Fuel Modification	Plan Review	Prior to Issuance of Grading Permits	Fire Chief
SC 12-16	Prior to the issuance of any grading permits, the applicant shall submit a list of the quantities of all hazardous, flammable and combustible materials, liquids or gases. These materials shall be classified according to the "Orange county Fire Department Chemical Classification Handout", including a summary sheet listing each hazard class, the total quantity of chemicals stored per class and the total quantity of chemicals used in that class, all in a manner meeting the approval of the Fire Chief	Hazardous Materials	Document Review	Prior to Issuance of Grading Permits	Fire Chief

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
SC 12-17 Prior to the issuance of any certificate of use or occupancy, all fire hydrants shall have a "Blue Reflective Pavement Marker" indicating its location on the street or drive per the Orange County Fire Authority Standard. On private property these markers are to be maintained in good condition by the homeowners association.	Fire Hydrants	Document Review	Prior to Issuance of Certificate of Occupancy	Fire Chief
SC 12-18 Prior to the issuance of any building permits, plans for the automatic fire sprinkler system shall be submitted to and approved by the Fire Chief prior to installation. The system shall be operational prior to the issuance of the certificate of use and occupancy	Fire Sprinklers	Document Review	Prior to Issuance of Building Permits	Fire Chief
SC 12-19 Prior to the issuance of any grading permit, street improvement plans with fire lanes shown shall be submitted to and approved by the Fire Chief indicating the locations of red curbing and signage Provide a drawing of the proposed signage with the height, stroke and color of lettering and the contrasting background color The CC&R's shall contain a fire lane map, provisions which prohibit parking in the fire lanes, and a method of enforcing fire lane requirements by the homeowners association.	Fire Lanes	Document Review	Prior to Issuance of Grading Permits	Fire Chief
Education				
SC 12-20 Prior to the issuance of building permits, the applicant shall pay all applicable school fees required in accordance with State law Current school impact fees are $1 72 per square-foot of residential	School Fees	Document Review	Prior to Issuance of Building Permits	SVUSD
Library				
No Standard Conditions of Approval Mitigation Measures have been proposed.				

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
Solid Waste				
SC 12-21 The potential for the proposed project to impact solid waste collection and disposal has been reduced to a level of insignificance through engineering design and construction techniques. A note on the building plans and certified by a licensed engineer shall substantiate that the features have been incorporated into the building plans in a manner meeting the approval of the Manager, PDS/Building Permits Services Division.	Solid Waste Plan	Document Review	Prior to Issuance of Building Permits	Mgr PDS Building Permits Services
SC 12-22 Prior to the issuance of any building permits, a plot plan delineating the capacity, number, and location of all proposed solid waste collection areas shall be submitted to the Manager, HCA/Environmental Health, for review and acceptance. A note on the building plans and certified by a licensed engineer shall substantiate that the features have been incorporated into the building plans in a manner meeting the approval of the Manager, PDS/Building Permits Services Division.	Solid Waste Plan	Plan Review	Prior to Issuance of Building Permits	Mgr. HCA Environmental Health
SC 12-23 Prior to the approval of a building permit the applicant shall submit a Recycling/Source Reduction Plan to the Manager, PDS/Environmental and Project Planning Services Division, for review and approval. Said plan shall provide a strategy to facilitate compliance with waste diversion levels as mandated by AB 939, and may include elements which demonstrate commitment to a project specific operation, coordination with existing local or regional programs, and the use of recycled materials during and following construction of the project. A note on the building plans and certified by a licensed engineer shall substantiate that the features have been incorporated into the building plans in a manner meeting the approval of the Manager, PDS/Building Permits Services Division.	Recycling Plan	Plan Review	Prior to Issuance of Building Permits	Mgr. PDS Environmental & Project Planning
SC 12-24 Prior to the issuance of any certificates of use and occupancy, the	Solid Waste Plan	Plan Review	Prior to Issuance of Certificate of	Mgr. HCA Environmental

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
applicant shall provide verification that the solid waste plan delineating the capacity, number, and location of all proposed solid waste collection areas, previously reviewed and accepted by the Manager, HCA/Environmental Health, has been implemented/incorporated into the project, in a manner meeting the approval of the Manager, PDS/Building Inspection Services			Occupancy	Health
SC 12-25 Prior to the approval of a Site Development Permit the applicant shall submit a Recycling/Source Reduction Plan to the Manager, ENV /Project Planning Services Division, for review and approval. Said plan shall provide a strategy to facilitate compliance with waste diversion levels as mandated by AB 939, and may include elements which demonstrate commitment to a project specific operation, coordination with existing local or regional programs, and the use of recycled materials during and following construction of the project.	Recycling Plan	Plan Review	Prior to Issuance of Site Development Permit	Mgr. PDS Environmental & Project Planning
SC 12-26 Prior to the issuance of any certificates of use and occupancy, the applicant shall provide verification that the solid waste plan delineating the capacity, number, and location of all proposed solid waste collection areas, previously reviewed and accepted by the Manager, HCA/Environmental Health, has been implemented/incorporated into the project, in a manner meeting the approval of the Manager, PDS/Building Inspection Services Division	Solid Waste Plan	Plan Review	Prior to Issuance of Certificate of Occupancy	Mgr HCA Environmental Health
Additional Mitigation Measures No additional mitigation measures have been proposed.				

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
PUBLIC UTILITIES AND SERVICE SYSTEMS				
Project Design Features				
Water				
PDF 13-1 The new booster pump station shall be paid for by the applicant and designed and function according to TCWD's guidelines and standards.	Pump Stations	Plan Review	Prior to Issuance of Certificate of Occupancy	TCWD
PDF 13-2 Operational capacities and pressure parameters for design of the booster pump station (approved by OCFA) shall be determined at design stage and should incorporate but not be limited to the following requirements:	Pump Station	Plan Review	Prior to Issuance of Certificate of Occupancy	OCFA
• It shall meet the maximum day demand for the "stand alone" zones of Saddleback Meadows with an operating time of 24 hours and without its largest unit in service				
• It shall be designed with a back-up generator for the booster pump, as well as fuel and maintenance provisions.				
• It shall incorporate the typical 3 or 4 pump system with an alternating state sequence.				
• It shall pump from TCWD's El Toro Road zone (1,165 feet HWL) to the storage facility (reservoir) proposed				
• It shall have the ability to refill the proposed reservoir, if it were empty, within 72 hours while also providing for maximum day demands on the water system during that time.				

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
PDF 13-3 Water conservation measures to be implemented consist of water-conserving features in the design and construction of residential homes and uses, plus use of drought-tolerant plant materials in the slope and streetscape plantings. Proposed water conservation measures also include • Supply line pressure: Water pressure greater than 50 pounds per square inch (psi) reduced to 50 psi or less by means of pressure-reducing valves • Ultra-low-flush toilets: 1 5 gallon-per-flush toilets installed in all new construction. • Landscape with low-water-using plants wherever feasible • Grouping of plants of similar water use to reduce over-irrigation of low-water-using plants. • Extensive use of mulch as top cover to improve water-holding capacity of the soil. • Installation of efficient irrigation systems that minimize runoff and evaporation, and maximize the amount of water reaching plant roots. Drip irrigation, soil moisture sensors, and automatic irrigation systems are proposed methods of increasing irrigation efficiency.	Water Conservation	Plan Review	Prior to Issuance of Certificate of Occupancy	TCWD
PDF 13-4 All design and landscape features shall comply with TCWD's guidelines and standards.	Landscape Design	Plan Review	Following Grading	TCWD

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
Wastewater				
PDF 13-5 All utilities shall be installed by the applicant in accordance with Department/County requirements, per the requirements outlined on the Final Tract Map.	Wastewater Utilities	Plan Review	Following Grading	TCWD
Electricity				
PDF 13-6 All utilities shall be installed by the applicant in accordance with Department/County requirements, per the requirements outlined on the Final Tract Map.	Electrical Facilities	Plan Review	Following Grading	SCE
Natural Gas				
PDF 13-7 All utilities shall be installed by the applicant in accordance with Department/County requirements, per the requirements outlined on the Final Tract Map	Natural Gas Facilities	Plan Review	Following Grading	SCG
Cable				
PDF 13-8 All utilities shall be installed by Cox Cable in accordance with Department/County requirements, per the requirements outlined on the Final Tract Map.	Cable Facilities	Plan Review	Prior to Issuance of Certificate of Occupancy	Cox Cable
Communications				
PDF 13-9 All utilities shall be installed by the applicant in accordance with Department/County requirements, per the requirements outlined on the Final Tract Map.	Telephone Facilities	Plan Review	Prior to Issuance of Certificate of Occupancy	Pacific Bell

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
Standard Conditions and Mitigation Measures				
Water				
SC 13-10 Prior to the issuance of any building permit(s), the applicant shall provide a report to the Manager, PDS/Building Permits Services Division, indicating that plans showing the location of all proposed reclaimed water lines used to irrigate open spaces, parks, and other landscaped areas, have been submitted to and approved by the Trabuco Canyon Water District	Reclaimed Water Report	Report Review	Prior to Issuance of Building Permits	Mgr. PDS Building Permits Services
SC 13-11 Prior to the issuance of building permits, water conservation measures shall be incorporated into the development design plans and which shall be submitted for approval to the Trabuco Canyon Water District.	Water Conservation	Report Review	Prior to Issuance of Building Permits	Mgr. PDS Building Permits
Wastewater				
SC 13-12 Prior to the issuance of a certificate of use and occupancy, sewer lines, connections, and structures shall be installed in a manner meeting the approval of the Manager, HCA/Environmental Health. A All waste water facilities and line shall be constructed and maintained to meet TCWD standards and requirements. B. All sewer lines shall be underground facilities. C. The project shall comply with all State of California Health and Safety Codes	Wastewater Line Connection	Field Check	Prior to Issuance of Certificate of Occupancy	Mgr. HCA Environmental Health

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
Electricity				
SC 13-13 Prior to the issuance of a building permit, project proponent shall consult with the local gas and electric companies regarding feasible energy conservation features that should be included in the design of the proposed project. A note on the building plans and certified by a licensed engineer shall substantiate that the features have been incorporated into the building plans in a manner meeting the approval of the Manager, PDS/Building Permits Services Division.	Energy Conservation	Plan Review	Prior to Issuance of Building Permits	Mgr PDS Building Permits Services
SC 13-14 Prior to the issuance of a building permit, the project proponent shall incorporate passive or natural heating and cooling opportunities in the design of the proposed project including but not limited to the following: solar energy use; thermal insulation, tinted or solar reflective glass; orientation to sunlight, use of deciduous trees in landscaping; installation of roof fans, utilize fluorescent lighting, switches and thermostat, utilize time-controlled lighting, and, utilize AC units with 100% outdoor air economize. A note on the building plans and certified by a licensed engineer shall substantiate that the features have been incorporated into the building plans in a manner meeting the approval of the Manager, PDS/Building Permits Services Division	Energy Conservation	Plan Review	Prior to Issuance of Building Permits	Mgr PDS Building Permits Services
Natural Gas				
SC 13-15 The applicant shall provide for all lines and mains necessary to provide natural gas to the project	Natural Gas Lines	Plan Review	Prior to Issuance of Building Permits	Mgr. PDS Building Permits Services
SC 13-16 The applicant shall obtain all required permits and follow all SCG, State and County regulations and requirements regarding natural gas service	SCG Permits	Plan Review	Prior to Issuance of Building Permits	SCG

Project Design Features Standard Conditions of Approval Additional Mitigation Measures	Implementation Actions, Conditions or Mechanism	Method of Verification	Timing of Verification	Responsible Person
Cable				
No standard condition of approval have been proposed				
Communications				
SC 13-17 Applicant shall comply with the requirements of the California Public Utilities Commission and Pacific Bell Telephone Company for the provision of telephone service	Telephone Facilities	Plan Review	Prior to Issuance of Building Permits	Pac Bell

PLANNING & DEVELOPMENT SERVICES DEPARTMENT
P.O. Box 4048
SANTA ANA, CALIFORNIA 92702-4048

(REVISED)

NOTICE OF PREPARATION

FILED

Date: February 6, 1997

FEB 05 1997

Subject: Revised Notice of Intent to Prepare A Draft Environmental Impact Report # 566

GARY L. GRANVILLE, Clerk-Recorder
By _____ DEPUTY

Project Title: Saddleback Meadows Development

Applicant: California Quartet, Inc.

The Orange County Planning & Development Services Department has conducted an Initial Study for the subject project and has determined that an Environmental Impact Report is necessary. The County of Orange will be the Lead Agency for the subject project and will prepare the EIR. In order for the concerns of your agency to be incorporated into the Draft EIR, we need to know the views of your agency as to the scope and content of the environmental information relevant to your agency's statutory responsibilities in connection with the proposed project. Your agency must consider the EIR prepared by the County of Orange when considering your permit or approval for the project. The project description, location, and an analysis indicating the probable environmental effects of the proposed action are contained in the attached materials.

Pursuant to Section 21080.4 of CEQA, your response must be sent as soon as possible but not later than 30 days after receipt of this notice.

If any significant changes in the proposed project occur, we will advise you. If you have need for additional information contact Raymond H.C. Brantley/William Grieman of the Environmental & Project Planning Division at 834-5550.

Submitted by:

Raymond H.C. Brantley

Attachment: Initial Study

NOTICE OF INTENT TO PREPARE (NOP)
DRAFT SUBSEQUENT ENVIRONMENTAL IMPACT REPORT EIR (566)
FOR THE SADDLEBACK MEADOWS DEVELOPMENT project
GRADING APPLICATION GA960048
TRACT MAP 10692

I. INTRODUCTION/BACKGROUND

Pursuant to Public Resources Code Section 21165, the County of Orange is the Lead Agency responsible for preparing a Subsequent Environmental Impact Report (EIR) addressing potential impacts associated with the proposed Saddleback Meadows project located approximately ½-mile from the El Toro Road/Live Oak Canyon Road intersection in the Foothill/Trabuco Specific Plan area of unincorporated Orange Count. Section 15162 of the California Environmental Quality Act (CEQA) Guidelines describes a Subsequent EIR which will be the type of EIR prepared for the proposed project. According to this Section, a Subsequent EIR shall be prepared when subsequent changes are proposed in the project which will require important revisions of the previous EIR due to the involvement of new significant environmental impacts not considered in the previous EIR.

Subsequent EIR 566 will be based upon EIR 059, certified in May, 1978, FEIR 203, certified January 9, 1980, and FEIR 531, certified December 10, 1991. It will also incorporate relevant portions of DEIR 561 proposed for the earlier project. The currently proposed project was also evaluated as Alternative 2 in EIR 561.

II. PROJECT DESCRIPTION

The project proposes the phased development of 705 manufactured single family housing units and a 1.7-acre, neighborhood commercial center and associated infrastructure, on a 222.23-acre site on the easterly side of El Toro Road. The gross residential density is 3.17 du/ac, with minimum lot sizes of 2,630 square feet. Ten (10%) percent of the project site is proposed to remain in open space. In addition to the residential component, the project also proposes a private park site, regional riding/hiking trail connections, and construction of a water tank site dedicated to, and accepted by, the Trabuco Canyon Water District. Project implementation requires the approval of a grading plan. The grading permit application (GA960048) is based on tract 10692, which was recorded December 16, 1988.

The project site is located within the Foothill/Trabuco Specific Plan and the Aliso Creek Corridor Specific Plan approximately ½-mile southerly of the El Toro Road/Live Oak Canyon Road intersection. Implementation of the proposed project would directly effect 158 0-acres of the project site, not including remedial grading and fuel modification requirement. Total development footprint area would affect 90% or 200 acres of the project site In addition to onsite grading 2.04-acres of offsite area would be effected for access road construction and remedial grading.

A total of 3.7 million cubic yards of conventional grading and 10 million cubic yards of remedial grading would be required to implement the project.

The following table summarizes major features for the proposed project and current surrounding residential developments

SURROUNDING PROJECT COMPARISON SUMMARY

FEATURE	PROPOSED PROJECT	PORTOLA HILLS	HIDDEN HILLS/ HIDDEN RIDGE
Acreage	222.23	1,399	74
Dwelling Units	705	2,200	230
Minimum Lot Size	2,630 sf	3,000 sf	5,000 sf
% Open Space	10%	39%	31%
Gross Density	3.17 du/ac	2.2 du/ac	3.1 du/ac
Conventional Grading/Lot	4,500 cy	7,450 cy	5,850 cy
Wildlife Corridor	No	No	No
Regional Trail Connections	Yes	Yes	Yes

III. SUMMARY OF POTENTIALLY SIGNIFICANT IMPACTS

An Initial Study has been completed analyzing the proposed project pursuant to Section 15063 of the CEQA Guidelines It has been determined that there is substantial evidence that significant effects may occur in the topical areas of: Land Use, Geophysical; Water; Transportation; Air Quality; Noise; Biological Resources; Aesthetics, Cultural/Scientific Resources; Recreation; Hazards and Cumulative Impacts Areas that revealed less than or no significant effects were. Population and Housing; Energy and Minerals, Public Services; and Utilities and Service Systems. For more detail consult the Initial Study analysis

IV. ALTERNATIVES TO BE EVALUATED IN THE DRAFT EIR

The EIR will include a range of Alternatives which fulfill the following California Environmental Quality Act (CEQA) criteria outlined in Section 15126(d) of the CEQA Guidelines:

A. Alternatives Which Achieve the Project's Objectives: Section 15126(d) requires a range of Alternatives which could feasibly achieve the project's objectives.

B. Alternatives Which Eliminate or Reduce Project Impacts CEQA Guidelines Section 15126(d)(3) requires that the Alternatives Section of an EIR shall focus on those alternatives capable of eliminating or reducing any significant adverse impacts on the environment caused by the project.

C. Rule of Reason: Section 15126(d)(5) of the CEQA Guidelines requires that the range of Alternatives in an EIR be governed by the "rule of Reason" which requires the EIR to set forth only those alternatives necessary to permit a reasoned choice by the decision-maker.

Proposed Alternatives

The Lead Agency has determined that the following Alternatives to the proposed project are reasonable alternatives to be discussed in EIR 566 in compliance with Section 15126(d) of the Guidelines·

1 No Project/ No Development Alternative - This alternative would leave the proposed site in its existing condition.

2 FTSP EIR 531 Staff Alternative A - This alternative would allow 150 sf units with a minimum lot size of 20,000 square feet.

3. FTSP EIR 531 Staff Alternative B - This alternative would reduce the number of dwelling units on the project site to no more than 100 on approximately 30 acres.

4 299 Unit Single Family Housing Alternative - This alternative is the proposed project recommended by the OCEMA in preparation of EIR 561

5 Cluster/Reduced Development Footprint - This alternative evaluates a 318 detached and attached unit project within a reduced development footprint.

V. MANDATORY FINDINGS

A. Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?

Yes. The proposed project has the potential of significantly affecting the range of wildlife that may currently use this property as a wildlife movement corridor.

B Does the project have the potential to achieve the short-term environmental goals to the disadvantage of the long-term environmental goals?

Yes. The project has the potential to affect the NCCP related wildlife corridor planning for this area.

C Does the project have possible environmental effects which are individually limited but cumulatively considerable? ("cumulatively considerable" means that the incremental effects of an individual project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)

Yes. The proposed project could have significant cumulative effects on the air quality, traffic and biological resources of the area.

D. Does the project have environmental effects which will cause substantial adverse effects on human

beings, either directly or indirectly? *Yes. project implementation could have substantial adverse effects on human beings in terms of noise, air quality and geotechnical hazards. These potentially significant impacts shall be analyzed under each topical area of the EIR.*

VI. INITIAL STUDY

The Initial Study analysis is included in this NOP for review.

DETERMINATION

Based on the Initial Study above, the proposed project may have a significant effect on the environment which has not been analyzed in any previous CEQA document. Therefore an Environmental Impact Report (EIR) is required.

PROJECT BACKGROUND/CHRONOLOGY

The current proposed project is the culmination of planning efforts with the County of Orange over a seventeen (17) year period. The following Chronology identifies key dates in the project's evolution·

SADDLEBACK MEADOWS PROJECT CHRONOLOGY

DATE	PROJECT RELATED EVENT
August 8, 1978	- The Orange County Board of Supervisors adopted GPA 78-1, Item 4, the "Saddleback Meadows Mobile Home Subdivision" which granted a change in the Land Use Element designation for the site from 5.4 Other Open Space to 1 22 Medium Low Density Residential and 2.1 Local Commercial. Maximum number set at 617 dwelling units. Triggering mechanism to revert land use designation to original after 2 years commenced. EIR 059 certified.
February 6, 1979	- Board adopted Site Plan conditions as requirements for implementing the subject amendment. Draft EIR 059, which was the CEQA documentation for the site plan, identified major grading impacts as project related impacts, these impacts were also shown on grading plans for Tentative Tract Map TT10692, prepared for the project.
March 7, 1979	- Zone change application, Tentative Tract Map and Initial Study requests submitted to County for a maximum of 617 mobile home units and a neighborhood convenience commercial center on the project site.
March 29, 1979	- Determination of requirement for an EIR transmitted to applicant by Environmental Services Division (ESD).
June 5, 1979	- Appeal of EIR requirement by Cliff Russell, representing Worthington/McNiff
June 11, 1979	- The Orange County Planning Commission denied the appeal Supplemental EIR required for proposed 617 unit tentative tract map
June 25, 1979	- Zone Change 79-24 submitted to County The project proposed at this time consisted of 617 units
August 7, 1979	- Revised Tentative Tract Map was submitted to the County for Screencheck reflecting some design modifications requested by County staff as well as an increase of 145 dwelling units added to the project by the proponent.
August 17, 1979	- Revised Tentative Tract Map and Supplemental Environmental Information submitted to Environmental Services (ESD). Submittal raised many questions with ESD in that the project had been revised substantially with a 23.5% increase in total number of units and intensity of land use.

Saddleback Meadows Project Chronology (Cont'd)

DATE	PROJECT RELATED EVENT
August 21, 1979	- Revised Zone Change 79-24 received by the County reflecting the revised project proposal of 762 units, with 25% in affordable range.
November 28, 1979	- Revised TT10692 filed with Environmental Management Agency depicting 727 lots, including 714 residential lots, 1 commercial lot and several open space and utility lots.
December 13, 1979	- TT10692 approved by the Planning Commission with recommendation that Zone Change ZC79-24 be approved by Board of Supervisors
January 9, 1980	- Saddleback Meadows properties placed in the PC "Planned Community" District and adopted by Board of Supervisors, Ordinance Number 3177. Final EIR 203 certified.
October 28, 1981	- Two year extension of time to record to expire December 12, 1983 approved by the Subdivision Committee.
December 7, 1981	- Appeal to deny two year extension of time affirmed by Planning Commission. One year extension of time to record to expire December 12, 1982 granted by Planning Commission.
November 17, 1982	- An additional one year extension of time to record to expire December 12, 1983 approved by Subdivision Committee.
July 13, 1983	- Saddleback Meadows Planned Community District Regulations amended by Planning Commission, and adopted by Board of Supervisors, Ordinance Number 3398 (ZC82-63P)
October 26, 1983	- Third one year extension of time to record approved.
June 13, 1984	- Saddleback Meadows Planned Community District Regulations amended by Planning Commission, and adopted by Board of Supervisors, Ordinance 3486 (ZC84-3P).
October 24, 1984	- 589-day stay of time in which to record a final tract map approved by Subdivision Committee. Expiration date extended to July 24, 1986
July 24, 1986	- Water district could not provide sewer service; recordation not allowed until sewer capacity available.
December 16, 1988	- Tract Map 10692 recorded.
December 10, 1991	- Foothill/Trabuco Specific Plan approved and Final EIR 531 certified by Orange County Board of Supervisors The Specific Plan incorporated the Saddleback Meadows Planned Community Regulations as the Bridlewood Residential District.

Saddleback Meadows Project Chronology (Cont'd)

DATE	PROJECT RELATED EVENT
April, 1994	- Grading Permit Application GA940031 submitted for Phase I, Grading (98 3 acres) of the site.
August, 1994	- Initial Study completed and Environmental Impact Report Determination Letter is issued.
August 11, 1994	- Letter of Appeal filed with County
November, 1994	- Appeal Hearing postponed to January 7, 1995, then to January 31, 1995.
January 31, 1995	- Applicant withdraws appeal Planning Commission directs applicant to develop a more compatible project in response to public testimony, staff concerns, and Planning Commission's direction.
July 27, 1996	- Revised 318-unit Site Development Plan, zone change and area plan submitted to County of Orange.
July 30, 1996	- Orange County Planning Commission recommended EIR 561 for certification and recommended applications for Vesting Tentative Tract Map No 15230, area plan 95-7 and zone change 95.5 be denied.
August 11, 1995	- Notice of Preparation circulated for EIR 561.
October 22, 1996	- Board of Supervisors denied project and did not certify EIR 561
December 3, 1996	- Applicant submitted application for Phase I Grading Plan for 705 unit Tract 10692 (GA960048)
December 16, 1996	- EMA determined that a Subsequent EIR is required to evaluate the effects of the grading application

CEQA CHECKLIST DISCUSSION

INITIAL STUDY PROCEDURE

This Initial Study has been conducted pursuant to Section 15060 of the State CEQA Guidelines and the County of Orange CEQA procedures. It includes a detailed review and analysis of the project in light of the following documents, plans, policies and guidelines:

- CEQA Statute and Guidelines;
- Draft EIR 561/Response To Comments
- Final EIR 059, Certified on August 8, 1978;
- Final EIR 203, Certified on January 9, 1980;
- Original Grading Plans;
- Foothill-Trabuco Specific Plan;
- Final EIR 531, Certified on December 10, 1991,
- Tentative Tract Map TT10692/Recorded Final Tract Map 10692;
- TT10692 Hydrology and Hydraulic Design Reports,
- Aliso Creek Corridor Specific Plan;
- Orange County General Plan Elements: Land Use; Noise; Transportation; Resources; Recreation; and Safety;
- Biological Assessment and Oak Tree Inventory;
- Saddleback Meadows Preliminary Landscape Submittal,
- Fourth Supplemental Geotechnical Report;
- Correspondence on the Subject;
- Southern California Coastal Sage Scrub NCCP Process Guidelines, Amended November 1993;
- Initial Study No. PA940068 - July 6, 1994, and
- Supplemental Saddleback Meadows Communication Booklet - June 30, 1995.

The following discussion provides a detailed analysis of the environmental categories on the Orange County Environmental Analysis Checklist as they relate to the proposed project. It also identifies those issues that have been determined not to have potentially significant effects, and those determined to be mitigatable. It also provides the probable scope of evaluation in the Draft Subsequent EIR.

1. LAND USE & PLANNING

Existing Setting

The entire project 222.23-acre Saddleback Meadows project site is currently zoned "S"-Foothill/Trabuco Specific Plan with SR-Sign Restriction overlay district. The Bridlewood/Saddleback Meadows Residential District was established within the Foothill/Trabuco Specific Plan, adopted December, 1991, to recognize the existing zoning and tract map approvals for the Bridlewood/Saddleback Meadows property.

The current Orange County General Plan Land Use Element (LUE) designations for the project site are: 1B-Suburban Residential LUE Designation (0.5 to 18 Dwellings per Acre); and 1.2 Low Density Residential Neighborhoods - Community Profile Designation (0.5 to 2.0 Dwelling Units per Acre).

Surrounding Land Uses

Southerly: Hidden Ridge Residential Development (230 Residential Dwelling Units), Ramakrishna Monastery and O'Neill Park.

Westerly: Portola Hills Planned Community Residential Development (2,200 Residential Dwelling Units)

Northerly: Saint Michael's Abbey and Prep School

Easterly: Ramakrishna Monastery; Rural single-family development.

Potential Impacts

Potential impacts which may result if the project is developed include. the introduction of 705 manufactured housing units, a 1.7-acre, neighborhood commercial center, and related major infrastructure improvements into an area previously used primarily for open space and agricultural uses; potential conflicts with existing surrounding land uses; and the conversion of agricultural land to development.

The circumstances regarding surrounding land uses has changed since the previous EIRs were certified and the original project was approved. When EIRs 059 and 203 were certified, the vicinity of the project, with the exceptions of St. Michael's Abbey and the Ramakrishna Monastery, was characterized by a undeveloped, predominantly natural environment. The project site, although disturbed through farming and cattle grazing purposes, was dominated by coastal sage scrub, oak woodlands and grasslands. The closest urban development was approximately four miles south of the site near the El Toro/Trabuco Road intersection

The project vicinity has become more urban since the original approvals. It is now characterized by major residential development, including the Portola Hills Planned Community, the Hidden Ridge project and Foothill Ranch. With the changes that have taken place since the original project was approved, there is a question of the project's compatibility with surrounding uses

Mitigating Potential Impacts

The changes in circumstances in Land Use and Planning cannot be easily mitigated, if at all. A new Subsequent EIR will provide the best mechanism to properly assess the following:

- The project's potential conflicts with the Foothill-Trabuco Specific Plan, the Aliso Creek Corridor Specific Plan and the Natural Communities Conservation Planning Program (NCCP) Program;
- The project's potential conflicts with surrounding land uses;
- Reassess those major Conditions of Approval listed above which were not satisfied prior to the recordation of Tract 10692, including their appropriateness, relevance and compatibility at this time in light of changed circumstances;
- Identify the potential environmental impacts of the proposed project on the existing agricultural uses;

- Identify mitigation measures necessary to reduce all identified earth resource impacts to a level of insignificance; and
- Identify unavoidable and cumulative earth resource impacts.

Scope of EIR Discussion

The changes in circumstances in Land Use and Planning requires the Subsequent EIR to address the following:

- The project's potential conflicts with the Foothill-Trabuco Specific Plan, the Aliso Creek Corridor Specific Plan and the Natural Communities Conservation Planning Program (NCCP) Program;
- The project's relationship with surrounding land uses;
- Identification of the potential environmental impacts of the proposed project on the existing agricultural uses;
- Identification of mitigation measures necessary to reduce all identified earth resource impacts to a level of insignificance; and
- Identification of unavoidable and cumulative earth resource impacts.

2. POPULATION & HOUSING

The proposed project is not expected to cumulatively exceed adopted regional or local population projections. It will not induce substantial growth in an area directly or indirectly through project in an undeveloped area or extension of major infrastructure The project would not displace existing housing The project will increase affordable housing.

No Mitigation is needed and no discussion of Population and Housing is required in the EIR

3. GEOPHYSICAL

Existing Setting

The project site is primarily in its natural state with a disturbed area of approximately 75 acres used for cattle grazing. Although the majority of the site's surface soils and topographical features have not been physically disturbed, geotechnical reports prepared for the project have identified several major landslides which affect the site's stability.

Potential Impacts

Potential impacts which may result if the project is developed include substantial short term changes of the site's landforms and topographical features particularly during remedial grading activities. In the long term, the project proposes site reconfiguration to reflect the site's natural land form features, and related impacts on the soil stability of the site. During construction, erosion and siltation of soils may also occur.

Grading activities on the project site result in sediment being carried into the Aliso Creek Corridor and downstream ultimately to Aliso Beach. Because of the site's seismic features, people and property could be potentially exposed to earthquake and ground failure hazards.

The Planning Application indicates that remedial grading for the project will include grading a portion of the project site due to extensive landslides. The Saddleback Meadows Geotechnical Reports indicate that extensive remedial grading with large buttresses will be required to stabilize the project site due to these documented landslides. The Engineering Geology of Part of the Western Half of the Santiago Peak Quadrangle, Orange County, California, prepared by the California Department of Conservation Division of Mines and Geology, has mapped and recorded these landslides.

Scope of EIR Discussion

The Subsequent EIR will provide a detailed discussion and clarification of the following:

- Proposed grading in areas previously designated for preserved open space areas;
- Identification of soil and geologic characteristics and limitations of the project site, including soil stability, earthquake potential and known geologic hazards, including landslides, mudslides, ground failures and similar hazards for the entire site;
- Identification of the seismic features of the site, including the potential exposure of people or property to environmental impacts of the proposed project associated with earthquakes, liquefaction or similar hazards;
- The potential environmental impacts of the proposed project on the existing site topography and unique geologic or physical features;
- Mitigation measures necessary to reduce earth resource impacts to a level of insignificance, and
- Identification of unavoidable and cumulative impacts associated with earth and landform

4. WATER

Existing Setting

The onsite project drainage has not been modified and remains in a natural state. However, some improvements have been made to sections of Aliso Creek, adjacent to the site, including a major man-made drainage channel. This channel passes from the proposed site to the westerly side of El Toro Road.

The area of Aliso Creek Corridor is classified as Floodplain FP-2 by the Federal Emergency Management Agency (FEMA). The project site is located within the watershed of Aliso Creek. Four (4) ponds and four (4) intermittent ponds are also present onsite

Potential Impacts

Potential impacts which may result if the project is implemented include changes in absorption rates, alteration of the project site's existing landform, subsequently altering the existing flow of water onto, through, around and off the project site.

During construction the disruption of soils may also affect the content of site run-off into the watershed area of Aliso Creek. Groundwater levels and quality, including absorption rates, may be affected by the proposed project.

National Pollution Discharge Elimination System (NPDES) is a regulatory program required by the Clean Water Act and administered by the OCEMA. Potential impacts include pollutant discharges into Aliso Creek.

Scope of EIR Discussion

The Subsequent EIR will provide a detailed analysis of the proposed project's relationship to water resources, including the following:

- Identification and quantification of the current surface water and groundwater drainage patterns and water flows within, and adjacent to, the project site;
- Identification and quantification of the portion of the project site or off-site area that will be impacted by proposed project currently located within FEMA's FP-2 floodplain designation area;
- Identification and quantification of the current surface water and groundwater quality within, and adjacent to, the project site, including existing on-site discharges into drainage channels;
- Identification of significant changes in the course or direction of water movements;
- Identification of changes in absorption rates, drainage patterns, or the rate and amount of surface water run-off;
- Identification of changes in erosion or changes in siltation which may modify the channel of Aliso Creek;
- Identification of changes in the amount of surface water as a result of any proposed storm drain retarding basins;
- Identification of changes in the quantity or quality of groundwaters;
- Identification of the potential environmental impacts of the proposed project on wind or water erosion of soils, on or off-site;
- Identification of alterations to the course, flow or magnitude of flood waters, and resultant exposure of people or property to flood hazards;
- Identification of mitigation measures necessary to reduce project impacts to a level of insignificance, including the development of Best Management Practices (BMP) for compliance with the Clean Water Act, and
- Identification of unavoidable and cumulative water resource impacts.

5. TRANSPORTATION/CIRCULATION

Existing Setting

The Saddleback Meadows project site is accessed off of El Toro Road. The site's interior is natural and has no road access.

Potential Impacts

Potential impacts which may result if the project is developed include. The master planned (MPAH) arterial highways and roadways transit systems has identified El Toro Road which is adjacent to the project site and conditioned to be improved to primary status is now scheduled to be upgraded to a major artery, additional grading will be required at implementation; generation of a significant amount of project related traffic, creation of demand for new parking; alteration of existing traffic patterns; and potential impacts vehicles, bicyclists and/or pedestrians.

The traffic and circulation information on the proposed project and its relationship to El Toro Road, including its present and ultimate design configuration and improvement require updating. At the time EIRs 059 and 203 were certified and the project was approved, projects in the vicinity generated less than 3000 Average Daily Trips ADT on El Toro Road, which was designated on the County's Master Plan of Arterial Highways (MPAH) as a primary arterial highway El Toro Road was reconstructed in the early 1980's to a two-lane highway adjacent to the project site.

Today, projects in the vicinity generate approximately 16,000 ADT along El Toro Road. Since 1985, El Toro has been reclassed on the MPAH from a primary arterial highway to a major arterial. Impacts from the proposed project's additional grading which is necessary for the required upgraded improvements to EL Toro Road from a Primary to a Major Arterial were not addressed in EIRs 059 and 203

Scope of EIR Discussion

The Subsequent EIR will include a detailed traffic/circulation analysis and a traffic/engineering study. The traffic/circulation study must update projections of the number of trips generated by the project and other projects on the arterial highway system, including El Toro Road, Santiago Canyon Road, Glenn Ranch Road and Portola Parkway. The traffic/engineering study must provide preliminary designs for the ultimate improvement of El Toro Road to major arterial specifications. The following will be included in the Transportation/Circulation section of the EIR·

- Identification of existing and planned public transit systems affected by the proposed project;

- Identification of existing vehicular movement and patterns of circulation within and adjacent to the project site, and the existing vehicular movement in the surrounding vicinity as a result of current land uses through a traffic study;

- Identification and analysis of the existing ingress and egress to the project site, its potential internal circulation and parking problems associated with the proposed development;

- Identification of existing impacts to equestrians, motor vehicles, bicyclists and/or pedestrians,

- Evaluation of the interim and long-term traffic generation of the proposed project and its potential to generate additional vehicular movement beyond current projections of regional traffic;
- Evaluation of the need for El Toro Road to be a primary arterial versus a major arterial.
- Identification of increases in demand for public transit services with special attention to relationship with low income housing for senior citizens and any potential conflicts with planned roadway widenings or extensions;
- Identification of specific potential adverse impacts on the vehicular movement and the movement of people and goods as a result of the proposed project, both within the project site and within adjacent communities;
- Identification of specific potential internal circulation problems and potential traffic hazards to motor vehicles, bicyclists and/or pedestrians which may result from the proposed project;
- Identification of the aspects of the proposed project which will create demand for new parking facilities;
- Identification of mitigation measures necessary to reduce project traffic and circulation impacts to a level of insignificance; and
- Identification of unavoidable and cumulative impacts to transportation and circulation resources.

6. AIR

Existing Setting

The project site is located within the South Coast Air Basin, SCAB, which suffers from some of the most severe cases of air pollution in the nation. The SCAB is currently in violation of several federal air quality standards.

Potential Impacts

Potential impacts which may result if the project is developed include: generation of both short-term and long-term air quality impacts, both individually and cumulatively, including increased air emissions; impacts on sensitive receptors in the project vicinity including St. Michael's Abbey and the Hillside Montessori School; and the exposure of persons to locally elevated levels of air pollution.

Scope of EIR Discussion

Although the South Coast Air Basin is already in violation of air quality standards, the impacts of the project on local air quality must be thoroughly assessed. The Subsequent EIR for the proposed project will:

- Identification of the existing air quality environment of the project site in the local and regional context, including, but not limited to: air pollution; objectionable odors, and air movement, moisture and temperature;
- Identification of air quality impacts associated with construction of the proposed project,
- Assessment of the proposed project's consistency with the South Coast Air Quality Management District's (SCAQMD) Air Quality Management Plan (AQMP), Regional Mobility Plan (RMP) and Growth

Management Plan (GMP);

- Identification and quantification of long-term air quality impacts resulting from development of the proposed project, including, but not limited to: air pollution, objectionable odors; and increased air movement, moisture or temperature;
- Identification and analysis of the potential sensitive receptors which may be exposed to substantial pollutant concentrations,
- Identification of mitigation measures necessary to reduce short-term and long-term air quality impacts to a level of insignificance; and
- Identification of unavoidable and cumulative air quality impacts.

7. NOISE

Existing Setting

The project site is primarily in its natural state with noise generated by existing land uses and vehicular trips is minor Portions of the project site are impacted by noise resulting from aircraft operations from MCAS-El Toro and is located within the 60 CNEL noise contour of MCAS-El Toro. The project is adjacent to El Toro Road, a major access road to O'Neill Regional Park.

Potential Impacts

Potential impacts which may result if the project is approved include the generation of short term impacts related to construction, and the potential exposure of future residents to airborne noise sources, including interim impacts from aircraft operations at MCAS-El Toro prior to closure of this military base.

Scope of EIR Discussion

The Subsequent EIR for the proposed project will include a detailed noise assessment including the following

- Analysis of the exposure of the project site to existing and projected noise from vehicular traffic and aircraft overflights, in terms of individual and combined contribution of sources,
- Identification of the potential exposure of future residents of the project site to projected noise from vehicular traffic and aircraft overflights, both on an interim and long-term basis,
- Identification of any noise impacts on existing residents in the vicinity of the project as the result of project implementation,
- Identification of mitigation measures necessary to reduce noise impacts to a level of insignificance; and
- Identification of unavoidable and cumulative noise impacts

8. BIOLOGICAL RESOURCES

Existing Setting

The proposed project site exists in its natural state. Draft EIR 561 provided an evaluation of the site and together with previous surveys from December, 1989 and September 1990 revealed that the site had been partially disturbed by cattle grazing. Coastal sage scrub habitat has been identified by the Orange County Wildlife Geographic Information System project Coastal Sage Scrub Distribution Map dated February 1994 as existing in this region. Approximately 68.7 acres of Coastal Sage Scrub are located on site. The project site is also an existing wildlife corridor link between O'Neill Regional Park and Whiting Ranch/Limestone Regional Park. In addition, the project site is located within the watershed area of Aliso Creek Corridor. The Aliso Creek Corridor which is located adjacent to the project site is identified as a "blue line" stream by the United States Geologic Survey (USGS) Canada Quad topographical map. The U.S. Fish and Wildlife Service (USFWS) has documented the occurrence of the Federally Listed as Endangered Riverside Fairy Shrimp on the project site.

Potential Impacts

The proposed project has several potentially significant environmental impacts to biological resources. Specifically:

- Natural Communities Conservation Planning (NCCP) Program: The proposed project may potentially impact the State of California Natural Communities Conservation Planning (NCCP) Program. This is a habitat-based conservation process adopted by local, state and federal regulatory agencies charged with making or recommending land use decisions in California, by Assembly Bill AB2172 (Chapter 765, Statutes of 1991).

  Impacts from grading the site would result in the removal of coastal sage scrub. One of the findings the County must make to abide by the provisions of the U S. Department of Interior's 4(d) Rule is that the loss of the coastal sage scrub will not jeopardize the subregional NCCP Program plan. The site may be identified as one of the links between the Southern subregion and the Central subregion. If this connective link is lost, the 4(d) Rule finding might be precluded. A wildlife corridor has been proposed o-site to complete this link.

- Riverside Fairy Shrimp The proposed project may impact the Streptocephalus woottoni (scientific name), also known as the Riverside Fairy Shrimp, which is a Federally Listed Endangered Species.

  Section 9 of the Endangered Species Act prohibits the "take" of a federally listed species. Documentation is on file in the office of the U.S. Fish and Wildlife Service, Carlsbad Office, attesting to the known occurrence of this federally listed species on the project site. According to U.S. Fish and Wildlife Service, since the shrimp has been confirmed in one pond, it is highly probable that the species will be found in all eight ponds on the site.

- Sensitive Reptiles and Amphibians: Draft EIR 561 noted that several sensitive or threatened species of reptiles and amphibians can be expected to occur on the subject property These include the following the Arboreal Salamander, the Ensatina, the Western Spadefoot, the Orange-Throated Whiptail, the San Diego Horned Lizard, the Coastal Whiptail, the Coastal Rosy Boa, the Coast Patch-nosed Snake, and the Red Diamond Rattlesnake.

- Wildlife Corridor: The significance of the project site's location as a wildlife corridor has changed. Certified EIRs 059 and 203, and Draft EIR 561 identified the site as a wildlife corridor, along with two off-site corridors

connecting two major wildlife areas, the O'Neill Regional Park/Cleveland National Forest open space area and the Whiting Ranch/Limestone Regional Park open space area, easterly and westerly of the subject site, respectively Consequently, the elimination of the site as a wildlife corridor was not treated as a significant impact. The rationale provided for this conclusion was the presence of other wildlife corridors in the project vicinity

With the construction of residential communities in the project vicinity, the previously identified off-site wildlife corridors have been eliminated. The subject site now provides the only linkage between the two wildlife corridor areas. This document identified several large mammals which live on or frequent the site, including mule deer, mountain lion, gray fox and bobcat, thereby indicating the importance of the site as a wildlife movement corridor.

- Aliso Creek Corridor: Previous approvals for the project site designate the Aliso Creek corridor as natural open space to be preserved. The Aliso Creek corridor contains riparian vegetation and wildlife; Aliso Creek is also designated a blue-line stream, as identified by the U.S. Geological Survey

  The Site Plan and grading plans for the project indicate that the Aliso Creek corridor preservation area may be disturbed. The revised project proposes grading in the vicinity of the stream bed, which is in the FP-2 "Floodplain 2" District and off-site grading in the Aliso Creek area adjacent to the site to create access road fill placement and conduct remedial grading The project proposes restoration of the Aliso Creek riparian habitat area upon completion of grading.

Scope of EIR Discussion

The biological resource section of the Subsequent EIR will provide a detailed discussion of the following:

- A re-inventory of the existing unique, sensitive, aesthetically significant, rare, threatened, or endangered flora and fauna within the project site, including an Environmental Assessment and mitigation measures to avoid or reduce impacts,

- Identification of potential impacts to the Natural Communities Conservation Planning ("NCCP") Program, a habitat-based conservation process adopted by local, state and federal regulatory agencies charged with making or recommending land use decisions in California, by Assembly Bill AB2172 (Chapter 765, Statutes of 1991) The NCCP Program states that to approve an interim take application, the local agency must make certain findings, based on the information obtained pursuant to U S. Fish and Wildlife Service (USFWS) pursuant to the Natural Community Conservation Plan (NCCP) Program and the 4(d) Rule,

- A detailed analysis of the project's impacts to wildlife movement, including mitigation measures to avoid or reduce those impacts The location width, relationship to adjacent wildlife movement corridors must be evaluated;

- Address the proposed grading, including remedial and site preparation grading, in the revised project, which will impact Coastal Sage Scrub, including mitigation measures which avoid or reduce those impacts;

- The project's compliance with the County's general policy as a regulator of the NCCP Program, which is to avoid irreversible commitments that would preclude planning options in designing the coastal sage scrub habitat reserve,

- A detailed discussion of the proposed project's impacts to the Riverside Fairy Shrimp, including a Habitat Conservation Plan, an Environmental Assessment and mitigation measures to avoid or reduce impacts;
- Assessment of the project's impacts on unique, sensitive, aesthetically significant, rare, threatened, or endangered flora and fauna within the project site, including Oak Tree groves and Coastal Sage Scrub;
- Identification of impacts which might result from the removal of existing and intermittent ponds and the associated habitat for sensitive species, including the Riverside Fairy Shrimp, from the project site and off-site areas contiguous to project site;
- Identification of mitigation measures necessary to reduce all identified biological resource impacts to a level of insignificance; and
- Identification of unavoidable and cumulative biological resource impacts.

9. AESTHETICS

Existing Setting

The Saddleback Meadows project site is primarily in a natural state with the site's surface aesthetic features being left undisturbed. Existing light and glare from the project site is minimal, emanating only from the reflection of the eight (8) ponds on the site

Potential Impacts

Potential aesthetic impacts which may result if the project is developed include the construction of slopes and retaining walls, and a significant alteration in the appearance of the site from off-site vantage points, including El Toro Road which is designated a Scenic Highway on the County's Master Plan of Arterial Highways. Aesthetic impacts are especially pronounced from the existing residential developments southerly and westerly of the project site

Potential light and glare impacts which may result if the project is approved include: increased levels of exterior lighting and illumination, having the potential for adverse impacts upon residential neighborhoods and sensitive biotic communities.

Scope of EIR Discussion

The Subsequent EIR to be prepared for the proposed project will:

- Identification of existing scenic vistas and views open to the public across the project site Assess the obstruction of any scenic vista or view open to the public or the creation of any aesthetically offensive site open to public view;
- A line of sight analysis of the project from El Toro Road, Hidden Ridge, Portola Hills, St. Michael's Abbey, and O'Neill Regional Park;
- Assessment of the current aesthetic importance of the project site and the aesthetic impact of the proposed project to other developments in the project vicinity;

- Evaluation and comparison of the potential aesthetic impacts associated with implementing the existing zoning and those associated with the proposed project. The narrative of this topical discussion must be supplemented by detailed simulation models of both the General Plan and the project.
- Identification of mitigation measures necessary to reduce aesthetic impacts to a level of insignificance, and
- Identification of unavoidable and cumulative aesthetic impacts

10. CULTURAL/SCIENTIFIC RESOURCES

Existing Setting

The Saddleback Meadows project site is primarily in a natural state with only minimal disturbance through cattle grazing and farming activities. Therefore, the site's potential cultural/scientific resources and features have not be disturbed.

Potential Impacts

The grading of the property has the potential of resulting in alteration of or damage to significant archaeological, historical and/or paleontological resources.

Scope of EIR Discussion

The Subsequent EIR for the proposed project will include the following.

- Inventory existing significant archaeological and/or historical sites, structures, objects, or buildings located on the project site,
- Inventory potential paleontological sites;
- Evaluation of potential significant impacts to archaeological or historical sites, structures, objects, or buildings,
- Identification of mitigation measures necessary to reduce identified cultural/scientific resources to a level of insignificance, and
- Identification of unavoidable and cumulative cultural/scientific resource impacts

11. RECREATION

Existing Setting

There are no existing recreation or public open space uses located on the project site However, the proposed project site is located between O'Neill and Whiting Ranch/Limestone Regional Parks. A proposed trail is designated within the project site by the Orange County General Plan Recreation Element Master Plan of Regional Riding and Hiking trails.

Potential Impacts

The project represents a potential conflict with adopted recreational plans and policies, including the Aliso Creek Corridor Specific Plan, the General Plan Recreation Element and the Foothill/Trabuco Specific Plan.

Scope of EIR Discussion

The Subsequent EIR for the proposed project will address the following:

- Identification of all currently planned recreational opportunities within the project site and the surrounding vicinity;
- Assessment of the impact of the proposed project on the quality and quantity of existing recreation opportunities;
- Evaluation and comparisons of the potential recreation impacts associated with implementing the existing zoning designations and those associated with the proposed project;
- Identification of mitigation measures necessary to reduce recreation impacts to a level of insignificance; and
- Identification of unavoidable and cumulative recreation impacts.

12. ENERGY & MINERAL RESOURCES

Existing Setting

The Saddleback Meadows project site is primarily in a natural state None of the site's potential mineral resources have been disturbed. Previous EIRs 561, 059 and 203 did not identify energy and/or mineral resources on the site The Orange County General Plan does not designate the site as having a high potential for mineral resources. No Mitigation is required and no discussion is necessary in the Subsequent EIR.

13. HAZARDS

Existing Setting

The Saddleback Meadows project site is located close to the Cleveland National Forest which is a potential fire hazard area. The project site is also located near the flight path of El Toro Marine Corps Air Station which has been approved for re-use.

Potential Impacts

Potential impacts which may result if the project is developed include the possible exposure of future residents to a high fire hazard area (north of Portola Parkway). Until MCAS El Toro is closed, residents may be subjected to potential, though remote, crash hazards

Scope of EIR Discussion

The Subsequent EIR will provide a detailed discussion of hazards, including the following:

- Identification of the current fire hazards, both on-site and within the project site vicinity;
- Identification of any existing emergency response plans for the project site and evaluate the potential of the proposed project to impact emergency response plans or evacuation plans;
- Identification of potential safety impacts of MCAS-El Toro operations on the proposed project;
- Identification of the impact to future users of the site with respect to possible exposure to other hazards;
- Identification of mitigation measures necessary to avoid or reduce hazards to a level of insignificance; and
- Identification of unavoidable and cumulative hazard impacts

14. PUBLIC SERVICES

Existing Setting

The Saddleback Meadows project site is undeveloped open space with limited use for cattle grazing. The project site is served by the following major public services.

Fire Protection	Orange County Fire Department
Police Protection	Orange County Sheriff-Coroner's Department
Schools	Saddleback Valley School District

The closest fire station is Station #42 located on Ridgeline Drive with a response time of approximately 3 minutes to the project site. The sheriff's service ratio of sworn officer to population is approximately 1/2050. All the schools in the project vicinity are at capacity

Potential Impacts

Potential impacts which may result if the project is developed include the need for additional fire personnel and additional police personnel. The project is expected to generate elementary, junior high and high school students to be absorbed into the Saddleback Valley School District.

Scope of EIR Discussion

The Subsequent EIR will provide a detailed assessment of the impacts to Public Services, including:

- Assessment of the adequacy of the supply of public services to be delivered to the future residents of the proposed project site;
- Evaluation and comparison of the potential public services impacts associated with implementing the proposed project;
- Identification of mitigation measures necessary to avoid or reduce public services impacts to a level of insignificance; and
- Identification of unavoidable and cumulative public services impacts.

15. UTILITIES & SERVICE SYSTEMS

Existing Setting

The Saddleback Meadows project site is undeveloped open space with limited use for cattle grazing. The project site is served by the following major public utilities and service systems:

Electrical Power	Southern California Edison
Natural Gas	Southern California Gas Company
Water and Sewer	Trabuco Canyon Water District

Potential Impacts

No potential significant impacts to Utilities and Service Systems are expected to result if the project is developed.

Scope of EIR Discussion

The Subsequent EIR will provide a detailed assessment of the impacts to Public Utilities and Service System, including:

- Assessment of the adequacy of the supply of public utilities and service systems to be delivered to the future residents of the proposed project site;
- Evaluation and comparison of the potential public utility and service system impacts associated with implementing the proposed project;
- Identification of mitigation measures necessary to avoid or reduce all identified public utility and service system impacts to a level of insignificance, and
- Identification of unavoidable and cumulative public services impacts

DATE: 2/17/97 TO: PLANNING AND DEVELOPMENT SVCS. DEPT.

SADDLEBACK MEADOWS

We have recently received the "Notice of Preparation" in regard to the above mentioned development.

Upon reviewing these documents, we feel prompted to send this transmittal.

The following points are our concerns on this project:

1. Besides affecting the natural beauty and rural atmosphere that the specific plan attempts to preserve, there will be a threat to the wildlife in this area because the plan has too much density of housing and appears to not have a wildlife corridor There are a significant amount of animals that will be in constant danger of being run over because of the road that they will be crossing.

2. The peace and tranquillity of two large religious organizations will be affected. These two being St. Michael's Abbey (which I believe to be the only Catholic Prep School on the west coast) and the Ramakrishna Monastery.

3. Bringing another 705 homes into this area will tax the existing infrastructure of roads, schools, etc. We are not prepared to handle the amount of people this development will bring in.

4. There appears to be only one road into the project, and should there be an emergency such as a fire, I cannot see how that many people will be able to leave the development and still allow emergency vehicles to enter.

5. The people in Portola Hills do not want an amendment to the current zoning not only because of aesthetic value, but for fear that the loss of their current views will affect the value of their homes.

6. We are very concerned that there are two extremely different views of the stability of the hills in Saddleback Meadows. How can two expert geologists (one hired by a previous developer and one hired by St. Michael's Abbey) give such opposing views of the stability of the area? It might be well advised to hire an independent geologist to do studies so that the County of Orange does not become entangled in law suits should a landslide occur.

The issues above are of great concern to us and we hope that you can either resolve them or **STOP** the Saddelback Meadows zoning amendment. Thank you.

James Lopper Dawn Lopper

Re: Proposal for 705 Mobile Homes - California Quartet, Inc.

Gentlemen:

Late last summer the Board of Supervisors voted down this developer's plan for 318 single family homes on this same property. Now the developer comes back with his original proposal for 705 mobile homes. This proposal is absolutely preposterous and they know it.

The addition of 318 homes would have had a negative impact on the character of this area because of the increased population and traffic. I cannot image how 705 mobile homes could possibly be considered more palatable. This is ludicrous and I appeal to you to keep these carpetbaggers from destroying the Canyon.

Very truly yours,

Donald R Finn

STATE OF CALIFORNIA - THE RESOURCES AGENCY PETE WILSON, Governor

DEPARTMENT OF FISH AND GAME
Region 5
330 Golden Shore, Suite 50
Long Beach, California 90802
(562) 590-5113

March 12, 1997

Mr. Raymond H.C. Brantley
Orange County Environmental Management Agency
P.O. Box 4048
Santa Ana, California 92702-4048

Dear Mr. Brantley:

Notice of Preparation of Draft Environmental Impact Report
Saddleback Meadows Residential Development
SCH 96121072, Orange County

The Department of Fish and Game (Department) appreciates this opportunity to comment on the above-referenced project, relative to impacts to biological resources. To enable Department staff to adequately review and comment on the proposed project, we recommend the following information be included in the Draft Environmental Impact Report:

1. A complete assessment of the flora and fauna within and adjacent to the project area, with particular emphasis upon identifying endangered, threatened, and locally unique species and sensitive habitats.

   a. A thorough assessment of rare plants and rare natural communities, following the Department's May 1984 Guidelines for Assessing Impacts to Rare Plants and Rare Natural Communities (Attachment 1).

   b. A complete assessment of sensitive fish, wildlife, reptile, and amphibian species. Seasonal variations in use of the project area should also be addressed. Focused species-specific surveys, conducted at the appropriate time of year and time of day when the sensitive species are active or otherwise identifiable, are required. Acceptable species-specific survey procedures should be developed in consultation with the Department and the U.S. Fish and Wildlife Service.

   c. Rare, threatened, and endangered species to be addressed should include all those which meet the California Environmental Quality Act (CEQA) definition (see CEQA Guidelines, § 15380).

d. The Department's California Natural Diversity Data Base in Sacramento should be contacted at (916) 327-5960 to obtain current information on any previously reported sensitive species and habitat, including Significant Natural Areas identified under Chapter 12 of the Fish and Game Code.

2. A thorough discussion of direct, indirect, and cumulative impacts expected to adversely affect biological resources, with specific measures to offset such impacts.

a. CEQA Guidelines, § 15125(a), direct that knowledge of the regional setting is critical to an assessment of environmental impacts and that special emphasis should be placed on resources that are rare or unique to the region.

b. Project impacts should be analyzed relative to their effects on off-site habitats. Specifically, this should include nearby public lands, open space, adjacent natural habitats, and riparian ecosystems. Impacts to and maintenance of wildlife corridor/movement areas, including access to undisturbed habitat in adjacent areas, should be fully evaluated and provided.

c A cumulative effects analysis should be developed as described under CEQA Guidelines, § 15130. General and specific plans, as well as past, present, and anticipated future projects, should be analyzed relative to their impacts on similar plant communities and wildlife habitats.

d. The document should include an analysis of the effect that the project may have on completion and implementation of regional and/or subregional conservation programs. Under § 2800-2840 of the Fish and Game Code, the Department, through the Natural Communities Conservation Planning (NCCP) program, is coordinating with local jurisdictions, landowners, and the Federal Government to preserve local and regional biological diversity. Coastal sage scrub is the first natural community to be planned for under the NCCP program. The Department recommends that the lead agency ensure that the development of this and other proposed projects does not preclude long-term preserve planning options and that projects conform with other requirements of the NCCP program. Jurisdictions participating in the NCCP should assess specific projects for consistency with the NCCP Conservation Guidelines. Additionally, the jurisdictions should quantify and qualify: 1) the amount of coastal sage scrub within their boundaries; 2) the acreage of coastal sage scrub habitat removed by individual projects; and 3) any acreage set aside for mitigation. This information should be kept in an updated ledger system. These issues must be addressed in an Environmental Impact Report per CEQA Guidelines, § 15065 and § 15380

3. A range of alternatives should be analyzed to ensure that alternatives to the proposed project are fully considered and evaluated. A range of alternatives which avoid or otherwise minimize impacts to sensitive biological resources should be included. Specific alternative locations should also be evaluated in areas with lower resource sensitivity where appropriate.

   a. Mitigation measures for project impacts to sensitive plants, animals, and habitats should emphasize evaluation and selection of alternatives which avoid or otherwise minimize project impacts. Off-site compensation for unavoidable impacts through acquisition and protection of high-quality habitat elsewhere should be addressed.

   b. The Department considers Rare Natural Communities as threatened habitats having both regional and local significance. Thus, these communities should be fully avoided and otherwise protected from project-related impacts (Attachment 2).

   c. The Department generally does not support the use of relocation, salvage, and/or transplantation as mitigation for impacts to rare, threatened, or endangered species. Department studies have shown that these efforts are experimental in nature and largely unsuccessful.

4. If the project has the potential to adversely affect species of plants or animals listed under the California Endangered Species Act (CESA), either during construction or over the life of the project, a CESA-Memorandum of Understanding (CESA-MOU) must be obtained under § 2081 of the Fish and Game Code. CESA-MOU's are issued to conserve, protect, enhance, and restore State-listed threatened or endangered species and their habitats. Early consultation is encouraged, as significant modification to a project and mitigation measures may be required in order to obtain a CESA-MOU.

   a. Biological mitigation proposals should be of sufficient detail and resolution to satisfy the requirements for a CESA-MOU.

   b. A Department-approved Mitigation Agreement and Mitigation Plan are required for plants listed as rare under the Native Plant Protection Act.

5. The Department opposes the elimination of watercourses and/or their channelization or conversion to subsurface drains. All wetlands and watercourses, whether intermittent or perennial, must be retained and provided with substantial setbacks which preserve the riparian and aquatic values and maintain their value to on-site and off-site wildlife populations.

a. The Department has direct authority under Fish and Game Code § 1600 et seq. in regard to any proposed activity which would divert, obstruct, or affect the natural flow or change the bed, channel, or bank of any river, stream, or lake. Early consultation is recommended, since modification of the proposed project may be required to avoid or reduce impacts to fish and wildlife resources.

b. A discussion of potential adverse impacts from any increased runoff, sedimentation, soil erosion, and/or urban pollutants on streams and watercourses on or near the project site, with mitigation measures proposed to alleviate such impacts must be included.

The Department holds regularly scheduled pre-project planning/early consultation meetings. To make an appointment, please call our regional office at (310) 590-5137.

Thank you for this opportunity to comment. Questions regarding this letter and further coordination on these issues should be directed to Mr. Scott Harris, Wildlife Biologist at (562) 590-5100 or Mr. Ray Ally, Associate Fishery Biologist at (562) 590-5147.

Sincerely,

Lilia I Martinez

GUIDELINES FOR ASSESSING THE EFFECTS OF PROPOSED DEVELOPMENTS ON RARE AND ENDANGERED PLANTS AND PLANT COMMUNITIES

The following recommendations are intended to help those who prepare and review environmental documents determine when a botanical survey is needed, who should be considered qualified to conduct such surveys, how field surveys should be conducted and what information should be contained in the survey report.

1. Botanical surveys that are conducted to determine the environmental effects of a proposed development should be directed to all rare and endangered plants and plant communities. Rare and endangered plants are not necessarily limited to those species which have been "listed" by state and federal agencies but should include any species that, based on all available data, can be shown to be rare and/or endangered under the following definitions.

   A species, subspecies or variety of plant is "endangered" when the prospects of its survival and reproduction are in immediate jeopardy form one or more causes, including loss of habitat, change in habitat, over-exploitation, predation, competition or disease. A plant is "rare" when, although not presently threatened with extinction, the species, subspecies or variety is found in such small numbers throughout its range that it may be endangered if its environment worsens.

   Rare plant communities are those communities that are of highly limited distribution. These communities may or may not contain rare or endangered species. The most current version of the California Natural Diversity Data Base's Outline of Terrestrial Communities in California may be used as a guide to the names of communities.

2. It is appropriate to conduct a botanical field survey to determine if, or the extent that, rare plants will be affected by a proposed project when:

   a. Based on an initial biological assessment, it appears that the project may damage potential rare plant habitat;

   b. Rare plants have historically been identified on the project site, but adequate information of impact assessment is lacking; or

   c. No initial biological assessment has been conducted and it is unknown whether or not rare plants or their habitat exist on the site.

3. Botanical consultants should be selected on the basis of possession of the following qualifications (in order of importance):

   a. Experience as a botanical field investigator with experience in field sampling design and field methods,

   b. Taxonomic experience and a knowledge of plant ecology;

   c. Familiarity with the plants of the area, including rare species; and

   d. Familiarity with the appropriate state and federal statutes related to rare plants and plant collecting.

4. Field surveys should be conducted in a manner that will locate any rare or endangered species that may be present. Specifically, rare or endangered plant surveys should be:

   a. Conducted at the proper time of year when rare or endangered species are both "evident" and identifiable. Field surveys should be scheduled (1) to coincide with known flowering periods, and/or (2) during periods of

phenological development that are necessary to identify the plant species of concern.

b. Floristic in nature. "Predictive surveys" (which predict the occurrence of rare species based on the occurrence of habitat or other physical features rather than actual field inspection) should be reserved for ecological studies, not for impact assessment. Every species noted in the field should be identified to the extent necessary to determine whether it is rare or endangered.

c. Conducted in a manner that is consistent with conservation ethics. Collection of rare or suspected rare species (voucher specimens) should be made only when such actions would not jeopardize the continued existence of the population and in accordance with applicable state and federal permit regulations. Voucher specimens should be deposited at recognized public herbaria for future reference. Photography should be used to document plant identification and habitat whenever possible, but especially when the population cannot withstand collection of voucher specimens.

d. Conducted using systematic field techniques in all habitats of the site to ensure a reasonably thorough coverage of potential impact areas.

e. Well documented. When a rare or endangered plant (or rare plant community) is located, a California Native Species (or Community) Field Survey Form or equivalent written form should be completed and submitted to the Natural Diversity Data Base.

5. Reports of botanical field surveys should be included in or with environmental assessments, negative declarations, EIR's and EIS's, should contain the following information:

a. Project description, including a detailed map of the project location and study area.

b. A written description of biological setting referencing the community nomenclature used and a vegetation map.

c. Detailed description of survey methodology.

d. Dates of field surveys.

e. Results of survey (including detailed maps).

f. An assessment of potential impacts.

g. Discussion of the importance of rare plant populations with consideration of nearby populations and total species distribution.

h. Recommended mitigation measures to reduce or avoid impacts.

i. List of all species identified.

j. Copies of all California Native Species Field Survey Forms or Natural Community Field Survey Forms.

k. Name of field investigator(s).

l. References cited, persons contacted, herbaria visited, and disposition of voucher specimens.

SENSITIVITY OF TOP PRIORITY RARE NATURAL COMMUNITIES IN SOUTHERN CALIFORNIA*

Sensitivity rankings are determined by the Department of Fish and Game, California Natural Diversity Data Base and based on either number of known occurrences (locations) and/or amount of habitat remaining (acreage). The three rankings used for these top priority rare natural communities are as follows:

S1. - Less than 6 known locations and/or on less than 2,000 acres of habitat remaining.

S2. - Occurs in 6-20 known locations and/or 2,000-10,000 acres of habitat remaining.

S3. - Occurs in 21-100 known locations and/or 10,000-50,000 acres of habitat remaining.

The number to the right of the decimal point after the ranking refers to the degree of threat posed to the natural community regardless of the ranking. For example:

S1.1 = very threatened
S2.2 = threatened
S3.3 = no current threats known

Sensitivity Rankings (February 1992)

Rank	Community Name	
S1.1	Mojave Riparian Forest	Southern Dune Scrub
	Sonoran Cottonwood Willow Riparian	Southern Coastal Bluff Scrub
	Mesquite Bosque	Maritime Succulent Scrub
	Elephant Tree Woodland	Riversidean Alluvial Fan Sage Scrub
	Crucifixion Thorn Woodland	Southern Maritime Chaparral
	Allthorn Woodland	Valley Needlegrass Grassland
	Arizonan Woodland	Great Basin Grassland
	Southern California Walnut Forest	Mojave Desert Grassland
	Mainland Cherry Forest	Pebble Plains
	Southern Bishop Pine Forest	Southern Sedge Bog
	Torrey Pine Forest	Cismontane Alkali Marsh
	Desert Mountain White Fir Forest	
S1.2	Southern Foredunes	
	Mono Pumice Flat	
	Southern Interior Basalt Fl. Vernal Pool	
S2.1	Venturan Coastal Sage Scrub	Coastal and Valley Freshwater Marsh
	Diegan Coastal Sage Scrub	S. Arroyo Willow Riparian Forest
	Riversidian Upland Coastal Sage Scrub	Southern Willow Scrub
	Riversidian Desert Sage Scrub	Modoc-G. Bas. Cottonwood Willow Rip.
	Sagebrush Steppe	Modoc-Great Basin Riparian Scrub
	Desert Sink Scrub	Mojave Desert Wash Scrub
	Mafic Southern Mixed Chaparral	Engelmann Oak Woodland
	San Diego Mesa Hardpan Vernal P.	Open Engelmann Oak Woodland
	San Diego Mesa Claypan Vernal P.	Closed Engelmann Oak Woodland
	Alkali Meadow	Island Ironwood Forest
	Southern Coastal Salt Marsh	Island Cherry Forest
	Coastal Brackish Marsh	S. Interior Cypress Forest
	Transmontane Alkali Marsh	Bigcone Spruce-Canyon Oak Forest
S2.2	Active Coastal Dunes	White Mountains Fellfield
	Active Desert Dunes	
	Stab. and Part. Stab. Desert Dunes	
	Stab. and Part. Stab. Desert Sandfield	
	Mojave Mixed Steppe	
	Transmontane Freshwater Marsh	S2.3 Bristlecone Pine Forest
	Coulter Pine Forest	Limber Pine Forest
	S. California Fellfield	

GLOBAL RANKING

The *global rank* (G-rank) is a reflection of the overall condition of an element throughout its global range.

SPECIES OR NATURAL COMMUNITY LEVEL

- G1 = Less than 6 viable EOs OR less than 1000 individuals OR less than 2000 acres.
- G2 = 6-20 EOs OR 1000-3000 individuals OR 2000-10,000 acres.
- G3 = 21-100 EOs OR 3000-10,000 individuals OR 10,000-50,000 acres.
- G4 = Apparently secure; this rank is clearly lower than G3 but factors exist to cause some concern; i.e. there is some threat, or somewhat narrow habitat.
- G5 = Population or stand demonstrably secure to ineradicable due to being commonly found in the world.

SUBSPECIES LEVEL

Subspecies receive a T-rank attached to the G-rank. With the subspecies, the G-rank reflects the condition of the entire species, whereas the T-rank reflects the global situation of just the subspecies or variety.
For example: *Chorizanthe robusta var. hartwegii.*
This plant is ranked G2T1. The G-rank refers to the whole species range i.e. *Chorizanthe robusta.* The T-rank refers only to the global condition of var. *hartwegii.*

STATE RANKING

The *state rank* is assigned much the same way as the global rank, except state ranks in California often also contain a threat designation attached to the S-rank.

- S1 = Less than 6 EOs OR less than 1000 individuals OR less than 2000 acres
  - S1.1 = very threatened
  - S1.2 = threatened
  - S1.3 = no current threats known
- S2 = 6-20 EOs OR 1000-3000 individuals OR 2000-10,000 acres
  - S2.1 = very threatened
  - S2.2 = threatened
  - S2.3 = no current threats known
- S3 = 21-100 EOs or 3000-10,000 individuals OR 10,000-50,000 acres
  - S3.1 = very threatened
  - S3.2 = threatened
  - S3.3 = no current threats known
- S4 - Apparently secure within California; this rank is clearly lower than S3 but factors exist to cause some concern; i.e. there is some threat, or somewhat narrow habitat. NO THREAT RANK.
- S5 - Demonstrably secure to ineradicable in California. NO THREAT RANK.

Notes:

1. Other considerations used when ranking a species or natural community include the pattern of distribution of the element on the landscape, fragmentation of the population/stands, and historical extent as compared to its modern range. It is important to take a bird's eye or aerial view when ranking sensitive elements rather than simply counting EOs.

2. Uncertainty about the rank of an element is expressed in two major ways:

   By expressing the rank as a range of values:
   ex. S2S3 means the rank is somewhere between S2 and S3.

   By adding a ? to the rank:
   ex. S2? This represents more certainty than S2S3, but less than S2.

3. Other symbols

- GH — All sites are historical; the element has not been seen for at least 20 years but suitable habitat still exists (SH = All California sites are historical).
- GX — All sites are extirpated; this element is extinct in the wild (SX = All California sites are extirpated).
- GXC — Extinct in the wild; exists in cultivation.
- G1Q — The element is very rare, but there is a taxonomic question associated with it.

RE: Saddleback Meadows Project No. GA 960048

Dear Sirs:

In response to Revised Notice of Preparation Draft Environmental Impact Report No. 566, dated February 6, 1997, please be advised that the undersigned is co-counsel for St. Michael's Abbey, an adjacent property owner.

In response to your request for the "views" of St. Michael's Abbey, please find enclosed a copy of a study, dated September 9, 1996, entitled "The Critical Problems with Saddleback Meadows"

This booklet was prepared as an analysis of the 318 unit single family residence project proposed by EIR 561, Zone Change 95-5 and Area Plan Amendment 95-7 (Tentative Tract Map #15230). All of the comments contained in this analysis are equally applicable to Draft EIR #566.

The undersigned as well as all of the consultants whose views are set forth in the enclosed analysis are still available for clarification of their views and expert opinions.

Subject: Saddleback Meadows Development

Dear Mr. Brantley:

Thank you for the opportunity to review and comment on the Notice of Preparation for the Saddleback Meadows Development. The proposed development is located 1/2 mile south of the El Toro Road/Live Oak Canyon Road intersection in the Foothill/Trabuco Specific Plan area. The project proposes the phased development of 705 manufactured single-family residential units and a 1.7 acre commercial center. Caltrans District 12 is a reviewing agency and our only comment is to coordinate your planning with the Transportation Corridor Agency.

We appreciate the opportunity to comment on this document. If you have any questions, please contact Aileen Kennedy on (714) 724-2239.

Sincerely,

Robert F. Joseph, Chief
Advance Planning Branch

Revised Notice of Preparation (Draft Environmental Impact Report No. 566)
Saddleback Meadows Development, Orange County, California

Dear Mr. Brantley:

The Fish and Wildlife Service (Service) and the California Department of Fish and Game (Department) (i.e., "the agencies") have reviewed the above referenced document. The document lists an additional project alternative for a total of five alternatives. This new alternative is stated as a "cluster/reduced development footprint" with 318 housing units. Other impacts on the new Environmental Analysis Checklist contained in the document are identified as "significant unless mitigated." These issues are water, transportation/circulation, and air quality. Our comment letter dated January 30, 1997, responding to the original Notice of Preparation for this Draft Environmental Impact Report, remains in effect.

In an effort to assist you and the project applicant in evaluating the potential for conflicts between Federal and State regulated species and the proposed project, the agencies are providing the following list of species that occur or may occur within the project area. Note that the Quino checkerspot butterfly (*Euphydryas editha quino*) and the San Diego fairy shrimp (*Branchinecta sandiegoensis*) are now federally listed as endangered. We are also including a list of "sensitive species," which are derived from various lists maintained by the agencies. Sensitive species are included to notify applicants and regulatory agencies in advance of possible listing proposals. None of the species listed as sensitive have been petitioned for listing, however. We also suggest that the current list maintained by the California Native Plant Society be consulted regarding sensitive plant species.

The Service recently learned that fairy shrimp habitat within the project area may have been adversely impacted. If you have any information about this matter, please inform the agencies. If you have any questions or comments regarding our letter, please contact Liam H. Davis, Associate Wildlife Biologist (Department) at 619-467-4207 or Robert James, Fish and Wildlife Biologist (Service) at 619-431-9440.

Sincerely,

Gail C. Kobetich
Field Supervisor

Regarding: Response to Intent to Prepare A Draft Environmental Impact Report #566

Sirs:

The notice of Draft EIR #566 seems somewhat confusing since the same proposal for 705 mobile homes was pulled by the applicant in favor of a less dense proposal (318 homes) in 1995. Then in 1996 the Board of Supervisors rejected the less dense proposal as not appropriate to the area and the communities surrounding the proposed development. Now we have 705 mobile homes plus an added feature of a commercial center. In general, if the lower density was not suitable before, how can an increased density and a commercial center be appropriate to the area or to the surrounding communities.

Response will be in order as seen in the Notice of Preparation.

In the Environmental Analysis Check list:

1. Land Use and Planning.
   a) Does the general plan designation or zoning include commercial as part of its scope and if not, does this constitute a Less Than Significant Impact?
   d) The conflict with adjacent, existing or planned land uses is more than just Significant Unless Mitigated. The surrounding land uses should be compared not to the communities of Portola Hills or Hidden Ridge but to the similar land uses in the Foothill/Trabuco Specific Plan area. There exists severe conflicts for this land use and there is Potential Significant Impact in this regards.

3. Geophysical
   d) The landslide and mudslide issue was an important one in the previously proposed plan and EIR. The same developer down played the potential of landslides once grading started with much public testimony regarding the numbers used to calculate the danger. In the final Board of Supervisors meeting the developer had modified these calculated numbers to agree with many opponents of the development. However, the calculations of the amount of grading did not change to reflect the lower numbers. If this issue poses a Potential for Significant Impact, the impact should even be more severe with the lower numbers agreed upon last year.

3. d) continued:
This issue of landslides is one of the most significant issues facing the surrounding communities and other land owners since the potential for damage and loss of property is very high. The developer could abandon the project if the grading proves undoable. Then the problem of leaving a denuded, undeveloped and problematic land mass as a legacy to County is ever present.

e) The erosion and changes to topography is so great that this alone should preclude the development of this land at the level proposed. A much less dense development would seem more appropriate and a more sane approach.

h) The unique geological or physical features of this land mass will change severely if this project as proposed is completed. In the first go around of the 705 mobile homes, I made comments at both the Planning Commission and the Board of Supervisors regarding the quantity of grading required for this project. At that time I made the comment that the grading proposed is of Biblical proportions since the average change in height of the land would be about 30 feet. **This truly does make the hills laid low and the valleys filled in.** There seems to be no change in the amount of grading and it seems that the amount should have increased in regards to the numbers for the soil being lowered.

5) Transportation/Circulation
In general the traffic circulation was a major concern for the previous 318 home project. Now that 705 mobile homes are proposed, the traffic situation would seem to have more than doubled. If the mitigation is to build wider and larger roads then the effects to other environmental concerns will be exacerbated. One effect is that the scenic highway through the canyons would be threatened. Another is that the noise, pollution and the increased traffic will have a detrimental effect not only on human inhabitants but wildlife as well.

Thus, the vehicle trips and traffic congestion would seem to be more than Less Than Significant Impact. Also, safety concerns of the added traffic lights and speeds associated with El Toro Road and canyon highway are greater than Significant Unless Mitigated. Finally, the addition of a commercial center as part of this development will increase traffic not associated with the mobile homes proposed.

6) Air Quality
a) What mitigation can there be to lower the air pollution of a project other than to lower the extent of the project. What this issue brings up is that the project has more of the right to pollute than the surrounding communities, to the detriment of all.

b) Further more, if sensitive people will be effected by the air pollution form the project, what is the mitigation other than having these people move to avoid the pollution or again, have the extent of the project reduced.

7. Noise
   a) What mitigating actions can be taken to reduce noise. If landscaping is the only option to mitigate the increased noise levels, we are looking at 7-10 years before mitigation takes effect.

8. Biological Resources
   a) Endangered, threaten or rare species do inhabit this area as found in a previous EIR. The area suggested to for development would make it impossible to apply mitigating measures. If most or all the land is developed, graded or otherwise disturbed, how can any of these species be protected or survive
   b), c), d) All these points will be difficult to mitigate with the proposed development and the area it will disturb.
   e) The Wildlife dispersal or migration corridors will be completely eliminated with the proposed development. What seems very curious is that the proposed project does not plan to provide a wildlife corridor as stated in Project Description table on page 2. The CEQA checklist seems to indicate that a wildlife corridor is a Significant Impact and that other corridors no longer exist. How can this project's description not include this vital wildlife corridor

9. Aesthetics
   a) & b) With the significant impact to the scenic view and the scenic highway, what mitigation is possible. No amount if landscaping will provide mitigation.
   c) The proposed project of mobile homes will have an offensive aesthetic effect to the other communities surrounding the development. Again, the surrounding communities are very different in style and usage of the land than the designated area of this development and if the mitigating actions taken to reduce the aesthetic impact. So, again, if landscaping is the only option to potentially mitigate this impact, we are looking at 7-10 years before the aesthetic impacts are mitigated.
   d) The effects of lights from this development will have more than a less than significant impact. The development is above many communities surrounding the site and lights have a great potential of glaring or shining down onto these communities.

11. Recreation
   a) The local area parks are already severely taxed, the proposed development adds significant impact to the current park systems without adding to the park systems.

13. Hazards
    e) The proposed development is next to open space that has little access. The extent of the development of this project is such that a significant fire hazard exists, especially for those lots next O'Neill Park. The fire hazard from the number of new residences will increase the potential danger not only to this project but to the surrounding communities as well. There exists only one access road out of this development and in an emergency, the amount of traffic using the one road could add to the hazards.

14. Public Services
    a) The increased danger of fire hazards should have a very significant impact on fire protection. Who will bear the burden of the need for increased fire protection. Will the increased services be paid for by this development or the county as a whole.
    b) Police protection has the same concern as 14a) above.
    c) Schools are already taxed in the area. There is no mitigation proposed for providing new schools to handle the increased needs. Furthermore, the state is mandating smaller class sizes in higher grades levels and this will only exacerbate the need for new schools and classrooms. This issue seems to have a Potential Significant Impact rather than a Significant Unless Mitigated since other developments in Mission Viejo (600 condos) are impacting the schools as well.

Please review this proposed development carefully since the Potential Significant Impacts are many and greater than indicated. One of the greatest impacts of this project is that it is started and found to be economically or physically not feasible. Then the land could be abandoned in a worse state than it presently exists and would threaten surrounding homes, lives and general well being.

Sincerely yours,

Jerold M. Kacsir

Representative, Portola Hills
19241 Jasper Hill Rd.
Trabuco Canyon, CA 92679
(714) 858-3014

Mr. Tom Mathews
Director, Orange County Environmental Management Agency
300 North Flower St.
Santa Ana, CA 92702

Dear Mr. Mathews:

I am writing as a representative of Portola Hills regarding the grading permit currently pending for Saddleback Meadows and alternatives recently proposed by TPG Management.

a. The two alternative proposals of 228 units and 183 units are unacceptable because their environmental impact is too great and they threaten to destabilize the entire site.

b. Our community endorses the 100-home Alternative 4 as described in the previous EIR for Saddleback Meadows.

c. We request a Full Faith Performance bond be required of the developer before a project on this landslide-prone site is allowed.

d. If a partial development is allowed, our community would like the see the remainder of the site purchased and preserved as open space. Preserving the entire site as open space is also a desirable alternative.

e. A real value of the property needs to be determined. To help determine its value, the County should act on the question of a grading permit for the 705-unit trailer park. The grading permit should be denied because of the project's significant environmental impacts from massive grading, landslide potential, endangered wildlife eradication, and incompatibility with surrounding neighbors, etc.

On a related issue, Planning Area 11, a site on El Toro Road south of the Saddleback Meadows site, experienced a large landslide this week during grading operations for 600 high-density units on 60 buildable acres.

Please consider our community's concerns for Saddleback Meadows as part of your advanced urban planning for our area.

Sincerely,

Elizabeth Wallace

Re: Saddleback Meadows Project

We have reviewed the EIR for the Saddleback Meadows project, #566, and respectfully submit the following comments:

Environmental Analysis Checklist - Issue #15. c) - We believe there should be an "X" on the line indicating the level of impact.

Page 2 Table titled "Surrounding Project Comparison Summary - We believe the Proposed Project must include a Wildlife Corridor as indicated Items V.A. and V.B. on Page 3 and Item 8. Biological Resources, Potential Impacts, Wildlife Corridor starting at the bottom of Page 16.

Page 10 Item 2. - We disagree with the statement that no discussion of Population and Housing is required in the EIR. Area schools are already over capacity and the Saddleback Meadows project, along with the apartments under construction on El Toro Road will certainly aggravate the situation.

Page 10 Item 3. - This item describes Potential environmental impacts on Aliso Creek and Aliso Beach as well as to occupants and structures in Hidden Ridge, the Ramakrishna Monastery, O'Neill Park, Portola Hills, Saint Michaels Abbey and Prep School, and Rural homes. We feel that, because of the vastness of potential liability, bonding of the developer should be of a sum consistent with that potential.

Page 15 Item 6 Scope of EIR Discussion - We believe that any discussion of impact on air quality should include not only the project under current conditions but should address the impact combined with other construction in the area including the apartments on El Toro Rd., additional housing in Portola Hills and Foothill Ranch, industrial construction in Foothill Ranch and along Portola Parkway, Lake Forest Drive and Bake Parkway. It should also consider the impact of a commercial airport at El Toro MCAS.

Page 18 Item 9 Aesthetics, Scope of EIR Discussion - A line of sight analysis should also be conducted from the project to the Ramakrishna Monastery.

Sincerely,

Bernard Siegel Cynthia D. Siegel

Subject: Revised Notice of Preparation for Draft EIR #566. Saddleback Meadows Development.

Dear Mr. Brantley:

At this time, Orange County Fire Authority (OCFA) staff have no additional comments other than those provided on March 17. However, I would like to point out the significance of those comments as they relate to the proposed development product. The requirements for construction in a Special Fire Protection Area include provisions which would be difficult, if not impossible, to meet with a "manufactured single family housing unit". In addition, based on work with a prior applicant, the requirement for a second point of access at 150 units would not be possible at this site due to geographic and topographic restriction.

Please contact me at (714)744-0485 if you have any questions.

Respectfully,

Laura Blaul,
Deputy Fire Marshal
Planning & Development

RE: Notice of Preparation/Draft E.I.R. No. 566
Saddleback Meadows Development

Dear Mr. Brantley:

After receipt on February 11, 1997 and upon careful evaluation of the Notice of Preparation and Initial Study GA960048 documents dated February 6, 1997 prepared by the County of Orange, and pursuant to the provisions of the California Environmental Quality Act allowing for public comments from interested parties, I am taking this opportunity to comment and make recommendations on this project.

As Tribal Chairman and Chieftain of this Indian Tribe, I would like to emphasize our desire to the County of Orange that this tribe be included in all further aspects of this project. My comments and recommendations will be directed to the cultural resource section (Section 10, pg 19) of the Notice of Preparation.

The recommendations of this tribe are as follows:

(1) Mitigation measure to be included in the Draft E.I.R. would stipulate that a professional Native American monitor selected by this tribe be present during all archaeological inventory, subsurface excavation/data recovery and during construction grading and trenching.

(2) Mitigation measure to be included in the Draft E.I.R. would stipulate that the professional Native American monitor selected for this position give weekly written reports to this tribal council and to other appropriate, interested agencies as deemed necessary. This monitor will also be required to give oral reports and testimony at those times when called upon to do so.

(3) As to any and all artifacts and cultural items encountered during excavations and/or grading, it would be the responsibility of the County of Orange to provide a safe environment for curation until the Native American monitor and members of this tribal council decide upon a proper disposition.

1226 West 3rd Street
Santa Ana, CA 92703
(714) 547-4237

It is the belief of this tribe that the comments and recommendations that have been made will be a valuable asset to the County of Orange in their commencement of this project. I hope that you and your staff will carefully consider the above recommendations. Please keep me informed of any future public hearings and comment deadlines as this tribe will carefully follow the progress of this project to the end.

Sincerely,

Jim Velasques
Tribal Spokesman and Chief
Diegueño/Coastal Gabrieleno

County of Orange

MEMO

DATE: FEB 28 1997

TO: Ray Brantley, Environmental and Coastal Planning

FROM: Ignacio Ochoa, Traffic Engineering

SUBJECT: Saddleback Meadows Notice of Preparation (Revised)

Traffic Engineering has completed its review of the revised N. O. P. and find some inconsistencies still exist with in the document.

1. The project on the public notice page proposes 158 acres or 71% of the site reserved for 705 single family residential units and 64 acres or 29% of the site proposed for open space, whereas page 1 of the initial study GA960048 proposes 10% of the project site for open space.

2. In the Environmental Analysis Checklist, under Transportation/Circulation - The effect of the vehicle trips generated by this proposal should be in the "Significant Unless Mitigated" instead of the "Less Than Significant Impact" column.

Ignacio Ochoa

MEMO

FEB 13 1997

DATE:

TO: George Britton, Manager, Environmental and Project Planning

Attn: Raymond Brantley

FROM: Manager, Environmental Resources

SUBJECT: Review of NOP for Saddleback Meadows Development

In response to your request for input on the subject project, Environmental Resources has reviewed this document and offers the following comments:

The EIR should particularly emphasize the water quality conditions of Aliso Creek as a "Receiving Water" of runoff from the project. Portions of Aliso Creek are already officially recognized as "impaired" in terms of water quality by the San Diego Regional Water Quality Control Board, due to some extent from urban stormwater runoff. As a result, all increases in potential pollutant discharge associated with contaminants in urban runoff are of concern. Intensive replacement of the current pervious cover with impervious surfaces could have impacts on the ability of an impaired water body to recover from current adverse conditions.

Potential project surface water quality impacts would arise from construction activities, long-term runoff impacts of new impervious surfaces, pesticides and fertilizers applied to new landscaping, outdoor uses (either principal or ancillary uses), and spills from accidents and/or improper residential management of chemicals.

In terms of specific mitigations for project impacts, these could include:

a) preparation of a construction Stormwater Pollution Prevention Plan under State NPDES requirements;
b) incorporation of those construction notes recommended in the Countywide Drainage Area Management Plan (DAMP) New Development Appendix;
c) incorporation of Federal EPA/NOAA guidance measures for coastal nonpoint source pollution;
d) incorporation of other measures from the State Municipal BMP Manual;
e) incorporation of other measures from the State Urban Runoff Technical Advisory Committee Report and Recommendations;
f) development of a long-term post-construction water quality management plan, describing committments to installation and maintenance of structural facilities and conduct of non-structural Best Management Practices (BMPs) consistent with the DAMP New Development Appendix;
g) inclusion of flood control improvements sensitive to surface water quality; and/or
h) inclusion of the goals and objectives from the Water Quality Control Plan for the San Diego Region for water quality as engineering design goals for runoff leaving the project area.

Additionally, problems that have been identified with previous environmental documents on this property include:

a) conclusions that implementation of a standard Water Quality Management Plan (WQMP) would assure that "no unavoidable adverse impacts to...water quality" result. Such an assumption is invalid, in that no scientific research was conducted to determine the efficacy of such measures, and no CEQA documentation was prepared for their adoption. The EIR should recognize that there will be unquantifiable and incremental unavoidable adverse water quality impacts associated with the project;

b) failure to include the standard county condition dealing with performance of a hazardous materials assessment prior to offers of dedication for public purposes. This condition should appropriately appear as a mitigation; and

c) recognizing that Aliso Creek is a watershed already formally designated as impaired in terms of water quality by the Statewide Water Quality Assessment, but then creating arbitrary criteria for assessing impact significance. Such criteria need to be based on the Beneficial Uses established for Aliso Creek in the Regional Water Board Region 9 Basin Plan and the impact the project could have on use attainability. The EIR should recognize that run-off arising from the built-out project may have impacts on the ultimate ability of Aliso Creek to recover from its current impairment.

If there are any questions, please contact Jim Swanek at 567-6342.

Bruce Moore for

Chris Crompton

DATE: January 28, 1997

TO: Raymond Brantly, Chief, Environmental & Project Planning

FROM: Johnnie Earnest, Chief, Geotechnical/Grading Plan Check

SUBJECT: Review of Notice of Intent to Prepare a Draft Environmental Impact Report # 566 - Saddleback Meadows Residential Development - Tract 10692 - Grading Application GA960048

This site has been the object of several previous studies. Applicable comments contained in the second screencheck review of the Draft Environmental Impact Report EIR #561 issued on December 29, 1995 should be addressed in the subject EIR #566. A copy of those comments are attached.

According to the subject document approximately 10 % of the site is to remain open space. Based upon previous reviews, mitigation measures will require encroachment into this area. Although the areas will remain open space grading operations will remove a large portion of the natural vegetation.

The impact that grading operations will have upon the stability of adjacent property and vice versa must be addressed and appropriate mitigation/corrective grading measures provided.

If the site is to be graded in phases appropriate grading measures must be provided to demonstrate that each phase will have adequate stability.

As noted above consideration must be given to the impact that grading activity will have upon the biological resources of the area.

Anaheim, CA
92803-3334

SUBJECT: WILL SERVE - Saddleback Meadows Development

This letter is not to be interpreted as a contractual commitment to serve the proposed project, but only as an information service. Its intent is to notify you that the Southern California Gas Company has facilities in the area where the above named project is proposed. Gas service to the project could be served from an existing main as shown on the attached atlas sheet without any significant impact on the environment. The service will be in accordance with the company's policies and extension rules on file with the California Public Utilities Commission at the time contractual arrangements are made.

The availability of natural gas service, as set forth in this letter, is based upon present conditions of gas supply and regulatory policies. As a public utility, the Southern California Gas Company is under the jurisdiction of the federal regulatory agencies. Should these agencies take any action which affects gas supply or the condition under which service is available, gas service will be provided in accordance with revised conditions.

Residential (System Area Average)	Yearly
Single-family	750 therms/year/dwelling unit
Multi-family units	475 therms/year/dwelling unit

These averages are based on total gas consumption in residential units served by Southern California Gas Company during 1985 and it should not be implied that any particular home, apartment or tract or homes will use these amounts of energy.

Estimates of gas usage for non-residential projects are developed on an individual basis and are obtained from a Market Services Staff representative by calling (800) 427-2000 Market Services can also provide assistance in selecting the most energy efficient appliances or systems for a particular project.

Sincerely

Robert S. Warth
Technical Supervisor

Att'n: Mr. Raymond H.C. Brantley

Re: Saddleback Meadows:

Dear Mr. Brantley:

As you probably know, we are the attorneys for the Vedanta Society of Southern California ("Vedanta"). Vedanta owns the Ramakrishna Monastery and surrounding land adjacent to O'Neill Regional Park at 19961 Live Oak Canyon Road in Trabuco Canyon.

We are writing now to thank you for the opportunity to comment on the Notice of Preparation ("NOP") Dated December 24, 1997, and to avail ourselves of that opportunity.

As a threshold matter we note that the NOP refers to 705 manufactured homes (i.e., a trailer park) but the Initial Study ("Study") calls for development of 318 single-family detached residential units. We suppose the reason for this is that the Applicant has recycled its documents from its failed attempt to develop the same land last year.

This would also account for certain omissions in the Study. We believe that "potentially significant impact" should be found in the areas of "population and housing," "public services" and "utilities and service systems." These items were erroneously omitted from the previous Environmental Analysis Checklist but should be included in this one. (We note that under "Public Services" in the Environmental Analysis Checklist potential significant impacts *are* noted, as they should be.)

We must respectfully disagree with the "Environmental Findings" which conclude that "Adverse Impacts on Humans" will be "Significant Unless Mitigated." As the previous rounds of hearings revealed, the correct category is "Potentially Significant" because adequate mitigation is not possible.

In the "Environmental Checklist" there are numerous debatable

conclusions, and some that are downright wrong. Please review the following items:

2 a) and b);
3 a), b), d), e), f), g), h);
4 f)
5 a), c);
6 a) and b);
9 c);
10 a), b), c), d) and e);
11 b) and c);
13 b) and e);
14 c), d) and e)
15 a), b), c), d) and e)

Any EIR that follows the Environmental Findings set forth in the NOP will necessarily be flawed as was the previous EIR upon which this most recent NOP seems to be based. In essence the NOP and accompanying documents ignore or gloss over significant problems, some of which will prove to be insurmountable.

We wish to observe, finally, that the previous Board of Supervisors in voting unanimously to disapprove this project's previous incarnation stated that the land was unbuildable due to the ongoing ancient landslides that underlie it. That Board recommended that the land be returned to acreage, and we submit that this is the only wise course of action. The Applicant does not have a vested right to develop this property, contrary to what it has stated publicly.

Again, please accept our thanks for this opportunity to comment.

Yours very truly,

Charles K. Mitchell

Notice of Preparation to Prepare a Draft Environmental Report (DEIR) No. 566 for Saddleback Meadows Residential Development, Orange County, California.

Dear Mr. Brantley:

The U. S. Fish and Wildlife Service (Service) and California Department of Fish and Game (Department) Natural Community Conservation Planning (NCCP) program staff (i.e., "agencies") have reviewed the above referenced document. The project is located within the Southern Subregion Orange County NCCP Planning Area. The preferred project alternative proposes the phased development of 705 manufactured, single-family residential units on a 222.9-acre site near the intersection of El Toro Road and Live Oak Canyon Road. A total of 10% of the project site is proposed to remain as open space. There are two County of Orange (County) staff alternatives presented. Staff Alternative 'A' would allow 150 sf units with a minimum lot size of 20,000 feet^2. Staff Alternative 'B' would reduce the number of dwelling units on the project site to no more than 100 on approximately 30 acres. The proposed project may conflict with the earlier-adopted Foothill-Trabuco and Aliso Creek Corridor Specific Plans.

The NOP outlines the project chronology from 1978. The agencies have formally commented at different stages of the proposed project. We have also met with the project applicant and their consultants, including a meeting at the project site on May 20, 1996. On June 29, 1994, the Service wrote a letter stating that project approval must be deferred until the Southern Subregion NCCP was finalized. In 1996, both agencies commented on DEIR No. 561. The Service letter stated that the location of this development within and adjacent to occupied habitat of rare species could compromise the NCCP reserve and its ability to function as a wildlife corridor through the direct and indirect impacts of habitat destruction, fragmentation, introduction of exotic species, noise, and lighting. Our comments were based upon a project alternative that provided more open space than the proposed preferred alternative.

The agencies offer the following specific information and recommendations to assist the County in planning for the preservation of sensitive wildlife species, habitats, and wildlife corridors within the proposed project area, and as a means to assist you in complying with pertinent

statutes. To facilitate the evaluation of the proposed project from the standpoint of environmental resource planning, we request that the DEIR contain the following specific information:

1) A complete discussion of the purpose and need for the project and each of the project alternatives.

2) A complete description of the proposed project, including all practicable alternatives that have been considered to reduce project impacts to wetland areas, coastal sage scrub, and other rare habitat types and species.

3) Descriptions of the biological resources associated with each habitat type. These descriptions should include both qualitative and quantitative assessments of the resources present on the proposed project site, such as coastal sage scrub, southern maritime chaparral, oak woodland, southern willow scrub, mulefat scrub, and other wetlands. Information from EIR No. 561 and other sources should be updated as necessary. Maps and tables should be used to summarize these data.

4) Specific acreage and descriptions of coastal sage scrub within the project area and impacts due to project alternatives.

5) An assessment of direct, indirect, and cumulative project impacts to wildlife and associated habitats as a result of this project and other reasonably expected projects. All facets of the project (e.g., construction, implementation, operation and maintenance) should be included in this assessment.

6) Cumulative impacts should include an adequate discussion of past, present, and reasonably anticipated future projects producing related or cumulative impacts, including those projects outside the control of the agency, pursuant to §15130 of the CEQA Guidelines. This discussion should include projects such as the proposed Live Oak Plaza and Foothill Ranch projects.

7) Available data in EIR No. 561 regarding coastal California gnatcatcher (*Polioptila californica californica*) surveys indicated that surveys were done in 1993 and 1994. The agencies accept survey results as valid for only 12 months. Gnatcatchers are known to occur adjacent to the proposed project area. We suggest that updated surveys be done for this species. The updated survey protocol includes a total of seven surveys in the breeding season or nine in the non-breeding season.

8) An assessment of existing wildlife corridors and impacts due to the proposed project and its alternatives. The agencies recommend that the DEIR disclose and analyze any

impacts within this linkage area by utilizing aerial photographs and graphic techniques such as maps and tables. Data from the mountain lion telemetry studies conducted by Paul Beier Ph.D., and other applicable investigations conducted in the area should be included in this assessment. We suggest that this assessment of wildlife corridors include a field survey using applicable techniques to determine wildlife use within the proposed project area. These techniques should include but not be limited to one or more of the following: track pads, scent stations, wildlife sign identification, and automatic photographic techniques.

9) A list of Federal candidate, proposed or listed species, state-listed species, and locally sensitive species that are on or near the project site should be included with a detailed discussion of these species, including information pertaining to their local status and distribution. The Service will provide a list of these species in a separate letter. The real and anticipated impacts of the project on these species should be fully addressed.

10) The status and likely impacts to botanical resources, including rare plants, should be reassessed. A literature search should be conducted, including a review of the Natural Diversity Database maintained by the State of California, for species that are Federal and State listed, proposed, candidate, or are otherwise considered to be endemic or rare by knowledgable authorities such as the California Native Plant Society. These species of interest for this proposed project would include but not necessarily be limited to Catalina mariposa lily (*Calochortus catalinae*) and intermediate mariposa lily (*Calochortus weedii* ssp. *intermedius*).

11) Surveys should be conducted for the Quino checkerspot (*Euphydryas editha quino*), a Federal endangered species. The biologist conducting this survey should contact the Carlsbad Field Office to obtain the most current survey guidelines.

12) The current status of fairy shrimp on the project site should be discussed. This would include the endangered Riverside fairy shrimp (*Streptocephalus woottoni*), the proposed endangered San Diego fairy shrimp (*Branchinecta sandiegoensis*) and the threatened vernal pool fairy shrimp (*Branchinecta lynchi*). Riverside fairy shrimp is known to occur on the proposed project site.

13) Specific mitigation plans to fully offset project-related impacts, including proposals for mitigating the cumulative impacts of direct and indirect habitat loss, degradation, or modification. The project site supports significant biological resources and is part of a regional wildlife corridor. Adverse project-related impacts should be mitigated, to the maximum extent practicable, through on-site conservation or revegetation of impacted habitat types. The objective of each mitigation plan should be to offset the project-induced qualitative and quantitative losses of wildlife habitat values. These mitigation

plans involving restoration and enhancement should be prepared by persons with specific expertise on southern California ecosystems and state-of-the-art native plant revegetation techniques. Each plan should include, at a minimum: a) the location of the mitigation site; b) the species, actual number, and size of the plants to be used (seeds and seedlings should be obtained from an appropriate on-site location or from a site in the immediate vicinity of the project site); c) a schematic layout depicting the arrangement of the plants within the compensation area; d) time of year that planting will occur; e) identification of the irrigation methodology to be employed; f) measures to be taken to control exotic vegetation on site; g) a detailed monitoring program that includes provisions for replanting areas where planted materials have not survived; and h) identification of the agency or party responsible for assuring the successful creation of the mitigation habitat and providing for the perpetual conservation of the restoration site.

14) An analysis of the effects of the project on the hydrology of any riparian or wetland communities within the sphere of influence of the project. Of particular importance is an analysis of the adequacy of proposed means to convey major flood or runoff flows without impacting vegetation off-site or in the restoration area. Also of great interest would be an analysis of the effects on hydrology of the Riverside fairy shrimp occupied habitat due to the proposed project.

15) Identification of methods to be employed to prevent soil erosion and siltation to adjacent areas designated as open space and NCCP reserve lands.

16) Measures to be taken to perpetually protect habitat values that are created during restoration (mitigation). Issues that should be addressed include restrictions on vehicle and people access, proposed land dedications, monitoring and management programs, control of illegal dumping, restrictions on lighting near mitigation areas, etc.

17) A thorough analysis of expected noise impacts on avian species and other wildlife and measures to be taken to mitigate any adverse impacts resulting from noise levels.

The agencies appreciate working with the County on NCCP conservation planning issues. Lands within the proposed project area are important in conservation planning for the Southern Subregion NCCP Reserve in Orange County. The area of the proposed project is also the only linkage to the NCCP Central Subregion in Orange County. An improperly implemented project would permanently destroy the integrity of the linkage between the Subregion reserves.

If you have any questions or comments please contact Liam H. Davis, Associate Wildlife Biologist (Department) at 619-467-4207 or Robert James, Fish and Wildlife Biologist (Service) at 619-431-9440.

Project Title: Saddleback Meadows Development
Applicant: California Quartet, Inc.

Gentlemen:

Trabuco Canyon Water District ("TCWD") is in receipt of the Notice of Preparation (Revised) dated February 6, 1997 for the above-captioned matter.

TCWD responds that it will provide water to and sewering of the property, subject to receipt of all applicable fees, approval of appropriate agreements, and the construction of water and sewer facilities to meet the needs of the project.

If you require further information, please contact the undersigned at (714) 858-0277.

Very truly yours,

RE: **Comments on the Notice of Preparation for the Draft EIR for the County of Orange, Saddleback Meadows Development - SCAG No. I9700056**

Dear Mr. Brantley:

Thank you for submitting the **Notice of Preparation for the Draft EIR for the County of Orange, Saddleback Meadows Development** to SCAG for review and comment. As areawide clearinghouse for regionally significant projects, SCAG assists cities, counties and other agencies in reviewing projects and plans for consistency with regional plans.

In addition, The California Environmental Quality Act requires that EIRs discuss any inconsistencies between the proposed project and the applicable general plans and regional plans (Section 15125 [b]). If there are inconsistencies, an explanation and rationalization for such inconsistencies should be provided.

Policies of SCAG's Regional Comprehensive Plan and Guide which may be applicable to your project are outlined in the attachment. We suggest that the appropriate policies be addressed in the DEIR.

Please provide a minimum of 45 days for SCAG to review the DEIR when this document is available. If you have any questions regarding the attached comments, please contact Bill Boyd at (213) 236-1960.

Sincerely,

VIVIANE DOCHE-BOULOS

**COMMENTS ON THE NOTICE OF PREPARATION
OF A DRAFT ENVIRONMENTAL IMPACT REPORT
FOR COUNTY OF ORANGE, SADDLEBACK MEADOWS DEVELOPMENT**

PROJECT DESCRIPTION

The proposed Project involves the phased development of 705 manufactured single-family units and a 1.7 acre neighborhood commercial center on a 222.23-acre site on the easterly side of El Toro Road. Gross residential density proposed is 3.17 dwellings per acre, with an average lot size of 3,900 square feet. Seventy one percent (158 acres) of the site would be impacted, and 64 acres are proposed as open space. The site is located approximately 1/2 mile south of the El Toro Road/Live Oak Canyon Road intersection in the Foothill/Trabuco Canyon Specific Plan area of unincorporated Orange County.

CONSISTENCY WITH REGIONAL COMPREHENSIVE PLAN AND GUIDE POLICIES

The Growth Management Chapter (GMC) of the Regional Comprehensive Plan and Guide (RCPG) contains the following policy that is particularly applicable and should be addressed in the Draft EIR for the Project[1]:

- *The population, housing, and jobs forecasts, which are adopted by SCAG's Regional Council and that reflect local plans and policies, shall be used by SCAG in all phases of implementation and review.*

The Regional Mobility Element (RME) also has policies pertinent to this proposed project[2]. This chapter links the goal of sustaining mobility with the goals of fostering economic development, enhancing the environment, reducing energy consumption, promoting transportation-friendly development patterns, and encouraging fair and equitable access to residents affected by socio-economic, geographic and commercial limitations. Among the relevant policies of this chapter are the following:

- *Promote Transportation Demand Management (TDM) programs along with transit and ridesharing facilities as a viable and desirable part of the overall mobility program while recognizing the particular needs of individual subregions.*

---

[1] See Endnote.

[2] See Endnote.

- *Support the extension of TDM program implementation to non-commute trips for public and private sector activities.*

- *Support the coordination of land use and transportation decisions with land use and transportation capacity, taking into account the potential for demand management strategies to mitigate travel demand if provided for as a part of the entire package.*

- *Urban form, land use and site-design policies should include requirements for safe and convenient non-motorized transportation, including the development of bicycle and pedestrian-friendly environments near transit.*

- *The development of the regional transportation system should include a non-motorized transportation system that provides an effective alternative to auto travel for appropriate trips. The planning and development of transportation projects and systems should incorporate the following, as appropriate:*

    a. *Provision of safe, convenient, and continuous bicycle and pedestrian infrastructure to and throughout areas with existing and potential demand such as activity areas, schools, recreational areas (including those areas served by trails), which will ultimately offer the same or better accessibility provided to the motorized vehicle.*

    b. *Accessibility to and on transit (bus terminals, rail stations, Park-And-Ride lots), where there is demand and where transit boarding time will not be significantly delayed.*

    c. *Maintenance of safe, convenient, and continuous non motorized travel during and after the construction of transportation and general development projects. Existing bikeways and pedestrian walkways should not be removed without mitigation that is as effective as the original facility.*

- *Entities and programs that currently support the auto should be encouraged to provide the same types of services for non-motorized transportation, including education, promotion, and enforcement.*

<u>GMC POLICIES RELATED TO THE RCPG GOAL TO IMPROVE THE REGIONAL STANDARD OF LIVING</u>

The Growth Management goals to develop urban forms that enable individuals to spend less income on housing cost, that minimize public and private development costs, and that enable firms to be more competitive, strengthen the regional strategic goal to stimulate the regional economy. The evaluation of the proposed project in relation to the following policies would be intended to guide efforts toward achievement of such goals and does not infer regional interference with local land use powers.

- *Encourage local jurisdictions' efforts to achieve a balance between the types of jobs they seek to attract and housing prices.*

- *Encourage patterns of urban development and land use which reduce costs on infrastructure construction and make better use of existing facilities.*

GMC POLICIES RELATED TO THE RCPG GOAL TO IMPROVE THE REGIONAL QUALITY OF LIFE

The Growth Management goals to attain mobility and clean air goals and to develop urban forms that enhance quality of life, that accommodate a diversity of life styles, that preserve open space and natural resources, and that are aesthetically pleasing and preserve the character of communities, enhance the regional strategic goal of maintaining the regional quality of life. The evaluation of the proposed project in relation to the following policies would be intended to provide direction for plan implementation, and does not allude to regional mandates.

- *Support provisions and incentives created by local jurisdictions to attract housing growth in job rich subregions and job growth in housing rich subregions.*

- *Encourage existing or proposed local jurisdictions' programs aimed at designing land uses which encourage the use of transit and thus reduce the need for roadway expansion, reduce the number of auto trips and vehicle miles traveled, and create opportunities for residents to walk and bike.*

- *Encourage local jurisdictions' plans that maximize the use of existing urbanized areas accessible to transit through infill and redevelopment.*

- *Support and encourage settlement patterns which contain a range of urban densities.*

- *Encourage planned development in locations least likely to cause environmental impact.*

- *National Forests shall remain permanently preserved and used as open space. SCAG*

shall support policies and actions that preserve open space areas identified in local, state, and federal plans.

- *Support the protection of vital resources such as wetlands, groundwater recharge areas, woodlands, production lands, and land containing unique and endangered plants and animals.*

- *Encourage the implementation of measures aimed at the preservation and protection of recorded and unrecorded cultural resources and archaeological sites.*

- *Discourage development, or encourage the use of special design requirements, in areas with steep slopes, high fire, flood, and seismic hazards.*

- *Encourage mitigation measures that reduce noise in certain locations, measures aimed at preservation of biological and ecological resources,measures that would reduce exposure to seismic hazards, minimize earthquake damage, and to develop emergency response and recovery plans.*

GMC POLICIES RELATED TO THE RCPG GOAL TO PROVIDE SOCIAL, POLITICAL, AND CULTURAL EQUITY

The Growth Management Goal to develop urban forms that avoid economic and social polarization promotes the regional strategic goal of minimizing social and geographic disparities and of reaching equity among all segments of society. The evaluation of the proposed project in relation to the policy stated below is intended guide direction for the accomplishment of this goal, and does not infer regional mandates and interference with local land use powers.

- *Encourage efforts of local jurisdictions in the implementation of programs that increase the supply and quality of housing and provide affordable housing as evaluated in the Regional Housing Needs Assessment.*

- *Support local jurisdictions and other service providers in their efforts to develop sustainable communities and provide, equally to all members of society, accessible and effective services such as: public education, housing, health care, social services, recreational facilities, law enforcement, and fire protection.*

AIR QUALITY CHAPTER CORE ACTIONS

The Air Quality Chapter core actions related to the proposed project include:

- *Determine specific programs and associated actions needed (e.g., indirect source rules, enhanced use of telecommunications, provision of community based shuttle services, provision of demand management based programs, or vehicle-miles-traveled/emission fees) so that options to command and control regulations can be assessed.*

- *Through the environmental document review process, ensure that plans at all levels of government (regional, air basin, county, subregional and local) consider air quality, land use, transportation and economic relationships to ensure consistency and minimize conflicts.*

WATER QUALITY CHAPTER RECOMMENDATIONS AND POLICY OPTIONS

The Water Quality Chapter core recommendations and policy options relate to the two water quality goals: to restore and maintain the chemical, physical and biological integrity of the nation's water; and, to achieve and maintain water quality objectives that are necessary to protect all beneficial uses of all waters.

- *Encourage "watershed management" programs and strategies, recognizing the primary role of local governments in such efforts.*

- *Coordinate watershed management planning at the subregional level by (1) providing consistent regional data; (2) serving as a liaison between affected local, state, and federal watershed management agencies; and (3) ensuring that watershed planning is consistent with other planning objectives (e.g., transportation, air quality, water supply).*

- *Support regional efforts to identify and cooperatively plan for wetlands to facilitate both sustaining the amount and quality of wetlands in the region and expediting the process for obtaining wetlands permits.*

- *Clean up the contamination in the region's major groundwater aquifers since its water supply is critical to the long-term economic and environmental health of the region. The financing of such clean-ups should leverage state and federal resources and minimize significant impacts on the local economy.*

- *Encourage water reclamation throughout the region where it is cost-effective, feasible, and appropriate to reduce reliance on imported water and wastewater discharges. Current administrative impediments to increased use of wastewater should be addressed.*

- *Ensure wastewater treatment agency facility planning and facility development be*

consistent with population projections contained in the RCPG, while taking into account the need to build wastewater treatment facilities in cost-effective increments of capacity, the need to build well enough in advance to reliably meet unanticipated service and storm water demands, and the need to provide standby capacity for public safety and environmental protection objectives.

CONCLUSIONS

All feasible measures needed to mitigate any potentially negative regional impacts associated with the proposed project should be implemented and monitored, as required by CEQA.

ENDNOTE

SOUTHERN CALIFORNIA ASSOCIATION OF GOVERNMENTS

Roles and Authorities

SCAG is a ***Joint Powers Agency*** established under California Government Code Section 6502 et seq. Under federal and state law, SCAG is designated as a Council of Governments (COG), a Regional Transportation Planning Agency (RTPA), and a Metropolitan Planning Organization (MPO). SCAG's mandated roles and responsibilities include the following:

SCAG is designated by the federal government as the Region's ***Metropolitan Planning Organization*** and mandated to maintain a continuing, cooperative, and comprehensive transportation planning process resulting in a Regional Transportation Plan and a Regional Transportation Improvement Program pursuant to 23 U.S.C. §134(g)-(h), 49 U.S.C. §1607(f)-(g) et seq., 23 C.F.R. §450, and 49 C.F.R. §613. SCAG is also the designated ***Regional Transportation Planning Agency***, and as such is responsible for both preparation of the Regional Transportation Plan (RTP) and Regional Transportation Improvement Program (RTIP) under California Government Code Section 65080.

SCAG is responsible for developing the demographic projections and the integrated land use, housing, employment, and transportation programs, measures, and strategies portions of the ***South Coast Air Quality Management Plan***, pursuant to California Health and Safety Code Section 40460(b)-(c). SCAG is also designated under 42 U.S.C. §7504(a) as a ***Co-Lead Agency*** for air quality planning for the Central Coast and Southeast Desert Air Basin District.

SCAG is responsible under the Federal Clean Air Act for determining ***Conformity*** of Projects, Plans and Programs to the Air Plan, pursuant to 42 U.S.C. §7506.

Pursuant to California Government Code Section 65089.2, SCAG is responsible for ***reviewing all Congestion Management Plans (CMPs) for consistency with regional transportation plans*** required by Section 65080 of the Government Code. SCAG must also evaluate the consistency and compatibility of such programs within the region.

SCAG is the authorized regional agency for ***Inter-Governmental Review*** of Programs proposed for federal financial assistance and direct development activities, pursuant to Presidential Executive Order 12,372 (replacing A 95 Review).

SCAG reviews, pursuant to Public Resources Code Sections 21083 and 21087, ***Environmental Impact Reports*** of projects of regional significance for consistency with regional plans [California Environmental Quality Act Guidelines Sections 15206 and 15125(b)].

Pursuant to 33 U.S.C. §1288(a)(2) (Section 208 of the Federal Water Pollution Control Act), SCAG is the authorized ***Areawide Waste Treatment Management Planning Agency***.

SCAG is responsible for preparation of the ***Regional Housing Needs Assessment***, pursuant to California Government Code Section 65584(a).

SCAG is responsible (with the San Diego Association of Governments and the Santa Barbara County/Cities Area Planning Council) for preparing the ***Southern California Hazardous Waste Management Plan*** pursuant to California Health and Safety Code Section 25135.3.

The Gas Company

Orange Coast Region

February 18, 1997

County Of Orange
Planning & Developmenbt Services Dept.
P.O Box 4048
Santa Ana, Ca. 92702-4048

Attention: Raymond H.C. Brantley

Southern California Gas Company
Mailing Address
Box 3334
Anaheim, CA
92803-3334

SUBJECT: WILL SERVE - Saddleback Meadows Development

This letter is not to be interpreted as a contractual commitment to serve the proposed project, but only as an information service. Its intent is to notify you that the Southern California Gas Company has facilities in the area where the above named project is proposed. Gas service to the project could be served from an existing main as shown on the attached atlas sheet without any significant impact on the environment. The service will be in accordance with the company's policies and extension rules on file with the California Public Utilities Commission at the time contractual arrangements are made.

The availability of natural gas service, as set forth in this letter, is based upon present conditions of gas supply and regulatory policies. As a public utility, the Southern California Gas Company is under the jurisdiction of the federal regulatory agencies. Should these agencies take any action which affects gas supply or the condition under which service is available, gas service will be provided in accordance with revised conditions.

Residential (System Area Average)	Yearly
Single-family	750 therms/year/dwelling unit
Multi-family units	475 therms/year/dwelling unit

These averages are based on total gas consumption in residential units served by Southern California Gas Company during 1985 and it should not be implied that any particular home, apartment or tract or homes will use these amounts of energy.

Estimates of gas usage for non-residential projects are developed on an individual basis and are obtained from a Market Services Staff representative by calling (800) 427-2000. Market Services can also provide assistance in selecting the most energy efficient appliances or systems for a particular project.

Sincerely,

Robert Warth

Robert S. Warth
Technical Supervisor

ENVIRONMENTAL MANAGEMENT AGENCY
P.O. BOX 4048
SANTA ANA, CALIFORNIA 92702-4048

NOTICE OF PREPARATION

Date: December 24, 1996

Subject: Notice Of Intent To Prepare A
Draft Environmental Impact Report # 566

Project Title: Saddleback Meadows Residential Development

Applicant California Quartet, Inc.

The Orange County Environmental Management Agency has conducted an Initial Study for the subject project and has determined that an Environmental Impact Report is necessary. The County of Orange will be the Lead Agency for the subject project and will prepare the EIR. In order for the concerns of your agency to be incorporated into the Draft EIR, we need to know the views of your agency as to the scope and content of the environmental information relevant to your agency's statutory responsibilities in connection with the proposed project Your agency must consider the EIR prepared by the County of Orange when considering your permit or approval for the project. The project description, location, and an analysis indicating the probable environmental effects of the proposed action are contained in the attached materials.

Pursuant to Section 21080.4 of CEQA, your response must be sent as soon as possible but not later than 30 days after receipt of this notice.

If any significant changes in the proposed project occur, we will advise you If you have need for additional information, contact Raymond H.C Brantley of the Environmental & Project Planning Division at 834- 5550

Submitted by:

Raymond H.C Brantley

Attachment: Initial Study

F0250-103 1 88/85

PUBLIC NOTICE

NOTICE OF INTENT TO PREPARE AN ENVIRONMENTAL IMPACT REPORT

EIR 566

Pursuant to Public Resources Code Section 21165, the County of Orange is the Lead Agency responsible for preparing an environmental impact report (EIR) addressing potential impacts associated with the proposed Saddleback Meadows project located approximately 1/2 mile of the El Toro Road/Live Oak Canyon Road intersection in the Foothill/Trabuco Specific Plan area of unincorporated Orange County. The Project proposes the phased development of 705 manufactured, single-family residential units on a 229.2-acre site on the easterly side of El Toro Road. The gross residential density proposed is 3.17 dwelling per acre, with an average lot size of 3,900 square feet and a minimum lot size of 3,200 square feet. Sixty-nine percent (69%), or 158 acres of the project site would be impacted; 71 acres are proposed for open space.

At a minimum, the EIR will examine the potential impacts resulting from the project in the following topical areas: Land Use; Affordable Housing; Geophysical; Grading; Water; Transportation; Air Quality; Noise; Biological Resources; Aesthetics; Cultural/Scientific Resources; Recreation; Hazards; Public Services, including schools; and Cumulative Impacts. A more complete description of EIR requirements are included in the Notice of Preparation.

REVIEWING LOCATIONS

COPIES OF THE NOTICE OF PREPARATION (NOP) ARE AVAILABLE FOR PUBLIC REVIEW FROM DECEMBER 26, 1996 TO JAN. 31, 1997 AT THE FOLLOWING LOCATIONS.

INITIAL STUDY

1. **PROJECT TITLE:** Saddleback Meadows **PROJECT NUMBER:** GA 960048

2. **LEAD AGENCY:** Orange County Environmental Management Agency **LEAD DIVISION:** Environmental Planning Div.

3. **CEQA CONTACT PERSON:** Raymond H.C. Brantley **PHONE NUMBER:** (714) 834-3763

4. **PROJECT LOCATION:** Approx. 1/4 mile south of the intersection of El Toro Road and Live Oak Canyon Road, immediately north of the Hidden Ridge community, east of El Toro Road in the Foothill Trabuco Specific Plan area of unincorporated Orange County.

5. **PROJECT SPONSOR'S NAME:** Calif. Quartet, Ltd. **ADDRESS:** 1601 Dove St., Ste. 105 Newport Beach, CA 92660

6. **GENERAL PLAN DESIGNATION:** 1B and 1.2

7. **ZONING:** "S" "BWR" Foothill Trabuco Specific Plan; "SR" Overlay District

8. **DESCRIPTION OF PROJECT: (Describe the whole action involved)**
Development of 318 single-family detached residential units, associated infrastructure, a wildlife movement corridor, hiking/riding trail and biological resource enhancement on the 229.2 acre site.

9. **SOURCES OF INFORMATION: (Numbered)**
(1) Certified FEIRs 059 & 203; (2) Orange County General Plan (OCGP) Land Use Element; (3) Foothill-Trabuco Specific Plan; (4) Tentative Tract Map TT10692; (5) Preliminary Landscape Plan; (6) 4th Supplemental Geotechnical Rpt.; (7) Biological Assessment & Oak Tree Inventory; (8) Aliso Creek Corridor Specific Plan; (9) Phase I Grading Plan; (10) Original Grading Plan; (11) OCGP Noise Element; (12) OCGP Transportation Element; (13) SCAQMD Air Quality Handbook; (14) Letter to Tim Neely from US Fish & Wildlife Service; (15) OCGP Resources Element; (16) OCGP Recreation Element; (17) OCGP Safety Element; (18) OC Natural Community Conservation Planning Program Guidelines (19) Saddleback Meadows Information Booklet

10. **RESPONSIBLE AGENCIES:**
U.S. Fish & Wildlife Service, Calif. Dept. of Fish & Game; U.S. Army Corps of Engineers; Calif. Regional Water Quality Control Board

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" or "Potentially Significant Unless Mitigated," as indicated on the attached Environmental Analysis Checklist.

X	Land Use & Planning	X	Air Quality	X	Recreation
___	Population & Housing	X	Noise	___	Energy & Mineral Resources
X	Geophysical	X	Biological Resources	X	Hazards
X	Water	X	Aesthetics	___	Public Services
X	Transportation/Circulation	X	Cultural/Scientific Resources	___	Utilities & Service Systems

ENVIRONMENTAL FINDINGS

	POTENTIALLY SIGNIFICANT IMPACT	SIGNIFICANT UNLESS MITIGATED	LESS THAN SIGNIFICANT IMPACT	NO IMPACT
A. **POTENTIAL TO DEGRADE**: Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?	X	___	___	___
B. **SHORT-TERM**: Does the project have the potential to achieve short-term, to the disadvantage of long-term, environmental goals?	X	___	___	___
C **CUMULATIVE IMPACTS**: Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)	X	___	___	___
D. **ADVERSE IMPACTS ON HUMANS**: Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	___	X	___	___

DETERMINATION

I find that the proposed project **COULD NOT** have a significant effect on the environment, and a **NEGATIVE DECLARATION** will be prepared. ___

I find that although the proposed project **COULD** have a significant effect on the environment, there will not be a significant effect in this case because Mitigation Measures have been added to the project. A **MITIGATED NEGATIVE DECLARATION** will be prepared ___

I find that the proposed project **MAY** have a significant effect on the environment which has not been analyzed previously. Therefore, an **ENVIRONMENTAL IMPACT REPORT** is required. X

I find that although the proposed project could have significant effect(s) on the environment, all project impacts have been adequately analyzed and mitigated in a **PREVIOUS CEQA DOCUMENT** prepared and approved/certified pursuant to State and County CEQA Guidelines ___

I find that although the proposed project has been analyzed and mitigated as part of an earlier document prepared and approved/certified pursuant to State and County CEQA Guidelines, minor additions and/or clarifications are needed to make the previous documentation adequate to cover the project Therefore, an **ADDENDUM** will be prepared for the proposed project ___

ENVIRONMENTAL ANALYSIS CHECKLIST

ISSUES & SUPPORTING DATA SOURCES:	Potential Signifcnt Impact	Signifcnt Unless Mitigtd	Less Than Signifcnt. Impact	No Impact
1. LAND USE & PLANNING. Would the proposal:				
a) Conflict with general plan designation or zoning (source #(s):) (2)	___	___	___	X
b) Conflict with applicable environmental plans or policy of agencies with jurisdiction over the project? ( ) (3, 8, 9, 18)	___	X	___	___
c) Affect agricultural resources or operations (e g., impacts to soil or farmlands, or impacts from incompatible land uses)? (2)	___	___	___	X
d) Disrupt or divide the physical arrangement of an established community (such as a low-income or minority community)? (N/A)	___	___	___	X
e) Conflict with adjacent, existing or planned, land uses? (3)	___	X	___	___
2. POPULATION & HOUSING. Would project:				
a) Cumulatively exceed adopted regional or local population projections? (2)	___	___	X	___
b) Induce substantial growth in an area directly or indirectly through project in an undeveloped area or extension of major infrastructure? (2)	___	___	X	___
c) Displace existing housing? (N/A)	___	___	___	X
3 GEOPHYSICAL. Would project result in or expose people to impacts involving:				
a) Local fault rupture? ( ) (6, 10)	___	___	X	___
b) Seismicity: ground shaking or liquefaction? (1, 6)	___	___	X	___
c) Seismic seiche or tsunami? (1)	___	___	X	___
d) Landslides or mudslides? (1, 6, 9, 10, 19)	___	X	___	___
e) Erosion, changes in topography or unstable soil conditions from excavation, grading or fill? (6, 9)	___	X	___	___
f) Subsidence of the land? (1, 6)	___	X	___	___
g) Expansive soils? (1, 6)	___	X	___	___
h) Unique geologic or physical features? (1, 6)	___	X	___	___
4. WATER. Would the proposal result in:				
a) Changes in absorption rates, drainage patterns, or the rate and amount of surface runoff? (9, 10)	___	X	___	___
b) Exposure of people or property to water related hazards such as flooding? (8)	___	___	X	___

ISSUES & SUPPORTING DATA SOURCES:	Potential Signifcnt Impact	Signifcnt. Unless Mitigtd	Less Than Signifcnt. Impact	No Impact
4 WATER (Cont'd)				
c) Discharge into surface waters or other alteration of surface water quality (temperature, dissolved oxygen or turbidity)? (8)	___	___	X	___
d) Changes in the amount of surface water in any water body? (8)	___	___	X	___
e) Changes in currents, or the course or direction of water movements? (8)	___	___	X	___
f) Change in the quantity of ground water, either through direct additions or withdrawals, or through interception of an aquifer by cuts or excavations? ( ) (8, 9)	___	___	X	___
g) Altered direction or rate of flow of groundwater? (9)	___	___	___	X
h) Impacts to groundwater quality? (9)	___	___	___	X
5 TRANSPORTATION/CIRCULATION. Would the proposal result in:				
a) Increased vehicle trips or traffic congestion beyond adopted policies and/or forecasts? (12)	___	___	X	___
b) Safety hazards from design features (e g sharp curves or dangerous intersections) or incompatible uses (e g farm equipment)? (12)	___	___	X	___
c) Inadequate emergency access or access to nearby uses? ( ) (3, 12)	___	___	X	___
d) Insufficient parking capacity on-site or off site? (N/A)	___	___	___	X
e) Hazards or barriers for pedestrians or bicyclists? (3)	___	___	___	X
f) Conflicts with adopted policies supporting alternative transportation (e g bus turnouts, bicycle racks)? (12)	___	___	___	X
g) Rail, waterborne or air traffic impacts? (N/A)	___	___	___	X
6. AIR QUALITY. Would the proposal:				
a) Violate any SCAQMD standard or contribute to air quality deterioration beyond projections of SCAQMD? (13)	___	___	X	___
b) Expose sensitive population groups to pollutants in excess of acceptable levels? (13)	___	___	X	___
c) Alter air movement, moisture, or temperature, or cause any change in climate? (13)	___	___	X	___
d) Create objectionable odors? (13)	___	___	X	___

ISSUES & SUPPORTING DATA SOURCES	Potential Signfcnt. Impact	Signfcnt Unless Mtigtd	Less Than Signfcnt. Impact	No Impact
7. NOISE. Would the proposal:				
a) Increase existing noise levels? (1 , 11)	___	X	___	___
b) Expose people to noise levels exceeding adopted County standards? (11)	___	___	X	___
8. BIOLOGICAL RESOURCES Would Project impact:				
a) Endangered, threatened or rare species or their habitats (including but not limited to plants, fish, insects, animals and birds)? (1 , 7 , 14 , 18 , 19)	X	___	___	___
b) Locally designated species (e g heritage trees)? (7)	X	___	___	___
c) Locally designated natural communities (e g. oak forest, coastal habitat, etc)? (7 , 8 , 18)	X	___	___	___
d) Wetland habitat (e.g marsh, riparian and vernal pool)? (1 , 7 , 8 , 9 , 14 , 18 , 19)	X	___	___	___
e) Wildlife dispersal or migration corridors? (1 , 7 , 8)	___	X	___	___
f) Adopted conservation plans and policies (e g. Resource Management Plan)? (3 , 8 , 18)	___	___	X	___
9. AESTHETICS. Would the proposal:				
a) Affect a scenic vista or view open to the public? (3)	X	___	___	___
b) Affect a designated scenic highway? (12 , 19)	X	___	___	___
c) Result in an offensive aesthetic effect? (3)	___	___	X	___
d) Create light or glare beyond the physical limits of the project site? (5)	___	___	X	___
10. CULTURAL/SCIENTIFIC RESOURCES. Would the Project:				
a) Disturb paleo resources? (1)	___	X	___	___
b) Disturb archaeo resources? (1)	___	X	___	___
c) Affect historical resources? (1)	___	X	___	___
d) Have the potential to cause a physical change which would affect unique ethnic cultural values? (1 , 3)	___	___	___	X
e) Restrict existing religious or sacred uses within the potential impact area? (1 , 3)	___	X	___	___
11 RECREATION. Would Proposal:				
a) Increase demand for local or regional parks or other recreational facilities? (1 , 3 , 16)	X	___	___	___
b) Affect existing recreational opportunities? (3 , 8 , 16)	___	___	X	___
c) Conflict with adopted recreational plans and policies? (1 , 3 , 8 , 16)	___	___	X	___

ISSUES & SUPPORTING DATA SOURCES	Potential Signfcnt. Impact	Signfcnt. Unless Mtigtd	Less Than Signfcnt Impact	No Impact
12 ENERGY & MINERAL RESOURCES Would Project:				
a) Conflict with adopted energy conservation plans? (15)	___	___	X	___
b) Use non-renewable resources in a wasteful and inefficient manner? (15)	___	___	X	___
13 HAZARDS. Would the proposal involve:				
a) A risk of accidental explosion or release of hazardous substances (including, but not limited to: oil, pesticides, chemical, gas or radiation)? (N/A)	___	___	X	___
b) Possible interference with an emergency response plan or emergency evacuation plan? (3)	___	___	X	___
c) The creation of any identified health hazard? (N/A)	___	___	X	___
d) Exposure of people to existing sources of health hazards? (N/A)	___	___	X	___
e) Increased fire hazard in designated high fire hazard areas (e g flammable brush, grass, or trees)? (17)	___	X	___	___
14. PUBLIC SERVICES Would Project result in need(s) for new/altered government services in:				
a) Fire protection? (17)	X	___	___	___
b) Police protection? (17)	X	___	___	___
c) Schools? (17)	___	X	___	___
d) Maintenance of public facilities, including roads? (17)	___	___	X	___
e) Other governmental services? (N/A)	___	___	X	___
15 UTILITIES & SERVICE SYSTEMS. Would Project result in needs for new or substantial alterations:				
a) Power or natural gas? (N/A)	___	___	X	___
b) Communications systems? (N/A)	___	___	X	___
c) Local or regional water treatment or distribution facilities? (1 , 3)	___	___	X	___
d) Sewer or septic tanks? (1 , 3)	___	___	X	___
e) Solid waste disposal? (1 , 3)	___	___	___	___

NOTICE OF INTENT TO PREPARE (NOP)
DRAFT SUBSEQUENT ENVIRONMENTAL IMPACT REPORT EIR (566)
FOR THE SADDLEBACK MEADOWS DEVELOPMENT project
GRADING APPLICATION GA960048
TRACT MAP 10692

I. INTRODUCTION/BACKGROUND

Pursuant to Public Resources Code Section 21165, the County of Orange is the Lead Agency responsible for preparing a Subsequent Environmental Impact Report (EIR) addressing potential impacts associated with the proposed Saddleback Meadows project located approximately ½-mile from the El Toro Road/Live Oak Canyon Road intersection in the Foothill/Trabuco Specific Plan area of unincorporated Orange Count. Section 15162 of the California Environmental Quality Act (CEQA) Guidelines describes a Subsequent EIR which will be the type of EIR prepared for the proposed project. According to this Section, a Subsequent EIR shall be prepared when subsequent changes are proposed in the project which will require important revisions of the previous EIR due to the involvement of new significant environmental impacts not considered in the previous EIR.

Subsequent EIR 566 will be based upon EIR 059, certified in May, 1978, FEIR 203, certified January 9, 1980, and FEIR 531, certified December 10, 1991. It will also incorporate relevant portions of DEIR 561 proposed for the earlier project. The currently proposed project was also evaluated as Alternative 2 in EIR 561

II. PROJECT DESCRIPTION

The project proposes the phased development of 705 manufactured single family housing units on a 229 2-acre site on the easterly side of El Toro Road. The gross residential density is 3 17 du/ac, with minimum lot sizes of 3,200 square feet. Ten (10%) percent of the project site is proposed to remain in open space. In addition to the residential component, the project also proposes a private park site, regional riding/hiking trail connections, and associated infrastructure Project implementation requires the approval of a grading plan The grading permit application (GA960048) is based on tract 10692, which was recorded December 16, 1988

The project site is located within the Foothill/Trabuco Specific Plan and the Aliso Creek Corridor Specific Plan approximately ½-mile southerly of the El Toro Road/Live Oak Canyon Road intersection Implementation of the proposed project would directly effect 156.0-acres of the project site, not including remedial grading and fuel modification requirement. Total development footprint area would affect 90% or 206 acres of the project site In addition to onsite grading 2.04-acres of offsite area would be effected for access road construction and remedial grading.

A total of 3 7 million cubic yards of conventional grading and 10 million cubic yards of remedial grading would be required to implement the project.

The following table summarizes major features for the proposed project and current surrounding residential developments

SURROUNDING PROJECT COMPARISON SUMMARY

FEATURE	PROPOSED PROJECT	PORTOLA HILLS	HIDDEN HILLS/ HIDDEN RIDGE
Acreage	229	1,399	74
Dwelling Units	705	2,200	230
Minimum Lot Size	3,200 sf	3,000 sf	5,000 sf
% Open Space	10%	39%	31%
Gross Density	3.17 du/ac	2 2 du/ac	3 1 du/ac
Conventional Grading/Lot	4,500 cy	7,450 cy	5,850 cy
Wildlife Corridor	No	No	No
Regional Trail Connections	Yes	Yes	Yes

III. SUMMARY OF POTENTIALLY SIGNIFICANT IMPACTS

An Initial Study has been completed analyzing the proposed project pursuant to Section 15063 of the CEQA Guidelines. It has been determined that there is substantial evidence that significant effects may occur in the topical areas of· Land Use; Geophysical; Water; Transportation, Air Quality; Noise, Biological Resources; Aesthetics; Cultural/Scientific Resources, Recreation; Hazards and Cumulative Impacts Areas that revealed less than or no significant effects were: Population and Housing; Energy and Minerals, Public Services, and Utilities and Service Systems For more detail consult the Initial Study analysis

IV. ALTERNATIVES TO BE EVALUATED IN THE DRAFT EIR

The EIR will include a range of Alternatives which fulfill the following California Environmental Quality Act (CEQA) criteria outlined in Section 15126(d) of the CEQA Guidelines.

A. Alternatives Which Achieve the Project's Objectives· Section 15126(d) requires a range of Alternatives which could feasibly achieve the project's objectives

B. Alternatives Which Eliminate or Reduce Project Impacts CEQA Guidelines Section 15126(d)(3) requires that the Alternatives Section of an EIR shall focus on those alternatives capable of eliminating or reducing any significant adverse impacts on the environment caused by the project

C. Rule of Reason Section 15126(d)(5) of the CEQA Guidelines requires that the range of Alternatives in an EIR be governed by the "rule of Reason" which requires the EIR to set forth only those alternatives necessary to permit a reasoned choice by the decision-maker.

Proposed Alternatives

The Lead Agency has determined that the following Alternatives to the proposed project are reasonable alternatives to be discussed in EIR 566 in compliance with Section 15126(d) of the Guidelines

1 No Project/ No Development Alternative - This alternative would leave the proposed site in its existing condition.

2. FTSP EIR 531 Staff Alternative A - This alternative would allow 150 sf units with a minimum lot size of 20,000 square feet.

3 FTSP EIR 531 Staff Alternative B - This alternative would reduce the number of dwelling units on the project site to no more than 100 on approximately 30 acres.

4 318 Unit Single Family Housing Alternative - This alternative is the proposed project evaluated by EIR 561.

V. MANDATORY FINDINGS

A. Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?

Yes. The proposed project has the potential of significantly affecting the range of wildlife that may currently use this property as a wildlife movement corridor

B Does the project have the potential to achieve the short-term environmental goals to the disadvantage of the long-term environmental goals?

Yes. The project has the potential to affect the NCCP related wildlife corridor planning for this area.

C. Does the project have possible environmental effects which are individually limited but cumulatively considerable? ("cumulatively considerable" means that the incremental effects of an individual project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)

Yes The proposed project could have significant cumulative effects on the air quality, traffic and biological resources of the area

D Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly? *Yes. project implementation could have substantial adverse effects on human beings in terms of noise, air quality and geotechnical hazards These potentially significant impacts shall be analyzed under each topical area of the EIR*

VI. INITIAL STUDY

The Initial Study analysis is included in this NOP for review

DETERMINATION

Based on the Initial Study above, the proposed project may have a significant effect on the environment which has not been analyzed in any previous CEQA document. Therefore an Environmental Impact Report (EIR) is required.

PROJECT BACKGROUND/CHRONOLOGY

The current proposed project is the culmination of planning efforts with the County of Orange over a seventeen (17) year period. The following Chronology identifies key dates in the project's evolution.

SADDLEBACK MEADOWS PROJECT CHRONOLOGY

DATE	PROJECT RELATED EVENT
August 8, 1978	- The Orange County Board of Supervisors adopted GPA 78-1, Item 4, the "Saddleback Meadows Mobile Home Subdivision" which granted a change in the Land Use Element designation for the site from 5.4 Other Open Space to 1 22 Medium Low Density Residential and 2.1 Local Commercial. Maximum number set at 617 dwelling units Triggering mechanism to revert land use designation to original after 2 years commenced EIR 059 certified
February 6, 1979	- Board adopted Site Plan conditions as requirements for implementing the subject amendment. Draft EIR 059, which was the CEQA documentation for the site plan, identified major grading impacts as project related impacts, these impacts were also shown on grading plans for Tentative Tract Map TT10692, prepared for the project.
March 7, 1979	- Zone change application, Tentative Tract Map and Initial Study requests submitted to County for a maximum of 617 mobile home units and a neighborhood convenience commercial center on the project site
March 29, 1979	- Determination of requirement for an EIR transmitted to applicant by Environmental Services Division (ESD)
June 5, 1979	- Appeal of EIR requirement by Cliff Russell, representing Worthington/McNiff
June 11, 1979	- The Orange County Planning Commission denied the appeal. Supplemental EIR required for proposed 617 unit tentative tract map
June 25, 1979	- Zone Change 79-24 submitted to County The project proposed at this time consisted of 617 units.
August 7, 1979	- Revised Tentative Tract Map was submitted to the County for Screencheck reflecting some design modifications requested by County staff as well as an increase of 145 dwelling units added to the project by the proponent
August 17, 1979	- Revised Tentative Tract Map and Supplemental Environmental Information submitted to Environmental Services (ESD). Submittal raised many questions with ESD in that the project had been revised substantially with a 23 5% increase in total number of units and intensity of land use.

Saddleback Meadows Project Chronology (Cont'd)

DATE	PROJECT RELATED EVENT
August 21, 1979	- Revised Zone Change 79-24 received by the County reflecting the revised project proposal of 762 units, with 25% in affordable range.
November 28, 1979	- Revised TT10692 filed with Environmental Management Agency depicting 727 lots, including 714 residential lots, 1 commercial lot and several open space and utility lots
December 13, 1979	- TT10692 approved by the Planning Commission with recommendation that Zone Change ZC79-24 be approved by Board of Supervisors
January 9, 1980	- Saddleback Meadows properties placed in the PC "Planned Community" District and adopted by Board of Supervisors, Ordinance Number 3177 Final EIR 203 certified.
October 28, 1981	- Two year extension of time to record to expire December 12, 1983 approved by the Subdivision Committee.
December 7, 1981	- Appeal to deny two year extension of time affirmed by Planning Commission One year extension of time to record to expire December 12, 1982 granted by Planning Commission.
November 17, 1982	- An additional one year extension of time to record to expire December 12, 1983 approved by Subdivision Committee
July 13, 1983	- Saddleback Meadows Planned Community District Regulations amended by Planning Commission, and adopted by Board of Supervisors, Ordinance Number 3398 (ZC82-63P)
October 26, 1983	- Third one year extension of time to record approved
June 13, 1984	- Saddleback Meadows Planned Community District Regulations amended by Planning Commission, and adopted by Board of Supervisors, Ordinance 3486 (ZC84-3P)
October 24, 1984	- 589-day stay of time in which to record a final tract map approved by Subdivision Committee Expiration date extended to July 24, 1986
July 24, 1986	- Water district could not provide sewer service, recordation not allowed until sewer capacity available
December 16, 1988	- Tract Map 10692 recorded.
December 10, 1991	- Foothill/Trabuco Specific Plan approved and Final EIR 531 certified by Orange County Board of Supervisors. The Specific Plan incorporated the Saddleback Meadows Planned Community Regulations as the Bridlewood Residential District.

Saddleback Meadows Project Chronology (Cont'd)

DATE	PROJECT RELATED EVENT
April, 1994	- Grading Permit Application GA940031 submitted for Phase I, Grading (98 3 acres) of the site
August, 1994	- Initial Study completed and Environmental Impact Report Determination Letter is issued.
August 11, 1994	- Letter of Appeal filed with County.
November, 1994	- Appeal Hearing postponed to January 7, 1995, then to January 31, 1995
January 31, 1995	- Applicant withdraws appeal. Planning Commission directs applicant to develop a more compatible project in response to public testimony, staff concerns, and Planning Commission's direction.
July 27, 1996	- Revised 318-unit Site Development Plan, zone change and area plan submitted to County of Orange
July 30, 1996	- Orange County Planning Commission recommended EIR 561 for certification and recommended applications for Vesting Tentative Tract Map No 15230, area plan 95-7 and zone change 95.5 be denied.
August 11, 1995	- Notice of Preparation circulated for EIR 561.
October 22, 1996	- Board of Supervisors denied project and did not certify EIR 561
December 3, 1996	- Applicant submitted application for Phase I Grading Plan for 705 unit Tract 10692 (GA960048)
December 16, 1996	- EMA determined that a Subsequent EIR is required to evaluate the effects of the grading application

CEQA CHECKLIST DISCUSSION

INITIAL STUDY PROCEDURE

This Initial Study has been conducted pursuant to Section 15060 of the State CEQA Guidelines and the County of Orange CEQA procedures. It includes a detailed review and analysis of the project in light of the following documents, plans, policies and guidelines

- CEQA Statute and Guidelines,
- Draft EIR 561/Response To Comments
- Final EIR 059, Certified on August 8, 1978;
- Final EIR 203, Certified on January 9, 1980;
- Original Grading Plans;
- Foothill-Trabuco Specific Plan;
- Final EIR 531, Certified on December 10, 1991;
- Tentative Tract Map TT10692/Recorded Final Tract Map 10692,
- TT10692 Hydrology and Hydraulic Design Reports,
- Aliso Creek Corridor Specific Plan,
- Orange County General Plan Elements. Land Use; Noise; Transportation, Resources, Recreation, and Safety;
- Biological Assessment and Oak Tree Inventory;
- Saddleback Meadows Preliminary Landscape Submittal,
- Fourth Supplemental Geotechnical Report;
- Correspondence on the Subject;
- Southern California Coastal Sage Scrub NCCP Process Guidelines, Amended November 1993,
- Initial Study No. PA940068 - July 6, 1994, and
- Supplemental Saddleback Meadows Communication Booklet - June 30, 1995

The following discussion provides a detailed analysis of the environmental categories on the Orange County Environmental Analysis Checklist as they relate to the proposed project. It also identifies those issues that have been determined not to have potentially significant effects, and those determined to be mitigatable It also provides the probable scope of evaluation in the Draft Subsequent EIR.

1. LAND USE & PLANNING

Existing Setting

The entire project 229 2-acre Saddleback Meadows project site is currently zoned "S"-Foothill/Trabuco Specific Plan with SR-Sign Restriction overlay district. The Bridlewood/Saddleback Meadows Residential District was established within the Foothill/Trabuco Specific Plan, adopted December, 1991, to recognize the existing zoning and tract map approvals for the Bridlewood/Saddleback Meadows property

The current Orange County General Plan Land Use Element (LUE) designations for the project site are: 1B-Suburban Residential LUE Designation (0.5 to 18 Dwellings per Acre), and 1.2 Low Density Residential Neighborhoods - Community Profile Designation (0.5 to 2 0 Dwelling Units per Acre)

Surrounding Land Uses

Southerly	Hidden Ridge Residential Development (230 Residential Dwelling Units), Ramakrishna Monastery and O'Neill Park.
Westerly	Portola Hills Planned Community Residential Development (2,200 Residential Dwelling Units)
Northerly	Saint Michael's Abbey and Prep School
Easterly	Ramakrishna Monastery; Rural single-family development.

Potential Impacts

Potential impacts which may result if the project is developed include the introduction of 705 manufactured housing units and related major infrastructure improvements into an area previously used primarily for open space and agricultural uses; potential conflicts with existing surrounding land uses, and the conversion of agricultural land to development.

The circumstances regarding surrounding land uses has changed since the previous EIRs were certified and the original project was approved. When EIRs 059 and 203 were certified, the vicinity of the project, with the exceptions of St. Michael's Abbey and the Ramakrishna Monastery, was characterized by a undeveloped, predominantly natural environment. The project site, although disturbed through farming and cattle grazing purposes, was dominated by coastal sage scrub, oak woodlands and grasslands. The closest urban development was approximately four miles south of the site near the El Toro/Trabuco Road intersection.

The project vicinity has become more urban since the original approvals It is now characterized by major residential development, including the Portola Hills Planned Community, the Hidden Ridge project and Foothill Ranch With the changes that have taken place since the original project was approved, there is a question of the project's compatibility with surrounding uses

Mitigating Potential Impacts

The changes in circumstances in Land Use and Planning cannot be easily mitigated, if at all A new Subsequent EIR will provide the best mechanism to properly assess the following

- The project's potential conflicts with the Foothill-Trabuco Specific Plan, the Aliso Creek Corridor Specific Plan and the Natural Communities Conservation Planning Program (NCCP) Program,
- The project's potential conflicts with surrounding land uses,
- Reassess those major Conditions of Approval listed above which were not satisfied prior to the recordation of Tract 10692, including their appropriateness, relevance and compatibility at this time in light of changed circumstances,
- Identify the potential environmental impacts of the proposed project on the existing agricultural uses;

- Identify mitigation measures necessary to reduce all identified earth resource impacts to a level of insignificance, and
- Identify unavoidable and cumulative earth resource impacts

Scope of EIR Discussion

The changes in circumstances in Land Use and Planning requires the Subsequent EIR to address the following

- The project's potential conflicts with the Foothill-Trabuco Specific Plan, the Aliso Creek Corridor Specific Plan and the Natural Communities Conservation Planning Program (NCCP) Program;
- The project's relationship with surrounding land uses;
- Identification of the potential environmental impacts of the proposed project on the existing agricultural uses,
- Identification of mitigation measures necessary to reduce all identified earth resource impacts to a level of insignificance, and
- Identification of unavoidable and cumulative earth resource impacts.

2. POPULATION & HOUSING

The proposed project is not expected to cumulatively exceed adopted regional or local population projections It will not induce substantial growth in an area directly or indirectly through project in an undeveloped area or extension of major infrastructure The project would not displace existing housing. The project will increase affordable housing.

No Mitigation is needed and no discussion of Population and Housing is required in the EIR.

3. GEOPHYSICAL

Existing Setting

The project site is primarily in its natural state with a disturbed area of approximately 75 acres used for cattle grazing Although the majority of the site's surface soils and topographical features have not been physically disturbed, geotechnical reports prepared for the project have identified several major landslides which affect the site's stability

Potential Impacts

Potential impacts which may result if the project is developed include substantial short term changes of the site's landforms and topographical features particularly during remedial grading activities. In the long term, the project proposes site reconfiguration to reflect the site's natural land form features, and related impacts on the soil stability of the site. During construction, erosion and siltation of soils may also occur

Grading activities on the project site result in sediment being carried into the Aliso Creek Corridor and downstream ultimately to Aliso Beach. Because of the site's seismic features, people and property could be potentially exposed to earthquake and ground failure hazards.

The Planning Application indicates that remedial grading for the project will include grading a portion of the project site due to extensive landslides The Saddleback Meadows Geotechnical Reports indicate that extensive remedial grading with large buttresses will be required to stabilize the project site due to these documented landslides The Engineering Geology of Part of the Western Half of the Santiago Peak Quadrangle, Orange County, California, prepared by the California Department of Conservation Division of Mines and Geology, has mapped and recorded these landslides

Scope of EIR Discussion

The Subsequent EIR will provide a detailed discussion and clarification of the following

- Proposed grading in areas previously designated for preserved open space areas,
- Identification of soil and geologic characteristics and limitations of the project site, including soil stability, earthquake potential and known geologic hazards, including landslides, mudslides, ground failures and similar hazards for the entire site;
- Identification of the seismic features of the site, including the potential exposure of people or property to environmental impacts of the proposed project associated with earthquakes, liquefaction or similar hazards,
- The potential environmental impacts of the proposed project on the existing site topography and unique geologic or physical features;
- Mitigation measures necessary to reduce earth resource impacts to a level of insignificance, and
- Identification of unavoidable and cumulative impacts associated with earth and landform.

4. WATER

Existing Setting

The onsite project drainage has not been modified and remains in a natural state However, some improvements have been made to sections of Aliso Creek, adjacent to the site, including a major man-made drainage channel This channel passes from the proposed site to the westerly side of El Toro Road.

The area of Aliso Creek Corridor is classified as Floodplain FP-2 by the Federal Emergency Management Agency (FEMA) The project site is located within the watershed of Aliso Creek Four (4) ponds and four (4) intermittent ponds are also present onsite

Potential Impacts

Potential impacts which may result if the project is implemented include changes in absorption rates, alteration of the project site's existing landform, subsequently altering the existing flow of water onto, through, around and off the project site

During construction the disruption of soils may also affect the content of site run-off into the watershed area of Aliso Creek. Groundwater levels and quality, including absorption rates, may be affected by the proposed project

National Pollution Discharge Elimination System (NPDES) is a regulatory program required by the Clean Water Act and administered by the OCEMA. Potential impacts include pollutant discharges into Aliso Creek.
Scope of EIR Discussion

The Subsequent EIR will provide a detailed analysis of the proposed project's relationship to water resources, including the following

- Identification and quantification of the current surface water and groundwater drainage patterns and water flows within, and adjacent to, the project site;
- Identification and quantification of the portion of the project site or off-site area that will be impacted by proposed project currently located within FEMA's FP-2 floodplain designation area;
- Identification and quantification of the current surface water and groundwater quality within, and adjacent to, the project site, including existing on-site discharges into drainage channels,
- Identification of significant changes in the course or direction of water movements,
- Identification of changes in absorption rates, drainage patterns, or the rate and amount of surface water run-off;
- Identification of changes in erosion or changes in siltation which may modify the channel of Aliso Creek;
- Identification of changes in the amount of surface water as a result of any proposed storm drain retarding basins;
- Identification of changes in the quantity or quality of groundwaters,
- Identification of the potential environmental impacts of the proposed project on wind or water erosion of soils, on or off-site,
- Identification of alterations to the course, flow or magnitude of flood waters, and resultant exposure of people or property to flood hazards;
- Identification of mitigation measures necessary to reduce project impacts to a level of insignificance, including the development of Best Management Practices (BMP) for compliance with the Clean Water Act; and
- Identification of unavoidable and cumulative water resource impacts.

5. TRANSPORTATION/CIRCULATION

Existing Setting

The Saddleback Meadows project site is accessed off of El Toro Road. The site's interior is natural and has no road access

Potential Impacts

Potential impacts which may result if the project is developed include. The master planned (MPAH) arterial highways and roadways transit systems has identified El Toro Road which is adjacent to the project site and conditioned to be improved to primary status is now scheduled to be upgraded to a major artery, additional grading will be required at implementation, generation of a significant amount of project related traffic, creation of demand for new parking; alteration of existing traffic patterns; and potential impacts vehicles, bicyclists and/or pedestrians

The traffic and circulation information on the proposed project and its relationship to El Toro Road, including its present and ultimate design configuration and improvement require updating. At the time EIRs 059 and 203 were certified and the project was approved, projects in the vicinity generated less than 3000 Average Daily Trips ADT on El Toro Road, which was designated on the County's Master Plan of Arterial Highways (MPAH) as a primary arterial highway El Toro Road was reconstructed in the early 1980's to a two-lane highway adjacent to the project site.

Today, projects in the vicinity generate approximately 16,000 ADT along El Toro Road. Since 1985, El Toro has been reclassed on the MPAH from a primary arterial highway to a major arterial Impacts from the proposed project's additional grading which is necessary for the required upgraded improvements to EL Toro Road from a Primary to a Major Arterial were not addressed in EIRs 059 and 203.

Scope of EIR Discussion

The Subsequent EIR will include a detailed traffic/circulation analysis and a traffic/engineering study The traffic/circulation study must update projections of the number of trips generated by the project and other projects on the arterial highway system, including El Toro Road, Santiago Canyon Road, Glenn Ranch Road and Portola Parkway. The traffic/engineering study must provide preliminary designs for the ultimate improvement of El Toro Road to major arterial specifications The following will be included in the Transportation/Circulation section of the EIR

- Identification of existing and planned public transit systems affected by the proposed project;
- Identification of existing vehicular movement and patterns of circulation within and adjacent to the project site, and the existing vehicular movement in the surrounding vicinity as a result of current land uses through a traffic study;
- Identification and analysis of the existing ingress and egress to the project site, its potential internal circulation and parking problems associated with the proposed development;
- Identification of existing impacts to equestrians, motor vehicles, bicyclists and/or pedestrians,

- Evaluation of the interim and long-term traffic generation of the proposed project and its potential to generate additional vehicular movement beyond current projections of regional traffic,
- Evaluation of the need for El Toro Road to be a primary arterial versus a major arterial
- Identification of increases in demand for public transit services with special attention to relationship with low income housing for senior citizens and any potential conflicts with planned roadway widenings or extensions;
- Identification of specific potential adverse impacts on the vehicular movement and the movement of people and goods as a result of the proposed project, both within the project site and within adjacent communities,
- Identification of specific potential internal circulation problems and potential traffic hazards to motor vehicles, bicyclists and/or pedestrians which may result from the proposed project,
- Identification of the aspects of the proposed project which will create demand for new parking facilities;
- Identification of mitigation measures necessary to reduce project traffic and circulation impacts to a level of insignificance, and
- Identification of unavoidable and cumulative impacts to transportation and circulation resources.

6. AIR

Existing Setting

The project site is located within the South Coast Air Basin, SCAB, which suffers from some of the most severe cases of air pollution in the nation. The SCAB is currently in violation of several federal air quality standards

Potential Impacts

Potential impacts which may result if the project is developed include. generation of both short-term and long-term air quality impacts, both individually and cumulatively, including increased air emissions; impacts on sensitive receptors in the project vicinity including St. Michael's Abbey and the Hillside Montessori School, and the exposure of persons to locally elevated levels of air pollution.

Scope of EIR Discussion

Although the South Coast Air Basin is already in violation of air quality standards, the impacts of the project on local air quality must be thoroughly assessed. The Subsequent EIR for the proposed project will

- Identification of the existing air quality environment of the project site in the local and regional context, including, but not limited to. air pollution; objectionable odors, and air movement, moisture and temperature,
- Identification of air quality impacts associated with construction of the proposed project,
- Assessment of the proposed project's consistency with the South Coast Air Quality Management District's (SCAQMD) Air Quality Management Plan (AQMP), Regional Mobility Plan (RMP) and Growth

Management Plan (GMP);

- Identification and quantification of long-term air quality impacts resulting from development of the proposed project, including, but not limited to. air pollution, objectionable odors, and increased air movement, moisture or temperature,
- Identification and analysis of the potential sensitive receptors which may be exposed to substantial pollutant concentrations,
- Identification of mitigation measures necessary to reduce short-term and long-term air quality impacts to a level of insignificance; and
- Identification of unavoidable and cumulative air quality impacts

7. NOISE

Existing Setting

The project site is primarily in its natural state with noise generated by existing land uses and vehicular trips is minor Portions of the project site are impacted by noise resulting from aircraft operations from MCAS-El Toro and is located within the 60 CNEL noise contour of MCAS-El Toro. The project is adjacent to El Toro Road, a major access road to O'Neill Regional Park.

Potential Impacts

Potential impacts which may result if the project is approved include· the generation of short term impacts related to construction; and the potential exposure of future residents to airborne noise sources, including interim impacts from aircraft operations at MCAS-El Toro prior to closure of this military base

Scope of EIR Discussion

The Subsequent EIR for the proposed project will include a detailed noise assessment including the following

- Analysis of the exposure of the project site to existing and projected noise from vehicular traffic and aircraft overflights, in terms of individual and combined contribution of sources;
- Identification of the potential exposure of future residents of the project site to projected noise from vehicular traffic and aircraft overflights, both on an interim and long-term basis;
- Identification of any noise impacts on existing residents in the vicinity of the project as the result of project implementation,
- Identification of mitigation measures necessary to reduce noise impacts to a level of insignificance, and
- Identification of unavoidable and cumulative noise impacts

8. BIOLOGICAL RESOURCES

Existing Setting

The proposed project site exists in its natural state Draft EIR 561 provided an evaluation of the site and together with previous surveys from December, 1989 and September 1990 revealed that the site had been partially disturbed by cattle grazing. Coastal sage scrub habitat has been identified by the Orange County Wildlife Geographic Information System project Coastal Sage Scrub Distribution Map dated February 1994 as existing in this region. Approximately 68.7 acres of Coastal Sage Scrub are located on site The project site is also an existing wildlife corridor link between O'Neill Regional Park and Whiting Ranch/Limestone Regional Park. In addition, the project site is located within the watershed area of Aliso Creek Corridor The Aliso Creek Corridor which is located adjacent to the project site is identified as a "blue line" stream by the United States Geologic Survey (USGS) Canada Quad topographical map The U.S. Fish and Wildlife Service (USFWS) has documented the occurrence of the Federally Listed as Endangered Riverside Fairy Shrimp on the project site

Potential Impacts

The proposed project has several potentially significant environmental impacts to biological resources. Specifically:

- Natural Communities Conservation Planning (NCCP) Program: The proposed project may potentially impact the State of California Natural Communities Conservation Planning (NCCP) Program. This is a habitat-based conservation process adopted by local, state and federal regulatory agencies charged with making or recommending land use decisions in California, by Assembly Bill AB2172 (Chapter 765, Statutes of 1991)

  Impacts from grading the site would result in the removal of coastal sage scrub One of the findings the County must make to abide by the provisions of the U.S. Department of Interior's 4(d) Rule is that the loss of the coastal sage scrub will not jeopardize the subregional NCCP Program plan. The site may be identified as one of the links between the Southern subregion and the Central subregion. If this connective link is lost, the 4(d) Rule finding might be precluded A wildlife corridor has been proposed o-site to complete this link.

- Riverside Fairy Shrimp. The proposed project may impact the Streptocephalus woottoni (scientific name), also known as the Riverside Fairy Shrimp, which is a Federally Listed Endangered Species.

  Section 9 of the Endangered Species Act prohibits the "take" of a federally listed species. Documentation is on file in the office of the U.S. Fish and Wildlife Service, Carlsbad Office, attesting to the known occurrence of this federally listed species on the project site According to U S. Fish and Wildlife Service, since the shrimp has been confirmed in one pond, it is highly probable that the species will be found in all eight ponds on the site

- Sensitive Reptiles and Amphibians Draft EIR 561 noted that several sensitive or threatened species of reptiles and amphibians can be expected to occur on the subject property These include the following: the Arboreal Salamander, the Ensatina, the Western Spadefoot, the Orange-Throated Whiptail, the San Diego Horned Lizard, the Coastal Whiptail, the Coastal Rosy Boa, the Coast Patch-nosed Snake, and the Red Diamond Rattlesnake

- Wildlife Corridor The significance of the project site's location as a wildlife corridor has changed Certified EIRs 059 and 203, and Draft EIR 561 identified the site as a wildlife corridor, along with two off-site corridors

connecting two major wildlife areas, the O'Neill Regional Park/Cleveland National Forest open space area and the Whiting Ranch/Limestone Regional Park open space area, easterly and westerly of the subject site, respectively. Consequently, the elimination of the site as a wildlife corridor was not treated as a significant impact. The rationale provided for this conclusion was the presence of other wildlife corridors in the project vicinity

With the construction of residential communities in the project vicinity, the previously identified off-site wildlife corridors have been eliminated. The subject site now provides the only linkage between the two wildlife corridor areas. This document identified several large mammals which live on or frequent the site, including mule deer, mountain lion, gray fox and bobcat, thereby indicating the importance of the site as a wildlife movement corridor.

- Aliso Creek Corridor Previous approvals for the project site designate the Aliso Creek corridor as natural open space to be preserved. The Aliso Creek corridor contains riparian vegetation and wildlife. Aliso Creek is also designated a blue-line stream, as identified by the U S Geological Survey

  The Site Plan and grading plans for the project indicate that the Aliso Creek corridor preservation area may be disturbed. The revised project proposes grading in the vicinity of the stream bed, which is in the FP-2 "Floodplain 2" District and off-site grading in the Aliso Creek area adjacent to the site to create access road fill placement and conduct remedial grading. The project proposes restoration of the Aliso Creek riparian habitat area upon completion of grading.

Scope of EIR Discussion

The biological resource section of the Subsequent EIR will provide a detailed discussion of the following

- A re-inventory of the existing unique, sensitive, aesthetically significant, rare, threatened, or endangered flora and fauna within the project site, including an Environmental Assessment and mitigation measures to avoid or reduce impacts;

- Identification of potential impacts to the Natural Communities Conservation Planning ("NCCP") Program, a habitat-based conservation process adopted by local, state and federal regulatory agencies charged with making or recommending land use decisions in California, by Assembly Bill AB2172 (Chapter 765, Statutes of 1991) The NCCP Program states that to approve an interim take application, the local agency must make certain findings, based on the information obtained pursuant to U S Fish and Wildlife Service (USFWS) pursuant to the Natural Community Conservation Plan (NCCP) Program and the 4(d) Rule,

- A detailed analysis of the project's impacts to wildlife movement, including mitigation measures to avoid or reduce those impacts The location width, relationship to adjacent wildlife movement corridors must be evaluated,

- Address the proposed grading, including remedial and site preparation grading, in the revised project, which will impact Coastal Sage Scrub, including mitigation measures which avoid or reduce those impacts;

- The project's compliance with the County's general policy as a regulator of the NCCP Program, which is to avoid irreversible commitments that would preclude planning options in designing the coastal sage scrub habitat reserve,

- A detailed discussion of the proposed project's impacts to the Riverside Fairy Shrimp, including a Habitat Conservation Plan, an Environmental Assessment and mitigation measures to avoid or reduce impacts,
- Assessment of the project's impacts on unique, sensitive, aesthetically significant, rare, threatened, or endangered flora and fauna within the project site, including Oak Tree groves and Coastal Sage Scrub;
- Identification of impacts which might result from the removal of existing and intermittent ponds and the associated habitat for sensitive species, including the Riverside Fairy Shrimp, from the project site and off-site areas contiguous to project site;
- Identification of mitigation measures necessary to reduce all identified biological resource impacts to a level of insignificance, and
- Identification of unavoidable and cumulative biological resource impacts.

9. AESTHETICS

Existing Setting

The Saddleback Meadows project site is primarily in a natural state with the site's surface aesthetic features being left undisturbed. Existing light and glare from the project site is minimal, emanating only from the reflection of the eight (8) ponds on the site

Potential Impacts

Potential aesthetic impacts which may result if the project is developed include the construction of slopes and retaining walls, and a significant alteration in the appearance of the site from off-site vantage points, including El Toro Road which is designated a Scenic Highway on the County's Master Plan of Arterial Highways Aesthetic impacts are especially pronounced from the existing residential developments southerly and westerly of the project site

Potential light and glare impacts which may result if the project is approved include. increased levels of exterior lighting and illumination, having the potential for adverse impacts upon residential neighborhoods and sensitive biotic communities.

Scope of EIR Discussion

The Subsequent EIR to be prepared for the proposed project will:

- Identification of existing scenic vistas and views open to the public across the project site. Assess the obstruction of any scenic vista or view open to the public or the creation of any aesthetically offensive site open to public view,
- A line of sight analysis of the project from El Toro Road, Hidden Ridge, Portola Hills, St. Michaels Abbey, and O'Neill Regional Park;
- Assessment of the current aesthetic importance of the project site and the aesthetic impact of the proposed project to other developments in the project vicinity,

- Evaluation and comparison of the potential aesthetic impacts associated with implementing the existing zoning and those associated with the proposed project. The narrative of this topical discussion must be supplemented by detailed simulation models of both the General Plan and the project.
- Identification of mitigation measures necessary to reduce aesthetic impacts to a level of insignificance; and
- Identification of unavoidable and cumulative aesthetic impacts.

10. CULTURAL/SCIENTIFIC RESOURCES

Existing Setting

The Saddleback Meadows project site is primarily in a natural state with only minimal disturbance through cattle grazing and farming activities. Therefore, the site's potential cultural/scientific resources and features have not be disturbed.

Potential Impacts

The grading of the property has the potential of resulting in alteration of or damage to significant archaeological, historical and/or paleontological resources.

Scope of EIR Discussion

The Subsequent EIR for the proposed project will include the following:

- Inventory existing significant archaeological and/or historical sites, structures, objects, or buildings located on the project site,
- Inventory potential paleontological sites,
- Evaluation of potential significant impacts to archaeological or historical sites, structures, objects, or buildings,
- Identification of mitigation measures necessary to reduce identified cultural/scientific resources to a level of insignificance, and
- Identification of unavoidable and cumulative cultural/scientific resource impacts.

11. RECREATION

Existing Setting

There are no existing recreation or public open space uses located on the project site. However, the proposed project site is located between O'Neill and Whiting Ranch/Limestone Regional Parks A proposed trail is designated within the project site by the Orange County General Plan Recreation Element Master Plan of Regional Riding and Hiking trails.

Potential Impacts

The project represents a potential conflict with adopted recreational plans and policies, including the Aliso Creek Corridor Specific Plan, the General Plan Recreation Element and the Foothill/Trabuco Specific Plan

Scope of EIR Discussion

The Subsequent EIR for the proposed project will address the following

- Identification of all currently planned recreational opportunities within the project site and the surrounding vicinity;
- Assessment of the impact of the proposed project on the quality and quantity of existing recreation opportunities;
- Evaluation and comparisons of the potential recreation impacts associated with implementing the existing zoning designations and those associated with the proposed project;
- Identification of mitigation measures necessary to reduce recreation impacts to a level of insignificance, and
- Identification of unavoidable and cumulative recreation impacts

12. ENERGY & MINERAL RESOURCES

Existing Setting

The Saddleback Meadows project site is primarily in a natural state. None of the site's potential mineral resources have been disturbed. Previous EIRs 561, 059 and 203 did not identify energy and/or mineral resources on the site. The Orange County General Plan does not designate the site as having a high potential for mineral resources. No Mitigation is required and no discussion is necessary in the Subsequent EIR.

13. HAZARDS

Existing Setting

The Saddleback Meadows project site is located close to the Cleveland National Forest which is a potential fire hazard area. The project site is also located near the flight path of El Toro Marine Corps Air Station which has been approved for re-use.

Potential Impacts

Potential impacts which may result if the project is developed include the possible exposure of future residents to a high fire hazard area (north of Portola Parkway) Until MCAS El Toro is closed, residents may be subjected to potential, though remote, crash hazards

Scope of EIR Discussion

The Subsequent EIR will provide a detailed discussion of hazards, including the following:

- Identification of the current fire hazards, both on-site and within the project site vicinity;
- Identification of any existing emergency response plans for the project site and evaluate the potential of the proposed project to impact emergency response plans or evacuation plans;
- Identification of potential safety impacts of MCAS-El Toro operations on the proposed project;
- Identification of the impact to future users of the site with respect to possible exposure to other hazards,
- Identification of mitigation measures necessary to avoid or reduce hazards to a level of insignificance; and
- Identification of unavoidable and cumulative hazard impacts

14. PUBLIC SERVICES

Existing Setting

The Saddleback Meadows project site is undeveloped open space with limited use for cattle grazing The project site is served by the following major public services:

Fire Protection	Orange County Fire Department
Police Protection	Orange County Sheriff-Coroner's Department
Schools	Saddleback Valley School District

The closest fire station is Station #42 located on Ridgeline Drive with a response time of approximately 3 minutes to the project site. The sheriff's service ratio of sworn officer to population is approximately 1/2050 All the schools in the project vicinity are at capacity

Potential Impacts

Potential impacts which may result if the project is developed include the need for additional fire personnel and additional police personnel. The project is expected to generate elementary, junior high and high school students to be absorbed into the Saddleback Valley School District.

Scope of EIR Discussion

The Subsequent EIR will provide a detailed assessment of the impacts to Public Services, including

- Assessment of the adequacy of the supply of public services to be delivered to the future residents of the proposed project site,
- Evaluation and comparison of the potential public services impacts associated with implementing the proposed project;
- Identification of mitigation measures necessary to avoid or reduce public services impacts to a level of insignificance; and
- Identification of unavoidable and cumulative public services impacts

15. UTILITIES & SERVICE SYSTEMS

Existing Setting

The Saddleback Meadows project site is undeveloped open space with limited use for cattle grazing The project site is served by the following major public utilities and service systems:

Electrical Power	Southern California Edison
Natural Gas	Southern California Gas Company
Water and Sewer	Trabuco Canyon Water District

Potential Impacts

No potential significant impacts to Utilities and Service Systems are expected to result if the project is developed.

Scope of EIR Discussion

The Subsequent EIR will provide a detailed assessment of the impacts to Public Utilities and Service System, including

- Assessment of the adequacy of the supply of public utilities and service systems to be delivered to the future residents of the proposed project site,
- Evaluation and comparison of the potential public utility and service system impacts associated with implementing the proposed project,
- Identification of mitigation measures necessary to avoid or reduce all identified public utility and service system impacts to a level of insignificance, and
- Identification of unavoidable and cumulative public services impacts

Subject: Saddleback Meadows Residential Development

Dear Mr. Brantley:

Thank you for the opportunity to review and comment on the Notice of Preparation for the Saddleback Meadows Residential Development. The proposed project is for phased development of 705 manufactured, single-family residential units on a 229.2 acre site. Caltrans District 12 is a reviewing agency and has no comment at this time.

Please continue to keep us informed of future developments which could potentially impact our State Transportation Facilities. If you have any questions or need to contact us, please call Aileen Kennedy on (714) 724-2239.

Sincerely,

Robert F. Joseph, Chief
Advance Planning Branch

MEMO

DATE: January 9, 1997

TO: George Britton, Manager, P&DS/E&PPD

FROM: Joan S. Golding, Manager, P&DS/APD Planning & Dvlpt Svcs

SUBJECT: Saddleback Meadows NOP/DEIR 566

Advance Planning staff have reviewed the Notice of Preparation (NOP) for the Saddleback Meadows Residential Development project and have the following comments and proposed mitigation measures:

COMMENTS:

AFFORDABLE HOUSING:

Saddleback Meadows retains a requirement that 66 2/3 percent of all residential units built be affordable under the Orange County Housing Element affordable guidelines. The EIR should include a discussion of Housing Element affordable requirements and how they will be implemented as part of this project.

PROPOSED MITIGATION MEASURES:

BIOLOGICAL AND WATERSHED RESOURCES:

Fund the removal of arundo donax in the Aliso Creek Corridor in partial compensation for the proposed project's biological impacts to the Aliso Creek Corridor. The arundo removal shall be adjacent to and in the vicinity of the proposed project at an acreage ratio of 3 to 1 (for arundo removal to the creek area impacted).

EXISTING FEE PROGRAMS:

- Library: Tract and parcel maps within the proposed project shall be subject to the following condition.

  Prior to the recordation of any final tract/parcel map (except for financing purposes), the project proponent shall enter into a secured agreement with the County of Orange to pay development fees for the South County Canyons Library as provided in Sections 7-9-700 through 7-9-713 of the Codified Ordinances of the County of Orange and Board Resolution No. 87-1684. This agreement shall contain:

  a) provision for payment or financial security for participation by the project proponent in the construction, equipment and collection of the library facility, subject to adjustment for inflation;

b) provision for payment of these funds is to be generally phased with development and in accordance with an established payment schedule.

- Fire: Tract and parcel maps within the proposed project shall be subject to requirements for subsequent agreements and fees as determined by the Orange County Fire Authority.

- Sheriff: Tract and parcel maps within the proposed project shall be subject to requirements for subsequent agreements and fees as determined by the Orange County Sheriff-Coroner.

Thank you for the opportunity to comment on this project. Should you have any questions or desire further information, please feel free to contact me (834-6007) or Ruby Maldonado, of my staff, directly. Ruby can be reached at 834-2520.

Sincerely,

per Joan S. Golding

ENVIRONMENTAL INFORMATION FOR USE BY THE COUNTY OF ORNAGE, CALIFORNIA

LEAD DIVSION: EMA - ENVIRONMENTAL SERVICE DIVISION

I. INTRODUCTION

The project proposes development of a 714 unit mobile home subdivision and a 1.7 acre accessory neighborhood commercial center. The project site has a gross area of 232.5 acres, located within unincorporated territory, County of Orange.

This report is being written to address the potential impacts associated with the submittal of Tentative Tract Map #10962, which is being processed concurrently with this EIR by the County of Orange.

This environmental document supplements Final Environmental Impact Report #059, which addressed the subject property's General Plan Amendment to the Land Use Element. This amendment (GPA 78-1) removed the project site from reserve status and designated the site for future residential land use.

Proposed Planned Community District Zoning regulations are being processed concurrently with the Tentative Tract Map. The proposed zoning was determined to have been adequately addressed in EIR #059. However, included within the scope of this report is a discussion of the Planned Community zoning[1] impacts to further clarify the ramifications of the proposed project.

The purpose of the EIR is to present the results of a comprehensive analysis of the proposed project, the environmental impacts, which this project will cause, and mitigation measures, which will eliminate or lessen the anticipated impacts.

This supplemental environmental impact report is intended to be used as an informational document (as required by law) and is subject to public review, agency review and consideration by the County of Orange. During the review process, this report is subject to amendment to reflect the concerns and positions of reviewing agencies and the public concerning the impact of the project. When all interested persons have had the opportunity to comment on the adequacy of the report, the County will then make a determination of the report's adequacy.

[1] A reproduction of the Planned Community Zoning Text follows:

SECTION V — COMMERCIAL DEVELOPMENT REGULATIONS

1. Intent

   These regulations provide for convenience facilities and goods to serve the needs of the immediate neighborhood. Permitted uses include limited professional, retail, service and commercial uses.

2. Uses Permitted and Site Development Standards

   - Neighborhood Commercial Developments shall be developed wherever shown on the Development Plan in conformance with provisions of SECTION CN, "Commercial Neighborhood" District Section 7-9-89 of the Orange County Zoning Code.

The Gas Company

Orange Coast Region

January 10, 1997

Subject. Saddleback Meadows Residential Development.

This letter is not to be interpreted as a contractual commitment to serve the proposed project but only as an information service. Its purpose is to notify you that the Southern California Gas Company has facilities in the area where the above named project is proposed. Gas service to the project could be served from an existing main as shown on the attached alloc sheet without any significant impact on the environment. The service will be in accordance with the company's policies and extension rules on file with the California Public Utilities Commission at the time contractual arrangements are made.

The availability of natural gas service, as set forth in this letter, is based upon present conditions of gas supply and regulatory policies. As a public utility, the Southern California Gas Company is under the jurisdiction of the Federal regulatory agencies. Should these agencies take any action which affects gas supply or the condition under which service is available, gas service will be provided in accordance with revised conditions.

Residential (System Area Average)	Yearly
Single-family	750 therms/year/dwelling unit
Multi-family units	475 therms/year/dwelling unit

These averages are based on total gas consumption in residential units served by Southern California Gas Company during 1985 and it should not be implied that any particular home, apartment or most of homes will use these amounts of energy.

We have developed several programs which are available, upon request, to provide assistance in selecting the most energy efficient appliances or systems for a particular project. If you desire further information on any of our energy programs, please contact the office at (800)427-2000 for assistance.

Sincerely,

Robert S Worth

January 20, 1997

Re. Saddleback Meadows Residential Development and DEIR 566

Dear Mr. Brantley,

In response to the Notice of Preparation of Environmental Impact Report 566, we wish to call your attention to the following.

1 On October 22, 1996 the Board of Supervisors not only voted down the previous plan of the developer but also recommended that the property be returned to acreage
2. The proposed alternatives to the project which will be evaluated in EIR 566 were also voted down by the Board of Supervisors on October 22, 1996.
3. In the preparation of EIR 561 for the previous plan, the developer knowingly and willfully used inadequate geophysical data in an attempt to show that their plan was viable.
4 It was proven during the process of reviewing the previous plan that it violated the Trabuco Specific Plan as well as the General Plan. The fact that the TSP was adopted by the Board of Supervisors after the Trailer Park had been in approved in 1979 clearly indicates that the applicant's rights are not vested.
5. The geophysical conditions of the property are insurmountable, and the grading required to attempt to correct them poses a severe threat to the geophysical stability of surrounding properties, including the Ramakrishna Monastery. This was clearly substantiated by the testimony of several geophysical and civil engineers during the review process of the previous plan.
6. The grading required for the proposed project threatens the deed restrictions of the 240 acres of property given by the Vedanta Society to Orange County in 1974. If these restrictions were violated, the Vedanta Society would take legal action to reclaim ownership of the deeded property
7 The proposed plan is wholly incompatible with the rural nature of the Trabuco Canyon area and surrounding properties.

8 It is an environmentally destructive plan that provides no mitigation measures for preserving wildlife habitat and corridors, natural vegetation, etc.
9. It would result in severe traffic conditions in an area that has a very inadequate roadway system.
10. The residents of the proposed project, as well as their properties, would be placed at great risk because of limited road access, the certainty of land movement, and potential severe weather and environmental conditions such as very strong winds and brush fires.
11. The proposed project would constitute a major leap backwards in the efforts of the County, the residents of Trabuco Canyon, and the neighboring property owners to preserve the unique rural nature of the area

Sincerely yours,

Richard Jennings

Re: Project No. GA960048 - Saddleback Meadows; Notice of Preparation

Dear Mr. Brantley:

I am in receipt of a "Notice of Preparation" dated December 24, 1996, for the above-referenced project. As you may know from former correspondence, our office represents St. Michael's Abbey, which is adjacent to the project site.

As an initial matter, please be advised that the "Public Notice" makes reference to a 705-unit project, while the "Initial Study," under "Description of Project," recites a 318 single-family project. Obviously, there is some confusion regarding the project that is being proposed, which must be resolved.

Second, in connection with the Environmental Analysis Checklist, under the category "Land Use and Planning," the project's compliance with General Plan and Foothill/Trabuco Specific Plan must be thoroughly analyzed. It is this office's understanding that a 705-unit project may not proceed, because this project failed to receive even staff level approval when previously proposed. Since the Foothill/Trabuco Specific Plan for the Bridlewood area requires CEQA analysis with respect to the grading impacts of the 705-unit plan, and since this analysis has already been provided and rejected by staff, it would appear the current viability of the 705-unit plan is nonexistent. This must be analyzed in detail.

In addition, the potential impacts to St. Michael's Abbey of the project must be analyzed in depth, including potential soils stability impacts from the massive 10 million cubic yards of

HUTAN & TUCKER, LLP
ATTORNEYS AT LAW

grading proposed. Significant analysis has already been done on a less-intense proposal, which failed to reduce all identified earth resource impacts to a level of insignificance.

In addition, we believe the EIR must discuss population and housing, since the addition of 705 units may have a significant effect on local population, and may induce substantial growth in the area. Traffic impacts, particularly those on public transportation, must also be described at length.

The EIR will have to give full discussion to biologic resources, including the Riverside Fairy Shrimp. In addition, discussion should be made of other threatened species which may or do appear on the property, including the Western Spadefoot Toad.

Air quality impacts must be thoroughly addressed, particularly given the intensive traffic, parking, and average daily trip projections set forth in the Notice of Preparation. St. Michael's Abbey is identified as a sensitive receptor in the project vicinity, and expected impacts on this site should be specifically tested and discussed.

St. Michael's Abbey can also be expected to be impacted in terms of noise and glare. The potential impacts to the Abbey from noise and glare, in addition to current view impacts and impacts on the rural surroundings which currently exist, should be thoroughly treated and discussed.

Regarding recreation resources, the EIR should discuss how the impacts from a heavy concentration of 705 units of housing will be addressed in the immediate area. Specifically, some set aside or dedication of on-site park land should be required, in order to provide recreational resources within a reasonable distance to the persons who will use them, as generated by the project. This becomes all the more acute, since our understanding is that 75% of the units must be affordable, and may be marketed to persons with limited or no means to travel to distant, regional areas.

In areas of public services, there should be a full explanation of how impacts on the Saddleback Valley Unified School District will be mitigated, since all schools in the project vicinity are at capacity.

Finally, the range of alternatives should be expanded beyond that currently discussed. For each environmentally superior alternative that is rejected, the EIR must state findings, supported by facts in the record, regarding the infeasability of the rejected alternative.

RUTAN & TUCKER, LLP

RE: SADDLEBACK MEADOWS RESIDENTIAL DEVELOPMENT
SCH# 96121072

Attached for your comment is the Notice of Preparation for the SADDLEBACK MEADOWS RESIDENTIAL DEVELOPMENT draft Environmental Impact Report (EIR).

Responsible agencies must transmit their concerns and comments on the scope and content of the NOP, focusing on specific information related to their own statutory responsibility, within 30 days of receipt of this notice. We encourage commenting agencies to respond to this notice and express their concerns early in the environmental review process.

Please direct your comments to:

RAYMOND H.C. BRANTLEY
ORANGE COUNTY ENVIRONMENTAL MANAGEMENT AGENCY
P.O. BOX 4048
SANTA ANA, CA 92702-4048

with a copy to the Office of Planning and Research. Please refer to the SCH number noted above in all correspondence concerning this project.

If you have any questions about the review process, call at (916) 445-0613.

Sincerely,

Antero A. Rivasplata

MEMO

January 14, 1997

TO: Raymond Brantley
EMA/Planning/Environmental & Project Planning

FROM: Kevin H. Kondru, Manager
IWMD/Engineering Support Services

SUBJECT: Notice of Intent to Prepare a Draft Environmental Impact Report (No. 566)

The County of Orange Integrated Waste Management Department (IWMD) staff has reviewed the Notice of Intent for the above-referenced project. IWMD has no comment regarding the existing information included in the Notice of Intent and Negative Declaration (ND). However, the ND should elaborate on the proposed project's use of technology for minimizing or recycling waste products. In addition, special landscape treatments to reduce the amount of yard trimmings and waste should be presented.

If you need any additional information, please contact Karen DiCarlo at (714) 834-4107.

Subject: Notice of Intent to Prepare a Draft Environmental Impact Report #566

Dear Mr. Brantley:

Orange County Fire Authority (OCFA) staff have reviewed the initial study for the draft EIR for the proposed Saddleback Meadows residential development. In reviewing the NOP, we have the following comments/concerns:

1. The proposed development is within a Special Fire Protection Area and must meet all adopted fuel modification, street width and construction requirements (including Class A roofs, 1 hour fire resistive ratings on the exterior of all structures, multi-glazed windows, etc.) for development in the designated Area.

2. All developments over 150 units must provide a minimum of two points of access into the development. Both access drives or must meet OCFA standards.

Please contact me at (714)744-0485 if you have any questions.

Respectfully,

Laura Braul,
Deputy Fire Marshal

County of Orange

MEMO

DATE: January 9, 1997

TO: George Britton, Manager, P&DS/Z&PPD

FROM: Joan S. Golding Manager, P&DS/APD

SUBJECT: Saddleback Meadows NOP/DEIR 566

Advance Planning staff have reviewed the Notice of Preparation (NOP) for the Saddleback Meadows Residential Development project and have the following comments and proposed mitigation measures:

COMMENTS:

AFFORDABLE HOUSING.

Saddleback Meadows retains a requirement that 66 2/3 percent of all residential units built be affordable under the Orange County Housing Element affordable guidelines. The EIR should include a discussion of Housing Element affordable requirements and how they will be implemented as part of this project.

PROPOSED MITIGATION MEASURES:

BIOLOGICAL AND WATERSHED RESOURCES:

Fund the removal of arundo donax in the Aliso Creek Corridor in partial compensation for the proposed project's biological impacts to the Aliso Creek Corridor. The arundo removal shall be adjacent to and in the vicinity of the proposed project at an acreage ratio of 3 to 1 (for arundo removal to the creek area impacted).

EXISTING FEE PROGRAMS:

- Library: Tract and parcel maps within the proposed project shall be subject to the following condition:

  Prior to the recordation of any final tract/parcel map (except for financing purposes), the project proponent shall enter into a secured agreement with the County of Orange to pay development fees for the South County Canyons Library as provided in Sections 7-9-700 through 7-9-713 of the Codified Ordinances of the County of Orange and Board Resolution No. 87-1684. This agreement shall contain:

  a) provision for payment or financial security for participation by the project proponent in the construction, equipment and collection of the library facility, subject to adjustment for inflation;

b) provision for payment of these funds is to be generally phased with development and in accordance with an established payment schedule.

- Fire: Tract and parcel maps within the proposed project shall be subject to requirements for subsequent agreements and fees as determined by the Orange County Fire Authority.

- Sheriff: Tract and parcel maps within the proposed project shall be subject to requirements for subsequent agreements and fees as determined by the Orange County Sheriff-Coroner.

Thank you for the opportunity to comment on this project. Should you have any questions or desire further information, please feel free to contact me (834-6007) or Ruby Maldonado, of my staff, directly. Ruby can be reached at 834-2520.

Sincerely,

Melinda Stewart

MEMO

DATE: JAN 0 8 1996

TO: Ray Brantley, Environmental & Coastal Planning

FROM: Ignacio Ochoa, Traffic Engineering

SUBJECT: Saddleback Meadows Notice of Preparation

Traffic Engineering has completed its review of the subject document and has found some inconsistencies between the Public Notice page, the Initial Study page, the Environmental Analysis Checklist pages and the subsequent pages. These inconsistencies are as follows:

1. The project on the Public Notice page is identified as 705 manufactured, single-family residential units, whereas the the Initial Study page describes the project as a 318 single-family detached residential development.

2. The Public Notice page states that 69%, or 158 acres of the project site would be impacted with 71 acres being reserved for open space. On page 1 under Project Description, however, 90% of site is identified as being impacted with 10% remaining as open space.

3. In the Environmental Analysis Checklist pages under Transportation/Circulation, the project is identified as having a less than significant impact or no impact in all of the traffic-related categories. On page 2 under Summary of Potentially Significant Impacts, however, the report states that it has been determined that there is substantial evidence that significant effects may occur in various areas including Transportation.

Subject: EIR #566; Saddleback Meadows Residential Development

Dear Mr. Brantley:

Thank you for providing the Transportation Corridor Agencies with the opportunity to review and comment on the Notice of Preparation for subject EIR. Staff has reviewed the NOP and has no comments at this time.

Should you have any questions regarding this response, please contact Laura Coley Eisenberg of my staff at (714) 513-3482.

Sincerely,

Steve Letterly, Director
Environmental Services

MEMO

DATE: January 28, 1997

TO: Raymond Brantly, Chief, Environmental & Project Planning

FROM: Johnnie Barnett, Chief, Geotechnical/Grading Plan Check

SUBJECT: Review of Notice of Intent to Prepare a Draft Environmental Impact Report # 566 - Saddleback Meadows Residential Development - Tract 10692 - Grading Application GA960048

This site has been the object of several previous studies. Applicable comments contained in the second screencheck review of the Draft Environmental Impact Report EIR #561 issued on December 29, 1995 should be addressed in the subject EIR #566. A copy of those comments are attached.

According to the subject document approximately 10 % of the site is to remain open space. Based upon previous reviews, mitigation measures will require encroachment into this area. Although the areas will remain open space grading operations will remove a large portion of the natural vegetation.

The impact that grading operations will have upon the stability of adjacent property and vice versa must be addressed and appropriate mitigation/corrective grading measures provided.

If the site is to be graded in phases appropriate grading measures must be provided to demonstrate that each phase will have adequate stability.

As noted above consideration must be given to the impact that grading activity will have upon the biological resources of the area.

PC0606

County of Orange

MEMO

DATE: December 29, 1995

TO: Mr. Ray Brantley, Chief, Environmental and Coastal Planning

FROM: Johnnie K. Earnest, Chief, Geotechnical/Grading Plan Check

Subject: Second Screencheck review of Section 4.2 Soils and Geology, Draft Environmental Impact Report dated December 1995 issued for Saddleback Meadows EIR 561

Geotechnical Environmental Impact Report Saddleback Meadows Development, Tentative Tract 15230, El Toro Road, Orange County, California issued by G.A.Nicoll and Associates, Inc. dated November 27, 1995, Project 4816-07

The following comments are made relative to the review of the above referenced section of the EIR prepared for the Saddleback Meadows by Urban Vision and the above referenced report by G.A.Nicoll and Associates, Inc.

Comments 1) through 6) were made upon my completion of the first screencheck dated November 6, 1995 and with the exception of item number 4 remain for the most part applicable.

1) The geotechnical report submitted with the EIR 561 (appendix D) was originally submitted for the evaluation of the proposed development of Tract 10692. Although this report was not approved it did identify some of the problematic areas associated with future development (existing landslides and other zones of weakness). One of the most critical items being the stability of the site upon completion of the proposed remedial/corrective grading and the impact that the proposed grading (both interim and final) will have upon the adjacent property. According to the information provided under Section 4.2 a supplemental geotechnical investigation has been performed for Tract 10692. However this report apparently has not been included in the subject EIR. This report should be included as it may contain information that would clarify and/or resolve some of the concerns previously expressed regarding geometry of the landslides (deepest rupture surface or zone of weakness), justification of parameters used in the stability analyses, impact of groundwater upon stability, total and differential settlement, location of buttress/stabilization keyways, stability of backcuts especially those impacting off-site property.

2) Based upon the information contained in the geotechnical report it appears that the depth of removal (4 to 5 feet) stated in the EIR is somewhat misleading.

3) There is a discrepancy between the landslides designated on the plan submitted with the original geotechnical investigation report dated January 6, 1994 and that shown by Exhibit 17 contained in the subject EIR 561.

4) The geotechnical report should address the development now being proposed (Tract 15230).

5) Although some of the data being requested at this time normally is not submitted until a grading permit application is requested, it is deemed appropriate due to the potential problems that exist relative to the adjacent off-site property.

6) A grading permit will be required for all specific site developments.

The following observations were made during the review of the G.A.Nicoll report dated November 27,1995.

7) Soil parameters reported in Table II for use in stability calculations appear to be somewhat higher than those used by most consultants, especially when analyzing basal rupture surface. These values also appear to be higher than those utilized in your previous stability calculations.

8) Cross sections provided should extended to include all areas having an impact upon the stability of the proposed development e.g. Section B-B terminates some 700 to 750 feet short of the crest of the hillside and some 450 to 500 feet short of test boring BB-9 which identified landslide debris to a depth of 61+ feet.

9) Discuss the impact that the excavation of the keyway proposed adjacent to the Fathers of Norbertine property will have upon the stability of the site.

10) Seismic analyses although not included with the subject report appear to have been conducted utilizing an acceleration value of 0.13 g. inlieu of the value of 0.15 g. which is a minimum value allowed by County Code for seismic analyses. This inconsistency has been noted in previous review sheets.

11) It appears that additional subsurface exploration and evaluation work has been performed relative to the proposed development. All of this information should be included in the subject report.

January 27, 1997

Mr. Raymond H. C Brantley
County of Orange
Environmental and Project Planning Division
300 North Flower Street, Room 321
Santa Ana, California 92702-4048

Dear Mr. Brantley:

RE: City of Mission Viejo Comments to the Notice of Preparation for the Saddleback Meadows Residential Development: Draft Environmental Impact Report #566

The City of Mission Viejo has concluded its review of the Notice of Preparation for the Saddleback Meadows Residential Development Draft Environmental Impact Report (Draft EIR) No. 566. The City has identified a series environmental issues which warrant detailed analysis in the Draft EIR. These comments are included as Attachment 1 to this transmittal.

A major emphasis of the City's comments relate to El Toro Road. As you are well aware, El Toro Road is a vital transportation link to both the Saddleback Meadows project and residential/commercial development in the City of Mission Viejo The attached comments reflect the City of Mission Viejo's desire that the Draft EIR fully address the capacity and timing of El Toro Road improvements for both the proposed project as well as each of the project alternatives. As a component of the Orange County Master Plan of Arterial Highways (MPAH) and the Congestion Management Program Highway System, El Toro Road must be thoroughly analyzed, and mitigation measures must be considered, to insure that development intensity and infrastructure capacity are appropriately balanced.

We look forward to working with your staff and your environmental consultant to ensure that areawide transportation infrastructure needs are effectively planned and implemented.

Sincerely,

Clint Sherrod
Community Development Director

Attachment One
City of Mission Viejo Comments
Saddleback Meadows Residential Development Notice of Preparation
Draft Environmental Impact Report No. 566

1. Proposed Project and Project Alternatives:

The Notice of Preparation identifies a proposed project of 705 manufactured, single family residential units and three alternate development scenarios for the Saddleback Meadows site. The three, alternate development scenarios consist of two staff alternatives, in addition to the original residential development proposal analyzed in Draft EIR 561. In summary, the development intensities of the four development alternatives are as follows:

a.	Proposed project:	705 manufactured, single family residential units
b.	Staff Alternative A:	150 single family units
c.	Staff Alternative B:	100 single family units
d.	DEIR 561 Alternative:	318 single family units

Page 1 of the Initial Study (#GA 960048) identifies the proposed project as 318 single-family detached residential units, which conflicts with the project description identified in the public notice and the narrative appendix to the Initial Study (705 manufactured, single family units).

Recommended Action:

Revise the Initial Study to define a consistent project description of the proposed project and its alternatives.

2 Traffic Analysis of Proposed Project and Project Alternatives

The Saddleback Meadows Draft EIR includes a proposed project and three alternate development scenarios for the project site.

Recommended Action:

The City of Mission Viejo requests that the traffic study in Draft EIR 566 analyze and quantify the circulation impacts of not only the proposed project, but also each of the development alternatives, upon impacted roadways and intersections in the study area.

3. El Toro Road: MPAH Designation

In Draft EIR 561, El Toro Road was assumed as a Primary Arterial highway, a designation that was inconsistent with the Major Arterial highway designation defined by the Orange County Master Plan of Arterial Highways. The current Initial Study states that Draft EIR 566, analyzing the revised project, will address El Toro Road's arterial designation to be a primary arterial versus a major arterial.

Recommended Actions:

a. Should the Draft EIR recommend pursuit of a Primary Arterial designation for a specified segment of El Toro Road, the reclassification of El Toro Road from a six-lane Major Arterial to a four-lane Primary Arterial requires the County of Orange to process a Master Plan of Arterial Highway (MPAH) amendment, with the amendment ultimately being approved by the Orange County Transportation Authority (OCTA) board of directors.

Since Draft EIR 566 will serve as an environmental assessment for the Saddleback Meadows Grading Application GA 960048, and Subdivision Tract Map 10692, the City of Mission Viejo recommends that the vesting tentative tract map include a rights-of-way requirement for El Toro Road that allows El Toro Road to be improved as a six-lane Major Arterial roadway. This provision is requested to insure that adequate rights-of-way for ultimate El Toro Road improvements are not relinquished through the subdivision map process.

b. Recognizing that compliance with levels of service performance standards are essential through the Orange County Congestion Management Program and the Measure M Growth Management program, Draft EIR 566 should fully disclose and analyze how the down-sizing of El Toro Road from a six-lane facility to a four-lane facility will adequately serve proposed and future transportation needs of existing and future development that are serviced by the arterial roadway.

c. The OCTA MPAH guidance manual identifies that a multi-jurisdictional, cooperative process must be undertaken with any MPAH amendment that affects more than one jurisdiction. In conjunction with that process, technical data will be prepared and reviewed by Growth Management Area (GMA) forums to determine whether there is consensus on the proposed amendment. Also, in conjunction with that process, an environmental assessment of the MPAH amendment must be completed.

This multi-jurisdictional, cooperative process should be undertaken concurrently with the environmental process for Draft EIR 566, to enable representatives of affected jurisdictions to review the technical analysis for a four-lane versus a six-lane El Toro Road facility, and to review and comment upon the design and engineering plans for the study's recommended facility requirements.

d. The City of Mission Viejo continues to retain El Toro Road, within its jurisdictional boundaries, as a six-lane Major Arterial facility. The jurisdictional boundary between the City of Mission Viejo and the County of Orange generally lies immediately east of the Glenn Ranch Road intersection at El Toro Road.

In previewing the Initial Study's scope to address the appropriate MPAH designation for El Toro Road, the City of Mission Viejo cautions that the Glenn Ranch Road/El Toro Road intersection could function as a circulation bottleneck,

as one transitions—north to south--from a potential four-lane facility to a six-lane facility.

The Draft EIR must analyze, at project buildout and at General Plan buildout, the maximum feasible improvements to the Glenn Ranch Road/El Toro Road intersection, to insure that a Level of Service "D" performance standard is maintained, in compliance with Measure M Growth Management Program requirements.

The County of Orange will need to be an active participant in the maximum feasible improvement to the Glenn Ranch Road intersection, since Draft EIR 561 previously identified that seventy-five percent (75%) of project trips will use this intersection, and the intersection will experience Levels of Service F performance unless roadway improvements are appropriately phased with development.

4. El Toro Road Preliminary Design

The Initial Study states that preliminary designs for the ultimate improvement of El Toro Road to major arterial specifications will be conducted, in conjunction with a traffic/engineering study. It is unclear if this study is a component of the Draft EIR analysis, or a separate and concurrent process to be undertaken by the County of Orange.

Recommended Actions:

a. If pursued as a separate and concurrent process, the City of Mission Viejo requests that the County of Orange's El Toro Road design plans be reviewed by the City of Mission Viejo, for interface and integration with a six-lane, El Toro Road design and engineering plan that will be implemented southerly of Glenn Ranch Road by the City of Mission Viejo.

b. The traffic/engineering study should also include:

1) an analysis of how and when roadway improvements to El Toro Road will be phased and constructed to achieve a roadway cross-section that effectively transitions from the existing cross-section to the interim cross section;

2) an analysis of how and when ultimate roadway improvements to El Toro Road will be transitioned from the interim cross-section to the ultimate cross section;

3) an analysis of how El Toro Road can transition from a six-lane facility in the City of Mission Viejo to a four-lane facility in county unincorporated area, while achieving a Level of Service "D" performance standard at the Glenn Ranch Road/El Toro Road intersection through Year 2020;

4) an identification of proposed intersection improvements to the intersection

of Glenn Ranch Road/El Toro Road to achieve a Level of Service "D" performance standard through Year 2020; and,

5) an identification of applicant and/or County of Orange participation in the funding of identified transportation improvements within the City of Mission Viejo.

5. Land Use Assumptions in the City of Mission Viejo:
The Saddleback Meadows residential project is located north of Planning Area 11 in the City of Mission Viejo. The City of Mission Viejo City Council, in 1995, adopted a general plan amendment which changed the land use designation of Planning Area 11 from commercial to residential.

Recommended Actions:

a. The adopted land use designation of residential development for Planning Area 11 shall be incorporated into the Year 2000 and Year 2020 land use assumptions for the DEIR traffic study.

b. The traffic analysis should also include appendices which identify the traffic analysis zones, the land use designation(s), and the land use intensities for the Planning Area 11 land uses. This will enable the City of Mission Viejo to verify if the land use assumptions in the Saddleback Meadows DEIR accurately represent the current general plan intensities.

6. Inventory of Assumed Circulation Improvements:
The Orange County Congestion Management Program (CMP) requires local jurisdictions to analyze development projects and identify the project's impacts upon the CMP Highway System. In the project study area, El Toro Road is a component of the CMP Highway System.

Recommended Actions:

a. The Draft EIR traffic study needs to provide narrative discussion that describes, in detail:

1) The degree to which the trips from the proposed project will impact CMP and Measure M arterials (i.e., the percent contribution of project impact to each intersection's Intersection Capacity Utilization value);

2) The description of the assumed, committed transportation improvements that are proposed for each intersection to improve levels of service;

3) The funding source(s) of the proposed improvements, including whether or not these exact improvements are integrated in a jurisdiction's approved capital improvement program for implementation; and the year when such improvement is programmed for completion;

4) If not incorporated into an approved capital improvement program, the funding and construction mechanism for the identified improvement;

5) Whether or not phasing of the development project is required to insure that the improvement is operational before the project occupancy is allowed;

6) Concurrence from the City of Mission Viejo on the feasibility of the proposed improvements for intersections located in the City of Mission Viejo.

7) The degree to which the project applicant is required to participate in the funding of the identified improvements.

RE: Comments on the Notice of Preparation for the Draft EIR for the County of Orange - Saddleback Meadows Residential Development - SCAG No. I 9600451

Dear Mr. Brantley:

Thank you for submitting the Notice of Preparation for the Draft EIR for the County of Orange - Saddleback Meadows Residential Development to SCAG for review and comment. As areawide clearinghouse for regionally significant projects, SCAG assists cities, counties and other agencies in reviewing projects and plans for consistency with regional plans.

In addition, The California Environmental Quality Act requires that EIRs discuss any inconsistencies between the proposed project and the applicable general plans and regional plans (Section 15125 [b]). If there are inconsistencies, an explanation and rationalization for such inconsistencies should be provided.

Please provide a minimum of 45 days for SCAG to review the DEIR when this document is available. If you have any questions regarding the attached comments, please contact Bill Boyd at (213) 236-1960.

Sincerely,

VIVIANE DOCHE-BOULOS
Manager, Intergovernmental Review

COMMENTS ON THE NOTICE OF PREPARATION OF A DRAFT ENVIRONMENTAL IMPACT REPORT FOR THE COUNTY OF ORANGE - SADDLEBACK MEADOW RESIDENTIAL DEVELOPMENT

PROJECT DESCRIPTION

This project proposes the phased development of 705 manufactured, single-family residential units on a 229.2 acre site on the easterly side of El Toro Road. The gross residential density proposed is 3.17 dwellings per acre. Sixty-nine percent of the site would be impacted and 71 acres are proposed for open space use. The project is located approximately 1/2 mile south of the El Toro Road/Live Oak Canyon Road intersection in the Foothill/Trabuco Specific Plan area of unincorporated Orange County.

CONSISTENCY WITH REGIONAL COMPREHENSIVE PLAN AND GUIDE POLICIES

The Growth Management Chapter (GMC) of the Regional Comprehensive Plan and Guide (RCPG)[1] contains the following policy that is particularly applicable and should be addressed in the Draft EIR for the proposed project:

- *The population, housing, and jobs forecasts, which are adopted by SCAG's Regional Council and that reflect local plans and policies, shall be used by SCAG in all phases of implementation and review.*

The Regional Mobility Element (RME) also has policies pertinent to this proposed project. This chapter links the goal of sustaining mobility with the goals of fostering economic development, enhancing the environment, reducing energy consumption, promoting transportation-friendly development patterns, and encouraging fair and equitable access to residents affected by socio-economic, geographic and commercial limitations. Among the relevant policies of this chapter are the following:

- *Promote Transportation Demand Management (TDM) programs along with transit and ridesharing facilities as a viable and desirable part of the overall mobility program while recognizing the particular needs of individual subregions.*

- *Support the extension of TDM program implementation to non-commute trips for public and private sector activities.*

[1] See Endnote.

- *Support the coordination of land use and transportation decisions with land use and transportation capacity, taking into account the potential for demand management strategies to mitigate travel demand if provided for as a part of the entire package.*

- *Urban form, land use and site-design policies should include requirements for safe and convenient non-motorized transportation, including the development of bicycle and pedestrian-friendly environments near transit.*

GMC POLICIES RELATED TO THE RCPG GOAL TO IMPROVE THE REGIONAL STANDARD OF LIVING

The Growth Management goals to develop urban forms that enable individuals to spend less income on housing cost, that minimize public and private development costs, and that enable firms to be more competitive, strengthen the regional strategic goal to stimulate the regional economy. The evaluation of the proposed project in relation to the following policies would be intended to guide efforts toward achievement of such goals and does not infer regional interference with local land use powers.

- *Encourage local jurisdictions' efforts to achieve a balance between the types of jobs they seek to attract and housing prices.*

- *Encourage patterns of urban development and land use which reduce costs on infrastructure construction and make better use of existing facilities.*

- *Encourage subregions to define an economic strategy to maintain the economic vitality of the subregion, including the development and use of marketing programs, and other economic incentives, which support attainment of subregional goals and policies.*

GMC POLICIES RELATED TO THE RCPG GOAL TO IMPROVE THE REGIONAL QUALITY OF LIFE

The Growth Management goals to attain mobility and clean air goals and to develop urban forms that enhance quality of life, that accommodate a diversity of life styles, that preserve open space and natural resources, and that are aesthetically pleasing and preserve the character of communities, enhance the regional strategic goal of maintaining the regional quality of life. The evaluation of the project in relation to the following policies would be intended to provide direction for plan implementation, and does not allude to regional mandates.

- *Support provisions and incentives created by local jurisdictions to attract housing growth in job rich subregions and job growth in housing rich subregions.*

7

- *Encourage existing or proposed local jurisdictions' programs aimed at designing land uses which encourage the use of transit and thus reduce the need for roadway expansion, reduce the number of auto trips and vehicle miles traveled, and create opportunities for residents to walk and bike.*

- *Encourage local jurisdictions' plans that maximize the use of existing urbanized areas accessible to transit through infill and redevelopment.*

- *Support and encourage settlement patterns which contain a range of urban densities.*

- *Encourage planned development in locations least likely to cause environmental impact.*

- *Support policies and actions that preserve open space areas identified in local, state and federal plans.*

- *Encourage the implementation of measures aimed at the preservation and protection of recorded and unrecorded cultural resources and archaeological sites.*

- *Encourage mitigation measures that reduce noise in certain locations, measures aimed at preservation of biological and ecological resources,measures that would reduce exposure to seismic hazards, minimize earthquake damage, and to develop emergency response and recovery plans.*

GMC POLICIES RELATED TO THE RCPG GOAL TO PROVIDE SOCIAL, POLITICAL, AND CULTURAL EQUITY

The Growth Management Goal to develop urban forms that avoid economic and social polarization promotes the regional strategic goal of minimizing social and geographic disparities and of reaching equity among all segments of society. The evaluation of the proposed project in relation to the policy stated below is intended guide direction for the accomplishment of this goal, and does not infer regional mandates and interference with local land use powers.

- *Encourage efforts of local jurisdictions in the implementation of programs that increase the supply and quality of housing and provide affordable housing as evaluated in the Regional Housing Needs Assessment.*

- *Support local jurisdictions and other service providers in their efforts to develop sustainable communities and provide, equally to all members of society, accessible and effective services such as: public education, housing, health care, social services, recreational facilities, law enforcement, and fire protection.*

CONCLUSIONS

All feasible measures needed to mitigate any potentially negative regional impacts associated with the proposed residential development should be implemented and monitored, as required by CEQA.

- ENDNOTE -

SOUTHERN CALIFORNIA ASSOCIATION OF GOVERNMENTS

Roles and Authorities

SCAG is a *Joint Powers Agency* established under California Government Code Section 6502 et seq. Under federal and state law, SCAG is designated as a Council of Governments (COG), a Regional Transportation Planning Agency (RTPA), and a Metropolitan Planning Organization (MPO). SCAG's mandated roles and responsibilities include the following:

SCAG is designated by the federal government as the Region's *Metropolitan Planning Organization* and mandated to maintain a continuing, cooperative, and comprehensive transportation planning process resulting in a Regional Transportation Plan and a Regional Transportation Improvement Program pursuant to 23 U.S.C. §134(g)-(h), 49 U.S.C. §1607(f)-(g) et seq., 23 C.F.R. §450, and 49 C.F.R. §613. SCAG is also the designated *Regional Transportation Planning Agency*, and as such is responsible for both preparation of the Regional Transportation Plan (RTP) and Regional Transportation Improvement Program (RTIP) under California Government Code Section 65080.

SCAG is responsible for developing the demographic projections and the integrated land use, housing, employment, and transportation programs, measures, and strategies portions of the *South Coast Air Quality Management Plan*, pursuant to California Health and Safety Code Section 40460(b)-(c). SCAG is also designated under 42 U.S.C. §7504(a) as a *Co-Lead Agency* for air quality planning for the Central Coast and Southeast Desert Air Basin District.

SCAG is responsible under the Federal Clean Air Act for determining *Conformity* of Projects, Plans and Programs to the Air Plan, pursuant to 42 U.S.C. §7506.

Pursuant to California Government Code Section 65089.2, SCAG is responsible for *reviewing all Congestion Management Plans (CMPs) for consistency with regional transportation plans* required by Section 65080 of the Government Code. SCAG must also evaluate the consistency and compatibility of such programs within the region.

SCAG is the authorized regional agency for *Inter-Governmental Review* of Programs proposed for federal financial assistance and direct development activities, pursuant to Presidential Executive Order 12,372 (replacing A-95 Review).

SCAG reviews, pursuant to Public Resources Code Sections 21083 and 21087, *Environmental Impact Reports* of projects of regional significance for consistency with regional plans [California Environmental Quality Act Guidelines Sections 15206 and 15125(b)].

Pursuant to 33 U.S.C. §1288(a)(2) (Section 208 of the Federal Water Pollution Control Act), SCAG is the authorized *Areawide Waste Treatment Management Planning Agency*.

SCAG is responsible for preparation of the *Regional Housing Needs Assessment*, pursuant to California Government Code Section 65584(a).

SCAG is responsible (with the San Diego Association of Governments and the Santa Barbara County/Cities Area Planning Council) for preparing the *Southern California Hazardous Waste Management Plan* pursuant to California Health and Safety Code.

NOTICE OF PREPARATION

DATE: August 2, 2001

SUBJECT: Notice Of Intent To Prepare
Draft Environmental Impact Report # 566

Project Title: Saddleback Meadows

Applicant: California Quartet/TPG

The Orange County Planning & Development Services Department has conducted an Initial Study for the subject project and has determined that an Environmental Impact Report is necessary. The County of Orange will be the Lead Agency for the subject project and will prepare the EIR. In order for the concerns of your agency to be incorporated into the Draft EIR, we need to know the views of your agency as to the scope and content of the environmental information relevant to your agency's statutory responsibilities in connection with the proposed project. Your agency must consider the EIR prepared by the County of Orange when considering your permit or approval for the project. The project description, location, and an analysis indicating the probable enviornmental effects of the proposed action are contained in the attached materials. Interested individuals and groups are also invited to comment on the scope of the anticipated EIR.

Pursuant to Section 21080.4 of CEQA, your response must be sent as soon as possible but *not later than 30 days after receipt of this notice.*

All parties that have submitted their names and mailing addresses will be notified if any significant changes in the proposed project occur. If you wish to be placed on the mailing list, please submit your name and mailing address to the contact person at the address below. If you have need of additional information, contact Bill Grieman of the Environmental Planning Services Division at 834-5550. The mailing address is Planning & Development Services Department, P.O. Box 4048, Santa Ana, CA 92702-4048.

RHCB/RA FORMS OCT 1997

PUBLIC NOTICE

NOTICE OF INTENT TO PREPARE ENVIRONMENTAL IMPACT REPORT NO. 566

Pursuant to Public Resources Code Section 21165, the County of Orange is the Lead Agency responsible for preparing an environmental impact report (EIR) addressing potential impacts associated with the proposed Saddleback Meadows project, located approximately 1/2 mile southerly of the El Toro Road/Live Oak Canyon Road intersection in the Foothill Trabuco Specific Plan area of unincorporated Orange County. The project proposes the phased development of 299 single-family residential units on a 229.2-acre site. The gross density proposed is 1.4 dwelling units per acre, with average lot sizes of 6,672 square feet and a minimum lot size of 5,000 square feet. Approximately 71 percent (158.6-acres) of the project site is proposed to remain in open space. In addition to the residential component, the project also proposes a wildlife movement corridor, regional riding & hiking trail connections, and biological resource enhancement. The proposed project will also comply with the urban stormwater runoff requirements of the California Regional Water Quality Control Board, and water quality infiltration basins have been incorporated into the project design. Project implementation requires the approval of a Zone Change (Foothill/Trabuco Specific Plan Amendment), Area Plan and Vesting Tentative Tract Map.

At a minimum, EIR 566 will examine the potential impacts generated by the proposed Project in relation to the following CEQA Checklist categories: Land Use & Planning; Geophysical, Hydrology & Drainage; Water Quality; Transportation/Circulation; Air Quality; Noise; Biological Resources; Aesthetics; Cultural/Scientific Resources; Recreation; Hazards; Public Services; and, Utilities and Service Systems. A more complete description of EIR requirements is included in the Notice of Preparation.

REVIEWING LOCATIONS

COPIES OF THE NOP ARE AVAILABLE FOR PUBLIC REVIEW FROM August 2, 2001 TO September 1, 2001 AT THE FOLLOWING LOCATIONS:

I. INTRODUCTION/BACKGROUND

Pursuant to Public Resources Code Section 21165, the County of Orange is the Lead Agency responsible for preparing an Environmental Impact Report (EIR) addressing potential impacts associated with the proposed Saddleback Meadows project, located approximately 1/2-mile from the El Toro Road/Live Oak Canyon Road intersection in the Foothill/Trabuco Specific Plan area of unincorporated Orange County. In accordance with the California Environmental Quality Act (CEQA) and its Guidelines, an Initial Study has been prepared for the proposed project. Based on the analysis conducted for the Initial Study (see Section VII of this document), it has been determined that the proposed project could result in significant environmental impacts and the preparation of a Subsequent EIR will be required. According to Section 15162 of the *CEQA Guidelines*, a Subsequent EIR is required when subsequent changes are proposed in the project which will require important revisions to the previous EIR due to the involvement of new significant environmental impacts not considered in the previous EIR.

CEQA documentation prepared for the project to date is summarized as follows:

- **EIR 059:** In August 1978, the Board of Supervisors of Orange County adopted General Plan Amendment 78-1 for the Saddleback Meadows property. Final EIR 059 was prepared and certified in conjunction with the general plan amendment.
- **EIR 203:** In January 1980, the Board of Supervisors adopted Ordinance Number 3177, which placed the property in the PC "Planned Community" District. Final EIR 203 was prepared and certified in conjunction with the Ordinance.
- **EIR 561:** EIR 561 was prepared and circulated in February 1996 for 318 detached single family dwelling units on a 222.2 acre site. On July 30, 1996, the Orange County (County) Planning Commission recommended that the Board of Supervisors certify the EIR, which, on October 22, 1996, the Board failed to do.
- **Subsequent EIR 566:** Subsequent EIR 566 for the Saddleback Meadows project was prepared and circulated in May 1997 and was certified by the County Planning Commission on December 3, 1997. The County Board of Supervisors failed to grant an appeal of this action on February 24, 1998.
- **Subsequent EIR 566 Addendum No. 1:** Addendum No. 1 was prepared in July 1998. The project evaluated by Addendum No. 1 included 299 detached single family dwelling units on 222.2 acres. The Addendum was approved by the Planning Commission on October 7, 1998 and by the Board of Supervisors on December 8, 1998.
- **Subsequent EIR 566 Addendum No. 2:** Addendum No. 2 was prepared in March 2001 to evaluate and document any potential changes in the environmental effects or

baseline conditions since the preparation of Addendum No. 1. The project evaluated by Addendum No. 2 was identical to Addendum No. 1 (299 detached single-family dwelling units) and included updated traffic and biological resources impact studies. On May 9, 2001, the Planning Commission failed to approve Addendum No. 2 and recommended preparation of a new EIR for the 299-lot project. This recommendation was upheld by the Board of Supervisors on May 22, 2001.

II. PROJECT DESCRIPTION

The project proposes the phased development of 299-detached single-family residential units on a 222.2-acre site, located on the easterly side of El Toro Road (see Exhibits 1, 2,and 3). The gross residential density is 1.4 du/ac, with average lot sizes of 6,672 square feet and a minimum lot size of 5,000 square feet. Approximately 71 percent (158.6 acres) of the project site is proposed to remain in open space.

In addition to the residential component, the project also proposes a wildlife movement corridor, regional riding/hiking trail connections, and biological resource enhancement. The proposed project will also comply with the urban stormwater runoff requirements of the California Regional Water Quality Control Board, and water quality infiltration basins have been added to the project features. Project implementation requires the approval of a Zone Change (Foothill/Trabuco Special Plan Amendment), Area Plan and Vesting Tentative Tract Map.

The proposed project represents a complete revision and redesign of previously approved and recorded Tract 10692. As a result of a directive from the Orange County Planning Commission in January 1995, the original project was revised in consideration of changed circumstances and new information of environmental significance not previously considered in EIR 078. The current project design is a result of numerous meetings with interested citizens, resource agencies and adjacent property owners from 1995 to the present.

The project site is located within the Foothill/Trabuco Specific Plan and the Aliso Creek Corridor Specific Plan, approximately 1/2-mile southerly of the El Toro Road/Live Oak Canyon Road intersection. Implementation of the proposed project would directly effect 149.0-acres of the project site, or 65 percent, including remedial grading. In addition to on-site grading, 2.04-acres of offsite area would be effected for access road construction and remedial grading.

HDR

Exhibit 3
Illustrative Site Plan
Saddleback Meadows

A total of 8.6 million cubic yards of grading would be required to implement the project. The following table outlines a comparison between the current and previously submitted project:

Recorded/Proposed Project Comparison

Features	Proposed Project	Previously Approved Recorded Tract 10692
Dwelling Units	299	705
Minimum Lot Size	5,000 sf	3,200 sf
Gross Density	1.4 du/ac	3.03 du/ac
% Open Space	71%	31%
Wildlife Corridor	Yes	No

III. SUMMARY OF POTENTIALLY SIGNIFICANT IMPACTS

Based on the Initial Study prepared for the proposed project (see Section VIII), project implementation could result in significant impacts to one or more of the following:

- Air quality
- Biological resources
- Aesthetics
- Cultural/scientific resources
- Recreation
- Hazards

It is anticipated that with the implementation of appropriate mitigation measures, impact for the following environmental resources will be less than significant: land use and planning, geophysical, hydrology and drainage, water quality, noise, public services and utilities. The Initial Study concludes that less than significant or no impact will result to: agricultural resources, population and housing, transportation, and mineral resources.

IV. ALTERNATIVES TO BE EVALUATED IN THE DRAFT EIR

In accordance with Section 15126.6 of the *CEQA Guidelines*, the EIR will define and evaluate project alternatives that have the potential to meet the primary objectives of the proposed project and reduce any significant environmental impacts of the project. The lead agency has determined that the following alternatives to the proposed project are reasonable alternatives

to be discussed in the EIR:

- **No Development Alternative:** This alternative would leave the proposed site in its existing condition.
- **No Project Alternative:** This alternative would not allow any change from existing entitlements on the project site for 705 manufactured units.
- **F/TSP EIR 531 Staff Alternative A:** This alternative would allow 150 units with a minimum lot size of 20,000 square feet.
- **F/TSP EIR 531 Staff Alternative B:** This alternative would reduce the number of dwelling units on the project site to no more than 100 on approximately 30 acres.
- **Cluster/Single Family/Multi Family Residential Alternative:** This alternative would feature 318 detached and attached dwelling units, within a reduced development impact area (110.5 acres).
- **44/178 Alternative:** This alternative would allow 127 single-family units on a 44-acre "Development Parcel." The alternative would also feature a 178-acre "Conservation Area" parcel.
- **Acquisition Alternative:** This alternative would involve the County and adjacent landowners purchasing the property from the developer. Subsequent to acquisition, the property would be placed in a permanent open space reserve.
- **Golf Course Alternative:** This alternative would feature an 18 hole target style golf course on 150-acres, avoiding sensitive habitat areas wherever possible. Alternative may also include a small lodge/hotel and conference retreat center and resort casitas linked to the conference center.

V. MANDATORY FINDINGS

As required by CEQA, mandatory findings are determined to be made by the lead agency to determine not only whether an EIR must be prepared, but also to identify the effects to be analyzed in the document.

a) Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?

Potential significant effect. Based on previously prepared studies, several sensitive species exist within the proposed project site. The proposed project has the potential of significantly affecting the range of wildlife that may currently use this property as a wildlife movement corridor.

b) Does the project have the potential to achieve the short-term environmental goals to the disadvantage of the long-term environmental goals?

Potential significant effect. The project has the potential to permanently impact existing biological, aesthetic and cultural resources that are unique to this area.

c) Does the project have possible environmental effects which are individually limited but cumulatively considerable? ("cumulatively considerable" means that the incremental effects of an individual project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)

Potential significant effect. The proposed project could have significant cumulative effects on the air quality, and biological resources of the area.

d) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?

Less than significant with mitigation. Project implementation could have substantial adverse effects on human beings in terms air quality and geotechnical hazards.

VI. DETERMINATION

Based on the Initial Study, the proposed project may have a significant effect on the environment that has not been analyzed in a previous CEQA document. Preparation of an EIR is therefore required. The following environmental topics will be addressed in the EIR:

- Land Use & Planning
- Geophysical
- Hydrology and Drainage
- Water Quality/Water Quality
- Transportation/Circulation
- Biological Resources
- Aesthetics
- Cultural/Scientific Resources
- Recreation
- Hazards

- Air Quality
- Noise
- Public Services
- Utilities & Service Systems

ENVIRONMENTAL ANALYSIS CHECKLIST

Project Number: PA 980103

ISSUES & SUPPORTING DATA SOURCES:	Potential Significant Effect	Less than Significant w/ Mitigation	Less than Significant Impact	No Impact
1. LAND USE & PLANNING. Would the project:				
a) Conflict with general plan designation or zoning?	☐	☒	☐	☐
b) Conflict with applicable environmental plans or policies of agencies with jurisdiction over the project?	☐	☒	☐	☐
c) Disrupt or divide the physical arrangement of an established community (e.g. low income, minority)?	☐	☐	☐	☒
d) Conflict with adjacent, existing or planned land uses?	☐	☒	☐	☐
2. AGRICULTURE. Would project:				
a) Convert Farmlands listed as "Prime", "Unique" or of "Statewide Importance," as shown on the State Farmland Mapping and Monitoring Program, to non-agricultural use?	☐	☐	☐	☒
b) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use?	☐	☐	☐	☒
3. POPULATION & HOUSING. Would project:				
a) Cumulatively exceed adopted regional or local population projections?	☐	☐	☐	☒
b) Induce substantial growth in an area directly or indirectly through project in an undeveloped area or extension of major infrastructure?	☐	☐	☐	☒
c) Displace existing housing affecting a substantial number of people?	☐	☐	☐	☒
4. GEOPHYSICAL. Would project result in or expose people to impacts involving:				
a) Local fault rupture?	☐	☐	☒	☐
b) Seismicity ground shaking or liquefaction?	☐	☒	☐	☐
c) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	☐	☐	☐	☒
d) Landslides or mudslides?	☐	☒	☐	☐
e) Erosion, changes in topography or unstable soil conditions from excavation, grading or fill?	☐	☒	☐	☐
f) Subsidence of the land?	☐	☒	☐	☐
g) Expansive soils?	☐	☒	☐	☐
h) Unique geologic or physical features?	☐	☒	☐	☐
5. HYDROLOGY&DRAINAGE. Would the project:				
a) Substantially alter the existing drainage pattern of the site or area, including the alteration of the course of a stream or river, in manner which would result in:				
i) substantial erosion or siltation on- or off-site?	☐	☒	☐	☐
ii) a substantial increase in the rate or amount of surface runoff in manner which would result in flooding on- or off-site?	☐	☒	☐	☐
b) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?	☐	☒	☐	☐
c) Place within a 100-year flood hazard area structures which would impede or redirect flood flows?	☐	☐	☐	☒
d) Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam, or inundation by seiche, tsunami, or mudflow?	☐	☐	☐	☒

ISSUES & SUPPORTING DATA SOURCES:	Potential Significant Effect	Less than Significant w/ Mitigation	Less than Significant Impact	No Impact
6. WATER QUALITY. Would the project:				
a) Violate any water quality standards or waste discharge requirements?	☐	☒	☐	☐
b) Substantially deplete groundwater supplies or interfere with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of a local groundwater table level?	☐	☐	☒	☐
c) Otherwise substantially degrade water quality?	☐	☒	☐	☐
7. TRANSPORTATION/CIRCULATION. Would the project result in:				
a) Increased vehicle trips or traffic congestion beyond adopted policies and/or forecasts?	☐	☐	☒	☐
b) Exceed, either individually or cumulatively, a level of service standard established by the county congestion management agency for designated roads or highways?	☐	☐	☒	☐
c) Safety hazards from design features (e.g. sharp curves or dangerous intersections) or incompatible uses (e.g. farm equipment)?	☐	☐	☒	☐
d) Inadequate emergency access or access to nearby uses?	☐	☐	☒	☐
e) Insufficient parking capacity on-site or off-site?	☐	☐	☒	☐
f) Hazards or barriers for pedestrians or bicyclists?	☐	☐	☒	☐
g) Conflicts with adopted policies supporting alternative transportation (e.g. bus turnouts, bicycle racks)?	☐	☐	☒	☐
h) Rail, waterborne or air traffic impacts?	☐	☐	☐	☒
i) Change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?	☐	☐	☐	☒
8. AIR QUALITY. Would the project:				
a) Exceed any SCAQMD standard or contribute to air quality deterioration beyond projections of SCAQMD?	☒	☐	☐	☐
b) Expose sensitive population groups to pollutants in excess of acceptable levels?	☐	☒	☐	☐
c) Alter air movement, moisture, or temperature, or cause any change in climate?	☐	☐	☐	☒
d) Create objectionable odors affecting a substantial number of people?	☐	☐	☐	☒
9. NOISE. Would the project:				
a) Increase existing noise levels?	☐	☒	☐	☐
b) Expose people to noise levels exceeding adopted County standards?	☐	☒	☐	☐
c) If located within an airport land use plan or, where such plan has not been adopted, within two miles of a public airport or public use airport, expose people residing or working in the project area to excessive noise levels?	☐	☐	☒	☐
10. BIOLOGICAL RESOURCES. Would the project impact:				
a) Endangered, threatened or rare species or their habitats (including but not limited to plants, fish, insects, animals and birds)?	☒	☐	☐	☐
b) Locally designated species (e.g. heritage trees)?	☒	☐	☐	☐
c) Locally designated natural communities (e.g. oak forest, coastal habitat, etc.)?	☒	☐	☐	☐
d) Wetland habitat (e.g. marsh, riparian and vernal pool)?	☐	☒	☐	☐
e) Wildlife dispersal or migration corridors?	☐	☒	☐	☐
f) Adopted or proposed conservation plans and policies (e.g. Natural Community Conservation Plan or Resource Management Plan)?	☒	☐	☐	☐
11. AESTHETICS. Would the project:				
a) Affect a scenic vista or view open to the public?	☒	☐	☐	☐
b) Affect a designated scenic highway?	☒	☐	☐	☐
c) Substantially degrade the existing visual character or quality of the site and its surroundings?	☒	☐	☐	☐
d) Create light or glare beyond the physical limits of the project site?	☐	☒	☐	☐

ISSUES & SUPPORTING DATA SOURCES:	Potential Significant Effect	Less than Significant w/ Mitigation	Less than Significant Impact	No Impact
12. CULTURAL/SCIENTIFIC RESOURCES, Would the project:				
a) Disturb archaeo or paleo resources?	☒	☐	☐	☐
b) Affect historical resources?	☒	☐	☐	☐
c) Have the potential to cause a physical change which would affect unique ethnic cultural values?	☒	☐	☐	☐
13. RECREATION. Would project:				
a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☒	☐	☐
b) Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	☐	☒	☐	☐
c) Conflict with adopted recreational plans or policies?	☒	☐	☐	☐
14. MINERAL RESOURCES. Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	☒
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☐	☒
15. HAZARDS. Would the project:				
a) Create a hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☐	☒
b) Create a hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☐	☒
c) Exposure of people to existing sources of health hazards?	☐	☐	☐	☒
d) For a project located within an airport land use plan or, where such plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?	☐	☐	☒	☐
e) For a project within the vicinity of private airstrip, would the project result in a safety hazard for people residing or working in the project area?	☐	☐	☒	☐
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☐	☒
g) Expose people or structures to a significant risk or loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?	☒	☐	☐	☐
16. PUBLIC SERVICES. Would project result in need(s) for new/altered government facilities/services in:				
a) Fire protection?	☐	☒	☐	☐
b) Police protection?	☐	☒	☐	☐
c) Schools?	☐	☒	☐	☐
d) Maintenance of public facilities, including roads?	☐	☒	☐	☐
e) Other government services?	☐	☒	☐	☐
17. UTILITIES & SERVICE SYSTEMS. Would project result in needs for new or substantial alterations in:				
a) Power or natural gas?	☐	☒	☐	☐
b) Communications systems?	☐	☒	☐	☐
c) Local or regional water treatment or distribution facilities?	☐	☒	☐	☐
d) Sewer or septic tanks?	☐	☒	☐	☐
e) Solid waste disposal?	☐	☒	☐	☐

ISSUES & SUPPORTING DATA SOURCES:	Potential Significant Effect	Less than Significant w/ Mitigation	Less than Significant Impact	No Impact
MANDATORY FINDINGS :				
a) Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife population to drop below self sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?	☒	☐	☐	☐
b) Does the project have the potential to achieve the short-term environmental goals to the disadvantage of the long-term environmental goals?	☒	☐	☐	☐
c) Does the project have possible environmental effects which are individually limited but cumulatively considerable? ("cumulatively considerable" means that the incremental effects of an individual project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)	☒	☐	☐	☐
d) Does project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly	☐	☒	☐	☐

DETERMINATION:

Based upon the evidence in light of the whole record documented in the attached environmental checklist explanation, cited incorporations and attachments, I find that the proposed project:

COULD NOT have a significant effect on the environment, and a negative declaration (ND) will be prepared pursuant to CEQA Guidelines Article 6, 15070 through 15075. ☐

COULD have a significant effect on the environment, there will not be a significant effect in this case because the mitigation measures have been added to the project. A negative declaration (ND) will be prepared pursuant to CEQA Guidelines Article 6, 15070 through 15075. ☐

MAY have a significant effect on the environment which has not been analyzed previously. Therefore, an environmental impact report (EIR) is required. ☒

NOTE: All referenced and/or incorporated documents may be reviewed by appointment only, at the County of Orange Planning & Development Services Department, 300 N. Flower Street, Santa Ana, California, unless otherwise specified. An appointment can be made by contacting the CEQA Contact Person identified above.

VIII. ENVIRONMENTAL ANALYSIS AND EXPLANATION OF CHECKLIST REPONSES

This Initial Study has been conducted pursuant to Section 15060 of the *CEQA Guidelines* and the County of Orange CEQA procedures. The following discussion provides information to substantiate the responses in the foregoing Orange County Environmental Analysis Checklist. For each environmental category, the discussion is outlined to address the: (1) existing setting; (2) potential impacts; and (3) scope of the EIR discussion. The scope of the EIR will be refined, as appropriate, upon completion of the public scoping process including input from responsible agencies and the public.

As encouraged by CEQA, source references used to substantiate the checklist are referenced following each topical area. A list of references in included at the end of the checklist summary on this Initial Study in Section IX.

1. LAND USE & PLANNING

Source References (see Section IX): 3, 7, 8

Existing Setting

The project site is situated within the Foothill/Trabuco Specific Plan (F/TSP) planning area. The 6,500 acres of the F/TSP area are situated within the foothills of the Santa Ana Mountains and are characterized by abundant natural and scenic resources, and primarily low-density residential and open space land uses. The project site is currently undeveloped; however, it has been used for agriculture and cattle grazing since the 1940's.

The entire 222.2-acre Saddleback Meadows project site is currently zoned S "Specific Plan" (Foothill/Trabuco Specific Plan) with an SR "Sign Restriction" overlay district. The Specific Plan designation for the site is BWR "Bridlewood Residential" District. The BWR District was established within the F/TSP, adopted December 1991, to recognize the existing zoning and tract map approvals for the Bridlewood/Saddleback Meadows property. The General Plan Land Use Element (LUE) designation for the project site is 1B "Suburban Residential" (0.5 to 18 dwelling units per acre).

Surrounding land uses include: (1) St. Michael's Abbey, Cooks Corner, natural open space, Cleveland National Forest, Live Oak Plaza, Santiago Canyon Estates, and low density residential to the north; (2) Hidden Hills/Hidden Ridge developments, Painted Trails development, O'Neill Regional Park, and the Ramakrishna Monastery to the south; (3) low density residential, a church, and natural open space to the east; and (4) Portola Hills and Foothill Ranch communities, and Aliso

Creek to the west.

Potential Impacts

Potential impacts which may result if the project is developed include: the introduction of 299 detached single-family residential units and related major infrastructure improvements into an area previously used primarily for open space and agricultural uses, and potential conflicts with existing surrounding land uses. Implementation of the proposed project would result in construction of only 45 percent of the units allowed by the current zoning and General Plan land use designations.

The circumstances regarding surrounding land uses have changed since the previous EIRs were certified and the original project was approved. When EIRs 059 and 078 were certified, the vicinity of the project, with the exceptions of St. Michael's Abbey and the Ramakrishna Monastery, was characterized by an undeveloped, predominantly natural environment. The project site, although disturbed by farming and cattle grazing activities, was dominated by grasslands, coastal sage scrub, and oak woodlands. The closest urban development was approximately four miles south of the site near the El Toro/Trabuco Road intersection. The project vicinity has become more urban since the original approvals with residential developments to the north, west, and south. It is now characterized by major residential development, including the Portola Hills Planned Community, the Hidden Ridge project and Foothill Ranch. With the changes that have taken place since the original project was approved, there is a question of the project's compatibility with surrounding uses.

Scope of EIR Discussion

The land use section of the EIR will include a detailed discussion of the following:

- The project's consistency with the General Plan and F/TSP.
- Project consistency with applicable regional plans.
- Potential land use compatibility conflicts with surrounding land uses.
- Recommendation of mitigation measures to reduce or avoid significant land-use related impacts.
- Identification of unavoidable and cumulative land use impacts.

2. AGRICULTURE

Source References (see Section IX): 1, 7, 8

Existing Setting

Orange County has historically been a rural community supported by an agricultural economy. During the 1960's and 1970's, the County experienced a sharp decline in agriculture production as the urban development grew. Growth projections through 2000 indicate the continued urbanization of Orange County. In 1965, the Williamson Act was adopted in response to the increasing pressures on agricultural land. Under the Williamson Act, agricultural land can be held within agricultural preserves in order to protect these lands from urban development.

The project site is largely undeveloped. Portions of the site have historically been used for cattle grazing. The project site is not located in an area identified as important farmland as classified by the Department of Conservation, Farmland Mapping and Monitoring Program. The project site is designated as "other lands," which is defined as "land which does not meet the criteria of any other category including low-density rural developments, wetlands, dense brush and timberlands...."

Potential Impacts

Development of the proposed project will not convert farmlands listed as Prime Unique, or of Statewide Importance to non-agricultural uses. Moreover, none of the property is bound by a Williamson Act Contract as an agricultural preserve. Implementation of the proposed project will eliminate the existing use of portions of the site for cattle grazing. On a County-wide basis, the number of acres lost to this use is considered minimal and incremental, and less than significant.

Scope of EIR Discussion

The potential impact of the proposed project on agricultural resources is determined to be less than significant. This topical area will not be addressed in the EIR.

3. POPULATION & HOUSING

Source References (see Section IX): 2, 6, 7, 8

Existing Setting

The County of Orange General Plan Housing Element, adopted September 14, 1993, outlines specific goals, policies and programs to facilitate development of housing in unincorporated

areas. For analytical purposes, the region has been broken into units called Regional Statistical Areas (RSAs). The project site is located in RSA C-43. As of 1999, RSA C-43 had a population of 190,000 with a 2000 projection of 212,700. The total population for Orange County is 2,846,289 (2000). Projected population for the County in 2010 is 3,105,300. The eastern and southern areas of the County, including RSA C-43, are expected to realize the largest populations gains. Subsequently, new development reflects this trend and approximately 57 percent of residential construction will be in south County. The average household size in unincorporated Orange County in 1999 was 2.58.

Potential Impacts

Approximately 299 single-family housing units will be constructed under the proposed project, which would result in an increase of approximately 771 new residents for the County. This compares to the approved 705 manufactured homes, which would result in approximately 1,819 new residents. The proposed project is not expected to cumulatively exceed adopted regional or local population projections, in fact, a reduction in the number of planned residential units would occur.

Infrastructure to serve the proposed project will only be extended to meet the needs of the development. Capacities will not be upgraded beyond what is needed to meet the development of the area in accordance with the adopted F/TSP. The project, therefore, will not be growth inducing.

Project implementation will not displace existing, occupied housing.

Scope of EIR Discussion

The potential impact of the proposed project on population and housing is determined to be less than significant. This topical area will not be addressed in the EIR.

4. GEOPHYSICAL

Source references (see Section IX): 4, 7, 8

Existing Setting

The proposed project site is located within the Canada De Los Alisos in the low coastal foothills of the Santa Ana Mountains These hills are part of the Peninsular Ranges Geomorphic Province and are generally underlain by sedimentary bedrock of Tertiary age. Ridges, ravines, and gullies form the dominant physiographic features, provide moderate to high topographic relief. Elevations above mean sea level range from approximately 1,000 to 1,550 feet. Natural slope gradients range from nearly level along some ridge crests and valley bottoms to 1:1 (horizontal:vertical) within deeply incised gullies. The site drains generally toward the west and southwest into Aliso Creek and Oso Creek tributaries of San Juan Creek.

Approximately 43 percent of the project site is in the 0 to 25 percent slope category, 43 percent is in the 26 to 50 percent slope category and 14 percent of the project site has slopes exceeding 50 percent.

On-site bedrock consists of a thick sequence of interbedded, fine- to course-grained sandstone and siltstone. Ancient to active landslides underlie much of the project area. Recent and older alluvial deposits are confined to the major gullies and Aliso Creek drainage. Topsoil and colluvium mantel the bedrock and landslides throughout most of the site. Fill soils underlie areas where man-made features, such as roads and berms associated with livestock ponds, were constructed.

The closest, major active fault is the Whittier-Elsinore Fault Zone, located approximately eight miles to the northeast of the F/TSP area. The Aliso Fault, located along the F/TSP southwest boundary is classified as potentially active, but considered to have a low potential for activity within the F/TSP area. The likelihood of surface faulting within the F/TSP area is considered minimal. The primary seismic hazard potentially affecting the project site, as well as most other sites in southern California, is ground shaking due to an earthquake on a major regional fault.

Potential Impacts

Potential impacts which may result if the project is developed include substantial short-term changes of the site's landforms and topographical features particularly during grading activities. In the long-term, the project proposes site reconfiguration to reflect the site's natural land form features, and related impacts on the soil stability of the site. During

construction, erosion and siltation of soils may also occur. The proposed project will also introduce new structures and residents into the seismically active, southern California area.

Grading activities on the project site could result in sediment being carried into the Aliso Creek Corridor and downstream ultimately to Aliso Beach.

Scope of EIR Discussion

Various geotechnical studies have been prepared for the proposed project. The geophysical section of the EIR will document the findings and recommendation of the technical reports, which will be included as an appendix to the Draft EIR. The EIR discussion will include the following:

- Proposed grading in areas previously designated for preserved open space areas.
- Identification of soil and geologic characteristics and limitations of the project site, including soil stability, earthquake potential and known geologic hazards, including landslides, mudslides, ground failures and similar hazards for the entire site.
- Identification of the seismic features of the site, including the potential exposure of people or property to environmental impacts of the proposed project associated with earthquakes, liquefaction or similar hazards.
- The potential environmental impacts of the proposed project on the existing site topography and unique geologic or physical features.
- Mitigation measures necessary to reduce geophysical impacts to a level of insignificance.
- Identification of unavoidable and cumulative geophysical impacts.

5. HYDROLOGY & DRAINAGE

Source references (see Section IX): 4, 7, 8

Existing Setting

There are three major drainage areas within the F/TSP area: Aliso Creek Drainage, Oso Creek Drainage, and Trabuco Creek Drainage. The proposed project site is within the Aliso Creek and Oso Creek Drainage areas. Approximately 75 percent of the project site drains into Aliso Creek, with the remaining 25 percent draining into Oso Creek. The on-site project drainage has not been modified and remains in a natural state; however, embankments were

constructed across several minor tributaries in order to impound water, presumably to provide watering holes for the cattle. As many as eight ponds have been identified on-site; however, one of the ponds has breached and another pond has been completely filled with silt. In addition, some improvements have been made to sections of Aliso Creek, adjacent to the site, including a major man-made drainage channel. This channel passes from the proposed site to the westerly side of El Toro Road.

The area of Aliso Creek Corridor is classified as Floodplain FP-2 by the Federal Emergency Management Agency (FEMA).

Potential Impacts

Potential impacts which may result if the project is implemented include changes in absorption rates, alteration of the project site's existing landform, subsequently altering the existing flow of water onto, through, around and off the project site. During construction the disruption of soils may also affect the content of site run-off into the watershed area of Aliso Creek. Groundwater levels and quality, including absorption rates, may be affected by the proposed project. Potential impacts include pollutant discharges into Aliso Creek. The National Pollution Discharge Elimination System (NPDES) is a regulatory program required by the Clean Water Act and administered by OCEMA, which addresses water quality issues.

Scope of EIR Discussion

Various hydrology studies have been prepared for the proposed project. The hydrology and drainage section of the EIR will document the findings and recommendations of the technical report, which will also be included as an appendix to the Draft EIR. The EIR discussion will include the following:

- Identification and quantification of the current surface water and groundwater drainage patterns and water flows within, and adjacent to, the project site.
- Identification and quantification of the portion of the project site or off-site area that will be impacted by proposed project currently located within FEMA's FP-2 floodplain designation.
- Identification and quantification of the current surface water and groundwater quality within, and adjacent to, the project site, including existing on-site discharges into drainage channels.
- Identification of significant changes in the course or direction of water movements.
- Identification of changes in absorption rates, drainage patterns, or the rate and amount of surface water run-off.

- Identification of changes in erosion or changes in siltation which may modify the channel of Aliso Creek.
- Identification of changes in the amount of surface water as a result of any proposed storm drain retarding basins.
- Identification of changes in the quantity or quality of groundwater.
- Identification of the potential environmental impacts of the proposed project on wind or water erosion of soils, on-site or off-site.
- Identification of alterations to the course, flow or magnitude of flood waters, and resultant exposure of people or property to flood hazards.
- Recommendation of mitigation measures necessary to reduce project impacts to a level of insignificance, including the development of Best Management Practices (BMP) for compliance with the Clean Water Act.
- Identification of unavoidable and cumulative water resource impacts.

6. WATER QUALITY

Source references (see Section IX): 4, 7, 8

Existing Setting

Water pollution control is regulated in California by the State Water Resources Control Board (SWRCB) and nine California Regional Water Quality Control Boards (RWQCBs). Each of the nine regional boards is required to adopt a Water Quality Control Plan or Basin Plan, which recognizes and reflects regional differences in existing water quality, the beneficial uses of the Region's ground and surface waters, and local water quality conditions and problems. The project site is located within the San Diego Basin and subject to the policies in the Water Quality Control Plan for that basin.

Based on information included in the EIR for the F/TSP, groundwater quality within each of the three drainage basins (Aliso Creek, Oso Creek, and Trabuco Creek) is of poor quality.

The discharge of pollutants into water is regulated by the state through the NPDES program. The County of Orange has adopted the Drainage Area Master Plan (DAMP) to satisfy the requirements of the NPDES program. Structural and non-structural Best Management Practices are required to control possible pollutant discharges to surface water.

Potential Impacts

Grading and construction activities will potentially result in short-term water quality impacts including increased erosion and sediment contribution to surface water. Improper handling of construction materials and/or equipment could result in accidental spills that could adversely affect water quality. Potential long-term water quality impacts include the addition of pollutants typical of urban runoff (such as pesticides, fertilizers, vehicle hydrocarbons, greases, oil, plastics, and litter) and the increase of on-site activities.

Scope of EIR Discussion

Various water quality studies have been prepared for the proposed project. The water quality section of the EIR will document the findings and recommendations of the technical reports, which will also be included as an appendix to the Draft EIR. The EIR discussion will include the following:

- Overview of existing groundwater quality, beneficial uses and regulatory environment.
- Identification of potential project impacts and pollutant sources that could affect surface or groundwater quality.
- Recommendation of mitigation measures to reduce or avoid significant water quality impacts, including the identification of structural and non-structural Best Management Practices.
- Identification of unavoidable and cumulative water quality impacts.

7. TRANSPORTATION/CIRCULATION

Source references (see Section IX): 4, 7

Existing Setting

The existing roadways that will serve the proposed project is El Toro Road and Valley Vista Way, located within the Hidden Ridge/Hidden Hills Community. The site's interior is natural and has no road access.

El Toro Road is classified as a Major Arterial Highway south of Live Oak Canyon Road in Orange County's Master Plan of Arterial Highways (MPAH).

Potential Impacts

The proposed project will generate additional vehicle trips that will contribute to local traffic particularly on El Toro Road. Traffic will also contribute to peak hour intersection traffic.

Scope of EIR Discussion

A transportation and circulation study is being prepared for the proposed project. The transportation and circulation section of the EIR will document the findings and recommendations of the technical report, which will also be included as an appendix to the Draft EIR. The EIR discussion will include the following:

- An inventory of existing area-wide conditions including current traffic volumes, roadway capacities and levels of service.
- Assessment of project related and cumulative impacts on area roadways and intersection operation and levels of service.
- Identification and analysis of the existing ingress and egress to the project site, its potential internal circulation and parking problems associated with the proposed development.
- Identification of existing impacts to equestrians, motor vehicles, bicyclists and/or pedestrians.
- Evaluation of the need for El Toro Road to be a primary arterial versus a major arterial.
- Identification of increases in demand for public transit services with special attention to relationship with low income housing for senior citizens and any potential conflicts

with planned roadway widenings or extensions.

- Identification of specific potential internal circulation problems and potential traffic hazards to motor vehicles, bicyclists and/or pedestrians which may result from the proposed project.
- Recommendation of mitigation measures necessary to reduce project traffic and circulation impacts to a level of insignificance.
- Identification of unavoidable and cumulative impacts to transportation and circulation resources.

8. AIR QUALITY

Source references (see Section IX): 7, 8

Existing Setting

The project site is located within the South Coast Air Basin (SCAB), which is generally characterized by poor air quality. SCAB falls under the jurisdiction of the South Coast Air Quality Management District (SCAQMD). In conjunction with the Southern California Association of Governments (SCAG), SCAQMD is responsible for formulating and implementing air pollution controls. In 1997, SCAQMD's Air Quality Management Plan was adopted establishing a comprehensive air pollution control program leading to attainment of state and federal air quality standards. State and federal air quality standards are often exceeded within SCAB.

Potential Impacts

Potential impacts which may result if the project is developed include: generation of both short-term and long-term air quality impacts, both individually and cumulatively. Construction related emissions will be associated with the vehicle emissions of heavy construction equipment and fugitive dust from grading and other soil disturbance. The primary contribution to long-term emissions will result from vehicle emissions and increased trips generated by the project. Increased air emissions may also result in impacts on sensitive receptors in the project vicinity including St. Michael's Abbey and the Hillside Montessori School, and the exposure of persons to locally elevated levels of air pollution. Implementation of the project will not alter air movement, moisture, temperature, or cause a change in the climate. Moreover, there are no proposed land uses that will have the potential to create objectionable odors.

Scope of EIR Discussion

A project specific air quality study is being prepared for the proposed project. The air quality section of the EIR will document the findings and recommendations of the technical report, which will also be included as an appendix to the Draft EIR. The EIR discussion will include the following:

- Identification of the existing air quality environment of the project site in the local and regional context.
- Identification of air quality impacts associated with construction of the proposed project.
- Assessment of the proposed project's consistency with the SCAQMD's Air Quality Management Plan (AQMP).
- Identification and quantification of long-term air quality impacts resulting from development of the proposed project.
- Identification and analysis of the potential sensitive receptors which may be exposed to pollutants in excess of acceptable levels.
- Recommendation of mitigation measures to reduce or avoid air quality impacts.
- Identification of unavoidable and cumulative air quality impacts.

9. NOISE

Source references (see Section IX): 4, 7, 8

Existing Setting

The project area is located in a relatively remote portion of eastern Orange County and partially developed with low-density single-family residences. The project site is primarily in its natural state with noise generated by existing land uses and vehicular trips is minor. Existing noise levels are primarily associated with traffic noise generated along primary roadways. The F/TSP stipulates a noise standard for the area that is more stringent than the more urban areas of the County. Mitigation measures for the F/TSP require that residential lots and dwellings be attenuated so as not to exceed an exterior standard of 60 dB CNEL (compared to the 65 dB County standard) and interior standard of 45 dB CNEL. The project is adjacent to El Toro Road, a major access road to O'Neill Regional Park.

Potential Impacts

Construction activities will involve heavy equipment and generate noise levels in excess of ambient levels in the project area. Long-term noise impacts will primarily be associated with an increase in vehicle trips and an incremental increase in traffic noise within the area.

Scope of EIR Discussion

A project-specific noise analysis is being prepared for the proposed project. The noise section of the EIR will document the findings of the technical report, which will also be included as an appendix to the Draft EIR. The EIR discussion will include the following:

- Analysis of short-term construction related noise impacts.
- Identification of nearby sensitive receptors, both human and nosier sensitive biotic communities.
- Analysis of stationary noise impacts and mobile source noise impacts on project vicinity residents and identified sensitive receptors. Evaluation of noise impacts in terms of ambient traffic or aircraft noise impacts on adjacent noise sensitive uses.
- Conformance requirements of project development with the Orange County General Plan Noise Element, and local and state regulations.
- Recommendation of mitigation measures necessary to reduce noise impacts to a level of insignificance.
- Identification of unavoidable and cumulative noise impacts.

10. BIOLOGICAL RESOURCES

Source References (see Section IX): 4, 7, 8

Existing Setting

The proposed project site is largely undeveloped, and annual grasslands cover over 50 percent of the site. Five types of native vegetation occur on the project site: Venturan-Diegan costal sage scrub, coast live oak woodland, southern mixed chaparral, southern sycamore riparian woodland, and mulefat scrub. Portions of the Venturan-Diegan costal sage scrub are disturbed. Agricultural land and ephemeral ponds also occur on the site.

Within these habitats, the following two sensitive plants were determined to potentially occur on the project site: Catalina mariposa lily (*Calochortus catalinae*) and intermediate mariposa lily (*Calochortus weedii* var. *intermedius*). There are known wildlife corridors within the project site. In addition, the following endangered, threatened, or rare animal species could occur within the project vicinity: Riverside fairy shrimp (*Streptocephalus woottoni*), western spadefoot toad (*Spea hammondi*), coastal whiptail (*Cnemidophorus tigris multiscutatus*), orange throat whiptail (*Cnemidophorus hyperythrus beldingi*), Cooper's hawk (*Accipter cooperii*), coastal cactus wren (*Campylorhynchus brunneicapillus*), loggerhead shrike (*Lanius ludovicianus*), southern California rufous-crowned sparrow (*Aimophila rucieps canescens*), and coastal California gnatcatcher (*Poplioptila californica*).

In addition, the project site is located within the watershed area of Aliso Creek Corridor. The Aliso Creek Corridor, which is located adjacent to the project site, is identified as a "blue line" stream by the United States Geologic Survey (USGS).

Potential Impacts

Grading and construction of the developed area will impact existing vegetation and potentially result in direct and indirect impacts to some of the sensitive plant and animal species identified that may occur in the area (as listed above). The project will also impact some coast live oaks. The proposed project also will potentially impact wildlife corridors and wetlands and related habitat resources.

Scope of EIR Discussion

Various project-specific biological assessments have been prepared for the proposed project. The biological resources section of the EIR will document the findings of the technical reports, which will also be included as an appendix to the Draft EIR. The EIR discussion will include the following:

- General biological survey for wildlife and plant species with emphasis on potential habitat for sensitive species.
- Discussion of wildlife corridors.
- A detailed discussion of the proposed project's impacts to the Riverside fairy shrimp, including mitigation measures to avoid or reduce impacts.
- Assessment of the project's impacts on unique, sensitive, aesthetically significant, rare, threatened, or endangered flora and fauna within the project site, including oak tree groves and coastal sage scrub.
- Identification of impacts which might result from the removal of existing and intermittent ponds and the associated habitat for sensitive species, including the Riverside fairy shrimp, from the project site and off-site areas contiguous to project site.
- Recommendation of mitigation measures necessary to reduce all identified biological resource impacts to a level of insignificance.
- Identification of unavoidable and cumulative biological resource impacts.

11. AESTHETICS

Source references (see Section IX): 3

Existing Setting

The F/TSP area is recognized as an area characterized by visual resources unique to the County. Features that significantly contribute to the visual character of the area are identified in the F/TSP as: topography, natural vegetation, natural watercourses, and vistas and viewscape corridors. The F/TSP identifies public viewpoints based on relative visibility, significance or view corridors and/or important vistas. Additionally, per the County's Master Plan of Arterial Highways, El Toro Road is designated as a Scenic Highway.
The proposed project site is primarily in a natural state.

Potential Impacts

Potential aesthetic impacts which may result if the project is developed include the construction of slopes and retaining walls, and a significant alteration in the appearance of the site from offsite vantage points, including El Toro Road, which is designated a Scenic Highway. Aesthetic impacts are especially pronounced from the existing uses southerly and westerly of the project site.

Potential light and glare impacts which may result if the project is approved include: increased levels of exterior lighting and illumination, having the potential for adverse impacts upon residential neighborhoods and sensitive biotic communities.

Scope of EIR Discussion

The aesthetics section of the EIR will include viewshed impact simulations and also include the following analysis:

- Identify existing scenic vistas and views open to the public across the project site. Assess the obstruction of any scenic vista or view open to the public or the creation of any aesthetically offensive site open to public view.
- Complete a line of sight analysis of the project from El Toro Road, Hidden Ridge, Portola Hills, St. Michaels Abbey, Ramakrishna Monastery, and O'Neill Regional Park.
- Assess the current aesthetic importance of the project site and the aesthetic impact of the proposed project to other developments in the project vicinity.
- Evaluate and compare the potential aesthetic impacts associated with implementing the existing zoning and those associated with the proposed project. The narrative of this topical discussion must be supplemented by detailed simulation models of both the General Plan and the project.
- Recommendation of mitigation measures necessary to reduce aesthetic impacts to a level of insignificance.
- Identify of unavoidable and cumulative aesthetic impacts.

12. CULTURAL/SCIENTIFIC RESOURCES

Source references (see Section IX): 3, 7

Existing Setting

The project site is located within an area that is sensitive for cultural resources. Previously conducted cultural resources reports were prepared which indicated that there are prehistoric and historic sites recorded within the project boundaries. In addition, the project site is also located within an area with high potential to produce significant paleontological resources.

Potential Impacts

Grading could potentially result in alteration of or damage to significant archaeological, historical and/or paleontological resources on the project site.

Scope of EIR Discussion

Site-specific cultural resources reports have been conducted for the project site. The cultural resources section of the EIR will document the findings and recommendations of the technical reports, which will also be included as an appendix to the Draft EIR. The EIR discussion will include the following:

- Inventory existing significant archaeological and/or historical sites, structures, objects, or buildings located on the project site.
- Inventory potential paleontological sites.
- Evaluation of potential significant impacts to archaeological or historical sites, structures, objects, or buildings.
- Recommendation of mitigation measures necessary to reduce identified cultural/scientific resources to a level of insignificance.
- Identification of unavoidable and cumulative cultural/scientific resource impacts.

13. RECREATION

Source references (see Section IX): 7

Existing Setting

There are no existing recreation or public open space uses located on the project site. However, the proposed project site is located between O'Neill and Whiting Ranch/Limestone Regional Parks. A proposed trail is designated within the project site by the Orange County General Plan Recreation Element Master Plan of Regional Riding and Hiking trails.

Potential Impacts

The project represents a potential conflict with adopted recreational plans and policies, including the Aliso Creek Corridor Specific Plan, the General Plan Recreation Element and the Foothill/Trabuco Specific Plan.

Scope of EIR Discussion

The recreation section of the EIR will include a detailed discussion of the following:

- Identification of all currently planned recreational opportunities within the project site and the surrounding vicinity.
- Assessment of the impact of the proposed project on the quality and quantity of existing recreation opportunities.
- Evaluation and comparisons of the potential recreation impacts associated with implementing the existing zoning designations and those associated with the proposed project.
- Identification of mitigation measures necessary to reduce recreation impacts to a level of insignificance.
- Identification of unavoidable and cumulative recreation impacts.

14. MINERAL RESOURCES

Source references (see Section IX): 4, 7

Existing Setting

No known mineral resource exist on the project site. The project site is not designated as a know or potential mineral deposit by the state (mineral resource mapping as required under the Surface Mining and Reclamation Act) or the County of Orange.

Potential Impacts

The proposed project site is not located in an area identified as a mineral resource area, including mineral resources and energy resources. Implementation of the proposed project, therefore, will not result in the loss of availability of a known mineral resource that would be of future value to the region or the residents of the state. No locally important mineral resources are known to be present on or beneath the project site and implementation of the proposed project will not result in the loss of these minerals.

Scope of EIR Discussion

The proposed project will not result in a significant impact to mineral resources. This topical area will not be addressed in the EIR.

15. HAZARDS

Source references (see Section IX): 7, 8

Existing Setting

The project site is located close to the Cleveland National Forest, an area that is subject to high wild land fire hazards. When in operation, the site may also have been subject to hazards related to the flight operations at the El Toro Marine Corp Air Station (MCAS). The MCAS has been closed, and the facilities are currently being proposed for development of an international airport. No other sources of health hazards are known to exist within the project area.

Potential Impacts

Development of the project will introduce residents to a high fire hazard area. Development

and operation of a regional airport at MCAS could also expose residents to safety and accident hazards related to future flights from that airport. The project will not involve the use, storage or handling of hazardous materials.

Scope of EIR Discussion

The hazards section of the EIR will include a detailed discussion of the following:

- Identification of the current fire hazards, both on-site and within the project site vicinity.
- Identification of any existing emergency response plans for the project site and potential impacts of the project on such plans.
- Disclosure of the status and environmental findings related to potential hazards of the proposed international airport as the former MCAS site.
- Recommendation of mitigation measures necessary to avoid or reduce hazards to a level of insignificance.
- Identification of unavoidable and cumulative hazard impacts.

16. PUBLIC SERVICES

Source references (see Section IX): 7, 8

Existing Setting

The project site is undeveloped open space with limited use for cattle grazing. The project site is served by the following major public services:

- Fire and emergency services are provided by the Orange County Fire Authority. Station No. 42 located at 19150 Ridgeline Road, is approximately ½ mile from the project site, and provides primary response.
- Police protection is provided by the Orange County Sheriff-Coroner's Department. The Department's headquarters located at 550 N. Flower Street in Santa Ana. Patrol cars are in the vicinity of the project site on a regular basis patrolling the area, rather than being dispatched from a particular substation.
- Saddleback Unified School District, serving grades K-12 provides school services for the project area.

- Orange County Public Library serves the project site and vicinity. The closest library to the site is the Rancho Santa Margarita Branch Library located at 30902 La Promesa in Ranch Santa Margarita.

Potential Impacts

Implementation of the proposed project will introduce approximately 299 single-family dwelling units to the area. This increase may result in the need for additional fire and emergency medical and police personnel and equipment in order to service the project site and vicinity. Therefore, the proposed project may have a potential significant impact related to the ability of fire and police to provide adequate level of service. The proposed project will generate additional elementary, intermediate, and high school students. As stated above, the project site is located within the Saddleback Valley Unified School District, which is at maximum capacity. The introduction of new students into the already crowded district may result in a significant impact. Implementation of the project will also incrementally increase the demand for library services.

Scope of EIR Discussion

The services section of the EIR will provide a detailed discussion of the following:

- Evaluation of existing fire and police service levels and capacities and the adequacy of these providers to serve the proposed project including: personnel and equipment, availability, and response times.
- Assessment of project impacts related to Saddleback Valley Unified School District.
- Identification and assessment of impacts in the local library system.
- Recommendation of mitigation measures necessary to avoid or reduce public services impacts to a level of insignificance.
- Identification of unavoidable and cumulative public services impacts.

17. UTILITIES & SERVICE SYSTEMS

Source references (see Section IX): 7, 8

Existing Setting

The project site is undeveloped open space with limited use for cattle grazing. The project site is served by the following major public utilities and service systems:

- Southern California Edison (SCE) – electrical service
- Southern California Gas (SCG) Company – natural gas
- Trabuco Canyon Water District – sewer and water service
- Waste Management of Orange County – solid waste

Potential Impacts

The proposed development of approximately 299 single-family dwelling units will incrementally increase service requirements for electricity, gas, sewer, water, and solid waste.

Scope of EIR Discussion

The utilities and services sections of the EIR will include a detailed discussion of the following:

- Assessment of the adequacy and capacity of public utilities and service systems to serve the proposed project site.
- Demonstration of compliance with County requirements to reduce impacts to landfills.
- Recommendation of mitigation measures necessary to avoid or reduce all identified public utility and service system impacts to a level of insignificance.
- Identification of unavoidable and cumulative public services impacts.

IX. SOURCE REFERENCES

The following information sources have been referenced in preparation of the Initial Study. The source numbers correspond to the numbers within the respective environmental topics of

Section VIII.

To: Reviewing Agencies

Re: Saddleback Meadows
SCH# 1996121072

Attached for your review and comment is the Notice of Preparation (NOP) for the Saddleback Meadows draft Environmental Impact Report (EIR).

Responsible agencies must transmit their comments on the scope and content of the NOP, focusing on specific information related to their own statutory responsibility, within 30 days of receipt of the NOP from the Lead Agency. This is a courtesy notice provided by the State Clearinghouse with a reminder for you to comment in a timely manner. We encourage other agencies to also respond to this notice and express their concerns early in the environmental review process.

Please direct your comments to:

Bill Grieman
Orange County Planning and Development Services Department
300 North Flower Street 3rd Floor
P.O. Box 4048
Santa Ana, CA 92702

with a copy to the State Clearinghouse in the Office of Planning and Research. Please refer to the SCH number noted above in all correspondence concerning this project.

If you have any questions about the environmental document review process, please call the State Clearinghouse at (916) 445-0613.

Sincerely,

Scott Morgan
Project Analyst, State Clearinghouse

Document Details Report
State Clearinghouse Data Base

SCH#	1996121072
Project Title	Saddleback Meadows
Lead Agency	Orange County

Type	NOP Notice of Preparation
Description	The project proposes the phased development of 299-detached single-family residential units on a 222.2-acre site, located on the easterly side of El Toro Road (see Exhibits 1, 2 and 3). The gross residential density is 1.4 du/ac, with average lot sizes of 6,672 square feet and a minimum lot size of 5,000 square feet. Approximately 71 percent (158.6 acres) of the project site is proposed to reamin in open space. In addition to the residential component, the project also proposes a wildlife movement corridor, regional riding/hiking trail connections, and biological resource enhancement. The proposed project will also comply with the urban stormwater runoff requirements of the California Regional Water Quality Control Board, and water quality infiltration basins have been added to the project features. Project implementation requires the approval of a Zone Change Foothill/Trabuco Special Plan Amendment), Area Plan and Vesting Tentative Tract Map. The proposed project represents a complete revision and redesign of previously approved and recorded Tract 10692. The original project was revised in consideration of changed circumstances and new information of environmental significance not previously considered in EIR 078. The current project design is a result of numerous meetings with interested citizens, resource agencies and adjacent property owners from 1995 to the present.

P.O. Box 4048
Santa Ana, CA 92702

File: IGR/CEQA
SCH#: 1996121072
Log #: 952

Subject: **NOP for Saddleback Meadows DEIR #566**

Dear Mr. Grieman,

Thank you for the opportunity to review on the above project. The project site is located east of El Toro Road, and south of the "Y" intersection of Santiago Canyon Road and Live Oak Canyon Road. The nearest state route is the SR-241 tollroad.

The project consists of a phased development of 299 single-family residences on a 222.2-acre site. The project also includes a proposed wildlife corridor, regional hiking/biking trail connections, and biological resource enhancement. Water quality infiltration basins have been included in the project.

Caltrans District 12 status is a reviewing agency on this project and has reviewed the NOP for DEIR #566 dated August 6, 2001 and has no comments at this time.

Caltrans is always available to provide assistance and information on transportation issues to our communities as they continue to grow and prosper.
Please continue to keep us informed of this project and other future developments, which could potentially impact our transportation facilities. If you have any questions or need to contact us, please do not hesitate to call Maureen El Harake at (949) 724-2086.

Sincerely,

Robert F. Joseph, Chief
IGR/Community Planning

RE: SCH# 1996121072– Saddleback Meadows

Dear Mr. Grieman:

The Native American Heritage Commission has reviewed the above mentioned NOP To adequately assess the project-related impact on archaeological resources, the Commission recommends the following actions be required:

- ✓ Contact the appropriate Information Center for a record search. The record search will determine:
  - Whether a part or all of the project area has been previously surveyed for cultural resources.
  - Whether any known cultural resources have already been recorded on or adjacent to the project area.
  - Whether the probability is low, moderate, or high that cultural resources are located within the project area.
  - Whether a survey is required to determine whether previously unrecorded cultural resources are present.
- ✓ If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
  - The report containing site significance and mitigation measurers should be submitted immediately to the planning department.
  - The site forms and final written report should be submitted within 3 months after work has been completed to the Information Center.
- ✓ Contact the Native American Heritage Commission for:
  - A Sacred Lands File Check.
  - A list of appropriate Native American Contacts for consultation concerning the project site and assist in the mitigation measures.
- ✓ Provisions for accidental discovery of archeological resources:
  - Lack of surface evidence of archeological resources does not preclude the existence of archeological resources. Lead agencies should include provisions for accidentally discovered archeological resources during construction per California Environmental Quality Act (CEQA) §15064.5 (f).
- ✓ Provisions for discovery of Native American human remains
  - Health and Safety Code §7050.5, CEQA §15064.5 (e), and Public Resources Code §5097.98 mandates the process to be followed in the event of an accidental discovery of any human remains in a location other than a dedicated cemetery and should be included in all environmental documents.

If you have any questions, please contact me at (916) 653-4040.

Sincerely,

Rob Wood

ATTN: Bill Grieman

Subject: **Saddleback Meadows**

Dear Mr. Grieman,

We have received the subject documents and offer the following comments. We are also providing some additional information regarding the possible regulatory requirements for the subject project since this information has not been selected to be project-specific. Some of the information might not apply to this project.

We would like to see the following questions/concerns addressed in your Environmental Impact Report regarding the subject project:

a) Would the proposed project create a potentially significant adverse environmental impact to drainage patterns or the rate, or quantity of surface water and runoff?

b) Would the proposed project result in discharges into surface waters during or following construction, or in any way lead to a significant alteration of surface water quality including, but not limited to temperature, dissolved oxygen, turbidity or other typical urban storm water pollutants (e.g., metals, pathogens, synthetics, organics, sediment, nutrients, oxygen demanding substances.)?

c) Would the proposed project have a potentially significant adverse impact to groundwater flow though the alteration of pressure head (water table level) within the aquifer or though the interception of groundwater flow via cuts or excavation?

d) Would the proposed project result in the loss or degradation of any beneficial uses that have been designated for the water bodies that will be directly or indirectly affected by the project?

e) What mitigation measures are being proposed to eliminate or compensate for the adverse effects identified in (a) through (d) above?

Permits

There are six potential permits or approvals that might be needed from the Regional Quality Control Board during the life of a project. Additional information on these permits is provided to assist you in determining the permits that may be required for the proposed project; as well as to encourage project design modifications that may assist in obtaining all needed permits from the RWQCB or SWRCB.

During the construction and development phases of a project, the project could be subject to any one or more of four types of RWQCB permits or approvals. These include: (1) the Statewide National Pollutant Discharge Elimination System (NPDES) General Construction Activity Storm Water Permit, (2) the Clean Water Act 401 water quality Certification, (3) General Dewatering Permit, and (4) Dredging Permit. Upon completion of construction, and throughout the project's operational life, the project may be also subject to one or both of the following two types of RWQCB permits: (1) NPDES permit for any point source discharge of wastes to surface waters; and (2) State Waste Discharge Requirements (WDRs) for any waste discharge to land. Examples of discharges to land requiring WDRs include landfills, reclaimed water discharges from sewage treatment plants for irrigation purposes, sand and gravel operations, and animal confinement facilities.

Water quality degradation is regulated by the Federal National Pollutant Discharge Elimination System (NPDES) Program, established by the Clean Water Act, which controls and reduces pollutants to water bodies from point and non-point discharges. In California, the program is administered by the California Regional Water Quality Control Boards. The Regional Board issues NPDES permits for discharges to water bodies in the San Diego area, including Municipal (area- or county-wide) Storm Water Discharge Permits.

Construction SWPPP

Projects disturbing more than five acres of land during construction must be covered under the State NPDES General Permit for Discharges of Storm Water Associated with Construction Activity. This can be accomplished by filing a Notice of Intent (NOI). The project sponsor must propose and implement control measures that are consistent with this State Construction Storm Water General Permit, and with recommendations and policies of the local agency and the RWQCB.

Industrial SWPPP

Projects that include facilities with discharges of Storm Water Associated with Industrial Activity must be covered under the State NPDES General Permit for Discharges of Storm Water Associated with Industrial Activity. This may be accomplished by filing a Notice of Intent. The project sponsor must propose control measures that are consistent with this, and with recommendations and policies of the local agency and the RWQCB. In a few cases, the project sponsor may apply for (or the RWQCB may require) issuance of an individual (industry- or facility-specific) permit.

Municipal SWPPP

The RWQCB's San Diego Urban Runoff Municipal Permit requires San Diego area municipalities to develop and implement Storm Water Management Plans (SWMPs) The SWMPs must include a program for implementing new development and construction site storm water quality controls. The objective of this component is to ensure that appropriate measures to control pollutants from new development are: considered during the planning phase, before construction begins; implemented during the construction phase; and maintained after construction, throughout the life of the project.

Water Quality Certification

The RWQCB must certify that any permit issued by the U.S. Army Corps of Engineers pursuant to Section 404 of the Clean Water Act (covering, dredging, or filling of wetlands) complies with state water quality standards. Section 401 Water Quality Certification, or waiver, is necessary for all 404 Nationwide Permits, reporting and non-reporting, as well as individual permits.

Wetlands enhance water quality through such natural functions as flood and erosion control, stream bank stabilization, and filtration and purification of contaminants. Wetlands also provide critical habitats for hundreds of species of fish, birds, and other wildlife; offer open space; and provide many recreational opportunities. Adverse Water quality impacts can occur in wetlands from construction of structures in waterways, dredging, filling, and, otherwise altering the drainage to wetlands.

All projects must be evaluated for the presence of jurisdictional wetlands. Destruction or impact to wetlands should be avoided. Water quality certification may be denied based on significant adverse impacts to "Waters of the State." The goals of the California Wetlands Conservation Policy, include ensuring "no overall net loss and achieving a long-term net gain in the quantity, quality, and permanence of wetlands acreage and values." In the event wetland loss is unavoidable, mitigation will be preferably in-kind and on-site, with no net destruction of habitat value. Mitigation will preferably be completed prior to, or at least simultaneous to, the filling or other loss of existing wetlands.

Successful mitigation projects are complex tasks and difficult to achieve. This issue will be strongly considered during agency review of any proposed wetland fill. Wetland features or ponds created as mitigation for the loss of existing "jurisdictional wetlands" or "waters of the United States" cannot be used as storm water treatment controls.

CEQA requires monitoring of all mitigation efforts as a condition of project approval. Although monitoring programs are not required to be included in environmental documents, it is helpful to know what sort of mitigation monitoring the applicant intends to implement, and who will be accountable for seeing that any proposed mitigation's are successfully executed.

Project/ Site Planning

Evidence of filing for a NOI and development of a SWPPP should be a condition of development plan approval by all municipalities. Implementation of the SWPPP should be enforced during

construction via appropriate options such as citations, stop work orders, or withholding occupancy permits. Impacts identified should be avoided and minimized by developing and implementing the following.

The project should minimize impacts from project development by incorporating appropriate site planning concepts. This should be accomplished by designing and proposing site planning options as early in the project planning phases as possible. Appropriate site planning concepts to include, but are not limited to the following:

- Phase construction to limit areas and periods of impact.
- Minimize directly connected impervious areas.
- Preserve natural topography, existing drainage courses and existing vegetation.
- Locate construction and structures as far as possible from streams, wetlands, drainage areas, etc.
- Reduce paved area through cluster development, narrower streets, use of porous pavement and/or retaining natural surfaces.
- Minimize the use of gutters and curbs that concentrate and direct runoff to impermeable surfaces.
- Use existing vegetation and create new vegetated areas to promote infiltration.
- Design and lay out communities to reduce reliance on cars.
- Include, green areas for people to, walk their pets, thereby reducing build-up of bacteria, worms, viruses, nutrients, etc. in impermeable areas, or institute ordinances requiring owners to collect pets' excrement.
- Incorporate low-maintenance landscaping.
- Design and lay out streets and storm drain systems to facilitate easy maintenance and cleaning.
- Consider the need for runoff collection and treatment systems.
- Label storm drains to discourage dumping of pollutants into them.

Construction- Phase Management

Erosion Prevention

The project should minimize erosion and control sediment during and after construction. This should be done by developing and implementing an erosion control plan, or equivalent plan. This plan should be included in the SWPPP. The plan should specify all control measures that will be used or which are anticipated to be used, including, but not limited to, the following:

- Limit access routes and stabilize access points.
- Stabilize denuded areas as soon as possible with seeding, mulching, or other effective methods.
- Protect adjacent properties with vegetative buffer strips, sediment barriers, or other effective methods.
- Delineate clearing limits, easements, setbacks, sensitive areas, vegetation and drainage courses by marking them in the field.
- Stabilize and prevent erosion from temporary conveyance channels and outlets.
- Use sediment controls and filtration to remove sediment from water generated by dewatering or collected on-site during construction. For large sites, stormwater settling basins will often be necessary.
- Schedule grading for the dry season (May-Sept.)

Chemical and Waste Management

The project should minimize impacts from chemicals and wastes used or generated during construction. This should be done by developing and implementing a plan or set of control measures. The plan or control measures should be included in the Storm Water Pollution Prevention Plan. The plan should specify all control measures that will be used or which are anticipated to be used, including, but not limited to, the following:

- Designate specific areas of the site, away from streams or storm drain inlets, for storage, preparation, and disposal of building materials, chemical products, and wastes.
- Store stockpiled materials and wastes under a roof or plastic sheeting.
- Store containers of paint, chemicals, solvents, and other hazardous materials stored in containers under cover during rainy periods.
- Berm around storage areas to prevent contact with runoff.
- Cover open Dumpsters securely with plastic sheeting, a tarp, or other cover during rainy periods
- Designate specific areas of the site, away from streams or storm drain inlets, for auto and equipment parking and for routine vehicle and equipment maintenance.
- Routinely maintain all vehicles and heavy equipment to avoid leaks.

Winston H. Hickox
Secretary for Environmental Protection

Gray Davis
Governor

- Perform major maintenance, repair, and vehicle and equipment washing off-site, or in designated and controlled areas on-site.
- Collect used motor oil, radiator coolant or other fluids with drip pans or drop cloths. Store and label spent fluids carefully prior to recycling or proper disposal.
- Sweep up spilled dry materials (cement, mortar, fertilizers, etc.) immediately—do not use water to wash them away.
- Clean up liquid spills on paved or impermeable surfaces using "dry" cleanup methods (e.g., absorbent materials, cat litter, rags) and dispose of cleanup materials properly.
- Clean up spills on dirt areas by digging up and properly disposing of the soil.
- Keep paint removal wastes, fresh concrete, cement mortars, cleared vegetation, and demolition wastes out of gutters, streams, and storm drains by using proper containment and disposal.

We appreciate the opportunity to comment on the subject environmental document and look forward to your response. If you have any questions regarding our concerns or questions, please do not hesitate to contact me at (858) 467-2705 or at lemop@rb9.swrcb.ca.gov.

Sincerely,

Paul Lemons

(909) 396-2000 · http://www.aqmd.gov

RECEIVED

AUG 13 2001

Environmental & Project Planning Services Division

August 8, 2001

Mr. Bill Grieman
County of Orange
Planning & Development Services Dept.
P.O. Box 4048
Santa Ana, CA 92702-4048

Dear Mr. Grieman:

Notice of Preparation of a Draft Environmental Impact Report for Saddleback Meadows

The South Coast Air Quality Management District (AQMD) appreciates the opportunity to comment on the above-mentioned document. The AQMD's comments are recommendations regarding the analysis of potential air quality impacts from the proposed project that should be included in the Draft Environmental Impact Report (EIR).

Air Quality Analysis

The AQMD adopted its California Environmental Quality Act (CEQA) Air Quality Handbook in 1993 to assist other public agencies with the preparation of air quality analyses. The AQMD recommends that the Lead Agency use this Handbook as guidance when preparing its air quality analysis. Copies of the Handbook are available from the AQMD's Subscription Services Department by calling (909) 396-3720.

The Lead Agency should identify any potential adverse air quality impacts that could occur from all phases of the project and all air pollutant sources related to the project. Air quality impacts from both construction and operations should be considered. Construction-related air quality impacts typically include, but are not limited to, emissions from the use of heavy-duty equipment from grading, earth-loading/unloading, paving, architectural coatings, off-road mobile sources (e.g., heavy-duty construction equipment) and on-road mobile sources (e.g., construction worker vehicle trips, material transport trips). Operation-related air quality impacts may include, but are not limited to, emissions from stationary sources (e.g., boilers), area sources (e.g., solvents and coatings), and vehicular trips (e.g., on- and off-road tailpipe emissions and entrained dust). Air quality impacts from indirect sources, that is, sources that generate or attract vehicular trips should be included in the evaluation. An analysis of all toxic air contaminant impacts due to the decommissioning or use of equipment potentially generating such air pollutants should also be included.

Mitigation Measures

In the event that the project generates significant adverse air quality impacts, CEQA requires that all feasible mitigation measures be utilized during project construction and operation to minimize or eliminate significant adverse air quality impacts. To assist the Lead Agency with identifying possible mitigation measures for the project, please refer to Chapter 11 of the AQMD CEQA Air Quality Handbook for sample air quality mitigation measures. Additionally, AQMD's Rule 403 – Fugitive Dust, and the Implementation Handbook contain numerous measures for controlling construction-related emissions that should be considered for use as CEQA mitigation if not otherwise required. Pursuant to state CEQA Guidelines §15126.4 (a)(1)(D), any impacts resulting from mitigation measures must also be discussed.

Data Sources

AQMD rules and relevant air quality reports and data are available by calling the AQMD's Public Information Center at (909) 396-2039. Much of the information available through the Public Information Center is also available via the AQMD's World Wide Web Homepage (http://www.aqmd.gov)

The AQMD is willing to work with the Lead Agency to ensure that project-related emissions are accurately identified, categorized, and evaluated. Please call Dr. Charles Blankson, Transportation Specialist, CEQA Section, at (909) 396-3304 if you have any questions regarding this letter.

Sincerely,

Steve Smith

Subject: Notice of Intent to Prepare Environmental Impact Report No. 566
Saddleback Meadows

Dear Mr. Grieman

The Transportation Corridor Agencies (TCA) received the above Notice of Intent to Prepare Environmental Impact Report No. 566 one day prior to the deadline of September 1, 2001. Given the short amount of time available to the TCA to review this document, the TCA will not be able to provide comment, however, would instead request review of the subject EIR when it becomes available. Please update your records to send all future correspondence to the following address:

RE: SCAG Clearinghouse I20010480 Saddleback Meadows Project

Dear Mr. Grieman:

We have reviewed the above referenced document and determined that it is not regionally significant per Areawide Clearinghouse criteria. Therefore, the project does not warrant clearinghouse comments at this time Should there be a change in the scope of the project, we would appreciate the opportunity to review and comment at that time.

A description of the project will be published in the **September 1, 2001** Intergovernmental Review Report for public review and comment.

The project title and SCAG Clearinghouse number should be used in all correspondence with SCAG concerning this project. Correspondence should be sent to the attention of the Clearinghouse Coordinator If you have any questions, please contact me at (213) 236-1867.

Sincerely,

JEFFREY M. SMITH, AICP

SUBJECT: Notice of Preparation – Saddleback Meadows DEIR 566
Project Charge Number: PP53700

Please review the attached Notice of Preparation (NOP) for the proposed Saddleback Meadows Draft Environmental Impact Report (DEIR 566) for issues and concerns related to your area of expertise. The NOP has been circulated for a public review period, which ends September 1, 2001. In order for the DEIR to properly consider your concerns, please have your comments to Bill Grieman of Environmental Planning Section by that date.

If you have any questions related to the NOP, please call Bill Grieman at 834-5175.

Thanks in advance for your participation in the EIR process.

TO: William Grieman, Environmental Planning Services

FROM: Doug Friedman, Acoustics, Building Permit Services

SUBJECT: Screen Check for: Tentative Tract Map No. T10692, Saddleback Meadows
Related to: PA 980103, PP53700, DEIR 566

THE SUBJECT HAS BEEN SCREENED:

- We have comments because this property is located:
  - Proximate to arterial highways
  - Within area of CNEL 60 dB or higher
    - It is during this initial evaluation of a project that the effect of existing development, topographic features, or other such noise attenuation measures are considered, although at a very general level of details. Acoustical analysis reports shall be prepared in any instances where there is the possibility of unacceptable noise impacts. Thus, unless it can be shown with certainty that the project is outside the area that has a CNEL of 60 or more decibels, an acoustical analysis report will be required.

- We recommended the following conditions:

Description (mitigating measure)	*Standard Condition of Approval / Mitigation Measures**	*Required*	*Not Required*
Residential Noise Study	N1	X	
Non-Residential Noise Study	N2		X
Over-Flight Notification	N3	X	
DRE Report Information (airport activity)	N4	X	
Avigation Easement	N5	X	
Aircraft Noise Signs	N6	X	
Prospective Purchaser / Tenant Notification (airport activity)	N7	X	
Noise Generating Equipment	N8	X	
Multi-family Dwelling Units (field testing)	N9		X
Construction Noise	N10	X	
Final Map/ Parcel Map Noise Notification (transportation corridor)	N11		X
DRE Transportation Corridor Notification	N12		X

County of Orange **MEMO**

DATE: August 7, 2001

TO: Bill Grieman, Environmental Planning Services Division

FROM: John Powers, E&PPS Division/Transportation Planning

SUBJECT: Saddleback Meadows DEIR 566 NOP

Transportation Planning staff has reviewed the NOP for Saddleback Meadows DEIR 566 and offers the following comments: The EIR discussion should include an analysis of vehicle trip generation and distribution of traffic generated by the project. An analysis of forecast arterial traffic volumes of existing conditions plus project-generated traffic should be included.

The Level of Service on Santiago Canyon must be maintained at LOS C, and the project is within the boundaries of several fee programs: Eastern/Foothill Transportation Corridors Areas of Benefit Zone A, Foothill Circulation Phasing Plan, Santiago Canyon Road Fee Program, and El Toro Fee Program.

Thank you for the opportunity to review the NOP. Should you have any questions, please contact me at 834-5095.

MEMO

DATE: August 9, 2001

TO: Tim Neely, Manager, Environmental Planning Services

FROM: Manager, Subdivision and Grading Services

SUBJECT: Notice of Preparation (DEIR 566)
Saddleback Meadows

This is a Notice of Preparation (NOP) for a Draft Subsequent Environmental Impact Report for the Saddleback Meadows project. The project proposes the phased development of 299 detached single family dwelling units on a 222.2 acre site.

The site is located on the easterly side of El Toro Road, 0.5 ± miles southerly of the intersection of Santiago Canyon Road / El Toro Road and Live Oak Canyon Road in the Foothill / Trabuco Specific Plan area.

DISCUSSION:

Traffic Review has reviewed the Notice of Preparation and Initial Study for the Saddleback Meadows Project – dated August 2001. Traffic generated by this project has the potential to be a significant impact, especially to Santiago Canyon. Traffic Review requests that the following changes be made to the report as follows:

- Page 6 - Paragraph III "Summary of Potentially Significant Impacts"
  - In the first paragraph add "Transportation" to the bulleted list of items.
  - In the second paragraph, last line, delete "transportation,".
- Page 12 (Page 2 within the "Environmental Analysis Checklist)
  - Item 7 a - Uncheck the box in the column labeled "Less than Significant Impact", and check instead the box in the column labeled "Less than Significant w/Mitigation".
  - Item 7 b - Uncheck the box in the column labeled "Less than Significant Impact", and check instead the box in the column labeled "Potential Significant Effect".

DISCUSSION: continued

- Page 24 – under the second paragraph, "Potential Impacts"
  - At the end of the first sentence, add "and Santiago Canyon Road.".

TO: Bill Grieman, Environmental Planning

FROM: Johnnie Earnest, Chief, Geotechnical/Grading Plan Check

SUBJECT: Notice of Preparation – Saddleback Meadows DEIR 566, Dated August 2, 2001

The following comments are made relative to a review of the Geophysical section of the above noted document.

Please include an updated geotechnical section in the EIR report that addresses the impact that existing geotechnical/geologic conditions have upon the proposed development and vise versa. The section must address the impact that development will have upon adjacent areas and include appropriate mitigation measures. All recommendations and mitigation measures must be supported by geotechnical data and calculations. All work must be in accordance with the County of Orange Grading and Excavation Code, Grading Manual and the applicable sections of the Uniform Building Code.

RECEIVED

AUG 14 2001

Environmental & Project Planning Services Division

DATE: 14 August 2001

TO: T. S. Neely, Manager, P.D.S.D., Environmental planning Services Division

FROM: K. E. Smith, Materials Engineer, E.P.S. , Materials Laboratory

SUBJECT: N.O.P. for D.E.I.R. 566 – Saddleback Meadows

I have had the opportunity to review the N.O.P. and the attached Initial Study and find that while there is reference to the previous environmental records, the Environmental Analysis Checklist does not adequately reflect the geological hazards on this property and the potential impacts on public facilites such as El Toro Road and Aliso Creek.

This property has (based on previously submitted geotechnical reports) a landslide that extends under Aliso Creek and El Toro Road. How this slide is evaluated and reconstructed is a potential significant concern for the future integrity of the road and creek. Previous mitigation virtually required an impervious surface such that no percolation would be permitted that could 'lubricate' the slip zone of the slide.

The ability to safely stabilize the landslides on this property and not endanger or impact adjacent properties or facilities needs to be specifically addressed in the E.I.R.

DATE: August 14, 2001

TO: Bill Griesman, PDSD, Environmental Planning Services

FROM: Ignacio Ochoa, County Traffic Engineer

SUBJECT: NOP – Saddleback Meadows DEIR 566

The subject project site lies in the following Major Thoroughfare and Bridge Fee (Road Fee Programs) area of benefit and, will be subject to the requirements of those fee programs; either by paying the required fees or by improving adjacent roads:

El Toro Road Fee Program
Foothill Circulation Phasing Plan (FCPP)
Santiago Canyon Road Fee Program
Foothill Eastern Transportation Corridor Fee Program

In addition, the subject property is located on an ancient landslide area, which, according to our information, extends Westerly from the property across existing El Toro Road down into Aliso Creek. Any improvements to the subject property should be conditioned to not preclude future improvements (widening) of El Toro Road to Master Plan of Arterial Highways (MPAH) standards.

Any questions, may be referred to Charles Antos at 834-3614.

County of Orange **MEMO**

DATE: August 20, 2001

TO: Bill Grieman

FROM: Frank McGill (834-2099)

SUBJECT: NOP for Saddleback Meadows

As requested, following are my comments:

1. The discussion of the existing setting regarding Geophysical (see page 19) should include the history of slides in this area and its potential for future sides without any further intervention by man.

2. The discussion of the existing setting regarding Biological Resources (see page 28) should discuss the extent to which non-native plants have invaded the project site.

3. The discussion of the existing setting regarding Aesthetics (see page 29) states, "The proposed project site is primarily in a natural state." The project site has been highly degraded by agricultural activities, erosion, and invasion of non-native plants It is not in a natural state.

4. The discussion of the existing setting regarding Hazards (see page 33) should include the significant potential for slides without any further intervention by man. Such slides could cause major damage to adjourning public and private property and endanger people.

Mr. Bill Grieman
Manager, Environmental Planning Services Division
County of Orange
300 N. Flower St., Room 321
Santa Ana, CA 92702-4048

Re: Saddleback Meadows; Notice of Intent, EIR No. 566

Dear Mr. Grieman,

The Orange County Fire Authority is pleased to provide comment regarding the proposed Saddleback Meadows residential project. Issues of concern for the Fire Authority include;

a. The project is proposed for areas designated as Special Fire Protection Area by the County of Orange for its significant wildland fire risk. The area is located in a zone of historical fire spread and severity. The project will need to demonstrate compliance with Special Fire Protection Area requirements to mitigate these risks.

b. Wildfire risks should be fully studied for the project site, including fire behavior and spread potential, and evacuation access and egress for the community planned in accordance with identified risks. Institutional uses such as schools within the proposed project should be developed in such a manner as to allow safe shelter-in-place of occupants during community exposure to wildfire. The existing access to fire truck trails in the project area should be maintained/retained for continuing fire service use.

c. The project will create new fire protection demands that will require mitigation including; increased demand for services, emergency response and fire prevention activity, and related administrative support. As a requirement for development, the Fire Authority will require the project proponent to enter into a Secured Fire Protection Agreement for service to the project, and to contribute funds towards mitigation of these impacts.

d. In addition to the above requirements, the project must comply with all Fire Authority standard conditions for development.

The Orange County Fire Authority looks forward to continuing its participation in the review of this project. Should you have any additional questions, please contact me at (714)744-0484.

Sincerely,

Michael S. Rohde
Battalion Chief/Advance Planning

ATTN: Bill Grieman

FROM: Chief, PFRD/HBP Program Management & Coordination-Facilities Development

SUBJECT: Notice of Preparation/Draft Subsequent EIR #566/Saddleback Meadows/Foothill Trabuco Specific Plan

HBP Facilities Development staff has reviewed subject documentation and offers the following comments:

(NOTE: HBP comments are consistent with our earlier comments on Tentative Tract Map No. 15230, approved by the Orange County Subdivision on 10-21-98, for subject proposed 299-unit Saddleback Meadows Project. The DSEIR should incorporate these conditions as mitigation measures)

1. **Master Plan of Regional Recreation Facilities:**

a. **Regional Park Dedication:**

Lots LL and MM, per approved Tentative Tract Map 15230, shall be dedicated to the County as an addition to O'Neill Regional Park, exclusive of manufactured slopes, which should be retained in separate lots. Regional park dedication shall be in done in compliance with the following conditions:

i. Prior to the recordation of the first subdivision map, the subdivider shall make an irrevocable offer of dedication in fee to the County of Orange, or its designee, of Lots LL and MM, exclusive of manufactured slopes, for regional park purposes in a form approved by the Manager, PFRD/HBP Program Management & Coordination suitable for recording. Said offer shall be free and clear of money and all other encumbrances, liens, leases, fees, easements (recorded and unrecorded), assessments and unpaid taxes, except those meeting the approval of the Manager, PFRD/HBP, Program Management and Coordination. Until such time as the offer is accepted by the County or its designee, the subdivider or assigns and successors shall be responsible for maintenance and upkeep of the above-referenced lots.

ii. Prior to the recordation of any subdivision map, the subdivider shall survey and monument all lots dedicated for regional park purposes, and stake the property line of the dedication area(s) with durable, long-lasting, high visibility markers at all angle points and line of sight obstructions to the satisfaction of the Manager, PFRD/HBP Program Management & Coordination.

iii. Prior to recordation of the regional park dedication, the existing old ranch house sited within future regional park land shall be demolished except for the rock work subject to the approval of the Manager, PFRD/ HBP Program Management & Coordination.

2. **Master Plan of Regional Riding and Hiking Trails/County Bikeways:**

a. **Regional Trail Dedication:**

The Live Oak Canyon Regional Riding and Hiking Trail is depicted within the Recreation Element aligned through Lot R of approved Tentative Tract Map No. 15230, adjacent El Toro Road, through the proposed project. A recreation easement for this riding and hiking trail shall be dedicated to the County which includes trail improvements, including trail improvements just offsite along El Toro Road, north to the intersection of El Toro Road and the community spine road, as well as north to the existing under crossing of El Toro Road, in compliance with the following conditions:

i. Prior to the recordation an applicable subdivision map the subdivider shall:

a. Irrevocably offer a recreation easement for the Live Oak Canyon Regional Riding and Hiking Trail in a manner meeting the approval of the Manager, PFRD/HBP Program Management & Coordination. The subdivider shall not grant any easement(s) over the property subject to the recreation easement unless such easements are first reviewed and approved by the Manager, PFRD/HBP Program Management & Coordination.

b. Design the necessary improvements (both onsite and offsite) for the trail, including, but not limited to grading, erosion control, signage, fencing, a grade-separated crossing (as applicable), and elevated crossing activation buttons for trail users at the signalized intersection at El Toro Road, in manner meeting the approval of the Manager, PFRD/HBP Program Management & Coordination, in consultation with the Manager, PDSD/Subdivision & Grading. Further, the subdivider shall enter into an agreement, accompanied by financial security, with the County of Orange, to insure the installation of the necessary improvements.

ii. Prior to the issuance of a grading permit, the grading plans shall be reviewed by the Manager, PFRD/HBP Program Management & Coordination, to ensure that the proposed grading provides for, will not interfere with, or preclude the installation of the riding and hiking trail in a location and in a manner meeting the approval of the Manager, PFRD/HBP Program Management & Coordination.

iii. Prior to the issuance of final certificates of use and occupancy and the release of financial

security guaranteeing the riding and hiking trail improvements, the applicant shall install the riding and hiking trail improvements in a manner meeting the approval of the Manager, PFRD/HBP Program Management & Coordination, in consultation with the Manager, Construction.

b. Local Riding and Hiking Trail Dedication:

A local riding and hiking trail is described within Area Plan 98-2 text to be dedicated to the County within a recreation easement aligned east-west through the proposed project. A recreation easement for the local riding and hiking trail shall be dedicated to the County for those areas not included within future dedicated regional park land. Moreover, trail improvements shall be made for this trail, *both* within and outside the future regional park. in addition to a connection from the staging area along the community spine road *offsite* to the regional riding and hiking trail at El Toro Road. Improvements for the staging area shall also be made including the ability to accommodate parking equestrian trailers as well as vehicle only parking. Dedication of the recreation easement and the improvements, including the staging area shall be done in compliance with Condition 2.a.i., 2.a.ii., and 2.a.iii. above.

c. Trail Reroutes/Bikeway and Riding and Hiking Trails:

i. The Aliso Creek Class I, paved Off-Road Bikeway, as well as the Live Oak Canyon Regional Riding and Hiking Trail will require re-routing plans during construction of the proposed project. Therefore, the following condition shall apply:

> Prior to any grading and/or construction activities which precludes the utilization of either the Aliso Creek Class I Off-Road Bikeway or the Live Oak Canyon Regional Riding and Hiking Trail, a re-routing plan shall be submitted subject to the approval of the Manager, PFRDHBP Program Management & Coordination.

ii. The same condition shall also be applicable to the Class II On-Road Bikeway aligned along the north bound lane of El Toro Road contiguous the proposed project.

3. Resources Element (Open Space Component):

a. Dedicate Restricted Scenic Preservation Easement:

Fuel modification areas, manufactured slopes and remedial grading areas sited between the regional park dedication area and residential development, the fuel modification and native enhancement transition area contiguous El Toro Road, and northerly most fuel modification and native enhancement transition area, shall be placed within restricted scenic preservation easement areas. These areas include Lots R, CC, DD, EE, FF, GG, HH, II and JJ. *(NOTE: Manufactured slopes now depicted within Lots MM and LL the regional park, should be depicted within separate open space lots and restricted scenic preservation easements placed over them).* Restricted scenic

preservation easements shall be dedicated to the County of Orange in compliance with the following conditions:

i. Prior to the recordation of any applicable final tract map which creates building sites, the subdivider shall make an irrevocable offer to dedicate an easement to the County of Orange or its designee over Lots R, CC, DD, EE, FF, GG, HH, II, and JJ, for restricted scenic preservation purposes in a manner meeting the approval of the Manager, PFRD/HBP Program Management & Coordination. Maintenance, upkeep and liability for said easement area shall remain the responsibility of the subdivider or assigns and successors (i.e., homeowner's association)or current underlying owner(s) of said easement area and shall not be included in said dedication offer. The subdivider shall not grant any easement over any property subject to said easement unless such easements are made subordinate to said easement offer in a manner meeting the approval of the Manager, PFRD/HBP Program Management & Coordination.

ii. The subdivider shall note limitations and restrictions for said easement by a reference on the final map to a previously recorded document or by the recordation of a separate document concurrent with the recordation of subject map in a manner meeting the approval of the Manager, PFRD/HBP Program Management & Coordination.

iii. Prior to recordation of any applicable final tract map or as determined by the Manager, PFRD/HBP Program Management & Coordination, the subdivider shall survey and monument all parcels of the land to be dedicated for restricted scenic preservation easement purposes, and submit plans showing how the development boundaries of the restricted scenic preservation easement parcel(s) is marked to be visible for monitoring purposes by Grantee to the satisfaction of the Manager, PFRD/HBP Program Management & Coordination

b. Public Area Landscaping:

The areas to be irrevocably offered to the County of Orange for restricted scenic preservation purposes shall be landscaped, equipped for irrigation, as applicable, and improved in accordance with an approved landscape plan as stated below:

i. Preliminary Plan- Prior to the recordation of a subdivision map (except maps for financing and conveyance only), the subdivider shall enter into an agreement and post financial security guaranteeing landscape improvements and the maintenance thereof based on a preliminary landscape plan showing major plant material and uses, and a cost estimate for the landscape improvements. The preliminary plan and cost estimates shall be reviewed and approved by the Manager, PDSD/Subdivision and Grading, in consultation with the Manager, PFRD/HBP Program Management & Coordination. Said plan shall take into account the County Standard Plans for landscape areas, adopted plant palette guides, applicable scenic and specific plan requirements, Water Conservation Measures contained in Board Resolution 90-487(Water Conservation Measures), and Board Resolution 90-1341(Water Conservation Implementation Plan).

ii. Detailed Plan- Prior to the issuance of any building permits, the applicant shall submit a detailed landscape plan for approval to the Manager, PDSD/Subdivision & Grading, in consultation with the Manager, PFRD/HBP Program Management & Coordination. Detailed plans shall show the detailed irrigation and landscaping design.

iii. Installation Certification- Prior to the issuance of final certificates of use and occupancy and the release of the financial security guaranteeing the landscape improvements, the applicant shall install said improvements and have the installation certified by a licensed landscape architect or licensed landscape contractor, as having been installed in accordance with the approved detailed plans. The applicant shall furnish said certification, including an irrigation management report for each landscape irrigation system, and any other required implementation report determined applicable to the Manager, PFRD/Construction, and the Manager, PDSD/Building Inspection, prior to the issuance of any certificates of use and occupancy.

c. **Urban Edge Treatment Plan/Viewshed Analysis:**

Prior to the issuance of any building permits for residential structures, an urban edge treatment plan/viewshed analysis shall be submitted to the County subject to the approval of the Manager, PFRD/HBP Program Management & Coordination. The Urban edge treatment plan/viewshed analysis shall comply with the following criteria:

i. Establish building height and setback limits (i.e., Building Envelope Formula) and grading treatments to preserve views attained from within existing and proposed parks and open space areas as well as from along designated scenic highways(i.e., El Toro Road) as identified by the Master Plan of Regional Recreational Facilities (Recreation Element), Open Space Component (Resources Element) and Master Plan of Scenic Highways (Transportation Element) respectively. Moreover, views from St, Michaels Abbey, the Ramakrishna Monastery and neighboring Hidden Ridge Community shall also be addressed. Viewshed analysis cross sections should be provided as seen from these areas to proposed residential structures.

ii. Eliminate and/or reduce to the greatest extent possible conflicts which may impact the existing and future recreational utility of a regional recreation recreational facility and open space areas.

iii. Eliminate and/or reduce to the greatest extent possible potential operation and maintenance problems resulting from encroachment, unauthorized entry, private development fuel modification requirements, flood control facilities, and maintenance of privately landscaped manufactured slopes and maintenance roads as they relate to future and existing regional recreational facilities.

iv. Establish appropriate landscape/fuel modification treatments and wall and/or fence treatments including berms to provide appropriate transition from regional recreational

v. Establish smooth and gradual transition between graded slopes and existing slopes within the park and open space areas using variable slopes (2:1-4:1).

vi. Obscure slope drainage structures with a variety of plant materials.

vii. Incorporate architectural and design techniques into the project in order to enhance off-site views attained from within parks and significant open space.

vii. All landscaping of manufactures slopes interfacing significant open space areas should be exclusively native, as applicable, to preserve the biological and scenic integrity of regional corridors, open space and park lands.

Thank you for the opportunity to comment. Should you have any questions, please contact Wayne Johnson at 834-6787.

TO: Kevin Thomas, Director Harbors, Beaches, and Parks

FROM: HBP Operations Superintendent

SUBJECT: Saddleback Meadows Project Comments

In accordance with your request, the following are HBP Operations comments/concern relevant to the projects potential impacts on O'Neill Regional Park, Limestone-Whiting Wilderness Park and Aliso Creek. Program Management & Coordination will expand on these comments.

General Comments

A. Wildlife Corridor of significant width to provide for movement of large mammals including mule deer and mountain lions between the Santa Ana Mountains, O'Neill Regional Park, and Limestone-Whiting Wilderness Park is essential. Dr Paul Bier Wildlife Biologist and Orange County Mountain Lion Study leader prepared corridor recommendations in a report to the Orange County Board of Supervisor in early 1990's.

B. Regional Riding and Hiking Trail connecting O'Neill Regional Park, Limestone-Whiting Wilderness Park and the Aliso Creek Trail needs to be developed.

C. Project needs to address and mitigate the significant impacts of drainage into the Aliso Creek water shed Water quality, velocity and volume must be addressed within the project site. Aliso Creek, within Limestone-Whiting Wilderness Park has limited flow capacity, notable bank erosion and heritage Sycamore trees along its bank. Silt from grading operations must be maintained on project site.

D. The viewshed from O'Neill Regional Park trails and project should be protected.

DATE: September 4, 2001

TO: Tim Neely, Manager, PDSD/Environmental Planning Section

FROM: R. S. Bavan, Chief, PFRD/Program Development Division/Flood Program

SUBJECT: Notice of Preparation (NOP) – Saddleback Meadows DEIR 566

In response to your August 2, 2001 request, we reviewed the subject NOP. The following comments are submitted for your consideration:

1. The DEIR needs to address issues such as the increase in runoff (existing condition versus post-project condition), potential changes in drainage patterns, effect on the capacity of existing drainage facilities, potential flooding of downstream areas, effect on water quality, etc. An evaluation of the runoff increase and its effect on the downstream drainage facilities and properties should be provided. Appropriate mitigation measures should be proposed to ensure that post-project conditions are not worsened both on- and off-site.

2. All hydrologic and hydraulic analyses performed to determine the potential impacts to downstream drainage facilities should utilize OCFCD's criteria and standards contained in the Orange County Flood Control Design Manual, the 1986 Orange County Hydrology Manual (OCHM), and Addendum No. 1 to the OCHM. Such analyses should be submitted to PFRD/Program Development Division for review and approval. Please be aware that, Addendum No. 1 to the OCHM requires expected value discharges be used to calculate incremental increases in peak discharge for implementing development mitigation measures, and high confidence discharges for the design of new drainage facilities.

3. The NOP indicated that the project site is tributary to two OCFCD facilities, Aliso Creek (Facility No. J01) and Oso Creek (Facility No. L03). The U. S. Army Corps of Engineers is currently working on Watershed Management Studies for both the Aliso Creek and San Juan Creek (which includes Oso Creek) watersheds. The DEIR should be consistent with these on-going studies. We suggest that Jim Hutchison of the Corps be contacted at (213) 452-4204 for more information regarding the Corps' Watershed Management Studies.

4. At this time, since we are aware of the bacteria problem (fecal coliform) in the lower reach and mouths of Aliso Creek and San Juan Creek, the DEIR should discuss the water quality concerns with respect to the temperature, toxicity, and bacteria sources. The strategy is to combat bacteria sources at project implementation. The DEIR must identify the potential contaminants resulting from urban runoff associated with the development; and discuss their impacts on the downstream receiving waters. Adequate mitigation measures should be proposed to treat the storm water, and limit development

runoff to predevelopment levels. The need also exists to establish an urban runoff management/monitoring program (post construction) to ensure that no additional project caused subsurface and surface water contamination on the existing drainage system will result.

If there are questions regarding this response, contact Shirley Chan at 834-4398 or Kevin Onuma at 834-2425.

Re: *Saddleback Meadows*
Draft Environmental Impact Report No. 566

Dear Mr. Grieman:

We are in receipt of the "Notice of Preparation" (the "NOP") regarding the County of Orange's intent to prepare Draft Environment Impact Report No. 566 ("DEIR 566") regarding the 299-unit single-family housing project proposed for the Saddleback Meadows property.

Pursuant to the instructions provided in the NOP, we are writing on behalf of our client, the Vedanta Society of Southern California, to ensure that our office is placed on the mailing list for all notices, reports, and other information regarding DEIR 566 and the Saddleback Meadows property in general. Please send all such information to the address listed above.

Should you have any questions regarding the foregoing, please do not hesitate to contact our office.

Very truly yours,

David J. Hesseltine

Re: *Saddleback Meadows Draft EIR No. 566*

Dear Mr. Britton:

On behalf of the Vedanta Society of Southern California ("Vedanta"), we are writing to bring to your attention an article which appeared in the *Los Angeles Times* this week that is highly relevant to Draft Environmental Impact Report No. 566 ("DEIR 566"), which the County of Orange (the "County") is currently preparing for the Saddleback Meadows Property (the "Property").

Specifically, the article, a copy of which is attached hereto as Exhibit "A," reports that the Santa Monica Mountain Conservancy is acquiring over 1,400 acres in Malibu for preservation as open space. The Santa Monica Mountain Conservancy is purchasing a portion of the property and the remainder is being donated by the landowner in exchange for tax credits under the Natural Heritage Preservation Tax Credit Act (California Public Resources Code § 37000, *et seq.*) [the "Preservation Tax Credit Act"]. As the article explains, the Preservation Tax Credit Act, which was enacted just last year, allows landowners who make approved donations of, *inter alia*, private property to public parks or wildlife agencies to receive substantial tax credits based on the value of the donated property.

Vedanta requests that, in conducting the analysis in DEIR 566 regarding the "Acquisition Alternative" and the "44/178 Alternative"—each of which entail either a portion or all of the Property being purchased or donated for preservation as permanent open space—the County evaluate whether a donation by the developer of all or a portion

of the Property would qualify under the Preservation Tax Credit Act and thereby entitle the developer to significant tax credits. As we explained in the letter we submitted in response to the Notice of Preparation regarding DEIR 566, all possible sources of funds for the partial or outright purchase of the Property in connection with the "Acquisition Alternative" and the "44/178 Alternative" must be explored, and clearly the Preservation Tax Credit Act is another source of funds (in the form of tax credits for the developer).

We hope that you will give the Preservation Tax Credit Act careful consideration in preparing DEIR 566 and, if we can be of any further assistance in this regard, please do not hesitate to contact us.

Very truly yours,

David J. Hesseltine

The Region

State Will Get Malibu Open Space in Deal

Coast: A property owner will receive tax credits for donating a portion of the 1,408 acres, which will tie into other parkland. The slopes above PCH will go undeveloped.

By KENNETH R. WEISS
TIMES STAFF WRITER

The Santa Monica Mountains Conservancy on Monday agreed to acquire 1,408 acres of prime Malibu real estate in a complex deal that will tie Topanga Canyon State Park into a growing swath of protected mountain wilderness and coastal open space.

The conservancy will pay $7 million for a portion of the property that runs above two miles of coastline from Tuna Canyon to Las Flores Canyon.

The rest of the acreage will be donated by landowner Alfred E. Mann in exchange for tax credits potentially worth tens of millions of dollars under a new state program.

Mann, a biomedical entrepreneur, said the tax credits make the deal "acceptable," given the enormous tax bill he faces for the recent $3.8-billion sale of MiniMed Inc., an insulin pump maker, and one of his affiliated companies.

"I got a big chunk of change and truly need tax credits," Mann said. He said he probably won't break even on the deal, having sunk at least $30 million into property that he estimates won't net more than $25 million.

The property has long been coveted by park officials, who see it as a key link in a chain of purchases to protect the undeveloped coastal slope of the Santa Monica Mountains above Pacific Coast Highway.

The Mountains Restoration Trust, a nonprofit conservation group, expects to take possession of an adjacent 418 acres by the end of the year, said Stephen Harris, the trust's president. "It's a perfect link," he said, between the Mann property and what the state recently purchased in lower Topanga Canyon.

These three undeveloped parcels, covered with coastal scrub and chaparral, offer a broad corridor for wildlife, as well as for hik-

Attachment F

Photo by KEN HOVELT / Los Angeles Times

Paul Edelman of the Santa Monica Mountains Conservancy discusses plans to acquire 1,408 acres in the hills above Malibu.

ers, horseback riders and cyclists.

Park officials hope to connect the parcels with a trail that would be fanned by cool ocean breezes in the summer and offer unrivaled views of the Pacific along the route.

Some promontories on Mann's property provide 360-degree views that extend to Santa Catalina Island to the south, Oat Mountain to the north and Mt. Wilson to the northeast.

Joseph T. Edmiston, the conservancy's director, said his state agency plans to keep the land as open space with the exception of a primitive camp to be built as a destination for busloads of students from low-income neighborhoods to get their first taste of wilderness.

"It's truly spectacular," Edmiston said while touring the property. "This is the ridgeline you see from the Santa Monica Pier and something we need to preserve" from development.

Mann said he once hoped to build a resort hotel and golf course on the relatively flat area at the top of his land above Big Rock. Tuna and Las Flores canyons. He also considered developing 100 sites for large homes, building condominiums next to the hotel and a sewage treatment plant for the homes around Big Rock, a neighborhood where septic tanks may be contributing to unstable ground.

But Mann said he grew weary of tangling with opponents of the development and with trying to overcome regulatory hurdles. "I've had this property for a decade now," he said. "I don't have time to play with it."

If state officials approve the deal, it will be the largest, so far, to take advantage of the new Natural Heritage Preservation Tax Credit Act. Enacted last year, the act is designed to help wealthy landowners turn over private property to public parks and wildlife agencies.

So far, the state's Wildlife Conservation Board has approved about $8 million in tax credits to five landowners who collectively have donated more than 500 acres and water rights.

The law authorizes the state to issue $100 million in tax credits over five years, a method of acquisition that virtually doubles the state's purchasing power.

Re: *Saddleback Meadows*
Response to Notice of Intent to Prepare Draft EIR No. 566

Dear Mr. Britton:

On behalf of the Vedanta Society of Southern California ("Vedanta"), we hereby submit the following comments in response to the "Notice of Preparation" (the "NOP") issued by the County of Orange (the "County") on August 2, 2001 to provide public notice of the County's intent to prepare Draft Environmental Impact Report No. 566 ("DEIR 566") for the 299-unit single family housing project (the "299-Unit Project") which is currently being proposed for development at the Saddleback Meadows property (the "Property").

I. Project Alternatives To Be Evaluated In DEIR 566

A. Acquisition Alternative

In contrast to the manner in which the NOP describes the "Acquisition Alternative," we would propose that this alternative not be limited to the acquisition of the Property solely by "the County and adjacent landowners." Instead, we would ask that this alternative be expanded to include acquisition of the Property by any governmental entity, private entity, private person(s), and any combination thereof. As has been reported in recent articles appearing in the *Orange County Register* and *Los Angeles Times*, copies of which are attached as Exhibit "A" hereto, the United States Fish and Wildlife Service and the California Department of Fish and Game (collectively, the

"Wildlife Agencies") are exploring the possible purchase of the Property to serve as a permanent open space reserve and wildlife corridor connecting Whiting Ranch Wilderness Park and O'Neill Regional Park. In fact, an appraisal of the Property on behalf of the Wildlife Agencies is in its final stages of preparation and is expected to be issued shortly.

The purchase of the Property by the Wildlife Agencies is clearly a feasible alternative that should be considered as part of the "Acquisition Alternative." Indeed, there is clear precedent for such an alternative becoming a reality. As was widely publicized in the press, the California Department of Parks and Recreation recently purchased a 32-acre parcel in Coal Canyon in order to preserve it as a wildlife corridor between Chino Hills State Park and the Cleveland National Forest. (*See Orange County Register* and *Los Angeles Times* articles attached hereto collectively as Exhibit "B.") The same thing could happen with respect to the Property and that possibility should be seriously addressed in DEIR 566.

B. 44/178 Alternative

In evaluating the "44/178 Alternative" identified in the NOP, we would request that the "Development Parcel" and the "Conservation Area" parcel which are the principal components of that alternative be defined in the same manner as they were described when Vedanta first proposed the "44/178 Alternative" in October 1998. As originally proposed by Vedanta, all residential units, infrastructure, or other improvements to be developed in connection with the "44/178 Alternative" were to be confined to the 44-acre "Development Parcel" so that few, if any, of the valuable environmental resources on the Property (*e.g.*, endangered species, sensitive habitats, vernal ponds, oak groves, landforms, ridgelines, etc.) would be altered or adversely impacted in any material way. In this regard, the 178-acre "Conservation Area" was to be permanently preserved in its natural condition as undeveloped and undisturbed open space. Attached hereto as Exhibit "C" is a plan showing the 44-acre "Development Parcel" as it was originally proposed by Vedanta with the understanding that no development activities (e.g., remedial grading) would occur outside of the contours of the 44-acre footprint.

In its October 7, 1998 letter to the Planning Commission, Vedanta explained that the "number of units to be developed with the 44-acre parcel could vary depending on the desire of the developer and could include a mix of condominium units, assisted living facilities, single-family detached homes, etc." However, the proviso stipulated by Vedanta was that, regardless of the *number* of units that might be developed within the 44-acre "Development Parcel," none of these units would result in the destruction of any of the ridgelines, landforms, or sensitive environmental resources located within the "Conservation Area" parcel.

Accordingly, in contrast to how the "44/178 Alternative" is described in the NOP, Vedanta does not necessarily agree that 127 units would be the appropriate number of units that could be developed within the "Development Parcel." The better approach would be to identify a range of units from, for example, 65 to 100 units that could safely be accommodated within the 44-acre "Development Parcel." As you know, the County (specifically, Tom Mathew's staff) earlier proposed a 65-unit alternative to fit within the 44-acre development envelope.

In addition to correctly identifying the physical aspects of the "44/178 Alternative," we would also ask that you properly address its financial components. In this regard, we would request that the County evaluate two versions of the "44/178 Alternative." The first version would involve a condition of approval requiring the developer to offer to dedicate the 178-acre "Conservation Area" parcel to the County free of charge in exchange for the right to develop residential uses within the "Development Parcel." As you know, the County has typically imposed such an exaction in approving large-scale residential developments such as the 299-Unit Project. The second version of this alternative would involve the "Conservation Area" parcel being purchased by a governmental entity, a private entity, private person(s), or any combination thereof, as suggested by the "Acquisition Alternative."

C. FTSP Alternative

Finally, we would propose that the County analyze at least one of the reduced-density alternatives to be evaluated in DEIR 566 as if it were required to comply with all development and land use regulations, guidelines, and goals established by the Foothill/Trabuco Specific Plan (the "FTSP"). This is certainly appropriate given that the 299-Unit Project requires an amendment to the FTSP to exempt the Property from all development and land use regulations, guidelines, and goals specified in the FTSP. The environmental benefits that would accrue to the public if the developer (like all other developers in the Trabuco Canyon area) were required to comply with the FTSP standards should be analyzed in DEIR 566.

II. Potentially Significant Environmental Impacts To Be Evaluated In DEIR 566

In connection with the administrative proceedings the County previously conducted regarding (1) the 318-unit single family housing project (the "318-Unit Project") and Draft Environmental Impact Report No. 561 ("DEIR 561"), (2) the 705-unit manufactured housing project (the "705-Unit Project") and Final Subsequent Environmental Impact Report No. 566 ("FSEIR 566"), and (3) the 299-Unit Project, FSEIR 566, and the two Addenda to FSEIR 566, Vedanta submitted numerous written and oral comments and objections regarding the environmental impacts associated with developing those three projects on the Property. However, rather than restate each of

those objections and comments in this letter, Vedanta would respectfully request that the County review those prior objections and comments before proceeding to prepare DEIR 566. For the record, Vedanta hereby incorporates by reference each of or its prior objections and comments as if set forth in full in this letter.

Vedanta also has four additional comments regarding the NOP's determination concerning (a) which potential environmental impacts should be evaluated in DEIR 566 and (b) how those impacts should be evaluated:

A. The Critical Role Of The Property In The NCCP Process

All of the previous environmental documents which have been prepared regarding the proposed projects to be developed at the Property have failed to discuss the Property's critical importance in ensuring the successful completion of the approval process for NCCP Southern Subregion. In their letter of May 7, 2001 to the Board of Supervisors, the Wildlife Agencies reaffirmed their position that it is essential to preserve the Property in its undeveloped state in order to complete that planning process. In particular, the Wildlife Agencies have previously stressed that the Property provides a "critical habitat connection" between the Central and Southern NCCP Subregions which is necessary to preserve as open space in order to complete the planning for the Southern Subregion, and that the 299-Unit Project, as presently proposed, would "preclude[] the opportunity to ensure the linkage between the Central and Southern NCCP reserve lands." Accordingly, a comprehensive discussion of the importance of preserving the Property to serve as NCCP habitat linkage should be included in DEIR 566.

B. Outdated Version Of Housing Element

The NOP concludes that the 299-Unit Project will have a less than significant impact on population and housing and, therefore, those topics need not be addressed in DEIR 566. This conclusion, however, is reached by relying upon an outdated version of the County's General Plan, and without *any* discussion of the impact of the 299-Unit Project on the availability of affordable housing units.

The NOP expressly relies upon the Housing Element of the Orange County General Plan adopted on September 14, 1993. Government Code section 65588, however, required the County to adopt an updated version of the Housing Element to its General Plan no later than December 31, 2000. On May 8, 2001, the Board of Supervisors approved Housing Element Amendment 2001-1, and the Housing Element, as amended, is currently being reviewed by the California Department of Housing and Community Development (the "HCD") for compliance with the Government Code.[1]

[1] A land use approval that is issued in reliance on a General Plan, or any element thereof, which is outdated or otherwise fails to substantially comply with any requirement of the Government Code can be invalidated if the

Nonetheless, the NOP relies upon the 1993 version of the Housing Element and the outdated population and housing statistics and projections contained therein. For example, the NOP relies on a population *projection* for the year 2000 for Regional Statistical Area C-43, despite the fact that *actual* population figures from the 2000 Census are now publicly available.

In support of its conclusion that the 299-Unit Project will not have any significant impact on population and housing, the NOP also touts the fact that the 299-Unit Project will result in a reduction in the number of planned residential units for the Property when compared to the 705-Unit Project which is the subject of the tract map that is currently recorded on the Property. However, the NOP completely ignores the fact that (1) a condition of approval for that tract map was that two-thirds of the housing units permitted for the 705-Unit Project, *i.e.*, 470 units, must be sold as affordable housing and (2) the 299-Unit Project provides for *no* affordable housing units whatsoever. As stated in FSEIR 566, the elimination of these affordable housing units would affect the County's efforts to ensure that an adequate supply of affordable housing exists throughout the County, not simply in the Trabuco Canyon Area. (*See* FSEIR at p.4-11, n.4.)

Accordingly, not only should DEIR 566 determines the impact of the 299-Unit Project on population and housing based on the current version of the County's General Plan—if and when the Housing Element is approved by the HCD—but it should also evaluate the impact the loss of 470 planned affordable housing units would have in the county-wide housing environment.

C. Incompatible Land Uses

Vedanta's second comment regarding the potentially significant environmental impacts which the NOP proposes for evaluation in DEIR 566 relates to land use and planning impacts. Specifically, on page 1 of the Environmental Analysis Checklist, the NOP concludes that the impact of the 299-Unit Project on adjacent, existing or planned land uses would be less than significant with mitigation. (*See also* NOP p.6.) However, both DEIR 561 and FSEIR 566 concluded that, "following implementation of all mitigation measures, the project will have the following unavoidable adverse impacts: • Land use incompatibility with 1) O'Neill Regional Park, 2) the Ramakrishna Monastery, and 3) St. Michael's Abbey." (DEIR 561 at p. 8-1; FSEIR 566 at p. 8-1.) This inconsistency should be explained and reconciled in DEIR 566.

---

defect in the General Plan shares a "nexus" with the land use approval. (*See, e.g., Garat v. City of Riverside* (1991) 2 Cal.App.4th 259, 297; *Neighborhood Action Group v. County of Calaveras* (1984) 156 Cal.App.3d 1176, 1188-89.)

D. Need For Current Data

Vedanta cannot stress enough how critical it is for the DEIR's analysis of environmental impacts to be based on the *most current* data and information available. Addendum No. 2 to FSEIR 566 was prepared in March of this year to purportedly update any changes in the circumstances surrounding the development of the 299-Unit Project which may have occurred since Addendum No. 1 to FSEIR 566 was prepared in August 1998. However, with the exception of certain information regarding impacts on traffic and biological resources, Addendum No. 2 for the most part simply incorporates the information contained in Addendum No 1. In turn, Addendum No. 1 simply incorporates the information contained in FSEIR 566, which was prepared in June 1997 and was based on reports which substantially pre-dated that timeframe. As a result, much of the information contained in Addendum Nos. 1 and 2, regarding the impacts associated with the 299-Unit Project is at least four years old, if not older.

The issue of outdated studies is of particular concern with respect to impacts on endangered species. For example, Appendix C to Addendum No. 2, entitled "Updated Biological Mitigation Plan," relies upon surveys for the coastal California gnatcatcher which were conducted between April and June 1998. However, such surveys are generally only recognized as valid by the United States Fish and Wildlife service for a period of one year. Similarly, although Appendix C to Addendum No. 2 purports to provide an updated Biological Mitigation Plan for the 299-Unit Project, that plan fails to even acknowledge that the entire Property was proposed for designation as critical habitat for the federally-listed endangered Riverside fairy shrimp in September 2000. (In May 2001, the U.S. Fish and Wildlife Service issued the Final Rule designating the entire Property as critical habitat for the Riverside Fairy Shrimp.) As such, special care should be taken to ensure that all analysis conducted in DEIR 566 is based upon the most current information and data available.

With respect to conducting new surveys for the coastal California gnatcatcher--especially in the wake of all of the new residential development in the Trabuco Canyon area which may have made the coastal sage scrub habitat at the Property an important refuge for the local gnatcatcher population--Vedanta believes that, to ensure fairness and impartiality, the developer should be required to provide funds to enable the County to hire an independent gnatcatcher surveyor, rather than relying on any of the biological consultants the developer has used in the past. The reason that the County should engage a neutral, third-party consultant to conduct a new gnatcatcher survey is that, throughout the course of the County's administrative proceedings regarding the 318-Unit Project, the 705-Unit Project, and the 299-Unit Project, the developer's consultants have insisted that there are *no* gnatcatchers on the Property.

Attachment F

CONNOR, BLAKE & GRIFFIN LLP

However, in September 1998, a licensed surveyor hired by Vedanta conducted a brief survey of just a portion of the Property visible from Vedanta's adjacent property, and discovered the presence of two gnatcatchers after just a few hours of observation. In light of this striking contrast between the results of the surveys conducted by the developer's consultants and Vedanta's consultant, the fair solution would be to have an independent surveyor conduct the surveys that are required for DEIR 566.

Thank you for the opportunity to participate in the NOP process and we hope that the County will give careful consideration to Vedanta's requests in preparing DEIR 566. If we can be of further assistance in this regard, please do not hesitate to contact our office.

Very truly yours,

Edmond M. Connor

Effort builds to preserve Saddleback Meadows

Environment • State, federal buyout would prevent home development.

By JIM RADCLIFFE
The Orange County Register

TRABUCO CANYON

State and federal officials are trying to cobble together a multimillion-dollar offer to the owner of Saddleback Meadows so the 222-acre swath of rolling hills and ponds would become a reserve instead of a 299-home development, they said Monday.

The U.S. Fish and Wildlife Service and the California Department of Fish and Game are exploring government programs that would provide funding and possibly seek private money to round out the offer and keep the land as open space.

A similar deal was floated three years ago to landowner California Quartet Ltd. and appeared headed for a successful sale when the $17 million offer from the nearby St. Michael's Abbey broke down.

GRAPHIC
» Local 5

Unlike that effort, state and federal officials are involved this time and are driving the proposal.

Neighbors of Saddleback Meadows, including the abbey and the Ramakrishna Monastery, have fought the development for years. They

MEADOWS • PAGE 5

MEADOWS: Purchase eyed

FROM PAGE 1

fear it would hurt Trabuco's rural lifestyle.

"This is something that was unexpected and is totally fantastic," Ed Connor, the Ramakrishna's lawyer, said of the purchase attempt. "It truly represents manna from heaven for the monastery."

Abbey officials could not be reached for comment.

David Zoutendyk, the Fish and Wildlife Service's branch manager for Orange County, said his agency is "very interested in seeing that that site is purchased and set aside. It's a very dramatic piece of land. The ridgeline that runs through there – it's pretty neat."

Bill Tippets, deputy regional manager of the state Department of Fish and Game, said the land, off El Toro and Live Oak Canyon roads near Cook's Corner, allows coyotes, deer and other wildlife to move freely between Whiting Ranch Wilderness Park and O'Neill Regional Park, also a wildlife sanctuary. And Saddleback Meadows' ponds hold the endangered Riverside fairy shrimp, he added.

Talks regarding the deal are in the preliminary stages. A property appraisal is expected to be completed within two months.

"While we have never been opposed to public acquisition of the property, we are now wary of repeating a similar process," Jason Grange, a spokesman for the property owner, said in a written statement.

"Our current proposed project already includes the preservation of wildlife corridors and the setting aside of more than 157 acres of open space, the majority of which will remain natural and completely undisturbed.

"That amounts to 71 percent of the project dedicated to the public at no expense to taxpayers," Grange stated.

According to California Quartet's proposal, some of that open space would be for slopes to stabilize nearby hills.

Proposals to develop Saddleback Meadows have bounced around since 1978. At one time, 705 mobile homes were planned.

In 1998, negotiations between the abbey and California Quartet went on for months and evolved into a new deal: The abbey would put up $17 million and the county $15 million for 178 acres of open space; 130 homes would be built on the remaining land.

That deal broke down when it became clear that the developer needed to grade 30 of the purchased acres to stabilize hills, both parties said at the time.

Now, California Quartet is poised to go to the Planning Commission and the Board of Supervisors to win approvals for the gated community with 299 homes.

The first of those meetings was to be held Wednesday but was postponed for about two months.

Tom Mathews, director of the county's Planning and Services Department, said an extensive environmental report was not presented in an easy-to-understand fashion, so he wanted to rework it.

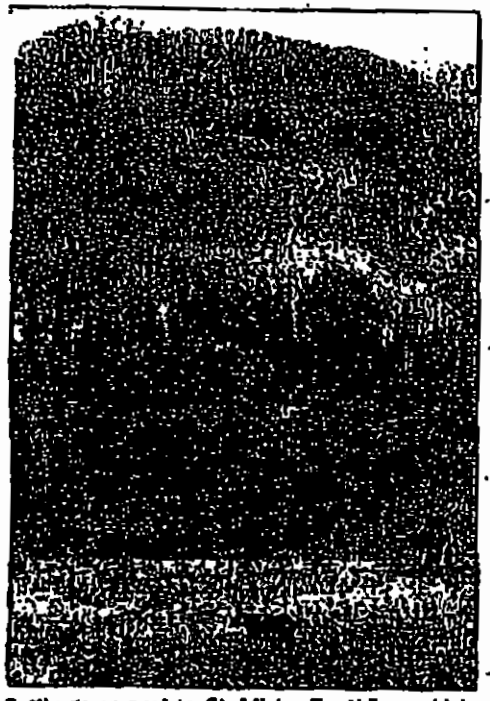
Developer's Wild Tale Goes On



Cattle graze next to St. Michael's Abbey, which has been fighting the Saddleback Meadows plan.

■ A revived Saddleback Meadows project for 299 homes will come before the county again. Conservation-minded buyers try to raise funds before a summer hearing.

By H.G. REZA
TIMES STAFF WRITER

The controversial Saddleback Meadows project, thought dead because of a court decision last year, breathed new life last week when county officials agreed to reconsider plans to build 299 homes in the pristine wilderness area.

First appearing on the Board of Supervisors agenda in 1978, the project was approved in 1980 on a 3-2 vote for 705 mobile homes. The Trabuco Canyon development has been mired in controversy ever since.

In 1998, developer Aradi Inc. announced that the company would build 299 homes instead, and in 1998 the board approved an environmental report on a 2-1 vote—but for the original 705 mobile homes. Last year, an appellate court ruled that the tie vote was invalid.

Now, Orange County officials have agreed to review the report again; however, a hearing set for last Wednesday was rescheduled for the summer. The parties involved said the postponement was to give state and federal officials and private landowners time to raise money to purchase the property to maintain it as open space.

Officials said that the California Department of Fish and Game is leading an effort to buy the 222 acres owned by Aradi. The U.S. Fish and Wildlife Service has joined the state agency, as have the Ramakrishna Monastery and St. Michael's Abbey, whose properties border the proposed development.

"We're looking at what sources of funding there may be. A lot of people would like to see that property not developed," said Bill Tippets, deputy regional manager of the Department of Fish and Game.

David Zoutendyk, a Fish and Wildlife Service biologist, said federal officials are having the property appraised.

"This land is important because it's the last linkage" between nature preserves in central and southern Orange County, Zoutendyk said. "It would connect Whiting Ranch Wilderness Park and O'Neill Regional Park, providing a corridor for deer, bobcats, birds and other animals."

SADDLEBACK: New Impact Report Sought for Plan

Continued from B1

Jason Grange, spokesman for the developer, said the company will consider a purchase offer, but he said two previous attempts by the county and the abbey in 1998 to buy all or part of the property fell apart.

"We had an agreement, but the abbey couldn't come up with the money. We know about the current attempt to buy the property, but we're also going to continue with a contingency plan for the 299-home complex," Grange said.

Attorney Ed Connor, who represents Ramakrishna Monastery, countered that the project cannot continue unless a new environmental report is drafted for 299 homes. It was Connor who persuaded the court to invalidate the board's approval of the report.

"In February 2000, the judge directed the county to set aside approval for the project and suspend all planning activity until a new environmental report is prepared," he said.

Superior Court Judge Robert E. Thomas ruled that the Board of Supervisors and county Planning Commission had "to set aside their . . . respective determinations that the final environmental impact report and addendum were adequate." He also ruled that the board "never validly certified" the report.

But Grange and county Planning and Services Department spokesman Josh McDonnell said that a subsequent appellate court ruling narrowed the issue solely to the tie vote by the supervisors that validated the report.

"The appellate court ruled that a 2-to-2 vote did not certify the environmental report," McDonnell said. "The ruling also directed that all subsequent approvals [by county officials] be set aside."

While the 19-page opinion by the California 4th District Court of Appeal addressed only the validity of the tie vote, the justices also upheld Thomas' ruling that the environmental report adopted by the board on a 2-2 vote did not cover Aradi's proposal to build 299 homes.

The appellate court's findings note that the "county planning commission certified an environmental impact report for a 705-unit touring development in Trabuco Canyon," not for 299 homes.

"The appellate court is saying that there never was an environmental report done for 299 homes. That's been our position all along," Connor said.

Still, Grange said the appellate ruling was a victory for Aradi.

"The court didn't find the environmental report inadequate, only that the supervisors couldn't certify it with a 2-to-2 vote. The court said a tie vote wouldn't do it," Grange said.

He said the project "has been redefined and revised" for the board's and Planning Commission's study.

Grange said the revisions include setting aside 167 of the 322 acres as open space, but Aradi is still committed to building 299 homes on the site.

Supervisor Todd Spitzer, whose district includes Saddleback Meadows, did not respond to repeated inquiries about his position on the project. Instead, staff members offered to explain his position in off-the-record interviews. He voted for it in 1998.

However, a tie vote may be all that the developer and conservationists get as long as Supervisor Jim Silva is on the board. Silva has abstained from voting on the project because Aradi was fined $14,000 in 1996 for laundering contributions to his campaign.

Saddleback Meadows has been a source of controversy as early as 1980, when supervisors gave it preliminary approval despite objections from county planners and the grand jury because of grading problems. Sixteen years later, officials estimated it would take 13 months of grading and the removal of 500,000 truckloads of dirt before construction could begin.

In 1982, then-Supervisor Bruce Nestande took the unusual step of writing letters to a bank to help then-owner G. Gratton Worthington obtain a $2.4-million loan to develop the property. The project, which at the time called for 705 mobile homes, was still being reviewed by county officials when Nestande acted.

The loan was never repaid, and the owner filed for bankruptcy.

Aradi bought the property out of bankruptcy in 1993 and obtained a permit to build the mobile home park but later decided to build homes instead.

Because of potential grading costs and money spent by Aradi on lawyers, lobbyists, hydrologists, soil experts and an environmental study, then-Supervisor William O. Steiner said in 1996 that Aradi needed to build at least 300 homes to turn a profit. The developer planned to construct 318.

The county's planning staff recommended a maximum of 299 homes, but a county planning commissioner said only 260 could be built. The result was that in July 1998, the county Planning Commission handed the project to the Board of Supervisors without a recommendation—uncorking another controversy.

Development Talks

Saddleback Meadows, a proposed housing project that's been around since 1978, got a new lease on life when county officials agreed to restudy the development. Opponents thought that a court ruling had effectively killed it last year.

PAUL DUGDALE / Los Angeles Times

Steiner, a supporter of the project, was accused of a conflict of interest for accepting a $5,000 consultant fee from an Aradi lobbyist. Steiner was cleared of wrongdoing and voted for the development.

Silva was the center of another controversy when it was revealed that VarLyn Jensen, a lobbyist for St. Michael's Abbey in opposition to the project, sent out a fund-raising letter for Silva, encouraging contributors to pressure him to vote against Saddleback Meadows. Jensen was a member of a host committee to raise funds for Silva, after it was revealed that Aradi had made illegal contributions to Silva.

The fund-raising letter appeared a few months after Aradi had been fined for making illegal contributions to Silva. The supervisor decided to abstain from voting on the issue.

Jensen, who some consider the most savvy political insider in the county, said at the time: "I'm raising money for Jim Silva legally. [Aradi] laundered their contribution and got fined."

He also admitted to contributing to Steiner's campaign that year, even though he called Steiner "a cheerleader" for Saddleback Meadows at a Planning Commission hearing.

Those were not the only intrigues. At the same time, Katherine Swiss, a former Miss Texas who profited from property development in that state, was quietly working with the Norbertine priests from St. Michael's Abbey to derail the project.

In 1993, Aradi hired a private detective to investigate Swiss and her finances when she attempted to outbid the developer for the sewer and water rights for the property at the bankruptcy sale.

Aradi, which had offered $35,000 for the rights, was forced to pay $100,000 instead.

Swiss said back then she would have acquired the rights, but "$30,000 was all the money I had with me at the time."

Swiss, who is still helping the abbey, could not be reached for comment. Jensen, who is still representing the abbey, declined to comment.

But Tippets, Grange and others familiar with the project said Swiss is helping the abbey raise funds to help conservationists purchase the property from Aradi.

State buys key link in lion lair

Environment • A $13.5 million deal extends the Coal Canyon wildlife corridor.

By PAT BRENNAN
The Orange County Register

COAL CANYON

Parks officials have struck a last-minute deal to buy the final link in one of the state's most important wildlife corridors for $13.5 million.

"We were sweating bullets on this one," said Warren Westrup, chief of the office of acquisitions and real property services for state parks. "But we knew it was too important of a deal to lose."

The 32-acre parcel, bought Friday from a group of Phoenix lawyers, will become part of the state parks system, joining a 650-acre piece purchased and spared from development in October.

The Coal Canyon wildlife corridor runs under the Riverside (91) Freeway. For mountain lions and other creatures, it is the last link between the Chino Hills and Cleveland National Forest.

The state plans to return the Coal Canyon corridor to a natural condition – ripping out the on- and off-ramps and asphalt roadway and replacing them with a stream bed and native vegetation. Hiking and horseback riding will probably be permitted.

The deal was touch-and-go until the last moment.

First, the owners in Phoenix had to agree to accept about $3 million less than the lowest appraisal price of more than $16 million.

And the deal had to close Friday, the final day of the fiscal year. If it hadn't, bond money and other contributions totaling about $4.5 million would have vanished. The lawyers also would have had the right to seek another buyer as of today.

At one point Friday, parks officials and activists working on the deal nearly had to reach into their pockets to come up with a $75 processing cost. But the lawyers group agreed to allow the sum to be paid later.

$13.5-Million Deal Saves Key Wildlife Area

Parks: Corridor will prevent isolation from nearby wilderness, which would have diminished gene pool.

By DOUGLAS HAGERMAN
TIMES STAFF WRITER

A key wildlife corridor connecting Chino Hills State Park on the north side of the Riverside Freeway with the Cleveland National Forest south of the freeway now belongs to the state, officials said Monday.

The state Department of Parks and Recreation bought the 32-acre parcel for $13.5 million, including about $2.5 million in donations from private conservancies.

Escrow closed late Friday. The state had purchased 649 acres of wilderness in Coal Canyon south of the freeway last year for $40 million.

The transaction barely met a Friday deadline that was crucial to securing $3 million in state funding for the project.

A news conference to announce the milestone is set for 1 p.m. today on the property.

The 32-acre parcel is critical to the health of Chino Hills State Park wildlife, officials said. Had development isolated the park from nearby wilderness areas, its gene pool would have diminished over time because its wildlife wouldn't have been able to breed with wildlife outside the park, officials said.

"This is a huge step" toward preserving the park's well-being, said Claire Schlotterbeck of Brea, the president of Hills for Everyone, a coalition of citizens groups that helped create Chino Hills State Park in the early 1980s.

It's particularly the larger species, such as mountain lions and deer, that need the space to roam and find mates, she said.

If the park's mountain lion population declined from inbreeding, for example, it would lead to a population explosion among their natural prey, including opossums, raccoons and skunks. Those animals prey on birds' eggs, so growth in their population could reduce the park's avian population. That, in turn, would hurt the spread of plant seeds, Schlotterbeck said.

At the time of the Coal Canyon purchase south of the freeway last year, state parks Director Rusty Areias said it was probably the most critical biological corridor in California.

Three conservation biologists, Reed Noss, Paul Beier and William Shaw, said in 1998 that restoration of a natural linkage under the freeway would be a first.

"It's a global precedent, I think, because we've developed this freeway" that blocks the connection between the wilderness areas on either side "and we're returning it [the connection] to the wildlife," Krueper said.

Two long, dark tunnels were the only connection between the two sides of the freeway until the deal closed. While mountain lions used the tunnels, deer would not.

Public and private officials were scrambling to close escrow up until the last minute—5 p.m. Friday, Schlotterbeck said.

The state had set aside $3 million in a three-year trust that expired Saturday. If the money hadn't been spent by then, it would have been lost for the purchase, Schlotterbeck said. "It's just been really nerve-racking," she said.

Park users may never notice the wildlife corridor's impact, but they would have noticed the impact of failing to secure it, she said.

"In 50 years, they'll be thanking us," she said, "because deer will still be there and golden eagles will still be there."

Orange County General Plan

Land Use Element

The Orange County General Plan Land Use Element (Adopted June, 1982), designates the project site as 1B (Suburban Residential - 0.5 to 18 du/ac). The Community Profile, which is not a part of the General Plan, designates the site as 1.2 low density residential (0.5 to 2.0 du/ac.) In addition to the Land Use Element, the project site is subject to policies contained in the Circulation Element, Housing Element, Public Services and Facilities Element, Noise Element, Recreation and Safety Element.

Housing Element

The Orange County General Plan Housing Element was adopted ~~September 13, 1993~~ May 8, 2001 and is a comprehensive statement of broad and specific policies to facilitate development of housing in the County. The project site is located in Regional Statistical Area (RSA) 43-C. RSA 43-C had a ~~1995~~ 2000 population of ~~190,766~~ 231,981 with a year 2000 population projection of ~~242,700~~ 274,246 (1.77 annual percent growth). RSA 43-C had ~~1995~~ 2000 jobs per housing ratio of ~~2.00~~ 1.09. ~~the highest in the County~~.

In 1979, the County adopted the Inclusionary Housing Program (IHP), which required developers to provide 25 percent of all new dwellings within the affordable category (i.e., 120 percent or less of median income). In 1983, the IHP was replaced by the Housing Opportunities Program (HOP), which phased out mandatory requirements over a three-year period in favor of voluntary compliance with affordable housing objectives encouraged by County incentives and market forces. Adoption of the HOP did not rescind prior approvals of mandatory affordable housing requirements placed on projects as conditions of approval under the IHP.

A total of 26,907 mandatory affordable units have been required to date as part of General Plan amendments or zone changes. The vast majority of these (24,268) are found within planned communities, with the remainder scattered in conventionally-zoned parcels.

The previously approved and recorded Final Tract Map 10692 was required in the IHP/HOP to provide 66 2/3 percent of total construction as affordable housing (mobile homes). Since it was an original Condition of Approval, this requirement still applies to the project even though the County-mandated affordable housing requirements have since been rescinded.

SUBJECT: Saddleback Meadows SCEIR 566

My comments are as follows:

Page 4.1-5:

Delete discussion of Community Profile here and anywhere else it may appear.

Pages 4.2-8 and 5-3:

Based on conservations with Pat Stanton and John Earnest, it is my understanding that there is a reasonable chance that, with no development or no activity by man, a landslide will occur on this property that can adversely impact El Toro Road and adjoining properties. This should be clearly stated under the discussion of landslides (pg. 4.2-8) and Alternative # 1 No Development (page 5-3).

TO: Tim Neely, Manager, Environmental Planning

FROM: Rob Selway, Chief, Historical and Cultural Programs

SUBJECT: Draft EIR 566 for Saddleback Meadows

Thank you for the opportunity to comment on the subject project. Historical and Cultural Programs staff have reviewed the DEIR for Saddleback Meadows Development Project and have the following comments:

- The cultural resources mitigation language used in the EIR should be updated to address current standards for artifact curation and long-term collection management. The current conditions have been in place for several years and it is upsetting to find the old conditions still in use. The updated language protects the County at the time collections are donated so that our warehouse facility is not burdened with responsibility to accept unprepared artifacts and assume curation costs.

- The Board of Supervisors requires cultural resource artifacts, which may be discovered during the site development, be donated to a suitable repository that will maintain the collection for future scientific study and exhibition "within Orange County." Prior to donation, the certified cultural resources consultant should prepare the collection "to the point of identification."

- The project proponent should be prepared to pay "potential curation fees" to the County repository for the long-term curation and maintenance of donated collections.

- PDF-1 (4.10-17) states that ORA-710 will be covered and preserved in a biological conservation easement. Earth-disturbing activities, including biological enhancement programs, should not occur unless monitored by a certified archaeologist. Fencing, plantings and water systems for biological areas can threaten the covered cultural resources, especially if the primary purpose of the easement is viewed as biological conservation, then the archaeological resources may be overlooked. Placement of such improvements must be considered by a certified archaeologist to avoid the known significant site.

- SC10-1 Literature search and survey has been completed according to cultural resources analysis, so why require this condition? (4.10-1) Outlines previous literature search. Was this done by UCLA? The South Coast Information Center is now located at CSU Fullerton.

To: Chuck Shoemaker
Subject: Comments on EIR 566

HI Chuck,

Thank you for the opportunity to comment on Draft EIR 566. My comments are as follows:

1) Section 4.1- On page 4.1-5, a discussion of the Land Use and Housing Elements to Orange County General Plan is provided. The information contained in this discussion is inacurate as both Elements have recently been amended. This particularly concerns me because the text implies that the County is largely meeting its' affordable housing goals. To the contrary, we are most emphatically not meeting the needs of very low income households.

2) Section 4.1- On page 4.1-12, the statement is made that the proposed project is in substantial conformance with the Housing Element. I would advise a close review of the most current Housing Element prior to making that claim.

3) This may or may not be necessary, but the environmental assessment does not inlude a discussion the socio-economic impacts of the proposed project or the project alternatives. It may also be appropriate to include a new project alternative, or modify alternative 5 to specifically include a discussion of the potential for the development of "affordable housing" units.

4) Section 5.4.6- In Alternative 6, the text describes 44 acres being used for residential development, but Table 5.5 states that 22 acres will be used for lots and 8.3 acres will be used for streets totalling about 30 acres. I would advise having someone double check all the tables in the alternatives section.

Please feel free to contact me at 834-2083 regarding these comments.

12.19.01

The following comments are made based upon a review of the Geotechnical Report prepared by G. A. Nicoll & Associates, Inc. issued under Project 4816-04.3 dated August 30, 2001. The report was submitted as Appendix C of the Draft Revised Subsequent Environmental Impact Report, EIR 566, State Clearinghouse No. 96121072, Volume 2.

1. The geologic map and sections provided in Appendix C (G.A. Nicoll & Associates, Inc. report dated August 30, 2001) have been reproduced at a scale of about 1 inch = 330 feet. This makes it extremely difficult to evaluate the merits of the report. Please provide unreduced drawings.

2. Under Item 1. c) The consultant states that the base plan used contained 318 lots and was very similar to the proposed 299-lot plan with only minor changes. Based upon the last review performed (July 1998) it appears that sufficient time existed to allow the consultant to re-evaluate the site based upon the more recent development plan.

3. While it may be correct that the minor changes would not have a significant impact upon the overall grading conditions given the controversy surrounding the proposed project the most recent plan should be utilized for analyses.

4. Item 1. f) Based upon the information provided the most recent exploration was performed about six years ago. Please explain.

5. As noted under item 4 a more detail evaluation will be conducted (required) during the grading permit application process.

6. Item 4. c) A concern exists relative to the shear strength parameters utilized in the slope stability analyses. The strength parameters used for slope stability analyses under seismic conditions greatly exceeds the 20 percent increase of the static parameters. Please re-evaluate seismic slope stability analyses.

7. It appears that the most recent exploration referred to under Item 5. b) was performed in 1995 and not within the last year of the subject report dated August 2001 (see comment 4).

8. Under Item 6 on page 4 of the subject report the consultants state that stability analyses were conducted utilizing Alternate 4 Plan grades. This plan which is reproduced at a scale of about 1 inch to 330 feet appears to be similar to the proposed Site Plan. However there are differences plans. Given the sensitivity of the area analyses should be performed utilizing the most recent plan. Please refer to the above comments 2 and 6.

9. Item 8.1 c)
There is still concern as to whether the general area represented by Borings BC-12 & 14 should be within the undisturbed bedrock or the landslide area. It is difficult to completely dismiss the interpretation of data by other consults and you own previous conclusions for the inclusion of the subject area within the landslide zone. While the borings you cite according to your most recent interpretation did not disclose the

Attachment F

12.19.0

presence of landslide material they did show out of slope bedding and shear zones that could be problematic to development. However as noted by the last paragraph under this heading the only consequence would be a negligible variation in remedial grading quantities. If the landslide were present you estimate that a four percent increase in the remedial grading quantities would be required to construct an upper shear key in the area of Boring BC-14. It should be noted that a four percent increase in this value represents some 272,00 cubic yards of material.

10. Please provide corrective grading recommendations to demonstrate that the subject area meets Code requirements for stability. The additional yardage should be included in the total remedial grading quantity. Alternately you may provide additional subsurface testing and evaluation to demonstrate conclusively that the subject area has not been subject to land movement and that it meets Code requirements.

11. Please explain comment under Item 8.2.1.a) as no recent subsurface information was presented in the subject report. According to the information noted on the logs for test Boring BC – 1 through BC – 17 the exploration occurred in 1995 (see comment 4).

12. You indicate that landslide material is not present within the area represented by Test Boring BC- 15. Explain the inclusion of the note 'landslide material' at a depth of 108 feet on the log.

13. Under Item 9.c) see previous comments regarding design parameters utilized for seismic analyses (see comment 6).

14. Assuming no development occurs the site and adjacent property could be subject to damage by future movement of the existing landslides and other areas of adverse geologic/geotechnical conditions.

15. Under the proposed development plan as well as the alternate designs the open space areas (no remedial grading) within the site and adjacent property could be damaged by future movement of unstable areas which are located both on-site and off-site.

16. Unable to locate test Boring BC-13.

17. Previous report indicates that an estimated 10 percent of back cuts are expected to fail during the grading process. Please provide guidelines that can be implemented during the grading process to prevent or limit this type of failure. Back cut failures could have an adverse impact upon the proposed development as well as the adjacent property.

COUNTY OF ORANGE

PUBLIC FACILITIES & RESOURCES DEPARTMENT

DATE: December 20, 2001

TO: Tim Neely, Manager, Environmental Planning Services

FROM: R. S. Bavan, Chief, Flood Control Programs

SUBJECT: Saddleback Meadows Screencheck Revised Subsequent EIR 566

We have reviewed the above mentioned EIR and offer the following comments for your consideration:

1. Standard County Condition SC 3-1a should be revised to also include analysis of erosion and sediment transport impacts due to increased flows from the project site. Hydrologic and hydraulic analyses performed to evaluate proposed mitigation measures should utilize OCFCD's criteria and standards where applicable and generally as contained in the Orange County Flood Control Design Manual, the 1986 Orange County Hydrology Manual (OCHM) and its Addendum No. 1.

2. The Screencheck EIR indicates that the project site is tributary to two OCFCD facilities, Aliso Creek (Facility No. J01) and Oso Creek (Facility No. L03). The U. S. Army Corps of Engineers is currently performing Watershed Management Studies on the Aliso Creek and San Juan Creek (which includes Oso Creek) watersheds It is recommended that the EIR be prepared in consultation with Jim Hutchison [(213) 452-4204] of the Corps to ensure consistency with future Corps' plans for these watersheds.

If you have questions regarding this memo, please contact Bryan McKinney at 834-2534.

County of Orange **MEMO**

DATE: DEC 2 0 2001

TO: Tim Neely, Manager, Environmental Planning Services

FROM: Manager, Subdivision and Grading Services

SUBJECT: **Screen Check Revised Subsequent EIR 566-Saddleback Meadows**

Attention: Chuck Shoemaker:

This is the Screen Check Revised Subsequent EIR for the Saddleback Meadows Project proposing the development of 299 Single Family Residential Units on a 222 Acre Site.
The site is located on the Easterly side of El Toro Road 0.5± miles southerly of the intersection of Santiago Canyon Road/El Toro Road and Live Oak Canyon Road within the Foothill/Trabuco Specific Plan and the Aliso Creek Corridor Specific Plan.

DISCUSSION:

The following items are to be addressed prior to Traffic Review's final comments.

1) The traffic study includes a year 2020 analysis. The County of Orange requires the traffic analysis for General Plan Buildout (year 2025) period. The year 2025 is consistent with OCP 2000 projections and will assure consistency with regional forecast. In addition a table showing roadway capacity values (year 2025) with and without project for all links along El Toro Road/Santiago Canyon Road from Glen Ranch Road to the Eastern Transportation Corridor must be included in the traffic study. The study shows a forecast on Santiago Canyon Road of 12.1, 13.6 and 15.4 (1000's). This is much lower than the County's or OCTA's forecast for this facility. This needs to be reconciled prior to the final traffic report.

2) In order to bring the three intersections of El Toro Road at (a) Project Entrance, (b) Valley Vista Way and (c) Glen Ranch Road to acceptable LOS the applicant proposes two additional through lanes on El Toro Road. The applicant is required to demonstrate how the additional right of way will be acquired and how the roadway will be transitioned from four lanes to two lanes northerly of the project entry.

EIR 566

ADDITIONAL COMMENTS:

3) All ICU analysis for El Toro Road/Project Entrance "without project" are to be deleted. The intersection would not exist without project.

4) The Standard conditions of approval (volume 1 pages 4.5-29) includes improvements to Live Oak Canyon across the property frontage. This condition does not apply since the site does not front Live Oak Canyon Road.

5) We support the traffic report recommendation that the project should participate in the additional improvement cost for Santiago Canyon Road. However we request that the report include supporting data.

for Patrick J. Stanton, Manager
Subdivision and Grading Services

DATE: December 20, 2001

TO: Tim Neely Manager, PDSD/Environmental Services Division

ATTN: Chuck Shoemaker, Senior Planner

FROM: Chief, PFRD/HBP Program Management & Coordination-Facilities Development

SUBJECT: Screencheck Revised Subsequent EIR 566/Sadddleback Meadows

HBP Facilities Development staff has reviewed subject screencheck documentation and offers the following comments:

A. *Pages S-28 and S-31*, "Saddleback Meadows Conceptual Conceptual Mitigation and Monitoring Plan for CDFG Jurisdictional Areas (Helix, 2001a, 2002b); where is this documentation to be found within submitted documentation? It should be available within the technical appendices.

B. *Page S-35, PDF 11-3*; revise to read as follows:

"The proposed project will pay in-lieu park fees in accordance with the County of Orange *Local Park Code subject to the approval of the Manager, PDSD/Current Planning Services prior to issuance of building permits*"

C. Page S-35, PDF 11-4; change to read as follows:

"The proposed project will dedicate open space in accordance *with County of Orange Standard Conditions of Approval Manual for resource and scenic preservation easement criteria subject to the approval of the Manager, PFRD/HBP Program Management & Coordination, prior to recordation.*"

(NOTE: *Areas shown as Regional Park Dedication Area* on Figure 4.11-2, Recreation Areas and Trails, *shall be dedicated as resource preservation easement areas* (excluding manufactured/graded areas) to the County of Orange. Buffer areas such as manufactured/graded slopes etc, between development and the resource preservation easement area shall be dedicated to the County as scenic preservation easement areas.)

D. *Page 2-7, second paragraph*; the DEIR should clearly delineate the location of Aliso Creek on maps/figures for the proposed project.

E. *Page 2-9, Objective #3*; revise to read as follows:

" Minimize visual effects on surrounding properties through creative grading and site planning/*urban edge* techniques."

F. *Page 2-10, last paragraph*; change to read as follows:

" . . . incorporated into the project *to buffer the project from these adjacent landowners".*

G. *Figure 2.10, Illustrative Site Plan*; delineate a riding and hiking trail south of the project entry aligned parallel El Toro Road south to Valley Vista Way.

H. *Page 2-15, Design Features*;

1. *Add a feature bullet* as follows:

"Dedication of a recreation easement to the County of Orange for the Live Oak Canyon Regional Riding and Hiking Trail south of the community entry paralleling El Toro Road to the southern terminous of the project".

2. *Feature bullet point # 4; add as follows*: "A *riding* and hiking trail connecting the Aliso Creek Riding and Hiking Trail *via the Live Oak Canyon Riding and Hiking Trail* . . ."

3. *Feature bullet #8*; the County of Orange does not utilize "restricted" scenic easement nomenclature. Only the term scenic preservation easement is utilized. Also start subject point with "*Dedication to the County of Orange of approximately* 61.7 acres of Scenic Preservation Easement . . ."

4. *Last bullet point*; change to read as follows:

" *Dedicate* approximately 80.9 acres of *resource preservation easement area* to the County of Orange. This area would preserve and enhance existing biological resources".

5. *Last bullet point*; the text indicates 12.5 acres are to be dedicated as biological open space. Clarify as to what biological open space means. What limitations and or special conditions would be imposed upon the area and who is to accept the dedication? It would seem inclusion within a resource preservation easement area adequate to preserve this open space.

I. *Page 2-17, third paragraph*; replace "polishing" with the term "natural filter".

J. *Page 4.1-3, fourth paragraph*, last sentence; revise to read as follows:

" The portion of the park adjacent to the *southern* project site *boundary* is designated . . "

K. *Page 4.1-11, second paragraph, second sentence*; change to read as follows:

" As part of the proposed project, approximately 80.9 acres of the site would be *dedicated* by the applicant to the County of Orange as *a resource preservation easement area.*"

L. *Page 4.2-14/SC-23*; revise to read as follows;

" . . . Manager, PDRD/Harbors, Beaches & Parks, *Program Management & Coordination* Division."

M. *Pages 4.3-2 & 4.3-4*; Drainage Point numbers are referenced as a Drainage Sub-Areas by letter on Figure 4.3.1(Existing Drainage Features). Change either the text or the exhibit to be internally consistent.

N. *Page 4.4-8/PDF 4-9*; a riverine system should also be added for northern development as it drains into a sensitive future resource preservation easement area and its natural cleansing of urban runoff provides mitigation for urban pollutants.

O. *Page 4.4-10, fourth bullet point*; will the HOA provide for the maintenance costs for the proposed energy dissipaters at the storm drain outlets emptying into the future resource preservation easement area?

P. *Page 4.5-29/SC 5-7*, revise to read as follows :

" . . . the necessary right-of-way along *El Toro Road to* Santiago Canyon Road *per the Foothill Trabuco Specific Plan (Exhibit II-8, Recreation Plan)*, including . . . "

" . . . meeting the approval of the Manager, *PFRD/HBP Program Management & Coordination*".

Q. *Page 4.5-30/M5-2*; inconsistent with Page 4.5-27(Site Access) wherein the text indicates a signal at El Toro Road "may" be necessary. M 5-2 says "shall provide". Resolve in DEIR text.

R. *Page 4.8-25/PDF 8-1*; we cannot find the location of the "Saddleback Meadows Conceptual Mitigation and Monitoring Plan for CDFG Jurisdictional Area (Helix, 2001a)" within the screencheck document. It should be provided within the technical appendices of the circulated DEIR.

S. *Page 4.8-26*; who will maintain pay for the maintenance of the ephemeral shrimp fairy ponds long-term? This should be made clear within the text.

T. *Page 4.8-29/SC 8-7*; change to read " . . . Harbors Beaches and Parks, *Program Management*

and Coordination Division . . ."

U. *Page 4.8-30, #3*; all replacements shall be at least *15-gallon plants* per County Standard Conditions of Approval Manual criteria for Tree Preservation Plans which defer to HBP for approval of said plans.

V. *Page 4.8-30, #3, second paragraph*; revise to read as follows: " . . . or replaced by *an identical species of equal or greater size.*" This is consistent with tree preservation mitigation HBP asks of all applicant's tree preservation plans.

W. *Page 4.8-30, #5*; change to read " . . Division, *Program Management & Coordination* Division".

X. *Page 4.8-31/SC 8-8*; a heading entitled "*Public Area Landscaping*" should precede conditions within SC8-8.

Y. *Page 4.8-31/SC8-8*, Preliminary Plan; revise to read "*Prior to recordation of a subdivision map*, an agreement shall be . . ."

Z. *Page 4.8-31/SC8-8*, Detailed Plan; change to read " . . . and Parks, *Program Management & Coordination* Division."

AA. *Page 4.8-32/SC8-9*; condition should be prefaced by the term "*Private Area Landscaping*". Moreover, revise the first sentence to read " . . .with a plan approved by the Manager, PDSD/ Subdivision & Grading".

BB. *Page 4.8-32/SC87-9*; add two missing additional condition components for Private Area Landscaping per the County Standard Conditions of Approval Manual.

CC. *Page 4.9-1/last paragraph*; project site is located within the western portion of the specific plan area in the "*Bridlewood Residential (BWR) District*", not the Upper Aliso Residential District (UAR). Correct the text reflecting correct zoning within the Foothill Trabuco Specific Plan.

DD. Page *4.9-4, "Land Use Regulations"*; project is sited within the "Bridlewood Residential (BWR) District.

EE. *Page 4.9-19/PDF 9-1*; revise the text as both natural and manufactured scenic corridor setback areas will be placed within scenic preservation easement areas. One variety of scenic preservation easements permits fuel modification and one does not. *Delete* reference to fee dedication as HBP will not be accepting dedication in fee for parkland.

FF. *Page, 4.9-19/PDF 9-4*; change to read as follows:

" In addition, on-site landscape screening is proposed to further reduce visual impacts, *both* subject to *approval of the Manager, PFRD/HBP Program Management & Coordination*".

GG. *Page 4.9-21/SC 9-1*; revise to read as follows;

"... natural open space for dedication *within resource preservation easement areas* to the County ..."

HH. *Page 4.9-21/SC 9-2, (A & B)*; reference to Manager, PFRD/HBP should add "*Program Management & Coordination* Division."

II. *Page 4.9-22/SC 9-4*; *delete* this standard condition as it is *redundant* in relation to other standard conditions within the text in this section of the screencheck DEIR.

JJ. *Page 4.11-1, first paragraph*, last sentence; revise to read as follows;

" In addition, the project will have access to the Orange County Regional Riding and Hiking Trail and *Regional Bikeway* Systems, with on-site connection provided to the Viewpoint Spur Trail and the Aliso Creek Regional Riding and Hiking Trail, *via the Live Oak Canyon Regional Riding and Hiking Trail*, which parallels ..."

In addition to the trails mentioned in this sentence, include references to the following:

1. The *Aliso Creek Bikeway*, a regional Class I (paved off-road) bikeway located parallel to the Aliso Creek Trail.

KK. *Page 4.11-1, second paragraph*; O'Neill Regional Park correct acreage citation is approximately 3,100 acres, not 2,000 acres as now referenced in the text.

LL. *Page 4.11-3, Regional Bikeways/Regional Riding and Hiking Trails*; approval of a re-route during construction shall be subject the following conditions and should be included as a recreation mitigation measure:

1. Prior to any grading and/or construction activities which precludes the utilization of either the Aliso Creek Class I Off-Road Bikeway, or the Live Oak Canyon Regional Riding and Hiking Trail, a re-routing/detour plan shall be submitted to the approval of the Manager, PFRD/HBP Program Management & Coordination in conjunction with a County Property Permit

NOTE: The same condition shall also be applicable to the Class II On-Road Bikeway aligned along the north bound lane of El Toro Road contiguous the proposed project.

MM. *Figure 2.10, Illustrative Site Plan*; identify the point where the existing Aliso Creek Bikeway and proposed Aliso Creek Riding and Hiking Trail undercross El Toro Road north of the project community entry.

NN. *Figure 4.11.1, Foothill Trabuco-Specific Plan Regional Parks and Trails*; update as follows:

In the legend, change #1 to the "El Toro *Road* Bikeway". This is a Class II (on-road, striped lanes) bikeway. *In the legend and on the map, add the Aliso Creek Bikeway.* This is a regional Class I bikeway and is separate and distinct from the Aliso Creek Trail (a regional riding and hiking trail).

OO. *Figure 4.11.2., Recreation Areas and Trails*;

1. Add the Aliso Creek Bikeway to the map and to the legend.

2. Identify the point where the existing Aliso Creek Bikeway and the proposed Aliso Creek Trail undercross El Toro Road and enter the project vicinity.

3. Using two different colors, show the Aliso Creek Bikeway and the parallel Aliso Creek Trail extending northward from the undercrossing of El Toro Road.

4. Show the green trail (the Live Oak Canyon Trail) extending from the southerly property boundary, northward to the Aliso Creek Trail undercrossing of El Toro Road.

5. Apply a different color to the proposed local trail shown running east-west through the project site. (This is an unnamed trail that would not be maintained by the County.

PP. *Page 4.11-3, third paragraph*; the Viewpoint Spur Trail is *not* a regional riding and hiking trail. Please revise the text.

QQ. *Page 4.11-5, first paragraph* (Aliso Creek Trail); revise as follows:

"'. . . to the subject property *aligned beneath El Toro Road at an undercrossing north of the entry intersection to the project.* The trail *then* . . ."

RR. *Page 4.11-5, third paragraph*; the County has *no* O'Neill Regional Park Riding and Hiking Trail by name. Revise text.

SS. *Page 4.11-1, first paragraph*; change to read " . . .Aliso Creek Riding and Hiking Trail *via the Live Oak Canyon Riding and Hiking Trail*, which parallels . . ."

TT. Regional Trail Dedication:

The *Live Oak Canyon Regional Riding and Hiking Trail* is proposed to follow the west side of the project site, from the southerly boundary of the subject property, *northward* to the Aliso Creek Trail undercrossing of El Toro Road. *A recreation easement for this trail, including trail improvements, shall be dedicated to the County, in compliance with the following conditions:*

1. Prior to the recordation of an applicable subdivision map, the subdivider shall:

a. Irrevocably offer a recreation easement for the Live Oak Canyon Regional Riding and Hiking Trail in a manner meeting the approval of the Manager, PFRD/ HBP Program

Management & Coordination. The subdivider shall not grant any easement(s) over the property, subject to the recreation easement, unless such easements are first reviewed and approved by the Manager, HBP/Program Management & Coordination.

b. Design the necessary improvements (both on-site and off-site) for the trail, including, but not limited to, grading, erosion control, signage, fencing, and a grade-separated crossing, as applicable, in a manner meeting the approval of the Manager, PFRD/HBPProgram Management & Coordination, in consultation with the Manager, Subdivision & Grading. Furthermore, the subdivider shall enter into an agreement, accompanied by financial security, with the County of Orange, to insure the installation of the necessary improvements.

2. Prior to the issuance of a grading permit, the grading plans shall be reviewed by the Manager, PFRD/HBP Program Management & Coordination, to ensure that the proposed grading provides for, will not interfere with, or preclude the installation of the riding and hiking trail in a location and in a manner meeting the approval of the Manager, HBP/Program Management & Coordination.

3. Prior to the issuance of final certificates of use and occupancy, and the release of financial security guaranteeing the riding and hiking trail improvements, the applicant shall install the riding and hiking trail improvements in a manner meeting the approval of the Manager, PFRD/HBP Program Management & Coordination, in consultation with the Manager, Construction.

UU. *Local Riding and Hiking Trail Dedication*:

According to the Foothill-Trabuco Specific Plan, the *Viewpoint Spur Trail*, a local riding and hiking trail, is to be dedicated to the County within a recreation easement aligned north-south through the proposed project. The easement would generally follow that portion of the truck road that traverses the northeastern area of the project site. Dedication of the recreation easement and improvements shall be done in compliance with the conditions listed above.

VV. *Trail Rest Stop*:

A trail rest stop located at a high point in the vicinity of the Water Tank Site (the northeast corner of the project site) shall be constructed in conjunction with the above requirements for the Viewpoint Spur Trail. Subject rest stop and related amenities (e.g. benches, drinking fountain, water trough, landscaping, etc.) shall be constructed and dedicated to the County. The park shall connect to the Viewpoint Spur Trail.

WW. *Page 4.11-6, project impacts, second paragraph*; revise to read " . . . Aliso Creek Trail *via Live Oak Canyon Trail* ..."

XX. Page *4.11-6, project impacts, second paragraph*; revise to read ". . . payment of local park fees required by the Orange County *PDSD/Current Planning Services Division in compliance with the Local Park Code."*

YY. *Page 4.11-6, third paragraph*; text references a staging area and view park site. Where are these to be sited? Indicate the other recreational facilities proposed to mitigate for non-construction of these improvements per the text.

ZZ. *Page 4.11-7/PDF 11-1*; revise to read as follows:

" The Viewpoint Spur Trail and *Live Oak Canyon Regional Riding and Hiking Trail* shall be constructed on the project site *within recreation easements for riding and hiking trails*

AAA. *Page 4.11-7/PDF 11-2*; change to read as follows:

" Viewpoint Spur Trail shall be constructed on-site, ultimately connecting the existing trail to the Aliso Creek Riding and Hiking Trail *via the Live Oak Canyon Riding and Hiking Trail*".

BBB. *Page 4.11-7/PDF 11-4*; revise to read as follows:

" The *applicant* will *dedicate resource and scenic preservation easement areas consistent with the County Standard Conditions of Approval Manual for resource and scenic preservation easements subject to the approval of the Manager, PFRD/HBP Program Management & Coordination.*"

CCC. *Page 4.11/M 11-1*; change to read " . . . Manager, PDSD/Current Planning Services Division".

DDD. *Page 4.11/M11-2*; revise to read as follows:

" *The applicant shall dedicate a recreation easement for the Live Oak Canyon Regional Riding and Hiking Trail as well as the local Viewpoint Spur Trail, construct the trails and improvements, and required connections. The recreation easements shall be dedicated per the County Standard Conditions of Approval Manual conditions for recreation easements for regional trails*".

EEE. The County of Orange does not anticipate acceptance of dedication of a recreation easement for the east-west internal project trail shown on Figure 4.11.2, Recreation Areas and Trails. This is because subject trail is not a regional trail depicted on the Master Plan of Regional Riding and Hiking Trails, nor a local riding and hiking trail per the Foothill Trabuco Specific Plan-Recreation Plan, Exhibit II-8.

FFF. Page 4.12-6, third paragraph; OCFA Station No.18 is located *adjacent* O'Neill Regional Park, *not* within it. Please revise the text.

Thank you for the opportunity to comment. Should you have any questions, please contact Wayne Johnson at 834-6787.

FROM: K. E. Smith, Materials Engineer, P.F.&R.D., E.&P.S. , Materials Laboratory

SUBJECT: DEIR 566 – Saddleback Meadows (#96121072)
(2nd Administrative Vol. 1)

I have reviewed this DEIR from the geotechnical aspects that may impact public facilites such as El Toro Road and Aliso Creek. While I do not have copies of EIR 059 and EIR 203, I am very familiar with their contents and the contents of the geotechnical reports that accompanied those projects. I have some difficulty in recognizing that the property described in those EIR's is the same as described in the subject EIR.

I do not have any doubt about the surface geology described in 566. What is missing is the geology that was discussed in the previous documents that indicated a slide mass that extended under El Toro Road and Aliso Creek. As stated in this EIR there was over 10 million cubic yards of remedial grading required for that early project. Part of the mitigation for that slide mass stabilization was water proofing the surface of the development area so that no water could ever penetrate to the slip surface. This discussion (and especially the mitigation) is not present in 566.

This EIR mentions ephemeral ponds occurring on the site. Are these ponds or puddles caused by an unstable surface? A size reference and location would be some verification that 'ponds' actually exist for more than a few hours. The concern is moisture traps that may lubricate a slip plane surface of a landslide.

The key to the development of this property is the ability to correctly identify the geotechnical problems and stabilize them. Until now, stabilization of the geotechnical issues on this property has not been demonstrated.

In the discussion of landslides (pg. 4.2-8) there is reference to the block failure they claim is inactive. What is the basis of this claim and what are the static and pseudo-static stability of this mass? There are many that do not believe

that it is stable and believe that it will move when lubricated closing El Toro Rd. and Aliso Creek.

CEQA, as stated on the next page, requires this identification of stability if it may impact the project.

Groundwater is talked about and dismissed in the same paragraph. This does not seem appropriate in a drought. Again the concern is slide stability and keeping all sources of water from the potential slip surface. In fact the grading requirements seem to compound the problem.

The EIR talks about some moderately to highly expansive soils. It then talks about not moving any soils off site. This last statement brings forth major concerns. The surface soils are highly organic and any organic content in excess of 0.5% (by weight) causes compaction problems leading to failure to achieve compaction.

> (There are no published documents that support the compaction of soils with organic materials let alone the 3% (volume) indicated in Condition M 2-13 on page 4.2-18.)

The presence of organics in the deep fills required of this project will lead to time/settlement problems that can crack water and drainage lines thus providing moisture to the slip surface mentioned above. If the project does as suggested and the project does not place the organic soils in places where settlement can cause a problem, where will it be placed? This soil is highly erosive.

The compaction levels of 85% mentioned in condition M 2-7 (pg. 4.2-17) is inadequate and will lead to expansion problems in the expansive soils referenced in the EIR unless they are removed from the site.

The compaction referenced in condition M 2-16 (pg. 4.2-18) for 90% for structural fills is inadequate. It should be 95%.

Condition M2-21 (pg. 4.2-19) calls for verification of expansion potential during grading. This is too late. You have to know how to deal with the soils before grading even begins. Feasibility of the project requires this identification before grading.

The "dumping" of runoff into Aliso Creek after all sediments have been removed by the "trapping" devices, now requires stabilization of the tributary flows all

the way to the creek low flow line to prevent "head cutting" of the outlets and subsequent failure of El Toro Rd.

The EIR should contain the geotechnical cross sections showing the relationships of the 'block' slide and all other geotechnical matters that may affect El Toro Rd. The fact that the stability is not discussed in the EIR is a fault that must be corrected. We have had 23 years to assess this stability and it has not been done yet?

County of Orange **MEMO**

DATE: December 26, 2001

TO: Chuck Shoemaker, Chief, Private Projects, Environmental Planning Services

FROM: Johnnie Earnest, Chief, Geotechnical/Grading Plan Check

SUBJECT: Draft Revised Subsequent Environmental Impact Report. EIR No. 566, Saddleback Meadows, PA980103, Tentative Tract Map 15784, Vesting Tentative Tract Map 15230, Orange County, California dated December 2001

The following comments are made relative to the review of Section 4.2 Geophysical Resources and Appendix C Geotechnical Report prepared by G. A. Nicoll and Associates Inc., dated August 30, 2001 and issued under their Project 4816-04.3 contained in the above noted report.

The information provided indicates that the proposed development will contain 299 single family units within a 224+ acres site located on the eastern side of El Toro Road about one-half mile south of the intersection of Santiago Canyon Road and Live Oak Canyon Road. During the past 15 to 20 years this site has been investigated by several geotechnical firms with the most recent studies performed by G. A. Nicoll and Associates, Incorporated. The major problematic areas impacting the proposed development have been identified. Evaluations and mitigation measures have been provided that indicate that the proposed development is feasible. It is noted that the information provided to date is not adequate to obtain a grading permit and will require further refinement.

Some of the items that will require a more detail investigation and evaluations include, slope stability, location and geometry of landslides, orientation of slip surfaces and other planes of weakness, justification of soil parameters especially those used for seismic analyses, settlement of deep fills, impact of groundwater and differential settlement. The above document also notes that about 10 percent of the backcuts for buttresses will fail during grading operations. As previously noted failure of backcuts are undesirable for any portion of a development but are of special concern when they impact adjacent property. Prior to issuance of any grading permit the geotechnical consultant of record must provide guidelines/recommendations to protect off-site property. Another area of concern is the possibility of the need to encroach into designated open space areas to perform remedial grading. This could have a serious impact upon the biological resources of the area.

It appears that the following items need to be revised:

Page 4.2-8 under the heading Landslides, second sentence. One landslide was mapped on the project site...Reference should be to Landslides were mapped on the project site....

Page 4.2-10 under the heading Seismic Hazards, the fifth bullet should be revised as it could lead to miss interpretation. I do not believe the intent of the proposed grading is to stabilize the slopes on the Abbey property.

Page 4.2-14 under PDF2-1 it should be noted that the ultimate design of the Geotechnical Hazard Mitigation Plan 4.2.5 referenced in this section may require some refinement as the seismic analyses performed utilized soil parameters that exceeds the 20 percent increase in static values which most consultants use

As previously noted these conditions do not indicate that the project is not feasible but it could have a significant impact upon the overall cost for development due to the increase in the total yardage required for remedial grading.

More specific comments were previously prepared and submitted relative to the review of the geotechnical report contained in Appendix C. These comments are restated as follows:

The following comments are made based upon a review of the Geotechnical Report prepared by G. A. Nicoll & Associates, Inc. issued under Project 4816-04.3 dated August 30, 2001. The report was submitted as Appendix C of the Draft Revised Subsequent Environmental Impact Report, EIR 566, State Clearinghouse No. 96121072, Volume 2.

1. The geologic map and sections provided in Appendix C (G.A. Nicoll & Associates, Inc. report dated August 30, 2001) have been reproduced at a scale of about 1 inch = 330 feet. This makes it extremely difficult to evaluate the merits of the report. Please provide unreduced drawings.

2. Under Item 1. c) The consultant states that the base plan used contained 318 lots and was very similar to the proposed 299-lot plan with only minor changes. Based upon the last review performed (July 1998) it appears that sufficient time existed to allow the consultant to re-evaluate the site based upon the more recent development plan.

3. While it may be correct that the minor changes would not have a significant impact upon the overall grading conditions given the controversy surrounding the proposed project the most recent plan should be utilized for analyses.

4. Item 1. f) Based upon the information provided the most recent exploration was performed about six years ago. Please explain.

5. As noted under item 4 a more detail evaluation will be conducted (required) during the grading permit application process.

6. Item 4. c) A concern exists relative to the shear strength parameters utilized in the slope stability analyses. The strength parameters used for slope stability analyses

under seismic conditions greatly exceeds the 20 percent increase of the static parameters. Please re-evaluate seismic slope stability analyses.

7. It appears that the most recent exploration referred to under Item 5. b) was performed in 1995 and not within the last year of the subject report dated August 2001 (see comment 4).

8. Under Item 6 on page 4 of the subject report the consultants state that stability analyses were conducted utilizing Alternate 4 Plan grades. This plan, which is reproduced at a scale of about 1 inch to 330 feet, appears to be similar to the proposed Site Plan. However there are differences plans. Given the sensitivity of the area analyses should be performed utilizing the most recent plan. Please refer to the above comments 2 and 6.

9. Item 8.1 c)
There is still concern as to whether the general area represented by Borings BC-12 & 14 should be within the undisturbed bedrock or the landslide area. It is difficult to completely dismiss the interpretation of data by other consults and you own previous conclusions for the inclusion of the subject area within the landslide zone. While the borings you cite according to your most recent interpretation did not disclose the presence of landslide material they did show out of slope bedding and shear zones that could be problematic to development. However as noted by the last paragraph under this heading the only consequence would be a negligible variation in remedial grading quantities. If the landslide were present you estimate that a four percent increase in the remedial grading quantities would be required to construct an upper shear key in the area of Boring BC-14. It should be noted that a four percent increase in this value represents some 272,00 cubic yards of material.

10. Please provide corrective grading recommendations to demonstrate that the subject area meets Code requirements for stability. The additional yardage should be included in the total remedial grading quantity. Alternately you may provide additional subsurface testing and evaluation to demonstrate conclusively that the subject area has not been subject to land movement and that it meets Code requirements.

11. Please explain comment under Item 8.2.1.a) as no recent subsurface information was presented in the subject report. According to the information noted on the logs for test Boring BC – 1 through BC – 17 the exploration occurred in 1995 (see comment 4).

12. You indicate that landslide material is not present within the area represented by Test Boring BC- 15. Explain the inclusion of the note 'landslide material' at a depth of 108 feet on the log.

13. Under Item 9.c) see previous comments regarding design parameters utilized for seismic analyses (see comment 6).

14. Assuming no development occurs the site and adjacent property could be subject to damage by future movement of the existing landslides and other areas of adverse geologic/geotechnical conditions.

15. Under the proposed development plan as well as the alternate designs the open space areas (no remedial grading) within the site and adjacent property could be damaged by future movement of unstable areas, which are located, both on-site and off-site.

16. Unable to locate test Boring BC-13.

17. Previous report indicates that an estimated 10 percent of back cuts are expected to fail during the grading process. Please provide guidelines that can be implemented during the grading process to prevent or limit this type of failure. Back cut failures could have an adverse impact upon the proposed development as well as the adjacent property.

County of Orange **MEMO**

DATE: December 31, 2001

TO: Tim Neeley, Manager, Environmental Planning Services

ATT: Bill Grieman, Planner III

FROM: Matthew Blinstrub, Planner IV, NPDES/Water Quality Management Plan Section, Subdivision & Grading Services Division

SUBJECT: Comments on Draft EIR 566 for PA 98-0103 and Tracts 15784 and 15230.

PROJECT: 299 Single Family Homes on 222.2 acres of land on the NE corner of El Toro Road and Valley Vista Way, at 19658 El Toro Road, in the Foothill/Trabuco Specific plan Area.

The Water Quality Management Plan (WQMP) Section has reviewed the subject Draft Environmental Impact Report (DEIR 566) for Planning Application PA 98-0103 and Tracts 15784 and 15230, and has the following comments:

Recommended Conditions of Approval to be Applied to the Project:

1. Apply WQ4 and HM01.

2. SG SG/PD GR **RUNOFF MANAGEMENT & WATER QUALITY PLAN**
Prior to the recordation of the first final map (either for conveyance or development), or prior to the issuance of any rough or precise grading permit (except for any publicly financed infrastructure), whichever occurs first, the land owner/applicant shall prepare, and receive approval from the Manager, Subdivision and Grading Services Division, in consultation with the Environmental Resources and Flood Program Sections of the PFRD Program Development Division (PDD) of, a Runoff Management Plan (RMP), including a Water Quality Management Plan (WQMP), covering the subject property. The RMP shall include the locations of all permanent large-scale Best Management Practices (BMPs), including filtration devices, such as constructed wetlands, water quality basins, detention basins, debris basins, grass/bioswales, energy dissipaters, catch basin inserts, and other BMPs.

3. SG SG/PD GR **MASTER INFRASTRUCTURE IMPROVEMENTS**
Prior to the recordation of the first final map (either for conveyance or development), or prior to the issuance of any rough or precise grading permit, whichever occurs first, the land owner shall design and construct all applicable master infrastructure improvements identified in the approved RMP, including debris basins, bioswales, energy dissipaters, drainage pipes, and other improvements, and shall provide all necessary dedications, all in a manner meeting the approval of the Manager, Subdivision & Grading Services Division.

4. SG SG R **FINAL MAP NOTE FOR RETENTION BASINS/WETLANDS**
Prior to the recordation of each final map (either for conveyance of development), a note shall be placed on the applicable final map where appropriate, indicating that retention basins and/or constructed wetlands will be required on the property in accordance with the approved RMP, in a manner meeting the satisfaction of the Manager, Subdivision and Grading Services Division.

5. Apply the following custom WQ1/WQ2 Condition, which will apply to discretionary Subdivision Map and/or Planning Applications requesting approval for projects covering the subject property:

SG SG RGB POLLUTANT RUNOFF CUSTOM
Prior to the recordation of a subdivision map, or issuance of precise grading permits or building permits, whichever comes first, the applicant shall submit and obtain approval from the Manager, Subdivision and Grading, of a Water Quality Management Plan (WQMP) specifically identifying Best Management Practices (BMPs) that will be used on site to control predictable pollutant runoff for each site-specific development. This WQMP shall identify, at a minimum, the routine structural and non-structural measures specified in the Countywide NPDES Drainage Area Management Plan (DAMP) Appendix G. The WQMP shall detail implementation of BMPs whenever they are applicable to a project and specify the long term maintenance responsibilities (identifying the developer, parcel owner, maintenance association, lessee, etc.), and shall reference the location(s) of structural BMPs. At a minimum, the WQMP shall include the BMPs specified in the County Drainage Area Management Plan (DAMP) Appendix G, including but not limited to, Filtration (S1), Energy Dissipaters (S12), Inlet Trash Racks (S15), and any "special" BMPs or Project Design Features, included in the approved RMP or related environmental or other planning documents. The above requirements shall be met to the satisfaction of the Manager, Subdivision and Grading. .

6. In addition to the above conditions, the WQMP Section has the following comments:

a) Details must be provided in the EIR and RMP as to where the storm drain outlets will be located and how locating them there will replicate natural flow conditions.

b) The DEIR indicates that the Site Plan has been designed to take advantage of the available space for grassy swales and basins and in-line solutions where space is not available. More clarification is needed in regards to what constitutes "in-line solutions". In addition, all large-scale BMPs identified in and/or anticipated by, the Screencheck EIR and draft RMP/WQMP, including grassy swales, detention ponds, and other large-scale BMPs, need to be clearly shown and labeled on the Site Plan and Tentative Maps, since the configuration and location of the BMPs may impact lot configurations. The proposed water quality-related Project Design Features also need to be shown and labeled on the Site Plan and Tentative Maps.

c) The Site Plan and Tentative Maps should also be revised so that pad elevations are included and contour elevation labels are labeled and readable.

d) The riverine system needs to be discussed and described in more detail, including how the system will function.

e) Pages S-22 through S-23 include a number of spelling errors, wrong words, and incomplete sentences.

f) The Public Facilities & Resources Department (PFRD) is referred to as RFRD on Page 4.4-3.

g) "Prolonged solid stabilization" at the top of Page 4.4-9, is probably meant to read "soil stabilization".

h) Per the County's DAMP, the correct wording in PDF 4-17 on Pages S-23 and 4.4-9, and elsewhere throughout the document is Water Quality Management Plan (WQMP). In

addition, the "trigger point" for compliance with the Water Quality Management Plan Condition (PDF 4-17) is "Prior to the recordation of a subdivision map, or issuance of precise grading permits or building permits".

i) Reword initial paragraph of SC 4-2 on Page 4.4-9 to match the County's Standard Condition.

j) In the second and sixth Bullets on Page 4.4-10, delete references to city equivalent, unless the project is anticipated to be annexed in the near future.

k) It should read "located on" in the first paragraph at the top of Page 4.4-11.

l) In the second Bullet on Page 4.4-11, add "maintenance consistent with the State of California Model Water Efficient landscape Ordinance."

m) In the third Bullet on Page 4.4-11, retention of maintenance records should not be limited to 3 years, since longer retention periods will be required as part of the new NPDES Permit.

n) The conclusion of the Water Quality Section of the DEIR is that, with the identified PDFs, water quality impacts will be reduced to a less than significant level. If this is the case, and the EIR's conclusions are based on the fact that these PDFs (i.e., BMPs) will be used, then how can M 4-1 be proposed on Page 4.4-12, which could result in eliminating some or all of the filtration basins? Consideration should be given to this issue if this option is to remain, and discussions should be included about the additional adverse impacts associated with the elimination of such features, and about what other State or Federal agencies must approve the elimination of the on-site filtration basins (which it appears will also function as fairy shrimp habitat), should regional improvements be determined to be acceptable in lieu of the on-site filtration basins.

o) Eliminate words such as "should" and "would" and use "shall" and "will" (Ex., top of S-21).

p) Include the following in the EIR and RMP: Details of the Low flow diversion devices to be used; details of the landscaped detention areas, including specifications as to the type of plant species to be maintained in them, and the frequency and type of maintenance required; details regarding inspections and maintenance of BMPs in the permanent open space area, including how the permanent endowment funding mechanism will work, and the identification of the responsible party.

Thank you for the opportunity to comment on the subject project.

Re: Saddleback Meadows; Notice of Intent, EIR No. 566

Dear Mr. Grieman,

The Orange County Fire Authority has reviewed the proposed Saddleback Meadows residential project. While significant fire service issues exist regarding this project, they are adequately addressed in mitigation measures listed in the Revised Subsequent Environmental Impact Report. We have no additional comment at this time.

The Orange County Fire Authority looks forward to continuing its participation in the review of this project. Should you have any additional questions, please contact me at (714)744-0484.

Sincerely,

Michael S. Rohde
Battalion Chief/Advance Planning

SUBJECT: **Saddleback Meadows No. 566 – Screencheck Draft**

Environmental Resources has reviewed the subject draft and has the following general and specific comments.

General Comment

The general project design features described in Section 2.3.1 and the specific ones for water quality described in Section 4.4.4 do not adequately assess to the water quality problems in Aliso Creek and respond to the project's impact on these conditions. In particular, the San Diego Regional Water Quality Control Board has taken two significant actions in the last year with respect to water quality in Aliso Creek and its tributaries and storm drains, which are not recognized in the screencheck:

- Issued a 13225 Directive to the County and all the cities in the Aliso Creek watershed to assess and improve water quality with respect to bacterial indicators of recreational health.

- Proposed expanding the listing of water quality impairments in Aliso Creek. Currently, the Creek is listed for elevated bacterial indicator levels in the lower one mile. The proposed listing would make this applicable to the entire Creek and also add new listings for aquatic toxicity and phosphorus

The County and cities in response to the 13225 Directive have monitored 35 large storm drain inputs to Aliso Creek and have compiled extensive data into three quarterly reports to date. The data shows that the almost every storm drain routinely exceeds the levels for water contact recreation (similar data has been found by the Health Care Agency in a study of San Juan Creek). Only storm drains without dry season flow have met the standards.

These actions indicate that the screencheck should be broadly revised as follows:

a) A project design goal should be established to minimize or eliminate dry season flows reaching Aliso and Oso Creeks, since these will almost certainly exceed recreational use standards irrespective of the BMPs applied on the site. This may be achieved by focusing on irrigation practices in the development that may cause water runoff and applying source control practices at a design level identified in references such as the *Start at the Source Manual (1999)* prepared by the Bay Area Stormwater Management Agencies Association.

b) For storm events, the water quality design should be quantified with respect to the size of storm event that will be treated and the effects on the pollutants of concern during storm events. The proposed riverine urban runoff filtration system, for example, has no sizing information with respect to its water retention time and, as described, is unlikely to have a significant impact on dissolved toxic constituents, such as organophosphate pesticides, and bacterial indicators, which are problems in Aliso Creek. The riverine filtration system may even attract wildlife, if not designed otherwise, contributing to the loading of bacterial indicators.

Without this kind of commitment and analysis the finding that the water quality impacts are mitigated to a level less than significant (Section 4.4.7) is not supported.

Specific Comments

1. Section 4.3.1 and 4.4-3 – These sections describe Aliso Creek as variously being 19 and 16.5 miles from the headwaters to the ocean. The latter number is more often cited.

2. Section 4.4.1 (page 4.4-3) – The Public Facilities and Resources Dept should be abbreviated to PFRD not RFRD.

3. Section 4.4.1 (page 4.4-3) – The description of surface water beneficial uses discusses REC-1 and REC-2 uses but does not identify the other beneficial uses of the Creek.

4. Table 4.4.1 – The table does not identify the narrative standards contained in the Basin Plan or the standards contained in the California Toxics Rule.

5. Section 4.4.2 (page 4.4-4) – As described in the general comment above, all storm drain inputs to Aliso Creek exceed water quality standards during low flow and storm flows and therefore meet the significance threshold.

6. Section 4.4.2 (page 4.4-5) – The list of sources of urban runoff pollutants should recognize that many bacterial indicators have unidentified sources. Work by the University of California Davis for example has found that runoff from dirt and turf

grass areas is high in bacterial indicators with no obvious fecal source of contamination.

7. Section 4.4.2 (page 4.4-6) – The urban drainage system can be modified to include water quality design features at an individual house or street basis while still meeting broader flood control objectives (see *Start at the Source).*

8. Section 4.4.4 (page 4.4-6) – The statement that the "water quality filtration system will effectively remove low flow urban runoff pollutant(s) prior to entering Aliso Creek" cannot be supported given the information provided above. Some reduction in bacterial indicators and toxic constituents may be achievable but not removal.

9. Section 4.4.4 (page 4.4-7) – The statement that erosion is "plaguing the property" appears to indicate that all erosion is deletenous. If the erosion is natural then the property may an important source for contributing sand to replenish beaches downstream. If the property has been disturbed by grazing and other activities resulting in excessive erosion then this increased loss of soil may in fact be deleterious. The issue should be clarified.

10. Section 4.4.4 (page 4.4-7) – PDF 4-5 indicates using narrower streets. The proponent should clarify with the Fire Dept. that they will allow a narrower standard.

11. Section 4.4.4 (page 4.4-8) - The Stormceptor technology may trap phosphorus attached to sediment but has no known effect on bacterial indicators or toxic constituents. In addition Stormceptors include bypass features for significant storm events. 20 percent of the project drainage therefore appears to have BMPs proposed that do not focus on the constituents of concern.

12. Section 4.4.4 (page 4.4-9) – Appendix G of the DAMP requires the preparation of a Water Quality Management Plan (WQMP not a Water Quality Control Plan) which includes a standard list of routine structural and non-structural BMPs as well as special BMPs as necessary. All of the BMPs in Appendix G that are applicable to residential areas must be incorporated into the project. The riverine filtration and landscape irrigation BMPs discussed above should be incorporated into the WQMP as BMPs S1, S2 and S3 and the Stormceptors, if included, may be a special BMP.

13. Section 4.4.4 (page 4.4-10) – It should be clarified as to who will be responsible for maintaining the structural BMPs, including the riverine filtration on the project site. Responsibility for the non-structural features is assigned to the Home Owners Association, but no comparable assignment is proposed for the structural elements.

14. Section 4.4.6 (page 4.4-12) – M 4-1 should be revised to reflect that off-site water quality improvements must be consistent with the requirements of the new stormwater NPDES permit for South Orange County (Section F-1 of Order 2002-0001).

If you have any questions please contact me at 567-6360.

COUNTY OF ORANGE

PUBLIC FACILITIES & RESOURCES DEPARTMENT

DATE: April 2, 2002

TO: Tim Neely, Manager, Environmental Planning

FROM: Rob Selway, Chief, Historical and Cultural Programs

SUBJECT: Revised Draft EIR 566 for Saddleback Meadows

Thank you for the opportunity to comment. Historical Programs has reviewed the DEIR for Saddleback Meadows Project, and we have the following comments, many of which were made during an earlier review cycle:

- The cultural resources mitigation language used in the EIR should be updated to address current standards for artifact curation and long-term collection management. The current conditions have been in place for several years. The updated language protects the County at the time collections are donated so that our warehouse facility is not burdened with responsibility to accept unprepared artifacts and assume curation costs. The mitigation measures for archaeological resources do not contain the current requirements for donation or curation of cultural resources. The paleontological mitigations do not mention potential curation fees. Therefore the following two comments provide mitigation language that must be included in the EIR:

  The Board of Supervisors requires cultural resource collections, which may be discovered during the site development, be donated to a suitable repository that will maintain the collection for future scientific study and exhibition **"within Orange County."** Prior to donation, the certified cultural resources consultant should prepare the collection **"to the point of identification."**

  The project proponent should be prepared to pay **"potential curation fees"** to the County repository for the long-term curation and maintenance of donated collections.

- PDF-10-1 states that ORA-710 will be covered and preserved in a biological conservation easement. Perhaps the site could be protected within a duel conservation easement, thus preventing any disturbance. Earth-disturbing activities, including biological enhancement programs, should not occur unless monitored by a certified archaeologist. Fencing, plantings and water systems for biological areas can threaten the covered cultural resources, especially if the primary purpose of the easement is viewed as biological conservation, then the archaeological resources may be overlooked. Such improvements must be considered by a n archaeologist to avoid the known site.

TO: Tim Neely Manager, PDSD/Environmental Services Division

ATTN: Bill Grieman

FROM: Chief, PFRD/HBP Program Management & Coordination-Facilities Development

SUBJECT: Screencheck "Pre-Draft" Revised Subsequent EIR 566/Sadddleback Meadows

HBP Facilities Development staff, in consultation with HBP Trails Implementation staff, has reviewed subject screencheck documentation and offers the following comments:

A. <u>Summary of Impacts/Mitigation Measures, Table 1.1</u>:

1. *Page 1-12, Land Use Compatibility*; text should be revised to indicate the County requests the acreage offered for regional park expansion be dedicated to the County as Resource Preservation Easement area excluding manufactured slopes per our earlier comments.

2. *Page 1-36, PDF 11-2*; change to read as follows:

"The Live Oak Canyon Regional Riding and Hiking Trail, as *well as an east-west aligned local riding and hiking trail connector to the off-site* Viewpoint Spur Trail, shall be located on-site within recreation easements for riding and hiking trails.

3. *Page 1-38, M 11-4, Local Riding and Hiking Dedication*; revise to read as follows:

"A local riding and hiking trail is to be dedicated to the County within a recreation easement aligned *east-west* through the project *connecting to the off-site Viewpoint Spur Trail.* Dedication of the recreation easement and improvements shall be done in compliance with the conditions listed above *for regional trail dedications. Maintenance of the local trail shall be the responsibility of the applicant or its assigns".*

B. <u>Section 2.0, Project Description</u>:

1. *Page 2-7, second paragraph* ; the DEIR should clearly delineate the location of Aliso Creek on a map, preferably within Section 4.3, Hydrology.

2. *Page 2-15, 5th bullet point*; change to read as follows:

"*Construction and* dedication of *an east-west local riding and hiking trail connector to the offsite* Viewpoint Spur Trail to the County within a recreation easement through the proposed project".

3. *Page 2-15, 9th bullet point*; revise to read as follows:

" . . . of approximately 53.65 acres of Scenic Preservation *Easement* Area is . . ."

4. *Page 2-15, 10th bullet point*; change to read as follows:

"An offer of dedication of approximately 83.25 acres to the County of Orange as a Natural Resource Protection Area *within a Resource Preservation Easement*".

5. Page 2-16, 1st bullet point; revise to read as follows"

" An offer of dedication of approximately 11.65 acres of Biological Mitigation Area *within Scenic Preservation Easement areas*".

A scenic preservation easement is requested by HBP as mitigation areas are largely within manufactured slope areas.

C. Section 4.1, Land Use:

1. *Page 4.1-11, 1st paragraph, 2nd sentence*; change to read as follows:

"As part of the proposed project, approximately 83.25 acres of the site would be dedicated by the applicant to the County of Orange *within a Resource Preservation Easement*".

D. Section 4.8, Biological Resources:

1. *Page 4.8-29, SC 8-6(3) Tree Replacement Scale*; revise scale as standard condition size is for 15-gallon replacement species. FTSP requirement is the same.

2. *Page 4.8-29, SC 8-6(5), second sentence*; 35-inch+ alternative tree replacement standard cited is inconsistent with County requirement in SC 8-6(3). The County *does not have two standards* for trees exceeding 35-inches in diameter. Please delete second sentence.

E. Section 4.9, Aesthetics/Visual:

1. *Page 4.9-20, SC 9-1*; delete reference to "its designee in-fee". County is *not* accepting fee dedication, only scenic and resource preservation easement dedications to ensure preservation of open space in perpetuity through the Saddleback Meadows project, if approved.

F. Section 4.11, Recreation:

1. *Figure 4.11.1*; correct figure nomenclature is "Foothill/Trabuco Specific Plan *Recreation* Plan" per Exhibit II-8 of the FTSP. Please revise.

2. *Page 4.11-8, M 11-4, Local Riding and Hiking Trail Dedication*; change to read as follows:

   "*A* local riding and hiking trail is to be dedicated to the County within a recreation easement aligned *east-west* through the proposed project *connecting the Live Oak Canyon Trail to the offsite Viewpoint Spur Trail.* Dedication of the recreation easement and improvements shall be done in compliance with the conditions listed above. *Maintenance of the local trail shall be the responsibility of the applicant or its assigns*".

3. *Page 4.11-5, last paragraph, second sentence*; change to read as follows:

   " . . . Aliso Creek Trail via Live Oak Canyon Trail and *local east-west riding and hiking trail to offsite* Viewpoint Spur Trail (see Figure 4.11.2)".

4. *Page 4.11-6, PDF 11-1*; revise to read as follows:

   "The local east-west riding and hiking trail shall be constructed onsite, *linking to the offsite Viewpoint Spur Trail*, ultimately . . ."

5. *Page 4.11-7, PDF 11-2*; change to read as follows:

   " . . . , as well as the local *east-west riding and hiking trail connection to the offsite Viewpoint Spur Trail, . . .*"

G. Additional Comments From HBP Trails Implementation Staff:

(Note, due to HBP staffing and time constraints it was not possible to merge the following additional comments with those in A through F, above. However, the comments are internally consistent throughout.)

1. *HBP is withdrawing its request for a staging area near the entrance to the project.* Instead, we are requesting only a *small rest area* at the same location, with no vehicular parking. (To distinguish this feature from the Ridgetop Rest Area, we suggest referring to it as the Entry Rest Area.) The Entry Rest Area would be described as follows:

   - Smaller in size than the original proposed staging area.
   - No vehicular parking.

- Amenities would include benches, fencing, a bike rack, a horse tie-up, and landscaping with shade trees.

Where appropriate, our following comments reflect this change from staging area to rest area.

2. *Page 1-24*:

- *PDF 5-2*; revise as follows: "The entry street shall be designed to include a traffic signal, a crosswalk for the Live Oak Canyon Trail..."

- *M 5-2*; revise as follows: "The developer shall provide a traffic signal at the main project access point to El Toro Road, pedestrian buttons and separate horse-height buttons on the north and south sides of the entry road (to accommodate the Live Oak Canyon Trail), and trail warning signage."

3. *Page 1-36*:

- *Recreation, third sentence*; revise as follows: "However, the project proposes two rest areas and trail connections to the Aliso Creek Trail and Live Oak Canyon Trail."

- *PDF 11-1;* revise as follows: "A Local Trail shall be designed and constructed per County of Orange standards for a regional riding and hiking trail. The trail shall be aligned east-west and set back from the project's main road by at least 10 feet, to provide space for shade trees and landscaping. The trail shall connect to both the Viewpoint Spur Trail and the Live Oak Canyon Trail.

- *Add PDF 11-3;* "A trail rest stop (Entry Rest Area) shall be designed and constructed on the north side of the project entry road."

- Add PDF 11-4; "A trail rest stop (Ridgetop Rest Area) shall be designed and constructed. The rest area shall be located at a high point about 700 feet south of the water tank site (in the northeast area of the project site)."

4. *Page 1-37, M 11-3, 1b*; delete "and a grade-separated crossing".

5. Page 1-39:

- *M 11-5*; revise the mitigation measure as follows:

  "A trail rest stop (Ridgetop Rest Area) shall be located at a high point about 700 feet south of the water tank site (in the northeast area of the project site). The subject rest stop and related amenities...shall be constructed and dedicated to the County. The rest stop shall connect to the Viewpoint Spur Trail via the Local Riding and Hiking Trail."

- *Add M 11-6*:

"A trail rest stop (Entry Rest Area) shall be located on the north side of the project entry road. The subject rest stop and related amenities (benches, fencing, a bike rack, a horse tie-up, and landscaping with shade trees) shall be constructed and dedicated to the County. The rest stop shall connect to the Local Trail."

6. *Figure 2.7: Proposed Site Plan*:

Add the Live Oak Canyon Trail (which the applicant is to improve and dedicate to the County).

7. *Page 2-15, 4th bullet point*:

Revise as follows: "Construction and dedication of the Live Oak Canyon Regional Riding and Hiking Trail, within a recreation easement aligned north-south from the Aliso Creek Trail to the southerly project boundary. The project also includes two trail rest stops, the Entry Rest Area and the Ridgetop Rest Area (see Figure 2.7)."

8. *Page 2-18, Transportation/Circulation*:

Revise the first sentence as follows: "...immediately south of the existing Aliso Creek Bikeway/Trail undercrossing structure."

9. *Page 4.5-13, Bikeway Facilities*:

- Delete the reference to the Master Plan of Countywide Bikeways. This was replaced in 1995 by OCTA's regional Commuter Bikeways Strategic Plan (CBSP). (The County has a plan that serves as a subset of the CBSP. Known as the "Bikeway Plan", it covers only the unincorporated areas and bikeways along certain flood control channels.)

- The El Toro Road Bikeway is a Class II (on-road, striped lanes) bikeway, rather than a Class I (paved off-road) bikeway. (The Class I bikeway in this area is the Aliso Creek Bikeway.)

- Throughout this section, change "trail" to "bikeway". "Trail" refers to unpaved riding and hiking trails. "Bikeway" refers to paved routes (on-road and off-road).

- In the project vicinity, there are four proposed or existing regional bikeways: the Aliso Creek Bikeway (Class I), the El Toro Road Bikeway (Class II), the Santiago Canyon Road Bikeway (Class II), and the Live Oak Canyon Road Bikeway (Class II).

- Re-write the first paragraph to reflect the comments above, and delete the second paragraph (as some phrases are incorrect).

10. *Page 4.5-28, PDF 5-2*; Revise to read as follows: "The entry street shall be designed to include a traffic signal, a crosswalk for the Live Oak Canyon Trail..."

11. *Page 4.5-30*:

Add M 5-3; "The applicant shall provide a traffic signal at the main project access point to El Toro Road, pedestrian buttons and separate horse-height buttons on the north and south sides of the entry road (to accommodate the Live Oak Canyon Trail), a crosswalk for the trail, and trail warning signage."

12. *Page 4.11-3, Regional Bikeways*:

Include the following: "The project also abuts the El Toro Road Bikeway, a regional Class II (on-road, striped lanes) bikeway along El Toro Road."

13. *Page 4.11-3: Riding and Hiking Trails*:

- Change the second sentence to read: "Regional riding and hiking trails are intended for use by equestrians, pedestrians (walking, hiking, and jogging), and mountain bicyclists". (Delete the phrase, "depending on the trail surface and its designated use". All regional riding and hiking trails have a natural or decomposed granite surface, and are used by all three user types.)

- In the third sentence, delete the reference to the El Toro Bikeway. (See above.)

- Change the second paragraph to read "The Aliso Creek Trail begins in Aliso-Wood Canyons Regional Park and continues northward along Aliso Creek. The trail enters the project site from the west at the existing El Toro Road trail/bikeway undercrossing, and continues northward along the east side of El Toro Road. North of Live Oak Canyon Road the trail becomes the Santiago Creek Trail. The Aliso Creek Bikeway is generally parallel to this trail."

14. *Figure 4.11.2*:

Show the Aliso Creek Bikeway continuing west (through the bikeway/trail undercrossing) and south (parallel to the Aliso Creek Trail).

15. *Page 4.11-6: Project Impacts*:

- Note that the Live Oak Canyon Trail currently exists as a single-track trail along the west side of the project site, and must be kept open during construction.

- Change the first sentence in the last paragraph to read, "The applicant would improve the existing Live Oak Canyon Trail per County regional trail standards."

16. *Page 4.11-7*:

- *Add PDF 11-3*: "A Local Trail shall be designed and constructed per County of Orange standards for a regional riding and hiking trail. The trail shall be set back from the project's main road by at least 10 feet, to provide space for shade trees and landscaping. The trail shall connect to both the Viewpoint Spur Trail and the Live Oak Canyon Trail.

- *Add PDF 11-4*: "An Entry Rest Area shall be designed and constructed on the north side of the project entry road, near the project entrance. The rest area shall connect to the Local Trail."

- *Add PDF 11-5*: "A Ridgetop Rest Area shall be designed and constructed on the east side of the project site. The rest area shall connect to the Viewpoint Spur Trail via the Local Trail."

17. *Page 4.11-8, M 11-3, 1b*:

Delete "and a grade-separated crossing".

18. *Page 4.11-8, M 11-5*:

HBP was incorrect in earlier comments regarding the location of the rest area and the Viewpoint Spur Trail. Therefore, revise the mitigation measure as follows:

"A trail rest stop (Ridgetop Rest Area) shall be located at a high point about 700 feet south of the water tank site (in the northeast area of the project site). The subject rest stop and related amenities...shall be constructed and dedicated to the County. The rest stop shall connect to the offsite Viewpoint Spur Trail via the Local Riding and Hiking Trail."

19. *Page 4.11-8/9*:

- *Add M 11-6 to read as follows:*

Entry Rest Area: "A trail rest stop (Entry Rest Area) is to be constructed and dedicated to the County. The rest stop shall be located north of the project entry road, near the project entrance. The rest area shall include the following amenities: fencing, benches, a bike rack, a horse tie-up, and landscaping with shade trees. The rest stop shall connect to the Local Trail."

Thank you for the opportunity to comment. Should you have any questions, please contact Wayne Johnson at 834-6787 or Jeff Dickman at 834-5372.

Eric Jessen

County of Orange **MEMO**

DATE: April 9, 2002

TO: Tim Neely, Manager, Environmental Planning Services

Attention: Bill Grieman

FROM: Manager, Subdivision and Grading Services

SUBJECT: Traffic Review
Pre Draft Revised Subsequent EIR 566
Saddleback Meadows

This is a Pre-Draft Environmental Impact Report (EIR) for the proposed Saddleback Meadows project.

The site is comprised of a 299 unit single family residential development located on the eastern side of El Toro Road, approximately one-half mile south of the intersection of Santiago Canyon Road and Live Oak Canyon Road.

DISCUSSION:

Traffic Review has reviewed the Draft Revised Subsequent Environmental Impact Report 566 titled; "Saddleback Meadows" – dated March, 2002, prepared by HDR, and the associated Traffic Study titled; "Saddleback Meadows Growth Management / CMP Traffic Analysis (Revised)" – dated February 4, 2002, prepared by Urban Crossroads, Inc. Traffic Review has the following comments:

DRAFT EIR:

- Page 1-25 Table 1.1 - Summary of Impacts / Mitigation Measures:

  Need to add mitigations for off site intersections identified as impacted in the Traffic Study.

Section 4.5 Transportation / Traffic

- Page 4.5-22

  Need to identify the following six intersections as project impacts and identify project fair share of the proposed improvements:

  1. El Toro Road at Ridgeline Road
  2. El Toro Road at Valley Vista Way
  3. El Toro Road at Glenn Ranch Road
  4. Portola Parkway at Glenn Ranch Road
  5. Portola Parkway at Foothill Transportation Corridor (FTC)
  6. Portola Parkway at El Toro Road

DISCUSSION: continued

DRAFT EIR: continued

Section 4.5 Transportation / Traffic continued

- Page 4.5-27

  Need to identify project fair share percentage of improvements to Santiago Canyon Road and payment of fees in addition to standard Santiago Canyon Road Fee Program as mitigation.

- Page 4.5-29

  Need to revise section 4.5.5 to accurately identify that the circulation system requires improvements to mitigate project increases. Revise the second sentence to read "Under 2025 plus project without proposed improvements, the circulation system would not operate at acceptable LOS at six intersections and along Santiago Canyon Road."

- Page 4.5-30

  Add the fair shares for identified intersections and Santiago Canyon Road improvements as mitigation measures.

APPENDIX "F" - TRAFFIC STUDY:

- Page 4-9 Table 4-3

  Identify Portola Parkway at Foothill Transportation Corridor (FTC) as a 0.03 ICU project increase.

- Page 4-17 Table 4-6

  Identify the amount of ICU increase for:

El Toro Road at Ridgeline Road	⇒	0.01
El Toro Road at Project Entrance	⇒	0.99
El Toro Road at Valley Vista Way	⇒	0.08
El Toro Road at Glenn Ranch Road	⇒	0.09
Portola Parkway at Glenn Ranch Road	⇒	0.04
Portola Parkway at El Toro Road	⇒	0.01

DISCUSSION: continued

APPENDIX "F" - TRAFFIC STUDY: continued

- Page 4-19

Section "C"

Need to identify the ICU increases, project fair share and required improvements for the six impacted intersections.

Section "D"

Need to include a Highway Capacity Manuel (HCM) Rural Two Lane Road analysis of Santiago Canyon Road. Also need to identify amount of project impact and proposed mitigations.

Patrick J. Stanton

APPENDIX B

PROJECT CHRONOLOGY

APPENDIX B: SADDLEBACK MEADOWS
SUMMARY LAND USE ENTITLEMENT PROCESSING CHRONOLOGY
(1978 – 2001)

August 1978

- ✓ The Board of Supervisors of Orange County approved General Plan Amendment 78-1. Final Environmental Impact Report #59 was prepared and certified in conjunction with plan amendment.

March 1979

- ✓ The property owner submitted a Zone Change Application, Tentative Tract Map and Initial Study requests for mobile home subdivision to Orange County.

December 1980

- ✓ The Board of Supervisors approved Tentative Tract Map 10692, calling for development of a 714 lot single-family mobile home/manufactured housing subdivision and a small commercial site.

June 1984

- ✓ The Board of Supervisors approved the Development Plan (2nd revised) for Saddleback Meadows. This plan called for the 705 lot mobile home/manufactured housing subdivision and 1.7 acres of neighborhood commercial use.

October 1984 through July 1986

- ✓ The Orange County Subdivision Committee approved a 589-day tolling of the deadline to record the Final Map for Tentative Tract 10692 in October 1984. This action extended the expiration date for recording the Final Map for Saddleback Meadows to July 1986.

July 1986 through November 1998

- ✓ Sewer Moratorium. The Final Map did not record on in July 1986 because on July 16, 1986, the Santa Ana Mountains County Water District imposed a sewer moratorium. This moratorium tolled the expiration deadline for the tentative map until the moratorium was lifted in November 1988.

December 1988

- ✓ Final Map No. 10692 was recorded, and associated improvement bonds and fees (in excess of $2,000,000) were paid.

1990 through 1993

- ✓ During this period the Saddleback Meadows property was involved in various thrift regulation, bankruptcy and foreclosing proceedings

December 1991

- ✓ The Board of Supervisors approved the Foothill/Trabuco Specific Plan which incorporated for the Saddleback Meadows property the site plan and development standards of Final Map (10692)

April 1994

- ✓ California Quartet filed with the County a Grading Application GA940031 for a portion, approximately 98 acres, of the site.

August 1994

- ✓ The environmental "Initial Study" was completed for the Grading Application and County staff decided that an environmental impact report (EIR) was necessary.

- ✓ California Quartet files a Letter of Appeal with the County, contesting the requirement for an EIR for the Grading Application.

January 1995

- ✓ After several postponements, two hearings were held before the Planning Commission regarding the appeal of the EIR requirement (on January 17, & 31, 1995).

- ✓ On January 31, 1995 California Quartet. Ltd. withdrew the appeal of the County's determination to require the preparation of an EIR and clarified its intent to pursue a project that is more environmentally sensitive than the approved (705 lot) Final Map. The Planning Commission directed the applicant to develop a more compatible project in response to public testimony, staff concerns, and the Planning Commissions' direction (a process that was to take approximately 120 days).

February through June 1995

- ✓ California Quartet initiated contacts with community residents and neighboring property owners and undertook an intensive data gathering and design process.

- ✓ On June 9, 1995 a meeting with staff of the U.S. Fish and Wildlife Service (USFWS) and California Department of Fish and Game (CDFG) was held at USFWS offices at Carlsbad to discuss environmental permitting.

- ✓ The initial design process continued from February through late June 1995. On June 30, California Quartet submitted a 318-lot proposal for informal review by County staff. The submittal was called a "Revised Site Development Plan for Saddleback Meadows."

July 1995

- ✓ California Quartet submitted a formal Planning Application to the County based on a revised project proposal for 318 lots. The Planning Application consisted of:
    - o Zone change;
    - o Area Plan;
    - o EIR 561;
    - o A Site Development Permit for geo-technical testing on the property was processed to permit continuation of geo-technical testing on the site after the County issued a stop-work notice[1].

August through December 1995

- ✓ County staff completed the Initial Study on August 11, 1995 and issued and a Notice of Preparation (NOP) of an Environmental Impact Report for the revised project.

- ✓ California Quartet conducted an additional work session with community residents on August 14, 1995.

- ✓ The County staff convened on August 24, 1995 a public meeting on the revised project in the form of a Public Scoping meeting in conjunction with the preparation of the Draft EIR.

- ✓ California Quartet arranged for and participated in meetings with representatives of the neighboring St. Michael's Abbey and other nearby property owners contacted all the neighboring homeowner's associations to arrange for meetings to review their potential concerns.

- ✓ In October 1995, California Quartet sent an informational mailer with detachable questionaire to over 2,000 households in the area.

[1] *This exploratory work was performed to provide geological data for use in conjunction with the revised site development plan. The County determined that since this was a new application, the Saddleback Meadows project would have to abide by the geo-technical investigation requirements of the Foothill Trabuco Specific Plan. The Specific Plan requires a site development permit to allow geo-technical testing on any property contained within the boundaries of the Specific Plan area, although Final Map 10692 is exempt from the requirements of the Specific Plan.*

- ✓ California Quartet also contacted members of the Foothill/Trabuco Specific Plan Review Board.

- ✓ On October 15, 1995 California Quartet submitted the Application for Vesting Tentative Tract Map 15230 that was based on the revised site plan.

- ✓ On November 9, 1995 a work session was held at the Saddleback Meadows property. Attendees included representatives of the Army Corps of Engineers (USACE), California Department of Fish and Game (CDFG), County of Orange (Harbors Beaches and Parks), California Quartet and environmental consultants. The purpose of the session was to familiarize environmental permit agency staff with the site and to identify issues and concerns to be addressed in processing permits with USACE, USFWS and CDFG.

- ✓ County's planning staff met with staff from USFWS & CDFG on December 15, 1995 to discuss the proposed Saddleback Meadows project

February 1996

- ✓ County environmental review staff filed a Notice of Completion of the Draft Environmental Impact Report and begins the public circulation and comment period on February 5, 1996.

- ✓ The County's Director of Planning discussed Draft EIR 561 at the Foothill Trabuco Review Board meeting of February 16, 1996.

- ✓ The draft EIR was delivered to the USACE, CDFG and USFWS on February 13, 1996. On February 26, 1996 a meeting was held to present the Saddleback Meadows Draft EIR (#561) to representatives of the environmental permitting agencies. This session was held at the Carlsbad offices of the USFWS and attended by representatives of the USFWS, CDFG, and USACE.

March 1996

- ✓ On March 8, 1996 the Foothill Trabuco Review Board considered the alternative plan proposed for the Saddleback Meadows property and heard testimony from the public.

- ✓ On March 19, 1996 the first Planning Commission hearing on the revised project proposal was held. The purpose of this first hearing was to afford the public an opportunity to comment on the Draft EIR document prior to the close of the 45-day public comment period (March 25, 1996).

- ✓ A second Planning Commission public hearing was held on April 2, 1996 at which California Quartet provided a detailed briefing on the proposal for a revised project.

- ✓ Letters commenting on the Drafr EIR were received from the California Department of Fish and Game and United States Fish and Wildlife Service on March 25, 1996.

May 1996

- ✓ On May 5, 1996 the third Planning Commission hearing was postponed due to County staff concerns about the Resource Agencies (U.S. Fish and Wildlife Service & California Department of Fish and Game) sudden and unexpected reversal of their position on the location and design of the wildlife corridor.

- ✓ On May 8, 1996 a work session was convened with County EMA staff regarding alternative wildlife corridor alignments. General and specific discussion regarding suggestions for design modifications with the applicant explaining the economic/financial ramifications of the suggestions and how they would render the project infeasible from an economic and development objective standpoint EIR alternative No. 7 was reviewed with particular focus on the size and width concerns of the wildlife corridor, which had appeared to be the primary source of the environmental agency concerns regarding the proposed project.

- ✓ On May 17, 1996 a work session was convened. Representatives of the USACE, CDFG, USFWS and County staff discussed wildlife corridor design issues and Alternative 7. The resource agencies, primarily the CDFG asked for significant changes in the wildlife corridor location/alignment and its design. These comments conflicted with earlier comments from the agency.

- ✓ On May 20, 1996 the same environmental agency representatives who attended the May 17, 1996 participated in a tour of the Saddleback Meadows property. The purpose of this tour was to visualize in the field what was discussed at the previous week's session (May 17th).

- ✓ On May 23, 1996 the first meeting was held with new counsel representing St. Michael's Abbey This meeting served to re-establish dialogue with applicant. The Abbey had suddenly, and without explanation, terminated discussion in November of 1995.

- ✓ Based on comments from May 17 and May 20, 1996 sessions with representatives of environmental agencies several additional alternative development plans were prepared and presented to County planning staff on May 24, 1996.

- ✓ A meeting with County staff was held on May 28, 1996 to discuss further refinements of the alternative development plans.

June 1996

- ✓ Prior to the June 5, 1996 Planning Commission public hearing (this was to be hearing number 3) EMA staff recommended that the Planning Commission approve a project with a reduced lot yield of 299 lots (to become known as Alternative No. 8.)

- ✓ On June 5, 1996 the third Planning Commission public hearing was held. EMA staff recommend Alternative No. 8 with 299 Lots, California Quartet, Ltd. countered with a version of Alternative No. 8 with 318 lots fitting within the same development footprint as the 299 lot project. The Planning Commission continued the hearing to July 10, 1996.

July 1996

- ✓ In early July 1996 the Orange County Tax Assessor's Office approved a payment plan for resolving the former owner's property tax delinquencies that dated back to 1991.
- ✓ On July 10, 1996 the fourth Planning Commission public hearing was held. After the staff recommended approval of a 299-lot project, the matter was continued to July 30, 1996.
- ✓ On July 19, 1996 the Foothill Trabuco Review Board considered further refinements the alternative plan as proposed and revised by California Quartet for the Saddleback Meadows property and heard testimony from the public.
- ✓ On July 30, 1996 the fifth Planning Commission public hearing was held and the Planning Commission was unable to reach agreement on the lot yield. The Commissioners voted four times on varying lot yields ranging from 318 lots to 260 lots. However, a majority of the commissioners were in agreement on the proposed development footprint as depicted by Staff recommended Alternative No. 8. The Commission voted to recommend that the Board of Supervisors certify the EIR for the project.

August through September 1996

- ✓ On August 2, 1996 California Quartet, Ltd. appealed the Planning Commission action of July 30, because the Commission's failure to reach agreement on the lot yield represented a "de-facto" project denial.
- ✓ The Saddleback Valley Unified School District Board approved a school facilities mitigation agreement for Saddleback Meadows (September 3, 1996).
- ✓ On September 10, 1996 California Quartet submitted a revised site plan (referred to as Alternative 9) that had a lot yield of 318 lots to County staff and requested that this alternative be considered by the Board of Supervisors as a plan, which better addressed the concerns and issues raised by the public, and the Planning Commissioners at the previous hearing.
- ✓ On September 20, 1996 the Foothill Trabuco Review Board considered Alternative 9 (318-lots) and representatives of California Quartet made a presentation and answered questions.

October 1996

- ✓ The Orange County Board of Supervisors held on October 22, 1996 a public hearing on the appeal of Planning Commission decision of July 30, 1996. Supervisor Silva recused himself from voting on the project and the Board denied the Appeal. The Supervisors then considered a motion to approve a project with a density cap of 100 lots (Draft EIR alternative No. 4). The motion did not carry and, at the request of Supervisor Stanton, the Board directed staff to report back to the Board on the process to initiate a reversion to acreage on the Saddleback Meadows property, (i.e. remove the existing Recorded Final Tract Map).

November 1996

- ✓ On November 5, 1996 the Board of Supervisors heard a County staff report concerning the reversion to acreage procedure. The motion to initiate the reversion to acreage did not carry. Supervisor Saltarelli requested staff to inquire about the potential acquisition of the Saddleback Meadows property for public purposes. The Board did not certify the EIR.

- ✓ On November 7 and 8, 1996 California Quartet attempted to re-submit the Grading Application based on Final Tract map. The County staff refused to accept any applications for submittal of anything relating to Saddleback Meadows. The County had determined that the previous Grading Application filed in April 1994 had expired in 1995; therefore, a new application would be necessary to continue processing the Grading Application.

- ✓ On November 8, 1996 California Quartet received a letter from Thomas Mathews, the County Planning Director, concerning Supervisor Saltarelli's desire to explore possible full or partial acquisition of the Saddleback Meadows property. In response, California Quartet's Counsel transmitted to County Counsel, a draft of a proposed Tolling Agreement to extend the deadline for filing a legal challenge to the Board decision of October 5, 1996.

- ✓ On November 15, 1996 California Quartet's counsel submitted to the County a Demand Letter concerning the processing of a Rough Grading Plan Application which the project civil engineer had attempted to submit on November 8 and 9, 1996 and also submitted a letter regarding Settlement Discussions concerning the sale of Saddleback Meadows property for public purposes laying out the ground rules for such negotiations.

- ✓ On November 18, 1996 California Quartet provided County staff with several sketch studies, which presented reduced development areas and lot yields as requested by County staff.

- ✓ On November 26, 1996 the Tolling Agreement was executed between California Quartet, Ltd. and the County of Orange. The Tolling agreement was effective on November 21, 1996 and was to expire 180 days from the effective date (May 20, 1997).

- ✓ On November 27, 1996 California Quartet received a letter from County staff regarding California Quartet's attempt to file a Grading Application for Tract 10692. The letter stated that the reason the application was not accepted by the County was due to a misunderstanding by staff and invited California Quartet to resubmit the application.

December 1996

- ✓ On December 3, 1996 the County staff accepted the Grading Application for Tract 10692 (705 lots), which was assigned Grading Application Number GA960048.

- ✓ On December 24, 1996 the County staff circulated a Notice of Preparation (NOP) for a Draft Subsequent Environmental Impact Report related to Grading Application GA960048, Tract Map 10692. This started a 30-day comment period.

February 1997

- ✓ Due to concerns related to processing technicalities the County staff re-circulated the Notice of Preparation document.
- ✓ On February 7, 1997 a meeting requested by County staff was held to discuss potential full/partial acquisition possibilities with applicant and representatives from the community and neighbors. Attendees from the community included, two members, representatives from the Foothill/Trabuco Review Board; St. Michaels Abbey; the Vedanta Society/Rama Krishna Monastery, and the Hidden Ridge community.
- ✓ On February 21, 1997 representatives of California Quartet made an informational presentation before the Foothill Trabuco Review Board concerning the Notice of Preparation for the EIR for the grading permit application for the 705-lot project (existing Final Map for the Saddleback Meadows property).
- ✓ On February 28, 1997 the County held a follow-up session to the February 7, 1997 session with the same group of representatives from the community, to receive their feedback from the previous meeting.

April 1997

- ✓ On April 7, 1997 the County's Director of Planning & Development Services sent a letter to the Members of the Board of Supervisors providing a summary of the alternatives proposed by the landowner but not acted on by the Board of Supervisors in October and the results of several meetings which had been held to explore acquisition of all or a portion of the property.[2]

May through September 1997

- ✓ The EIR for the Grading Application for the 705-lot project was prepared and circulated for public and governmental agency review and comment.
- ✓ On August 1, 1997 representatives of California Quartet made an informational presentation before the Foothill Trabuco Review Board concerning an application for an informational sign concerning the705-unit Final Map to be posted at the Saddleback Meadows property.

[2] *Community representatives maintained that a 100-unit project clustered adjacent to El Toro Road was the maximum development acceptable. However, California Quartet indicated that the 100-unit alternative was not economically feasible. In this letter, the Planning Director reported that his understanding was that the landowner would entertain any offer to purchase (for preservation of open space) all or a portion of the property, even though the property was not being marketed. The Planning Director indicated that County staff was unaware of any viable sources of funds, private or public, for this purpose and expressed the opinion that further exploration of public acquisition was not warranted.*

October 1997

- ✓ On October 22, 1997 the first Planning Commission public hearing was held to review certification of Subsequent EIR 566 to allow for the grading and development to implement the recorded (705 lot) Final Map. The hearing was continued to December 3, 1998.

November 1997

- ✓ The Orange County Board of Supervisors discussed amending the standard appeal procedures for SEIR 566 that would allow the SEIR to be directly to the Board of Supervisors following certification by the Planning Commission (November 25, 1997) No decision was reached and the hearing was continued to December 9, 1997.

December 1997

- ✓ On December 3, 1997 the Planning Commission voted to certify Final Subsequent EIR 561. On December 9, the Board of Supervisors held a first reading of "An Ordinance of the County of Orange providing for appeal of certain Grading Permits". The item was continued to December 16, 1997 at which time the Board failed to approved the ordinance change.

- ✓ On December 17, 1997 the Chair of the Planning Commission sent a letter to members of the Board of Supervisors regarding the Commissions recent certification of SEIR 566 on Saddleback Meadows and recommending that the Board revisit an alternative zoning designation for Saddleback Meadows, suggesting Alternative No. 4 in SEIR 566 (299-lots).

- ✓ On December 18, 1997 the Vedanta Society of Southern California filed a notice of appeal regarding the Planning Commission's certification of FSEIR 566.

January 1998

- ✓ On January 27, 1998 the Board of Supervisors held a hearing to consider the appeal of the Planning Commission's certification of SEIR 566, as filed by the Vedanta Society of Southern California. The hearing was continued for a month.

February 1998

- ✓ Dialog between California Quartet and St. Michael's Abbey was re-established on February 9, 1998 when counsel, representing the Saddleback Meadows Land Conservancy, transmitted to California Quartet an offer to purchase a portion of Saddleback Meadows for approximately $5.2 million. This offer was made prior to the February 24th hearing by the Board of Supervisors of an appeal of the Planning Commission approval of the Environmental Impact Report for the Grading Application for Recorded Tract Map 10692 (for 705 lots for mobile home or manufactured housing.)

- ✓ California Quartet transmitted a response to the Conservancy offer to the Deputy County Counsel's office, stating the reasons why the partial acquisition offer was rejected.

- ✓ The offer for partial acquisition of Saddleback Meadows became a point of discussion at the February 24, 1998 hearing before the Board of Supervisors on the EIR certification appeal. The Board deadlocked 2-2 on the appeal question after being advised by County Counsel that a tie vote would have the effect of upholding the prior Planning Commission action.

- ✓ At the conclusion of the February 24, 1998 SEIR appeal hearing; Supervisor Spitzer expressed his desire to bring about a settlement between parties in connection with the Abbey's offer to purchase a portion of the property in return for a significantly reduced development project. It was agreed among the Supervisors that Supervisor Spitzer would provide the Board with an update report within 45 days -- by April 14, 1998.

March 1998

- ✓ The first in a series of nine settlement/negotiation meetings held during 1998,including representatives of California Quartet, St. Michael's Abbey (the Norbertine Fathers of Orange), the Rama Krishna Monastery (Vedanta Society) and County staff, was held on March 6, 1998.[3]

- ✓ Following the meeting of March 6, 1998 California Quartet analyzed the feasibility of various reduced density/development envelope concepts. St. Michael's Abbey reviewed these alternatives during the course of those negotiations in conjunction with a potential partial purchase of the remainder property.[4]

- ✓ On March 6, 1998 the Vedanta Society filed a lawsuit challenging the validity of the EIR for the Grading Application, arguing that a majority vote of the Board of Supervisors was required to reject the appeal of the December 3, 1997 certification of the EIR for the Grading Application.

- ✓ At a second settlement meeting held on March 23, 1998 California Quartet discussed reduced development alternatives that had been analyzed since the last meeting and the County staff presented the so-called "Mathews Plan" that was prepared by County staff.

[3] *The meetings were held during 1998 on March 6, March 23, April 1, April 20, May 8, August 27, September 22, October 30, and November 18.*

[4] *The analyses of each of these concepts included performing conceptual site planning design, development cost studies, view and premium analysis, and finally running preliminary financial proformas for each of these scenarios. During the course of these negotiations California Quartet determined that a reduced development alternative in conjunction with a partial purchase of the remaining open space areas by the Abbey could be made financially feasible under certain circumstances Major deal points included the following. the maximum development density, the purchase price of the open space, defining the development area, use of the open space for environmental mitigation needs of the project, restrictions on the purchased land for open space uses only, indemnification and release of liability relating to the purchased open space, and a guarantee of support for the project by the opposing parties.*

April 1998

- ✓ A third settlement meeting at which California Quartet presented a modified version of the staff alternative (a.k.a. the "Modified Mathews Plan" 130-150 units) was held on April 1, 1998.

- ✓ On April 14, 1998 Supervisor Spitzer provided Board members with a status update on the Saddleback Meadows negotiations.

- ✓ A work session with County staff was held at the County offices on April 20, 1998 to review geo-technical questions and concerns related to Staff alternative and the modified staff ("Mathews Plan"). Representatives of St Michael's Abbey, including geologists, participated in this discussion.

- ✓ A fourth settlement session was held on April 20, 1998 at which representatives of St. Michael's Abbey and the Rama Krishna Monastery discussed their concerns about geo-technical stability issues.

- ✓ California Quartet arranged an additional work session that was held on April 23, 1998 involving the geo-technical consultants to discuss/address the concerns raised in this meeting. Counsel to the Abbey conveyed the Abbey's latest offer in tabular form offering different amounts for various scenarios and requested California Quartet to return with a counter offer at the next settlement meeting.

May 1998

- ✓ On May 4, 1998 California Quartet convened a work session involving the respective geo-technical consultants to discuss and review concerns raised by representatives of the Abbey and the Monastery. Unfortunately, no consensus was reached at this session.

- ✓ At a fifth settlement meeting held on May 8, 1998 California Quartet presented a response to the partial acquisition offer of April 23, 1998 in tabular form involving modifications to the so-called "Mathews Plan." At this session representatives of the Abbey and Supervisor Spitzer appeared to agree to a partial acquisition in the amount of $5.2 million in conjunction with a development program. Funding from The Abbey was anticipated to be $4.2 million and $1.0 million was to come from the County[5].

- ✓ On May 26, 1998 California Quartet representatives attended a meeting at which legal counsel for St Michael's Abbey proposed acquisition of the entire property for $12.2 million, with $10.2 million to come from the Abbey and $2.0 million from the County.

[5] *However, counsel representing the Rama Krishna Monastery, rejected the idea of a modification to the staff proposed development program After a caucus among Supervisor Spitzer and representatives of the Norbertine Fathers of Orange (St. Michael's Abbey) and the Vedanta Society (Rama Krishna Monastery) the meeting concluded with counsel for the Norbertines (Verlyn "Sonny" Jensen) and Supervisor Spitzer making a combined cash offer of $8.0 million ($7.0 million from the Abbey and $1 0 million from the County) for the entire property*

June 1998

- ✓ Supervisor Spitzer presented status report on Saddleback Meadows settlement negotiations at the Board of Supervisors meeting of June 2, 1998. The Board directed County Counsel and staff to prepare for consideration by the Board a settlement agreement containing the following "conceptual" terms:

  1) $1.5 million in appropriated County funds (referred to as the "Strawberry Field Funds") to acquire an interest in the property with the understanding that these funds were to be used only in conjunction with $10.5 million from St. Michael's Abbey to purchase the entire property. Escrow was to close on or before October 29, 1998 with the understanding that if the "Strawberry Field funds" turned out not to be available the development option would not be "triggered" until the Board had had an opportunity to explore alternative funding. The County's contribution of $1.5 million was to be reimbursed in the event the property was used for a purpose which derives financial benefit;

  2) All litigation by St. Michael's Abbey and/or California Quartet be tolled;

  3) County staff was to immediately begin processing an amendment to the General Plan, amendment to the Specific Plan, Zone Change, Area Plan, and Tentative Tract Map applications and any other required plan/application for the 299-lot development plan to be considered for approval if the acquisition was not completed by October 29, 1998 and;

  4) California Quartet would cease processing any permits related to the 705-unit manufactured home subdivision (Final Map 10692) until October 30, 1998.

- ✓ On June 12, 1998 California Quartet received from St. Michael's Abbey a letter of intent regarding purchase and sale of the Saddleback Meadows property that included a provision that would allow St. Michael's Abbey to develop the property.

- ✓ On June 15, 1998 California Quartet formally requested that County cease processing of the grading plan check application based on Recorded Tract Map 10692 (705 units), in accordance with the conceptual terms of the settlement agreement referenced in the Board of Supervisors motion of June 2, 1998.

- ✓ On June 22, 1998 California Quartet submitted to the County applications for the Area Plan & Zone Change for the 299-lot "Contingency Plan" that would be adopted if St. Michael's Abbey failed to perform on acquiring the property.

- ✓ At the Board of Supervisors meeting held on June 23, 1998, Supervisor Spitzer provided Board Members with a Saddleback Meadows Settlement negotiations update and reported that St. Michael's Abbey apparently had decided not to follow through on their offer to work with the County to acquire the Saddleback Meadowsproperty as had been reported on June 2, 1998.

July 1998

- ✓ On July 3, 1998 the Saddleback Meadows Land Conservancy, Norbertine Fathers (St. Michael's Abbey) and the Vedanta Society of Southern California (Rama Krishna Monastery) transmitted to California Quartet a "Summary of Settlement Terms" and a "Supplemental Term Sheet" proposing partial purchase of the property for $5.2 million.

- ✓ On July 17, 1998 California Quartet provided a detailed response to the partial acquisition offer of July 3, 1998.

- ✓ On July 27, 1998 California Quartet provided a detailed analysis of the impact of "ridgeline protection" criteria proposed by the Vedanta Society. California Quartet surveyed and staked the edge of the "Vedanta Ridgeline" with 10' tall white PVC poles so that its view of the ridgeline could be viewed and studied relative to the viewpoint of the Rama Krishna Monastery.

August 1998

- ✓ A site tour was held on August 10, 1998 to allow representatives of the Vedanta Society (Rama Krishna Monastery) to view the ridgeline on the Saddleback Meadows property. The purpose of the site visit/meeting was to discuss the issue of the "Vedanta Ridgeline Protection" proposal which when physically interpreted, severely impacted the development envelope for the partial development alternative's so as to make the project financially infeasible.

- ✓ On August 11, 1998 Supervisor Spitzer provided other Board members with a status report on the Saddleback Meadows settlement negotiations and invited Supervisor Wilson to participate in the negotiations with him. Supervisor Wilson accepted Supervisor Spitzer's invitation and the next status report was set for October 6, 1998. This was the same date that the Board members designated as the deadline for reaching a mutually satisfactory agreement on the matter.

- ✓ On August 11, 1998 the United States Fish and Wildlife Service and California Department of Fish and Game wrote an unusual joint letter to the Board of Supervisors commenting on the 299 Lot Contingency Plan and also indicating they (the Agencies) had been informed by interested parties that a new clustered development alternative proposal, along with the purchase of significant open space on the site, had been offered to the property owner.

- ✓ On August 25, 1998 the Planning Commission heard the Area Plan/Zone Change application along with the Addendum to Supplement EIR 566. The Commission voted to continue the item to October 7, 1998 the day after the deadline for the settlement negotiations and the next Board of Supervisors status report on Saddleback Meadows.

- ✓ On August 27, 1998 the sixth settlement negotiation session was conducted with both Supervisors Spitzer and Wilson involved. The main issue of discussion was protection of the ridgeline. This issue was not resolved during this session. The next negotiation session was scheduled for September 15, 1998

- ✓ On August 28, 1998 counsel to the Vedanta Society sent to California Quartet copies of the Vedanta Alternate Study, consisting of a site plan prepared by its consultant engineer/site planner. The study showed a plan for 120 lots.

September 1998

- ✓ A meeting was held at the offices of the counsel to the Vedanta Society on September 10, 1998 at which representatives of California Quartet offered an analysis of Vedanta Alternative Plan as received by California Quartet on September 1, 1998.

- ✓ California Quartet provided a cost and revenues comparison impact analysis of the Vedanta Alternative Plan (120-lots) as compared to the Modified Staff Alternative (127-lots) on September 14, 1998.

- ✓ The seventh settlement negotiation meeting was held at the County Hall of Administration on September 22, 1998 with Supervisors Wilson and Supervisor Spitzer in attendance. Discussion focused on California Quartet's analysis of the Vedanta Alternative Plan and the Vedanta ridgeline protection issue. California Quartet explained how the Vedanta ridgeline protection proposal rendered the reduced development alternative financially unfeasible, unless the purchase price was increased to offset the additional costs and lost revenues that would result from an alternative that honored the ridgeline provision. Counsel for Vedanta, the Norbertines and Saddleback Meadows Land Conservancy informed the participants in this session that his clients would accept the Modified Staff Alternative (127-lots) without the ridgeline provision along with a total purchase price of $5.2 M (which would include $1M from the County) so long as the area outside the 44-acre development bubble was not disturbed in any way (including fuel modification), despite the fact that "environmental mitigation" would be necessary outside the 44-acre development to accommodate fuel modification, geo-technical mitigation, and natural resource management.

- ✓ Counsel to Vedanta Society, submitted a letter to the County's Planning Director on September 23, 1998. The letter objected to the County's continued processing of the Contingency 299-Lot Plan and alleged the County's failure to comply with the procedural requirements of the Foothill/Trabuco Specific Plan by failing to forward California Quartet's Area Plan and Zone Change Application to the Foothill Trabuco Specific Plan Review Board for its review and recommendations prior to the Planning Commission's consideration of the application.

October 1998

- ✓ On October 4, 1998 California Quartet signed and delivered to Supervisor Spitzer's a revised Memorandum of Understanding (MOU) between California Quartet and The Saddleback Meadows Land Conservancy.

- ✓ On October 5, 1998 counsel for St. Michael's Abbey transmitted another version of the MOU reflecting their understanding of the "deal" reached at the September 22, 1998 meeting held at the County offices.

- ✓ On October 5, 1998 Supervisor Spitzer sent a memorandum to the other Board members providing an update on the Saddleback Meadows settlement negotiations.

- ✓ County Counsel sent on October 6, 1998 a memorandum to Members of the Planning Commission concluding that the Commission could take action on the Saddleback Meadows Zone Change and Area Plan prior to the Foothill Trabuco Specific Plan Review Board completing a further review of the project.

- ✓ Counsel for California Quarter wrote on October 6, 1998 to counsel for St. Michael's Abbey and the Rama Krishna Monastery responding to the "offer letter" dated October 5, 1998.

- ✓ On October 7, 1998 the Planning Commission heard the Area Plan/Zone Change application along with the Addendum to Supplemental EIR 566. The Commission certified the addendum to the EIR, approved the Area Plan and recommended that the Board of Supervisors approve the Zone Change.

- ✓ On October 10, 1998 the Foothill Trabuco Review Board met to consider the 299-lot plan for Saddleback Meadows. California Quartet representatives and counsel and consultants to St. Michael's Abbey and the Rama Krishna Monastery made presentations.

- ✓ The eighth Saddleback Meadows negotiation meeting was called by Supervisor Spitzer's office and convened on October 30, 1998. Supervisor Spitzer pressed representatives of St. Michael's Abbey and the Saddleback Meadows Land Conservancy on the question of whether there was a commitment to acquire a portion of the Saddleback Meadows property. There was a mutual agreement that California Quartet would prepare a "Conceptual Remedial Grading Plan" based on the 127-lot reduced alternative and present it to the group prior to the November 24th Board of Supervisor's hearing on Saddleback Meadows.

- ✓ Counsel for St. Michael's Abbey and the Saddleback Meadows Land Conservancy distributed on October 31, 1998 a Draft of the MOU document, reflecting extensive changes compared to document signed by California Quartet on October 5, 1998.

November 1998

- ✓ At the Board of Supervisors hearing of November 3, 1998 representatives of the Saddleback Meadows Land Conservancy and California Quartet executed a Memorandum of Understanding (MOU) for partial acquisition and development of the Saddleback Meadows property. The County did not and could not sign the MOU at that time because County Counsel advised the Board not to do so until the proposed action was properly noticed. The Board continued the hearing to November 24th, 1998 at which time the appeals for both the Tentative Tract maps and the Area Plan were to be heard in conjunction with consideration of the acquisition agreement (i.e. Purchase and Sales Agreement).

- ✓ Counsel for the Vedanta Society filed on November 5, 1998 an appeal of the Orange County Subdivision Committee's approval of the Contingency 299-Lot Tentative Tract Maps on behalf of the Vedanta Society and the Saddleback Meadows Land Conservancy.

- ✓ Counsel for California Quartet distributed the proposed Purchase and Sale Agreement for the partial acquisition and development alternative to the involved parties on November 17, 1998. This version incorporated revisions to the draft provided by Counsel for the Saddleback Meadows Land Conservancy on October 31, 1998. California Quartet delivered copies of the "Conceptual Remedial Grading Plan" to counsel for Vedanta, Supervisor Spitzer and the County Planning Director.

- ✓ A ninth negotiation session was held at Supervisor Spitzer's office on November 18, 1998 to review/discuss the "Conceptual Remedial Grading Plan" and comments from counsel for the Norbertines, Vedanta and the Saddleback Meadows Land Conservancy regarding the draft Purchase & Sales Agreement sent by counsel for California Quartet on November 17, 1998.

- ✓ The Board of Supervisors held a public hearing on November 24, 1998. The hearing dealt with the status of negotiations and appeal of the 299 Lot Contingency Plan and related entitlement documents. Testimony was received and the public hearing closed with final action continued to December 8, 1998.

- ✓ Counsel for California Quartet sent a letter on November 25, 1998 on behalf of California Quartet to Counsel for the Norbertines responding to a document entitled "Purchase Agreement for Real Property And Escrow Instructions for the Purchase of Saddleback Meadows (Spitzer-Wilson 44-acre Compromise)," dated November 23, 1998 consisting of 29 pages delivered November 24, 1998 by the Office of Supervisor Spitzer at approximately 5:30 p.m. in the hearing room of the Board of Supervisors prior to the hearing for the Contingency Plan for 299 units on the Saddleback Meadows property.

December 1998

- ✓ Counsel for California Quartet sent a letter on December 1, 1998 on behalf of California Quartet to Counsel for the Norbertines regarding the preparation of the proposed Conservation Easement. Counsel for California Quartet circulated a proposed Land Purchase Agreement reflecting the business terms set forth in a Memorandum of Understanding dated November 3, 1998 between the Saddleback Meadows Land Conservancy, the County of Orange and California Quartet. Instead of receiving responsive comments, or a redlined version of the document with proposed changes, California Quartet's counsel received on November 24th a partial copy of a completely new draft agreement. Further, counsel for California Quartet claimed that this substantially revised agreement imposed an unrealistic and unattainable deadline.

- ✓ Counsel for California Quartet sent a December 7, 1998 letter to the Board of Supervisors responding to arguments made by counsel for Vedanta supporting their appeals of the Planning Commission's action on the Area Plan and the Subdivision Committee's action approving the tentative tract maps.

- ✓ The Board of Supervisors considered the matter of Saddleback Meadows on December 8, 1998 and denied the Vedanta Society's appeals (on a 2 to 2 vote) upholding the Planning Commission and Subdivision Committee's approvals of the Area Plan and Tract Maps, respectively. The Board certified SEIR #566 and approved the appropriate Findings and Statement of Overriding Conditions. The Board also adopted the resolutions and ordinances approving the Zone Change for the 299- lot Contingency plan.

- ✓ The County of Orange Department of Planning and Development Services filed a Notice of Determination on the Final Supplemental Environmental Impact Report, starting the 30-day statute of limitations for filing a legal challenge under the California Environmental Quality Act (December 9, 1998.)

- ✓ An e-mail that was addressed to all Board Members of the Sea and Sage Chapter of the Audubon Society, inviting them to join in a lawsuit challenging the environmental document for Saddleback Meadows that was soon to be filed by St. Michael's Abbey, the Endangered habitat's League, and the Rural Canyons Conservation Fund.

January 1999

- ✓ A Petition for Writ of Mandate and Complaint for Declaratory Relief Verification was filed with the Orange County Superior Court by the Endangered Habitats League on January 8, 1999.

- ✓ A Petition for Writ of Mandate and Complaint for Declaratory Relief was filed by the Norbertine Fathers on January 8, 1999.

- ✓ A site visit with representatives of the Army Corps of Engineers and a project biologist was held on January 13, 1999.

- ✓ Counsel for the Vedanta Society filed a Notice of Related cases in Vedanta, Norbertine and Endangered Habitats Actions on January 21, 1999.

- ✓ Joint Status Conference Statement of all parties was filed with the Orange County Superior Court on January 22, 1999.

February 1999

- ✓ The Answer of Real Party-in-Interest was filed with the Orange County superior Court by California Quartet in the Norbertine Action on February 16, 1999. Also, a Summons on Cross Complaint; Verified Cross-Complaint of Real Parties-In-Interest for Breach of Contract, Unfair Business Practices, Intentional Interference with Economic Relationship and Declaratory Relief was filed in the Norbertine Action.

March 1999

- ✓ A Stipulation and Order addressing the briefing schedule and the hearing date for the Motion for Summary Adjudication was executed by the parties to litigation and filed with the Orange County Superior Court on March 3, 1999.
- ✓ An amended Petition and Complaint was filed in Orange County Superior Court by counsel for the Endangered Habitats League on March 9, 1999.
- ✓ The Norbertines substituted counsel (replacing Ed Connor with Mary Hudson) on March 18, 1999.

April 1999

- ✓ The Orange County Superior Court consolidated the Vedanta, Norbertine and Endangered Habitat lawsuits by Minute Order on April 8, 1999. Also, the County agreed to provide the Petitioners with notice prior to the issuance of grading permits for the Saddleback Meadows property.
- ✓ Counsel for the Vedanta Society filed on April 23, a motion to dismiss all cross-claims by Real Parties in connection with the Norbertine action.

May 1999

- ✓ A Memorandum of Points and Authorities was filed by counsel for the Norbertines in support of their motion to dismiss the Cross Compliant filed by Real Parties on May 6, 1999 and Real Parties (California Quartet) filed an opposition to this motion on May 7, 1999.
- ✓ Counsel for Vedanta filed their reply in support of their motion to strike California Quartet's cross complaint on May 12, 1999.
- ✓ California Quartet filed its opposition to Vedanta's motion to strike the cross complaint on May 27, 1999.

June 1999

- ✓ Counsel for the Norbertines and Saddleback Meadows Land Conservancy filed their reply to the California Quartet cross complaint on June 2, 1999.
- ✓ California Quartet filed applications with the Army Corps of Engineers (Nationwide 404 Permit), State Water Quality Control Board (401 Permit), and State Department of Fish & Game (1603 Permit) on June 14, 1999.
- ✓ Judge Thomas of the Orange County Superior Court entered his judgment denying the California Quartet cross complaint in June 1999.

July 1999

- ✓ The parties failed to reach agreement on a briefing schedule and the scope of the administrative record.
- ✓ Site visit with Army Corps of Engineers and biologists employed by California Quartet on July 8, 1999.
- ✓ California Quartet waived the 30-day clock at request of California Department of Fish & Game on July 15, 1999.
- ✓ The Regional Water Quality Control Board e-mailed a request for additional information on July 27, 1999.

August 1999

- ✓ The Army Corps of Engineers issued a request for additional information on August 3, 1999.
- ✓ Counsel for Vedanta filed an amended complaint and request for declaratory relief with the Orange County Superior Court on August 9, 1999 and moved for summary judgment on the 2-2-vote issue on August 10, 1999

September 1999

- ✓ California Quartet provided additional information to the Army Corps of Engineers on September 3, 1999.
- ✓ California Quartet filed its opposition to the Vedanta motion on the 2-2-vote issue on September 10, 1999.
- ✓ California Quartet provided a response to a request for information from the Regional Water Quality Control Board on September 29, 1999.
- ✓ Counsel for Vedanta filed their reply to California Quartet's opposition to the motion on the 2-2-vote issue on September 27, 1999.

October 1999

- ✓ Counsel for Vedanta filed a statement with the Superior Court concerning their motion for a summary adjudication of the 2-2-vote issue on October 15, 1999.
- ✓ The Army Corps of Engineers issued a verbal request for additional information on October, 15, 1999.
- ✓ California Quartet provided additional information to Corps on October 22, 1999.

- ✓ Settlement agreement and release of all claims on the cross complaint executed on October, 15, 1999.

December 1999

- ✓ Orange County Superior Court Judge Thomas ruled that the 2-2 vote (on February 24, 1998) by the Board of Supervisors on the Vedanta appeal (of the December 7, 1997 Planning Commission certification of the Supplemental Environmental Impact Report for the Grading Application for the 705 lot project) had the affect of granting the Vedanta appeal.

- ✓ Counsel for Vedanta filed a proposed order granting their motion for summary adjudication on the 2-2-vote issue.

- ✓ A meeting between the Army Corps of Engineers and consultant team and a site visit with the Corps and project biologists was held on December 15, 1999.

- ✓ California Quartet filed on December 17, 1999 a draft Biological Assessment at the request of the Army Corps of Engineers as a prelude to the Section 7 process.

- ✓ The County and California Quartet filed on December 29, 1999 their objection to the Vedanta draft of the court order.

- ✓ The Superior Court entered on December 30, its order on the 2-2-vote issue.

January 2000

- ✓ California Quartet filed a writ petition with the Fourth District Court of Appeal on the 2-2-vote issue on January 3, 2000.

- ✓ Counsel for Vedanta filed, on January 5, 2000 a motion to remove its remaining claims based on the rationale that the Superior Court ruling on the 2-2 vote issue has made them moot. January 13, 2000: Site visit with Corps, Corps requests additional information.

- ✓ Counsel for Vedanta and the other co-litigants filed an opposition to the California Quartet writ petition to the Fourth District Court of Appeal on January 18, 2000.

- ✓ California Quartet provided additional information to Corps on January 21, 2000.

- ✓ Counsel for California Quartet filed opposition to the Vedanta motion for summary adjudication on January 25, 2000.

- ✓ The Army Corps of Engineers indicated on January 31, 2000 that it intended to deem the California Quartet application incomplete and require that a new application be filed.

February 2000

- ✓ On February 10, 2000 The California Department of Fish and Game informed California Quartet that the Section 1603 Streambed Alteration Permit application was reassigned to new staff person, and that no review has been conducted since application was filed.

- ✓ A meeting was held on February 15, 2000 between representatives of California Quartet and staff at the Los Angeles District Office of the Army Corps of Engineers at which the Corps agreed to continue to process the Section 404 application if requested information could be submitted timely.

- ✓ The Regional Water Quality Control Board informed California Quartet on February 22, 2000 that the file has been reassigned to new staff person and that California Quartet's previous response could not be located.

- ✓ Judge Thomas of the Orange County Superior Court granted on February 23, 2000 the Vedanta motion for summary adjudication and dismissal of the remaining causes of action in the consolidated cases (Vedanta, Norbertine, Audubon and Endangered Habitats.)[6]

- ✓ On February 29, 2000 California Quartet submitted to the Army Corps of Engineers an updated jurisdictional delineation report.

May 2000

- ✓ On May 10, 2000 consultants for California Quartet led a site visit of Saddleback and a potential off-site mitigation opportunity (Southern California Edison's Viejo property). The visit was attended by representatives from the Army Corps of Engineers, U.S. Fish and Wildlife Service, State Department of Fish and Game, and State Regional Water Quality Control Board.

June 2000

- ✓ In June 2000 California Quartet submitted to the Army Corps of Engineers and the California Department of Fish & Game conceptual plans for biological mitigation at two off-site locations, Hidden Ranch and Southern California Edison's Viejo property.

September 2000

- ✓ On September 5, 2000 the Army Corps of Engineers submitted a request for a formal Section 7 consultation to the U.S. Fish & Wildlife Service.

[6] *The County and California Quartet (as Real Party In-Interest) had filed in January 2000, an appeal with the Fourth District Court of Appeal, thereby automatically staying implementation of Judge Thomas' order until the appellate court disposes of the appeal.*

October 2000

- ✓ On October 10, 2000 consultants of California Quartet led a meeting attended by representatives from the Army Corps of Engineers, U.S. Fish and Wildlife Service, State Department of Fish and Game, and State Regional Water Quality Control Board.

- ✓ On October 18, 2000 California Quartet's biologist gave a tour of the Saddleback property to U.S Fish and Wildlife Service.

- ✓ On October 24, 2000 the Service acknowledged the Corps' request and expected to provide a biological opinion by no later than January 22, 2000. Army Corps of Engineers suggests that all issues regarding impact delineation and mitigation have been resolved, pending receipt of the Service's biological opinion.

- ✓ On October 30, 2000 the Fourth District Court of Appeal issued a nineteen page decision upholding the Orange County Superior Court decision on the 2-2 vote issue, concluding that a majority vote of the Board of Supervisors is required to reject the appeal of the certification of the EIR for the Grading Application for the Final Map for Saddleback Meadows (the 705 lot project).

November 2000

- ✓ On November 17, 2000 consultants of California Quartet met with U.S. Fish and Wildlife Service. Meeting also attended by representatives of Army Corps of Engineers and State Department of Fish and Game. Fish and Game announces that their project manager would soon be leaving. Service requests that dry sampling for Riverside Fairy Shrimp cysts be conducted at the two breached ponds.

December 2000

- ✓ On December 7, 2000 California Quartet's biologists gave State Fish and Game a tour of the site with a focus on wildlife corridors.

- ✓ On December 20, 2000 additional biological information was submitted to U.S. Fish and Wildlife Service. Included are results of dry sampling, which found some cysts, but at very low density.

January 2001

- ✓ On January 3, 2001 the Fourth District Court of Appeal issued a remittatur, formally returning Vedanta Society v. County of Orange to the Orange County Superior Court.

- ✓ In December the Army Corps of Engineers had announced their project manager responsible for the 404 Permit Application for the Saddleback Meadows project would be leaving. On January 10, 2000 a transition meeting was held between California Quartet's consultants and the Army Corps of Engineers staff.

- ✓ On January 25, 2001 U.S. Fish and Wildlife Service requested 60-day extension of Section 7 consultation.

March 2001

- ✓ New project manager assigned by California Department of Fish and Game to 1603 application. On March 8, 2001. California Quartet's consultants took new project manager on tour of property and proposed off site mitigation.

- ✓ On March 12, 2001 the Los Angeles District of the Army Corps of Engineers issued a Pre-Construction Notification under Nationwide Permit 26 for impacts to 1.26 acres of jurisdictional wetlands consisting of 0.40 acres of seasonal ponds and 0.86 acres of mulefat scrub and 1.49 acres of non-wetland waters of the United States consisting of mostly ephemeral streams.

- ✓ On March 21, 2001 the County of Orange issued a Public Notice of Availability for Final Subsequent EIR 566 and Addendum Numbers 1 and 2. The purpose of the notice was to inform the public about the availability of the environmental documents for review at County offices and local libraries.

- ✓ On March 22, 2001 California Quartet agreed to a request by the U.S. Fish and Wildlife Service for an extension of the consultanon period per regulations implementing Section 7 of the Federal Endangered Species Act.

April 2001

- ✓ On April 4, 2001 the Wetlands Regulatory Office of Region IX of the U.S. Environmental Protection Agency issued a letter requesting that the Army Corps of Engineers require an Individual Permit (instead of a Nationwide Permit) for Saddleback Meadows.

- ✓ On April 5, 2001 California Quartet's consultants met with U.S. Fish and Wildlife Service to continue discussions on Section 7 consultation.

- ✓ On April 18, 2001 U.S. Fish and Wildlife Service requested 60 to 70 day extension of Section 7 consultation.

May 2001

- ✓ On May 9, 2001 the County of Orange Planning Commission recommended by a 3-2 vote that a new EIR be prepared for the 299-lot project.

- ✓ On May 22, 2001 the County Board of Supervisors upheld the Commission's recommendation.

June 2001

- ✓ Helix Environmental completes focused survey for gnatcatchers and finds none.

July 2001

- ✓ On July 17, 2001 California Quartet's consultants met with U.S. Fish and Wildlife Service to continue discussions on the Section 7 consultation.
- ✓ On July 19, 2001 California Department of Fish and Game issued a draft 1603 permit.

August 2001

- ✓ On August 6, 2001 the Notice of Preparation for the Supplemental Environmental Impact Report 566 was circulated.
- ✓ On August 9, 2001 California Quartet's consultants presented a refined mitigation plan to the U.S. Fish and Wildlife Service in order to address their concerns regarding the Riverside Fairy Shrimp.

September 2001

- ✓ On September 29, 2001 an updated Water Quality Management Plan was filed with the Regional Water Quality Control Board.

October 2001

- ✓ On October 22, 2001 RWQCB issued a letter requesting more information.
- ✓ On October 25, 2001 the environmental consultant submitted the First Administrative Draft of Subsequent Environmental Impact Report 566 to Orange County Department of Planning and Development Services.
- ✓ On October 26, 2001 the U.S. Fish and Wildlife Service issued a final Biological Opinion.

APPENDIX C

GEOTECHNICAL REPORT

GANICO

La Jolla, California 92037

Attention: Mr. Joe La Cava

Subject: Geotechnical Assessment for Tentative Tract Map 15230
299 Lots
Saddleback Meadows Development
Orange County, California

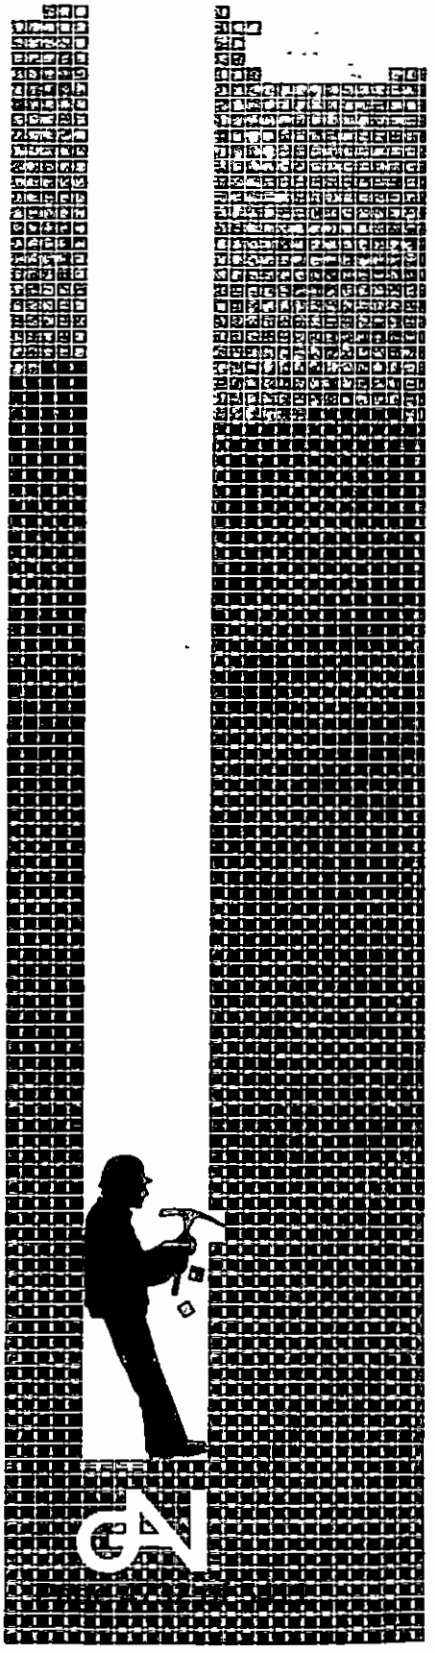
Gentlemen:

1. INTRODUCTION

a) This report presents the results of our investigation for the Saddleback Meadows Contingency Plan – 299 Lots, prepared by Hunsaker & Associates, dated August, 2001.

b) The Plan is the product resulting from the revision and compilation of earlier development concept plans. The Plan contains 299 residential lots.

c) The Plan, which was prepared by Hunsaker and Associates, and used as the base plan for our Geotechnical EIR contained 318 lots. This 299-lot Plan is geotechnically very similar, with only minor changes, mostly involving the proposed loffel walls.



d) References cited during the most current investigation and for previous work on the site are presented in *References, Appendix A*. The Geotechnical EIR for Tentative Tract 15230 is dated November 27, 1995 *(presented as Reference No. 9)*. Our previous Geotechnical Investigation report for Tentative Tract 10692, the Entitled Plan, is dated January 6, 1994 *(Reference No. 8)*.

e) The current Saddleback Meadows Contingency Plan contains minor earthwork revisions, including graded berms for use as view shed barriers.

f) Geotechnical Cross Sections A–A', B–B' and C–C' from the 318 Lot Plan have been revised showing the new grades. The site geology and the locations of exploratory excavations are shown on the *Geologic Map, Plate 1*. The Geologic Key is shown on *Plate 2*. The Logs of Borings for the most recent site exploration are included in this report (Borings BC–1 through BC–17). Logs of Borings and Test Pits for previous exploration by GANA and other consultants are found in the GANA report dated January 1, 1994 (Ref. 8).

2. PURPOSE

a) The purpose of this investigation was to evaluate the Saddleback Meadows Contingency Plan and its impact on the site conditions, to revise the previous geotechnical cross sections to reflect the new grades, to conduct stability analyses and to provide other additional geotechnical data to supplement our previous Geotechnical EIR of November, 1995.

b) A secondary purpose was to evaluate the extent of the removal areas, the grading envelope and the estimated removal volumes.

3. SCOPE

The scope of services we have provided for this assessment is outlined as follows:

a) Evaluation of the Contingency Plan grades and their impact on the site;

b) Revision of the Geotechnical Cross Sections A–A', B–B' and C–C' to evaluate stability influence of new grades;

c) Conducted static and pseudostatic stability analyses along portions of the revised cross sections;

d) Review and evaluation of major landslide structures and re–evaluation of the materials shear strengths to provide clarification of changes from previous reports;

e) Preparation of graphic illustrations;

f) Evaluation of the extent of removal areas, the grading envelope and the estimated removal volumes;

g) Preparation of this report presenting our findings, conclusions and recommendations.

4. QUALIFICATIONS

a) A more detailed evaluation of the slope stability, including analyses of buttress backcuts and forecuts, individual cut slope buttresses, etc. will be conducted during the 40–scale grading plan review which accompanies the grading permit application.

b) Although no major changes are anticipated in the final grading plan from the current plan, any revisions will be reviewed and re–analyzed, if required.

c) Shear strength parameters utilized in our Slope Stability analyses are presented in Section 9,d. They reflect the lower values, or the more conservative results of tests obtained from samples taken from the site. The shear test results are presented in *Direct Shear Diagrams, Figures 2 and 3*.

Geologic and Soil Engineers

Project Name:	Saddleback Meadows
Date	March 2002
Project No	G4816-04.3
Figure No.	3

5. FIELD EXPLORATION

a) The first generated Logs of Borings, test pits and dozer pits, excavated prior to our latest site exploration are presented in the January 6, 1994 report.

b) Logs of Borings excavated during the most recent subsurface exploration on the site are presented in the *Field Exploration, Appendix B*. Boring, Test Pit and Dozer Pit locations are shown on the *Geologic Map, Plate 1*.

6. STABILITY ANALYSES

The results of our stability analyses for the major landslides on–site are presented in the *Stability Analyses, Appendix C, Volume 1 (cross sections with results) and Volume 2 (Computer Output)*. All procedures and results conform to the County of Orange Grading Code regulations. Stability analyses were conducted utilizing the Alternate 4 plan grades.

7. SITE CONDITIONS

7.1 Location

The location of the site is shown on the *Location Map, Figure 1*.

7.2 Surface Conditions

A description of the surface conditions at the site is presented in the November, 1995 report. Based on several site visits since our most recent subsurface exploration, the site conditions are essentially unchanged, with the exception of some additional erosion within the canyon along the north boundary with the Abbey property and within the gullies on site.

7.3 Geologic Conditions

a) The geologic conditions at the site are essentially the same as those presented in the November, 1995 report, maps and cross sections.

b) Some minor adjustments have been made to the cross section where changes were warranted by additional review and analysis of the subsurface data.

c) Explanations for the changes made to the geologic conditions shown in the January 6, 1994 report are presented in this report.

8. REVISED GEOLOGIC CONDITIONS

a) A number of changes have been made to the geologic map and cross sections for the January 6, 1994 report. These changes were included in the Geologic Map and Geologic Cross Sections in the November 27, 1995 report. As a result of new subsurface data found in our recent Borings BC–1 through BC–17 and from additional field mapping, a number of changes have been made on the geologic map and cross sections for our January 6, 1994 report.

b) These revisions are shown in the cross sections for this report and in the November 27, 1995 report, and they are summarized and described as follows:

8.1 Central Ridge Area

a) The ridge area above and to the east of the old ranch house was originally shown as a landslide with a possible lower slide surface; Cross Section 7–7', Plate 9 illustrates this in the January, 1994 report.

b) Section B–B' of the November, 1995 report and in this report, depicts the revised geologic structure in this area.

c) The landslide interpretation was eliminated for the following reasons:

i) The Petra boring data, in Boring PB–9 does not show any shears or landslide materials.

ii) The bedrock materials observed in our recent deep Borings BC–5, BC–12 and BC–14 were observed to be essentially undisturbed and only minor shear surfaces were observed in the borings. A slide surface deeper than the BC–5 and BC–12 borings is very unlikely.

iii) The rupture surface logged in Boring BB–13, located just south of the east end of Section B–B', was originally interpreted as a basal landslide surface. We have, however, determined that since the surface was not encountered in PB–9, it must pass beneath the boring, which would cause the extrapolation of any potential slide surface to occur well below the deepest slide surface shown in Section B–B'. Therefore, the shear surfaces encountered in Boring BB–13 are interpreted as being of a tectonic derivation since it is unreasonable to assume that basal landslide surfaces would be present at the projected depth. The structural projection of the "basal surface" in the BB–13 boring is shown on the upper east end of Section B–B' of this report.

iv) Based on our geologic mapping in the canyon north of the ridge, we regard the exposed bedrock on the south side of the canyon is undisturbed and the materials on the north side are disturbed.

v) Regardless of whether there is a slide or no slide condition present, the only consequence would be a negligible variation in remedial grading quantities. If a slide is present, an estimated 4 percent increase in the remedial grading quantities would be required to construct an upper shear key in the area of Boring BC–14. However, there would be no change in the present grading envelope.

8.2 Reconstruction of Landslide Structure

8.2.1 Main Slide Area (Sections A–A' and B–B')

a) Our subsurface exploration that was conducted within the past year was initiated to provide more detail to the structure of the deeper slide surfaces and refine remedial grading quantities.

b) Boring BC–1 was drilled to encounter and confirm the location of the basal slide surface shown in Sections 2–2' and 3–3' of the January 6, 1994 report. Section A–A' of this report was constructed essentially along the same line as section 2–2'.

c) At a depth of 120 feet, BC–1 did not encounter this projected slide plane which had been expected from the information obtained in BA–9 and BC–1 (in Section 2–2'). However, an ash bed and a thick, fat, sheared clay zone was encountered at 152 to 154 feet, which was interpreted as the slide material encountered in BA–9.

d) Based on the projection of the rupture zones in BA–9 and BC–1, the structure was extrapolated upslope and downslope along Section A–A' and generally parallel to the known structures; becoming flat and then warping upward along the fault zone to the west and becoming steeper, upslope to the east.

e) Another deeper slide surface was constructed based on the subsurface date from Borings BA–4 and B–22. Structurally, it generally parallels the BA–9 surface.

f) A hypothetical slide surface was constructed connecting the lower and intermediate surfaces in the area of the A–A'/B–B' intersection (refer to the queried, dashed contact).

g) A shallower slide surface was constructed based on boring data found in Borings BA–3 and BA–11. The upper and lower splays to the west represent two hypothetical options. They represent the toe geometry typical of generic landslides common to the south County.

8.2.2 Southerly Slide Area (Section C–C')

a) Cross Section C–C' of the November 27, 1995 report and C–C' in this report were constructed generally along the same trend as Section 4–4' of the January 6, 1994 report.

b) Based on the subsurface data from our recent Boring BC–15 and a re–evaluation of boring data from B–7, B–36, BA–13 and PB–10, we have eliminated the deep slide interpretation in the east half of Section C–C'. The shallow landslides remain.

c) Along Section C–C', the first deep slide surface from the east that passes through B–37 and beneath PB–29 is a hypothetical surface. The intermediate surface above is based on data from B–37 and PB–29.

9. SLOPE STABILITY ANALYSES

a) Slope stability analyses were performed using the UTEXAS2 Slope Stability computer program on what has been determined to be typically critical cross sections. The output documents for the slope stability analyses are presented in the *Stability Analyses, Appendix C, Volume 2.*

b) The strength parameters utilized in the analyses were selected based on the combined results of the field exploration, data from prior consultants and our laboratory test data. The laboratory shear tests include those which were conducted on specimens from hand–driven samples collected by a geologist during the down–hole logging process. They were obtained from the borings drilled specifically to explore the actual rupture surfaces. Lastly, the shear strength values used reflects those values used for similar previous investigations completed over the years in the same and adjacent site areas. The test results were reported in our previous report *(Reference January 6, 1994 report).*

c) The strength parameters used in the static analyses are based on the residual shear strengths, whereas those used in the seismic analyses are based on the peak strengths. Graphic plots of the laboratory results of the shear tests are shown in *Figures 2 and 3.* They also depict the shear strength values used in our slope stability analyses. It is notable that the values used in the analyses are more conservative than the actual strengths obtained.

d) The shear strengths used in the analyses are as follows:

Geologic Conditions	Angle of Friction (degrees)		Cohesion (lb/ft^2)	
	Static	Seismic	Static	Seismic
Rupture Surface	9	15	150	450
Fill	25	28	250	450
Bedrock/Across Bedding	30	30	350	350
Along Bedding	21	21	138	138

e) Remedial measures have been proposed where the factors of safety failed to reach the required 1.5 for the static condition and 1.1 for the seismic condition. The remedial grading is shown on the enclosed cross sections in Appendix C. Although the horizontal acceleration of 0.15g is required by County Code, the application of it to this site and to the computer programs for slope stability currently in vogue are in doubt; the values have been increased to meet the County standard.

10. CONCLUSIONS AND RECOMMENDATIONS

a) The remedial grading required for the Saddleback Meadows Contingency Plan – 299 Lots (dated June 22, 1998) is significantly reduced from the 705–unit grading concept for the original Entitled Plan. The total Remedial Grading quantity is approximately 6.8 million cubic yards.

b) We conclude that the site is developable.

The opportunity to be of service is sincerely appreciated. If you have any questions, please call.

Very truly yours,

GANICO Geotechnical, Inc.

APPENDIX B

Field Exploration

a) The site was explored utilizing a truck–mounted bucket auger drill rig to excavate 17 borings to depths of 77 to 173 feet below the existing ground surface. All borings were subsequently backfilled. Approximate locations of the borings are shown on the *Geologic Map, Plate 1*, of the November 1995 report.

b) The soils and bedrock encountered in the borings were logged and sampled by our Geologist. The soils were visually classified in accordance with the Unified Soil Classification System described in *Figure B-1*. The Logs of the Borings are presented in *Figures B-2 to B-18*. (The logs, as presented, are based on the field logs, modified as required from the results of the laboratory tests.) Driven ring and bulk samples were obtained from the excavations for laboratory inspection and testing. The depths at which the samples were obtained are indicated on the logs.

c) The number of blows during sampling was recorded, together with the depth of penetration, the driven weight and the height of fall. The energy required per foot of penetration for given samples was then calculated, and is indicated on the logs. These drive energies provide a measure of the density or consistency of the soil.

d) Ground water and seepage was encountered as noted on the Logs of Borings.

UNIFIED SOIL CLASSIFICATION SYSTEM

MAJOR DIVISIONS			GROUP SYMBOLS	DESCRIPTIONS
COARSE GRAINED SOILS (More than 50% of material is LARGER than No. 200 sieve size.)	GRAVELS (More than 50% of coarse fraction is LARGER than the No. 4 sieve size.)	CLEAN GRAVELS (Little or no fines)	GW	Well graded gravels, gravel-sand mixtures, little or no fines.
			GP	Poorly graded gravels or gravel-sand mixtures, little or no fines.
		GRAVELS WITH FINES (Appreciable amount of fines)	GM	Silty gravels, gravel-sand-silt mixtures.
			GC	Clayey gravels, gravel-sand-clay mixtures.
	SANDS (More than 50% of coarse fraction is SMALLER than the No. 4 sieve size.)	CLEAN SANDS (Little or no fines)	SW	Well graded sands, gravelly sands, little or no fines.
			SP	Poorly graded sands or gravelly sands, little or no fines.
		SANDS WITH FINES (Appreciable amount of fines)	SM	Silty sands, sand-silt mixtures.
			SC	Clayey sands, sand-clay mixtures.
FINE GRAINED SOILS (More than 50% of material is SMALLER than No. 200 sieve size.)	SILTS AND CLAYS (Liquid limit LESS than 50)		ML	Inorganic silts and very fine sands, rock flour, silty or clayey fine sands or clayey silts with slight plasticity.
			CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays, silty clays, lean clays.
			OL	Organic silts and organic silty clays of low plasticity.
	SILTS AND CLAYS (Liquid limit GREATER than 50)		MH	Inorganic silts, micaceous or diatomaceous fine sandy or silty soils, elastic silts.
			CH	Inorganic clays of high plasticity, fat clays.
			OH	Organic clays of medium to high plasticity, organic silts.
HIGHLY ORGANIC SOILS			Pt	Peat and other highly organic soils.

BOUNDARY CLASSIFICATIONS: Soils possessing characteristics of two groups are designated by combinations of group symbols.

PARTICLE SIZE LIMITS

Project No.: 4816-04

Figure No.: B-18.5

LOG OF BORING

Drill Rig	Boring Diameter	Boring Elevation	Boring Number
Bucket Auger	30 inches	1073 feet	BC-17

Date Drilled: 10/12/95 GDH

This log is a representation of subsurface conditions at the time and place of drilling. With the passage of time or at any other location there may be consequential changes in conditions.

SAMPLE: BULK | TUBE | DRIVE ENERGY FT KIPS/FT | FIELD MOISTURE % DRY WEIGHT | DRY DENSITY LB/CU.FT. | SHEAR RESISTANCE KIPS/SQ FT | DEPTH FEET | SOILROCK SYMBOL | SOILROCK TYPE | Description and Remarks

155

Silty SANDSTONE: light-pinkish-brown, fine-grained, somewhat cemented, poorly bedded

@ 150.5 feet, Sheared Silty CLAY: grayish-green, very moist, soft to stiff, polished, unstriated, somewhat remolded

@ 152 feet, becomes highly chaotic with grayish-green Silty CLAY intermixed with pink ASH and broken Siltstone fragments

@ 153.9 feet, Contact: N5W,26NE

LANDSLIDE MATERIAL

160

Sandy SILTSTONE: olive-brown, well-cemented, firm, faintly polsihed on fresh surfaces

@ 156.9 feet, 2 inch thick Sheared Silty CLAY Seam: polished, unstriated dark green medium stiff

N25W,30NE VASQUEROS SESPE FM

Silty SANDSTONE: fine-grained, light gray, well cemented, well indurated, poorly bedded, massive

@ 169 feet, becomes less cemented

165

LANDSLIDE MATERIAL

FAULTED BEDROCK

170

VAQUEROS SESPE FM

175

Bottom of Boring at 173 feet.

Notes:

1) Minor caving at 100-150 feet.
2) Seepage at 51.7 and 70 feet.
3) Boring downhole logged and backfilled.

APPENDIX C

Slope Stability Analyses
Cross Sections

UNITS

Qp	Pond Sediments
Fill	Fill
Qal	Alluvium
Qcol	Colluvium, includes landslide graben soils
Qalo	Old Alluvium
Qf	Mapped and /or inferred area of surficial instability
Qls	Mapped and /or inferred landslide, arrows show direction of movement
Qls(Qalo)	(Qalo) Indicates predominant material disturbed older alluvium at toe of slide
Tvs	vaqueros and Sespe formations, undifferentiated
Ts	Sespe formation

SYMBOLS

- Geologic contact, dotted where buried, queried where uncertain
- Scarp
- Fault, queried where uncertain, dotted where buried
- C C' — Geologic Cross Section
- Boring by Moore & Taber
- Boring by Leighton and Associates, Inc.
- Test Pit by Leighton and Associates, Inc.
- Test Pit by Leighton and Associates, Inc.
- Dozer Pit by Leighton and Associates, Inc.
- Boring by G.A Nicoll and Associates, Inc.
- Boring by Petra Geotechnical, Inc.
- Boring by G.A Nicoll and Associates, Inc.
- Boring by G.A Nicoll and Associates, Inc.

Showing depth

CORRECTIVE GRADING

- Key — Major Buttress or Shear Key, showing spot elevations
- Other Buttress or Stability Fill Key, showing key width
- See Geotechnical Cross Sections, Plates D-1 through D-8 symbol shows subdrain locations in cross sections
- 20' — Limits of Removal Area, showing estimated overage removal depth
- Approximate location of major subdrain; arrows show flow direction, "o" indicates outlet location
- Limits of grading, including corrective grading
- Synclinal Fold Axis, Showing direction of plunge

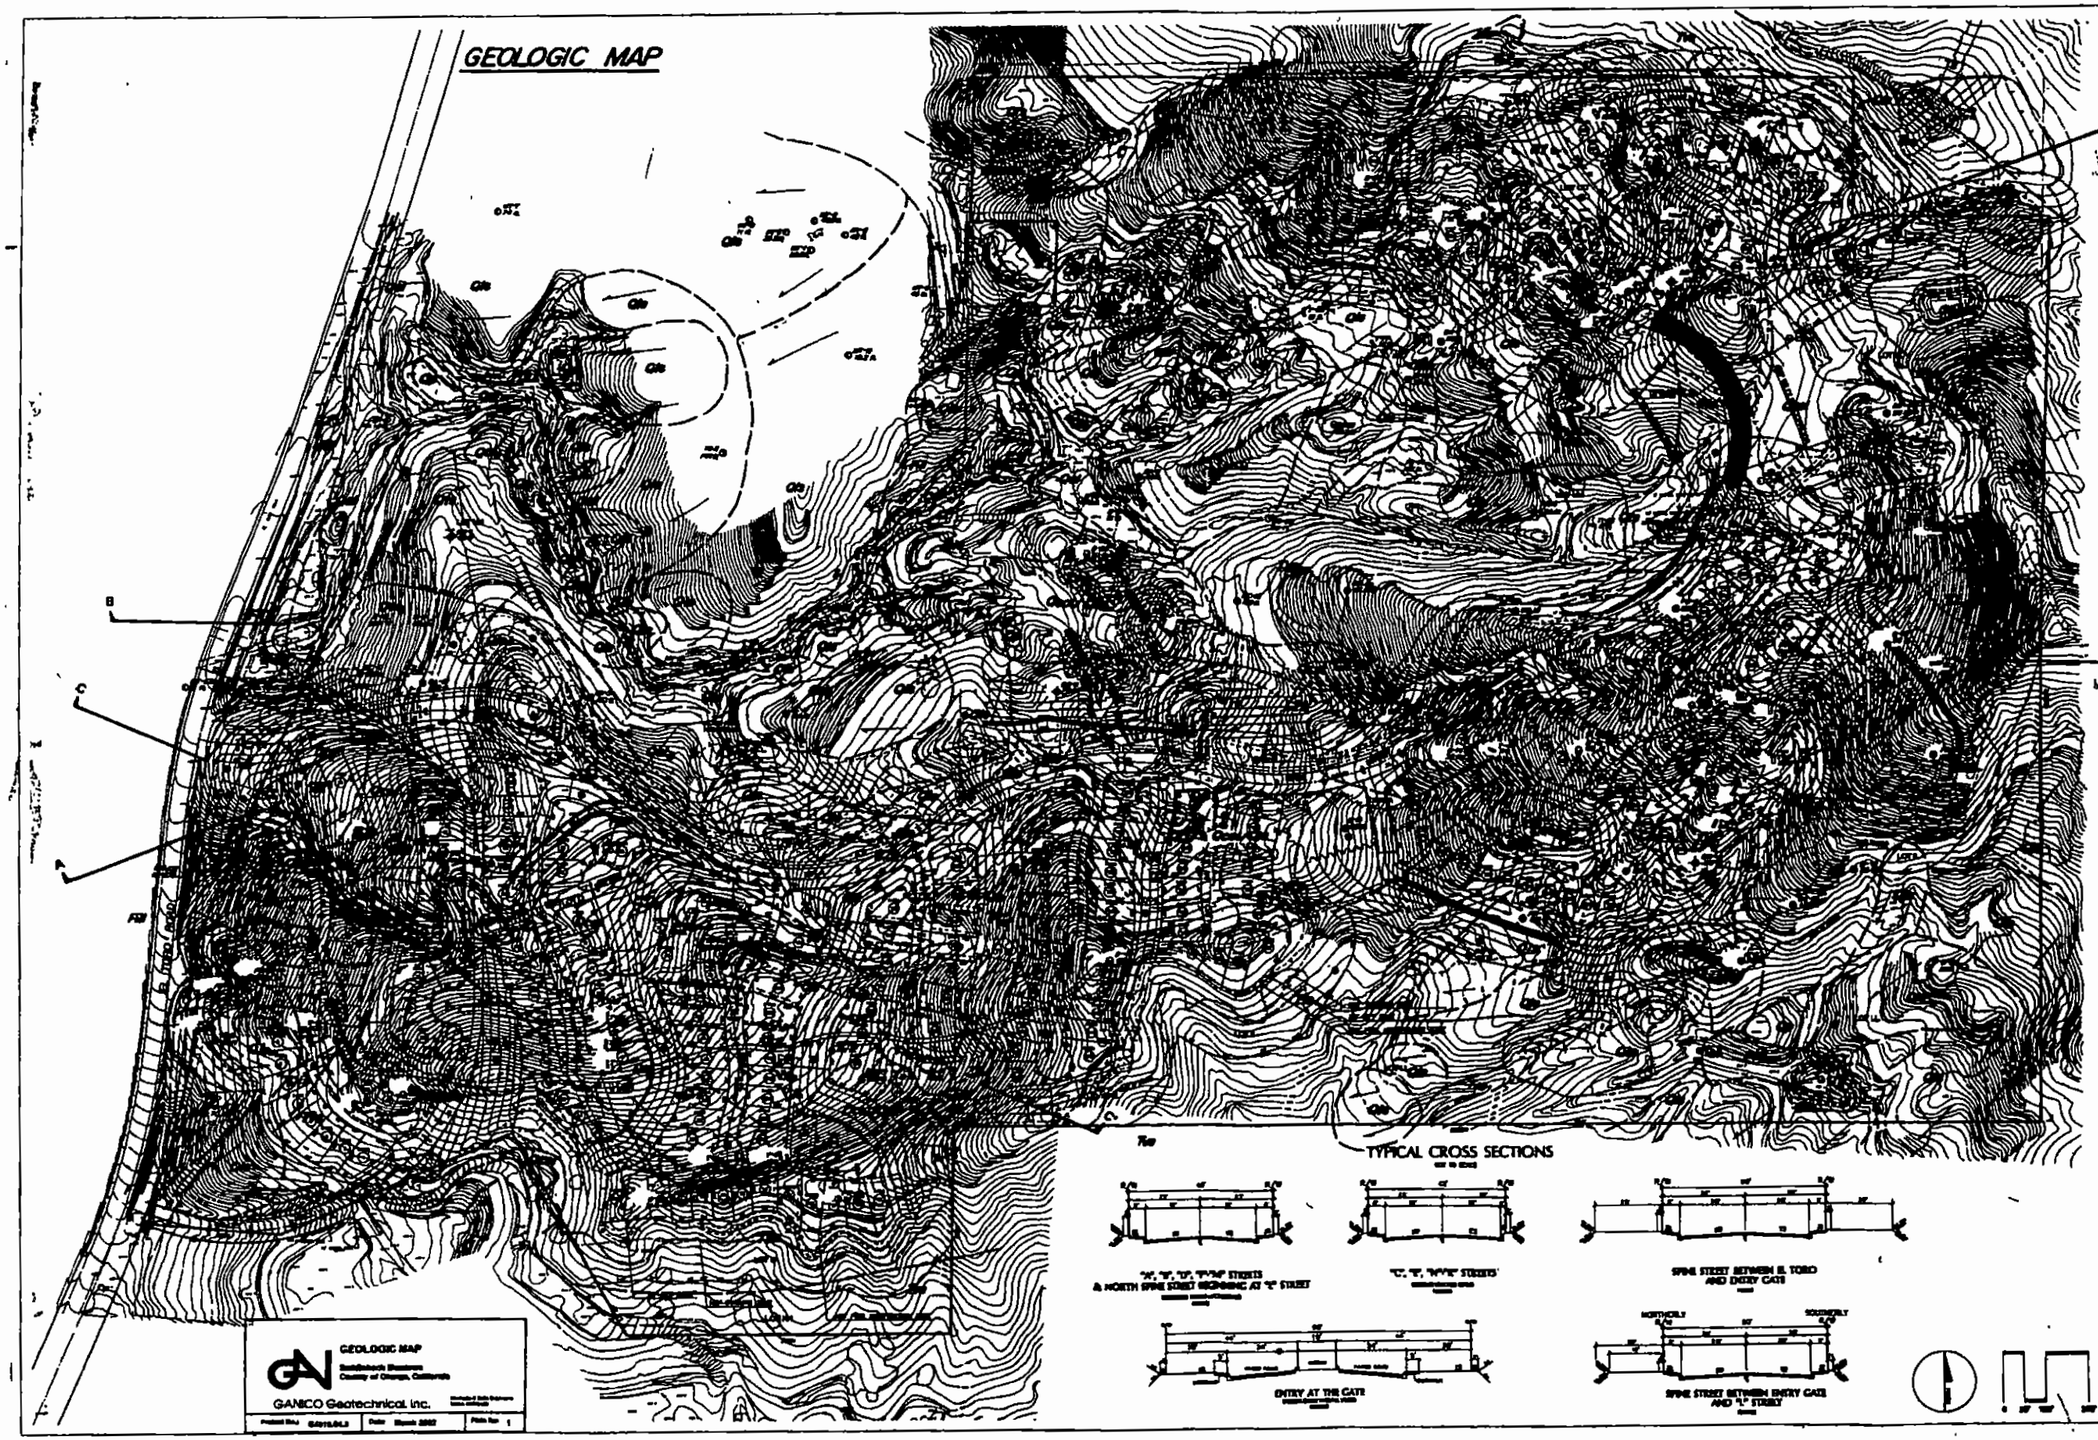
GEOLOGIC MAP



NOTES

1. EXISTING LAND USE : VACANT
2. PROPOSED LAND USE : SINGLE FAMILY RESIDENTIAL, DEVELOPMENT, PARK
3. EXISTING ZONING / LAND USE DESIGNATION : FOOTHILL / TRABUCO SPECIFIC PLAN (1988 DISTRICT)
4. DOMESTIC WATER SERVICE PROVIDED BY : TRABUCO CANYON WATER DISTRICT
5. SANITARY SEWER SERVICE PROVIDED BY : TRABUCO CANYON WATER DISTRICT
6. GAS SERVICE PROVIDED BY : SOUTHERN CALIFORNIA GAS COMPANY
7. ELECTRIC SERVICE PROVIDED BY : SOUTHERN CALIFORNIA EDISON COMPANY
8. TELEPHONE SERVICE PROVIDED BY : PACIFIC BELL
9. CABLE TELEVISION PROVIDED BY : COX COMMUNICATIONS
10. PROJECT IS LOCATED WITHIN THE SADDLEBACK VALLEY SCHOOL DISTRICT
11. NO BUILDINGS EXIST ON THE SITE
12. ALL PROPOSED UTILITIES ARE TO BE UNDERGROUND
13. GRADING BEYOND BANKS AS DEFINED IN ACCORDANCE WITH THE COUNTY OF ORANGE FLOOD CONTROL DISTRICT STANDARDS
14. ALL GRADING SHALL CONFORM TO THE COUNTY OF ORANGE GRADING AND EXCAVATION CODE, EXCLUDED WORKS SHALL BE 2:1 (UNLESS OTHERWISE SHOWN) AND ASEA PLAN 1996.
15. IN THE DESIGN OF THIS MAP THE SOILS ACCESS GUIDELINES ADOPTED BY THE BOARD OF SUPERVISORS WERE CONSIDERED.
16. ALL SLOPES TYPE C UNLESS OTHERWISE NOTED
17. MULTIPLE FINAL MAPS MAY BE FILED ON THIS TENTATIVE MAP
18. THE NECESSARY ENCROACHMENT PERMITS SHALL BE OBTAINED FROM THE COUNTY OF ORANGE PRIOR TO CONSTRUCTION.
19. THIS IS AN APPLICATION FOR A DEVELOPMENT PERMIT.

LOT SUMMARY TABLE

LOT NUMBER	LAND USE
1 THRU 109	RESIDENTIAL LOTS
200	PUMP STATION PURPOSES
201	GATED ENTRY
A THRU D	STREETS
E - F, etc. PL E (XX.XXX AC)	RESTRICTED SCENIC PRESERVATION EASEMENT
etc. (X.XXX SQ AC)	REGIONAL PARK
CO	SEWER LIFT STATION

LEGAL DESCRIPTION

TRACT No. 15230 IN THE UNINCORPORATED TERRITORY OF THE COUNTY OF ORANGE, STATE OF CALIFORNIA AS RECORDED IN BOOK 825, PAGES 9-20 ON NOV. 16, 1998.

SLOPE DESIGNATIONS

- MAINTAINED BY PUBLIC AGENCY OR HOME OWNERS ASSOCIATION
- MAINTAINED BY HOME OWNERS ASSOCIATION
- MAINTAINED BY INDIVIDUAL OWNERS

ESTIMATED EARTHWORK

CUT: XXX,XXX CYD
FILL: XXX,XXX CYD
NOTE: CUT / FILL VOLUMES DO NOT INCLUDE REMEDIAL GRADING.

DEVIATION REQUESTS :

1. TYPE "C" SLOPE HEIGHTS OVER 30' AS SHOWN
2. CROSSLOT GRADE LESS THAN 250' ON "H" & "I" STREETS
3. 15% GRADE ON "E" STREET

STATEMENT OF OWNERSHIP

I (WE) ACKNOWLEDGE THAT I (WE) ARE (AM) THE RECORD OWNER(S) OF THE PROPERTY INVOLVED IN THIS APPLICATION OR ARE (AM) AUTHORIZED TO ACT FOR THE RECORD OWNER(S) THEREOF. I (WE) ALSO ACKNOWLEDGE THAT ADDITIONAL INFORMATION MAY BE REQUIRED BY THE COUNTY OF ORANGE TO PROCESS THIS APPLICATION.

9	3340.000	350.000
10	3480.000	445.000

SHORT FORM OF OUTPUT WILL BE USED FOR SEARCH

THE FOLLOWING REPRESENT EITHER DEFAULT OR PREVIOUSLY DEFINED VALUES:

INITIAL TRIAL ESTIMATE FOR THE FACTOR OF SAFETY = 3.000

INITIAL TRIAL ESTIMATE FOR SIDE FORCE INCLINATION = 15.000 DEGREES
(APPLICABLE TO SPENCER'S PROCEDURE ONLY)

MAXIMUM NUMBER OF ITERATIONS ALLOWED FOR
CALCULATING THE FACTOR OF SAFETY = 40

ALLOWED FORCE IMBALANCE FOR CONVERGENCE = 100.000

ALLOWED MOMENT IMBALANCE FOR CONVERGENCE = 100.000

NUMBER OF INCREMENTS FOR SLICE SUBDIVISION = 30

DEPTH OF WATER IN CRACK = .000

UNIT WEIGHT OF WATER IN CRACK = 62.400

SEISMIC COEFFICIENT = .000

PROCEDURE USED TO COMPUTE THE FACTOR OF SAFETY: SPENCER

FACTOR OF SAFETY ALONG NONCIRCULAR SURFACE

TABLE NO. 9

****
* NEW ANALYSIS/COMPUTATION DATA *
****

NONCIRCULAR SHEAR SURFACE(S)

COMPUTATIONS PERFORMED FOR SINGLE SHEAR SURFACE

SHEAR SURFACE COORDINATES -

POINT	X	Y
1	170.000	160.000
2	320.000	70.000
3	400.000	30.000
4	660.000	-20.000
5	900.000	-50.000
6	1100.000	-50.000
7	1960.000	60.000
8	2680.000	190.000
9	3340.000	350.000
10	3480.000	445.000

SHORT FORM OF OUTPUT WILL BE USED FOR SEARCH

SEISMIC COEFFICIENT = .150

THE FOLLOWING REPRESENT EITHER DEFAULT OR PREVIOUSLY DEFINED VALUES:

INITIAL TRIAL ESTIMATE FOR THE FACTOR OF SAFETY = 3.000

INITIAL TRIAL ESTIMATE FOR SIDE FORCE INCLINATION = 15.000 DEGREES

(APPLICABLE TO SPENCER'S PROCEDURE ONLY)

MAXIMUM NUMBER OF ITERATIONS ALLOWED FOR
CALCULATING THE FACTOR OF SAFETY = 40

ALLOWED FORCE IMBALANCE FOR CONVERGENCE = 100.000

ALLOWED MOMENT IMBALANCE FOR CONVERGENCE = 100.000

NUMBER OF INCREMENTS FOR SLICE SUBDIVISION = 30

DEPTH OF WATER IN CRACK = .000

UNIT WEIGHT OF WATER IN CRACK = 62.400

PROCEDURE USED TO COMPUTE THE FACTOR OF SAFETY: SPENCER

10	3480.000	445.000

SHORT FORM OF OUTPUT WILL BE USED FOR SEARCH

THE FOLLOWING REPRESENT EITHER DEFAULT OR PREVIOUSLY DEFINED VALUES:

INITIAL TRIAL ESTIMATE FOR THE FACTOR OF SAFETY = 3.000

INITIAL TRIAL ESTIMATE FOR SIDE FORCE INCLINATION = 15.000 DEGREES
(APPLICABLE TO SPENCER'S PROCEDURE ONLY)

MAXIMUM NUMBER OF ITERATIONS ALLOWED FOR CALCULATING THE FACTOR OF SAFETY = 40

ALLOWED FORCE IMBALANCE FOR CONVERGENCE = 100.000

ALLOWED MOMENT IMBALANCE FOR CONVERGENCE = 100.000

NUMBER OF INCREMENTS FOR SLICE SUBDIVISION = 30

DEPTH OF WATER IN CRACK = .000

UNIT WEIGHT OF WATER IN CRACK = 62.400

SEISMIC COEFFICIENT = .000

PROCEDURE USED TO COMPUTE THE FACTOR OF SAFETY: SPENCER

Creekside Daily Devotional
March 27, 2002

"I Must Be Better Than Him."

"Thank God, I am not like Jeffrey Dahmer!" That is so easy to say, the words just tumble out. His conviction on 17 counts of murder, mayhem and evil placed him in prison for life. On November 28, 1994, a fellow inmate executed him. It was almost as if a collective, "Good!" could be heard all over the nation.

It is so easy to measure ourselves by the worst of us. That was the Pharisee's problem. The toughest test is to measure ourselves by Jesus. James said it this way, "For whoever keeps the whole law and yet stumbles at just one point is guilty of breaking all of it." James 2:10 We can only be free when we are as broken as the tax collector. A bad attitude is as bad as murder.

In a TV interview, Dahmer spoke of needing inner peace. Mary Mott, of Arlington, Virginia, was moved to send him a World Bible School correspondence course which he completed and returned to her. In his thank you note for the lessons, he told her he wanted to become a Christian. Roy Ratcliff, a minister for the Church of Christ, went to the Columbia Correctional Institution in Portage, Wisconsin, studied further with him and baptized him on May 10, 1994. Two weeks prior to being killed, Dahmer was quoted as saying he was at peace with himself and God.

In his book, In The Grip Of Grace, Max Lucado wrote that he was troubled by Jeffrey Dahmer's conversion. Although he knew the conversion should not bother him, it did. "Grace for a cannibal," he wrote. Grace is not easy. How unlike God we can be.

It is better to be a tax collector than a Pharisee, is it not?

Carl Thompson
Carlsbad, California

5	1120.000	20.000
6	1960.000	60.000
7	2220.000	100.000
8	2680.000	190.000
9	3340.000	350.000
10	3480.000	445.000

SHORT FORM OF OUTPUT WILL BE USED FOR SEARCH

SEISMIC COEFFICIENT = .150

THE FOLLOWING REPRESENT EITHER DEFAULT OR PREVIOUSLY DEFINED VALUES:

INITIAL TRIAL ESTIMATE FOR THE FACTOR OF SAFETY = 3.000

INITIAL TRIAL ESTIMATE FOR SIDE FORCE INCLINATION = 15.000 DEGREES
(APPLICABLE TO SPENCER'S PROCEDURE ONLY)

MAXIMUM NUMBER OF ITERATIONS ALLOWED FOR CALCULATING THE FACTOR OF SAFETY = 40

ALLOWED FORCE IMBALANCE FOR CONVERGENCE = 100.000

ALLOWED MOMENT IMBALANCE FOR CONVERGENCE = 100.000

NUMBER OF INCREMENTS FOR SLICE SUBDIVISION = 30

DEPTH OF WATER IN CRACK = .000

UNIT WEIGHT OF WATER IN CRACK = 62.400

PROCEDURE USED TO COMPUTE THE FACTOR OF SAFETY: SPENCER

SHORT FORM OF OUTPUT WILL BE USED FOR SEARCH

THE FOLLOWING REPRESENT EITHER -DEFAULT OR PREVIOUSLY DEFINED VALUES:

INITIAL TRIAL ESTIMATE FOR THE FACTOR OF SAFETY = 3.000

INITIAL TRIAL ESTIMATE FOR SIDE FORCE INCLINATION = 15.000 DEGREES
(APPLICABLE TO SPENCER'S PROCEDURE ONLY)

MAXIMUM NUMBER OF ITERATIONS ALLOWED FOR CALCULATING THE FACTOR OF SAFETY = 40

ALLOWED FORCE-IMBALANCE FOR CONVERGENCE = 100.000

ALLOWED MOMENT IMBALANCE FOR CONVERGENCE = 100.000

NUMBER OF INCREMENTS FOR SLICE SUBDIVISION = 30

DEPTH OF WATER IN CRACK = .000

UNIT WEIGHT OF WATER IN CRACK = 62.400

SEISMIC COEFFICIENT = .000

PROCEDURE USED TO COMPUTE THE FACTOR OF SAFETY: SPENCER

CIRCULAR SHEAR SURFACE(S)

AUTOMATIC SEARCH PERFORMED

STARTING CENTER COORDINATE FOR SEARCH AT -
                                                    X  =
700.000                                             /
                                                    Y  =
600.000

REQUIRED ACCURACY FOR CRITICAL CENTER (= MINIMUM
SPACING BETWEEN GRID POINTS) =        1.000

CRITICAL SHEAR  SURFACE NOT ALLOWED TO PASS BELOW Y =
 80.000

FOR THE INITIAL MODE OF SEARCH
ALL CIRCLES ARE TANGENT TO HORIZONTAL LINE AT -
                                                    Y  =
100.000
```

SHORT FORM OF OUTPUT WILL BE USED FOR SEARCH

THE FOLLOWING REPRESENT EITHER DEFAULT OR PREVIOUSLY DEFINED VALUES:

INITIAL TRIAL ESTIMATE FOR THE FACTOR OF SAFETY = 3.000

INITIAL TRIAL ESTIMATE FOR SIDE FORCE INCLINATION = 15.000 DEGREES
(APPLICABLE TO SPENCER'S PROCEDURE ONLY)

MAXIMUM NUMBER OF ITERATIONS ALLOWED FOR
CALCULATING THE FACTOR OF SAFETY = 40

ALLOWED FORCE IMBALANCE FOR CONVERGENCE = 100.000

ALLOWED MOMENT IMBALANCE FOR CONVERGENCE = 100.000

INITIAL TRIAL VALUES FOR FACTOR OF SAFETY (AND SIDE FORCE INCLINATION
FOR SPENCER'S PROCEDURE) WILL BE KEPT CONSTANT DURING SEARCH

MAXIMUM SUBTENDED ANGLE TO BE USED FOR SUBDIVISION OF THE
CIRCLE INTO SLICES = 3.00 DEGREES

DEPTH OF CRACK = .000

SEARCH WILL BE CONTINUED TO LOCATE A MORE CRITICAL SHEAR
SURFACE (IF ONE EXISTS) AFTER THE INITIAL MODE IS COMPLETE

DEPTH OF WATER IN CRACK = .000

UNIT WEIGHT OF WATER IN CRACK = 62.400

SEISMIC COEFFICIENT = .000

PROCEDURE USED TO COMPUTE THE FACTOR OF SAFETY: SPENCER

FACTOR OF SAFETY ALONG CIRCULAR SURFACE

TABLE NO. 9
****
* NEW ANALYSIS/COMPUTATION DATA *
****

CIRCULAR SHEAR SURFACE(S)

AUTOMATIC SEARCH PERFORMED

STARTING CENTER COORDINATE FOR SEARCH AT -

X = 700.000

Y = 600.000

REQUIRED ACCURACY FOR CRITICAL CENTER (= MINIMUM SPACING BETWEEN GRID POINTS) = 1.000

CRITICAL SHEAR SURFACE NOT ALLOWED TO PASS BELOW Y = 80.000

FOR THE INITIAL MODE OF SEARCH
ALL CIRCLES ARE TANGENT TO HORIZONTAL LINE AT -

Y = 100.000

SHORT FORM OF OUTPUT WILL BE USED FOR SEARCH

SEISMIC COEFFICIENT = .150

THE FOLLOWING REPRESENT EITHER DEFAULT OR PREVIOUSLY DEFINED VALUES:

INITIAL TRIAL ESTIMATE FOR THE FACTOR OF SAFETY = 3.000

INITIAL TRIAL ESTIMATE FOR SIDE FORCE INCLINATION = 15.000 DEGREES
(APPLICABLE TO SPENCER'S PROCEDURE ONLY)

MAXIMUM NUMBER OF ITERATIONS ALLOWED FOR CALCULATING THE FACTOR OF SAFETY = 40

ALLOWED FORCE IMBALANCE FOR CONVERGENCE = 100.000

ALLOWED MOMENT IMBALANCE FOR CONVERGENCE = 100.000

INITIAL TRIAL VALUES FOR FACTOR OF SAFETY (AND SIDE FORCE INCLINATION
FOR SPENCER'S PROCEDURE) WILL BE KEPT CONSTANT DURING SEARCH

MAXIMUM SUBTENDED ANGLE TO BE USED FOR SUBDIVISION OF THE
CIRCLE INTO SLICES = 3.00 DEGREES

DEPTH OF CRACK = .000

SEARCH WILL BE CONTINUED TO LOCATE A MORE CRITICAL SHEAR
SURFACE (IF ONE EXISTS) AFTER THE INITIAL MODE IS COMPLETE

DEPTH OF WATER IN CRACK = .000

UNIT WEIGHT OF WATER IN CRACK = 62.400

PROCEDURE USED TO COMPUTE THE FACTOR OF SAFETY: SPENCER

INTRODUCTION

Tentative Tract 15230 is a proposed residential development known as Saddleback Meadows in the County of Orange. The project site locates adjacent to east of El Toro Road between Glenn Ranch Road and Ridgeline Road (see vicinity map for detail).

The purpose of this hydrology study is to determine the storm drain system required for Tentative Tract 15230.

In the developed condition the site has eight different storm drain systems. Lines "A", "B", and "C" collect flows from areas A, B, and C with proposed 18" R.C.P., 36" R.C.P., 42" R.C.P., respectively. The three proposed storm drain systems above discharge the runoffs into the existing natural channel. The flows then travel west toward El Toro Road to the existing facility "J01" at node 459. Line "E" collects flows from area E with a proposed 36" R.C.P., and discharges into the existing facility "J01" at node 459. The flows will confluence with the flows produced from areas A, B, and C at node 459, and eventually discharges into Alisos Creek by "J01". Line "F" collects flows from area F at node 504 with a proposed 24" R.C.P. and will be connected to the existing 24" R.C.P. (line "B" per storm drain plans No.J01-701-15). The flows then discharges into Alisos Creek. There are two existing 24" R.C.P. (lines "B" & "C" per improvement plans for tract 12724) in Valley Vista Street at nodes 607 and 703 collect flows from areas G and H then discharges into Alisos Creek with the existing 24" R.C.P. line "A" in El Toro Road. The last system line "D" collect flows from area D with a proposed 24" R.C.P. and discharges into a proposed earth channel at node 317 then into Oso Creek with the natural channel. See hydrology map for details.

In the existing condition the site has five existing drainage system. The existing facility "J01" collects flows from area A at node 459 and discharges into Alisos Creek. The existing 24" R.C.P. (line "B" per storm drain plans No.J01-701-15) collects flows from area F at node 504 and discharges into Alisos Creek. The two existing 24" R.C.P. (lines "B" & "C" per improvement plans for tract 12724) in Valley Vista Street at nodes 607 and 703 collect flows

from areas G and H then discharges into Alisos Creek with the existing 24" R.C.P. line "A" in El Toro Road. The last system the existing earth channel collects flows from area D at node 324 and discharge into Oso Creek with the natural channel.

The hydrology calculations were prepared using the 1986 Orange County HydrologyManual as incorporated in the A.E.S. rational method software package. Soil group was based on current USGS Hydrological Orange county Soil Group Map. All pertinent information is included on the hydrology map contained in this report.
