The importance/significance of the site is as yet unknown. It is therefore recommended that controlled grading under the guidance of a qualified archaeologist be accomplished at the site before the commencement of mass grading. Should clusters of artifacts be discovered, additional units could be excavated in those specific areas.

CA-ORA-716

The site is located on a high hilltop in the northeastern corner of the project area. Tadlock and Tadlock (1978) reported finding a negligible number of flakes on the westerly portion of the site and flakes, cores and a redeposited chopper on the central and eastern portion. Dillon (SRS 1989), then reports finding just one basalt core at the site area and comments that much of the surface of the site has been graded to and below the surface of bedrock.

Relative to the current project, the site, or what is left of it, lies off the property to the west; therefore, no further action is required.

CA-ORA-1255

The site lies on the lower drainage of a small knoll creating an upland pond and overlooking a steep-sided drainage (see Figure 9 below). It is approximately 25 by 25 meters in size. Dillon (SRS 1989) described the site as lying approximately 50 meters southwest of the pond in a natural amphitheater formed by a series of low, rounded knolls. The site was apparently on the backslope of the knoll creating the pond. Artifacts recovered by Dillon include one sandstone metate fragment, one core, two flakes and a quartzite prismatic blade.

Initial work on the site (Maxon 1995) consisted of a surface examination and surface collection. One metavolcanic flake was recovered by this method. Subsequently, two .50 by one

meter units were excavated on the top of the knoll. Unit one was excavated to 20 cm., Unit two to 30 cm. The lone artifact recovered was a piece of metavolcanic shatter in the 10-20 cm. level of Unit 2. The units were very shallow, because a very light colored decomposing bedrock sand was encountered at those levels and the units were abandoned.

Based on the dearth of cultural materials recovered, the site is deemed not important/significance and no further work is necessary. It is recommended, however, that a qualified archaeologist be present to monitor the commencement of clearing/grading. If additional artifacts are recovered, the site can be reevaluated.

CA-ORA-1256

The site lies to the south and downslope from the southwest margin of CA-ORA-715, along a brushy fingerline ridge. Dillon (SRS 1989) first recorded the site and reported finding a large, crude, "early" appearing scraper plane and an andesite core/scraper.

The site was not relocated during the surface examination of the current project and has been likely destroyed. The site is not considered important/significant; however, it is recommended that a qualified archaeologist be present to monitor clearing/grading operations. If additional artifacts are recovered, the site can be reevaluated.

CA-ORA-1257

The site lies to the west and downslope of a low knoll directly west of Aliso Creek, and north of a steep cliff. Dillon (SRS 1989) recorded the site and reported finding a unifacial granite mano and a sandstone bedrock feature containing two cupules or incipient bedrock mortars. He commented that the mano was not truncated like the other three found at CA-ORA-710, but may have been used in conjunction with the bedrock feature for grinding purposes: therefore he called it an incipient bedrock mortar.

During a prior visit to the site the small boulder containing the purported cupules was seen, and during the current project it was again located. The current researchers doubt the cultural nature of the cupules. They are in very soft stone and would have been most ineffective as grinding implements.

The site was carefully examined for cultural materials during the project (Maxon 1995). No artifacts were seen or recovered. Therefore, the site is considered not important/significant; however, it is recommended that a qualified archaeologist be present during clearing/grading operations. If additional artifacts are recovered, the site can be reevaluated.

CA-ORA-1435H (Hausauer Ranch)

The site is located at the bottom of a deep drainage near the center of the property (see Figure 10 below). It is surrounded by dense foliage (oak, eucalyptus and pepper trees). The site is a ranch complex comprised of a residence, barn (collapsed), several out structures and a holding pond surrounded by a large olive grove numbering nearly 100 trees. The ranch buildings are in an advanced state of decay and have additionally been vandalized. The site complex measures approximately 275 by 100 meters.

Work performed on the site (Maxon 1995) included examining the surface of the entire ranch area, mapping and describing all the structures associated with the ranch, and preparing a site recording form.

Because no in depth work has been accomplished on the site, its importance/significance has not yet been determined. It is therefore recommended that a thorough surface collection and excavation of a sufficient number of backhoe trenches (approximately 10-20) be accomplished at the site to provide the data for site evaluation. Subsequent work will depend on the results of test excavation of the site. Data recovery work may become necessary after evaluation.

CA-ORA-1437

This newly discovered site lies on a rounded knolltop at the northern edge of the property overlooking a small drainage leading south-westward into Aliso Creek (see Figure 11 below). The site is approximately 140 meters northwest of CA-ORA-1255 and measures approximately 20 by 20 meters.

The site was discovered serendipitously (Maxon 1995) as the reconnaissance crew was searching for CA-ORA-1255. Work performed on the site (Maxon 1995) included a surface

examination and the subsequent recording of all identified artifacts by surveyor's transit and stadia radiation methods. Twenty-nine items were identified including mano fragments, metate fragments, cores and flakes. The items were not collected, precluding the possibility of further study (material types, measurements, weights) of the artifacts. Finally, an archaeological site recording form was prepared for the site.

Because no in depth work has been accomplished on the site, its importance/significance is not known. It is therefore recommended that a thorough surface collection and unit excavation be accomplished at the site to provide the data for site evaluation. Subsequent work will depend on the results of test excavation of the site.

RESPONSE TO COMMENTS

In March 1996, comments to the Draft Environmental Impact Report No. 561 were submitted to Raymond Brantley, Chief of the County of Orange, Environmental and Project Planning Division, by Steve Conkling, a resident of a neighborhood in the vicinity of Saddleback Meadows. Mr. Conkling commented on the entire EIR document, a portion of which concerned the cultural resources research performed at Saddleback Meadows. A response to the comments was prepared and sent to Duane Morita of Urban Vision. This response is reproduced here. Mr. Conkling made some 69 separate comments concerning the EIR document. Those comments were enumerated and any concerning cultural resources (only #s 24 and 64) were responded to.

Comment (#24): "Table 4 states that cultural resources will require EMA approval. However, this table also indicates that a Section 404 permit will be required for the project. Under the Section 404 permit, cultural resources should be mitigated to be in compliance with Section 106 of the *National Historic Preservation Act*, and fall under the review of the U.S. Army Corps of Engineers. The current document does not provide cultural resource mitigation management to this level."

Response: The applicability of completing the project in compliance with Section 106 is discussed in the response to Comment #64 below. The statement that "cultural resources should

be mitigated to be in compliance with Section 106" is incorrect. Under Section 106, only the effect of the project on sites determined eligible to be listed in the *National Register of Historic Places* need to be taken into account. Sites determined to be ineligible require no additional action.

Comment (#64): "Since the project requires a 404 Permit with the U.S. Army Corps of Engineers (Corps), assessment, testing and data recovery for affected archaeological sites must be conducted in compliance with Section 106 of the *National Historic Preservation Act*. Section 106 requires that the sites be tested for their potential eligibility to the *National Register of Historic Places (National Register)*. None of the testing for the EIR was done to these standards."

Response: Throughout the duration of the Saddleback Meadows archaeological study there was no notification that the project required a 404 permit from the Army Corps of Engineers, or that any other Federal involvement in the project was expected. Completing the cultural resources study in compliance with Section 106 of the *National Historic Preservation Act* was not warranted. Consequently the project was appropriately completed under the *California Environmental Quality Act* (CEQA).

Comment (#64): "The 12 archaeological resources identified in the EIR have not been adequately tested to determine their significance under CEQA."

Response: Eleven prehistoric archaeological sites and one historic site have been recorded within the boundaries of the Saddleback Meadows project area. Three sites (CA-ORA-712, -1256 and -1257) could not be relocated as plotted by previous researchers and no cultural material was found despite a thorough examination of those plotted locations. These sites are clearly not important resources.

One site (CA-ORA-716) actually is located just outside the project boundaries and will not be affected by the current project. This site requires no further action relative to the current study.

One site (CA-ORA-1435H) lies within the current project area in proposed open space and will not be affected by grading or construction (this has changed because of the new proposed project of 705 manufactured, single-family residential unit development). This site requires no further action unless changes are made to the current plans (those changes to plans have occurred and additional work is necessary).

Six sites (CA-ORA- 710, -711, -713, -714, -715 and -1255) will be affected by the current project (Maxon 1995) and were formally test excavated. Test excavation consisted of surface collection and mapping of all visible surface artifacts, and excavation of a sufficient number of one by one meter square excavation units to characterize the nature of any subsurface deposit. These units were excavated using standard archaeological methods. Four of these sites (CA-ORA-713, -714, -715 and -1255) are not important since they are highly disturbed and contain no subsurface component. The remaining two sites (CA-ORA-710 and -711) are important since both contain substantial and relatively undisturbed subsurface components.

One site (CA-ORA-1437) was discovered during the current project (Maxon 1995). Time constraints prevented testing this site prior to completion of Draft Environmental Impact Report 561. This site requires testing and evaluation prior to development.

It is clear from the preceding discussion that eleven of the twelve recorded sites within the project boundaries have been adequately addressed. Three are determined to no longer exist, one is actually located outside the current project boundaries, one is located in proposed open space and will not be affected by the project (this has now changed), and six were tested using standard archaeological methods. One site discovered during field work will be test excavated and evaluated prior to the start of grading. The comment that the sites were not adequately tested under CEQA is unfounded.

Comment (#64): "...the sites are not adequately evaluated under a straight CEQA review. The office of Historic Preservation, in 1995, began the *California Register of Historical Places*, based on guidelines very similar to those for Section 106. The sites within the project area have not been evaluated for either *Register*."

Response: The Office of Historic Preservation (OHP) created the *California Register of Historical Resources* which has been adopted as *guidelines* by the Historical Resource Commission. In addition, current CEQA Statutes (Public Resource Code 21084.1) state that "an historical resource is a resource listed in, or determined eligible to be listed in, the California Register of Historical Resources (Governor's Office of Planning and Research 1996:51)." However, the *California Register* and the criteria for eligibility have not yet passed through the state legislative process and do not have the weight of formal regulations. The legality of requiring evaluation of historical resources for eligibility to be listed in the *California Register*, rather than per the criteria included in Section 21083.2 or Appendix K, is not clear.

Regardless, it is our position that the criteria in Appendix K used for evaluation of the archaeological sites to be affected by the proposed project would be sufficient for evaluating these same sites for their eligibility to be listed in the *California Register*. Criterion d. for eligibility to be listed in the *California Register* states that a historical resource may be listed if "it has yielded or is likely to yield information important in prehistory or history (Office of Historic Preservation 1995:4)." Section III, subsection B of Appendix K of CEQA states that an important archaeological resource is one which "can provide information ... useful in addressing scientifically consequential and reasonable or archaeological research questions (Governor's Office of Planning and Research 1996:275)." It is clear that criterion d. for eligibility to be listed in the *California Register* and criterion III, B of Appendix K are similar, and that the evaluation of archaeological sites using section III, B would be nearly identical to an evaluation using criterion d.

As stated previously, the project did not require compliance with Section 106 of the *National Historic Preservation Act*.

Comment #64: "According to the Office of Historic Preservation (1995), properties are evaluated at 45 years of age, not 100 years."

Response: Citing *Instructions For Recording Historical Resources* (Office of Historic Preservation 1995), Mr. Conkling states that "properties are evaluated at 45 years of age, not 100 years." In reality, the reference cited states that sites to be *recorded* should be at least 45 years

old, but is silent on matters of evaluation. All known cultural resources within the project area that are at least 45 years old have been recorded and assigned trinomial designations by the South Central Coastal Archaeological Information Center at the University of California, Los Angeles. All sites evaluated for the project are prehistoric sites and far exceed the 45 year criterion. The ranch house (CA-ORA-1435H) is not located in an area to be affected by the project (Maxon 1995) as currently planned, and accordingly, was not formally evaluated (this has now changed).

Comment #64: "Yet, no consultation with the Corps has been initiated, and site eligibility assessments have not been completed."

Response: The archaeological investigations were accomplished under CEQA regulations which do not require consultation with the U.S. Army Corps of Engineers.

Comment #64: "AM 9-8 is inaccurate and illegal, the Coroner makes the determination of the nature of the Human Remains. Also, the Heritage Commission contact information is incorrect.

Response: AM 9-8 states that "If human remains of Native American origin are encountered during the project the County Coroner's Office and the Native American Heritage Commission shall be contacted for preservation and protection of the remains." Mr. Conkling is correct. The proper procedure is that the County Coroner's office is notified whenever human remains are encountered. If the Coroner's office determines that the remains are of Native American origin, they have 24 hours in which to notify the Native American Heritage Commission, which in turn will notify the most likely descendant of the deceased Native American.

SUMMARY

Archaeological research accomplished at Saddleback Meadows (Maxon 1995) is as follows: cultural resource reconnaissance relocated CA-ORA-710, -711, -713, -714, -715, -1255 and -1257, previously recorded on the property; CA-ORA-712, -716 and -1256 were not relocated and are considered destroyed; CA-ORA-1435H, the historic ranch house, was formally recorded; CA-ORA-1437 was discovered during the project.

CA-ORA-710, -711, -713, -714, -715 and -1255 were formally test excavated; CA-ORA-1435H did not undergo any testing because it was to be in open space, and was not to be destroyed under the previous 318-unit development; CA-ORA-1437 did not undergo testing because time constraints precluded further work prior to completion of Draft Environmental Impact Report 561. The site was mapped and formally recorded.

RECOMMENDATIONS

CA-ORA-710 and CA-ORA-711 have been determined to be important/significant according to Section 106 of the NHPA and CEQA. Although the sites lie in open space, remedial grading of the proposed open space will destroy them. Data recovery excavation of at least 30 one by one meter units at each site must be accomplished: CA-ORA-1437 is the site discovered during the previous project (Maxon 1995); no work has been done as yet. A surface examination and surface collection and a test excavation consisting of approximately ten, one by one meter units must be accomplished at the site to characterize the nature of any subsurface deposit. Additional work may become necessary after evaluation. CA- ORA-1435H has not yet been evaluated. Initial work will entail research including archival research and a review of historic aerial photographs. A surface examination and surface collection and a test excavation consisting of a sufficient number of backhoe trenches (approximately 10-20) must then be accomplished at the site. Additional investigation may then become necessary after evaluation. All above investigations must be accomplished prior to the commencement of clearing/grading operations.

No determination of importance/significance has been made for CA-ORA-713 and CA-ORA-715. It is recommended that these sites undergo controlled destruction with the aid of a small,

paddlewheel scraper. This work can be accomplished after grading is underway. If artifact clusters are discovered additional excavation may be necessary.

All other archaeological sites on the property have been deemed not important/significant and no further work, beyond monitoring of grading is necessary.

APPENDIX A
Artifact Catalog

ARTIFACT CATALOG CODE KEY

All artifacts recovered during the Saddleback Meadows project (Maxon 1995) are listed in the following artifact catalog. Entries appear on two successive pages. The first page includes the site number and a unique catalog number assigned to each artifact. In addition, the first page also depicts the location of the artifact, the subassemblage, class and type of artifact. The second page repeats the catalog number and includes information on the artifacts material, modifications, presence or absence of cortex and thermal alteration, dimensions, weight and any comments. In the interest of space, some column headings have been reduced so that only a partial heading is shown. Those column headings are explained below:

Cat	= Catalog Number
Top 1	= Top depth of level
Bottom 1	= Bottom depth of level
Dup	= Duplicate: Multi-use tools were assigned the same cat number, but recognized as two separate artifacts
No	= Number of modified edges
Cort	= The presence or absence of cortex
Th	= Thermal modification
P	= after each dimension measurement, the P denotes partial measurement if the artifact had been broken

Personnel Resumes

RESUME

Ronald M. Bissell
24762 Via Del Rio
El Toro, California 92630
(714) 837-9582

EDUCATION

Master of Arts, Anthropology, Archaeological Emphasis.
California State University, Fullerton, California, 1983.

Master of Science, Library Science.
California State University, Fullerton, California, 1977.

Bachelor of Arts, Geology and History,
San Diego State University, San Diego, California, 1972.

Introduction to Federal Projects and Historic Preservation Law.
Sponsored by the Advisory Council on Historic Preservation and the General Services Administration Training Center, 1989.

EMPLOYMENT HISTORY

January 1986, Present. President, RMW Paleontological Associates, Incorporated, 23352 Madero, Suite J, Mission Viejo, California 92691. Duties include Principal Investigator responsibilities for all aspects of Cultural Resources Management projects.

April 1983, January 1986. Independent Consultant performing archaeological assignments for clients in California.

May 1976, April 1983. Information Specialist and Administrative Services Officer, Leighton and Associates, 1151 Duryea Avenue, Irvine, California 92714. Leighton and Associates is a geotechnical consulting firm.

March 1956, April 1976. United States Army. Rank at retirement was Major of Field Artillery.

CREDENTIALS

Certified by the Society of Professional Archaeologist as a Field Archaeologist.

Certified as an Archaeologist by the County of Orange Environmental Management Agency. Also certified by the Counties of Ventura, Los Angeles, Riverside and San Bernardino, Kern, Kings, Fresno, Tulare, Madera and San Diego as well as various municipal agencies.

California Community College credentials as Instructor in Anthropology, Library Science and Business Administration and as Chief Administrative Officer and Librarian.

Certified as Open Water Scuba Diver by the Professional Association of Diving Instructors.

OTHER INFORMATION

Completed graduate level classes in Land Use Planning, Computer Programming and Statistical Analysis.

Army trained land surveyor. Organized and taught a two semester hour class in land survey for archaeologists at the Anthropology Department, California State University, Fullerton, California.

RESUME

Patrick O. Maxon
27292 Padilla
Mission Viejo, California 92691
Home: (714) 859-4209
Office: (714) 770-8042

EDUCATION

M.A. Anthropology: 1994, California State University, Fullerton. Concentration in Archaeology.
B.A. Sociology/Psychology: 1987, Towson State University, Maryland.
University of Maryland, Munich Campus, Munich, Germany (one semester)

HONORS

Dean's List, National Honor Society for Sociology (1987), Varsity soccer (TSU), Scholar athlete.

EMPLOYMENT HISTORY

8-94 - present	Staff Archaeologist for RMW Paleo Associates. Responsibilities include project management, developing project proposals, conducting research, accomplishing field work (survey, excavation, monitoring) and completing technical reports.
7-90 - 8-94	Behavioral Specialist/Job Trainer Vantage Foundation, Costa Mesa, California. Worked with a group of three developmentally disabled adults teaching daily life and employment skills and managing maladaptive behaviors.
7-89 - 10-89	House Manager Pearlmark group home, Anaheim, California. Oversaw a home of 30-40 mentally ill individuals. Planned daily activities, managed homes employees, and met with residents' social workers, case managers and health professionals.
7-88 - 7-89	Instructor for United Cerebral Palsy, Santa Ana, California. Taught class of 25 developmentally disabled adults basic life skills and community integration.

SELECTED ARCHAEOLOGICAL EXPERIENCE

Bryant Ranch, Yorba Linda, California
Primary Number 30-150052
Duties: survey, excavation, monitoring, report preparation
7/96 - 1/97

Leisure World Self Storage, Laguna Niguel, California
CA-ORA-610
Duties: Project Manager; survey, report preparation

APPENDIX K

SCHOOL IMPACT MITIGATION AGREEMENT

SCHOOL IMPACT MITIGATION AGREEMENT

by and between

SADDLEBACK VALLEY UNIFIED SCHOOL DISTRICT

and

CALIFORNIA QUARTET

a California Limited Partnership

SCHOOL IMPACT MITIGATION AGREEMENT

This SCHOOL IMPACT MITIGATION AGREEMENT (the "Agreement") dated as of September 3, 1996, is entered into by and between the SADDLEBACK VALLEY UNIFIED SCHOOL DISTRICT ("District") and CALIFORNIA QUARTET, a California Limited Partnership ("Owner").

RECITALS:

A. Owner is the owner of undeveloped property known as Saddleback Meadows (aka Bridlewood) (the "Property") within the boundaries of the District which is depicted on Exhibit "A" and more particularly described in Exhibit "B" hereto.

B. Development of the Property consistent with existing land use approvals may result in District being required to provide additional school facilities to serve the student population which may be generated as a result of such development.

C. It is acknowledged that the State of California (the "State") has the primary obligation to assist local school districts in the funding of school facilities. It is further acknowledged that the timing and adequacy of State funding is unpredictable and that District and Owner may not be able to rely upon State funding to finance the particular school facilities necessary to serve the student population which may be generated by development of the Property.

D. Given the uncertainties of State funding, District and Owner have determined it is in their mutual best interests to enter into this Agreement for the purpose of financing school facilities necessary to serve the student population which may be generated by development of the Property.

E. Owner's participation and cooperation in implementing this Agreement is intended to mitigate the impact of the development of the Property upon District in lieu of any additional fees, bond assessments, dedications, taxes, or any other requirements (other than indebtedness payable from ad valorem real estate taxes such as general obligation bonds) which the District might otherwise impose or seek to impose on Owner or the Property pursuant to Government Code Sections 53080, 65995, and 65995.3 or any other applicable law.

AGREEMENT

NOW, THEREFORE, in consideration of the above recitals and the terms and conditions herein set forth, District and Owner hereby agree as follows:

ARTICLE I

MITIGATION PURPOSE AND CALCULATION

Section 1.1 Purpose of Agreement. The purpose of this Agreement is to establish a means of fully mitigating the impact upon District of Owner's development of the Property in lieu of payments made to District under Government Code Sections 53080 and 65995.

District and Owner acknowledge that under the provisions of current California law, District is limited in the assessment of School Fees upon Owner to the rate of $1.84 per square foot of assessable space. Owner has, by entering into this Agreement, voluntarily agreed to provide additional financing assistance to District in order to assist in providing School Facilities at the earliest possible date.

Section 1.2 School Impact Mitigation Payments. Owner shall make the school impact mitigation payments to District in cash at the following times:

(a) the amount of $1.84 per square foot of assessable space shall be paid prior to issuance of a building permit for each residential unit to be developed on the Property; and

(b) an additional amount equal to the difference between $8068 per residential unit minus the fees paid in section (a) above, shall be paid at the close of escrow for each such unit sold to the first homebuyer through escrow. Bulk sales or transfers of units shall not be deemed to be a "homebuyer."

In order to protect the District, and in consideration for the District allowing Owner to make part of the school impact mitigation payment at close of escrow, District shall be required to issue Certificates of Compliance only upon receipt of a Ten Thousand Dollar ($10,000.00) security deposit in a form acceptable to District. The security deposit shall be placed in an interest-bearing account, with the interest accruing to Owner. Owner agrees that, should Owner or its successors or assigns (including any merchant builders) not make any school impact mitigation payment at time of close of escrow, District may draw upon the security deposit for the payment then owing without advance notice to Owner or its successors or assigns. Additionally, all future school impact mitigation payments from the time the District first has to take money from the security deposit must be made in full at the time of requesting a Certificate of Compliance for a building permit. When all school

impact mitigation payments have been made, the security deposit and all interest earned shall be returned to Owner within sixty (60) days.

Section 1.3 Option to form Community Facilities District. In lieu of paying the school impact mitigation payments in cash, Owners may elect, with District's consent, to form a community facilities district ("CFD") under the Mello-Roos Act of 1982, Government Code Section 53311 et seq. (the "Act"). District agrees to use its best efforts to form a CFD under the Act provided that (i) the formation of a CFD is economically viable, and (ii) the formation of a CFD will be supported by an adequate lien to value ratio for the Property as determined by the District. The total amount of bonding authorization for the CFD shall be sufficient to provide a construction fund in the amount of the school impact mitigation payments in total as set forth in Section 1.2 above plus the costs of bond issuance and necessary reserves. Should Owners elect, and District consent, to the formation of a CFD, the specific terms and conditions shall be the subject of an additional agreement to be developed by the parties.

Section 1.4 District Waiver of Other Rights and Claims. By entry into this Agreement, and payment of the school impact mitigation payments as provided herein, Owner and its successors and assigns shall be deemed to have fulfilled and mitigated their entire obligation to assist in financing school facilities to serve the student population to be generated by development of the Property. As a result, District hereby covenants that, so long as Owner timely performs its obligations hereunder, District shall not assert or pursue any additional claims for mitigation of the impact of Owner's Property on District or seek to impose or secure any additional fee, tax, exaction, dedication, condition or requirement in respect to the Property. District shall provide Owner when requested with reasonable certification of compliance or approvals required from District by any local agency as a condition to any approval by the local agency or the issuance of any permit, license, or any other entitlement by any other local agency. This Section 1.4 shall not release Owner's Property from indebtedness for any ad valorem real property taxes, such as general obligation bonds, which have been or may be levied on the Property. Except as previously stated, District agrees that the obligations undertaken by Owner pursuant to this Agreement shall be accepted in lieu of any and all fees, taxes, exactions, dedications, condition or other requirement otherwise chargeable or imposeable in respect to development of the Property pursuant to any requirement of state or local law or policy, whether in force at the effective date of this Agreement or adopted subsequent thereto, and that residential development of the Property will to the extent permitted by law be exempted from any moratorium, limitation on development, fee, tax, exaction, dedication, condition or requirement that may be levied, recommended, or concurred in by or for the benefit of the District for purposes of alleviating or mitigating school impactions.

Section 1.5 Waiver of Protest. Payment of the school impact mitigation fees as set forth in Section 1.2 above, whether by direct payment or through a CFD, special tax is made by Owner without protest. Owner voluntarily enters into this Agreement and

knowingly and willingly waives its right of protest as may be afforded by Government Code Sections 66020, 66021 or 66024, or by any other provision of law.

ARTICLE II

REPRESENTATIONS AND WARRANTIES

Section 2.1 Representations and Warranties of the District. District represents, covenants, and warrants to the Owner that it is a public school district duly organized and existing under the laws of the State of California; that it is authorized, through formal action by the Board of Education at a duly noticed public meeting, to enter into this Agreement, and to carry out its obligations under and pursuant to the Agreement; and that this Agreement is not in conflict with any other contract or agreement to which District is a party.

Section 2.2 Representations and Warranties of Owner. Owner represents, covenants, and warrants to District that Owner has the power to enter into this Agreement and has duly authorized the execution and delivery of this Agreement in accordance with the Constitution and laws of the State of California; and that this Agreement is not in conflict with any other contract, document, or agreement executed by Owner.

ARTICLE III

MISCELLANEOUS

Section 3.1 Assignment.

(a) Assignment by District. Without Owner's prior written consent, District shall not assign, encumber, transfer, or in any way convey (collectively, a "transfer") any interest in this Agreement or in District's right or expectation of receiving any portion of the school impact mitigation payments except to the extent required by the State or as may be reasonably determined by District to be necessary to assist in the planning, design, financing, and construction of school facilities. Any attempt by District to so transfer any interest in school impact mitigation payments in violation of this Agreement shall be void and without any force or effect.

(b) Assignment by Owner. Nothing in this Agreement shall in any way limit the right or ability of Owner to transfer, assign, encumber, hypothecate, or in any way convey (collectively, a "transfer") any interest of Owner in the Property without the consent of District. However, Owner covenants for the benefit of the District that after a transfer of Owner's legal title to all or a portion of the Property, Owner shall, with ten (10) days after the transfer, provide District

with a copy of a fully executed agreement between Owner and the transferee showing that the transferee has accepted full responsibility for the payment of any unpaid school impact mitigation payments under Section 1.2 with respect to the Property so transferred. Until such time as the District has received said agreement, Owner shall remain jointly and severally liable for any unpaid school impact mitigation payments on the Property so transferred. District covenants and agrees that it will cooperate with Owner and will promptly execute any documents reasonably required by Owner or Owner's assignee or transferee in connection with the assignment or transfer of Owner's rights and obligations hereunder.

Notwithstanding any other provisions of this Agreement to the contrary, the following future acts shall not be considered a transfer for purposes of this Agreement (provided that Owner shall remain fully responsible for performance hereunder):

(i) a transfer which consists of a conveyance for financing for the purpose of securing loans of funds;

(ii) the conveyance or dedication of any portion of the Property to the County or other appropriate governmental agency or the granting of easements or permits to facilitate the development of the Property; and

(iii) a transfer consisting of a change in the form of ownership or ownership interests (including without limitation a sale of stock or transfer in a general or limited partnership interest).

Section 3.2 Successors. Subject to the restrictions on transfers herein provided, all of the covenants, stipulations, promises, and agreements contained in this Agreement by or on behalf of, or for the benefit of, either of the parties hereto, shall bind or inure to the benefit of, their respective successors or assigns. As used in the foregoing, "successors" shall refer both to Owner's interest in the Property or any portion thereof, and to the successors to all or substantially all of Owner's assets and to their successors by merger or consolidation. This Agreement shall run with the land and be binding upon all successors of Owner, subject to the limitations set forth herein.

Section 3.3 Effect of Void Agreement. If all or any material provision of this Agreement shall be held to be invalid, illegal, or unenforceable, the entire Agreement shall be null and void and have no further effect, except for this Section 3.3. Notwithstanding Section 1.4 of this Agreement, in the event that this Agreement becomes null and void, Owner agrees to pay District the maximum dollar amount per square foot of assessable space authorized by Government Code Sections 53080 or 65995 prior to Owner requesting a building permit for any residential unit within the Property. Should this Agreement become null and void after any school impact mitigation payments have been made for one or more residential units under Section 1.2(a), but prior to the time that

the additional amount as set forth under Section 1.2(b) has been paid, Owner shall pay District the difference between the fees paid under Section 1.2(a) and the maximum dollar amount per square foot assessed by the District under Government Code Sections 53080 or 65995 within thirty (30) days of having received written notice of a demand to pay said fees.

Section 3.4 Consents. Unless otherwise herein provided, whenever approval, consent, acceptance or satisfaction (collectively, a "Consent") is required of a party pursuant to this Agreement, it shall not be unreasonably withheld, conditioned, or delayed. Unless provision is made for a specific time period, consent or disapproval shall be required to be given within 30 days after receipt of the written request for Consent. If a party shall disapprove, the reasons therefore shall be stated in reasonable detail in writing.

Section 3.5 Entire Agreement: Amendments. This Agreement constitutes the entire agreement between District and Owner with respect to the subject matter set forth herein and supersedes all prior discussions, negotiations, and agreements on said subject.

This Agreement cannot be amended except in writing by Owner and District, duly executed by their authorized agents. Owner and District recognize that it may be necessary to make revisions to this Agreement after execution by the parties. Therefore, District delegates to the Superintendent the authority to approve amendments to this Agreement which do not substantially affect the terms contained herein.

Section 3.6 Exhibits. The Exhibits to which reference is made herein, are deemed incorporated into this Agreement in their entirety by reference thereto. The Exhibits are as follows:

A - Map of the Property
B - Legal Description of the Property

Section 3.7 Time. Time is of the essence of this Agreement and of each and every term, provision, and condition hereof.

Section 3.8 Notices. Any notice to either party shall be in writing and given by delivering the same to such party in person or by sending the same by registered mail. return receipt requested, with postage prepaid, to the following addresses:

If to District: Saddleback Valley Unified School District
26931 Discno Drive
Mission Viejo, CA 92691
Attn: Superintendent

If to Owner: California Quartet, Ltd.
c/o TPG Management, Inc.
1601 Dove Street, Suite 105
Newport Beach, CA 92660
Attn: H. Pike Oliver

Either party may change its mailing address at any time by giving written notice of such change to the other party in the manner provided herein. All notices under this Agreement shall be deemed given, received, made or communicated on the date personal delivery is effected or, if mailed, on the delivery date or attempted delivery date shown on the return receipt.

Section 3.9 Collection Costs and Attorney's Fees. In the event either party is required to institute collection proceedings or a legal action for enforcement of any of the terms or conditions set forth herein, the prevailing party shall be entitled to recover its reasonable costs and expenses, including without limitation litigation expenses and attorney's fees. Such expenses shall include reasonable costs of investigation and formal and informal discovery proceedings. All such costs and expenses shall be deemed to have accrued on commencement of such action and shall be enforceable whether or not such action is prosecuted to final judgment.

Section 3.10 Recordation. Owner shall record this Agreement against the Property within ten (10) days after the date this Agreement is approved by District's Board of Education at a duly noticed public meeting. Recording fees shall be paid for by Owner. Immediately after such recordation, Owner shall deliver a conformed copy of the recorded Agreement to District.

In the alternative, District may record the Agreement at Owner's expense.

Upon Owner's written request, and at no expense to District, District agrees to execute an appropriate writing canceling this Agreement and removing the same of record with respect to any lot or parcel that has made all of the school impact mitigation payments required herein.

IN WITNESS WHEREOF, the parties hereto have executed this Agreement on the day and year first above written.

Re: Saddleback Meadows

Dear Ms. Borchardt

Thank you for the opportunity to comment on the Saddleback Meadows draft EIR. The Orange County Fire Authority (OCFA) has considered the potential impacts associated with this proposal and would like to offer some preliminary comment.

The OCFA has identified that the proposed project may present significant impacts to existing fire and rescue services. Currently, the OCFA is responsible for provision of these services to the project area. To mitigate these impacts, the applicant may be required to enter into a secured fire protection agreement with the OCFA as a condition of development.

The project area is within the designated Special Fire Protection Area as a result of significant wildfire risks. These risks will require special mitigation measures an accordance with OCFA standards. All other standard conditions of development including access will also be applicable to the proposed project. Fire flows for the proposed project are determined at the time of plans submittal.

Currently, fire services provided by the OCFA to the project area include;

Fire Station 42 19150 Ridgeline Dr., Lake Forest (Portola Hills)
3 firefighters on duty staffing either a paramedic assessment engine company or a brush engine.

Fire Station 18 O'Neill Park, Trabuco Canyon Road, Trabuco Canyon
3 firefighters on duty staffing either a paramedic assessment engine company or brush engine.

Fire Station 16 28891 Modjeska Canyon Rd., Modjeska Cyn.
25 reserve firefighters staffing an engine company and water tender

Fire Station 45 30131 Adventura, Rancho Santa Margarita
8 firefighters staffing a paramedic assessment engine company, a truck and a Battalion Chief

The response time for the first arriving station, Station 42 is at the OCFA standard of a maximum of 5 minutes. While current staffing levels are sufficient, additional fire apparatus or equipment may be necessary to serve the proposed site.

If you have any additional questions, please contact me at (714)744-0484.

Sincerely,

Michael S. Rohde
Battalion Chief, Advance Planning

Natalie Borchardt, Environmental Specialist
HDR Engineering, Inc.
9444 Farnham Suite 300
San Diego, CA 92123

Dear Ms. Borchardt:

Here are the answers to the questions you are requesting regarding the Environmental Impact report (EIR) for the proposed Saddleback Meadows Project.

1. The Orange County Sheriff's station that would serve the project area is:
   11 Journey
   Aliso Viejo, CA 92656

2. The response times (receipt in dispatch to on scene) for emergency and non-emergency calls in the project area are:
   Emergency = 9.0 minutes
   Non Emergency = 24.56 minutes

3. Because the project area is currently open, non-developed land there are no crime statistics.

4. The current staffing levels are adequate to meet current demands for law enforcement services in the project area.

5. a. The project might require additional law enforcement staffing. With the addition of 299 single-family homes the area population will increase. Based upon our staffing methodology an increase of approximately 750 people will add approximately 300 more calls for service per year. These additional calls for service will require one additional deputy sheriff per shift plus a relief for a total of four additional deputies.

   b. The project based on its size and location should only impact existing response times with additional traffic congestion.

6. The only suggestion to mitigate any law enforcement impacts would be to refrain from installing a gate to the community and speed bump. Both of these would be a hindrance to quicker response times.

7. There currently are no impact fees.

Hopefully these answers are sufficient for your report and again sorry for the delay.

Sincerely,

MICHAEL S. CARONA, Sheriff-Coroner

Don Sedgwick, Member

1. Identify which District schools serve the project area.

   a. *Trabuco Elementary, 31052 Trabuco Canyon Road, Trabuco Canyon 92678*
   b. *Serrano Intermediate, 24642 Jeronimo, Lake Forest 92630*
   c. *El Toro High, 25255 Toledo Way, Lake forest 92630*

2. Identify current student enrollment and capacity statistics for the schools that serve the project area.

School	Enrollment 2001-2002 (estimate)	Estimated Permanent Capacity	Current Capacity with Portables
Trabuco Elementary	99	0	160
Serrano Intermediate	1469	1296	1463
El Toro High	2569	2016	2524

3. Is existing school capacity within the District adequate to meet current student population?

   No. Students on all sites that would service this development are only able to house students by the addition of portable classrooms.

4. Does Saddleback Valley Unified School District have student generation rates (grades K-12) for commercial/office land uses?

   Yes. Our consultant has developed a rationale that supports charging $ .33 per square foot for commercial construction.

5. Our records indicate that school developer fees are $1.77 per square foot of residential land use. Can you verify if these fee amounts are accurate?

   The current developer fee for the SVUSD is $2.05 per square foot for residential, and $ .33 per square foot for commercial development.

6. Would these fees be adequate to offset potential impacts to the District that may be generated from the proposed project?

   It is difficult to determine revenue from development without knowing the size of the housing and commercial units. It is estimated that the collection of developer fees would offset potential impact to the District that may be generated from the proposed project.

7. Are there any improvements or additions planned for the District schools that serve the project area?

   The District will be forced to provide adequate classrooms as enrollment increases through use of portable classrooms.

8. Is the District utilizing any bussing programs and/or portable classrooms to accommodate overcrowded schools?

   - *Parent Pay Bussing - $365/year per student*
   - *Use of Portables to house enrollment above permanent capacity.*

9. Do you have any recommendations that might help reduce any potential impacts to the SVUSD that would be generated as a result of the proposed project?

Re: Saddleback Meadows Draft EIR - Library Service Information

Dear Ms. Borchardt;

In response to your letter of July 6, we provide the following information relative to the impact of the Saddleback Meadows project on public library services.

1. The project area is currently served by the Rancho Santa Margarita branch library (30902 La Promesa, Rancho Santa Margarita).
2. The current capacity of the Rancho Santa Margarita Library is 16,300 square feet of public service space and a collection of 75,000 volumes.
3. This current capacity is not adequate, per Orange County Public Library standards, to meet the current service population
4. In 2002 we will be opening the 10,000 sq. ft. Foothill Ranch branch library (under construction at the intersection of Rue de Fortuna and Cabriolet, Lake Forest).
5. The opening of the Foothill Ranch library will allow the existing library facilities to meet the standards set by Orange County Public Library for the square footage per capita needed (figured at 0.2 sq. ft. per capita). However, the Rancho Santa Margarita and Foothill Ranch libraries were designed and funded without accommodation for the additional demand that residents of the proposed Saddleback Meadows project will place on the libraries' collections of books. Our standard in this area is 1.5 volumes per capita. Therefore, to reduce the significant impact the Saddleback project will have on public library services in the area, we recommend that the Orange County Public Library be provided with funds sufficient to purchase the necessary additional book volumes to serve this additional population. Determination of the appropriate amount will depend on the projected built-out population of the project and the cost of the average hardback book at the time of payment as identified by the American Book Publishing Record. Currently, this figure is $22/volume.
6. The project is not currently subject to any OCPL impact fees.

Please feel free to contact me if I can provide any additional information.

Sincerely,

John M. Adams
County Librarian

Re: Saddleback Meadows Draft Environmental Impact Report

Dear Natalie,

Answer to your first five questions:

1 Describe the current staff levels and equipment:

The District has a staff of 22.

The District has a population of approximately 10,300 people and is located in the southeastern portion of Orange County. The District provides sewer service to approximately 3,256 connections located within the District, 1,600 connections in the Irvine Ranch Water District (IRWD), and 233 connections in the Santa Margarita Water District (SMWD). The District provides water service to approximately 3,616 residential households located within the District and 532 households in the IRWD service area. The District provides reclaimed water service to five major users: Dove Canyon Country Club, Dove Canyon Master Association (DCMA), and the Robinson Ranch Homeowners Association (HOA), and the Trabuco Highlands Community Association.

The District obtains water from a variety of sources including local groundwater wells, State Project water, and inter-ties with other water purveyors. The level of service provided to customers and the quantity of water provided within the District have increased over the years in conjunction with the District's growth.

The District treats a portion of the collected wastewater at the Robinson Ranch Wastewater

Treatment Plant (RRWWTP) while the remainder is conveyed to SMWD for treatment at their Chiquita Wastewater Reclamation Plant. The central portion of the District remains unsewered. The District reclaims the treated wastewater effluent from the RRWWTP by pumping treated and stored flows to the reclaimed water customers. In addition, recycled flows, which are stormwater runoff flows, can be pumped from the Dove Lake to augment treated effluent flows during periods of high demand.

2 Are current staff levels and equipment adequate to meet existing demand for water and sewer service?

Yes.

3 Can the proposed project be adequately accommodated by existing staff and equipment?

Staff- Yes. Regarding equipment, a Sub-Area Master Plan should be prepared to define needed improvements.

4 What is the requirement for water and sewer services for the project site?

A Sub-Area Master Plan should be prepared and financed by the developer to define needed facility improvements. Facilities include:
Water; pump stations, reservoirs, pressure reducing valves, & pipelines.
Sewer; Local collection lines only. The project has already purchased regional wastewater collection, treatment and disposal capacity.

5 Are there any TCWD impact fees that the project will be subject to?

Regional wastewater collection, treatment and disposal capacity rights were financed prior to recordation of the previous tract map through Assessment District No. 5. Fees related to water have been paid. However, all fees and capacity charges need to be reevaluated following completion of the Sub-Area Master Plan.

Thank you,

Brian Bertsch

San Diego, CA 92123

Dear Ms. Borchardt:

Subject: Request for Information—Saddleback Meadows Development

The following comments are in response to your fax to IWMD dated August 1, 2001.

The California Integrated Waste Management Board requires that all counties have an approved Countywide Integrated Waste Management Plan (CIWMP). To be approved, the CIWMP must demonstrate sufficient solid waste disposal capacity for at least fifteen years, or identify additional available capacity outside of the county's jurisdiction. Orange County's CIWMP, approved in 1996, contains future solid waste disposal demand based on the County population projections previously adopted by the Board of Supervisors. IWMD's database shows that the Orange County landfill system has capacity in excess of thirty (30) years. This is well above the fifteen-year threshold established by the California Integrated Waste Management Board.

The County of Orange owns and operates three active landfills. The Frank R. Bowerman Landfill is the closest facility to the project, and will likely be the solid waste facility receiving the waste. Notwithstanding, the cities and unincorporated areas in Orange County are under contract to IWMD to commit all of their waste to the County landfill system (not to a particular facility) until the year 2007. At the same time, the landfill system is accepting additional waste from outside Orange County. Under these circumstances, it has been agreed that should the cumulative effect of development cause the daily tonnage ceiling of a particular facility to be exceeded, the waste being imported to that facility will be reduced by a corresponding amount. Consequently, it may be assumed that adequate capacity for the subject project is available for the foreseeable future.

Notwithstanding the availability of landfill capacity in the County system, the State of California has required that by the start of this year, each city and county demonstrate a reduction of at least 50% in the amount of waste from that jurisdiction that had gone into landfills in the year 1990. Also, the State requires that this level of reduction be sustained in perpetuity. Waste haulers are expected to contribute by recycling residential and commercial waste they have collected, and project developers are expected to employ measures to reduce the amount of construction-generated waste. IWMD recommends that the project developer contact the city recycling coordinator to ensure that the proposed project is in compliance with the city's program.

At this time, IWMD does not have information on solid waste generation rates in Orange County. Any questions about solid waste generation rates should be forwarded to the California Integrated Waste Management Board in Sacramento.

Further information about the County of Orange landfills can be accessed at http://www.oc.ca.gov/iwmd. Thank you for the opportunity to incorporate our comments. If you have any questions, Tony Deconinck can be reached by email at tony.deconinck@iwmd.ocgov.com, or by phone at (714) 834-4107.

Sincerely,

Robert Richmond, Planner IV
Regulatory Compliance

Will Serve Letter

Date: **7/17/01**

To: **HDR Engineering, Inc**

From: **Martin Kaczmarek**

Subject: **Saddleback Meadows**

This is to advise that the subject property is located within the service territory of the Southern California Edison Company and that the electric loads of the project are within parameters of the overall projected load growth which we are planning to meet in this area.

Unless the demand for electrical generating capacity exceeds our estimates, and provided that there are no unexpected outages to major sources of electrical supply, we expect to meet our electrical requirements for the next several years.

Edison has developed several programs which may prove extremely helpful to customers in increasing the efficiency of their operations and holding down energy costs. For more information, please call Mr. Jack Melnyk in our Customer Solutions Department at 714-973-5679.

Sincerely

Martin Kaczmarek

Attention: Natalie Borchardt

Subject: E.I.R. – Saddleback Meadows

This letter is not to be interpreted as a contractual commitment to serve the proposed project, but only as an information service. Its intent is to notify you that the Southern California Gas Company at the present time does not have distribution facilities in the areas where the above named projects are proposed.

When the areas are served by our facilities, the service will be in accordance with the Company's policies and extension rules on file with the California Public Utilities Commission at the time contractual arrangements are made.

The availability of natural gas service, as set forth in this letter, is based upon present conditions of gas supply and regulatory policies. As a public utility, the Southern California Gas Company is under the jurisdiction of the federal regulatory agencies. Should these agencies take any action which affects gas supply or the condition under which service is available, gas service will be provided in accordance with revised conditions.

Estimates of gas usage for non-residential projects are developed on an individual basis and are obtained from the Commercial-Industrial Market Services Staff by calling 1(800) 427-2000.

We have developed several programs, which are available upon request to provide assistance in selecting the most energy efficient appliances or systems for a particular project. If you desire further information on any of our energy conservation programs, please contact this office for assistance.

Sincerely,

Robert S. Warth
Technical Supervisor

VOLUME 2

D. Saddleback Meadows Processing Documents - Administrative Record in Support of Petitioner's Motion for Summary Adjudication – October 1997 to December8, 1998

VOLUME 3 (Bound as Individual Documents)

E. Draft Environmental Impact Report 561 (Volumes 1 – 3) - February, 1996
F. Response to Comments – Draft EIR 561 - July, 1996
G. Draft Subsequent Environmental Impact Report 566 (Volumes 1 – 3) – June, 1997
H. Response to Comments – Draft EIR 566 - October 1997

Saddleback Meadows Processing Documents – June to December 1998 and December 1997

The documents listed below were associated with the land use entitlement processing of the so-called 299-lot Contingency Plan for the Saddleback Meadows property between June 22, 1998 and December 8, 1998. These documents are contained within Volume 2 of SEIR Addendum No2.

1. **1998-06-22 – 1874-1874 – OCPDSD - Application Form**

   Application form for the so-called "299-lot Contingency Plan" that was filed with the Orange County Planning and Development Services Department on June 22, 1998. Page 1874 of the Administrative Record[1]

2. **1998-08-07 – 2210-2212 – PC – EIR – Memorandum – Distribution of Addendum**

   Memorandum from the Environmental and Project Planning Services Division of the Department of Planning and Development Services distributing the Addendum PA980103 to Final EIR 566 for the 299-lot plan. The distribution list is contained on the third page of this document. Administrative Record pages 2210 through 2212.

3. **1998-08-25 – 2215-2285 - PC – Comment letter**

   Comment letter from Vedanta Society of Southern California, the Norbertine Fathers of Orange and the Saddleback Meadows Land Conservancy to Members of the Orange County Planning Commission concerning Zone Change 98-3, Area Plan 98-2 and EIR Addendum PA980103 for the 299-lot Contingency Plan for Saddleback Meadows. Administrative Record pages 2215 through 2285.

4. **1998-08-25 – 2215-2215 – PC – Notice of Public Hearing – ZC 98-3 and AP 98-2**

   This is the notice for the August 25, 1998 public hearing held by the Planning Commission to consider Zone Change 98-3 and Area Plan 98-2 for the 299-lot plan for Saddleback Meadows. Administrative Record page 215.

5. **1998-10-13 – 2312-2596 – BoS – Agenda Item Transmittal – ZC 98-3 and AP 98-2 (including attachments)**

   Staff transmittal of materials to Board of Supervisors relating to Zone Change 98-3 and Area Plan 98-2 including the staff report and several attachments:

   a) **Attachment A – Appeal Letter**

   b) **Regional Map**

   c) **Chronology of Events**

[1] The term "Administrative Record" refers to the record prepared for Vedanta Society of Southern California v. County of Orange, et al. al. al., Orange County Superior Court Case Number 804137 and the other lawsuits that were consolidated with that case.

d) **Zone Change 98-3 (Draft Ordinance)**

e) **Area Plan 98-2**

f) **Analysis of Planning Issues**

g) **Existing Bridlewood Residential Draft Regulations**

h) **Manufactured Slopes Exhibit**

i) **Planning Commission Minutes, Resolutions, Staff Reports and Correspondence**

j) **Commissioner Moody's Memo**

k) **Draft Board of Supervisors Resolution re: AP 98-2**

l) **Analysis of Environmental/CEQA Issues**

m) **Draft Board of Supervisors Resolution re: EIR Addendum PA980103**

n) **EIR Addendum PA 980103**

6. **1998-10-21 – 2630-2630 – SC – Notice – TT-15320 – Meeting of 1998-10-21**

Formal notice of the Subdivision Committee meeting of October 21, 1998 to consider Tentative Tract 15320, the Vesting Tentative Tract Map delineating residential lots for the 299-lot plan for the Saddleback Meadows property.

7. **1998-10-21 – 2631-2631 – SC – Notice – TT – 15784 – Meeting of 1998-10-21**

Formal notice of the Subdivision Committee meeting of October 21, 1998 to consider Tentative Tract 15784, a Tentative Tract Map creating seven parcels for conveyance purposes only.

8. **1998-10-21 – 2597-2624 – SC – Tentative Tract Map Report – TT-15320 – VTTM**

This is the report of the Orange County Subdivision Committee on the Vesting Tentative Tract Map for the residential lots for the 299-lot plan for Saddleback Meadows. Administrative Record pages 2597 through 2634.

9. **1998-10-21 – 2625-2629 – SC – Tentative Tract Map Report – TT-15784 – TM**

Report of the Orange County Subdivision Committee on the Tentative Tract map for Saddleback Meadows for conveyance purposes only. Administrative Record pages 2625 through 2629.

10. **1998-10-21 – 2632-2831 – SC – Comment letter**

Comment letter addressed to the Pat Stanton, Chair of the Subdivision committee and written by Ed Connor on behalf of the Norbertine Fathers of Orange, the Saddleback Meadows Land Conservancy and the Vedanta Society of Southern California, opposing the approval of Tentative Tract Maps 15784 and 15320, including attachments. Administrative Record pages 2632 through 2831.

11. **1998-10-27 – 2832-2860 - BoS – Supplemental Transmittal – Appeal of AP 98-2 (with attachments)**

Staff transmittal to the Board of Supervisors of the appeal filed by Edmund Connor of the Planning Commission's approval of Area Plan 98-2 on behalf of the Vedanta Society of Southern California,

the Norbertine Fathers of Orange and the Saddleback Meadows Land Conservancy and notification of the withdrawal of the California Quartet appeal. The attachments are:

a) **Appeal by Edmund Connor**

b) **Staff Response**

c) **Withdrawal of Appeal by California Quartet**

This transmittal and the attachments comprise pages 2832 through 2860 of the Administrative Record.

12. 1998-10-29- 2861-2938 – BoS – Agenda Item Transmittal – Appeal of TTM 15784 and VTTM 15320 (with attachments)

Staff transmittal of materials to Board of Supervisors relating to the appeal of Tentative Tract Map 15874 (conveyance map) and Vesting Tentative Tract Map 15320 (delineating lots for the 299-lot site plan), including the staff report and several attachments:

a) **Appeal Letter**

b) **AIT of November 3, 1998 (Item #55)**

c) **Subdivision Committee Minutes**

d) **Final Subdivision Reports (2)**

e) **Public Comments**

f) **Tentative Tract Map (TTM) 15784**

g) **Vesting Tentative Tract Map 15230**

Pages 2861 through 2938 of the Administrative Record.

13. 1998-10-30 – 2939-2944 - BoS – Supplemental Transmittal – Public comments and corrected exhibit – ZC 98-3 and AP 98-2

Staff transmittal to the Board of Supervisors forwarding public comments since the original agenda item transmittal (of October 13, 1998) was prepared and the correction of an exhibit illustrating the manufactured slope height for the project. Administrative Record pages 2939 through 2944.

14. 1998-11-03 – 2945-2945 – BoS – Notice of Public Hearing on 1998-11-03 – ZC 98-3 and AP 98-2

Formal notice of the Board of Supervisors meeting of November 3, 1998, to consider Zone Change 98-3 and the appeal of Area Plan 98-2. Page 2945 of the Administrative Record.

15. 1998-11-17 – BoS – 2946-2970 – Supplemental Transmittal – Appeal of TTM 15784 and VTTM 15230 (with attachments)

Staff transmittal to the Board of Supervisors forwarding an appeal by Edmund Connor (on behalf of the Vedanta Society of Southern California, the Norbetine Fathers of Orange and the Saddleback Land Conservancy of the Orange County Subdivision Committee's approval of Tentative Tract Map 15784 (for conveyance purposes only) and Vesting Tentative Tract Map 15230 delineating the

residential lots for the 299-lot site plan for Saddleback Meadows and notifying the board of the withdrawal of the appeal previously filed by California Quartet. The attachments are:

a) **Appeal by Edmond Connor**

b) **Staff Response**

c) **Withdrawal of Appeal by California Quartet**

This document comprises pages 2946 through 2970 of the Administrative Record.

16. 1998-11-24 – 2971-3031 – BoS - Supplemental Transmittal – Ordinances and Resolutions for Final Action

Staff transmittal of ordinances and resolutions necessary for the Board of Supervisors to take final action on EIR Addendum PA 980103, Zone Change 98-3, Area Plan 98-2, Tentative Tract Map 15784 and Vesting Tentative Tract Map 15230. The attachments include:

a) **Draft Resolution – EIR Addendum**

b) **Draft Ordinance – Zone Change**

c) **Draft Resolution – Area Plan**

d) **Draft Resolution – TTTM**

e) **Draft Resolution – VTTM**

The documents comprise pages 2971 through 3031 of the Administrative Record.

17. 1998-11-24 – 3033-3039 - BoS – Comment Letter

Comment letter addressed to the Board of Supervisors and written by Edmond Connor on behalf of the Norbertine Fathers of Orange, the Saddleback Meadows Land Conservancy and the Vedanta Society of Southern California, opposing Zone Change 98-3, Area Plan 98-2, Tentative Tract Map15784 and Vesting Tentative Tract Map 15320. Administrative Record pages 2632 through 2831.

18. 1998-11-24 – 3041-3041 – BoS – Notice of Public Hearing on 1998-11-24 – TTM 15784 and VTTM 15320

Formal notice of the Board of Supervisors hearing of November 24, 1998, to consider the appeal of Subdivision Committee's approval of Tentative Tract Map 15784 and Vesting Tentative Tract Map 15230. Page 3041 of the Administrative Record.

19. 1998-12-04 – 3042-3062 – BoS - Supplemental Transmittal – Responses to Public Comments

Transmittal of staff responses to comments made at the Board of Supervisors hearing held on November 24, 1998. Pages 3042 through 3062 of the Administrative Record.

20. 1998-12-08 – 3063-3063 – BoS – Minute Order - Addendum PA 980103 and ZC 98-3

Minute order of the Board of Supervisors relating to actions taken on EIR Addendum PA 980103 and Zone Change 98-3 for the 299-lot plan for Saddleback Meadows. Page 3063 of the Administrative

Record.

21. 1998-12-08 – 3064-3066 – BoS – Ordinance 98-17 – ZC 98-3

Ordinance adopted by the Board of Supervisors on December 8, 1998 implementing Zone Change 98-3. Pages 3064 through 3066 of the Administrative Record.

22. 1998-12-08 – 3067-3071 – BoS – Resolution 98-455 – EIR Addendum PA 980103

Resolution adopted by the Board of Supervisors on December 8, 1998 certifying EIR Addendum PA 980103. Pages 3067 through 3071 of the Administrative Record.

23. 1998-12-08 – 3072-3079 – BoS – Resolution 98-467 – AP 98-2 (with conditions)

Resolution of the Board of Supervisors adopted on December 8, 1998 to approve Area Plan 98-2 with conditions. Pages 3072 through 3079 of the Administrative Record.

24. 1998-12-08 – 3080-3080 – BoS – Minute Order – TTM 15784 and VTTM 15230

Minute order of the Board of Supervisors of actions taken on December 8, 1998 concerning Tentative Tract Map 15784 and Vesting Tentative Tract Map 15230. Page 3080 of the Administrative Record.

25. 1998-12-08 – 3081-3083 – BoS – Resolution – TTM 15784 (with conditions)

Resolution of the Board of Supervisors adopted on December 8, 1998 to approve Tentative Tract Map 15784 with conditions. Pages 3081 through 3083 of the Administrative Record.

26. 1998-12-08 – 3084-3101 – BoS – Resolution – VTTM 15230 (with conditions)

Resolution of the Board of Supervisors adopted on December 8, 1998 to approve Vesting Tentative Tract Map 15230with conditions. Pages 3084 through 3101 of the Administrative Record.

27. 1998-12-09 – 3012-3013 – OCPDSD – Notice of Determination

The Notice of Determination for EIR Addendum PA 980103 and FEIR 566 filed with the Clerk of the County of Orange by the Orange County Planning and Development Services Department on December 9, 1998. Pages 3012 through 3013 of the Administrative Record.

28. December 17, 1997 – Planning Commission Transmittal

Planning Commission transmittal of the 299 unit project to the Board of Supervisors, indicating their EIR certification action that they had taken.

10. Saddleback Meadows Addendum PA980103 to certified Final Subsequent Environmental Impact Report 566, State Clearinghouse No. 96121072, Zone Change 98-3, and Area Plan 98-2, 299-Unit Single-Family-Unit-Project, dated August 1998;

11. August 7, 1998 memorandum from County of Orange P&DS/Environmental & Project Planning Services Division Environmental Planning Section to Distribution re Addendum PA980103 to Final EIR 566;

12. August 7, 1998 memorandum from County of Orange Planning & Development Services Department to Distribution List re Saddleback Meadows Contingency Plan;

13. Notice of August 25, 1998 public hearing by Orange County Planning Commission re Saddleback Meadows Contingency Plan (Zone Change 98-3 and Area Plan 98-2);

14. August 25, 1998 letter from Edmond M. Connor, Esq., Connor, Culver, Blake & Griffin LLP, to Honorable Members of the Planning Commission, Orange County Planning & Development Services Department (and the exhibits thereto);

MEMO

DATE: August 7, 1998

TO: Distribution

FROM: P&DS/ Environmental & Project Planning Services Division
Environmental Planning Section

SUBJECT: Addendum PA980103 to Final EIR 566

PROJECT DESCRIPTION: Attached for your information is subject Addendum PA980103 prepared for Zone Change ZC98-3 and Area Plan AP98-2 to establish 299 single-family dwelling units, as proposed by the applicant for the 222 acre Saddleback Meadows project site. The Addendum is based on certified Subsequent EIR 566, which was prepared to evaluate the impacts associated with 705 manufactured homes, and evaluates the currently proposed 299 unit project in comparison with the 705 unit project. The proposed project includes strategically designed landform grading and landscaping to screen and filter views of the development area from surrounding land uses.

PROJECT LOCATION: The project site is situated on 222.2 acres of vacant land located on the easterly side of El Toro Road, approximately one-half mile south of the intersection of Santiago Canyon Road/El Toro Road and Live Oak Canyon Road, in east-central unincorporated Orange County.

CEQA DETERMINATION: The CEQA review of the subject project has been completed by the Environmental & Project Planning Services Division. Based upon its review, E&PPSD has determined that the proper CEQA documentation for the proposed project is Addendum PA 980103 to Certified Subsequent EIR 566.

2210

NOTICE OF PUBLIC HEARING

BY THE ORANGE COUNTY PLANNING COMMISSION

SUBJECT: Saddleback Meadows Contingency Plan (Zone Change 98-3 and Area Plan 98-2)

LOCATION: East side of El Toro Road and north of Valley Vista Way in the Foothill/Trabuco area

PROPOSAL: 299 single-family detached homes with 155 acres of dedicated open space area

Environmental Documentation: EIR Addendum PA980103
Applicant: California Quartet, Ltd.
Hearing Date: August 25, 1998
Hearing Time: 1:30 P.M.
Hearing Location:

Hall of Administration
10 Civic Center Plaza
Santa Ana, CA

The applicant and all persons either favoring or opposing this proposal and supporting documents are invited to present their views at the hearing. It is requested that any written response be submitted to the Planning & Development Services Department prior to the hearing date. If you challenge the action taken on this proposal in court, you may be limited to raising only those issues you or someone else raised at the public hearing described in this notice, or in written correspondence delivered to the Planning & Development Services Department prior to the public hearing.

For further information please call Frank McGill at (714) 834-2099 or come to the Development Processing Center at the address indicated below.

Re: *Zone Change 98-3/Area Plan 98-2/EIR Addendum PA980103*
299-Unit Contingency Plan
Public Hearing of August 25, 1998

Honorable Members of the Planning Commission:

On behalf of (1) the Vedanta Society of Southern California ("Vedanta"); (2) the Norbertine Fathers of Orange (the "Norbertines"); and the Saddleback Meadows Land Conservancy LLC (the "Conservancy"), we respectfully submit this letter in opposition to California Quartet's application for approval of Zone Change 98-3 ("ZC 98-3" or the "Zone Change") and Area Plan 98-2 ("AP 98-2" or the "Area Plan") relating to a proposed 299-unit single family detached housing project (the "299-Unit Project"), which has been dubbed a "Contingency Plan."

Based on the list of objections attached hereto, and based also on all oral and written comments which are presented in opposition to the proposed Zone Change and Area Plan at the August 25 public hearing, including, but not limited to, all expert opinions expressed by Royce Riggan, John Byerly, Warren Singleton, or Saundra Jacobs either orally or in writing in connection with the hearing, Vedanta, the Norbertines, and the Conservancy respectfully submit that the CEQA review process relating to, and the environmental documentation which has been prepared in support of, ZC 98-3 and AP 98-2 is woefully inadequate from both a procedural and substantive standpoint.

By (1) purporting to rely on a previously certified EIR for an *entirely different* project which is, itself, grossly deficient and is now being challenged in court, (2) failing to provide the public and responsible agencies (such as the state and federal wildlife agencies) with the 45-days' notice required by law, and (3) refusing to prepare, and circulate for public review

and comment, a new EIR to properly address important new information and substantial project changes involving new environmental impacts and additional project alternatives and mitigation measures which have not been addressed in any earlier EIR, the County is poised to violate CEQA and the Guidelines in numerous different respects in connection with the proposed Zone Change and Area Plan for the 299-Unit Project.

As a result of these CEQA violations, my office has not been afforded adequate time to prepare and submit comments on ZC 98-3 and AP 98-2 and the environmental documentation relating thereto. Regrettably, history seems to be repeating itself in this case.

Indeed, one year ago last week, I submitted a lengthy letter to County staff objecting to the many procedural improprieties and substantive deficiencies relating to Draft Subsequent Environmental Impact Report No. 566 ("SEIR 566") which had been prepared to evaluate the environmental impacts associated with the issuance of a grading permit for the construction of 705 units of manufactured housing at the Saddleback Meadows site. Because of the failure of the Draft SEIR to include the grading plans and soils reports upon which the grading permit application was based, and given the County's refusal to make these materials available for public review during the comment period on the Draft SEIR, I was compelled to submit my August 1997 letter under protest.

How ironic it is that, one year later, I must also submit this letter under protest because of the County's clear-cut violation of those provisions of the CEQA Guidelines which require a local agency to provide 45 days' written notice to interested persons of its intention to use an EIR, which was prepared in connection with an earlier project, as the environmental documentation for a separate, later project. Instead of the 45-day public notice required to be given under CEQA Guidelines sections 15087, 15105, and 15153, the County has inexplicably decided to provide only 18 days' written notice of its intention to use Final SEIR 566 for the 705-unit manufactured housing project (the "705-Unit Project") as the EIR for the 299-Unit Project.

At first blush, one might wonder how it is possible to use an EIR initially prepared to analyze the impacts of developing 705 units of manufactured housing as the EIR for an *entirely different* project -- namely, a 299-unit single-family detached housing project which, among other things (1) involves building houses on land which was proposed to be left undeveloped by the 705-Unit Project; (2) proposes to develop a wildlife corridor through the middle of the project where none had been previously provided under the 705-Unit Project; and (3) purports to fully exempt the 299-Unit Project from compliance with the Foothill/Trabuco Specific Plan, despite express language in the Specific Plan requiring any new projects for the Saddleback Meadows property to be made "consistent" with the Plan.

Admittedly, CEQA Guidelines section 15153(b) does allow a previously prepared EIR to be used as the environmental documentation for a "separate, later project" *provided* that

the EIR for the earlier project meets certain criteria and *provided also* that the public is properly notified of the local agency's intention to rely on the previous EIR instead of preparing a *new* EIR for the *new* project. Unfortunately, the County has chosen to ignore the adequacy and public notice requirements set forth in CEQA Guidelines section 15153(b) and is trying, instead, to process an addendum (the "Addendum") to Final SEIR 566 in an apparent attempt to avoid these requirements. Of course, the County's attempt to use the Addendum as the environmental documentation for the 299-Unit Project is illegal and improper for two very basic reasons.

First, section 15164 of the CEQA Guidelines, which authorizes the preparation of "an addendum to a previously certified EIR if some changes or additions are necessary," only applies when the *same* project addressed in the previous EIR is being considered for a subsequent government approval at a more detailed level of planning. Obviously, when an entirely *different* project is being considered – such as a full-scale revision and redesign of the project which was analyzed in the previous EIR – an addendum is *not* the appropriate document by which to describe and analyze substantial project changes involving new impacts, alternatives, and mitigation measures not discussed in the earlier EIR. Indeed, an addendum is only to be used to address minor technical changes or additions to a previously certified EIR, not to report on substantial project changes or significant new information about a *completely different* project.

The second reason that the County is not allowed to adopt the Addendum in this case is that, assuming for the sake of argument that the Zone Change and the Area Plan actually involved the *same* 705-Unit Project addressed in Final SEIR 566 (which, of course, they do not), the provisions of section 15162 of the CEQA Guidelines would require the preparation of a subsequent or supplemental EIR. Specifically, new information and project changes relating to environmental impacts, project alternatives, mitigation measures not previously discussed in Final SEIR 566 would require the County to prepare another EIR and circulate it for public review and comment.

County staff has determined that none of the conditions described in CEQA Guidelines section 15162 would require the preparation of a subsequent or supplemental EIR to address the environmental impacts associated with the proposed Zone Change and Area Plan for the 299-Unit Project. Vedanta, the Norbertines, and the Conservancy certainly disagree with this determination and wish to underscore what several California courts have already held, i.e., that Guidelines section 15162 and its companion section 21166 of CEQA only apply when the question is whether more than one EIR must be prepared for what is essentially the *same* project. When the proposed new activity constitutes a *separate* project, the "fair argument" test applies to the local agency's decision regarding whether to require a new EIR for the later project.

Indisputably, the oral and written comments which will be submitted in opposition to the proposed Zone Change and Area Plan at the August 25 public hearing will constitute substantial evidence supporting a "fair argument" that the 299-Unit Project may cause significant

environmental effects, and may involve important new project alternatives and mitigation measures, which were not previously addressed in Final SEIR 566 -- thereby necessitating the preparation of a new EIR to be circulated for public review and comment.

By submitting this letter, and by incorporating the oral and written comments made at the August 25 public hearing in opposition to the proposed Zone Change and the Area Plan, my clients do not intend to waive their objections to the County's failure to provide the appropriate notice of its intention to rely on Final SEIR 566 as the EIR for the 299-Unit Project. However, within the little time afforded by the inadequate notice provided by the County, my office has attempted to formulate the attached objections and hereby submits them to the Planning Commission with the sincere hope that the County will review them in good faith and will correct the many defects and deficiencies which pervade the CEQA review process for the proposed Zone Change and the Area Plan.

Very truly yours,

Edmond M. Connor

OBJECTIONS TO ADDENDUM PA980103 TO FSEIR 566, ZONE CHANGE 98-3, AND AREA PLAN 98-2

1. The County of Orange (the "County") has violated section 15153(b) of the CEQA Guidelines in that it has improperly determined that FSEIR 566 adequately describes the significant environmental impacts of the 299-unit single family detached housing project referred to as the Saddleback Meadows Contingency Plan (the "299-Unit Project"), which impacts are more particularly described in the oral and written comments (the "Comments") submitted to the Orange County Planning Commission prior to or at its August 25, 1998 public hearing, including, but not limited to, the expert opinions of Royce B. Riggan, Jr., John R. Byerly, Warren W. Singleton, and Saundra F. Jacobs. (The comments of John R. Byerly regarding the geotechnical aspects of the 299-Unit Project are set forth in an August 21, 1998 letter to counsel which is attached hereto as Exhibit "A" and is incorporated herein by reference.)

2. The County has violated section 15153(b) of the CEQA Guidelines in that it has improperly determined that FSEIR 566 adequately describes the alternatives and mitigation measures related to the significant environmental impacts of the 299-Unit Project, as more particularly described in the Comments.

3. The County has violated section 15153(b), 15087, and 15105 of the CEQA Guidelines in that it has failed to provide (a) public notice of its plans to use FSEIR 566 as the environmental documentation for the 299-Unit Project and (b) a 45-day public review and comment period on such key issues as "whether [FSEIR 566] should be used for [the 299-Unit Project] and whether there are any additional, reasonable, alternatives or mitigation measures that should be considered as ways of avoiding or reducing the significant effects of [the 299-Unit Project]."

4. The County has violated section 15063(g) of the CEQA Guidelines in that, at the time it determined that an initial study was required for the 299-Unit Project, it failed to consult with the United States Fish and Wildlife Service, the California Department of Fish and Game, the Army Corp. of Engineers, and all other responsible and trustee agencies responsible for the resources affected by the 299-Unit Project, to obtain the recommendation of those agencies as to the appropriate environmental documentation for the 299-Unit Project.

5. The County has violated CEQA and the CEQA Guidelines, to the extent that it has sought to invoke the provisions of section 15164 of the CEQA Guidelines, in that section 15164 only allows the preparation of an addendum when the same "project" is involved. In this case, there are two separate and distinct projects, i.e., a grading application for a 705-unit mobilehome/manufactured housing project (the "705-Unit Project") and an application for a zone change and area plan for the 299-Unit Project.

6. Assuming *arguendo* that the 299-Unit Project and the 705-Unit Project are the same "project," which they clearly are not, the County has violated section 15162(a)(1) and (2) of the CEQA Guidelines in that it has improperly determined that a subsequent EIR is not required to address the effects of the 299-Unit Project, which proposes substantial changes in the "project" and is based upon substantial changes in the circumstances surrounding the "project," in that, among other things, (a) the 299-Unit Project will involve mass grading and permanent alteration of land that was to be left undisturbed and undeveloped by the 705-Unit Project; (b) the 299-Unit Project will involve a proposed wildlife corridor for which there is no analysis in FSEIR 566 and about which the public has not had an opportunity to comment with respect to its viability, and (c) the U.S. Fish and Wildlife Service and the California Department of Fish and Game have indicated in an August 11, 1998 correspondence to the Orange County Board of Supervisors that the adoption of the 299-Unit Project may jeopardize the approval of the Southern Region of the NCCP program in that (i) "Saddleback Meadows is the only remaining wildlife corridor linkage to the NCCP Central/Coastal Subregion" and (ii) the proposed wildlife corridor may not prove to be viable. (A true and correct copy of the August 11, 1998 correspondence from U.S. Fish and Wildlife Service and the California Department of Fish and Game to the Orange County Board of Supervisors is attached hereto as Exhibit "B" and is incorporated herein by reference.)

7. Assuming *arguendo* that the 299-Unit Project and the 705-Unit Project are the same "project," the County has violated section 15162(a)(3)(A) and (B) of the CEQA Guidelines in that it has improperly determined that a subsequent EIR is not required to address the 299-Unit Project, despite the new information of substantial importance described in the Comments which shows that the 299-Unit Project will have significant effects on the environment that are not discussed in FSEIR 566 and/or are substantially more severe than the impacts discussed in FSEIR 566, including, but not limited to, (a) the grading and permanent alteration of land that was to be left undisturbed and undeveloped by the 705-Unit Project, (b) the categorical exemption of the Saddleback Meadows property from the provisions of the Foothill/Trabuco Specific Plan, and (c) the additional reduction and/or destruction of valuable biological resources.

8. Assuming *arguendo* that the 299-Unit Project and the 705-Unit Project are the same "project," the County has violated section 15162(a)(3)(C) of the CEQA Guidelines in that it has improperly determined that a subsequent EIR is not required to address the 299-Unit Project, despite the new information of substantial importance which shows that the mitigation measures that were proposed during the public review period for Draft SEIR 566 (but which FSEIR 566 failed to consider and deemed infeasible because of its erroneous assumption that the County was precluded from even considering any mitigation measures that would cause the "project" to deviate from Recorded Tract Map 10692) are now feasible because the Recorded Tract Map is to be superseded *in toto*.

2222

9. Assuming *arguendo* that the 299-Unit Project and the 705-Unit Project are the same "project," the County has violated section 15162(a)(3)(D) of the CEQA Guidelines in that it has improperly determined that a subsequent EIR is not required to address the 299-Unit Project, despite the new information of substantial importance that has come to light since FSEIR 566 was certified regarding new project alternatives which are considerably different from those analyzed in FSEIR 566 and would reduce one or more of the significant impacts identified in the Comments, but that California Quartet, Ltd., has, to date, declined to adopt, including but not limited to, (a) the Mathews' alternative for the development of a 65-unit single family detached housing project on 35 acres of the Saddleback Meadows property and (b) the modified Mathews' alternative for the development of a 130-unit single family detached housing project on 44 acres of the property.

10. Assuming *arguendo* that the 299-Unit Project and the 705-Unit Project are the same "project," the County has violated section 15153(d) of the CEQA Guidelines in that it has improperly determined that none of the conditions described in section 15162 would require the preparation of a subsequent or supplemental EIR.

11. Assuming *arguendo* that the 299-Unit Project and the 705-Unit Project are the same "project," the County has violated section 15164(a) of the CEQA Guidelines in that it has improperly determined that the processing of an addendum would be appropriate and that none of the conditions described in section 15162 would require the preparation of a subsequent or supplemental EIR.

12. Assuming *arguendo* that the 299-Unit Project and the 705-Unit Project are the same "project," the County has violated section 15164(e) of the CEQA Guidelines in that it has failed to provide a brief explanation, supported by substantial evidence, of its determination that none of the conditions described in section 15162 would require the preparation of a subsequent or supplemental EIR.

13. Zone Change 98-3 and Area Plan 98-2 violate the provisions of the Foothill Trabuco Specific Plan (the "FTSP") in that they are part of a development proposal for the 299-Unit Project which deviates from Recorded Tract Map 10692 without providing for an amendment to the FTSP that (a) is adopted pursuant to the amendment procedures established by the FTSP and (b) is consistent with all of the provisions of the FTSP, including, but not limited to, (i) the development and design guidelines established by the FTSP, (ii) the goals and objectives of the FTSP, and (iii) all other provisions of the FTSP identified in the Comments.

14. The County has violated CEQA and the CEQA Guidelines in that it has improperly relied upon FSEIR 566, which is a legally inadequate CEQA document that was improperly certified for the reasons set forth in that certain "Complaint for Declaratory Relief and Petition for Writ of Mandate," which is attached hereto as Exhibit "C" and is incorporated herein by reference, including, but not limited to:

(a) In certifying FSEIR 566, the County did not comply with the special CEQA review process the Board of Supervisors adopted for the review of FSEIR 566;

(b) The special CEQA review process the Board of Supervisors adopted for the review of FSEIR 566 violated CEQA in that, *inter alia*, it unlawfully separated the decision whether to certify FSEIR 566 without taking action on the project for which the FSEIR was prepared;

(c) It improperly limits the mitigation measures its considers to only those that would not cause the project to deviate from Recorded Tract Map 10692;

(d) The analysis and information set forth in FSEIR 566 is legally inadequate under CEQA and the CEQA Guidelines in that, *inter alia*:

(i) It fails to properly describe the discretionary approval which it was prepared to analyze;

(ii) It fails to provide the required level of specificity;

(iii) It fails to provide the required level of technical detail;

(iv) It was not amended and recirculated after significant new information regarding the discretionary approval it was prepared to analyze was released;

(v) Its certification was separated from the discretionary approval it was prepared to analyze;

(vi) It fails to adequately address all environmental impacts of the discretionary approval it was prepare to analyze, including, but not limited to:

a. Soils and Geology;
b. Water/Hydrology;
c. Transportation/Circulation;
d. Air Quality;
e. Biological Resources;
f. Archeological/Cultural Resources; and
g. Public Services;

(vii) It fails to provide legally adequate mitigation measures and an adequate mitigation monitoring program was not adopted;

(viii) It fails to address the cumulative impacts of the project associated with the discretionary approval it was prepared to analyze;

(ix) It fails to consider project alternatives; and

(x) It fails to adequately respond to comments;

(e) Adequate and proper findings, supported by substantial evidence in the record, were not made in support of the certification of FSEIR 566; and

(f) The Statement of Overriding Considerations was improperly adopted in connection with the certification of FSEIR 566.

15. The County has violated CEQA and the CEQA Guidelines, to the extent that the "Draft Area Plan Conditions of Approval" attempt in any way to eliminate or modify any of the "Standard Conditions of Approval" that are set forth in FSEIR 566 and Addendum PA980103 as mitigation measures which must be completed

prior to the issuance of any grading permit, including, but not limited to, (a) SC 7-2 requiring a 1603 Streambed Alteration Agreement from the California Department of Fish and Game, (b) SC 7-3 requiring the necessary individual or nationwide permit from the Army Corp. of Engineers pursuant to section 404 of the Federal Clean Water Act, and (c) SC 7-5 and 7-7 requiring from the U.S. Fish and Wildlife Service (i) appropriate federal approvals required for impacts to Coastal Sage Scrub and (ii) written proof that the removal of any native vegetation from the project site complies with the Federal Endangered Species Act, in that it has attempted to reduce or eliminate feasible mitigation measures that are set forth in FSEIR 566 and Addendum PA980103 to reduce significant environmental impacts.

16. The County has violated CEQA and the CEQA Guidelines in that Addendum PA980103 to FSEIR 566 is inadequate and incomplete due to, *inter alia*, the omission of volume two of Appendix "G," the "Supplemental Geotechnical Assessment for Contingency Pan – 299 Lots," which purportedly contains the computer output documents for the slope stability analysis performed by G.A. Nicoll and Associates, Inc.

Rpt. No.: 5833
File No.: S-8753

Subject: Saddleback Meadows, El Toro Road, Orange County, California; Geotechnical Review of Addendum to Environmental Impact Report 566

Reference: Addendum PA980103 to Certified Final Subsequent Environmental Impact Report 566, Urban Vision, August 19, 1998

Dear Mr. Hesseltine:

Within the little time afforded by the County's expedited processing of the 299-unit "Contingency Plan" for the Saddleback Meadows property, I have attempted to review the geotechnical aspects of the referenced addendum to the earlier environmental impact report. This addendum anticipates the construction of 299 single-family dwelling units on the 222.2-acre site. Extensive grading (2.1 million cubic yards of cut and fill) is proposed to construct the building pads, associated streets, and open areas. Even more extensive grading (6.8 million cubic yards) is anticipated to remediate demonstrated unstable geologic conditions, including existing landslides, adverse bedding orientation, and loose and compressible alluvium and colluvium.

The problematic geotechnical issues associated with the 299-unit proposal remain unchanged from those that have been discussed in great detail with reference to the 705-unit manufactured housing project, and presented to the Planning Commission and the Board of Supervisors with no meaningful response. The issues of primary concern to this reviewer which mandate further analysis in an appropriate environmental impact report would include the following:

GEOTECHNICAL ENGINEERS • TESTING AND INSPECTION
2257 South Lilac Ave., Bloomington, CA 92316-2903
Bloomington (909) 877-1324 Riverside (909) 783-1910 Fax (909) 877-5210

GRADING (Page 20)

The addendum continues to assume an average daily grading of 30,000 cubic yards per day, projecting a total time of grading of 10 months. At 30,000 cubic yards per day for 8.9 million cubic yards of fill, grading needs to be performed 7 days a week–no allowance for off-days for weekends or for inclement weather is provided in this estimate. It seems to this reviewer that it might be possible to achieve the average 30,000 cubic yards per day goal for the conventional grading. It seems highly unlikely that the grading to accomplish the alluvium/colluvium removals, construction of buttress fills, and other remedial grading that will be required can approach the projected rate of fill movement. If, as seems likely, the remedial grading would be performed at an average rate of 10,000 cubic yards per day, and grading is performed on a 5-day per week basis, the remedial grading would require 31 months. With down-time for inclement weather, it is more realistic to project a total period of grading of 3 years. Even this projection is optimistic, and the site could easily experience 4 rain seasons during grading.

EXCAVATION CONDITIONS (Page 29)

The addendum correctly anticipates heavy ground water seepage into excavations at the site. Not addressed is the impact of discharge of collected ground water seepage, the impact of the interruption in subsurface ground water flow on downstream wells, nor the impact of the presence of the deep shear keys for buttress fills on the final ground water conditions. Is there a potential for surfacing of ground water behind the effective subsurface dam created by the shear key of the buttress fill?

LONG-TERM SETTLEMENT (Page 31)

Fill depths exceeding 50 feet are suggested, with settlements associated with those fills of 4 to 6 inches. Construction of shear keys for buttress fills, however, will result in fills as deep as 130 feet. Fills of such great depths require additional evaluation that may necessitate compaction criteria well in excess of code minimums, special moisture conditioning of fill during compaction, and long-term settlement monitoring prior to building construction. These considerations are not addressed in the addendum.

PHASING OF EARTHWORK (Page 31)

The addendum continues to project a buttress backcut failure rate of 10 percent. Considering the subsurface conditions typified by landslides within landslides, this failure rate is surely unrealistically optimistic. Further, the effect of backcut failures on upstream and adjacent properties is not addressed.

These are the comments that I have been able to prepare during the time allotted by the County's short notice to your firm regarding the public hearing to be held on August 25, 1998. I hope my comments have been helpful under the circumstances. Should there be questions, please feel free to call.

Sincerely,

JOHN R. BYERLY, INC.

Santa Ana, CA 92703

Saddleback Meadows Project
Orange County, California

Dear Board of Supervisors:

The California Department of Fish and Game and the U. S. Fish and Wildlife Service (collectively the Wildlife Agencies) recently learned about a Planning Application Hearing for the Saddleback Meadows project scheduled for the County Board of Supervisors on August 11, 1998. The applicant is proposing a 299 single-family dwelling unit project at Saddleback Meadows. The Wildlife Agencies and County have a lengthy history of communication concerning the project site and a variety of development proposal alternatives have been reviewed. The project site provides a critical habitat connection between the County of Orange's Central/Coastal and Southern Subregional Conservation Plans. In this letter we reiterate our position on the proposed Saddleback Meadows project and provide comments on a recent proposal that could affect the project.

The Wildlife Agencies, other Federal and State agencies, County of Orange, and local jurisdictions are participating in the Natural Community Conservation Planning (NCCP) program to conserve wildlife and habitat resources while accommodating economic growth and development. Our previous comments on Saddleback Meadows Project - Draft Environmental Impact Report (DEIR) No. 561 (February 1996) and in our August 8, 1997, letter concerning the Saddleback Meadows Draft Subsequent Environmental Report No. 566 (DSEIR) (June 1997) identified significant biological issues related to the project site. These biological issues include habitat connectivity, wildlife corridors, sensitive habitats, and occupied wetlands with a federally listed animal. These sensitive habitats include about 65 acres of coastal sage scrub (CSS), 14 acres of oak woodland, and about 4 acres of wetland vegetation communities. The federally endangered Riverside fairy shrimp (*Streptocephalus woottoni*) is known to occur within at least seven wetlands (identified as "ephemeral ponds") spread throughout the site. Our letter

2231

evaluating the DSEIR identified Alternative '3' which proposed a clustered, lower density development, presented the least environmental impact, but would nonetheless substantially impact the wildlife corridor integrity. The 299-unit development posed a significant impact to the existing habitat connection from O'Neill Regional Park (Southern Subregion) to the Cleveland National Forest and other open space habitat in the central portion of the Central/Coastal Subregion. The Wildlife Agencies are willing to work with the project applicant to redesign a cluster development in order to preserve the wildlife corridor.

Other animal species considered sensitive by the Wildlife Agencies occur on or adjacent to the project site. The Wildlife Agencies documented rare and sensitive Cactus wren (*Camphylorhynchus brunneicapillus*) on site. The coastal California gnatcatcher (*Polioptila californica californica*)(gnatcatcher), a federally threatened species, could utilize the site based on the presence of CSS and gnatcatcher-occupied CSS in surrounding areas. Both of these animals, as well as other wildlife, would utilize Saddleback Meadows as a wildlife corridor. County maps show that Saddleback Meadows is the only remaining wildlife corridor linkage to the NCCP Central/Coastal Subregion.

We have been informed by two interested parties, Saint Michael's Abbey and Vedanta Society of Southern California, that a new clustered development alternative proposal and purchase of significant open space on the site have been offered to the current property owner. The Wildlife Agencies are willing to work with the current landowners and all interested parties in reaching a workable development solution.

The Wildlife Agencies believe a workable solution exists to permit development, while maintaining an essential biological connection between the NCCP Central/Coastal and Southern Subregions. We request that the Board consider this alternative approach that may provide a solution acceptable to all parties. If you have any questions or comments, we are available to discuss this matter further. Please feel free to contact us at your earliest convenience.

Sincerely,

Jim A. Bartel

Attorneys For Plaintiff and Petitioner VEDANTA SOCIETY OF SOUTHERN CALIFORNIA

FILED
ORANGE COUNTY SUPERIOR COURT
MAR 0 5 1998
ALAN SLATER, Executive Officer/Clerk
BY K. WOLFE

SUPERIOR COURT OF THE STATE OF CALIFORNIA

COUNTY OF ORANGE

VEDANTA SOCIETY OF SOUTHERN CALIFORNIA, a California non-profit religious corporation,

Plaintiff and Petitioner,

v.

COUNTY OF ORANGE, a political subdivision of the State of California; BOARD OF SUPERVISORS OF COUNTY OF ORANGE, the duly elected legislative body of the County; PLANNING COMMISSION OF COUNTY OF ORANGE, the duly appointed subagency of the Board; LARRY NEES, the duly appointed Building Official of the County; and DOES 1 through 25, inclusive,

Defendants and Respondents.

CALIFORNIA QUARTET, LTD., a California limited partnership; ARADI, LTD., a Nevada limited partnership; ARADI, INC., a Nevada corporation; and DOES 26 through 50, inclusive,

Defendants and Real Parties in Interest.

Case No. 791309

COMPLAINT FOR DECLARATORY RELIEF AND PETITION FOR WRIT OF MANDATE

JUDGE TULLY H. SEYMOUR
DEPT. 30

As a verified Complaint for Declaratory Relief and Petition for Writ of Mandate (the "Complaint and Petition") against (a) defendants and respondents COUNTY OF ORANGE (the "County"), BOARD OF SUPERVISORS OF COUNTY OF ORANGE (the "Board"), PLANNING COMMISSION OF COUNTY OF ORANGE (the "Planning Commission"), LARRY NEES ("Nees"), and DOES 1 through 25, inclusive (hereinafter, the County, the Board, the Planning Commission, NEES, and DOES 1 through 25, inclusive, are sometimes collectively referred to as the "Respondents"), and (b) defendants and real parties in interest CALIFORNIA QUARTET, LTD. ("California Quartet"), ARADI, LTD. ("Aradi, Ltd."), ARADI, INC. ("Aradi, Inc.") [hereinafter, California Quartet, Aradi, Ltd., and Aradi, Inc., are sometimes collectively referred to as "Aradi"], and DOES 26 through 50, inclusive (hereinafter, Aradi and DOES 26 through 50, inclusive, are sometimes collectively referred to as "Real Parties" and the Respondents and the Real Parties are sometimes collectively referred to herein as the "Defendants"), plaintiff and petitioner VEDANTA SOCIETY OF SOUTHERN CALIFORNIA (the "Society") alleges as follows:

I. SUMMARY OF COMPLAINT AND PETITION

1. Neither the public, nor the environment, has been well served by the County's unfortunate and ill-advised actions in (a) purporting to certify that Final Subsequent Environmental Impact Report No. 566 ("FSEIR 566" or the "FSEIR") properly complied with the dictates of the California Environmental Quality Act ("CEQA") and (b) attempting to adopt findings and a statement of overriding considerations as if the County were issuing some form of "project approval" -- even though no project approval was ever agendized for consideration by the Planning Commission or the Board at public hearings relating to FSEIR 566.

2. As an informational document, FSEIR 566 is grossly deficient and fails to comply with CEQA in numerous respects. More importantly, however, aside from its many

shortcomings as an environmental compliance document, FSEIR 566 is a legal nullity because it has never been officially certified by the County.

3. Indeed, the County has taken the position that, at the public hearing held on February 24, 1998, the 2-2 vote taken by the Board in connection with Supervisor William Steiner's motion to deny the Society's appeal of the Planning Commission's certification of FSEIR 566 somehow caused the appeal to fail and the certification to be upheld. However, there is no County ordinance which would support such an outcome because the "tie vote" rule set forth in section 7-9-157 of the Orange County Zoning Code only applies if "action on a discretionary permit" is involved, and neither the Planning Commission, nor the Board, took any action in approving or disapproving any such permit.

4. Moreover, the County's position that the Board's tie vote caused the Planning Commission's certification of FSEIR 566 to be upheld is completely at odds with numerous California appellate court decisions holding that a tie vote in this type of situation constitutes *no action* on the part of the Board and does *not* result in the Planning Commission's action being upheld or ratified by the Board.

5. The anomalous situation which has arisen, therefore, is that, contrary to California law, the County is proceeding as if FSEIR 566 has been properly certified under CEQA -- when, in fact, it has not. The tie vote taken by the Board at the February 24 public hearing on the Society's appeal did not result in any type of "determination" being made by the Board with respect to the appeal, even though the Board was expressly required to make such a "determination" in accordance with step no. 3 of the "Approval & Appeal Process for FSEIR 566," which was unlawfully adopted by the Board on November 25, 1997.

6. Regrettably, this litigation has been necessitated because County Counsel erroneously opined at the February 24 hearing -- and the County continues to believe and maintain -- that the Board's tie vote on Supervisor Steiner's motion to deny the Society's appeal caused the Planning Commission's certification of FSEIR 566 to be upheld *by default*. To challenge this unfounded position, the Society is seeking a declaration from the Court that, at the February 24 hearing, the Board did *not* make any determination on the Society's appeal

and certainly did *not* uphold or ratify the Planning Commission's action, either directly or indirectly.

7. Of course, without the Board's affirmative "ratification" of the Planning Commission's approval of FSEIR 566 --which the Board was expressly required to give under step no. 4 of the "Approval & Appeal Process for FSEIR 566" -- the Building Official of the County is not allowed -- according to the County's own rules -- to issue a grading permit to the Real Parties to commence grading operations on the 705-unit manufactured housing/mobile home project (the "Project") to be developed at the Saddleback Meadows property (the "Property"). Unfortunately, however, the County believes that the Board's tie vote amounted to Board ratification of the Planning Commission's action, and thus the Society is seeking injunctive relief herein to ensure that no grading permit is issued to the Real Parties, pending a hearing on the merits of this Complaint and Petition.

8. The Society is also seeking a declaration from the Court that the special CEQA review procedures adopted by the Board on November 25, 1997, were invalid because they unlawfully attempted to separate the certification of FSEIR 566 from the approval of the very project which the FSEIR was designed to evaluate, i.e., Grading Application No. GA960048 (the "Grading Application") which was submitted by Real Parties in December 1996. Moreover, the Society is asking the Court to declare that any future action taken by the County in considering whether to certify FSEIR 566 and approve the Grading Application be conducted jointly by the Planning Commission and the Building Official, with their joint determination being appealable to the Board under CEQA section 21151(c).

9. In addition to the declaratory relief sought in this action, the Society is also seeking a writ of mandate to direct the County to set aside and vacate its purported certification of FSEIR 566 and its purported adoption of the December 1997 "Findings, Facts, & Overriding Considerations" (hereinafter collectively referred to as the "Findings/Considerations") on the grounds that such actions by the County were:

(a) *Entirely unprecedented,* because never before in its history has the County approved an EIR without also taking action on the discretionary

project approval which triggered the preparation of the EIR in the first place, such as a tract map, a site plan, a grading permit, etc.;

(b) *Procedurally defective*, because it was a clear violation of CEQA for the Planning Commission to attempt to certify FSEIR 566 and to adopt the Findings/Considerations as if the Commission were actually approving a "project" when, in fact, no project approval was ever presented to, or considered by, the Planning Commission or the Board relating to Final Tract Map No. 10692 (the "Tract Map") or to Grading Application No. GA960048 (the "Grading Application") -- which, by the County's own admission, was the "initiating activity" which caused FSEIR 566 to be prepared;

(c) *Substantively inadequate*, because (i) the discussion of impacts, project alternatives, and feasible mitigation measures in FSEIR 566 was woefully deficient, (ii) the County's responses to the written comments submitted by members of the public were unbelievably evasive and non-responsive, and (iii) the entire FSEIR was premised on the false and misleading assumption that the Tract Map had somehow acquired a "vesting status" which prevented the County from adopting mitigation measures which might necessitate alterations to the physical design of the Project authorized by the Tract Map; and

(d) *Totally unnecessary*, because both the Planning Commission and the Board made it perfectly clear at the respective public hearings they held on December 3, 1997, and February 24, 1998, that they were opposed to allowing a 705-unit manufactured housing/mobilehome project to be developed at the Property and preferred, instead, to consider various project alternatives which would necessarily cause FSEIR 566 to be rendered useless and obsolete.

A. **Major Error No. 1: Scope of FSEIR Was Unfairly Curtailed Due to Incorrect Legal Assumption Regarding Vesting Status of Tract Map.**

10. Probably the single most egregious error committed by the County which tainted the entire CEQA review process for FSEIR 566 and doomed it to failure was the decision which County staff made sometime after the process got underway to arbitrarily *limit* the scope of the Draft SEIR so as to unfairly *exclude* from consideration any mitigation measures which might result in a change being made to the physical design of the Project as approved by the Tract Map -- such as, for example, mitigation measures which would call for oak tree groves or environmentally-sensitive riparian areas to be preserved, or certain 100-foot-deep excavations to be entirely eliminated, with the result that one or more areas of previously-approved manufactured housing sites could not be developed.

11. A cursory review of FSEIR and the Findings/Considerations will suffice to demonstrate that, throughout these documents, statements were made to the effect that "mitigation measures which would alter features of the final recorded tract map *cannot* be implemented to reduce all project impacts to a level of insignificance [because of the County's] *inability to deviate from the final recorded tract map*." (FSEIR 566, § 2.8, p. 2-10; § 3.2, p. 3-8, emphasis added.)

12. In fact, as one of the six Overriding Considerations adopted by the Planning Commission as part of its Resolution certifying FSEIR 566, the Planning Commission concluded that "Recorded Tract Map 10692 *limits the ability* of the applicant/lead agency to *deviate* from the physical design characteristics of the project to mitigate identified unavoidable adverse effects." (Findings/Considerations, § 5.2.6, p. 83, emphasis added.)

13. By taking the position that its "hands were tied" and that it could not "deviate" from the Tract Map, the County unjustifiably curtailed the scope of the environmental analysis set forth in FSEIR 566 by electing not to consider any feasible mitigation measures which would cause the Tract Map to be changed or altered in any way.

14. What is troublesome, however, is that at the time the "Notice of Preparation" relating to FSEIR 566 was sent out to the public in February 1997, no mention was made by the County of any plan to arbitrarily limit the scope of the Draft SEIR so as to exclude consideration of feasible mitigation measures which might warrant changes being made to the design or intensity of the development authorized by the Tract Map. Indeed, it was not until some four months later when the Draft SEIR was circulated for public review that the public was informed of the County's position regarding the "inviolable" status which the Tract Map had supposedly acquired in the eyes of the County.

15. The unfair manner in which the Draft SEIR was restricted in scope was certainly compounded when the Planning Commission was instructed by County Counsel at the public hearing held on December 3, 1997, that it was *not* allowed to consider any changes or alterations to the Tract Map in contemplating how to lessen or avoid the adverse environmental effects of the Project. This instruction directly contravened the provisions of sections 15002(h) and 15041 of the CEQA Guidelines which clearly authorize the lead agency for a project to "require changes in any or all activities involved in the project in order to lessen or avoid significant effects on the environment."

16. The apparent reason that the County adopted the legally incorrect position that it was not allowed to change or deviate from the Tract Map was that it purportedly believed that the Tract Map had acquired some sort of "vesting status," i.e., that Aradi had supposedly acquired "vested rights" to develop the Project free from any changes or alterations to the Tract Map which might otherwise be called for by the County in seeking to mitigate the adverse impacts of the Project.

17. However, (a) since the Tract Map was not approved as a vesting tentative map and is not otherwise protected by a development agreement, and (b) since the County has never issued any development permits to Aradi or its successors with respect to the Project, it is exceedingly clear under California law that Aradi has *no* vested rights to develop the Property, regardless of whether Aradi has incurred substantial pre-development expenses to date.

B. **Major Error No. 2: Overly-General Project Description in FSEIR Resulted in Failure to Address Construction-Level Impacts Associated with Grading Application.**

18. In addition to incorrectly viewing the Tract Map as if it had risen to the level of a "vested right," the other major error committed by the County which unfairly skewed the CEQA review process for FSEIR 566 was the County's failure and refusal to recognize that, from the outset, the Draft SEIR should have addressed the construction-level impacts associated with the approval of the Grading Application. When the Grading Application was submitted by Aradi in December 1996, the County expressly determined that a "Subsequent EIR is required to evaluate the effects of the *grading application*." (FSEIR 566, § 2.4, pp. 2-8 and 2-9, emphasis added.) Indeed, during the public review proceedings for FSEIR 566, the County expressly conceded that the "Grading Permit Application was the *initiating action* which resulted in the determination that DEIR 566 be prepared . . . ." (Response to Comments, p. 1-1, emphasis added.)

19. Ironically, however, after determining in December 1996 that a Subsequent EIR was needed to study the effects of the Grading Application, the County spent the next 12 months "running away" from this decision by steadfastly refusing -- despite repeated objections by the Society and other members of the public -- to have the Draft SEIR address the specific, construction-level impacts which would flow from the County's approval of the Grading Application.

20. Without any justification or explanation of any kind, the County decided that the Draft SEIR would only have to address the broad impacts of the overall Project, instead of the specific effects of the rough grading, and that a "planning level of detail," as opposed to a construction level of detail, was all that was required for the environmental analysis that was to be set forth in the Draft SEIR.

21. At no time during the public comment period for Draft SEIR 566 did the County make available for public review the 40-scale grading plans submitted in connection

with the Grading Application, nor did it allow the public to gain access to the soils reports which contained the "*more detailed evaluation* of the slope stability . . . [to] be conducted during the 40-scale grading plan review to accompany the grading permit application." (FSEIR 566, Appendix D, ¶ 4, p.4, emphasis added.)

22. By failing to provide the public with critically-important information regarding the 8.9 million cubic yards of remedial grading to be undertaken as part of the Project, such as, for example, the design of the shear keys to be constructed at the site, the County effectively prevented the Society's geotechnical consultants from being able to, *inter alia*, (a) evaluate the adequacy of the proposed remedial grading plan for the Project, (b) determine how the 100-foot-deep shear key excavations could possibly be accomplished without activating massive landsliding on the Property which, in turn, would threaten the stability of the slopes surrounding the Monastery, and (c) develop an accurate estimate of the duration of the proposed rough grading for the Project in order to determine how many *years* the landowners surrounding the Property would be subjected to the impacts of extensive mass grading operations.

23. Despite several letters of protest submitted by the Society, it was not until late October 1997 -- when the members of the Planning Commission balked at considering the adequacy of FSEIR 566 unless they were first allowed to review the 40-scale grading plans and the accompanying soils reports for the Project -- that the County finally made certain grading plans and reports available for public review.

24. Unfortunately, however, this was a case of "too little too late" because, not only did these materials still leave a great many questions unanswered, but, by the time these grading plans and reports were made available in November 1997, the 45-day public comment period for Draft SEIR 566 had been closed for over two months. Despite this fact, the County refused to (a) revise the Draft SEIR in order to analyze and incorporate the new grading plans and reports which the County had belatedly decided to make available for review at only one location and (b) recirculate the revised Draft for public review and comment.

C. **Major Error No. 3: Certification of FSEIR and Adoption of Findings/Considerations Were Impermissibly Separated from Approval of the Grading Application.**

25. The third major error committed by the County in processing FSEIR 566 was its unprecedented decision (a) to have the Planning Commission and the Board consider the adequacy of FSEIR 566 without simultaneously considering whether to approve the discretionary project, i.e., the Grading Application, which triggered preparation of the FSEIR in the first place and (b) to have the Planning Commission adopt 83 pages of detailed findings and overriding considerations as if it were, in fact, issuing some sort of "project approval." Of course, without any project approval having been agendized for its consideration, the Planning Commission was not authorized under CEQA to make any "findings" which might later be adopted by the County's Building Official in deciding whether to approve Aradi's Grading Application.

26. The administrative record will amply demonstrate that the County was clearly troubled by what procedures it should follow in considering whether to certify FSEIR 566 and to approve the Grading Application. At least four different sets of procedures were separately proposed and then withdrawn by County Counsel in trying to decide how the County should conduct the CEQA review process for FSEIR 566. In the end, however, a five-step procedure was proposed by County Counsel which was neither practical, nor legal, because it divorced (a) the certification of FSEIR 566 and the adoption of the Findings/Considerations from (b) the approval of the Grading Application.

27. Incredibly, after spending so much time formulating this five-step CEQA review process -- which was ultimately amended by the Board to include a sixth step -- the County did not even comply with the special procedures which the Board adopted (referred to collectively as the "Approval & Appeal Process for FSEIR 566") because the Board failed to meet the requirements in step nos. 3 and 4 of the process with respect to making a "determination" on the Society's appeal and issuing a "ratification" of the Planning

Commission's certification of FSEIR 566 The County's insistence, however, that FSEIR 566 has been officially certified, despite the County's failure to comply with the multi-step process it prescribed for itself, has left the Society with no choice but to file this lawsuit to obtain declaratory relief, a writ of mandate, and ancillary injunctive relief.

28. A more detailed statement of the Society's claims against the Defendants, including a summary of the many instances in which the County violated the provisions of CEQA and CEQA Guidelines in attempting to certify FSEIR 566 and to adopt the Findings/Considerations, is set forth below.

II. GENERAL ALLEGATIONS

A. The Parties.

29. The Society is now, and at all time herein mentioned was, a non-profit religious corporation formed, existing, and in good standing under the laws of the State of California and conducting operations in the County.

30. For nearly 50 years, the Society has owned and maintained the Ramakrishna Monastery (the "Monastery") on approximately 40 acres of real property located immediately adjacent to the southeast portion of the Property. The Society's operation and maintenance of the Monastery will be directly and materially affected by the development of the Project.

31. The County is now, and at all times herein mentioned was, a political subdivision of the State of California, created and existing under and by virtue of the laws of the State of California.

32. The Board is now, and at all times herein mentioned was, the duly elected legislative body of the County, organized and existing under the laws of the State of California.

33. The Planning Commission is now, and at all times herein mentioned was, the duly appointed planning subagency of the Board, organized and existing under the laws of the State of California.

34. Nees is now, and at all times herein mentioned was, the Manager of Building Inspection for the County, and the duly-appointed Building Official of the County as defined in the County's Grading and Excavation Code.

35. The true names and capacities, whether individual, corporate, or otherwise, of the Respondents sued herein as DOES 1 through 25, inclusive, are presently unknown to the Society, which therefore sues such Respondents by such fictitious names. The Society will seek leave of Court to amend this Complaint and Petition to show the true names and capacities of such Respondents when such information is ascertained.

36. Each of the Respondents sued herein as DOES 1 through 25, inclusive, performed, participated in, or abetted in some manner, the acts and omissions alleged herein, is responsible for the violations of law described hereinbelow, and is subject to the relief sought herein.

37. In performing the acts and omissions alleged herein, and at all time relevant hereto, each of the Respondents was the agent and employee of each of the other Respondents and was at all times acting within the course and scope of such agency and employment, and within the knowledge and approval of each of the other Respondents.

38. California Quartet is now, and at all times herein mentioned was, a limited partnership organized and existing under the laws of the State of California and doing business in the County. Since in or about 1993, California Quartet has been the record title owner of the Property.

39. Aradi, Ltd., is now, and at all times herein mentioned was, a limited partnership organized and existing under the laws of the State of Nevada and qualified to do business in California. Aradi, Ltd., is currently the general partner of California Quartet.

40. Aradi, Inc., is now, and at all times herein mentioned was, a corporation organized and existing under the laws of the State of Nevada and qualified to do business in California. Aradi, Inc., is currently the general partner of Aradi, Ltd.

41. The true names and capacities, whether individual, corporate, or otherwise, of the Real Parties sued herein as DOES 26 through 50, inclusive, are presently

unknown to the Society, which therefore sues such Real Parties by such fictitious names. The Society will seek leave of Court to amend this Complaint and Petition to show the true names and capacities of such Real Parties when such information is ascertained.

42. Each of the Real Parties has a direct, beneficial interest in the actions of Respondents to attempt to certify FSEIR 566 and each of these Parties will be directly affected by the relief sought herein.

B. Factual Background.

43. The Property, commonly known as "Saddleback Meadows," is comprised of approximately 222 acres of mostly hilly terrain located on the east side of El Toro Road approximately one-half mile south of the intersection of El Toro Road, Live Oak Canyon Road, and Santiago Canyon Road in Trabuco Canyon.

44. Since 1949, the Society has owned and maintained the Monastery on 40 acres immediately adjacent to the southeast portion of the Property. The other surrounding land uses include, but are not limited to, St. Michael's Abbey immediately to the northwest, and O'Neill Regional Park immediately to the south. The Cleveland National Forest is approximately one-half mile north of the Property.

45. In 1979, the County, at the request of one of the previous owners of the Property, approved Tentative Tract Map 10692 which allowed for the construction of more than 700 manufactured housing/mobilehome units on the Property. However, some nine years passed before Final Tract Map 10692 (referred to herein as the "Tract Map") was recorded in 1988.

46. On January 9, 1980, the Property was placed in the PC "Planned Community" District when the Planned Community District Regulations for Saddleback Meadows (the "District Regulations") were adopted by the Board to provide the zoning for the Property and to specify the development conditions and criteria which would apply to the Property. The District Regulations were amended by the Board on July 13, 1983, and again on June 13, 1984, pursuant to Ordinance No. 3468 (ZC84-3P) [hereinafter referred to as the "1984 Zoning Ordinance"].

47. The Property is located within the unincorporated area of the County which is covered by Foothill/Trabuco Specific Plan (the "Specific Plan"). The Specific Plan was adopted by the Board in December 1991 for the express purpose of preserving the rural character of the Trabuco Canyon area to serve as a buffer between urban development and the Cleveland National Forest, and to preserve the significant landform, biological, and scenic resources of the area. The Specific Plan, which refers to the Property as the "Bridlewood Residential District" and incorporates the 1984 Zoning Ordinance, exempts the Property from the regulations and guidelines of the Specific Plan and allows the Property to be developed in accordance with the Tract Map, notwithstanding the Board's express finding that development of the Property pursuant to the Tract Map is not consistent with the goals and objectives of the Specific Plan.

48. The Specific Plan states, in relevant part, that the exemption was provided because the then-current owner of the Property was in bankruptcy and the automatic stay arising from the bankruptcy prevented the Board from taking any action that would affect the value of the Property. However, in providing for this exemption, the Specific Plan specified two instances in which the exemption would not apply: (a) if any development proposal for the Property deviated from the Tract Map, then the Specific Plan would have to be amended to (i) determine an appropriate density cap for the Property, (ii) establish new development regulations for the Property, and (iii) require the development of the Property to be consistent with all provisions of the Specific Plan; and (b) if the landowner applied for a grading permit for the Property, all environmental analysis required by CEQA would have to be conducted.

49. In or about 1993, California Quartet purchased the Property at a public auction of the assets of a failed savings and loan association. Thereafter, in April 1994, California Quartet applied to the County for a grading permit to rough grade approximately 98.3 acres of the Property, which it referred to as Phase I of the Project. In August 1994, the County determined that a Subsequent EIR would have to be prepared before the requested grading permit could be issued.

50. California Quartet appealed this determination on August 11, 1994. However, on January 31, 1995, California Quartet withdrew its appeal and, pursuant to the request of the Planning Commission, began to develop a project to address the numerous environmental and other concerns that had been expressed by the public, the County staff, and the Planning Commission regarding the development of the Property.

51. As a result of this effort, a Zone Change and an Area Plan for a 318-unit single-family residential housing project (the "318-Unit Project") were submitted to the County by California Quartet on July 27, 1995. Environmental Impact Report No. 561 ("EIR 561") was then prepared to address the significant environmental impacts that would be caused by the construction of 318 single-family homes on the Property.

52. On July 30, 1996, the Planning Commission conducted a public hearing on the 318-Unit Project. At the conclusion of the hearing, the Planning Commission recommended that EIR 561 be certified by the Board, but also recommended that Zone Change 95-5 and Area Plan 95-7 for the 318-Unit Project be denied. On October 22, 1996, the Board conducted a public hearing regarding the 318-Unit Project and likewise voted to deny Zone Change 95-5 and Area Plan 95-7.

53. Following the Board's rejection of the 318-Unit Project, California Quartet renewed its efforts to develop the Property pursuant to the Tract Map.

54. On December 3, 1996, California Quartet submitted Grading Application No. GA960048 (referred to herein as the "Grading Application") to the County. The Grading Application requested (a) the approval of the Phase 1 grading plans for the Project and (b) the issuance of a grading permit to commence rough grading operations at the Property.

55. On December 16, 1996, the County's Environmental Management Agency, now known as the Planning & Development Services Department, determined that a Subsequent EIR needed to be prepared in order "to evaluate the effects of the grading application." (FSEIR 566 at pp.2-8 and 2-9.) By making this determination that a Subsequent EIR would have to be prepared and certified before the Grading Application could be approved, County EMA implicitly found that the Grading Application was a "discretionary

approval" under CEQA. If county EMA had found the Grading Application to be purely ministerial, CEQA would not have applied and no Subsequent EIR could have been required to be prepared.

56. On December 24, 1996, the County issued the Notice of Preparation for Draft Subsequent Environmental Impact Report No. 566 ("DSEIR 566" or the "DSEIR"), which solicited comments from all interested parties regarding the proposed content and scope of the DSEIR. The Notice of Preparation was re-issued by the County on February 6, 1997, to include a description of the commercial center California Quartet was proposing to construct as part of the Project.

57. The 45-day public review period for DSEIR 566 began on June 27, 1997, when the County distributed the DSEIR to various governmental agencies, surrounding property owners, and other interested parties for their review and comment. All comments on DSEIR 566 were to be submitted to the County no later than August 12, 1997.

58. The ability of the Society, as well as all other interested parties, to review and comment on the adequacy of the DSEIR was substantially impaired by the County's failure to make available for public review all documents and materials that were necessary to fully assess the adequacy of the DSEIR. In particular, the Phase 1 grading plans (the "Grading Plans"), which were the ***sine qua non*** of the Grading Application were not available for public review because the County had returned them to California Quartet to be revised. On August 1, 1997, the County informed the Society that, if it wished to review a copy of the Grading Plans it would have to arrange to purchase a copy from California Quartet. When the Society did finally receive a copy of the Grading Plans from California Quartet on or about August 6, 1997, the Society discovered that Grading Plans were preliminary in nature and only covered a small portion of the Project.

59. In addition, the in-depth review of the Grading Plans by the soils engineer of record (the "Grading Plan Review") had not yet been completed, and was therefore unavailable. Without access to the Grading Plan Review, it was not possible to fully understand or interpret the Grading Plans.

60. Because these critically important documents were unavailable to the public, the Society wrote to the County on August 6, 1997, to request that the County grant a 30-day extension of time for the Society to submit its comments on DSEIR 566, or, in the alternative, that the County re-notice the 45-day public review period once the Grading Plans and the Grading Plan Review were made available for public review. An extension of time was also requested in writing by Saundra F. Jacobs, by letter of August 5, 1997, and by St. Michael's Abbey, by letter of August 11, 1997, due to the unavailability of these important documents.

61. In its August 12, 1997 response to the Society, the County denied that access to the Grading Plans and the Grading Plan Review was necessary to comment on the adequacy of DSEIR 566 because, although the Grading Application was the "initiating activity" which triggered the preparation of the DSEIR, the County had prepared DSEIR 566 to analyze the general impacts of the entire Project. The County went on to state that the amount of detail provided by the Grading Plans and the Grading Plan Review was "premature" and was not required to be set forth in DSEIR 566 because the County had decided that the information to be incorporated in the DSEIR only needed to be specific enough for some undefined "planning decision."

62. Not only did the County fail to explain what "planning decision" it was referring to in its letter, but it also failed to explain why the scope of the environmental analysis set forth in DSEIR 566 was being arbitrarily limited to a "planning level of detail" when it was supposed to be analyzing the environmental effects of the Grading Application. At any rate, the County refused to re-notice the 45-day public review period, but, "in the spirit of cooperation," provided the Society and other interested parties with a 10-day extension of time within which to submit their comments on the DSEIR.

63. During the public review period, the County received numerous written comments on DSEIR 566 from various governmental agencies, municipalities, groups, and individuals. Included among the written comments on DSEIR 566 were letters from the Society, St. Michael's Abbey, the U.S. Fish & Wildlife Service and the California Department

of Fish & Game, Saundra F. Jacobs, the Southern California Association of Governments, and numerous other interested parties. (Copies of all letters commenting on DSEIR 566, which were received by the County between June 29, 1997, and August 22, 1997, are set forth in DSEIR 566 and are incorporated herein by reference.)

64. On October 10, 1997, the County (a) issued the "Response to Comments" for DSEIR 566 (the "Response to Comments") to address the numerous comments that were submitted regarding the DSEIR, and (b) announced that the Planning Commission would hold a public hearing on October 22, 1997, to consider the certification FSEIR 566.

65. On October 15 and 16, 1997, the Society submitted written objections to the County, taking issue with the Planning Commission's proposed review of FSEIR 566 on October 22, 1997. The principal objection lodged by the Society was that the Planning Commission was being asked to do something unlawful by certifying FSEIR 566 without simultaneously considering whether to approve the Grading Application, i.e., the discretionary project which the FSEIR was originally prepared to evaluate.

66. The Society's objections spawned a series of proposed procedures as to how the County should go about reviewing FSEIR 566 and the Grading Application. The County's first proposal, made on October 20, 1997, acknowledged that the County Building Official (the "Building Official") was the "decision-making body" which must ultimately approve or deny the Grading Application, and that the County's "Environmental Analysis Procedures" allowed the Planning Commission to make only a "recommendation" regarding the adequacy of an EIR when it was not the decision-making body, as that term is defined by CEQA. Accordingly, the County proposed the following procedure: (a) the Planning Commission would review the FSEIR and make a recommendation regarding its adequacy to the Building Official, (b) the Building Official would determine whether FSEIR 566 should be certified, and (c) if the Building Official certified the FSEIR, his determination could be appealed to the Board.

67. A second proposal was made by the County during the Planning Commission's October 22, 1997 public hearing. This proposal was very similar to the first,

except that it expressly provided for, *inter alia*, the Building Official to conduct a public hearing on the adequacy of FSEIR 566. However, the second proposal was unclear as to whether an appeal of the Building Official's determination regarding the FSEIR would be heard by the Board.

68. At the October 22, 1997 public hearing, the Planning Commission refused to render a decision on the FSEIR, principally because the Grading Plans had not been made available for the members of the Planning Commission to review. Instead, the Planning Commission scheduled another hearing for December 3, 1997, and requested that the Planning & Development Services Department make the Grading Plans and related soils reports available for public review. Although County staff complied with this request, the County neither re-noticed the 45-day public review period to solicit comments on this significant new information, nor did it incorporate these materials into the FSEIR and recirculate it to the public.

69. On October 24, 1997, the County made a third proposal regarding the process by which FSEIR 566 and the Grading Application would be reviewed. This third proposal simply clarified the details of the process that the County had suggested in its first two proposals. Written comments and objections to this proposal were submitted to the County by California Quartet and the Society, dated October 31, 1997, and November 3, 1997, respectively.

70. In response to these comments and objections, the County made a fourth, followed by a fifth, proposal -- the latter of which was ultimately submitted to the Board for its approval. This fifth proposal eliminated some of the features that the earlier proposals had incorporated, such as the Building Official determining the adequacy of the FSEIR and the right to appeal the Building Official's decision on the Grading Application. As finally submitted to the Board, the fifth proposal consisted to a five-step process which provided for (a) the Planning Commission to certify the adequacy of FSEIR 566, (b) the right to appeal that determination within fifteen days of the time it was made, (c) the Board to hear any such appeals, (d) the Building Official to render its decision on the Grading Application following

the expiration of the appeal period, or the denial of any appeal and the ratification of the Planning Commission's certification by the Board, and (e) a Notice of Determination to be filed when the grading permit was issued.

71. On November 25, 1997, in response to the Society's continued objections to the legality of the procedures being proposed by the County, the Board amended the five-step proposal by adding a sixth step to allow the issuance of any grading permit for the Project to be "appealed to be Board of Supervisors from the Planning Commission." The Board directed County staff to draft whatever ordinance was necessary to allow such an appeal to take place.

72. However, the ordinance which was drafted by the County staff was inconsistent with the Board's amendment because, instead of allowing for an appeal of the grading permit from the Planning Commission to the Board, it allowed the decision of the Building Official to be appealed to the Board. As drafted, therefore, the proposed ordinance drew strong opposition from the Building Industry Association and failed to receive the approval of a majority of the Board. In rejecting the proposed ordinance on December 16, 1997, the Board did not revisit or reconsider the six-step process it had adopted on November 25, 1997. Indeed, no action was taken at the December 16 hearing to repeal or modify the motion which was passed at the November 25 hearing.

73. By administrative fiat, however, County staff decided to ignore the desire so clearly expressed and voted on by the Board at the November 25 hearing to allow the grading permit for the Project to be "appealed to the Board from the Planning Commission." Without any formal action by the Board, County staff chose to override the Board's expressed intent and did not allow the Grading Application to be considered by the Planning Commission so that it might be appealed to the Board if approved.

74. As noted above, the Society submitted numerous letters to the County objecting to (a) the process by which the FSEIR and the Grading Application were to be reviewed and decided upon by the County, and (b) the sufficiency of the Response to Comments released by the County. These objections were set forth in the Society's letters,

dated October 15 and 16, 1997, November 3, 5, and 26, 1997, and December 1 and 2, 1997, each of which are incorporated herein by reference. Saundra F. Jacobs also submitted objections to the County's Response to Comments on December 2, 1997, which is also incorporated herein by reference.

75. Representatives of the Society, as well as other interested parties, appeared at the public hearings which were held regarding the certification of FSEIR 566 by the Planning Commission on October 22, 1997 and December 3, 1997, and the public hearing which was held regarding the adoption of the special CEQA review process for the FSEIR by the Board on November 25, 1997. During these public hearings representatives of the Society and the other interested parties presented numerous oral comments regarding FSEIR 566 and the process by which it was being reviewed.

76. The written and oral comments submitted to the County and the Planning Commission prior to its approval and certification of FSEIR 566 specifically informed the County and the Planning Commission about the serious deficiencies in the environmental compliance process relating to FSEIR 566 including, but not limited to, the following:

(a) the failure of FSEIR 566 to properly describe the discretionary "project" which it was prepared to evaluate;

(b) the failure of FSEIR 566 to contain the required level of specificity;

(c) the failure of FSEIR 566 to provide the required technical data;

(d) the County's failure to recirculate DSEIR 566 following the release of significant new information prior to certification, including, but not limited to, the Grading Plans and the Grading Plan Review;

(e) the purported approval and certification of FSEIR 566 pursuant to a specially-adopted CEQA review process which, ***inter alia***, unlawfully separated the certification of the FSEIR and the decision on the discretionary approval, i.e., the Grading Application, for which the FSEIR was originally prepared;

(f) the failure of FSEIR 566 to adequately address all significant environmental impacts associated with the Project, including, but not limited to, soils and geology, water/hydrology, transportation/circulation, air quality, biological resources, cultural resources, and public services;

(g) the failure of FSEIR 566 to specify all feasible mitigation measures available to lessen the effects of the significant environmental impacts;

(h) the failure of FSEIR 566 to adequately address the cumulative impacts of the Project;

(i) the failure of FSEIR 566 to consider reasonable alternatives to the Project, including, but not limited to, alternative sites;

(j) the failure of FSEIR 566 to adequately address and respond to comments received on the DSEIR;

(k) the County's failure to adopt an adequate Mitigation Monitoring Program;

(l) the failure of the County to adopt adequate and proper findings; and

(m) the failure of the County to adopt an adequate and proper statement of overriding considerations.

77. Despite the numerous comments outlining the deficiencies in FSEIR 566, and the process by which it was brought to the Planning Commission for certification, the Planning Commission took action to approve and certify FSEIR 566 on December 3, 1997, without ever considering whether the Grading Application should be approved, denied, or modified to lessen the environmental impacts associated with the rough grading for the Project.

78. Nonetheless, pursuant to its Resolution of December 3, 1997, the Planning Commission purported (a) to make findings in support of the approval of the entire Project and (b) to adopt a statement of overriding considerations which stated that the benefits of the Project supposedly outweighed its unavoidable impacts.

79. On December 18, 1997, the Society timely appealed the Planning Commission's purported certification of FSEIR 566 by submitting a notice of appeal that outlined the grounds therefor. On February 24, 1998, the Board heard the Society's appeal and after public testimony had been received, Supervisor Steiner moved to deny the appeal. However this motion failed for lack of majority when the Board split 2-2 with Supervisor Silva having recused himself prior to the hearing. Following the Board's vote, County Counsel declared, without any legal or factual support, that the Society's appeal had failed and the Planning Commission's certification of the FSEIR had been upheld.

80. The Society has exhausted all of its administrative remedies, and has no plain, speedy, or adequate remedy in the ordinary course of law, other than the relief sought in this Complaint and Petition.

FIRST CAUSE OF ACTION

(Against All Defendants For Declaratory And Injunctive Relief Re Invalid And Ineffective Certification Of FSEIR 566)

81. The Society realleges and incorporates herein by reference each and every allegation contained in paragraphs 1 through 80, inclusive, as set forth above.

82. To the extent that the Defendants maintain that FSEIR 566 has been validly and officially certified by Respondents, an actual controversy has arisen and now exists between the Society and the Defendants regarding the validity of Respondents' purported certification of FSEIR 566 pursuant to the special CEQA review process which the Board purportedly adopted on November 25, 1997, in that the Society contends, and Defendants deny, ***inter alia***, that:

(a) The November 25 CEQA review process (i) requires that the Board "***make a determination*** whether to uphold [any] appeal [of the certification of the FSEIR] in whole or in part or to deny the appeal" and (ii) prohibits the Building Official from approving the Grading Application, or issuing a grading permit, until the "***denial*** of any appeal and ***ratification*** of the Planning Commission's certification" by the Board (emphasis added); and

(b) The Board's 2-to-2 vote on the Society's appeal did not result in a denial of the Society's appeal, nor did it constitute any Board action upholding or ratifying the Planning Commission's December 3 certification of the FSEIR.

83. Government Code section 25005 provides that no act of a county board of supervisors, such as the Board, is valid unless a majority of all members concur therein. As a five-member panel, the Board needs three votes in order to take any valid action. Unless the Board has three votes in favor of an action, the Board is held to have taken no action.

84. The Society contends, therefore, that the Board took no action on the Society's appeal because three votes were not cast in favor of granting or denying the appeal. The minutes of the public hearing held on February 24, 1998 support this contention and state that the motion to deny the Society's appeal failed for lack of a majority.

85. A further, actual controversy has arisen and now exists between the Society and the Defendants, in that the Society contends, and the Defendants deny, *inter alia*, that:

(a) When a Subsequent EIR is required to be prepared to evaluate the effects of a grading application, there is a conflict between (1) the County's Environmental Analysis Procedures, adopted by the Board on June 25, 1995, and (2) the Orange County Grading and Excavation Code, in that (i) the County's Environmental Analysis Procedures do *not* authorize any decision-making body other than the Board, the Planning Commission, or the Subdivision Committee to approve and certify an EIR and certainly do *not* contemplate that the Building Official under the Grading Code would ever certify an EIR and (ii) the County's Grading Code assumes that all grading permits will be issued by the Building Official, as opposed to the Planning Commission;

(b) In light of the above-described conflict between the County's Environmental Analysis Procedures and the Grading Code, there is no clear rule or procedure set forth in the County's ordinances which indicates how

the County is to proceed in reviewing a Subsequent EIR and the Grading Application for which the Subsequent EIR was prepared to evaluate.

(c) Under CEQA and the CEQA Guidelines, the Planning Commission was not, and is not, authorized by law to certify FSEIR 566 and to adopt findings and overriding considerations without simultaneously approving the Grading Application;

(d) Likewise, under CEQA and the CEQA Guidelines, the Building Official was not, and is not, authorized to approve the Grading Application or issue any grading permits to Real Parties relating to the Project without simultaneously certifying FSEIR 566 and adopting findings and overriding considerations; and

(e) The November 25 CEQA review process unlawfully separated the (i) the decision whether to certify FSEIR 566 and to adopt findings and overriding considerations from (ii) the decision whether to approve the Grading Application.

86. In light of the foregoing, a judicial declaration is necessary and appropriate under the circumstances to resolve the above-described disputes and controversies between the Society and the Defendants with respect to the purported certification of FSEIR 566 by Respondents and the proper procedures for taking action on the FSEIR and the Grading Application in the future. Specifically, the Society seeks a declaration from the Court that:

(a) No final or official certification of FSEIR 566 has occurred under the terms of the CEQA review process adopted by the County on November 25, 1997;

(b) The CEQA review process adopted by the Board on November 25, 1997, was unlawful and invalid and any action take pursuant thereto, or in accordance therewith, is a legal nullity;

(c) The proper process under CEQA, and the County's ordinances and regulations, for considering whether to certify FSEIR 566 and approve the Grading Application is for the Planning Commission and the Building Official to hold a joint public hearing and to take joint, simultaneous action to review the adequacy of FSEIR 566 and to take action on the merits of the Grading Application;

(d) If and when any joint determination is made by the Planning Commission and the Building Official regarding FSEIR 566 and the Grading Application, such action shall be appealable to the Board pursuant to the provisions of CEQA section 21151(c); and

(e) Pursuant to section 21168.9 of CEQA, Respondents must suspend any and all Project activities which are based upon or are undertaken pursuant to the purported certification of FSEIR 566 or the purported adoption of the Findings/Considerations, to the extent that any such activities could result in any adverse change or alteration to the Property until the determination as to whether to certify FSEIR 566 and to approve the Grading Application is brought into compliance with the provisions of CEQA and the CEQA Guidelines.

87. In addition, the Society is entitled to ancillary injunctive relief in the form of a temporary restraining order, preliminary injunction, and permanent injunction, enjoining and prohibiting:

(a) Respondents, their agents, employees and representatives, and all persons acting under, or in concert or participation with them, from taking any action to grant or approve the Grading Application or to issue any grading permits relating to the Project, to Real Parties, or their agents, successors or assigns, pending a hearing on the merits of this Complaint and Petition; and

(b) Real Parties, their agents, employees and representatives, and all persons acting under, or in concert or participation with them, from engaging in (i) any grading, clearing, brushing or grubbing on the natural or existing grade

of the Property or (ii) any other activities which could result in any adverse change or alteration to the physical environment of the Property, pending a hearing on the merits of this Complaint and Petition.

SECOND CAUSE OF ACTION

(Against All Defendants For Declaratory Relief Re Non-Existence of Vested Rights To Develop The Property)

88. The Society realleges and incorporates herein by reference each and every allegation contained in paragraphs 1 through 80, inclusive, and 82 through 85, inclusive, as set forth above.

89. An actual controversy has arisen and now exists between and among the Society and the Defendants regarding the respective rights, duties, and obligations of the Defendants with respect to the development of the Property and ensuring that such development fully complies with CEQA and the Guidelines in that the Society contends, and the Defendants deny, *inter alia*, that:

(a) Real Parties possess *no vested rights* with respect to developing all or any portion of the Property, including, but not limited to, (i) any vested rights to maintain the benefits afforded under the exemption of the Property from the requirements of the Specific Plan, (ii) any vested rights to maintain the entitlements afforded under the 1984 Zoning Ordinance, or (iii) any vested rights to maintain the entitlements afforded under the Tract Map; and

(b) In considering whether to certify FSEIR 566, Respondents were free to, and were actually required to, consider all feasible mitigation measures, project alternatives, and other design features that would have lessened or avoided the environmental impacts associated with the Project, regardless of whether such measures, alternatives, or features would cause the design or intensity of the development authorized by the Tract Map.

90. A judicial declaration is necessary and appropriate under the circumstances to resolve the current between the Society and the Defendants. Specifically, the Society seeks a declaration from the Court that:

(a) Real Parties have *not* acquired any vested rights in, *inter alia*, (i) the exemption of the Property from the requirements of the Specific Plan, (ii) the current zoning for the Property as set forth in the 1984 Zoning Ordinance, or (iii) the current entitlements allowed under the Tract Map;

(b) Respondents have *not* issued any development permits to Real Parties upon which they have relied in good faith, and have performed substantial work and incurred substantial liabilities, so as to acquire any vested rights to develop the Property in accordance with such permits; and

(c) the mitigation measures, project alternatives, and other design features that Respondents were allowed to, and were actually required to, consider in deciding whether to certify FSEIR 566 and to adopt the Findings/Considerations *were not limited* to those measures, alternatives or design features which would not change or alter the physical design of the development authorized by the Tract Map.

THIRD CAUSE OF ACTION

(Against All Defendants For A Writ Of Mandate And Injunctive Relief Based On Violations Of CEQA And The CEQA Guidelines In Purporting To Certify FSEIR 566)

91. The Society realleges and incorporates herein by reference each and every allegation contained in paragraphs 1 through 80, inclusive, paragraphs 82 through 85, inclusive, and paragraph 90 as set forth above.

92. To the extent that the Board's purported action on February 24, 1998 resulted in any determination upholding the Planning Commission's certification of FSEIR 566, which the Society denies, the Society seeks a preemptory writ of mandate pursuant to Code of Civil Procedure section 1094.5, directing Respondents to vacate and set aside, *inter*

alia, the unlawful actions which they have taken, or may hereafter take, in (a) approving and certifying FSEIR 566, or (b) authorizing any other actions in reliance on such approval and certification, including, but not limited to, the approval of the Grading Application or the issuance of any grading permit(s) to Real Parties with respect to the Project. Such mandamus relief is being sought herein based on the numerous violations of CEQA and the CEQA Guidelines which are alleged hereinbelow.

A. **Failure To Properly Describe The Discretionary Project To Be Addressed By FSEIR 566.**

93. Respondents failed to proceed in the manner required by law and abused their discretion to the extent that they violated, *inter alia*, section 15124 of the Guidelines by failing to properly identify and describe the discretionary project approval which initiated and necessitated the preparation of FSEIR 566, i.e., the Grading Application.

94. As stated above, the Project consists of the development of 705 manufactured housing units and a commercial site, as authorized by the Tract Map. The Project was originally approved approximately 19 years ago when the County granted approval for Tentative Tract Map 10692. At the time that approval was issued, an EIR was prepared and certified by the County to address certain of the environmental impacts associated with the development of the Project.

95. In December 1996, Real Parties submitted the Grading Application to the County seeking the issuance of a grading permit to undertake a portion of the rough grading for the Project. As FSEIR 566 acknowledges, at pages 2-8 and 2-9, County EMA determined that the EIR certified in 1979 was no longer sufficient and that, before the County could approve the Grading Application, a Subsequent EIR needed to be prepared to "*evaluate the [environmental] effects of the grading application.*"

96. This determination by County EMA constituted an implicit finding that the Grading Application was the "next discretionary approval for the project," within the meaning of section 15162(c) of the CEQA Guidelines, which would provide the County with the occasion to require a Subsequent EIR to be prepared.

97. Consistent with this finding, FSEIR 566, at pages 3-15, identifies all County discretionary approvals for which it is to provide environmental analysis, as required by Guidelines section 15124(d)(1)(B). The only County approvals which FSEIR 566 identifies are the approval of a grading plan and the issuance of a grading permit, pursuant to the Grading Application. FSEIR 566 does not list the approval of the overall Project (i.e., the construction of 705 units of manufactured housing) as a discretionary approval for which it is to provide environmental analysis.

98. There can be no question, therefore, that the discretionary project approval which precipitated the preparation of FSEIR 566, and which was to be addressed and analyzed in the FSEIR, was the Grading Application. But for the Grading Application being submitted, there would have been no legal basis for the County to have directed that a Subsequent EIR be prepared because there would have been no new project approval which would have required CEQA compliance.

99. However, in calling for a Subsequent EIR to be prepared to update the environmental analysis set forth in the original EIR for the Project, the County inexplicably determined that the Subsequent EIR would only have to be specific enough to provide a "planning level of detail" for the Project in general, and would not have to address the construction-level impacts associated with the approval of the Grading Application.

100. In implementing this improper decision to address only the general "planning level" impacts of the entire Project, and to exclude an analysis of the specific impacts associated with the Grading Application, the County wrongfully described the "project" to be evaluated in the Draft SEIR in overly-broad terms as if it consisted of the overall development of the Project authorized by the Tract Map, but did not include the construction-level activities that would be unleashed by the approval of the Grading Application. The incomplete and overly-broad project description which was incorporated in the Draft SEIR necessarily skewed and improperly limited the environmental analysis set forth in FSEIR 566 in violation of CEQA and the CEQA Guidelines.

B. Failure To Provide The Required Level Of Specificity.

101. Respondents further failed to proceed in the manner required by law and abused their discretion by failing to provide the level of specificity that CEQA and the Guidelines required of FSEIR 566.

102. Specifically, Guidelines section 15146 provides that:

"The degree of specificity required in an EIR will correspond to the degree of specificity involved in the underlying activity which is described in the EIR.

(a) an EIR on a construction level project will necessarily be *more detailed* in the *specific effects* of the project than will be an EIR on the adoption of a local general plan or comprehensive zoning ordinance because the *effects of the construction* can be predicted with greater accuracy." (Emphasis added.)

103. Contrary to any previous statements by Respondents, FSEIR 566 is undeniably a construction-level EIR because, by Respondents' own admission, the document was prepared to analyze the environmental impacts of the Grading Application, which is the last discretionary approval Respondents will issue before the topography of the Property is permanently altered and the biological resources located at the site are forever destroyed.

104. FSEIR 566 does not comply with section 15146 because it postpones for future analysis the specific details of the very activity that it was supposedly prepared to address, i.e., the rough grading of the Property for the construction of 705 units of manufactured housing. As a Subsequent EIR prepared to analyze the effects of the rough grading of the Property, the FSEIR was required by section 15146 to possess a degree of specificity that corresponded to the level of technical detail that must necessarily be provided to the Building Official in order for him to approve the Grading Application.

105. In order to provide this degree of specificity, all technical materials to be reviewed by the Building Official before he approved the Grading Application -- which included, at a minimum, the Grading Plans and the Grading Plan Review -- should have been

made a part of FSEIR 566 so that all the detailed information that was available to the County when it considered the Grading Application was likewise made available to the public through the CEQA review process.

106. However, the level of specificity in FSEIR 566 fell far short of what would be required for properly evaluating the Grading Application because, *inter alia*, FSEIR 566 provided only a vague "conceptual plan" regarding how the rough grading of the Property was to be performed. By failing to include, *inter alia*, the Grading Plans and the Grading Plan Review, the FSEIR lacked the specificity required for a construction-level EIR, and clearly violated section 15146 of the CEQA Guidelines.

107. Respondents' failure to comply with the specificity provisions set forth in the CEQA Guidelines has, *inter alia*, unlawfully deprived the public and other interested public agencies of the right and opportunity to properly assess and comment on the impacts associated with the Grading Application as well as the mitigation measures proposed to reduce those impacts.

C. Failure To Provide The Requisite Technical Detail.

108. Respondents further failed to proceed in the manner required by law and abused their discretion by failing to comply with the mandatory provisions of Guidelines section 15147, which requires that all technical data, maps, plans, diagrams, and similar information that are necessary to make a "full assessment" of the environmental impacts of the project being evaluated must be contained in the environmental impact report or in the appendices thereto. Section 15147 goes on to require that these materials be made "readily available for public examination" during the noticed public review period.

109. Because FSEIR 566 was prepared to evaluate the environmental effects of the Grading Application, section 15147 required that the Grading Plans and the Grading Plan Review, as well as any other materials required for the Grading Application, be made part of the DSEIR before it was circulated for public review. However, the Grading Plans and the Grading Plan Review were never made a part of DSEIR 566, nor were they made available for inspection or copying during the 45-day public review period.

110. The geotechnical reports and maps which were made a part of DSEIR 566 were entirely inadequate in that they either (a) discussed the rough grading for the 318 Unit Project that was earlier rejected by the Planning Commission and the Board, or (b) deferred any detailed analysis of the 705-unit Project until after FSEIR 566 had been certified.

111. This failure by Respondents to comply with the technical detail provisions of the CEQA Guidelines has, *inter alia*, unlawfully deprived the public and other interested public agencies of the right and opportunity to properly assess and comment on the impacts associated with the Grading Application as well as the mitigation measures proposed to reduce those impacts.

D. Failure To Amend And Recirculate DSEIR 566 After Releasing Significant New Information Regarding The Grading Application.

112. Respondents further failed to proceed in the manner required by law and abused their discretion by failing to amend and recirculate DSEIR 566 following the release of significant new information regarding the rough grading of the Property.

113. Public review and comment is one of the most fundamental and important aspects of the CEQA review process. Both CEQA and the case law interpreting it have recognized that public review and comment is the strongest assurance of the adequacy of an EIR. For that very reason, CEQA section 21092.1 and CEQA Guidelines section 15088.5 require that if significant new information becomes available before an EIR has been certified, the EIR must be recirculated to allow the public sufficient time to review and comment on that new information. If significant new information becomes available after certification, CEQA and the Guidelines require the preparation of a new, subsequent EIR so that the public will have the opportunity to review and comment on that information.

114. In this case, following the close of the 45-day public review period and the Respondents' release of the Response to Comments for DSEIR 566, Respondents made the Grading Plans, Grading Plan Review, and various other reports and information relating to the rough grading of the Property available for public review. Although these materials still failed to provide important design details regarding the rough grading of the Project, they clearly

constituted significant new information because they supplied substantial additional data which was sorely lacking from the DSEIR when it was circulated for public review. However, in clear violation of, *inter alia*, sections 21092.1 and 15088.5, Respondents refused to (a) amend the DSEIR to incorporate and analyze this new data and (b) recirculate the DSEIR for public review and comment on this significant new information.

115. Respondents have run afoul of CEQA's policies and requirements regarding public participation in the review process. By releasing the Grading Plans and the Grading Plan Review -- each of which clearly contained significant new information -- at the eleventh hour before certifying FSEIR 566, Respondents deprived the public of their right to review and comment on such materials, and shirked their responsibility to provide a reasoned analysis in response to any public comments concerning them.

E. Failure To Certify FSEIR 566 And Adopt The Findings/Considerations In Conjunction With Deciding Whether To Approve The Grading Application.

116. Respondents further failed to proceed in the manner required by law and abused their discretion by allegedly certifying FSEIR 566 pursuant to a special CEQA review process which, *inter alia*, unlawfully separated the certification of FSEIR 566 from the approval, modification, or disapproval of the discretionary project, i.e., the Grading Application, for which the FSEIR was originally prepared.

117. CEQA and the CEQA Guidelines do not apply, and do not require the preparation of an EIR, unless there is some form of discretionary project approval which is being considered by a public agency. (*See, e.g.*, CEQA Guidelines §§15002(i), 15357.) The certification of an EIR, by itself, is not a "project" under CEQA; rather, an EIR is merely an informational document that is to be considered by the public agency at the time that it approves, modifies, or disapproves whatever discretionary project is before it.

118. In this case, since FSEIR 566 was expressly prepared to evaluate the environmental impacts of the Grading Application, Respondents could not legally certify the FSEIR without simultaneously reviewing the Grading Application for approval, disapproval, or modification under section 15002(h) of the CEQA Guidelines. Because Respondents

purported to certify FSEIR 566 without considering, or taking any action on, the Grading Application, they failed to proceed in the manner required by law and abused their discretion.

F. Failure To Adequately Address All Environmental Impacts Of The Project.

119. Respondents further failed to proceed in the manner required by law and abused their discretion by failing to adequately identify and address all significant environmental impacts associated with the rough grading of the Property as required by, *inter alia*, section 15126 of the CEQA Guidelines.

120. Specifically, before approving and certifying FSEIR 566, Respondents were required, *inter alia*, to clearly identify and describe all direct and indirect significant effects of the Project on the environment, giving due consideration to both the short-term and long-term effects. Respondents failed to meet their obligations in this regard with respect to, *inter alia*, the following matters:

(1) Soils and Geology

121. FSEIR 566 fails to identify and discuss each of the numerous geotechnical impacts that will occur as a result of the rough grading of the Property's hilly terrain. The discussion of the geotechnical impacts that is set forth in the FSEIR is woefully inadequate because it provides nothing more than a cursory overview of the Property's unstable soils conditions which may lead to massive landsliding and slope failures when deep excavations are made as part of the rough grading operations to take place at the site. Rather than fully identifying and discussing the critical issues relating to the Property's soils and geology, FSEIR 566 simply promises that a detailed analysis of these issues will be conducted at some undetermined time in the future.

122. FSEIR 566 also fails to contain a discussion regarding the impact of the rough grading on the area's groundwater. The rough grading of the Property will be greatly complicated by the perched groundwater which is present on the Property, as well as the numerous groundwater tables that will be exposed during the vast amount of remedial grading to be performed in an effort to stabilize the Property's unstable slopes. These conditions will require extensive dewatering activities both during and after the rough grading is completed.

123. FSEIR 566 fails to adequately discuss the impact these dewatering activity will have on the numerous water wells that are located on adjacent properties and which rely on the groundwater tables for their very existence. Although there is a substantial likelihood that the dewatering activities will cause these wells to permanently dry up, FSEIR 566 contains no discussion of any such impacts. Moreover, there is no discussion of the effect the rough grading will have on the quality or composition of the groundwater throughout the area or the impact on the streams and waterways into which the dewatering activities will redirect the groundwater.

124. Finally, FSEIR 566 fails to adequately discuss the impact that the rough grading process will have on the stability of the surrounding properties. Many of the slopes on the Property support the slopes on the surrounding properties, and vice versa. FSEIR 566 simply states in a conclusory fashion that there will be no impact on the stability of the surrounding slopes once rough grading is *completed*. FSEIR 566 completely avoids, however, any discussion of how the slope stability of neighboring properties will be impacted *during* the extensive rough grading process.

(2) Water/Hydrology

125. FSEIR 566 also fails to adequately and accurately assess the impacts the rough grading will have upon the hydrology and drainage for the Property and surrounding area.

126. As described above, FSEIR 566 is almost completely devoid of any discussion regarding the impacts the rough grading will have on the area's groundwater. In actuality, these impacts are significant and numerous and should have been addressed in detail.

127. Additionally, FSEIR 566 fails to analyze the Property's drainage after the rough grading has been completed and 705 units of manufactured housing have been constructed thereon. There is no discussion regarding whether the improvements to the County storm drain system that have been proposed will be sufficient to handle the run-off from the Project and there is an inadequate discussion regarding the impact of such run-off in general.

128. Finally, the hydrology report which is included in FSEIR 566 appears to be for the much smaller 318 Unit Project that was previously proposed and rejected for the Property, rather than the 705 unit Project which is the subject of FSEIR 566.

(3) Transportation/Circulation

129. The analysis in FSEIR 566 of the Project's traffic impacts is inadequate because it is limited in its geographic scope and fails to address the adequacy of the parking for the Project.

130. The traffic section of FSEIR 566 unfairly limits its review of the Project's impact on the area's intersections to those intersections which are north of the intersection of El Toro Road and Santa Margarita Parkway. No explanation is given for this limitation and no discussion is provided regarding the Project's impact on the intersections along El Toro Road between Interstate 5 and Santa Margarita Parkway, or the impacts on the heavily used Interstate 5.

131. Moreover, FSEIR 566 fails to address the sufficiency of the parking which is provided for the 705 units of manufactured housing to be constructed on the Property and the adequacy of the access to the Project.

(4) Air Quality

132. FSEIR 566 also fails to contain an adequate discussion of the impacts of the rough grading as well as the Project itself on the air quality for the area. Apparently, in considering the impact of the traffic and vehicle trips from the Project on the area's air quality, FSEIR 566 utilizes the calculations that were performed as part of the previously proposed, and rejected, 318 Unit Project rather than the much larger 705-unit Project. Additionally, FSEIR 566 does not adequately address the impacts that the actual process of grading the Property and constructing the 705 units will have on the area's air quality.

(5) Biological Resources

133. FSEIR 566 is also deficient because it does not adequately describe the biological resources of the Property and surrounding area, and describes and analyzes the impacts of the Project in only a superficial manner. Moreover, FSEIR 566 completely or

partially ignores at least eight requested information items that the U.S. Fish & Wildlife Service and the California Department of Fish and Game requested in their response to the Notice of Preparation for DSEIR 566.

134. Many of the wildlife species that exist on the Property are not adequately identified and considered in FSEIR 566. The wildlife species for which analysis is lacking include, but are not limited to, the following: (1) Riverside fairy shrimp, a federally endangered species, (2) California gnatcatcher, a federally threatened species, (3) Quino checkerspot butterfly, a federally endangered species, (4) western spadefoot toad, a California species of concern, (5) cactus wren, a federal and California sensitive species, (6) cladocerans, (7) copepods, (8) seed shrimp, (9) clam shrimp, and (10) pacific treefrog.

135. Moreover, Respondents improperly certified FSEIR 566 without surveys having been conducted pursuant to the U.S. Fish & Wildlife Service protocol to determine the size of the California gnatcatcher and Quino checkerspot butterfly populations which exist on the Property. As with many of the previously discussed impacts of the rough grading, the FSEIR improperly defers these studies until some indeterminate future date.

136. The FSEIR's discussion regarding the Property's biological resources is also deficient because it fails to adequately identify and discuss the many habitats and plant species which exist on the Property, such as the ephemeral ponds, wetlands, coastal sage scrub, mulefat scrub, coast live oak, southern sycamore riparian woodlands, Catalina mariposa lily, and intermediate mariposa lily. For example, FSEIR 566 does not adequately discuss the origins and importance of the ephemeral ponds which exist on the Property, and there is no discussion of the Project's impacts on the surrounding ephemeral ponds which are not within the Project's footprint. FSEIR 566 also lacks a sufficient discussion of the invertebrates and other species that may be found in these ponds or wetlands.

137. Finally, FSEIR 566 fails to adequately address the Project's impacts on the integrity of the wildlife corridors which currently exist on the Property, as well as the species which use the corridors, including, but not limited to, the mountain lion, mule deer, and coyote. These corridors currently link the Central and Southern Natural Community

Conservation Planning Subregional preserves, but their potential destruction or substantial modification is not sufficiently addressed.

(6) Archeological/Cultural Resources

138. FSEIR 566 is also deficient because it fails to adequately identify the potential array of archeological and cultural resources which currently exist on the Property -- such as, for example, possible Native American burial sites -- and to fully address the significant impacts that the rough grading will have on those resources. CEQA section 21083.2 required Respondents to identify the archaeological resources on the Property and to analyze the impacts of the rough grading on such resources. Despite this requirement, several of the "mitigation measures" proposed in FSEIR 566 stated that a certified archaeologist would be retained to survey the Property for cultural resources *after* FSEIR 566 has been certified. Again, deferring analysis in this manner is not permitted by CEQA or the CEQA Guidelines.

(7) Public Services

139. While acknowledging that the area's schools are already overcrowded and that the Project will add approximately 399 additional students to these schools, FSEIR 566 fails to adequately discuss the impact the Project will have upon the school system for the area.

G. Failure To Provide Legally Adequate Mitigation Measures And To Adopt An Adequate Mitigation Monitoring Program.

140. Respondents further failed to proceed in the manner required by law and abused their discretion by (a) failing to identify and adopt feasible mitigation measures for the numerous and significant environmental impacts of the Project, including, but not limited to, the impacts discussed herein, (b) adopting improper mitigation measures which were Impermissibly vague and which deferred analysis until after certification of the FSEIR, and (c) adopting an inadequate Mitigation Monitoring Program.

141. Guidelines section 15126 requires an EIR to identify and fully discuss all measures which are available to mitigate each and every significant environmental impact of a

proposed project. A project cannot be approved as proposed if there are feasible alternatives and mitigation measures which would substantially lessen the significant environmental impacts of the proposed project, but have not been incorporated into its design. (*See, e.g.*, CEQA § 21002; CEQA Guidelines §§15021, 15041.)

142. FSEIR 566 violates these and other provisions of CEQA and the CEQA Guidelines, as well as the Federal Endangered Species Act, by unlawfully limiting the mitigation measures which it discusses, and which Respondents adopted, to only those measures which would not result in, or require physical change to, the design of the Project as depicted on the Tract Map. FSEIR 566 provides no discussion of any legal or factual basis for such a limitation.

143. FSEIR 566 also violates the above provisions of CEQA and the Guidelines by failing to make any attempt to identify or discuss mitigation measures for many of the environmental impacts that will be caused by the Project, including, but not limited to, the Project's impact on the area's groundwater and its impacts on surrounding land uses, including, but not limited to, the religious uses by the Society and St. Michael's Abbey.

144. The mitigation measures which FSEIR 566 does contain, and which were adopted by Respondents, are legally inadequate because they fail to meet the standards established by CEQA and the Guidelines. Specifically, in order for a mitigation measure to be legally adequate it must be set forth in specific and detailed terms and it must be capable of (a) avoiding the impacts all together, (b) minimizing the impacts by limiting the degree or magnitude of the action and its implementation, (c) rectifying the impact by repairing, rehabilitating, or restoring the impacted environment, (d) reducing or eliminating the impact over time by preservation and maintenance operations during the life of the action, or (e) compensating for the impact by replacing or providing substitute resources or environments.

145. Many of the FSEIR's mitigation measures fail to meet these standards because they are nothing more than vague and generic promises to develop the sort of specific and detailed mitigation measures required by CEQA at some future time *after* the FSEIR has been certified. By deferring the development of the form and content of many of its mitigation

measures, FSEIR 566 deprives the public of the opportunity to review the mitigation measures to determine whether they can in fact mitigate the environmental impacts to which they are directed and meet the above standards. The mitigation measures which possess these deficiencies include, but are not limited to, the thirty-eight examples set forth in Appendix A to the comments to DSEIR 566 which St. Michael's Abbey submitted on August 21, 1997, and which are incorporated herein by reference.

146. Finally, the Mitigation Monitoring Program which Respondents adopted is also inadequate to meet the requirements of CEQA, including, but not limited to section 21081.6, because the mitigation measures set forth therein possess the same defects and deficiencies that are discussed above. Moreover, at least some of the additional mitigation measures which the Response to Comments indicated would be incorporated into the FSEIR have not been carried forward into the Mitigation Monitoring Program. For example, in response to comment SFC.2-66, the Response to Comments indicated that "five years of resource mitigation monitoring is hereby incorporated into the DEIR." However, this measure was neither incorporated into the FSEIR nor was it set forth in the Mitigation Monitoring Program.

H. Failure To Address The Cumulative Impacts Of The Project.

147. Respondents have further failed to proceed in the manner required by law and abused their discretion by failing to comply with the mandatory provisions of CEQA Guideline section 15130, which required Respondents to discuss significant cumulative impacts in FSEIR 566.

148. Specifically, CEQA Guidelines section 15130 requires an EIR to discuss the cumulative impacts of the relevant project and all past, present, and reasonably foreseeable future projects producing related or cumulative impacts, including the severity of those impacts and their likelihood of occurrence. Section 15130 also requires that this discussion of cumulative impacts include a summary of other projects anticipated in the region or area, a summary of expected environmental effects of those projects, and a reasonable analysis of the

cumulative impacts of the relevant project. The discussion of cumulative impacts must also include feasible mitigation measures.

149. Respondents did not comply with CEQA Guidelines section 15130 in that, *inter alia*, they failed to discuss the cumulative effects of the reuse of El Toro Marine Air Station as a commercial airport. In particular, FSEIR 566 is inadequate because it fails to consider the impacts of a commercial airport when conducting its analysis of the traffic, noise, and air quality impacts of the Project.

I. Failure To Consider Project Alternatives.

150. Respondents further failed to proceed in the manner required by law and abused their discretion by failing to comply with the provision of CEQA Guidelines section 15126(d), which required Respondents to describe a range of reasonable alternatives to the Project, including an alternative site for the Project, and to evaluate the comparative merits of the alternatives.

151. Respondents did not comply with CEQA Guidelines section 15126(d) in that, *inter alia*, they failed to discuss viable alternative sites for the Project or properly explain why there were no feasible alternative sites discussed.

152. Moreover, although FSEIR 566 discusses possible on-site alternatives to the Project, it nonetheless violates CEQA and the CEQA Guidelines because throughout FSEIR 566 it is erroneously stated that changes to the Project that would alter the features of the Tract Map cannot be made because Respondents are allegedly unable to deviate therefrom. Hence, without any factual or legal support, FSEIR 566 provides project alternatives, but states that none of them can be considered because they would deviate from the Tract Map.

J. Failure To Adequately Respond To Comments.

153. Respondents further failed to proceed in the manner required by law and abused their discretion by failing to comply with the mandatory provisions of CEQA section 21092.5 and CEQA Guidelines section 15088, which required that the Response to Comments provide a good faith, reasoned analysis of the issues presented by each comment. Conclusory statements unsupported by factual information are insufficient to meet this standard.

154. The Response to Comments which was prepared by Respondents failed to meet any aspect of this standard because it was not conducted in good faith and failed to provide any reasoned analysis of the comments that were submitted. Instead, Respondents simply (a) ignored comments, (b) referred the authors of the comments back to portions of the DSEIR which failed to address their concerns, or (c) stated that an analysis of the relevant issues will be conducted at some indeterminate time in the future.

155. For example, Respondents failed to respond to various legitimate concerns raised by the Society, St. Michael's Abbey, Saundra Jacobs, the U.S. Fish & Wildlife Service, and various other interested parties regarding, *inter alia*, the adequacy of the DSEIR's analysis of the geotechnical issues which exist on the Property, the Project's impacts on the Property's biological resources, and many of the other concerns regarding DSEIR 566 which are identified herein.

156. Moreover, Respondents have also refused to respond to the requests of the Society, St. Michael's Abbey, Saundra Jacobs, and other interested parties that Respondents recirculate DSEIR 566 after including the Grading Plans, Grading Plan Review and other important documents in the DSEIR.

* * *

157. As a result of Respondents' failure to comply with the requirements of CEQA and the CEQA Guidelines in approving and undertaking the actions alleged hereinabove, the Society is entitled to a peremptory writ of mandate which, *inter alia*:

(a) Directs Respondents to vacate and set aside the actions which they took on December 3, 1997, and February 24, 1998, in purporting to certify FSEIR 566; and

(b) Directs Defendants to suspend any and all Project activities which are based upon or are undertaken pursuant to the purported certification of FSEIR 566, to the extent that any such activities could result in any adverse change or alteration to the Property until the determination as to whether to

certify FSEIR 566 and to approve the Grading Application is brought into compliance with the provisions of CEQA and the CEQA Guidelines.

158. In addition, the Society is entitled to a stay pursuant to Code of Civil Procedure section 1094.5(g), or, alternatively, ancillary injunctive relief, prohibiting and enjoining Respondents and Real Parties from taking any actions in reliance upon, or pursuant to, Respondent's purported approval and certification of FSEIR 566.

FOURTH CAUSE OF ACTION

(Against All Defendants For A Writ of Mandate And Injunctive Relief Based On Violations Of CEQA And The Guidelines In Adopting Findings)

159. The Society realleges and incorporates herein by reference each and every allegation contained in paragraphs 1 through 80, inclusive, and paragraphs 82 through 85, inclusive, paragraph 90, and paragraphs 93 through 156, inclusive, as set forth above.

160. To the extent that the Board's purported action on February 24, 1998, resulted in any determination upholding or adopting the findings (collectively, the "Findings") made by the Planning Commission in certifying FSEIR 566, which the Society expressly denies, the Society seeks a preemptory writ of mandate, pursuant to Code of Civil Procedures section 1094.5, directing Respondents to vacate and set aside, *inter alia*, the unlawful actions which they have taken or may hereafter take in (a) purportedly making the Findings, or (b) authorizing any other actions in reliance on, or pursuant to, such Findings.

161. Before an EIR is certified and a project is approved, CEQA section 21081 and CEQA Guidelines section 15091 require a public agency to make certain findings regarding each environmental impact associated with the project, and CEQA section 21081.5 and CEQA Guidelines section 15091(b) require that all such findings must be based upon substantial evidence in the record. Respondents failed to proceed in the manner required by law and abused their discretion by failing to make proper findings and by failing to support the findings that were made with substantial evidence in the record.

162. Specifically, CEQA and the Guidelines required Respondents, *inter alia*, to make one of two findings for each significant environmental impact identified in FSEIR 566

and to provide an explanation of the rationale for each finding they made. The two possible findings which Respondents could have made for each significant impact were that (a) the mitigation measures or project alternatives identified in the FSEIR would reduce the impact to a level of insignificance, or (b) the impact is unavoidable because one or more specific economic, social, or other considerations make infeasible the mitigation measures or project alternatives which are identified in the FSEIR as relating to the impact in question. CEQA and the Guidelines required Respondents to make this later finding for each mitigation measure and project alternative that was identified by the FSEIR, but was not adopted by Respondents.

163. FSEIR 566 and each of the findings which Respondents made are based upon a fundamentally incorrect premise which renders Respondents' findings *per se* inadequate: i.e., that the Tract Map afforded Real Parties vested rights to develop the Project, such that Respondents were supposedly precluded from considering any mitigation measures or project alternatives which would cause the Project to deviate from the Tract Map. By arbitrarily limiting the wide array of mitigation measures and project alternatives that were available to reduce the impacts associated with the Project, Respondents necessarily adopted findings which were legally inadequate because they were based on a false premise regarding the vesting status of the Tract Map.

164. For example, paragraph 2.1 of the Findings expressly acknowledges that the Project, involving the construction of 705 units of manufactured housing, is incompatible with the adjacent wilderness regional park, St. Michael's Abbey, and the Society's Monastery. Nevertheless, the Findings state that this land use incompatibility is "unavoidable" because of "the recorded nature of the tract map."

165. In addition, the Findings are inadequate because they are conclusory, general, and not supported by substantial evidence in the record. For example, the Findings consider Alternative 3 to the Project as one which achieves all of the project objectives, yet rejects the alternative solely because the applicant for the Grading Permit had actually determined it to be economically infeasible. Respondents failed to cite to even one fact in support of this finding.

166. As a result of Respondents' failure to adopt adequate findings supported by substantial evidence as alleged hereinabove, the Society is entitled to a peremptory writ of mandate which, *inter alia*:

(a) Directs Respondents to vacate and set aside the actions which they took on December 3, 1997, and February 24, 1998, in purportedly making and adopting the Findings; and

(b) Directs Defendants to suspend any and all Project activities which are based upon or are undertaken pursuant to the purported adoption of the Findings, to the extent that any such activities could result in any adverse change or alteration to the Property until the determination as to whether to certify FSEIR 566 and to approve the Grading Application is brought into compliance with the provisions of CEQA and the CEQA Guidelines.

167. In addition, the Society is entitled to a stay pursuant to Code of Civil Procedure section 1094.5(g), or, alternatively, ancillary injunctive relief, prohibiting and enjoining Respondents and Real Parties from taking any actions in reliance upon, or pursuant to, Respondent's purported making and adoption of the Findings.

FIFTH CAUSE OF ACTION

(Against All Defendants For A Writ of Mandate And Injunctive Relief Based On Violations Of CEQA And The Guidelines In Adopting A Statement Of Overriding Considerations)

168. The Society realleges and incorporates herein by reference each and every allegation contained in paragraphs 1 through 80, inclusive, and paragraphs 82 through 85, inclusive, paragraph 90, paragraphs 93 through 156, inclusive, and paragraphs 161 through 165, inclusive, as set forth above.

169. To the extent that the Board's purported action on February 24, 1998, resulted in any determination upholding the Planning Commission's adoption of a statement of overriding considerations (hereinafter referred to as the "Overriding Considerations"), which the Society expressly denies, the Society seeks a preemptory writ of mandate, pursuant to

Code of Civil Procedures section 1094.5, directing Respondents to vacate and set aside, *inter alia*, the unlawful actions which they have taken or may hereafter take in (a) purportedly adopting the Overriding Considerations, or (b) authorizing any other actions in reliance on, or pursuant to, such Overriding Considerations.

170. Section 15093 of the CEQA Guidelines provides that the body determining whether to approve the project which is the subject of CEQA review must balance the benefits of the proposed project against its unavoidable environmental risks. If the decision-making body determines that the benefits of a proposed project outweigh the unavoidable adverse environmental effects, the body approving the project must state in writing the specific reasons to support its approval of the project based on the final EIR and/or other information in the record. Such writing, called a statement of overriding considerations, is to be included in the record of the project approval.

171. Respondents failed to proceed in the manner required by law and abused their discretion by adopting the Overriding Considerations--justifying their decision to approve the "project"--without (a) placing project approval on any agenda, (b) considering whether to approve the Project, or (c) voting on project approval or denial. Accordingly, the adoption of the Overriding Considerations was meaningless and remains a nullity.

172. Respondents also failed to proceed in the manner required by law by including, as an overriding consideration the erroneous assumption that the Tract Map had acquired a "vesting status" which supposedly prevented the Planning Commission or the Board from exercising their statutory authority vested in them under the Specific Plan and under sections 15002(h) and 15141 of the CEQA Guidelines to change or modify the Project in order to mitigate the environmental impacts thereof. Specifically, paragraph 5.2.6 of the Overriding Considerations erroneously states that the Tract Map has a "vesting" status which "limits the ability of the applicant/lead agency to deviate from the physical design characteristics of the project to mitigate identified unavoidable adverse effects."

173. Moreover, the Overriding Considerations are inadequate under CEQA and the CEQA Guidelines because there is insufficient evidence in the record to establish that the

considerations upon which Respondents are relying do, in fact, override the numerous significant impacts of the Project. The principal Overriding Considerations which Respondents adopted were that (1) two-thirds of the 705 housing units to be constructed on the Property are to be sold as affordable housing units, and (2) the Project will stabilize existing unstable geotechnical conditions on the Property.

174. However, FSEIR 566 fails to contain any analysis or information that demonstrates that these overriding considerations will actually occur when the Project is completed. FSEIR 566 contains neither a financial analysis that demonstrates that two-thirds of the 705 housing units can be sold as affordable housing units without the developer losing money, nor does FSEIR 566 contain sufficient information to evaluate whether the proposed remedial grading will, in fact, stabilize the unstable geotechnical conditions which exist on the Property.

175. In light of the information that is available, it appears Respondents have made an unwarranted leap of faith because the achievement of these two overriding considerations is highly unlikely given the scope and severity of the geotechnical conditions which exist on the Property and the exorbitantly high costs of grading the Property due to those conditions.

176. As a result of the actions of Respondents in adopting the Overriding Considerations alleged above, the Society is entitled to a peremptory writ of mandate which, *inter alia*:

(a) Directs Respondents to vacate and set aside the actions which they took on December 3, 1997, and February 24, 1998, purportedly adopting the Overriding Considerations; and

(b) Directs Defendants to suspend any and all Project activities which are based upon or are undertaken pursuant to the purported adoption of the Overriding Considerations, to the extent that any such activities could result in any adverse change or alteration to the Property until the determination as to

whether to certify FSEIR 566 and to approve the Grading Application is brought into compliance with the provisions of CEQA and the CEQA Guidelines.

177. In addition, the Society is entitled to a stay pursuant to Code of Civil Procedure section 1094.5(g), or, alternatively, ancillary injunctive relief prohibiting and enjoining Respondents and Real Parties from taking any actions in reliance upon, or pursuant to, Respondent's Statement of Overriding Concerns.

SIXTH CAUSE OF ACTION

(Against All Defendants For Declaratory Relief Re Lack Of Grounds For Continuing To Exempt Property From The Specific Plan)

178. The Society realleges and incorporates herein by reference each and every allegation contained in paragraphs 1 through 80, inclusive, and paragraphs 82 through 85, inclusive, paragraph 90, paragraphs 93 through 156, inclusive, paragraphs 161 through 165, inclusive, and paragraphs 170 through 175, inclusive, as set forth above.

179. An actual controversy has arisen and now exists between the Society and the Defendants regarding whether any legal basis exists for continuing to exempt the Property from the regulations and guidelines of the Specific Plan in that the Society contends, and the Defendants deny, *inter alia*, that:

(a) In adopting the Specific Plan, the Board expressly found that the Tract Map and the 1984 Zoning Ordinance were not consistent with the goals and objectives of the Specific Plan;

(b) The Board nonetheless exempted the Property from the regulations and guidelines of the Specific Plan, as long as the Property was developed in strict accordance with the Tract Map, because the Board believed that it could not take any action that would affect the value of the Property due to the fact that the then-current owner of the Property was in bankruptcy and a bankruptcy stay was in effect at the time the Board adopted the Specific Plan; and

(c) The grounds which supported the exemption when the Specific Plan was adopted in 1991 no longer exist because Real Parties, who are the current owners of the Property, are not in bankruptcy and there is no bankruptcy stay which prevents Respondents from changing the zoning and other land use regulations which currently apply to the Property.

180. In light of the circumstances alleged hereinabove, a judicial declaration is necessary and appropriate to resolve the above controversies between and among the Society and the Defendants, and to allow Respondents to pursue the land use goals and objectives of the Specific Plan. Respondents are no longer subject to any bankruptcy stay relating to the Property and thus are free to require the Specific Plan to be amended to impose its regulations and guidelines on any future development at the Property, prior to or in conjunction with the review and certification of any environmental documentation for the Grading Application.

WHEREFORE, the Society prays for relief and judgment as follows:

ON THE FIRST CAUSE OF ACTION

1. For declaratory and injunctive relief as prayed for hereinabove;

ON THE SECOND CAUSE OF ACTION

2. For declaratory relief as prayed for hereinabove;

ON THE THIRD CAUSE OF ACTION

3. For a peremptory writ of mandate pursuant to Code of Civil Procedure section 1094.5 as requested hereinabove, and for a stay, or, alternatively, ancillary injunctive relief, as prayed for hereinabove;

ON THE FOURTH CAUSE OF ACTION

4. For a peremptory writ of mandate pursuant to Code of Civil Procedure section 1094.5 as requested hereinabove, and for a stay, or, alternatively, ancillary injunctive relief, as prayed for hereinabove;

ON THE FIFTH CAUSE OF ACTION

5. For a peremptory writ of mandate pursuant to Code of Civil Procedure section 1094.5 as requested hereinabove, and for a stay, or, alternatively, ancillary injunctive relief, as prayed for hereinabove;

ON THE SIXTH CAUSE OF ACTION

6. For declaratory relief as prayed for hereinabove;

ON ALL CAUSES OF ACTION

7. For the Society's attorneys' fees pursuant to, *inter alia*, Code of Civil Procedure section 1021.5;

8. For the Society's cost of suit; and

9. For such other and further relief as the Court may deem just and proper.

INDEX OF ADMINISTRATIVE RECORD IN SUPPORT OF PETITIONERS' MOTIONS FOR SUMMARY ADJUDICATION OF ISSUES

Vedanta Society of Southern California v. County of Orange, et al.

(Consolidated Case No. 791309)

VOLUME 4 OF 5

(Tab Nos. 15 - 21; Pages 2286 - 2831)

15. October 7, 1998 letter from Edmond M. Connor, Esq., Connor, Culver, Blake & Griffin LLP, to Orange County Planning Commission (and the exhibits thereto);

16. October 13, 1998 Agenda Item Transmittal from Thomas B. Mathews, Director, Planning and Development Services Department, to Board of Supervisors re Zone Change 98-3 and Area Plan 98-2;

Attachment A: Appeal letter, dated October 8, 1998, from H. Mike McKnight, TPG Management, Inc., to Thomas B. Mathews, Director, County of Orange Planning and Development Services Department;

Attachment B: Regional Map;

Attachment C: Chronology of Events;

Attachment D: Zone Change 98-3 (Draft Ordinance);

Attachment E: Saddleback Meadows Contingency Plan – 299 lots – Area Plan 98-2;

Attachment F: Analysis of Planning Issues;

Attachment G: Existing Bridlewood Residential District Regulations;

Attachment H: Manufactured Slopes Exhibit (omitted by County);

Attachment I: Planning Commission Minutes, Resolutions, Staff Reports, and Correspondence:

1. Planning Commission Minutes from October 7, 1998;

2. Planning Commission Minutes from September 22, 1998;

3. Planning Commission Minutes from August 25, 1998;

4. Resolution No. 98-14, Resolution of the Planning Commission of Orange County, California re Zone Change 98-3 and Area Plan 98-2;

5. October 7, 1998 P&DS/Current Planning Services Division Report to Orange County Planning Commission re Zone Change 98-3/Area Plan 98-2 (aka Contingency Plan) [attachments omitted by County but found elsewhere under this tab];

6. October 7, 1998 P&DS/Environmental & Project Planning Services Division Report to Orange County Planning Commission re Addendum PA980103 to Final EIR 566 Prepared for the Saddleback Meadows Contingency Plan;

Attachment: "Saddleback Meadows Response to Comments Addendum PA980103 Certified Final Subsequent EIR 566" (all other attachments omitted by County but found elsewhere under this tab);

7. August 25, 1998 P&DS/Environmental & Project Planning Services Division Report to the Orange County Planning Commission re Addendum PA980103 to Final EIR 566 Prepared for the Saddleback Meadows Contingency Plan (attachments omitted by County but found elsewhere under this tab);

8. August 25, 1998 P&DS/Current Planning Services Division Report to the Orange County Planning Commission re Zone Change 98-3/Area Plan 98-2 (aka Contingency Plan) [attachments omitted by County but found elsewhere under this tab];

9. October 7, 1998 memorandum from Ray Chandos, Secretary/Treasurer, Rural Canyons Conservation Fund, to Orange County Planning Commission;

10. October 7, 1998 letter from Edmond M. Connor, Esq., Connor, Culver, Blake & Griffin LLP, to Orange County Planning Commission (exhibits omitted by County but found in this Limited Administrative Record at tab #15);

11. September 30, 1998 letter from William D. Ross, Esq., Law Offices of William D. Ross, to The Honorable Chuck McBurney, Chairman, and Members of the Orange County Planning Commission;

12. September 24, 1998 letter from Edmond M. Connor, Esq., Connor, Culver, Blake & Griffin LLP, to William D. Ross, Esq., Law Offices of William D. Ross (exhibits omitted by County);

13. September 23, 1998 letter from Edmond M. Connor, Esq., Connor, Culver, Blake & Griffin LLP, to Thomas B. Mathews, Director, Orange County Planning & Development Services Department (exhibits omitted by County);

14. September 2, 1998 letter from Edmond M. Connor, Esq., Connor, Culver, Blake & Griffin LLP, to Raymond H.C. Brantley, Environmental & Project Planning Services Division, County of Orange Planning & Development Services Department (certain exhibits omitted by County);

Attachment J: October 7, 1998 memorandum from Planning Commissioner Tom Moody to Orange County Planning Commission;

Attachment K: Draft Board of Supervisors Resolution re Area Plan 98-2;

Attachment L: Analysis of Environmental/CEQA Issues;

Attachment M: Draft Board of Supervisors Resolution re Addendum PA980103;

Attachment N: Addendum PA980103 to Certified Final Subsequent EIR 566 (omitted by County but found in this Limited Administrative Record at tab #10);

17. October 21, 1998 Preliminary Tentative Tract Map Report re Tentative Tract Map No. 15230 (and attachments thereto);

18. October 21, 1998 Preliminary Tentative Tract Map Report re Tentative Tract Map No. 15784; (and attachments thereto);

19. Notice of public meeting to be held by the Orange County Subdivision Committee on October 21, 1998 re Tentative Tract Map No. 15230;

20. Notice of public meeting to be held by the Orange County Subdivision Committee on October 21, 1998 re Tentative Tract Map No. 15784;

21. October 21, 1998 letter from Edmond M. Connor, Esq. Connor, Culver, Blake & Griffin LLP, to Pat Stanton, Chair, Subdivision Committee, County of Orange (and exhibits thereto);

Re: *Proposed Zone Change 98-3 and Area Plan 98-2/EIR*
Saddleback Meadows: 299-Unit Project

Dear Members of the Planning Commission:

As a supplement to my letters of August 25, September 2, and September 23, 1998, and without waiving any objections which have been stated to date on behalf of my clients, the Norbertine Fathers of Orange, the Saddleback Meadows Land Conservancy LLC, and the Vedanta Society of Southern California, I submit the following additional arguments in opposition to California Quartet's application for approval of Zone Change 98-3 ("ZC 98-3") and Area Plan 98-2 ("AP 98-2") for the development of a 299-unit, single-family detached residential housing project (the "299-Unit Project" or the "Project") at the Saddleback Meadows property (the "Property"):

A. Coastal California Gnatcatchers Have Recently Been Found on a Portion of The Property, Thereby Rendering the Developer's Prior Gnatcatcher Surveys Outdated and Invalid. A Formal Protocol Survey of the Entire Property Should Now Be Conducted as Part of a New or Subsequent EIR to Properly Assess the Impact of the Project on This Endangered Species.

The CEQA documentation relating to the presence of coastal California gnatcatchers on the Property is fatally flawed and must be corrected and recirculated for public review and comment -- particularly comments from the California Department of Fish & Game and the U.S. Fish & Wildlife Service.

determined that on-site coastal sage scrub habitat is *not* occupied by coastal California gnatcatchers . . . ." (Emphasis Added.) Likewise, on pages 4-130 and 4-139 of FSEIR 566, similar statements are made to the effect that no coastal California gnatcatchers were observed in connection with the surveys which California Quartet's consultants conducted four and five years ago in 1993 and 1994. However, a brief informal survey of but a small portion of the Property by my firm's consultant, Royce B. Riggan, has demonstrated that the prior gnatcatcher surveys are clearly outdated and incorrect because coastal California gnatcatchers *do* presently occupy the coastal sage scrub habitat at the Property.

At the August 25 session of the Planning Commission's hearing on ZC 98-3 and AP 98-2, my firm's consultant, Warren Singleton, pointed out that, in the southeast corner of the Property, the proposed rough grading operations for the 299-Unit Project would decimate a great many more acres of coastal sage scrub habitat than would otherwise be destroyed as part of the rough grading for the 705-unit manufactured housing/mobile home project (the "705-Unit Project") which was the subject of FSEIR 566. Mr. Singleton graphically demonstrated to the Planning Commission that, instead of reducing adverse environmental effects as claimed in the Addendum, the 299-Unit Project would actually have far worse impacts on (1) the biologically sensitive habitats and species found in the lush canyons located in the southeast corner of the Property because rough grading operations would be far more extensive at that location than under the 705-Unit Project; and (2) the Ramakrishna Monastery because a great many more residential units would be built much closer to the Monastery than would have occurred under the 705-Unit Project.

Following the August 25 Planning Commission hearing, I dispatched Royce Riggan -- who holds Federal Permit PRT-780195 and thus is officially licensed to conduct gnatcatcher surveys -- to visit the Property and determine whether the new areas to be impacted by the 299-Unit Project in the southeastern corner of the Property were occupied by coastal California gnatcatchers. While on a tour of that portion of the Property which was conducted by California Quartet's consultants in July 1998, I had noted how extensive the coastal sage scrub habitat was and how verdant and secluded the adjacent canyons were, and I could not believe that FSEIR 566 and the Addendum were correct in stating that *no* coastal California gnatcatchers were to be found in those locations.

I was not surprised, therefore, when, on September 23, 1998, after only two and a half hours at the site, Mr. Riggan, and his associate, Lisa Seneca observed two coastal California gnatcatchers: a juvenile of the year and an adult male. A copy of the California Native Species Field Survey Form confirming the two gnatcatcher sightings, which Mr. Riggan dutifully submitted to the Natural Diversity Database maintained by the California Department of Fish & Game, is attached as Exhibit "A" hereto. Based on the two sightings documented by Mr. Riggan and his associate, there is no longer any justification for the County's highly questionable actions

in allowing California Quartet to delay completing the May 1997 gnatcatcher survey of the Property in accordance with the USFWS presence/absence protocol. Both FSEIR 566 and the Addendum *concede* that a formal protocol gnatcatcher survey of the Project has not been conducted in recent years, and this is nothing short of unconscionable since the County is now considering whether to allow California Quartet to *decimate* virtually *all* of the coastal sage scrub habitat on the Property without even knowing the number of endangered birds that might be affected.

In addition to a formal protocol survey being undertaken, a new or subsequent EIR must now be prepared to fully and properly assess the impacts on this federally-listed endangered species, the coastal California gnatcatcher. Indeed, as underscored in the case cited in the letter to the Planning Commission from California Quartet's attorney, dated September 30, 1998, *Fund for Environmental Defense v. County of Orange* (1998) 204 Cal.App.3d 1538, 1550, CEQA section 21166 requires the preparation of a subsequent EIR when a "new protected or rare habitat or species of flora or fauna" is discovered after an EIR has been prepared. As explained in the *Fund for Environmental Defense* case, such a discovery constitutes a type of "change in circumstances" and "new information" under section 21166 which mandates the preparation of a subsequent EIR.

Of course, my clients continue to maintain that ZC 98-3 and AP 98-2 constitute a *new* project which is not the *same* as the 705-Unit Project manufactured housing/mobile home project authorized under Tract Map 10692. Although County staff now maintains that the 299-Unit Project and the 207-Unit Project are actually the *same* project for purposes of CEQA compliance, the County took an entirely different position two years ago when it stated on page 3-1 of Draft EIR No. 561 that "the proposed project [i.e., the 318-unit project] represents the *complete revision and redesign* of previously approved and recorded Tract Map 10692." (Emphasis added.) If, as my clients contend, the 299-Unit Project is *not* the same as the 705-Unit Project, then a new EIR must be prepared, particularly in light of the mandatory finding of significance which must now be made under CEQA Guidelines section 15065(a) because of the potential impact which the 299-Unit Project will have on "an endangered, rare, or threatened species."

B. <u>The Drainage and Grading Impacts Associated With the 299-Unit Project Should Be Addressed in a New or Subsequent EIR.</u>

As explained in great detail in the letter prepared by our firm's consultant, Warren Singleton, dated October 7, 1998, a copy of which is attached as Exhibit "B" hereto, the critically important drainage impacts of the 299-Unit Project have essentially been ignored in the CEQA documentation prepared by the County for ZC 98-3 and AP 98-2. Nowhere in FSEIR 566 or in the Addendum is a concept drainage plan for the 299-Unit Project to be found. Incredibly,

County staff is asking the Planning Commission to approve the development of 299 homes without any information being provided to the Commission or to the public as to exactly *where* storm, irrigation, and urban runoff from these hundreds of homes will be discharged on the Property.

The Addendum admits that such runoff will be dumped into natural drainage courses on the site which is a *radical* change from the stormdrain system proposed for the 705-Unit Project. However, although this major project change will be allowed to occur and huge volumes of water will be dumped on site, no document has been provided or referenced in the Addendum which would indicate the locations of the respective storm drain outlets to be constructed on the Property.

One can only *speculate*, based on the concept drainage plan for the 318-Unit Project described in Draft EIR 561 that, on a *daily* basis, a huge increase in runoff will be discharged into the geologically-unstable canyon areas adjacent to St. Michael's Abbey and the Ramakrishna Monastery. This is a frightening prospect because no analysis has been undertaken as to whether the introduction of the steady flow of water in these unstable canyon areas will create new geotechnical hazards by activating the landslide conditions which are clearly known to exist in the very locations where the water will be discharged.

Obviously, the major change in the stormdrain system for the 299-Unit Project necessitates the preparation of a new or subsequent EIR to address what has always been one of the most important concerns on the part of the Abbey and the Monastery, i.e., the potential geotechnical hazards created by the 299-Unit Project which could seriously undermine the stability of their respective facilities -- which are already suffering the effects of soils movement. To date, the CEQA documentation which has been prepared for the 299-Unit Project has simply ignored the very serious impacts which will be caused when a constant flow of water is added to areas on the Property which are known to be seriously unstable and prone to landsliding. This deficiency should be corrected and a new document should be circulated for public review and comment.

C. <u>The "44-178 Alternative" Should Be Analyzed in A New Or Subsequent EIR.</u>

In my September 2 letter to the County, I submitted plans relating to three different project alternatives, the 65-Unit Alternative, the 120-Unit Alternative, and the 127-Unit Alternative. Strangely, in what can only be described in a *Twilight Zone* statement, County staff has taken the position that the three alternatives have *not* been "submitted" for their review and thus they are free to overlook them for purposes of CEQA compliance. This appears to be a

rather convenient way for County staff to avoid *ever* having to address any reasonable project alternatives proposed by members of the public.

Undaunted by the strange tactics being employed by County staff, I will venture to suggest another project alternative that should be analyzed in a new or subsequent EIR *before* the Planning Commission takes any further action on ZC 98-3 and AP 98-2. Attached as Exhibit "C" hereto is an 11x17" plan showing the 44-acre portion of the Property which has been outlined in orange. This plan represents what I will refer to as the "44/178 Alternative," and it represents a project alternative which would allow a 44-acre parcel of the Property to be developed with residential uses, with the balance of the Property, i.e., 178 acres, being dedicated by the developer free of charge to the County to be preserved as permanent, undisturbed, undeveloped, natural open space. The number of units to be developed within the 44-acre parcel could vary depending on the desire of the developer and could include a mix of condominium units, assisted living facilities, single-family detached homes, etc.

The reason that it is so important to analyze the 44/178 Alternative is because the 44-acre development parcel would be situated on what is perceived to be the most "stable" soil at the Property, relatively speaking, and, if development were confined within that 44-acre parcel, very few sensitive habitats or species on the Property would be adversely impacted. In addition, such an Alternative would facilitate approval of the Southern Subregion NCCP because it would provide the wildlife corridor contemplated by the NCCP. As stated in the August 11 letter which was sent to the Board of Supervisors by the California Department of Fish & Game and the U.S. Fish & Wildlife Service, the wildlife agencies are interested in analyzing the 44/178 Alternative because of the many environmental benefits it affords. Accordingly, this Alternative should be studied in detail in a new or subsequent EIR before ZC 98-3 and AP 98-2 are approved by the Planning Commission.

D. <u>The Planning Commission Is Unlawfully Proceeding to Take Final Action on AP 98-2 Without Affording the Foothill/Trabuco Specific Plan Review Board an Opportunity to Make Its Recommendations on the Project</u>.

As I stated in my September 23 letter to Tom Mathews, the Planning Commission will violate both the Foothill/Trabuco Specific Plan and the Orange County Zoning Code if it proceeds to take any further action on the discretionary permit application relating to AP 98-2 *before* the Foothill/Trabuco Specific Plan Review Board (the "Review Board") has been afforded at least twenty-one (21) days within which to consider the merits of AP 98-2 and to report its recommendations thereon to the Planning Commission. Clearly, the Planning Commission is the "approving authority" with respect to *all* applications for Area Plans submitted to the County. Indeed, if no appeal is taken from the Planning Commission's approval of any given Area Plan, that approval becomes *final*.

Moreover, the Review Board is supposed to make its recommendations to the Planning Commission, *not* to the Board of Supervisors. As the County noted at page 4-11 of Draft EIR 561, "[d]iscretionary actions within the Specific Plan area are reviewed by the Foothill-Trabuco Specific Plan Review Board, who function as an advisory body to the *County Planning Commission*." (Emphasis added.) Aside from common courtesy, the Planning Commission is required by law to refrain from even *considering* California Quartet's application for approval of AP 98-2 until after the Review Board has been given at least 21 days to forward its recommendations on whether that Area Plan should be approved or denied.

Since the Review Board is charged with implementing the Foothill/Trabuco Specific Plan, it would seem only logical, not to mention lawful, to allow the Review Board adequate time within which to consider the impacts that will flow from *exempting* the 299-Unit Project from complying with the provisions of the Specific Plan. The CEQA documentation relating to ZC 98-3 and AP 98-2 is obviously deficient in that it does not address these impacts.

However, since it appears inevitable that the Planning Commission will refuse to honor the request of the Review Board for at least a two-week continuance of the Planning Commission's October 7 hearing, my clients must now face the sad fact that this matter appears headed for litigation. Accordingly, please be advised that, in addition to the objections raised in letters previously submitted by my firm and its consultants, my clients hereby incorporate and restate in opposition to ZC 98-3 and AP 98-2 each and every procedural and substantive contention, objection, comment, or argument raised in the letters which are listed in Exhibit "D" attached hereto. In addition, my clients also incorporate and restate each of the objections raised, or comments or arguments made, by any of their respective attorneys, representatives, or consultants at the public hearings or meetings held by the Planning Commission or the Board of Supervisors in connection with the review of FSEIR 566, including, but not limited to, hearings and meetings held on October 22, November 25, and December 3, 1997, and on February 24, 1998.

Very truly yours,

Edmond M. Connor

Habitat Description: (Plant communities, dominants, associates, substrate/soils, aspect/slope)

The southeastern corner of the Saddleback Meadows property is a well developed Venturan Sage Scrub with high shrub species diversity. Elements of a mixed chaparral are found on steeper north facing slopes. The property is a critical wildlife corridor between the south Orange NCCP area and the existing NCCP preserves to the west and northwest. Other areas of Coastal Sage Scrub occur on adjacent public lands to the south.

Other rare spp? Federally listed species of Anostraca are known to occur in natural and artificial ponds found on the property. Coastal Cactus Wrens are resident at several points within the property.

Site Information: Current/surrounding land use: The property is currently used for extensive cattle grazing. Properties to the north are generally vacant, properties to the south are sparsely developed as are properties to the east.

Visible disturbances, possible threats: The site is threatened by the current cattle grazing activity and by a pending land development plan. The latter would convert the site to urban level residential.

Overall site quality: [✓]Excellent [ ] Good [ ] Fair [ ] Poor Comments: 2293
The habitats in the southeastern corner of the site are (despite cattle grazing) in excellent condition.

Re: Saddleback Meadows Property: Drainage and Grading Impacts of Proposed 299-Unit Project; Zone Change 98-3 and Area Plan 98-2

Dear Mr. Connor:

A. Drainage Impacts Have Not Been Adequately Addressed.

At your request, I have reviewed the "Water/Hydrology" section of Addendum PA980103 (pp. 32-37) for the proposed 299-unit project to be undertaken by California Quartet pursuant to Zone Change 98-3 and Area Plan 98-2, and I have determined that the analysis set forth in that section is woefully inadequate to describe the drainage impacts of the 299-unit project.

The Addendum does not provide a concept drainage plan for the 299-unit project. Instead, it merely refers the reader to Exhibit 22 at page 4-40 of FSEIR 566 to review the "master drainage concept" for the 705-unit manufactured housing/mobilehome project. However, that drainage plain is radically different from the storm drain system that would have to be used for the 299-unit project because, under the latter project, storm, irrigation, and urban runoff would be discharged directly into natural drainage courses on the property instead of being confined in drainage pipes running to El Toro Road.

The impact of storm and nuisance water runoff from the houses and streets to be built in the hillside areas of the Saddleback Meadows property is an issue which is not adequately addressed in the Addendum. The collection of runoff from developed areas which subsequently outlets to a local non-regional natural drainage course is the concern.

Southern California is generally a dry semi-arid region with annual rainfall in the range of 15 to 20 inches per year. The small natural local drainage courses, drainage areas up to several hundred acres, do not experience daily flows and are generally dry the majority of the year. Development creates streets and houses with impervious surfaces, therefore generally increasing the runoff. Landscaped and irrigated slopes and lots will receive 35 to 50 inches per year or more in irrigation, far more than the natural condition.

Irrigation runoff creates two concerns. First, water contaminated with pesticides, fertilizers and other man-made chemicals will be introduced to these natural, sensitive habitat areas on a daily basis. Secondly, over an extended period of time, 5, 10, or 20 years, underground migration of a portion of this excess water will affect the ground water condition. The increase in ground water should be studied and mitigation methods installed to protect the proposed development and surrounding properties from geologic instabilities. The Abbey to the northwest and the Monastery to the south have recently experienced ground movement.

Storm runoff from development areas creates several problems. The character of the runoff is changed from the natural condition of carrying soil and debris and concentrating flow over longer time span to one of a clean flow carrying little soil and debris over a considerably shorter time. The outlet of this concentrated clean flow into the steep, natural canyon areas will cause severe erosion and geologic failures. The existing average grade in these natural drainage courses range from 3% to 35%. Grades in man-made channels are limited to 3% or less to minimize erosion.

What is most troubling about this matter is the drainage facility information in the Addendum is not consistent with either Exhibit 22 in FSEIR 566 or Exhibit 25 from the previously disapproved Draft EIR 561 for the 318-unit project. For example, Exhibit 25 from Draft EIR 561 indicates that the 318-unit project was slated for eight storm drain facilities A through H, but the Addendum states that the 299-unit project will only access storm drains A, B, E, and H, without any explanation as to what happened to drain lines C, D, F, and G. The reader is simply left to guess about what the storm drain system will look like and where water will be discharged on the property. Clearly, further CEQA documentation is required.

In addition to providing an adequate discussion of drainage impacts, new CEQA documentation should address the following mitigation measures to avoid the disastrous consequences of dumping substantially increased volumes of runoff into geologically unstable areas of the property:

1) All runoff from developed lots and streets is to be confined to a storm drain collection system within the development. No concentrated flows from the developed area will outlet to natural drainage courses except at the regional facilities at El Toro Road.

2) Require a study of the long term effects of irrigation infiltration on the geologic structures and methods to minimize its impact.

B. Grading Impacts Have Not Been Adequately Addressed.

I have reviewed the "Soils and Geology" section of Addendum PA980103 (pp. 20-32) and I have determined that the analysis set forth in that section is grossly deficient with respect to analyzing the grading impacts of the 299-unit project.

The addendum does not discuss the permanent impacts which the grading will have on the land to be used for the purported "wildlife corridor", nor does it discuss the impacts on the sensitive biological resources in the southeastern canyon areas which will be necessitated by the incredibly long equipment ramps which have to constructed to make the 100 to 120 foot deep removals of landslide debris and construction of the buttress keys. The nature and extent of the remedial grading and the hazards posed by such grading have not been adequately discussed.

The elimination of grading in the north central portion of the site creates the exact situation discussed in the previous drainage section. The remedial grading along the northwest property line abutting the Abbey property has been completely eliminated. The conceptual drainage plan, Exhibit 25 from Draft EIR 561, indicates storm drain lines A and B would outlet increased urban runoff from the development to the existing natural drainage course that follows the common property line. Also storm drain line C, on that same Exhibit, would dump water into the geologiclly unstable canyons adjacent to the Ramakrishna Monastery. These are precisely the situations which will cause geologic failures and damage to adjacent properties.

The reduction in impacts to vegetation and habitat are marginal at best. The only significant reduction in impact is to the Oak Woodland, 97% to 59% destruction. The impact to the Ephemeral Ponds is unchanged. The impact to the Coastal Sage Scrub is virtually unchanged, 66% vs. 65%. This is due to the dramatic extension of the proposed 299-unit development in the southeast quadrant. Please refer to the Impacted Vegetation Map, Exhibit No. 42 from the Draft EIR 561 which shows the limit of remedial grading. Compare it to the Geotechnical Hazard Mitigation Plan, Exhibit No. 19 from FSEIR 566. The 299-unit proposal dramatically pushes deep into the coastal sage scrub area.

This is significant because this is a large contiguous area with the "Gifted Property" and O'Neill Regional Park to the south. This area also contains five (5) of the ten (10) Cactus Wren sites on the property. Recently, I have been informed that two Coastal California Gnatcatchers have been observed in this area.

If you should have any questions or comments concerning the above, please call me at your convenience.

Very truly yours,

Warren W. Singleton, P.E.

ADDITIONAL DATA:

BACKGROUND

Attachment C contains a detailed chronology of events from 1978 regarding Saddleback Meadows. In summary, the existing Saddleback Meadows Planned Community land use regulations were originally approved by the County of Orange in 1980. Saddleback Meadows Tract Map 10692 was recorded in 1988. When the Foothill/Trabuco Specific Plan (F/TSP) was adopted in 1991, the Saddleback Meadows Planned Community District Regulations and Recorded Tract Map 10692 were incorporated into the F/TSP. Per those regulations, the developer is only required to obtain an administratively approved grading permit and building permits in order to develop 705 manufactured homes.

In 1996, the Planning Commission and Board of Supervisors considered several development alternatives, but did not approve any of them. One of the alternatives, which was recommended by staff, was for 299 dwelling units. That alterative is similar to the applicant's current proposal called the "Contingency Plan". This plan is being processed in the event negotiations involving the Board of Supervisors and other parties to purchase Saddleback Meadows do not come to fruition.

On October 6, 1998, during your discussion of a possible purchase of Saddleback Meadows (Agenda Item #100), you directed that the landowner's application for 299 units be presented to your Board on this date. On October 7, 1998, the Planning Commission, by a vote of 4 to 1, recommended that your Board approve ZC 98-3 and EIR Addendum PA 980103. They also approved related AP 98-2. On October 8, 1998, AP 98-2 was appealed to your Board by California Quartet, Ltd. (Attachment A).

PROJECT DESCRIPTION

Location and Surrounding Land Uses

The Saddleback Meadows property (technically referred to as the Bridlewood Residential District) is located on the easterly side of El Toro Road and north of Valley Vista Way. North of the project site is St. Michael's Abbey, which operates a boarding school for boys. South of the project site is Hidden Hills/Hidden Ridge residential development, O'Neill Regional Park, and the Ramakrishna Monastery. West of the project site and El Toro Road is the Portola Hills residential development. East of the property over a major ridgeline is the Trabuco Canyon Residential District. (See Attachment B, Regional Map.)

Direction	Existing Use	Density	Zoning
Project Site	Agriculture	N/A	F/T Specific Plan
North	School/Abbey	N/A	F/T Specific Plan
South	Residential	3.1 du/ac.	Conventional Zoning
East	Open Space	N/A	F/T Specific Plan
West	Residential	3.2 du/ac.	Portola Hills PC

The land is presently used for grazing cattle and has been used for farming. There are many steep slopes and much erosion due to man's influence and naturally unstable geology. Most of the property rests on ancient landslides that remain unstable. Much of the site has been invaded by non-native plants.

Design Summary

- Total property: 222.2 acres
- 299 standard detached single-family homes
- Proposed open space dedication: 158.5 acres
- Density: 1.3 dwelling units per acre
- Average residential lot: 6,672 sq. ft.

Zone Change 98-3

The zone change (see Attachment D) would amend the F/TSP Bridlewood Residential District Regulations as follows:

1. Replace the reference to "Saddleback Meadows Planned Community" with "Residential Estates (Planned Development)"
2. Lower the maximum number of homes from 705 to 299.
3. Require a minimum of 155 acres of dedicated open space. (The Area Plan proposes 158.5 acres.)
4. Add the requirement for an approved area plan prior to any subdivision or grading activity.
5. Add the requirement for an approved use permit prior to issuance of building permits.
6. Require a performance bond prior to issuance of a grading permit.
7. Eliminate the requirement for 66 2/3 percent affordable housing.
8. Eliminate the requirement for a 1.7-acre neighborhood commercial site along El Toro Road.
9. Maintain the existing exemption from all the other regulations and guidelines in the F/TSP.

Area Plan 98-2

The applicant's proposed area plan (see Attachment E) consists of a text and four concept plans: (1) Development Plan, (2) Landscape and Re-vegetation, (3) Grading, and (4) Open Space/Trails. The area plan also includes a lengthy discussion of "rural character" with several illustrations.

PROJECT ANALYSIS

The analysis of planning issues is contained in Attachment F. The analysis of environmental and CEQA issues is contained in Attachment L. Public comments on this project received prior to October 30, 1998, will be transmitted to you.

F/TSP Review Board

This project was distributed for public review on August 7, 1998. However, no distribution was made to the F/TSP Review Board at that time because there were no members. On September 22, 1998, the Board of Supervisors appointed five members to the Review Board. On September 24th each Review Board member was given a copy of the proposed project, the environmental documentation and staff reports. They conducted a public meeting on September 29th and continued it to October 16, 1998. Any comments/recommendations from the Review Board will be transmitted to you.

Re: Saddleback Meadows - Appeal of Planning Commission Approval of Area Plan 98-2

Dear Mr. Mathews:

On behalf of California Quartet, Ltd., pursuant to Orange County Code section 7-9-150.4, we hereby appeal the Planning Commission decision of October 7, 1998 approving Area Plan 98-2.

Should have any questions concerning this appeal, please contact me at (714) 253-2907.

Very truly yours,

H. Mike McKnight

CHRONOLOGY OF EVENTS

SADDLEBACK MEADOWS
PROJECT CHRONOLOGY

August 1978 - Board of Supervisors approve General Plan Amendment (GPA) 78-1. Final EIR 059 was prepared and certified in conjunction with GPA.

March 1979 - Zone Change Application. Tentative Tract Map and Initial Study requests for mobile home subdivision submitted to County.

December 1980 - Tentative Tract Map 10692 conditionally approved for single-family, mobile home, residential subdivision of 714 homes and (1) commercial lot.

June 1984 - Board of Supervisors approve the Development Plan (2nd revised) for Saddleback Meadows which provided for 705 mobile home units and 1.7 acres of neighborhood commercial use.

October 1984 - The Orange County Subdivision Committee approves a 589-day stay of time in which to record the Final Map for Tentative Tract 10692. This action extended the expiration date for recording the Final Map for Saddleback Meadows to July 1986.

April 1986 - Southmark Pacific Corporation acquired Saddleback Meadows property from Ticor Title Company with the intention of Recording the Final Map. The Final Map did not record on July 14, 1986, because the Santa Ana Mountains County Water District imposed a sewer moratorium on July 16, 1986, which effectively extended indefinitely the life of the approved Tentative Tract Map No. 10692.

November 1988 - The development moratorium was terminated by action of the Santa Ana Mountains County Eater District.

December 1988 - Recordation of Final Map No. 10692, with associated improvement agreements and significant fees (in excess of $2,000,000) paid in furtherance of the Map which included Capital Improvement charges and Sewer Treatment Capacity Rights..

December 1991 - Board of Supervisors approve the Foothill/Trabuco Specific Plan which incorporates the project into the Specific Plan document by adopting the standards of Recorded Tract Map 10692

September 1992 - California Quartet, Ltd. acquires the note on the Saddleback Meadows property along with three other properties packaged together from the Resolution Trust Corporation (RTC). And begins foreclosure proceeding on the defaulted note.

April 1994 - California Quartet, Ltd. submits Grading Permit Application GA940031 for Phase I Grading of the 705 mobile homes(approx. 98.3 acres).

August 1994 - The environmental "Initial Study" is completed for the Grading Application with the County making the determination that an environmental impact report (EIR) is necessary.

August 1994 - California Quartet files a Letter of Appeal with the County, contesting the requirement for an EIR for the Grading Permit Application.

January 1995 - Two hearings are held regarding the appeal (January 17, & 31). On January 31, 1995 , California Quartet, Ltd. withdraws the appeal of the County's determination to require the preparation of an EIR for the Grading Permit Application GA940031. The applicant clarifies it's intent in regards to what the project is. The Planning Commission directs the applicant to develop a more compatible project in response to public testimony, staff concerns, and the Planning Commissions' direction (to take approx. 120 days) .

February-June 1995 - Applicant initiates public relations contacts with the community and neighbors and begins an intensive 6-month data gathering and design process which produces a logical progression of alternative plans concluding with a 318-Lot design proposal.

February 1, 1995 - William Ross, applicant's legal counsel, sends correspondence to G. Weiler, attorney for St. Michael's Abbey.

March 26, 1995 - H. Pike Oliver meets with approximately ten residents from Portola Hills, Hidden Ridge, and the general Trabuco Canyon Area at the Portola Hills Community Center to review work on the progress on the alternative plan for the development of the Saddleback Meadows property.

June 1, 1995 - H. Pike Oliver participates in meeting at the office of G. Weiler, attorney representing St. Michael's Abbey. Discusses the status of the project and potential for acquisition or partial acquisition of the property.

June 1995 - California Quartet, Ltd. presents a Revised Site Development Plan for Saddleback Meadows in the form of an information booklet to County EMA staff.

July 1995 - A formal Planning Application is submitted to the County based on a revised project proposal for 318 lots. The Planning Application consists of: 1) Zone change; 2) Area Plan; 3) EIR 561; 4) A Site Development Permit for geotechnical testing on the property. The site development permit allowed the continuation of geotechnical testing on the site after the County issued a stop-work notice to prevent further exploratory geotechnical testing on the property. This exploratory work was being performed to provide needed geological data on the site for use in conjunction with the revised site development plan. The County determined that

since this was a new application, the Saddleback Meadows project would have to abide by the guidelines contained in the Foothill Trabuco Specific Plan. The Specific Plan requires a site development permit to allow geotechnical testing on any property contained within the boundaries of the Specific Plan area, although as the applicant pointed-out, the existing Recorded Tract Map 10692 is exempt from the requirements of the Specific Plan.

August 11, 1995 - County completes the Initial Study and issues a Notice of Preparation (NOP) of an Environmental Impact Report for the revised project.

August 14, 1995 H. Pike Oliver conducts Community work session with approximately ten area residents at Portola Hills II Club House. (Community workbook.)

August 24, 1995 - County conducts its first public meeting on the revised project in the form of a Public Scoping meeting in conjunction with the preparation of the Draft EIR. This meeting was held at a local high school.

August 25, 1995 - H. Pike Oliver prepares for and participates in meeting with Ken France, owner of property near the site.

August 29, 1995 - William Ross letter to G. Weiler, attorney representing St. Michael's Abbey.

September 1995 - Bob Odle makes telephone contacts with property managers of neighboring HOA's. Advised by them to put all requests in writing and not to request any meetings until a revised plan is available.

October 1995 Community information mailer with detachable questionnaire is sent out to over 2,000 households in the area. (Copies of returned questionnaires are attached.)

October 10, 1995 H. Pike Oliver coordinates with Tom Mathews and his assistant on the review of the community mailer.

October 12, 1995 Richard Garlinghouse correspondence with G. Weiler, attorney representing St. Michael's Abbey.

October 13, 1995 Richard Garlinghouse correspondence with G. Weiler, attorney representing St. Michael's Abbey, with attachment (memo from Mike McKnight to Richard Garlinghouse.)

October 18, 1995 Bob Odle mails letters to property managers requesting an opportunity to present the new project to their Executive Board.

October 20, 1995 H. Pike Oliver has telephone conversation with Marie Walsh concerning the views from Hidden Ridge.

October 23, 1995 Mike McKnight of TPG Management sends follow-up letter to Marie Walsh in response to her telephone conversation with H. Pike Oliver on 10/20/95.

October 23, 1995 H. Pike Oliver has conversation with E. Wallace.

October 23, 1995 H. Pike Oliver has conversation with M. Nicholson.

October 23, 1995 H. Pike Oliver has an extensive telephone conversation with Mr. Kacsir, community resident.

October 23, 1995 Mike McKnight transmittal of Saddleback Meadows Community Mailer and copy of County memo regarding recent geological and archaeological activities on the Saddleback Meadows property to G. Weiler.

October 24, 1995 H. Pike Oliver has telephone conversation with Julia Chenette, area resident.

October 24, 1995 H. Pike Oliver has telephone conversation with Delia Juneau concerning view simulation.

October 25, 1995 H. Pike Oliver writes letter to Ken France, neighboring property owner.

October 25, 1995 Mike McKnight responds to D. Juncau's request for view simulation information on the project.

October 30, 1995 Bob Odle mails letters to the property managers extending an invitation to tour the site on November 11, 1995. No responses were received.

October 31, 1995 Bob Odle mails letters to each member of the Foothill/Trabuco Specific Plan Review Board, inviting them to visit the site and receive a guided tour. Mr. Odle was advised by two board members, one by telephone and one by letter, that the Board voted to decline the offer and would only accept such an offer if they could convene a public meeting.

October 15, 1995 - Application for Vesting Tentative Tract Map 15230, based on the revised project, is filed with the County.

February 5, 1996 - County files a Notice of Completion of the Draft Environmental Impact Report and begins the public circulation and comment period.

February 16, 1996 - Director of Planning, EMA, discusses Draft EIR 561 at the Foothill/Trabuco Review Board meeting.

March 8, 1996 - TPG Management discusses proposed project at Foothill/Trabuco Review Board meeting.

March 19, 1996 - First Planning Commission public hearing. County Staff made brief presentations on the Draft EIR document and the proposed Zone Change and Area Plan. TPG Management presented a summary of process involved to get to the plan that was currently before the Commission for review. The main objective of this first Planning Commission hearing was to afford the public an opportunity to comment on the Draft EIR document prior to the close of the 45-day public comment period (March 25, 1996). The Commission moved that the hearing be continued to an April 2, 1996 date.

April 2, 1996 - Second Planning Commission public hearing. The objective of this second public hearing was to afford the applicant an opportunity to present the project in detail, describe the design process thoroughly, present an analysis of the Specific Plan consistency issue, and have the opportunity to rebut questions and/or issues raised at the March 19, 1996 Planning Commission hearing. At the close of this hearing, the Planning Commission voted to continue the matter to a May 7, 1996 hearing date.

May 5, 1996 - Third Planning Commission hearing is postponed. County staff is concerned about the Resource Agencies (U.S. Fish and Wildlife Service & California Department of Fish and Game) sudden and unexpected reversal of their position on the projects proposed wildlife movement corridor alignment. And design. Time is needed to resolve the agencies concerns regarding the corridor alignment design..

May 8, 1996 - Design workshop session with County EMA staff regarding alternative wildlife corridor alignments. General and specific discussion regarding suggestions for design modifications with the applicant explaining the economic/financial ramifications of the suggestions and how they would render the project infeasible from an economic and development objective standpoint. Their was also discussion of the merits of EIR alternative No. 7 which addressed the size and width concerns of the wildlife corridor which until recently, appeared to be the primary source of the resource agency's concerns regarding the proposed project. Alternative 7 balanced the environmental/wildlife corridor issues with the project's development objectives.

May 17, 1996 - "ALL Hands" meeting with U.S. Army Corps of Engineers, U.S. Fish and Wildlife Service, California Department of Fish and Game, and Orange County EMA staff to discuss wildlife corridor design issues and Alternative 7. The resource agencies, primarily the

California Department of Fish and Game expressed their desire to see changes in the wildlife corridor location/alignment and its design.

May 20, 1996 - Field meeting held on the Saddleback Meadows site with same agency representatives attending the May 17, 1996 meeting to visualize in-the-field what was discussed at the previous week's meeting (May 17th).

May 23, 1996 - First meeting with Verlyn "Sonny" Jensen, an attorney who now represents St. Michael's Abbey. This meeting served as a vehicle for Mr. Jensen to re-establish dialogue with applicant. Dialogue with the Abbey had been suddenly and completely cut-off in November of 1995.

May 24, 1996 - Based on comments from the two previous meetings with the various resource agencies a number of alternative development plans were prepared (3) and presented to EMA staff. Staff indicated a preference for one of the alternatives presented.

May 28, 1996 - A meeting with EMA staff to discuss further refinements of the alternative development plan which ended up having 311 lots. Prior to the June 5, 1996 Planning Commission public hearing (this was to be hearing number 3) EMA staff reduced the lot yield to 299 lots and recommended this alternative (to become known as Alternative No. 8) to the Planning Commission.

June 5, 1996 - Third Planning Commission public hearing. EMA staff makes recommendation to the Planning Commission for Alternative No. 8 for 299 Lots, California Quartet, Ltd. counters with a version of Alternative No. 8 with 318 lots using the same development footprint and development envelope. Planning Commission moves to continue hearing to July 10, 1996.

July 1996 - Payment Plan established with the Orange County Tax Assessor's Office for Delinquent property taxes dating back to 1991 prior to California Quartet, Ltd.'s acquisition of the note and subsequent foreclosure proceedings

July 10, 1996 - Fourth Planning Commission public hearing. Staff recommended the following: 1) close the public hearing; 2) Approve the draft resolution certifying Final EIR 561 and recommend its adoption by the Board of Supervisors; 3) Approve the draft ordinance (staff Alternative ZC 95-5) and recommend adoption by the Board of Supervisors; 4) Tentatively approve the Staff alternative 8 (299-lots); 5) Request the applicant submit a revised area plan text and exhibits consistent with Staff alternative ZC 95-5 and Alternative 8 to EMA by July 18, 1996. 6) request staff prepare a draft Planning Commission Resolution for final action on the Area Plan. Commissioner Blamer motioned to continue the hearing to July 30, 1996. The motion was seconded by Commissioner Moody and carried by a 2-1 vote. Commissioner Long was absent.

July 30, 1996 - Fifth Planning Commission public hearing. The Planning Commission was unable to reach a decision and make a recommendation to the Board of Supervisors. The Commissioners voted four times on varying lot yields ranging from 318 down to 260. However, as divided as the commissioners appeared to be, a majority of the commissioners were in agreement on the general development envelope as depicted by Staff recommended Alternative No. 8. The Commission did however, recommend certification of the EIR document. Because the Commissioners were at an impasse on the substantive issues before them, i.e. the Zone Change and Area Plan, they recommended moving the project along to the Board of Supervisors for their consideration, as the Board has the final discretionary authority to approve these items and the project.

August 2, 1996 - California Quartet, Ltd. appeals Planning Commission action, because the Commission's inaction on making a recommendation to the Board of Supervisors on the substantive issues of the Zone Change and Area Plan are procedurally de-facto project denials.

September 10, 1996 - Submit Alternative 9 (318 lots) to EMA Staff and request that this alternative be considered by the Board of Supervisors as a plan which better addresses the concerns and issues raised by the public and the Planning Commissioners at the last hearing.

October 2, 1996 - Saddleback Valley Unified School District Board approves Mitigation Agreement for Saddleback Meadows.

October 22, 1996 - Board of Supervisors public hearing on appeal of Planning Commission Action. Supervisor Silva recuses himself from voting on the project. The Board denies the Appeal. The Supervisors then motion to approve a project with a density cap of 100 lots (Draft EIR alternative No. 4). The motion does not carry and the Board directs staff to report back to the Board by November 5th, on the process to initiate a reversion to acreage on the Saddleback Meadows property, (i.e. remove the existing Recorded Final Tract Map).

November 5, 1996 - Board of Supervisors hear EMA staff's report concerning the reversion to acreage procedure. The motion to initiate the reversion to acreage does not carry. Supervisor Saltarelli requests staff to inquire about the potential acquisition of the Saddleback Meadows property for public purposes. The Board does not certify the EIR.

November 7 & 8, 1996 - Attempted to submit grading permit application based on Final Tract map. County refuses to accept any applications for submittal of anything relating to Saddleback Meadows. The County had determined that the previous grading permit application filed in April 1994 had expired in 1995, therefore, a new application would be necessary to continue processing the grading permit.

November 8, 1996 - TPG Management receives letter from Thomas Mathews, the County Planning Director, officially apprising us of Supervisor Saltarelli's desire to explore possible full or partial acquisition of the Saddleback Meadows property by the County.

November 8, 1996 - Bill Ross transmits to Ben DeMayo, Deputy County Counsel, a draft of the proposed Tolling Agreement. The purpose of this tolling agreement is to provide additional time for the parties to negotiate in good faith without having to file and engage in litigation. This tolling agreement is consistent with the provisions of Code of Civil Procedure section 360.5 .

November 14, 1996 - Bill Ross requests the County to transmit copies of all documents maintained by the County Environmental Management Agency (EMA) that concern or are related to the recent attempt by California Quartet to submit for processing of a grading permit based on the Recorded Final Tract Map.

November 15, 1996 - Bill Ross transmits to the County a Demand Letter to process the Rough Grading Plan Application which the project civil engineer had attempted to submit on November 8 and 9, 1996.

November 15, 1996 - Bill Ross transmits letter to County regarding Settlement Discussions concerning the sale of Saddleback Meadows property for public purposes laying out the ground rules for such negotiations.

November 18, 1996 - TPG Management prepares several sketch studies which look at reduced development areas and lot yields at the request of EMA staff, these studies entail a variety of lot sizes.

November 26, 1996 - Bill Ross transmits to the County a Demand Letter to process the rough Grading Plan Application.

November 26, 1996 - Tolling Agreement executed between California Quartet, Ltd. and the County of Orange. The Tolling agreement is effective on November 21, 1996 and will expire 180 days from the effective date (May 20, 1997).

November 27, 1996 - Pike Oliver meets with Tom Mathews, EMA Planning Director, and discusses sketch studies of alternative reduced area plans for Saddleback Meadows produced in response to EMA staff's request. Tom Mathews requests additional information be provided on these sketch studies (statistical summaries with along with a comparison to Alternative No. 9)

November 27, 1996 - Letter to Bill Ross from EMA responding to Ross's correspondence dated November 15, 1996 and November 26, 1996 regarding California Quartet's attempt to file an application for a grading permit for Tract 10692. The letter states that the reason the application

was not accepted by the County was due to a misunderstanding by staff. The letter then states their assurance that the application will be accepted when presented again.

December 3,1996 - County accepts Grading application for Tract 10692 . Assigned Grading Application Number GA960048

December 20, 1996 - Applicant transmits additional information requested by Tom Mathews on November 27, 1996.

December 24, 1996 - County circulates Notice of Preparation (NOP) of a Draft Subsequent Environmental Impact Report related to Grading Application GA960048, Tract Map 10692. Starts a 30-day comment period.

February 6, 1997 - County re-circulates NOP document.

February 7, 1997 - Meeting requested by County staff to discuss potential full/partial acquisition possibilities with applicant and representatives from the community and neighbors. Attendees from the community included, two members, Randy Brusca and Ray Chandos from the Foothill/Trabuco Review Board; Verlyn Jensen Representing St. Michaels Abbey,; Richard Jennings of the Vendanta Society Ramakrishna Monastery, and Marie Walsh of Hidden Ridge.

February 21, 1997 - TPG Management makes an informational presentation before the Foothill/Trabuco Review Board to facilitate Randy Brusca and Ray Chandos' request at the February 7, 1996 meeting at the County. Discussion of the two (2) reduced project area studies which were discussed previously at the February 7, 1997 meeting.

February 28, 1997 - County has follow-up meeting to the March 7, 1997 with the same group of representatives from the community, to receive their feedback from the previous meeting.

March 7, 1997 - Applicant meets with County staff to discuss outcome of County's February 28, 1997 meeting with the same members of the community who attended the February 7, 1997 meeting

April 11, 1997 - The Director of Planning & Development Services transmits a letter to the Members of the Board of Supervisors providing a summary of the alternatives proposed by the landowner but not acted on by the Board of Supervisors in October 0f 1996, and the results of several meetings which had taken place between Planning & development Services staff, County Counsel, the landowner, and surrounding property/area representatives to explore acquisition opportunities of all or a portion of the property. Generally, the community representatives maintained that a 100-unit project clustered adjacent to El Toro Road was the maximum development acceptable. The landowner stated that the 100-unit alternative is not economically feasible. The Director's understanding is that the landowner will entertain any offer to purchase

all or a portion of the property, even though it is not now being marketed. Staff was unaware of any viable sources of funds, private or public, for this purpose. Therefore, the discussions have come to an end.

May 30, 1997 - Applicant submits application for Use permit (PA97-0086) to allow construction of a temporary project identification/future construction sign on the Saddleback Meadows property.

August 5, 1997 - First Planning Commission Hearing on Use permit to allow a temporary sign on the Saddleback Meadows property. The hearing on this application was continued to September 9, 1997.

September 9, 1997 - Planning Commission denies Use permit for sign.

September 19, 1997 - Applicant appeals the Planning Commission's denial of the Use Permit to Board of Supervisors.

October 21, 1997 - Board of Supervisors hears Applicant's appeal regarding the Planning Commission's denial of Use permit PA97-0086 to allow construction of a temporary sign on Saddleback Meadows. The Hearing is continued to December 9, 1997

October 22, 1997 - First Planning Commission public hearing to review certification of Subsequent EIR 566 to allow for the grading and development of 705 manufactured homes and a 1.5 acre neighborhood commercial center on Saddleback Meadows. The hearing was continued to December 3, 1998.

November 25, 1998 - Board of Supervisors hearing to modify the appeal procedures for SEIR 566 so that the SEIR should be reviewed and certified by the Planning Commission with an appeal going directly to the Board of Supervisors. Hearing is continued to December 9, 1997.

December 3, 1997 - Planning Commission Certifies Final Subsequent EIR 561.

December 9, 1997 - Board of Supervisors uphold Applicant's appeal of Planning Commissions denial of use Permit for a site sign on Saddleback Meadows.

December 9, 1997 - Board of Supervisors First reading of "An Ordinance of the County of Orange providing for appeal of certain Grading Permits". Item is continued to December 16, 1997.

December 16, 1997 - Board item that had been continued from December 9, 1997 regarding "An Ordinance of the County of Orange providing for appeal of certain Grading Permits" is not approved.

December 17, 1997 - The Chair of the Planning Commission transmits letter to members of the Board of Supervisors regarding the Commissions recent certification of SEIR 566 on Saddleback Meadows and recommending that the Board revisit an alternative zoning designation for Saddleback Meadows (Alternative No. 4 in SEIR 566, 299-units).

December 18, 1997 - The Vendanta Society of Southern California submits a notice of appeal regarding the Planning Commission's certification of FSEIR 566.

January 27, 1998 - Board of Supervisors Hearing regarding the appeal of the Planning Commission's certification of SEIR 566, as filed by the Vendanta Socitey of Southern California.

February 9, 1998
St. Michael's Abbey transmits an Offer to California Quartet, for a partial purchase of Saddleback Meadows through their legal representative.

February 24, 1998
Board of Supervisors hearing upholding Certification of EIR #566 Supervisor Spitzer to provide Board with an update regarding potential settlement negotiations with Applicant regarding pending litigation against the County, within 45-days(April 14, 1998).

March 6, 1998 - August 1998
First in a series of settlement negotiation meetings involving St. Michael's Abbey, the Ramakrishna Monastery, California Quartet, and the County. CQ agrees to study a series of reduced development alternatives in conjunction with partial acquisition.

March 6, 1998
First in a series of settlement meetings involving St. Michael's Abbey, the Ramakrishna Monastery, California Quartet, and the County. CQ commits to study a series of reduced development alternatives coupled with a partial purchase of the property.

March 23, 1998
Second settlement meeting: CQ discusses reduced alternatives analyzed since the last meeting while County staff unveils the "Mathews Plan" prepared by County staff.

April 1, 1998
Third settlement meeting: California Quartet presents a modified version of the staff alternative (a.k.a. the "Modified Mathews Plan" 130-150 units).

April 14, 1998
Supervisor Spitzer provides Board members with a status update.

April 20, 1998
Geotechnical meeting at the County to discuss issues and concerns related to Staff alternative and the modified staff ("Mathews Plan") alternative.

April 23, 1998
Fourth settlement meeting: St. Michael's Abbey and Ramakrishna Monastery air their concerns with geotechnical stability issues. CQ suggests and initiates getting respective geotechnical consultants together in a work/study session to discuss/address the concerns raised today. Verlyn Jensen conveys their latest offer in tabular form offering different amounts for various scenarios on the table and asks CQ to return with a counter offer at next settlement meeting.

May 4, 1998
CQ initiated meeting of respective geotechnical consultants to discuss/address concerns of Abbey and Monastery. This was intended to a solution oriented meeting, but that, apparently, was not an objective shared by all participants.

May 8, 1998
Fifth settlement meeting: CQ presents it's counter offer in tabular form. Abbey and Supervisor Spitzer appear to agree to a partial acquisition of $5.2 million in conjunction with a development program to be defined that would be somewhere between the County staff proposal and the CQ proposed modifcation to the staff proposal. The Abbey would provide $4.2 million and $1.0 milllion would come from the County. Ed Connor, representing the Ramakhrishna Monastery, rejects the idea of a modification to the staff proposed development program. After a caucus between Supervisor Spitzer and representatives of the Abbey and the Monastery the meeting concludes with Verlyn Jensen and Supervisor Spitzer making a combined cash offer of $8.0 million ($7.0 million from the Abbey and $1.0 million from the County) for the entire property.

May 26, 1998
Meeting initiated by Verlyn Jensen to discuss new offer for acquisition of the entire property — $12.2 million, with $10.2 million from the Abbey and $2.0 million from the County.

June 2, 1998
Board of Supervisors Hearing. Supervisor Spitzer presents status report on Saddleback Meadows settlement Negotiations with direction to County Counsel and staff to prepare for consideration by the Board a settlement agreement containing the following "Conceptual" terms: 1) $1.5 million in appropriated County funds (Strawberry Field funds) will be utilized to acquire an interest in the subject property with the understanding that it is to be used only in conjunction with $10.5 million from St. Michael's Abbey to purchase the entire property with escrow to close on or before October 29, 1998 with language tht if the "Strawberry Field funds" are not available for this proposal that it will not trigger the development option until the Board has had an opportunity to explore alternative funding and that County's contribution of $1.5 million shall be

reimbursed in the event the property is used for a purpose which derives financial benefit; 2) request that all litigation by St. Michael's Abbey and/or California Quartet will be tolled; 3) County staff will immediately begin processing general plan, specific plan, zone change, area plan, tentative tract map applications and any other required plan/application for the 299-lot development plan to be considered for approval if the acquisition is not completed by October 29, 1998 and; 4) Request that California Quartet cease processing any permits related to the 705-unit manufactured home subdivision until October 30, 1998.

June 12, 1998
Letter of intent regarding Purchase and sale of the Saddleback Meadows property. to CQ from St. Michael's Abbey. Abbey indicates that as part of the terms, they would be allowed to develop the property.

June 15, 1998
CQ formally requests County cease processing of the grading plan check application based on Recorded tract Map 10692 (705 units), in accordance with the conceptual terms of the settlement agreement referenced in the Board of Supervisors motion of June 2, 1998.

June 22, 1998
Area Plan & Zone Change Application for the 299-unit "Contingency Plan" Submitted to County.

June 23, 1998
Board of Supervisors Hearing. Supervisor Spitzer provides Board Members with a Saddleback Meadows Settlement negotiations Update. Next Update by Supervisor Spitzer scheduled for August 11, 1998.

July 3, 1998 - On behalf of the Norbertine fathers of Orange, the Saddleback meadows Land Conservancy, and the Vendanta Society of Southern California, Attorney Edmond M. Connor transmits to representatives of the owner of Saddleback Meadows a "Summary of Settlement Terms" and a "Supplemental Term Sheet".

July 17, 1998 - Attorney representing the owners of Saddleback Meadows transmits a Response to Mr. Connor's letter dated July 3, 1998.

August 10, 1998 - Site visit/meeting scheduled to discuss the issue of the "Vendanta Ridgeline Protection" a negotiation term contained in Mr. Connors Letter dated July 3, 1998 which when physically interpreted, severely impacts the partial development alternative's development envelope enough to make the project unfeasible.

PROJECT CHRONOLOGY

June 2, 1998	–	Board of Supervisors Minute Order Regarding Saddleback Meadows (attached).
June 15, 1998	–	California Quartet formally requests County to cease processing the grading permit application for 705 units.
June 22, 1998	–	Application for Zone Change 98-3/Area Plan 98-2 (aka Contingency Plan) to allow for 299 units filed by California Quartet.
June 22 to August 6, 1998	–	In-house review by County staff.
August 7, 1998	–	Distribution of project application and EIR Addendum for public review.
August 25, 1998	–	1st Planning Commission public hearing.
September 22, 1998	–	2nd Planning Commission public hearing (continued without discussion). F/TSP Review Board members appointed.
September 25, 1998	–	F/TSP Review Board members given copy of project application, EIR Addendum, and staff reports. Application for Saddleback Meadows subdivision maps (TT15230 and TT15784) for Contingency Plan filed.
September 29, 1998	–	F/TSP Review Board conducts public meeting on Contingency Plan.
October 7, 1998	–	3rd Planning Commission public hearing.
October 16, 1998	–	2nd F/TSP Review Board public hearing.

ZONE CHANGE 98-3 (DRAFT ORDINANCE)

ORDINANCE NO. ____

AN ORDINANCE OF THE COUNTY OF ORANGE, CALIFORNIA ADOPTED PURSUANT TO THE STATE PLANNING AND ZONING LAWS, AMENDING THE FOOTHILL/TRABUCO SPECIFIC PLAN FOR SADDLEBACK MEADOWS (ZC98-3)

The Board of Supervisors of the County of Orange, California, does ordain as follows:

SECTION 1. Ordinance Nos. 3177, 3398, and 3468, which established regulations for the Saddleback Meadows (a.k.a. Bridlewood) Planned Community, are hereby repealed.

SECTION 2. The Foothill/Trabuco Specific Plan Section III.D.3, "Bridlewood Residential District," is hereby amended per Zone Change 98-3 as shown in Exhibit 1.

///

///

///

///

///

///

///

///

///

///

///

///

///

///

///

///

3.0 Bridlewood Residential (BWR) District

3.1 Purpose and Intent

The Bridlewood Residential District is established to provide for the development and maintenance of low density detached single-family residential neighborhoods in steep hillside areas in such a manner that generous open space areas are featured.

3.2 Uses Permitted

Per the Residential Estates (Planned Development) District Regulations: Zoning Code sections 7-9-68 and 7-9-110.

3.3 Site Development Standards

Per the Residential Estates (Planned Development) District Regulations: Zoning Code sections 7-9-68 and 7-9-110.

3.4 Special Provisions

a. The minimum amount of open space shall be 70% (155 acres). Such open space shall be defined as follows: The open space area remaining after approved development is completed that has a natural appearance and will remain undisturbed thereafter except for possible approved fuel modification. Such areas may include, depending on design and landscaping, parks, manufactured slopes, and recreation trails.

b. Any development shall be in compliance with every regulation of this District (BWR) and shall be exempt from all of the Regulations and Guidelines included in this Specific Plan other than those provided for by this District.

c. Prior to the approval of any tentative subdivision map, an area plan addressing the entire District shall be approved.

d. A preliminary grading permit may be issued in compliance with the Grading & Excavation Code subsequent to the approval of an area plan and tentative tract map which creates residential building sites. The Grading Official shall require a performance bond prior to the issuance of the grading permit.

e. Prior to the issuance of any building permits for residential structures, a use permit shall be approved by the Planning Commission per Zoning Code section 7-9-150.

f. Only if all special provisions listed above are clearly implemented in the plan submitted for Planning Commission consideration, then, the maximum number of units the Commission may consider is 299 single family detached dwellings.

AREA PLAN 98-2
SADDLEBACK MEADOWS
CONTINGENCY PLAN- 299 LOTS

BACKGROUND

This plan has 299 single-family detached dwelling units and originated from the "Staff recommended" 299-Lot Alternative (a.k.a. Alternative 8 in EIR No. 561 and presented as Alternative 4 in the recently certified SEIR No. 566). However, this Area Plan submittal is nearly *identical* to a plan (referred to as "Alternative 9") submitted for consideration before the Board of Supervisors on October 22, 1996. The differences between Alternative 9 and the proposed "Contingency Plan - 299 Lots" can be summarized as follows: 1) A reduction in density from 318 lots, to 299 lots; 2) Significant buffering and landform berming has been added along the project edge adjacent to the Ramakrishna Monastery; 3) The need for three extensive "loffel walls" near the project edge adjacent to the Ramakrishna Monastery have been eliminated; and 4) The majority of side-yard retaining walls throughout the project have been eliminated. The intent of this alternative Area Plan, as was its predecessor, Alternative 9, is to provide a project that directly responds to the view impact concerns expressed by St. Michael's Abbey, the Ramakrishna Monastery, the Hidden Ridge Community, and to a lesser degree, Portola Hills. This Area Plan also incorporates community-wide design concepts, elements and features reflective of a "*rural-like*" character within the context and constraints of the site and the developer's objectives. These design elements and features were also first presented at the July 30, 1996 Planning Commission Hearing, in a document entitled "Saddleback Meadows Rural Character Statement", a copy of which has been included in this document.

DESCRIPTION

The average lot size for this project is approximately 6,672 s.f., with a minimum lot size of 5,000 s.f.. Access to the project would be provided via a gate guarded private street off El Toro Road immediately south of the existing Aliso Creek/Trail under-crossing structure. An emergency only access connects with Valley Vista Way. All habitable structures are proposed to be protected by automatic fire sprinkler systems. The project site is approximately 222.2 acres in size. Total open space exceeds approximately 70%.

The project acreage (222.2 acres) does not include the adjacent off-site water tank site. A water tank with a maximum capacity of 1.4 million gallons, and associated access road, are proposed off-site adjacent to the northeast corner of the project site to provide water service to the proposed project. The proposed water tank site was previously dedicated to the Trabuco Canyon Water District when the existing Final Tract Map was recorded (Tract No. 10692). The water tank will be approximately 30-feet tall, 100 to 110-feet in diameter, and will be bermed,

landscaped, and painted a complimentary color to the surrounding setting. A total of approximately 8 acres of off-site area would be affected as a result of project implementation to accommodate slope area, access roads, related remedial grading, the water tank, and County of Orange fuel modification requirements.

Onsite circulation is proposed with a system of private streets consisting of a primary spine street (56-foot r.o.w.) and a series of cul-de-sacs (41-,45-, and 52-foot r.o.w.). An encroachment easement is required from the County of Orange to accommodate the project access road where it traverses County owned property along the western-most boundary of the site.

The project has been designed to minimize impact on the existing land form. The homes have been located on the relatively level areas in a broad crescent shape flowing along the southern and eastern sides of the site, while the steep terrain of the central canyon area has been left as open space. Development is kept off the eastern and northern major ridgelines bordering the property. A primary design consideration in establishing the rural-like character of Saddleback Meadows is presenting a landscape enveloped community when viewed from the surrounding areas and from within the development. In response to this design intent and the interests of St. Michael's Abbey, the Ramakrishna Monastery and the neighboring Hidden Ridge community, specific grading techniques, site planning, and landscape elements will be incorporated within the project. The intent of these features will be to enhance the views of Saddleback Meadows from the surrounding areas. This will be accomplished through:

1. Creative contour grading that emphasizes and expands upon landforms;

2. Berming at select and appropriate locations to blend with natural terrain features while providing screening and buffering views into the project site from St. Michael's Abbey, the Ramakrishna Monastery and Hidden Ridge;

3. Creative site planning techniques that minimize rows of backyards along highly visible edges, incorporates slopes, landscape zones and landforms between homes and the surrounding neighbors, and neighborhood streets that climb with the terrain rather than flat roads common to non-terrain sites; and

4. An aesthetic community-wide landscape program that provides visual enhancement through significant perimeter and interior plantings (plant pallets will require OCFA approval), responds to seasonal changes, and provides filtered views of the community from the surrounding areas.

This plan goes to great lengths to mitigate off-site views of the project from neighboring properties, specifically: St. Michael's Abbey, the Ramakrishna Monastery, and the Hidden Ridge Community. This will be accomplished through a combination of thoughtful landscape design and the extensive use of berming techniques which will be integrated with the landform contouring, especially along the Main Spine Road, and along view sensitive development edges. This

approach will also enhance the project's edge conditions which will provide for more sensitive edge transitions to the project's large open space areas and O'Neill Regional Park.
A wildlife movement corridor has been incorporated into the project design to address the importance of regional wildlife movement linkages between regionally important open space areas such as O'Neill Regional Park, Whiting Ranch Wilderness Park and the Cleveland National Forest. This plan utilizes an east/west corridor alignment similar to that shown in the Foothill/Trabuco Specific Plan. This wildlife corridor, which bisects the project (called the central corridor), is a component of a three corridor concept which together is designed primarily to accommodate small and medium size mammals and birds, but would not preclude the occasional potential movement of large mammals as well. This corridor is comprised of a minimum 400' wide wildlife corridor with 50' setbacks located on either side. The onsite wildlife corridor is proposed to utilize an at-grade crossing (400') where the wildlife corridor traverses the development's main spine road. Due to the low level of traffic on this end of the project, the at-grade crossing is not anticipated to inhibit wildlife movement. Loffel walls are used in select locations to minimize the extent of manufactured slopes. Loffel walls allow for the growth of plant materials on and around the wall, eventually helping to screen the wall behind a blanket of vegetation.

Statistical Summary*

ONSITE	ACREAGE	% OF SITE
Residential Lots	45.8	21%
Streets (private)	17.8	8%
Regional Park	90.0	41%
Restricted Scenic Preservation Easement	68.5	30%
Subtotal	222.2	100%

* Acreages and percentages are approximations subject to refinement at the Tentative Map/Final Map stages.

OPEN SPACE/ TRAIL CONCEPT

The proposed Open Space/Trail Concept for Saddleback Meadows incorporates a variety of refinements which result in minimizing environmental impacts. In response to the Natural Communities Conservation Program (NCCP) goals and objectives, the project provides for a viable Wildlife Movement Corridor incorporated into the design of the project providing access from the Aliso Creek Corridor to O'Neill Regional Park. The design proposes the primarily undisturbed open space areas, along with re-vegetated slope areas of the project, for fee dedication to serve as an extension of O'Neill Regional Park. Trail connections are provided, linking the project to existing regional riding and hiking trails and bikeways. The project proposes a Trail Staging Area/Pocket Park, Ridgetop Park and the dedication of a significant amount of natural and re-vegetated open space. The proposed Trail Staging Area/Pocket Park provides a

direct link to the regional trail located on El Toro Road and the other proposed recreation features (Ridgetop Park and the Picnic area).

The Open Space/Trail Concept is composed of the following major elements:

1. **Trails**
   a. Live Oak Canyon Regional Riding and Hiking Trail
      - Project proposes the dedication of a 16' wide Recreation Easement along the El Toro Road frontage (approx. 1350 l.f). Final Alignment is subject to approval by the Manager, Harbors Beaches and Parks.

      - Maintenance for this Trail/Recreation Easement will be the responsibility of the County of Orange.

   b. Local Riding and Hiking Trail
      - Project proposes the dedication of a 16' wide Recreation Easement (approx. 4800 l.f., for local riding and hiking trail purposes, of which approximately 1,550 l.f. traverses Restricted Scenic Preservation Easement areas , while approximately 3,250 l.f. will traverse the Regional Park dedicated areas. Final Alignment is subject to approval by the Manager, Harbors Beaches and Parks.

      - This plan provides a linkage from the proposed Trail Staging Area/Pocket Park to the Live Oak Canyon Regional Riding and Hiking Trail on El Toro Road. Another trail will link the proposed Trail Staging Area/Pocket Park to the proposed Ridgetop Park (a.k.a. "Bridlewood Look-Out Park") and the "Picnic Area".

      - Maintenance for this Trail/Recreation Easement will be the responsibility of the County of Orange.

2. **Regional Park**
   As designated on the Open Space/Trail Concept Map:
      - This category of open space will serve as an extension of O' Neill Regional Park.

      - This category of open space encompasses approximately ±90 acres (±41% of the project)

      - As a extension of O' Neill Regional Park, these open space areas, which include the wildlife movement corridor, would be offered for dedication to the County of Orange.
      - The Regional Park will encompass areas which include the following areas which lie outside of the required fuel modification zones: "undisturbed" open space; Native

Enhancement Transition Areas; re-vegetated remedial graded and manufactured slope areas; Oak Woodlands; Oak Restoration Areas; undisturbed portions of the existing Olive Grove; as well as the preserved existing and re-created Ephemeral Ponds.

- Coastal Sage Scrub, Oaks, and other biological resources requiring on-site mitigation would take place in the areas dedicated for Regional Park purposes.

- The proposed Trail Staging/Pocket Park , Ridge Top Park (a.k.a.Bridlewood Look-Out Park) and Picnic Area will be located in the Regional Park extension. These features will be subject to approval of the Regional Park Development Plan.

- The final boundary of the Regional Park and the Riding and Hiking Trail alignments will be subject to the approval of the Manager of Harbors, Beaches, and Parks.

3. Restricted Scenic Preservation Easements

Areas designated as the following (approx. 68.5 acres) on the Open Space/Trail Concept Plan Map are to ensure that the scenic qualities of these edge areas are not impacted in the future by structures and development after they have been established:

- El Toro Road Community Edge Area
- Fuel Modification Zones (Wet Zone and Non-Irrigated Zones only)
- These areas will be maintained by an HOA and/or Community Maintenance District.
- Community slopes(Between residential lots and Roads).

CONTOUR GRADING CONCEPT

The grading concept for this alternative reflects a contour grading approach which utilizes techniques emphasizing variations and takes advantage of the curvilinear street and lotting design, rather than repetitive uniformity. Contour grading and the creative use of berms and landforms along the community's spine road provide for screening and buffering of views into the project site from various offsite locations. Numerous design features work together to establish the rural-like character. Contour grading with landform enhancement provides for edge treatments responsive to the natural terrain. The community's spine road alignment responds to the terrain and allows for landscape plantings on both sides to create the rural-like experience while driving through the community. Creative site planning responds to the intended rural character with setbacks from the spine road. This allows the project a more natural and organic ambiance in keeping with the rolling hillside setting. These contour grading techniques consist of the following:

1. Integrate grading into the context of existing topography using horizontal rounding of contours;

2. Blending of manufactured contours with natural existing contours;

3. Rounding at the top and toe of slopes to avoid harsh transitions; and

4. Design of development enclaves of varying size and irregular spacing to avoid a uniformly "terraced" appearance.

Earthwork Volumes:

Conventional Grading

- Balanced Cut/Fill (approximate)
  Cut Quantity: ±2,100,000 c.y.
  Fill Quantity: ±2,100,000 c.y.

- Total Import Quantity: 0
  Total Export Quantity: 0

Remedial Grading

- Total Remedial Grading (Remove & Replace): approximately ±6,800,000 c.y.

MAXIMUM GRADING STATISTICS

Manufactured Slopes	10-20 ft.	Over 20 ft.	Highest
Building Lots (with Type C slopes)*	N/A	N/A	N/A
Type B Slopes** (between building lots)	0 L.F.	5,700 L.F.	50 ft.
Roads	2,500 L.F.	3,100 L.F.	120 ft.

Contour Elevation Changes	10-20 ft.	Over 20 ft.	Highest
Building Sites	92 places	134 places	80 ft.
Roads	4,250 L.F.	7,300 L.F.	91 ft.

Retaining Walls	0 - 6 ft.	Over 6 ft.	Highest
	3,500 L.F.	N/A	6 ft.

Loffel Walls	0 - 6 ft.	Over 6 ft.	Highest
	0 L.F.	1,640 L.F.	40 ft.

* Type "C" slopes are owned and maintained by private owners

** Type "B" slopes are owned and maintained by the H.O.A./Community Maintenance District

Note: These figures are approximations subject to refinement at the Tentative Map and Final Map stages.

LANDSCAPE / REVEGETATION CONCEPT

The Landscape / Revegetation Concept for Saddleback Meadows seeks to integrate the landscape of the proposed project with the site's existing setting and that of the surrounding foothill region. The use of landscape materials (with native and introduced plant pallets approved by the OCFA), and the manner in which the landscape design concept is integrated into the project will reinforce the ability of Saddleback Meadows to respond to the following:

1. Views into the community from surrounding properties;
2. Views from within the Saddleback Community;
3. The desire to create a community character which reflects the transitional nature of the property from a suburban to semi-rural setting.

Interspersing primarily sycamore tree groupings at strategic locations throughout the project will blend the different landscape zones and integrate this community into the surrounding preserved natural open space areas. A predominant image of nature, open space and natural vegetation will be accomplished via:

1. Tall trees and shrub massings planted on slopes between the residential enclaves and within natural open spaces, on slopes between homes, and along community streets;

2. A priority given to landscape plantings, i.e. views of the community shall be through the landscape which blankets the architecture of the neighborhoods, thus allowing the landscape (incorporating Sycamores, Oaks, and other appropriate trees) to predominate over the built environment; and

3. Side slope and street tree plantings in the neighborhoods to provide for visible tree canopies above the roof lines.

4. An interlace of the natural and introduced landscape as one fabric.

The Landscape Concept consists of five (5) functional, yet integrated, areas and zones as shown on the Landscape / Revegetation Concept Plan. These areas and zones are as follows:

1) El Toro Road Community Edge Area

The El Toro Road Community Edge area will play a key role in providing a physical and visual buffer for the project from off-site views. Predominantly manufactured slopes are planned along El Toro Road. In addition, a key component of this edge is the preservation of Aliso Creek and it's existing riparian habitat along El Toro Road, just north of the proposed main project entry point. Therefore, this community edge adjacent to the road will be landscaped with introduced and native compatible plants reflecting and continuing the riparian landscape found along the Aliso Creek/El Toro Road Corridor. The California Sycamore, commonly found in riparian areas, will be the major slope tree along the El Toro Road Community Edge.

Further up the manufactured slope, the landscape will transition from riparian plants to ornamental and native compatible plants suitable for erosion control and for buffering and screening. Tree plantings at side-yard property lines of the residential lots located at the top of slopes will reduce the visual impact of dwellings when viewed from off-site. Meanwhile these tree groupings are intended to maintain views for individual lots. Additionally, this edge treatment is designed to provide visual screening of the project from vehicles traveling along El Toro Road.

2) Community Slope Area

Manufactured slopes will be landscaped to visually enhance the project, to control erosion, and to provide buffering/screening where appropriate and feasible. Trees will be located at the top of slopes and clustered near side-yard property lines of residential lots as well as on the slope itself. Trees planted on the slope will take into consideration the maximum tree height at maturity relative to its vertical location to the top of slope, so that views from residential lots will not be impaired when slope landscaping reaches full maturity. This will blend the manufactured on-site slopes with off-site natural areas, integrating the community landscape into the surrounding environs. California Sycamore and some Coastal Live Oak trees will be used in strategic locations throughout the community slopes, continuing the community landscape theme.

Major oak woodland areas and areas of the olive grove which are not impacted by development and/or remedial grading activities are identified on the Landscape/Revegetation Concept Plan as preserved. These areas identify major preserved tree stands and tree groupings only. For identification of individual preserved and impacted oak trees, refer to Sweetwater Environmental Biologists' Oak Tree Inventory, dated December 21, 1995.

3) Fire Fuel Modification Zones

The proposed project is within a designated "Special Fire Protection Area", consequently, the development and construction of the project are subject to requirements designed to mitigate the increased fire hazard (Ordinance 3960). The Orange County Fire Authority (OCFA) requires a fuel modification program along all edges of residential development exposed to fire hazard areas. The fuel modification program addresses three zones consisting of a "Setback Zone", "Wet Zone", and a "Non-Irrigated Zone", as shown on the Landscape and Revegetation Concept Plan Map. Maintenance responsibility for the setback zone lies with the private owner. Maintenance responsibility for the other zones will be with the H.O.A./ Community Maintenance District.

Saddleback Meadows' residential edges contain both upslope and downslope conditions with a combination of both manufactured and natural undisturbed slopes. The intent of the fuel modification is to utilize these slopes as a transition area between natural open space (fire hazard areas) and the residential edge and to provide an acceptable level of fire safety. The revegetated portion of these slopes will be landscaped using native compatible plant species which will meet

the public safety goals of the OCFA, reinforce the naturalized appearance of the manufactured slopes, and satisfy the aesthetic requirements of the project. Fire Fuel Modification Zones are designed to reflect the native enhancement transition zone criteria for plant material selection. The plant palettes for both of the Fire Fuel Modification Zones and the Native Enhancement Transition Zone overlap and contain many of the same species and varieties of plants. These plant pallets will be required to meet the approval of the OCFA.

Setback Zone - Is a twenty-foot (20') wide area within the rear yard setback of all residential lots abutting the fuel modification zone. No combustible construction or materials will be allowed in this zone. This zone will be maintained by the individual homeowner. (Not shown on the Landscape / Revegetation Concept Plan, see Preliminary Fuel Modification Plan).

Wet Zone - is a fifty-foot (50') wide landscape area, beginning at the residential rear yard property line. This zone includes an automatic irrigation system and low fuel fire resistive, native compatible plants.

Non-Irrigated Zone - Fire fuel modification zones are 100' wide. However, several upslope areas with 50' widths will be permitted with O.C.F.A. approval. In natural undisturbed slopes, existing native planting will be non-irrigated, pruned and thinned. The OCFA requires that all "dead and dying" materials be removed, pruned and thinned in non-irrigated zones Manufactured slopes will be **temporarily** irrigated and landscaped with native and native-compatible plant materials. Landscaping is intended to naturalize over time with irrigation to be abandoned upon establishment and naturalization.

Application of the Orange County Fire Authority's (OCFA) fuel modification criteria to the area located along the upper north-easterly project boundary, dictates that the fuel modification zone traverse off-site onto private property. This will require that an easement be obtained from the adjacent property owner, for the purposes of fuel modification, prior to the issuance of a grading permit. Maintenance responsibility for any off-site fuel modification zones will be the same as for on-site fuel modification zones (i.e. H.O.A. / Community Maintenance District).

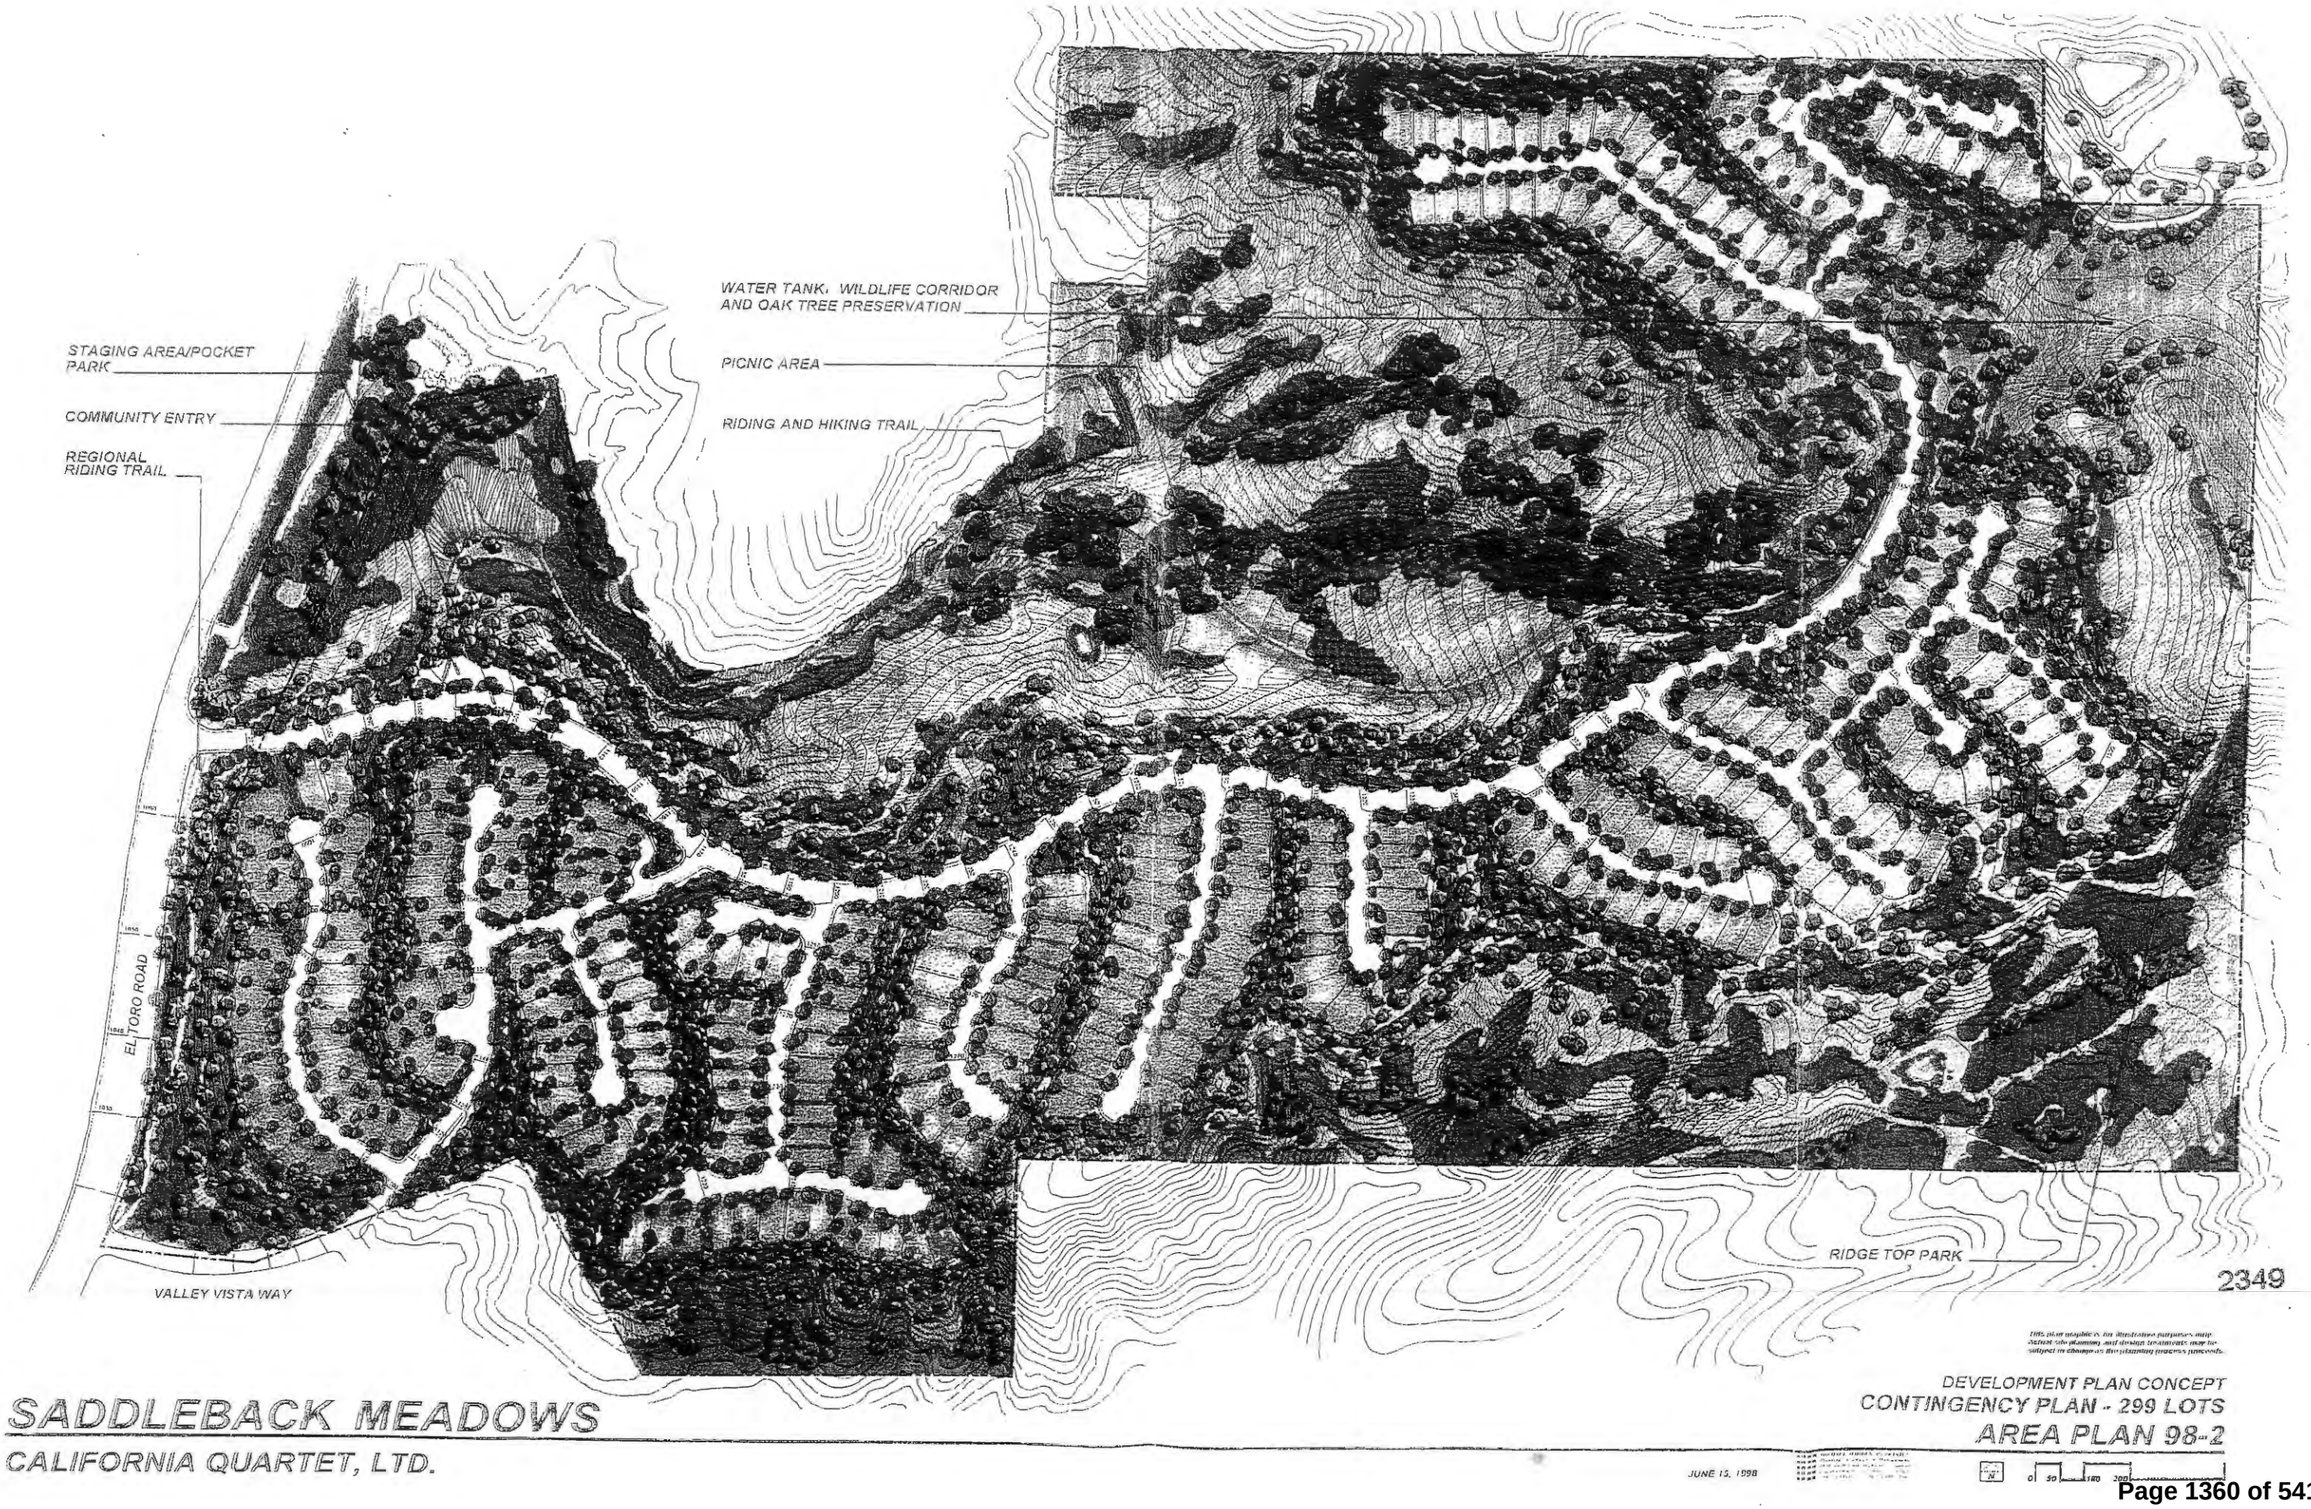
4) Native Enhancement Transition Area

Natural areas disturbed by remedial grading and located within designated open space areas will require revegetation with native or naturalized plant material to re-establish the previous coastal sage scrub (CSS). A high priority will be placed upon selecting plant material which is indigenous to the undisturbed natural areas and surrounding areas and which will provide a landscape with as much habitat value as is practical.

5) Existing Undisturbed Vegetation Area.

Open space areas undisturbed by remedial grading activities will be preserved and incorporated into the overall landscape concept. Only minimal clean-up of abandoned agricultural uses , if

necessary is planned. The elimination of livestock grazing on the property will allow the natural transition and succession of grasses to CSS and Chaparral plant communities over time. The majority of Oak Woodland mitigation will occur in this area within stands of existing non-native vegetation.



SADDLEBACK MEADOWS
RURAL CHARACTER STATEMENT

Purpose and Intent

The purpose and intent of this "character statement" booklet is to express the preliminary community design concepts that will eventually create the visual and physical character that the Saddleback Meadows community will have. This booklet addresses the basic design elements and considerations necessary in developing any community character, and ties those elements and considerations to the Saddleback Meadows community. It responds to the project teams intent for a rural community theme and character, as well as responding to design considerations expressed by Saint Michael's Abbey, Hidden Ridge residential community, and the Ramakrishna Monastery. It is a preliminary study intended to reflect the underlying design vocabulary that has been a consistent component of all land use and site planning studies conducted for this property.

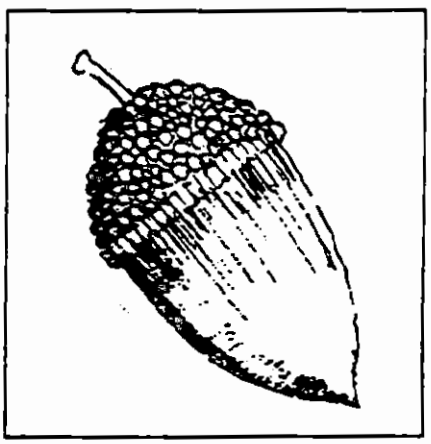
This "Rural Character Statement" is intended to be used as a guideline for community design and as a "tool of measure" to be used by the Planning Commissioners during the review of the Use Permit. The Use Permit requires a precise grading plan, detailed landscape plans, fuel modification plans and programs, architectural plans for all structures, and the precise location of all building and structures.

The planning and design of any proposed community is a combination of the physical site plan on the land and the design parameters initially established relating to the desired community character. The end result is a community whose physical character and composition relates directly with the landscape, streetscape and architectural fabric.

Approaching the Saddleback Meadows project with this philosophy, and with the desire to plan and design a community reflecting the qualities and character of a rural townscape, the initial community design elements establishing the rural character are presented in this booklet.

The "Rural Townscape" Character

The term "rural character" conjures up images of small towns set upon the land amidst a country setting. Winding roads are enveloped in trees and tree canopies. Rolling hills, field walls of stone and rock, woodlands, grasslands and fields surround the towns and provide a separation between each town. Natural areas outside of the towns are enjoyed by the people of the area for hiking, bicycling and horseback riding, exploring and treasure hunting, picnics, and rides in the country. Seasonal color through changing foliage and wild flowers accent the landscape, further emphasizing the character and appeal of the rural townscape and surrounding environment.



Villages and towns are visible and apparent within the landscape, yet blend with the land through a multitude of introduced, as well as natural features and elements. These include:

A. Country roads that transition into a town's main street;
B. Open fields or woodlands filtering into the outskirts of the town through open fields and parks, eliminating the visual boundary of the town and the country;
C. In hillside environments, steep winding streets that climb with the hillside;
D. Streetside elements such as wood rail fencing, simple wooden signs, and old street lamp;
E. The informal arrangement of trees and other plantings, whether curbside or used in other manners, accenting the natural appeal rather than rigid uniformity; and
F. Buildings and related architecture presenting softer earth tone qualities and utilizing materials that blend and are in harmony with the landscape and the natural elements.

The Rural Character of Saddleback Meadows

The character of the Saddleback Meadows community will be observed from two perspectives, these being:

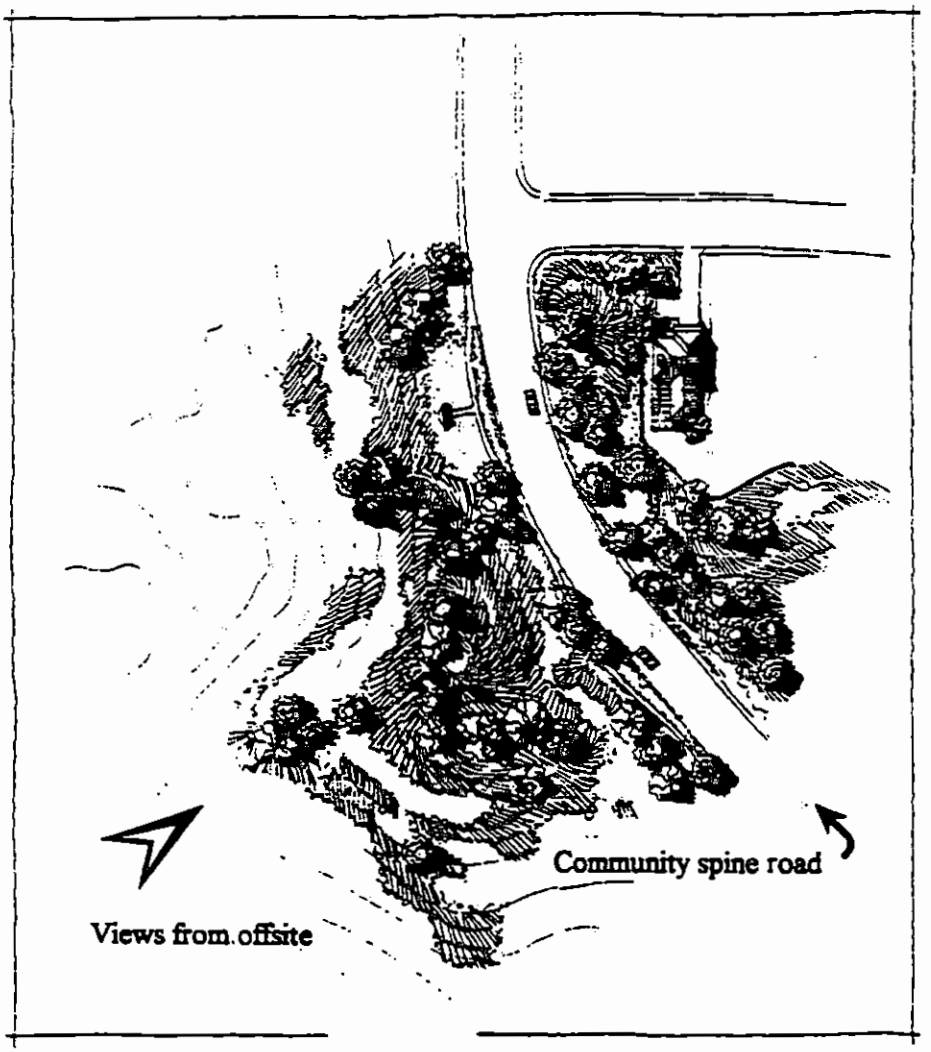
A. The "macro" scale:
    1. Public views into the community from off-site (El Toro Road, Saint Michael's Abbey, Hidden Ridge and the Ramakrishna Monastery); and
    2. Views of the community from within.

B. The "micro" scale:
    1. Views of community elements along highly visible public edges noticeable by the passing public, such as the El Toro Road edge and natural slopes adjacent to Saint Michael's Abbey, Hidden Ridge, and the Ramakrishna Monastery; and
    2. Visual elements and design details throughout the community noticeable from within the community.

The Saddleback Meadows community will incorporate community wide design elements and features reflective of the rural character. These features and elements will respond to the "macro" and "micro" levels of concern, as well as addressing the design considerations expressed by the adjacent neighbors.

A primary design consideration in establishing the rural character of Saddleback Meadows is presenting a landscaped enveloped community when viewed from the surrounding areas and from within. In response to this design intent and the interests of the Abbey, Hidden Ridge and the Monastery, specific grading techniques, site planning, and landscape elements will be incorporated within the plan. The intent of these features will be to enhance the views of Saddleback Meadows from the surrounding areas. This will be accomplished through:

1. Creative contour grading that emphasizes and expands upon landforms;
2. Berming at select and appropriate locations to blend with natural terrain features while providing screening and buffering views into the project site from the Abbey, Hidden Ridge and the Monastery;
3. Creative site planning techniques that minimize rows of backyards along highly visible edges, incorporates slopes, landscape zones and landforms between homes and the surrounding neighbors, and neighborhood streets that climb with the terrain rather than flat roads common to non-terrain sites; and
4. An aesthetic community wide landscape that provides visual enhancement through significant perimeter and interior plantings, providing filtered views of the community from the surrounding areas and responds to seasonal changes.

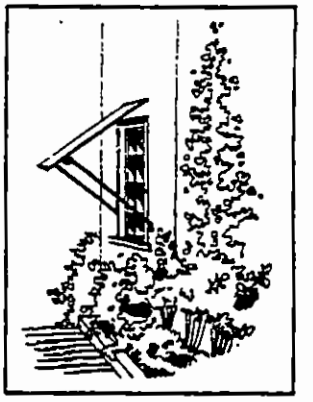


Numerous design features work together to establish the rural character. Contour grading with landform enhancement provides for edge treatments responsive to the natural terrain. The community's spine road alignment responds to the terrain and allows for landscape plantings on both sides to create the rural experience while driving through the community. Creative site planning responds to the intended rural character with setbacks from the spine road.

Contour grading and the creative use of berms and landforms along the community's spine road provide for screening and buffering of views into the project site from offsite.

Based upon the above described design considerations, the following design elements will be part of the Saddleback Meadows community to respond to views into the community from the surrounding areas and the desire to create the rural community character:

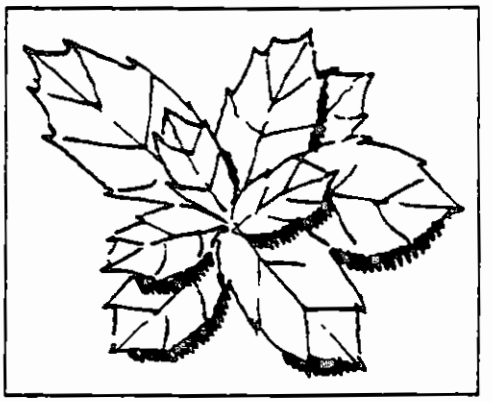
A. Blend the homes, streets and community elements with the natural surroundings. This is accomplished through:
   1.) Color compatibility of architecture with the natural landscape;
   2.) The use of natural and natural-like materials in architecture and streetscape elements;
   3.) Site planning and grading design encouraging landforms and berming, particularly along main community streets; and
   4.) An interlace of the natural and introduced landscape as one fabric.



B. Predominant image of green, nature, open space and plant materials, accomplished via:
   1.) Tall trees and shrub massings planted on slopes between the residential neighborhoods and within natural open spaces, on slopes between homes, and along community streets;
   2.) Priority given to landscape plantings, i.e. views of the community shall be through the landscape which blankets the architecture of the neighborhoods, thus allowing the landscape (incorporating Sycamores, Oaks, and other appropriate trees) to predominate over the built environment; and

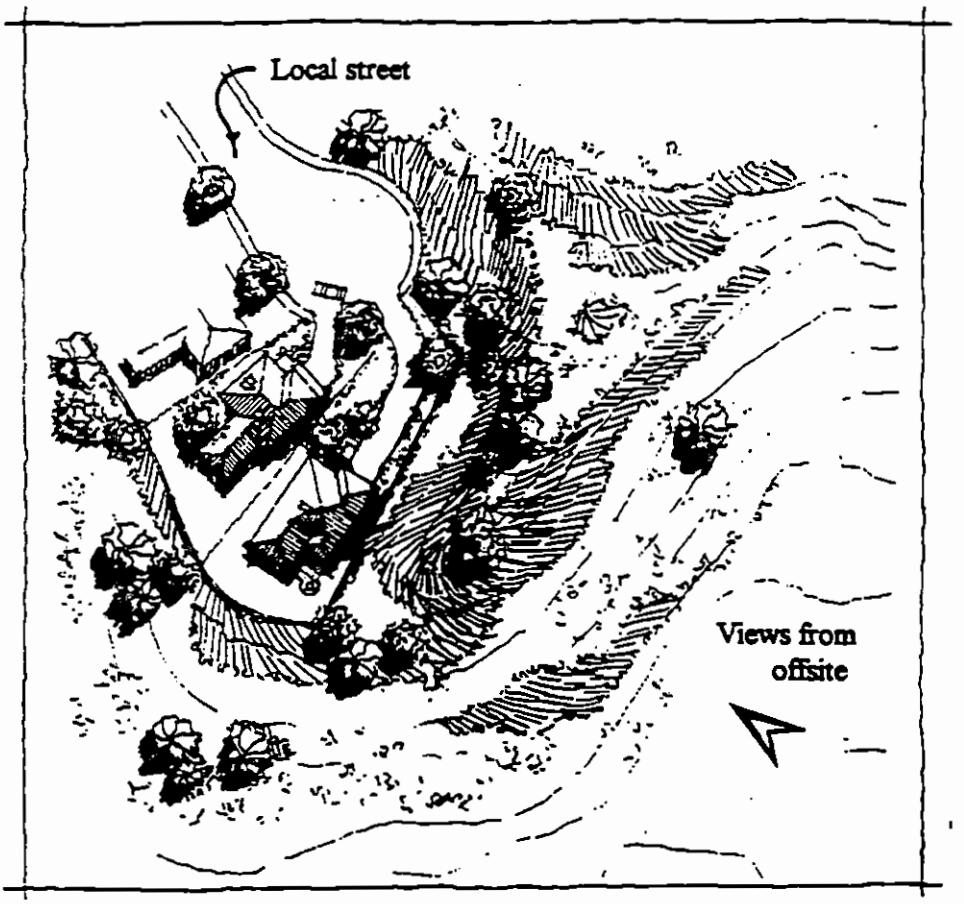
3.) Side slope and street tree plantings in the neighborhoods to provide for visible tree canopies above the rooflines.

The following design parameters will be part of Saddleback Meadows in response to views from within the community and the desire to create the rural community character:

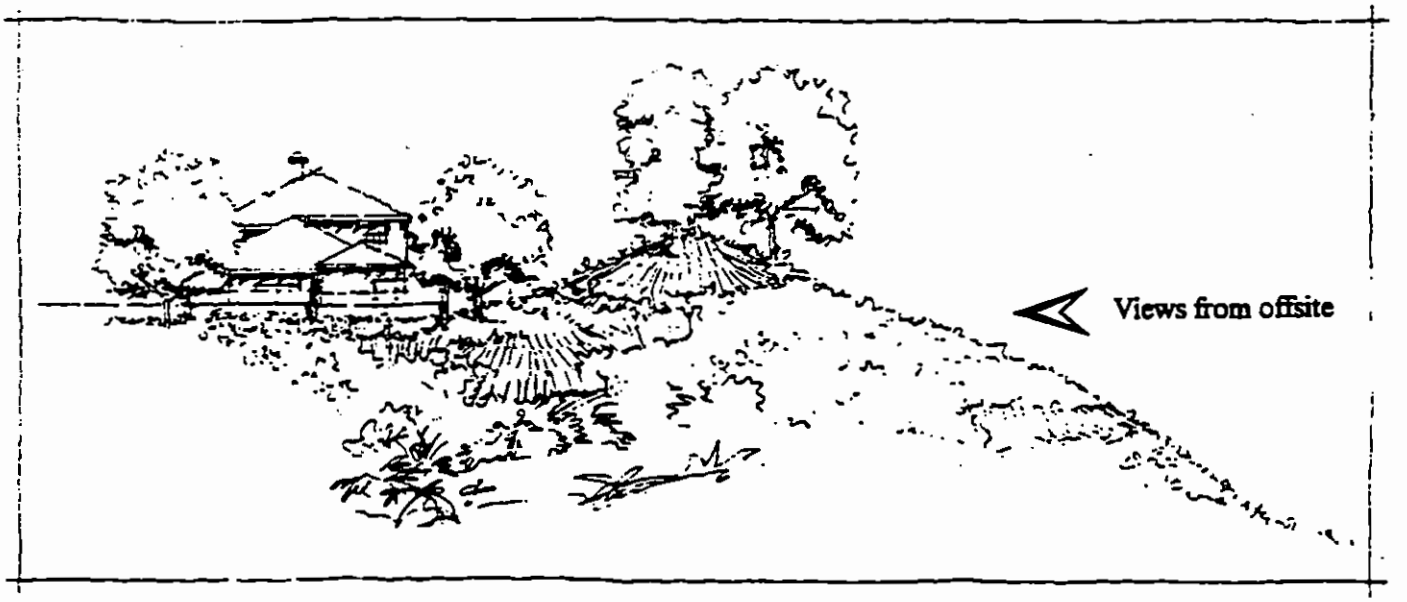


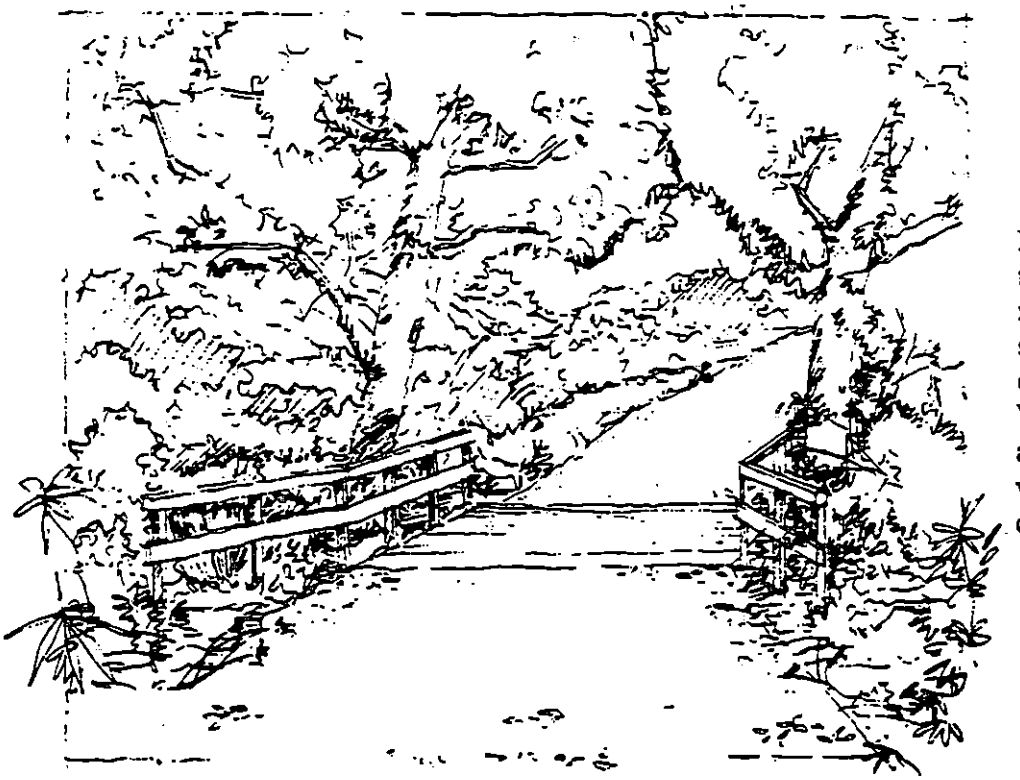
A. View windows into natural open spaces from the community streets and "pocket parks";
B. Informal plantings of landscape elements along the community streets, slopes and within the neighborhoods;
C. Blending of landscape elements and landform features transitioning from the natural to the man-made;
D. Movement in three-dimensions through landforms and plant massings, curvilinear, winding streets, and grade elevation in streets to accommodate the natural terrain;
E. Architecture: roofs, facades, design elements and details having a theme of natural materials and elements; and
F. Visual imagery along the community streets:
    1.) Informal slope plantings with tall canopy type trees for visual enclosure, presence and seasonal color;
    2.) Natural appearing materials such as wood rail fencing, stone/rock walls;
    3.) Narrow meandering walks and trails;
    4.) Minimal but thematic street signs and street lighting; and
    5.) Neighborhood tree planting requirements.

Based upon the above description of design intent in creating the rural character for the Saddleback Meadows community and responding to neighboring design interests, the following pages provide examples of design features and elements of the Saddleback Meadows project.

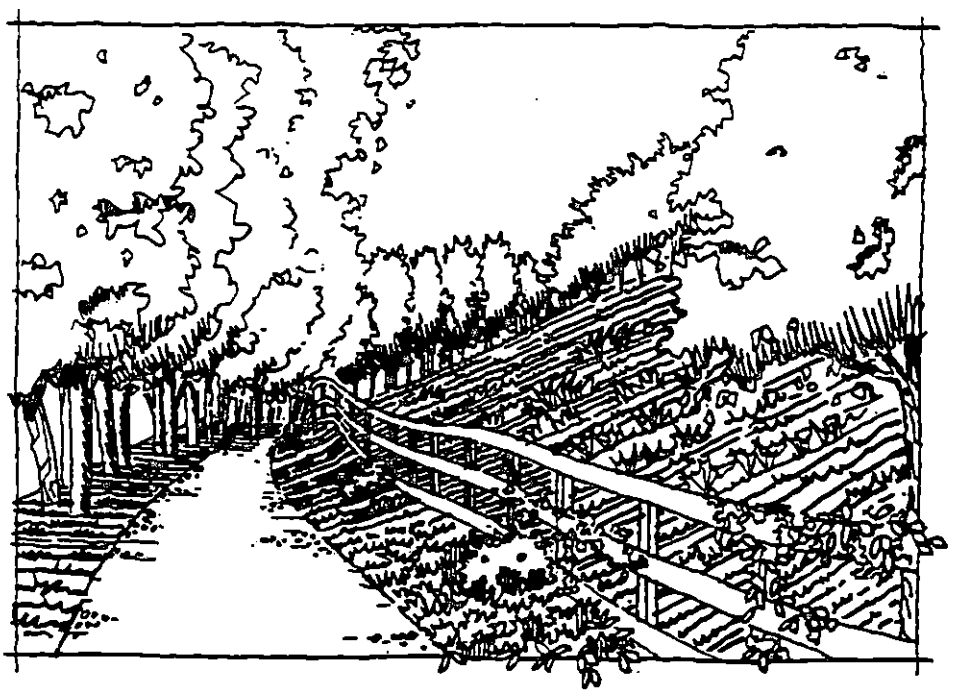


Consideration given to landforms and the replication of the existing terrain features along select project edges provides for a sense of "enclosure" for the neighborhoods while buffering views into the project from surrounding areas.



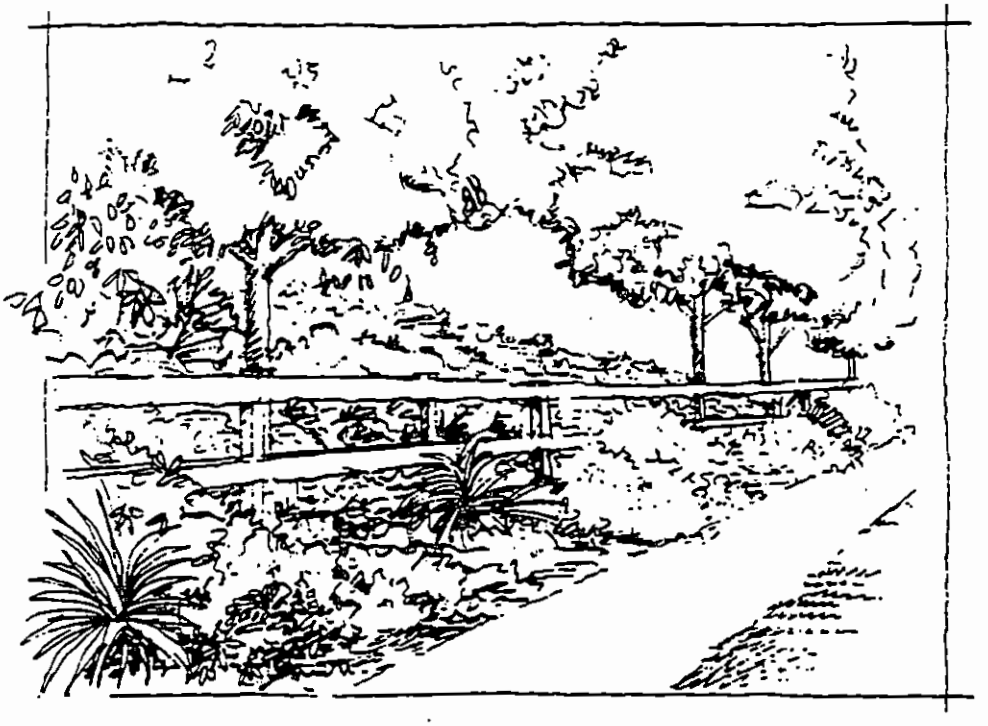


Riding, hiking and bicycling trails provide access to natural open spaces and should feature natural elements and materials. Wooden bridges provide access across swales while visually reinforcing the rural character.



Horse trails and/or bicycle trails can be incorporated as part of the community theme. Landscape setbacks from streets and thematic fencing encourage the rural flavor of the community.

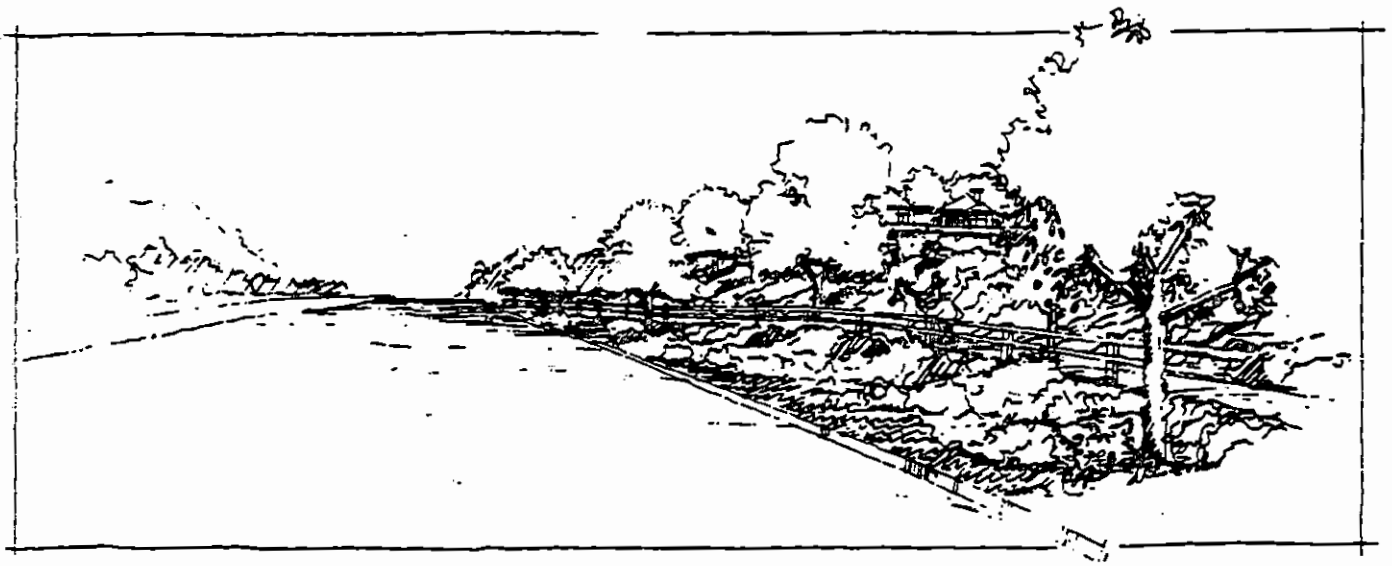
Meandering sidewalks along the community's spine road, enveloped by trees and landscape plantings, provide for an enjoyable walking experience through the community.



Visual accents of seasonal color in the landscape and natural appearing materials in fences and streetscape elements encourages the rural character within the community.

Simple wood-like sign posts provide information and direction while reflecting the desired character of the community.

Visual detail along public edges (El Toro Road) emphasizes the rural nature of Saddleback Meadows. Wood-like fencing, canopy trees and slope planting reflect the community theme and allow for filtered views into the hills beyond.



ATTACHMENT F

ANALYSIS OF PLANNING ISSUES

Density

The issue of density was the foremost issue discussed by the Planning Commission and Board of Supervisors in 1996. Saddleback Meadows may be regarded as a rural transition area because of its location along a heavily traveled road (El Toro Road) and at the western edge of the F/TSP area. The General Plan designates Saddleback Meadows and neighboring sites to the south and west as "Suburban Residential." Neighboring property to the north and east are designated as "Rural Residential." It is also separated from much of the F/TSP area by a major ridgeline to the east. See Attachment B, Regional Map.

The current zoning for this property (see Attachment G) allows 705 dwelling units. The Community Profile map would provide up to 444 dwelling units for Saddleback Meadows. The existing density for neighboring properties Portola Hills and Hidden Hills/Hidden Ridge, if applied to this site, would allow 666 dwelling units for Saddleback Meadows. The F/TSP zoning for the Upper Aliso Residential District to the north would allow 222 dwelling units for Saddleback Meadows while the F/TSP zoning for the Trabuco Canyon Residential District to the east would allow 111 dwelling units for Saddleback Meadows. Therefore, 299 units, or 1.3 dwelling units per acre, may be a reasonable density for this location.

Grading

Saddleback Meadows is a geologically unstable site. A landslide could naturally occur at any time and such a slide could impact adjoining properties. The proposed grading, when completed, is expected to eliminate the threat of slides to onsite residents and adjoining property owners. In order to accomplish this, extensive remedial grading is required. (Any significant project for this site is going to require extensive remedial grading due to the existing geological problems.) For the 705 dwelling unit project, there is 2.6 million cubic yards of conventional grading and 8.9 million yards of remedial grading. The Area Plan is proposing 2.1 million cubic yards of conventional grading and 6.8 million cubic yards of remedial grading. All grading is to take place on the site (i.e., no off-site trucking of material).

Open Space

The approved 705 dwelling unit project provides 129 acres of dedicated open space. The proposed Area Plan provides 158.5 acres of dedicated open space: 90 acres dedicated in fee for O'Neill Regional Park and 68.5 acres of restricted scenic preservation easement dedicated to the County. Some of this open space area (mostly in the scenic preservation area) will be disturbed during development.

After development is completed, these graded areas would be landscaped to have a natural looking appearance and remain undisturbed thereafter except for possible County required and approved fuel modification.

The dedicated open space area provides a very important east-west wildlife corridor, which is a major Natural Communities Conservation Program (NCCP) environmental goal in this region. A minor north-south wildlife corridor is also provided. The 705 dwelling unit project does not provide for any wildlife corridor.

Within the dedicated open space, the applicant is proposing about one mile of improved recreational trails, specifically:

- A missing link in the Live Oak Canyon Regional Riding & Hiking Trail.
- A connecting trail between Aliso Creek Regional Riding & Hiking Trail to the Viewpoint Spur Trail and O'Neill Regional Park.
- A staging area near El Toro Road.

Consistency with the F/TSP

The existing F/TSP states that the Bridlewood Residential District is exempt from all the other regulations and guidelines of the F/TSP. ZC98-3 proposes to maintain that exemption. However, the proposed project is largely, although not entirely, consistent with the other regulations and guidelines of the F/TSP for the following reasons:

1. The F/TSP Resources Overlay Component calls for the preservation of wildlife corridors, oak woodlands, major ridgelines, and scenic roadway corridors. The Area Plan complies with this except for a few of the oak trees being removed because of necessary remedial grading.

2. The F/TSP requires the dedication of 66 to 70 percent of a property for open space. The Area Plan proposes to dedicate 71 percent.

3. The F/TSP limits conventional grading volume to a maximum of 9,000 cubic yards per dwelling unit. The Area Plan averages out to 7,023 cubic yards of conventional grading per dwelling unit.

4. The F/TSP Development & Design Guidelines have largely been followed by the Area Plan via the Rural Character Statement, Landscape and Revegetation Concept, and Contour Grading Concept in AP 98-2.

The only significant Specific Plan provision that the proposed development is not in compliance with is the 30-foot limitation on the height of manufactured slopes. The number and height of the manufactured (see slopes Attachment H) are necessary to correct geological hazards and minimize grading in open space areas.

Integrity of F/TSP

At the October 7, 1998 Planning Commission public hearing, Commissioner Moody presented oral and written objections to the proposed project (see Attachment J). His principal objection was that the proposed project was violating the integrity of the F/TSP. He stated that because the

property is within the Specific Plan boundary, it should comply with all the regulations and guidelines of the F/TSP. Otherwise, it should be taken out of the Specific Plan area. He specifically stated that the project should have much lower density and less grading.

The issue of density and grading are addressed above by staff. The suggestion that Saddleback Meadows be taken out of the Specific Plan area is one that the Board of Supervisors could consider but staff does not recommend it at this time.

Conclusion

The proposed zone change and area plan, with 32 conditions of approval recommended by the Planning Commission and staff, will provide major public benefits in the form of additional regional park land, recreational trails, and an NCCP wildlife corridor. The project, as conditioned, will be in substantial overall compliance with the Foothill/Trabuco Specific Plan. The density cap of 299 is reasonable given existing residential densities in the Portola Hills and Hidden Ridge/Hidden Hills developments as well as what is allowed by the General Plan for the property. Compared to the approved project allowing 705 manufactured homes, the proposed project is a substantial reduction in the number of homes and amount of grading involved.

ATTACHMENT G

EXISTING BRIDLEWOOD RESIDENTIAL DRAFT REGULATIONS

3.0 Bridlewood Residential (BWR) District

3.1 Purpose and Intent

The Bridlewood Residential District is established to recognize the existing zoning and tract map approvals for the Bridlewood (Saddleback Meadows) property which permit the development of 705 manufactured homes on the site. While the Board of Supervisors does not believe that these approvals are consistent with the Goals and Objectives of the Specific Plan, the property owner has recently declared bankruptcy. A legal stay precludes the Board of Supervisors from taking any action related to the property that would affect its value. However, the provisions of this District require that the Specific Plan be amended to determine an appropriate density cap and District Regulations for the property in the event that it cannot be developed in a manner which is consistent with the approved zoning and tract map.

3.2 Special Provisions

a. As long as the site is developed in accordance with the existing Saddleback Meadows Planned Community zoning (Zone Change 84-3P) and Recorded Tract 10692, the project site shall be exempt from all of the Regulations and Guidelines included in this Specific Plan other than those provided for by this District.

b. Any development proposal which deviates from the approved Saddleback Meadows Planned Community zoning and Recorded Tract 10692 and which cannot be found to be in substantial compliance with these approvals shall require a Specific Plan Amendment which shall: 1) determine an appropriate density cap for the property; 2) establish new development regulations for the Bridlewood Residential District; and 3) be consistent with all of the provisions of the Specific Plan.

c. Prior to the issuance of any grading permits for the subject property, an Initial Study shall be conducted, per the requirements of CEQA, to determine if additional environmental documentation is required.

3.3 Uses Permitted

Per the Saddleback Meadows Planned Community (Zone Change 84-3P).

3.4 Site Development Standards

Per the Saddleback Meadows Planned Community (Zone Change 84-3P).

ATTACHMENT I

PLANNING COMMISSION MINUTES, RESOLUTIONS, STAFF REPORTS AND CORRESPONDENCE

PLANNING COMMISSION MINUTES

Date: October 7, 1998

Time: 1:34

Item 1.: Public Hearing – Zone Change 98-3/Area Plan 98-2, Addendum PA980103, of California Quartet.

Executive Officer Mathews introduced the project. He discussed the order of the staff presentations.

County Counsel representative deMayo reported on direction to staff by the Board of Supervisors.

Mr. Mathews discussed the history of the proposed project and clarified the intent of the Foothill/Trabuco Specific Plan (FTSP) in relationship to the original and proposed project. He discussed the amendment to the FTSP. Mr. Mathews discussed the letter from Commissioner Moody to the other Commissioner's. (See attachment 1).

Senior Planner McGill gave the staff presentation. He noted that a revision to the draft Planning Commission Resolution was handed out prior to the public hearing. Mr. McGill discussed the compliance of the proposed project with the Specific Plan regulations proposed by the applicant. He stated that the manufactured slopes were not in compliance with the FTSP but overall the project was in substantial compliance with the FTSP.

Executive Director of the Nature Reserve of Orange County (NROC) Tim Neely, presented background information on the NROC. He described the gnatcatcher as a song bird which is listed on the endangered species list. Mr. Neely stated that there is coastal sage scrub on the project site and that the natural habitat of the gnatcatcher is coastal sage scrub. Mr. Neely discussed the 4d permit rule that the applicant would have to apply for through the Fish & Wildlife Service. He stated that it has always been assumed that there were gnatcatchers in Saddleback Meadows.

Mr. Mathews stated that the project site has been utilized by man for a long time. He discussed the value of open space and the value that the Resource Agencies have placed on the project site. He noted that the project site is a challenge to develop.

Mr. McGill defined natural open space as meaning no grading after development is complete. He stated that with the amendment to the FTSP staff hoped to clarify the definition of natural open space. He stated that after the development is completed the area should still look natural except for the fuel modifications.

Commissioner Moody stated that he thought "natural open space" was no grading.

Mr. McGill responded that the term in the FTSP is not defined and has always been debated.

Senior Planner Brantely gave a brief presentation. He discussed the five issues raised at the previous public hearing. 1)Public Notification Requirements; 2) Recirculation of Certified Final Subsequent EIR 566; 3)Procedural errors; 4) Wildlife Corridor/NCCP; and, 5) Consideration of other alternatives. He stated that no new issues were identified in the response to comments. Mr. Brantley stated that the addendum prepared is sufficient for EIR 566.

Mr. Neely discussed the wildlife corridor and how it fits into the whole NROC. He pointed out that the wildlife corridor on the project site is the connection between the Central/Coastal Subregion and the Southern Subregion. He stated that the wildlife corridor proposed on the project site is the one requested by U.S. Fish & Wildlife Services. He pointed out the previously proposed wildlife corridor and noted that the Resource Agencies determined it was not acceptable. Mr. Neely stated that the Resource Agencies have not made a statement of approval or denial. He stated that any coastal sage scrub taken by this project is considered to be occupied and that take of habitat on this property would have to be approved by the U.S. Fish & Wildlife Services under a 4d Permit. He noted that the project site does not required a 4d Permit at this time. Mr. Neely stated that no new information has come forward on this project.

Frank Elfend, representing the applicant, stated that the previous speaker adequately address issues raised at the previous public hearing. He discussed the status of the negotiations and presented a letter from Supervisor Spitzer. (See attachment #2). He stated that he did attend the FTSP Review Board meeting and discussed his position with the Review Board. He discussed Mr. Connor's comments to the FTSP Review Board and his presentation to the Board of Supervisors at their public hearing yesterday. He discussed a letter written to Mr. Mathews from the FTSP Review Board requesting additional information be sent to them. He discussed the memo dated October 6, 1998 from County Counsel deMayo. (See attachment 3).

Mr. Mathews addressed the letter sent to him by the FTSP Review Board. He stated that the information they requested was included in the materials sent to them. He stated that the Review Board was given the information they were seeking.

William Ross, Attorney representing California Quartet, entered his comments into the record. (See attachment 4).

3:10 P.M.: The Commission took a break.

3:25 P.M.: The Chairman called the public hearing to order.

3:25 P.M.: The Chairman opened the public hearing.

Ed Connor, representing the Abbey and the Vedanta Society, stated that a new issue has been found and the Commission was be left with no choice but to require a new EIR be prepared. He stated that he personally hired a gnatcatcher surveyor and on September 23, 1998 he found two gnatcatchers on the project site. He noted that the surveyor has notified the Resources Agencies. He stated a new Subsequent EIR is required. Mr. Connor stated that the approval of 299 dwelling units will be worse than the original 705 units. He stated that the discharge of water has not been studied. Mr. Connor stated that if the Commission approved this project with 299 dwelling units it will ruin his clients way of life. Mr. Connor handed out an MOU that he requested the applicant sign before today's public hearing. (See attachment 5). Mr. Conner stated that they had a deal with the applicant and they backed out of the deal. He stated that Mr. Oliver was not authorization to sign any paper for the property owners.

Mr. Mathews stated that the coastal sage scrub is home to the gnatcatcher and we have indicated that the coastal sage scrub is occupied. He noted that Mr. Brantley and Mr. Neely have also previously indicated that the coastal sage scrub is occupied.

Mr. Mathews noted that he was contacted this morning by Tom Wilson of Silverado Canyon opposing the potential approval of the proposed project by the Planning Commission and the Board of Supervisors.

Adam Smith, a new appointed member of the FTSP Review Board, discussed the type of person he was. He stated that he was not comfortable making a recommendation in the time he was allotted. He stated that it was important for FTSP Review Board to make an intelligent recommendation. He requested a continuance to give appropriate time to the information that they recently received.

Bob Bennyhoff, resident of Orange Park Acres, stated that the proposal has been before numerous Panels, Commissions and Board of Supervisors. He stated that this plan seems to fit the FTSP and CEQA. Mr. Bennyhoff stated that he knew some of the newly appointed Review Board members and he suspected that the new Board of Review would disagree with this proposal also. He stated that this project case would probably wind up in court no matter what decision was made. He asked how much longer are we going to examine a piece of property? He noted that this property has been examined more than any other property in Orange County. Mr. Bennyhoff stated that a Geotechnical Engineer says this project can be done. He noted that there was no FTSP Review Board for over a year. He stated that the Planning Commission action is not final and that the Board of Supervisors will hear this project on November 3, 1998. He requested that the Planning Commission take a stand and let the Board of Supervisors hear the project and stand back and watch what happens.

Mr. Elfend offered rebuttal. He stated that the gnatcatcher issues has been addressed by Mr. Neely and Mr. Mathews. He stated that the only agreement acceptable to Mr. Connor is his agreement. He discussed the agreement with the Abbey to grade.

Pike Oliver, TPG Management, representing California Quartet LLC, handed out a letter authorizing him to represent the property owners. (See attachment 6). He stated that he participated in the discussion in good faith. Mr. Oliver stated that the Chambers Group was hired to conduct gnatcatcher survey and 12 surveys were conducted and no gnatcatchers were found. He listed the dates that the surveys were taken and noted that the surveys were taken under the specification of the U.S. Fish & Wildlife Service.

4:00 P.M.: No one else wishing to be heard, the Chairman closed the public hearing.

Mr. Mathews spoke to the Review Board's request for a continuance. He stated that the comments from the Review Board would be included in the Board of Supervisors submittal. He noted that staff was in receipt of a transmittal from Ray Chandos, Secretary/Treasurer of the Rural Canyons Conservation Fund. (See attachment 7).

Action 4:10 P.M.: The motion of Goacher, seconded by Long, to adopt the draft Resolution prepared by Environmental and Project Planning Services staff regarding EIR Addendum PA980103; and, Adopt the draft Resolution prepared by Current Planning Services staff regarding AP98-2; and, approve the draft Ordinance regarding ZC98-3 with modifications to the Special Provisions therein to read as follows:

3.4 Special Provisions

a. The minimum amount of open space shall be 70% (155 acres). Such open space shall be defined as follows: The open space area remaining after approved development is completed that has a natural appearance and will remain undisturbed thereafter except for possible approved fuel modification. Such areas may include, depending on design and landscaping, parks, manufactured slopes, and recreation trails.

b. Any development shall be in compliance with every regulation of this District (BWR) and shall be exempt from all of the Regulations and Guidelines included in this Specific Plan other than those provided for by this District.

c. Prior to the approval of any tentative subdivision map, an area plan addressing entire District shall be approved.

d. A preliminary grading permit may be issued in compliance with the Grading & Excavation Code subsequent to the approval of an area plan and tentative tract map which creates residential building sites. The Grading Official shall require a performance bond prior to the issuance of the grading permit.

e. Prior to the issuance of any building permits for residential structures, a use permit shall be approved by the Planning Commission per Zoning Code section 7-9-150.

f. Only if all special provisions listed above are clearly implemented in the plan submitted for Planning Commission consideration, then, the maximum number of units the Planning Commission may consider is 299 single-family detached dwellings.

A roll call vote was taken

PLANNING COMMISSION MINUTES

Date: September 22, 1998

TIME: 1:35 P.M.

Item 2.: Public Hearing – Zone Change/Area Plan No. 98-3/98-2 Addendum PA980103, of Saddleback Meadows.

Executive Officer Buzas introduced the item. He stated that staff was requesting that this item be continued to October 7, 1998. He noted that the Board of Supervisors will hear this project on October 6, 1998.

1:35 P.M.: The Chairman opened the public hearing.

1:35 P.M.: No one wishing to be heard, the Chairman closed the public hearing.

Action: 1:35P.M.: The motion of Nielsen, seconded by Long, to continued Zone Change/Area Plan 98-3/98-2 to October 7, 1998, was carried by unanimous vote

DATE: 8-25-98
TIME: 1:34 P.M.

Item 1.: Public Hearing – Zone Change 98-3, Area Plan PA98-2 Addendum PA980103, for Saddleback Meadows.

Executive Officer Buzas introduced the project.

Senior Planner McGill stated that the proposed project is for a Zone Change and an Area Plan. He discussed the purpose of each application. He stated that there are three main issues: density, grading and open space. He presented background information for the three main issues.

Mr. McGill discussed why staff felt that this area was a transition area. He noted that the Foothill/Trabuco Specific Plan does not say that the Saddleback Meadows area is a transition area. He stated that it does say that Saddleback Meadows is exempt from the Foothill/Trabuco Specific Plan for developing 705 units per its Recorded Tract Map. Mr. McGill stated that the proposed density is 299 units and is consistent with the General Plan and Community Profile.

Mr. McGill pointed out manufactured slopes and contour elevation changes on the exhibit and discussed why any significant development here would required a large amount of remedial grading. He pointed out the east west wildlife corridor which would be an important part of the NCCP on the exhibit. He pointed out the designated scenic preservation easement and the area to be dedicated as regional park.. (See Attachment 1). Mr. McGill discussed the benefits of hiking and bicycle trails. He stated that improvements within the final park boundaries and final trail alignment would be determined at a later date by Harbors, Beaches, and Parks.

Commissioner Moody read into the record a portion of the Foothill/Trabuco Specific Plan. (See Attachment 2). He asked how staff can say that Saddleback Meadows is exempt from the Foothill/Trabuco Specific Plan when this is a new project and not the original project proposed.

Mr. McGill responded that the applicant is requesting a zone change and it will be exempt for the Foothill/Trabuco Specific Plan.

Commissioner Moody stated that all regulations must be in accordance with the Specific Plan. He asked staff to get back to the Commission in writing before September 22, 1998 with an explanation.

Mr. Buzas responded that this is the applicants project and they are proposing to be exempt.

Commissioner Moody asked why the Commission is looking at this project in the middle of negotiations. He stated that this project should not be considered by the Planning Commission until after October 6, 1998.

County Counsel representative deMayo responded that the Board of Supervisors in March directed staff to process the applicants proposal of 299 units and be back to the Board of Supervisors by November 1998.

Commissioner Moody discussed the applicants proposal and stated that the Planning Commission should have been informed of the negotiations going on.

Commissioner Moody and deMayo discussed the negotiations and the timing of the project and why this project was brought before the Planning Commission today.

Commissioner Nielsen asked if there were any litigation associated with this project.

Mr. DeMayo responded yes. He stated that there was one litigation against the County by the applicant and one litigation by the Vedanta Society.

Commissioner Nielsen requested a close session under the Brown Act with County Counsel to know what should be said by the Planning Commission due to the litigations.

Commissioner Moody felt that the Planning Commission should be given information regarding negotiations before hearing this project.

Senior Planner Brantley gave the staff presentation. He stated that the proposed development of 299 units replaces the previously approved project of a 705 unit development. He stated that an EIR was prepared for the original request of 705 units. He stated that staff determined that an Addendum to the EIR was needed for the 299 unit project. Mr. Brantley stated that the currently proposed Contingency Plan for 299 units was examined previously for this site in the form of alternatives contained in proposed Final EIR 561 and Certified Subsequent EIR 566, although with slightly differing site plans. He stated that Alternative 4 from Certified SIER 566 and Alternatives 8 and 9 from Proposed FEIR 561, were previously evaluated. He noted that the Contingency Plan results from an extended evaluation by the applicant to address environmental concerns previously analyzed by reconfiguring the proposed project density, land use and location.

Mr. Brantley stated that none of the conditions described in Section 15162 calling for the preparation of a subsequent EIR have occurred. He stated that only minor technical changes or additions are necessary to make the EIR under consideration adequate under CEQA. He stated that the changes made by the Addendum do not raise important new issues about significant effects on the environment. Mr. Brantley stated that the changes related to the proposed project are of a minor nature. He stated that only minor technical changes to FEIR 566 are necessary in order to properly address the current project.

Planner III Grieman discussed key elements of the impact analysis including; land use compatibility; grading; biological resources including; wildlife corridor; NCCP; riparian resources; coast live oak woodland; Riverside fairy shrimp; coastal California gnatcatcher and Aesthetics. Mr. Grieman stated that the remaining environmental analysis checklist categories, including water/hydrology, transportation and circulation, air quality, noise, cultural/scientific resources, recreation, hazards, public services, and utilities and service systems were also analyzed in the Addendum. He stated that mitigation measures pertaining to these impact categories have been carried forward from Certified SEIR 566 to the Addendum.

Commissioner Moody stated that since the Addendum is connected to EIR 566 do we have to notify the public that this project is related to EIR 566. He asked what the legal requirements were.

Mr. DeMayo responded that no circulation period is required. He noted that interested parties were notified.

Commissioner Moody asked if U.S. Fish & Wildlife and the California Department of Fish & Game were notified.

Mr. Grieman stated that staff was in possession of a letter from U.S. Fish & Wildlife dated August 11, 1998 reiterating there previous responses.

Mr. Brantley stated that the Resource Agencies were notified as well as public interest groups. He stated that there is no requirement for a formal circulation of the Addendum.

Mr. Grieman noted that the Resource Agencies had not received the Addendum.

Mr. Brantley stood corrected.

Mr. DeMayo stated that the Chairman should open the public hearing and that a closed session could be held at a later date.

Frank Elfin, representing California Quartet, presented background information on the proposed project. He stated that negotiations have been going one for four years and in that four years no promises have been kept. He handed out a letter from Commission Long to the Board of Supervisors dated December 17, 1997. (See Attachment 3). Mr. Elfin stated that the proposal before the Commission today is the same project discussed in Commissioner Longs letter to the Board of Supervisors. He presented background information on the negotiations as directed by the Board of Supervisors. He stated that over a half dozen land use options were presented and we came to an agreement a few weeks before the June 2, 1998. Mr. Elfin stated that at the public hearing Supervisor Spitzer announced that St. Michael's Abby had agreed to purchase the property known as the Saddleback Meadows for a price of $11.7 million. He noted that at that time a motion was made by Supervisor Spitzer and seconded to have County staff start processing our application of 299 units which we have before the Planning Commission

today. He stated that the Board of Supervisors asked the applicant to put the 705 mobile home development on hold which we did. Mr. Elfin stated that the applicant received a call from Mr. Jensen saying that the money was not available, would we except another plan. He noted that this was discussed at the June 30, 1998 public hearing and Supervisor Spitzer stated that the offer by St. Michael's Abby was null and void. Mr. Elfin discussed the history of negotiations with the Vedanta Society and stated that we have been asked to put the project on hold again. He stated that the applicant wants action on this project. He requested approval of the 299 unit development.

Mr. Elfin stated that Mr. Connor, Attorney for the Vedanta Society and St. Michael's Abby went to USFWS and to CDFG and requested a letter from them requesting less development on property they did not own and they sent a letter requesting less development. He noted that he could go to the Resource Agencies and request the same letter for any piece of property and they would comply with the request.

Oliver Pike discussed the consistency of the proposed project. He stated that exemption was established on entitlements of the project. He stated that he has been working on this project for three years. He stated that he felt that it was appropriate for the Planning Commission to hear this project today. Mr. Pike stated that there was a need for some flexibility on the Foothill/Trabuco Specific Plan.

Bill Ross, Attorney, representing the applicant, stated that the proposal before the Planning Commission today is not the applicants proposal. He stated that the applicants proposal is for 318 units which is in litigation. Mr. Ross stated that circulation of the Addendum is not required per CEQA. He noted that the settlement discussion are subject to confidentiality provisions. He noted that Mr. Elfin has complied with this provision all the way. Mr. Ross discussed the litigation by Vedanta Society.

Mr. Elfin stated that he hoped that they have successfully explained why they are before the Planning Commission today. He stated that they are not going to be forced to give this land away. He requested approval of the 299 units.

2:20 P.M.: The Chairman opened the public hearing.

Ed Conner, Attorney, representing the Vedanta Society, the Norbertines and Saddleback Meadows Land Conservancy, stated that the confidentially provision has been violated by Mr. Elfin. He stated that USFWS told Mr. Neely that they did not approve of the plan which the Commission has not been told about. Mr. Conner stated that the negotiation deadline is October 5, 1998 and now the project is before the Commission and if a decision is made to approve it will give the applicant no reason to negotiate. He asked that the Commission play fair. Mr. Connor stated that a 45 day notice is required before this project is heard and he just found out the project was scheduled before the Commission 18 days ago. He stated that if things are done fair and we lose that is OK as long as it was handled fair. Mr. Conner entered into the record additional comments. (See Attachment 4).

Warren Singleton, Engineer, representing the Vedanta Society, presented background information on previous projects he has worked on. He presented an exhibit and pointed out the locations of the proposed 299 units. He stated that it was true that the 299 units will have less impact than the 705 units but not significantly less. Mr. Singleton stated that the wildlife corridor will be greatly disturbed. He noted that this was a very piece of land to develop. He pointed out the grading difference between the 299 unit proposal and 705 units. He pointed out the oak trees and stated that they are saving some of the oak trees where before all oak trees would have to removed. He discussed drainage and increased runoff. Mr. Singleton stated that remedial grading is the biggest expense in developing an area. He stated that grading for the proposed 299 units would require 83 percent more remedial grading than the 705 units due to the placement of the 299 units. He stated that the proposed project is economically unfeasible designed as proposed.

Royce Riggan, representing the Vedanta Society, stated that it was impossible to get his handout material to the Commission because there was no public review period. He expressed surprise that the Addendum was circulated for public review. Mr. Riggan stated that Mr. Neely, Executive Director of the NROC, laid out the proposed plans before USFWS (John Bradley, Jim Bartel and Liam) for review. He stated that USFWS told Mr. Neely that this plan was not acceptable. Mr. Riggan stated that the wildlife corridor as depicted on the applicants plans is really not a wildlife corridor. He stated that the area is on graded land and would have to be revegetated, is only 200 feet wide and crosses a road. Mr. Riggan entered further comments into the record. (See Attachment 5).

Saundra Jacobs, of FSC Consultants, entered her comments into the record. (See Attachment 6).

Mr. Elfin offered rebuttal to comments received today. He stated that he did not breach confidentially. He entered into the record an article from the Trabuco Canyon News. (See Attachment 7). He stated that every alternative that was presented was rejected by the Vedanta Society and St. Michael's Abby. Mr. Elfin stated that St. Michael's Abby has had four different lawyers representing them and they have all said give us one more week and we have been doing this and they are still asking for one more time. Mr. Elfin stated that a resolution does not look like it will come to an end and that is why we are requesting approval of 299 units.

Mr. Ross addressed the CEQA issues. He discussed CEQA requirements. He stated that there is no requirement for public circulation. He noted that the project is consistent with CEQA requirements. He discussed Mr. Singleton's comments on the 705 units VS: 299 units. Mr. Ross stated that it was his personal opinion that Mr. Connor is trying to delay again. He stated that his client will continue to work with the County on alternatives to reduce impacts.

3:55 P.M.: No one else wishing to be heard, the Chairman closed the public hearing.

Commissioner Moody stated that it was not right for the Commission to take action on this project today when negotiations are still in process. He stated that if this project came to the Commission after the Board of Supervisors heard this on October 6, 1998 we could take action. Commissioner Moody felt that too many legal concerns were raised today that needed answers and he felt uncomfortable with these issues. He felt that the Commission was being asked to be a party to conflict between the applicant and the Vedanta Society and St. Michael's Abby. Commissioner Moody felt that this project should be continued until after the Supervisors conference.

Commissioner Long stated that she disagreed with Commissioner Moody. She stated that the applicants request today is in compliance with the Planning Commission request to the Board of Supervisors. She stated that we have been assured by the applicant today that our action will not hinder negotiations. She stated that she would move to approve the project. There was no second.

Commissioner Goacher stated that if there was a procedural error in the notification process of this project staff needs to renotice the project. He stated that the Commission asked the applicant to bring this proposal back to us and he has done exactly what we asked. Commissioner Goacher stated that if he was sure that no procedural error occurred in the notification process he would move ahead today.

Commissioner Nielsen stated that he was not ready to go forward on this project today. He stated that he is not satisfied that all legal noticing has been complied with. He stated that staff has recommended a continuance so they must have a reason why they don't want us to take action today. Commissioner Nielsen stated that he did want to have a close session with County Counsel to discuss legal issues. He stated that there are procedural problems that needs to be addressed and he was not sure that all requirements had been complied with. He stated that he did like the project proposed better than the proposal of 705 units.

Mr. McGill discussed the reason staff was requesting a continuance to September 22, 1998.

Action 4:15 P.M.: The motion of Neilsen, seconded by Moody, to continue Zone Change/Area Plan 98-3/98-2 Addendum PA980103 to September 22, 1998.

A roll call vote was taken to continued.

AYES: Nielsen, Moody, Goacher
NAYES: Long, McBurney

Mr. DeMayo stated that the Planning Commission Secretary would agendize the closed session Commissioner Nielsen requested for September 22, 1998.

Commissioner Nielsen requested that all handout material be given to the Commission to give them sufficient time to digest. He stated that when the Commission get so many

RESOLUTION NO. 98-14
RESOLUTION OF THE PLANNING COMMISSION OF ORANGE COUNTY, CALIFORNIA

On motion of Commissioner Goacher, duly seconded and carried, the following Resolution was adopted:

WHEREAS, the Planning Commission conducted public hearings on Zone Change (ZC) 98-3 and Area Plan (AP) 98-2 for the area known as Saddleback Meadows (aka Bridlewood); and

WHEREAS, the Planning Commission has considered EIR Addendum PA980103 and, by separate Planning Commission Resolution, found that it satisfies the requirements of CEQA for this project.

NOW, THEREFORE, BE IT RESOLVED that this Commission makes the following findings:

1. ZC98-3/AP98-2 is consistent with the objectives, policies, general land uses and programs specified by the General Plan.

2. AP98-2 is consistent with the provisions of the Zoning Code.

3. The location, size, design and operating characteristics of AP98-2, as conditioned, will not create conditions or situations that may be incompatible with other permitted uses in the vicinity.

4. AP98-2 will not result in conditions or circumstances contrary to the public health and safety and the general welfare.

5. AP98-2, as conditioned, satisfies the requirements of section 7-9-711 regarding public facilities.

6. The RE (PD), "Residential Estates (Planned Development)," site development standards regarding building site areas, building site coverage, area per unit, and number of dwelling units have been satisfied by AP98-2.

7. Condition of Approval No. 27 requires a use permit be approved which is consistent with AP98-2. A use permit may be approved for the entire project site or portions of the project site.

8. AP98-2, as conditioned, will provide significant public benefits in the form of major recreational trails, an important wildlife corridor for the Natural Communities Conservation Program and a large addition to O'Neill Regional Park.

BE IT FURTHER RESOLVED that this Commission recommends that the Board of Supervisors approve ZC98-3.

BE IT STILL FURTHER RESOLVED that this Commission approves AP98-2 subject to the following conditions:

1. CP NA NA TIME LIMIT
Approval of Area Plan 98-2 is subject to approval of Zone Change 98-3 by the Board of Supervisors. Upon such approval, Area Plan 98-2 is valid for a period of 48 months thereafter. If the preliminary grading permit is not issued within such period of time, this approval shall be terminated and Area Plan 98-2 shall thereafter be null and void.

2. CP CP NA REVOCATIO
Failure to abide by and faithfully comply with any and all conditions attached to this approving action shall constitute grounds for the revocation of said action by the Orange County Planning Commission.

3. CP CP G TENTATIVE TRACT MAP
Prior to the issuance of any grading permits, Tentative Tract Map 15230 shall be approved by the Subdivision Committee after a public hearing. Said tentative tract map must be found consistent with Area Plan 98-2.

4. CP CP G GRADING REVIEW
Prior to the issuance of any grading permits, the Manager, Current Planning Services, shall determine that the grading plan is consistent with Area Plan 98-2 and the approved tree preservation plan.

5. HP HP G TREE PRESERVATION PLAN
Prior to the issuance of any preliminary grading permit, a tree preservation plan shall be prepared which identifies the location, size and species of all trees having a trunk diameter of 5 inches or greater (measured at four and on-half feet above ground level). The tree preservation plan shall be consistent with the Area Plan 98-2 and the Foothill/Trabuco Specific Plan and approved by the Manager, Harbors Beaches, and Parks. The plan shall be signed and certified by a biologist or arborist.

6. EP SG/EP G FED ENDGD SPEC ACT
Prior to the issuance of any preliminary grading permit, approval of any activity that involves removal of any native vegetation from subject site including clearing, grubbing, mowing, discing, trenching, grading, fuel modification, or other related construction-related activities, the applicant shall obtain written proof from the U.S. Fish and Wildlife Services that said activity complies with the Federal Endangered Species Act. Additionally, the applicant shall obtain approval of a mitigation plan to replace lost ephemeral ponds at a 2 to I ratio. This evidence shall be submitted to the Manager, Subdivision and Grading, for review and approval, in consultation with the Manager, Environmental & Project Planning.

7. SG SG G GEOLOGY RPT
Prior to the issuance of any grading permits, the applicant shall submit a geotechnical report to the Manager, Subdivision and Grading, for approval. The report shall include the information and be in a form as required by the Grading Manual.

8. SG SG G DRAINAGE
Prior to the issuance of any grading permits, the applicant shall, in a manner meeting the approval of the Manager, Subdivision and Grading, provide:

A. A drainage study determining the effect the proposed development and associated drainage patterns will have on existing drainage facilities.

B Mitigate either by on-site retardation or by providing improvements appropriately to impacted existing drainage facilities.

9. SG SG G CROSS-LOT DRAINAGE

Prior to the issuance of any grading permits, and if determined necessary by the Manager, Subdivision and Grading, a letter of consent, in a form approved by the Manager, Subdivision and Grading, suitable for recording, shall be obtained from the affected property owners for offsite grading and/or drainage. The owner/applicant shall record said letters of consent for offsite drainage and/or cross-lot drainage prior to the issuance of any grading permit. Acceptance of cross-lot drainage on lots within the tract map boundaries shall be noted on the recorded map.

10. SG SG G VECTOR CONTROL

Prior to the issuance of any preliminary grading permits, the subdivider shall provide evidence to the Manager, Subdivision and Grading, that the Vector Control District has surveyed the site to determine if vector control measures are necessary. If warranted, the developer shall conduct such measures in a manner meeting the approval of the Manager, Subdivision and Grading.

11. HP HP G ARCHAEO OBS & SALVAGE

Prior to the issuance of any preliminary grading permit, the project applicant shall provide written evidence to the Manager, Subdivision and Grading, that a County-certified archeologist has been retained, shall be present al the pre-grading conference, shall establish procedures for archaeological resource surveillance, and shall establish, in cooperation with the project developer, procedures for temporarily halting or redirecting work to permit the sampling, identification, and evaluation of the artifacts as appropriate. If the archaeological resources are found to be significant, the archaeologist shall submit a follow-up report to the Manager, Harbors, Beaches & Parks, which shall include the period of inspection, an analysis of any artifacts fond and the present repository of the artifacts. Excavated finds shall be offered to the County of Orange, or designee, on a first refusal basis. These actions, as well as final mitigation and disposition of the resources, shall be subject to the approval of the Manager, Harbors, Beaches & Parks.

12. HP HP G PALEO OBS & SALVAGE

Prior to the issuance of an preliminary grading permit, the project applicant shall provide written evidence to the Manager, Subdivision and Grading, that a County-certified paleontologist has been retained to observe grading activities and salvage and catalogue fossils as necessary. The paleontologist shall be present at the pre-grading conference, shall establish procedures for paleontological resource surveillance, and shall establish, in cooperation with the project developer, procedures for temporarily halting or redirecting work to permit sampling, identification, and evaluation of the fossils. If major paleontological resources are discovered, the paleontologist shall determine appropriate actions, in cooperation with the project developer, which ensure proper exploration and/or salvage. Excavated finds shall be offered to the County of Orange, or its designee, on a first refusal basis. The paleontologist shall submit a follow-up report for approval by the Manager, Harbors, Beaches & Parks, which shall include the period of inspection, a catalogue and analysis of the fossils found, and present repository of the fossils. These actions, as well as final mitigation and disposition of the resources, shall be subject to approval by the Manager, Harbors, Beaches & Parks.

13. SG SG G GRADING NOTES

Prior to the issuance of any grading permits, the following guidelines shall be included in the "Notes Section" of the grading plans meeting the approval of the Manager, Subdivision and Grading.

A. During all grading and construction operations, all oak trees on the site, located adjacent to the approved limits of grading and identified in an approved Tree Management/Preservation Plan as trees to be preserved, shall be adequately fenced and protected from encroachment by grading and construction equipment. Grading, placement of fill, and storage of building materials and heavy equipment, shall be prohibited within the dripline of any tree identified for preservation as part of an approved Tree Management/Preservation Plan.

B. If required, retaining walls shall be used to protect the existing grades of oaks identified for preservation from surrounding cut and fill. However, these should not alter drainage from around the trees.

C. No type of surface, whether pervious or impervious, shall be placed within a six-foot radius of oak tree trunks. Where surfacing cannot be avoided, alternative types of paving should be utilized, such as gravel or porous brick with sand joints.

D. Oak trees shall not be subjected to increased runoff from irrigation systems, impermeable surfaces, storm drain discharge, etc.

E. Natural drainage courses and natural grades outside the remedial grading impact area in proximity to and providing seasonal irrigation to oak trees shall not be altered.

F. In proximity to oak trees, only one trench should be dug to accommodate all utility lines. Where necessary, the impacted trees should be carefully pruned by an arborist in proportion to the total amount of root zone lost.

14. BP BP G CONSTRUCTION NOISE

A. Prior to the issuance of any grading permits, the project proponent shall produce evidence acceptable to the Manager, Building Permits, that:

1. All construction vehicles or equipment, fixed or mobile, operated within 1000' of a dwelling shall be equipped with properly operating and maintained mufflers.

2. All operations shall comply with Orange County Codified Ordinance Division 6 (Noise Control).

3. Stockpiling and/or vehicle staging areas shall be located as far as practicable from dwellings.

B. Notations in the above format, appropriately numbered and included with other notations on the front sheet of the grading plans, will be considered as adequate evidence of compliance with this condition.

15. CP SG G PERFORMANCE BOND
Prior to the issuance of a preliminary grading permit, the applicant shall provide a performance bond and related agreement to the satisfaction of the Manager, Subdivision and Grading.

16. HP HP G RE-ROUTING
Prior to the issuance of a preliminary grading permit, which includes the utilization of either the Aliso Creek Class 1 Off-Road Bikeway or the Live Oak Canyon Regional Riding and Hiking Trail, a re-routing plan shall be submitted by the applicant and approved by the Manager, Harbors, Beaches and Parks.

17. CP SG R
Prior to the recordation of any subdivision map which creates residential building sites, the preliminary grading activity for all of Area Plan 98-2 shall be completed to the satisfaction of the Manager, Subdivision and Grading.

18. HP HP R OPEN SPACE
Prior to the recordation of any subdivision map that creates residential building sites, the applicant shall dedicate to the County of Orange a minimum of seventy (70) percent of the project site as open space in a manner meeting the approval of the Manager, Harbors, Beaches & Parks. The open space dedication shall be for: (1) regional park, and (2) restricted scenic preservation purposes. The Manager, Harbors, Beaches & Parks shall determine the final boundary between these open space acres.

Within the regional park area, the Manager, Harbors, Beaches & Parks shall determine what improvements, if any, shall be made. If determined appropriate by the Manager, Harbors, Beaches & Parks, the applicant shall be required to provide those improvements as shown and discussed in the Area Plan 09-2.

Within the restricted scenic preservation easement area, after dedication, no grading, structures (including stables and corrals), or commercial agriculture activities shall be permitted in this area. River rock walls not to exceed three feet, approved Loffel walls, and open fencing shall be permitted. An entry gate and identification sign shall be permitted subject to approval of a site development or use permit for such use. Future fuel modification, landscaping, and tree preservation shall be permitted subject to prior approvals granted by the Planning Commission.

19. HP HP R RECREATIONAL TRAILS
Prior to the recordation of any subdivision map that creates residential building sites, the applicant shall dedicate a recreation easement for those bikeways and regional riding and hiking trails shown and discussed in Area Plan 98-2 in a manner meeting the approval of the Manager, Harbors, Beaches & Parks. Also, the applicant shall design the necessary improvements and enter into an agreement, accompanied by financial security, with the County of Orange to install the necessary improvements in a manner meeting the approval of the Manager, Harbors, Beaches & Parks.

20. HP HP R CLEANING UP
Prior to the recordation of any subdivision map that creates residential building sites, the existing old ranch house and all abandoned automobiles shall be removed in a manner meeting the approval of the Manager, Harbors, Beaches & Parks.

21. HP HP R LANDSCAPE PLAN
Prior to the recordation of any subdivision map which creates residential building sites, the subdivider shall enter into an agreement and post financial security guaranteeing landscape improvements and the maintenance thereof based on preliminary landscape plan showing major plant material and uses, and a cost estimate for the landscape improvements. The preliminary plan and cost estimates shall be reviewed and approved by the Manager, Subdivision and Grading, in consultation with the Manager, Harbors, Beaches & Parks. Said plan shall take into account the County Standard Plans for landscaped areas, adopted plant palette guides, applicable scenic and Foothill Trabuco Specific Plan requirements, Water Conservation Measures contained in Board Resolution 90-487 (Water Conservation Measures), and Board Resolution 90-1341 (Water Conservation Implementation Plan).

22. EP EP FIRE STATION FACILITY
Prior to the recordation of any subdivision map that creates residential building sites, the applicant shall enter into an agreement with the Orange County Fire Authority to pay pro-rata capital facility fees for Fire Station No. 42 in a manner meeting the approval of the Manager, Environmental & Project Planning. Said agreement shall be accompanied by financial security.

23. EP EP LIBRARY FACILITY
Prior to the recordation of any subdivision map that creates residential building sites, the applicant shall enter into an agreement with the County of Orange to pay development fees for the South County Canyons Library as provided in Sections 7-9-700 through 7-9-713 of the Codified Ordinances of the County of Orange and Board Resolution 87-1684 in a manner meeting the approval of the Manager, Environmental & Project Planning. Said agreement shall be accompanied by financial security.

24. EP EP SHERIFF STATION
Prior to the recordation of an subdivision map that creates residential building sites, the project proponent shall enter into a secured agreement with the County of Orange, subject to approval of the Sheriff-Coroner, to participate on a pro rata basis in funding (a) Sheriff substation facilities and (b) the initial costs of providing additional patrols plus support necessary to serve the project in a manner meeting the approval of the Manager, Environmental & Project Planning.

25. EC F F FUEL MODIFICATION
Prior to the recordation of any subdivision map that creates residential building sites, the applicant shall demonstrate to the satisfaction of the Fire Chief that necessary fuel modification in off-site locations will be maintained in perpetuity.

26. EP EP R AFFORDABLE HOUSING
Prior to the recordation of a subdivision map that creates residential building sites, the landowner shall provide a cash contribution to the County's General Plan Trust Fund. The specific methodology and amount of said contribution shall be subject to the approval of the Manager, Environmental & Project Planning. These funds shall be directed to support the County's overall efforts toward providing affordable housing, including but not limited to, future updates of the Orange County Housing Element and related programs for maintaining existing affordable housing and providing new affordable housing opportunities.

27. CP CP B USE PERMIT
Prior to the issuance of any building permits for residential structures, the applicant shall submit a use permit application for review by the Foothill/Trabuco Review Board and approval by the Planning Commission after a public hearing. Said use permit shall include, but not be limited to, the location of all structures and uses, precise landscaping plan, precise fuel modification plan and program, grading plan, and architectural plans for all structures. Said use permit must be found consistent with Area Plan 98-2.

28. F F GBU FUEL MOD PLAN
Prior to the approval of the use permit to construct residential structures, the applicant shall obtain the Fire Chief's approval, in consultation with the Manager, Environmental and Project Planning, of a precise fuel modification plan and program. The plan shall indicate the proposed means of achieving an acceptable level of risk to structures by vegetation. Include the method (mechanical or hand labor) for removal of combustible vegetation and the planting of drought tolerant fire resistant plants. However, only the minimum necessary fuel modification shall be approved by the Fire Chief. All practical mitigation measures to minimize the need for fuel modification shall be recommended by the Fire Chief such as use of non-combustible construction materials, interior fire sprinkler system and double-glassed windows. The required fuel modification shall be performed in a manner to minimize impacts on the natural environment as much as possible. The fuel modification plan shall then become effective after the Planning Commission approves the use permit.

29. SG SG B ROAD REE PROG
Prior to the issuance of building permits for residential construction, the applicant shall pay fees for the Major Thoroughfare and Bridge Fee Program listed below, in a manner meeting the approval of the Manager, Subdivision and Grading.

A. Foothill Circulation Phasing Program
B. Foothill/Eastern Transportation Corridor
C. El Toro Road
D. Santiago Canyon Road

30. HP HP R LOCAL PARK FEES
Prior to the issuance of building permits for residential construction, the applicant shall pay in-lieu fees per the Local Park Code Requirements.

31. FTSP CP B SCHOOL FEES
Prior to the issuance of any building permits for residential construction, the applicant shall provide written verification from the School District, in a manner meeting the approval of the Manager, Current Planning, that he has reached a mitigation agreement with the District for the subject project proposal.

32. CP NA NA INDEMNIFICATION
Applicant shall defend at his/her sole expense any action brought against the County because of issuance of this permit. Applicant will reimburse the County for any court costs and attorney's fees which the County may be required by a court to pay as a result of such action. The County may, at its sole discretion, participate in the defense of any such action, but such participation shall not relieve applicant of his/her obligations under this condition.

AYES: Commissioners Nielsen, Goacher, Long, McBurney

NOES: Commissioners Moody

ABSENT: Commissioners

I HEREBY CERTIFY that the foregoing Resolution No. 98-14 was adopted on October 7, 1998 by the Orange County Planning Commission.

ORANGE COUNTY PLANNING COMMISSION

by Thomas B. Mathews, Executive Officer

PLANNING & DEVELOPMENT SERVICES DEPARTMENT REPORT

HEARING DATE: October 7, 1998

TO: Orange County Planning Commission

FROM: Current Planning Services Division

SUBJECT: Zone Change 98-3/Area Plan 98-2 (aka Contingency Plan)

LOCATION: Saddleback Meadows (easterly side of El Toro Road near Valley Vista Way (District 3)

STAFF CONTACT: Frank McGill (834-2099)

PROPOSAL: California Quartet, Ltd. proposes an amendment to the Foothill/Trabuco Specific Plan (ZC98-3) and a conceptual plan (AP98-2) to allow for the development of 299 standard detached single-family homes with 158 dedicated open space acres.

SYNOPSIS: Concerns related to zoning raised by the Planning Commission on August 25, 1998 are addressed in this report. We have attached the August 25, 1998 Staff Report for your reference. Staff have approved the requisite draft ordinance and resolution for approval of ZC98-3 and AP98-2 subject to 32 conditions of approval for the Commission's consideration.

BACKGROUND:

At the public hearing on August 25, 1998, the Planning Commission raised concerns regarding zoning and the environmental documentation. On September 22, 1998, the Planning Commission continued the public hearing to this date without discussing the project. The concerns regarding zoning are discussed below. The concerns regarding the environmental documentation are discussed in a separate staff report from the Environmental & Project Planning Services Division.

F/TSP REVIEW BOARD:

As reported to you, this project was distributed for public review on August 7, 1998. However no distribution was made to the Foothill/Trabuco Specific Plan Review Board at that time because there were no members. On September 22, 1998 the Board of Supervisors appointed five members to the Review Board. Subsequently, the new Review Board members have been given copies of the proposed project, the environmental documentation, and staff reports. The Review Board conducted a public meeting on September 29, 1998 to discuss this project. They voted to continue their meeting to October 16, 1998 and to request the Planning Commission postpone taking final action until after that date. A copy of their correspondence is in Attachment E. The next scheduled Planning Commission meeting after October 16 is October 20, 1998.

DISCUSSION:

A commissioner asked staff to respond to his view that the applicant's proposed zoning should comply with the existing zoning regulation that any zoning amendment "...be consistent with all the provisions of the Specific Plan." The staff response is the following:

Amending the Foothill/Trabuco Specific Plan is a "zone change." The State Planning and Zoning Laws enable local jurisdictions to adopt and amend zoning regulations. Orange County Zoning Code section 7-9-155, "Zoning Code Amendments and Zone Changes," provides local procedures for adopting and amending zoning regulations for the unincorporated area of Orange County. Supplementing this section is section 7-9-156, "Specific Plans." Lastly, section III.G.3. of the Foothill/Trabuco Specific Plan, "Amendment Procedures," incorporates Zoning Code sections 7-9-155 and 7-9-156 by reference.

Whenever the Board of Supervisors adopts a zoning ordinance, such zoning must be in compliance with State law but it need not be in compliance with any earlier zoning ordinance adopted by the Board. A Board cannot restrict itself or future Boards on zoning matters. Therefore, the existing provision in the Bridlewood Residential District Regulations (see Attachment C) that any future zoning for this site must require that development "...be consistent with all of the provisions of the Specific Plan" need not be complied with.

The applicant has submitted proposed zoning which states, "Any development ... shall be exempt from all of the Regulations and Guidelines included in this Specific Plan other than those provided for by this District." The Planning Commission and/or Board of Supervisors may or may not agree with that proposed provision.

As discussed in the August 25, 1998, staff report, the applicant's development proposal is largely, although not entirely, consistent with all the regulations and guidelines of the Specific Plan for the following reasons:

1. The F/TSP Resources Overlay Component calls for the preservation of wildlife corridors, oak woodlands, major ridgelines, and scenic roadway corridors. The Contingency Plan complies with this except for a few of the oak trees being removed because of necessary remedial grading.

2. The F/TSP requires the dedication of 66 to 70 percent of a property for open space. The Contingency Plan proposes to dedicate 71 percent.

3. The F/TSP limits conventional grading volume to a maximum of 9,000 cubic yards per dwelling unit. The Contingency Plan averages 7,023 cubic yards of conventional grading per dwelling unit.

4. The F/TSP Development & Design Guidelines have largely been satisfied by the Contingency Plan via the Rural Character Statement, Landscape and Revegetation Concept, and Contour Grading Concept in AP 98-2.

The only significant Specific Plan provision that the proposed development is not in compliance with is the 30-foot limitation on the height of manufactured slopes The number and height of the manufactured slopes are necessary to correct geological hazards and minimize grading in open space areas.

CONCLUSION:

The proposed zone change and area plan, with 32 conditions of approval recommended by staff, will provide major public benefits in the form of a regional park, recreational trails, and an NCCP wildlife corridor. The project, as conditioned, will be in substantial overall compliance with the Foothill/Trabuco Specific Plan. The density cap of 299 is reasonable given existing residential densities in the Portola Hills and Hidden Ridge/Hidden Hills developments as well as what is allowed by the General Plan for this property. Compared to the approved project allowing 705 manufactured homes, the proposed project is a substantial reduction in the number of homes and amount of grading involved.

As stated earlier in this report, the F/TSP Review Board has requested the Planning Commission continue this item. To accommodate their request, staff would recommend October 20, 1998 as the next hearing date.

Staff has prepared and attached a draft Planning Commission Resolution and a draft Ordinance for the Commission's consideration when you decide to take final action.

RECOMMENDED ACTION:

1. Receive staff testimony and public testimony.

2. Continue the public hearing to October 20, 1998.

OR

3. Adopt the draft Planning Commission Resolution (Attachment A) which:

   A. Approves the draft Ordinance (Attachment B) and recommends adoption by the Board of Supervisors.

   B. Approves Area Plan 98-2 with 8 findings and 32 conditions.

Respectfully submitted,

John B Buzas

John B. Buzas, Manager

TO: Distribution List

FROM: Director, Planning & Development Services Department

SUBJECT: Saddleback Meadows

On August 25, 1998, the Orange County Planning Commission continued the public hearing on the zone change and area plan for Saddleback Meadows to September 22, 1998. Subsequently, County Counsel has informed us that the hearing needs to be postponed to October 7, 1998 (see attached memo). Therefore, there will be no staff report on this project for September 22 and we expect the Planning Commission to continue the matter without discussion until October 7, 1998.

COUNTY COUNSEL

MEMORANDUM

August 31, 1998

TO: Supervisors Todd Spitzer and Thomas W. Wilson
Members of the Planning Commission

FROM: Ben de Mayo, Deputy County Counsel

SUBJECT: Saddleback Meadows

This morning, *California Quartet v. County of Orange. Vedanta Society, Intervenor* Orange County Superior Court Case No. 77-93-58 was scheduled for hearing before Superior Court Judge John Woolley. Following an in-chambers conference with Judge Woolley, the parties agreed to continue the Planning Commission hearing from September 22 to October 7, the day after the currently-scheduled status report to the Board of Supervisors, and to continue the court hearing until October 22, 1998.

If you have any questions concerning this matter, please advise.

PLANNING & DEVELOPMENT SERVICES DEPARTMENT REPORT

DATE: October 7, 1998

TO: Orange County Planning Commission

FROM: P&DS/Environmental & Project Planning Services Division

SUBJECT: Addendum PA980103 to Final EIR 566 Prepared for the Saddleback Meadows Contingency Plan

LOCATION: North El Toro Road, ½ Mile Southerly of the El Toro/Live Oak/ Santiago Canyon Road Intersection in the Foothill/Trabuco Specific Plan Area of Unincorporated Orange County

CONTACT PERSONS: Raymond H. C. Brantley at (714) 834-3763
William Grieman at (714) 834-5175

PROPOSAL: Construction of a 299-unit, single family, subdivision on 222 acres, replacing a previously approved project for a 705-unit, manufactured single family housing development on the same site. Discretionary approvals include Zone Change ZC98-3, Area Plan AP98-2 and Tentative Tract Maps TT15230 and TT15784.

BACKGROUND:

This public hearing was continued from August 25, 1998. At the previous hearing, staff provided a lengthy discussion on the CEQA background of the project and the major impacts of the Contingency Plan. During that hearing, several issues of concern were raised by the public and the Planning Commission concerning the CEQA process as it relates to the proposed project and clarification on procedures. Following are the key issues raised and staff's response:

A. **Issue: Public Notification Requirements**

Several of the Planning Commissioners and members of the public expressed concern that the Addendum was not properly noticed, particularly in view of the fact that it was not distributed to the U.S. Fish and Wildlife Service and the California Department of Fish and Game (Resource Agencies).

Response:

The omission of sending the Resource Agencies the Addendum was a clerical error. Staff has rectified this error by, subsequent to the August 25 hearing, distributing copies of the Addendum

to the Resource Agencies. On August 31, PDSD staff met with representatives of the Resource Agencies to discuss the Addendum process as it relates to the proposed Contingency Plan. This meeting was constructive in clarifying the process and alleviating their concerns regarding the relationship of the Contingency Plan to Certified Subsequent EIR 566. In addition, copies of the document were sent to the Cities of Mission Viejo and Lake Forest.

It should be noted that, notwithstanding this error, CEQA Guidelines were followed in that, as indicated in Section 15164 of the CEQA Guidelines, an addendum does not require circulation or response to comments received thereon. However, it is County policy to fully inform all parties who have exhibited interest in a given project as to that project's latest status. Accordingly, in addition to sending all commentators on the Addendum a copy of the Response to Comments and staff report, staff is sending staff reports to all commentators on Certified Final Subsequent EIR 566. In so doing, staff has gone beyond the requirements of CEQA, with regard to Addendum circulation, by informing all commentators on the parent document (CFSEIR 566) of the Addendum's status. It is for these reasons that staff feels that recirculation of the Addendum is not required or warranted.

B. Issue: Recirculation of Certified Final Subsequent EIR 566

A major theme of public comment at the previous hearing was the need for recirculation of Certified Final Subsequent EIR 566 in light of the difference between the Contingency Plan and 705-unit manufactured housing project.

Response:

The Section referred to in the public testimony and correspondence regarding recirculation is CEQA Guidelines Section 15153. This section states that " the Lead Agency may employ a single EIR to describe more than one project, if such projects are essentially the same in terms of environmental impact. Further, the lead agency may use an earlier EIR prepared in ;connection with an earlier project to apply to a later project, if the circumstances of the projects are essentially the same."

The basic concept of Section 15153 is to avoid redundancy under CEQA when duplicating very similar projects in very similar locations. Although the County of Orange has determined that Section 15164 of the Guidelines, Addendum to an EIR, is more appropriate, the County has met all the requirements of Section with the proposed Contingency Plan.

C. Issue: Procedural Errors

Members of the public expressed concern about possible procedural errors with regard to the CEQA process for the Addendum. Members of the Commission requested that staff provide clarification. These concerns appear to be based on questions regarding proper environmental documentation for the Contingency Plan and public noticing.

Response:

As noted above, the omission of sending the Addendum to the Resource Agencies was a clerical error that was rectified through subsequent mailings of the document and a meeting with the Resource Agencies. With regard to whether an Addendum is the proper CEQA document to be required, as promulgated by, and in compliance with, Section 15164 of the CEQA Guidelines, the County of Orange determined that an Addendum is the appropriate environmental document for the Contingency Plan based upon the fact that only minor changes and modifications to Certified Final Subsequent EIR 566 are required to make that document adequate under the California Environmental Quality Act and County of Orange procedures.

The addendum has been prepared based on Certified Final Subsequent EIR 566, which was certified as adequate and in compliance with CEQA by the Orange County Board of Supervisors on February 24, 1998. The proposed project does not rely on a previously prepared EIR, as described in CEQA Guidelines Section 15153. Rather, it incorporates the use of an addendum to Certified Final Subsequent EIR 566 for a project clearly within the scope of that document. Public Resources Code Section 21000 and Section 15164 of the CEQA Guidelines outline the statutory requirements and conditions for the use of an addendum. Section 15164 states, in part:

> *(a)The lead agency or responsible agency shall prepare an addendum to a previously Certified Final Subsequent EIR if some changes or additions are necessary, but none of the conditions described in Section 15162 calling for the preparation of a subsequent EIR have occurred... (c) an addendum need not be circulated for public review, but can be included in, or attached to the final EIR . (d) the decision making body shall consider the addendum with the final EIR prior to making a decision on the project, (e) A brief explanation of the decision not to prepare a subsequent EIR, pursuant to Section 15162 should be included in an addendum to an EIR, the lead agencies required findings on the project, or elsewhere in the record. The explanation must be supported by substantial evidence.*

The Planning & Development Services Department determined that an addendum to Certified Final Subsequent EIR 566 is the appropriate environmental document for the proposed Contingency Plan project. This determination is in keeping with the intent of Section 15021 of the CEQA Guidelines, which requires the County, as the Lead Agency on the proposed project, seek to minimize environmental damage associated with proposed projects. In addition, the proposed project does not exceed any of the thresholds outlined in CEQA Guidelines 15162, which would require the preparation of a subsequent EIR. All of the identified environmental effects associated with the 299 unit project are less than those associated with the 705 unit project evaluated in Certified Final Subsequent EIR 566.

D. Issue: Wildlife Corridor/NCCP

One Commissioner expressed concern that issues related to the adequacy of the Wildlife Corridor had not been addressed.

Response:

The Corridor placement and design featured in the proposed Contingency Plan was also featured in Certified Final Subsequent EIR (CFSEIR) 566, which was certified by the Planning Commission, was appealed and upheld by the Board of Supervisors. Alternative 4 of CFSEIR 566 as well as Alternatives 8 and 9 of Proposed Final EIR 561 all reflect the corridor placement. The design and dimensions of the Corridor were derived through previous consultation with the Resource Agencies during the environmental review process associated with these two previous EIRs.

In their correspondence to the County, the Resource Agencies did express a preference for the lower density Alternatives contained within the previous EIRs, notwithstanding their verbal concurrence with the basic design parameters of the 400 foot wide Corridor as featured in the proposed Contingency Plan, although they have expressed a preference for a much wider corridor. Accordingly, the Resource Agency's position regarding the Wildlife Corridor featured in the Contingency Plan remains the same in that their previous comments included consideration of an identical corridor.

With regard to the Southern Subregion, NCCP related comments have been evaluated in both Certified Final Subsequent EIR 566 and Proposed Final EIR 561. The 299-unit Contingency Plan has incorporated many of the concerns identified in the two (2) previous EIRs relative to the NCCP, including a central wildlife corridor, preservation of, or replacement measures to ensure the continued sustainability of, valuable biological resources.

E. Issue: Consideration of Other Alternatives

The Commission requested additional clarification on the connection between other Alternatives and the Contingency Plan, particularly alternatives associated with the negotiations that are taking place between St. Michaels Abbey, the Vedanta Society and the County and the California Quartet. Staff was asked to provide the rationale as to why such alternative were not included in the Addendum or brought forth in some other way to the Commission.

Response:

Staff was presented with the Contingency Plan as a stand alone project. It has been analyzed as such. Proposed Final EIR 561 and Certified Final Subsequent EIR 566 analyzed a full range of alternatives, ranging from the No Project/No Development Alternative to the 705-unit manufactured housing project. No other alternative has been submitted to the County for environmental review.

An Addendum was determined to be the appropriate environmental documentation for the proposal based on CEQA Guidelines as discussed above and in the previous staff report. Should the identified alternatives be submitted to the County, they will be subjected to the same CEQA environmental documentation requirements as the proposed project.

RESPONSE TO COMMENTS

A Response to Comments Document has been prepared to address all written Comments received on Addendum PA980103. A copy of this document is attached to this report for the Planning Commission's review and consideration as Attachment A. Additionally, as is the County's policy, copies of the Response to Comments Document and this Staff Report has been provided to each Commentator.

CONCLUSION

As is evident from the discussions in the August 25 and October 7 PDSD Reports to the Planning Commission, the County of Orange places a high priority on meeting its responsibilities under the California Environmental Quality Act in a thorough and comprehensive manner. As Lead Agency on the Saddleback Meadows Contingency Plan, the County has been and remains in full control of the CEQA review process and the preparation of its environmental documents. In this regard, the County has supplemented the requirements of the CEQA Statutes and Guidelines with its own set of rigorous standards and requirements. In the case of the proposed Saddleback Meadows Contingency Plan, the County imposed additional requirements in order to ensure the integrity of the document.

Based upon the reconsideration of the Addendum, in light of public comments and issues raised by the Planning Commission, the Planning & Development Services Department has determined that the Addendum, combined with Certified Final Subsequent EIR 566, are the appropriate environmental documentation for the proposed Contingency Plan, Zone Change ZC98-3 and AP98-2

RECOMMENDED ACTIONS

1. Receive Staff Report and oral presentation;
2. Open public hearing to receive public testimony; and
3. Based upon the Addendum, the Environmental & Project Planning Services Reports dated August 25, 1998 and October 7, 1998, make the recommendation that the Board of Supervisors adopt the attached Revised Draft Resolution.

Respectfully submitted

George Britton, Manager

I. INTRODUCTION

This document comprises the Response to Comments for Addendum PA980103 to Certified Final Subsequent EIR 566, which was prepared for the Saddleback Meadows 299-unit Contingency Plan project. The purpose of this document is twofold:

- Respond to all Comments of environmental significance received by the County of Orange relative to Addendum PA980103; and
- Incorporate revisions and minor additions into the Addendum based upon public and agency Comments.

A. PUBLIC REVIEW PROCESS

Addendum PA980103 was made available to various public agencies and interested individuals on August 25, 1998, and Comments were received. A total of six comment letters were received. Comments and verbal testimony were also received during the public hearing on the project before the Orange County Planning Commission held on August 25, 1998 in the PC Meeting Room in the OC Hall of Administration.

Comments and responses have been retyped and correspondingly numbered in sequential order. Copies of the actual Addendum comment letters are contained in Appendix A of this document. Each comment is retyped as it appeared in the actual letter including typographical errors. Responses follow each comment.

It should be noted that CEQA does not require an Addendum to be circulated for public review nor responses to Comments on the Addendum prepared. This document has been prepared to provide complete public disclosure.

B. ORGANIZATION OF COMMENTS AND RESPONSES

The following sections are included in this document:

- Matrix of Agencies and Interested Persons Commenting on the Addendum
- Responses to Comments
- Letters Received from Commenting Agencies and Persons

III. RESPONSE TO WRITTEN COMMENTS

B. RESPONSE TO WRITTEN COMMENTS

JOHN R. BYERLY, INC., (JRB) **August 24, 1998**

JRB-1

Comment

Within the little time afforded by the County's expedited processing of the 299-unit "Contingency Plan" for the Saddleback Meadows property, I have attempted to review the geotechnical aspects of the referenced addendum to the earlier environmental impact report. This addendum anticipates the construction of 299 single-family dwelling units on the 222.2-acre site. Extensive grading (2.1 million cubic yards of cut and fill) is proposed to construct the building pads, associated streets, and open areas. Even more extensive grading (6.8 million cubic yards) is anticipated to remediate demonstrated unstable geologic conditions, including existing landslides, adverse bedding orientation, and loose and compressible alluvium and colluvium.

The problematic geotechnical issues associated with the 299-unit proposal remain unchanged from those that have been discussed in great detail with a reference to the 705-unit manufactured housing project, and presented to the Planning Commission and the Board of Supervisors with no meaningful Response. The issues of primary concern to this reviewer which mandate further analysis in an appropriate environmental impact report would include the following:

Response

The Comment summarizes the fact established over the past 19+ years, including the extensive reporting providing in Proposed FEIR 561 and Certified FEIR 566 that any project proposed on the Saddleback Meadows site will require extensive remedial and conventional grading. This information is contained in Addendum PA980103. The Comment does not require a response.

JRB-2

Comment

GRADING (Page 20) - The addendum continues to assume an average daily grading of 30,000 cubic yards per day, projecting a total time of grading of 10 months. At 30,000 cubic yards per day for 8.9 million cubic yards of fill, grading needs to be performed 7 days a week-no allowance for off-days for weekends or for inclement weather is provided in this estimate. It seems to this reviewer that it might be possible to achieve the average 30,000 cubic yards per day goal for the conventional grading. It seems highly unlikely that the grading to accomplish the alluvium/colluvium removals, construction of buttress fills, and other remedial grading that will be required can approach the projected rate of fill movement. If as seems likely, the remedial grading would be performed at an average rate of 10,000 cubic yards per day, and grading is performed on a 5-day per week basis, the remedial grading would require 31 months. With down-time for inclement weather, it is more realistic to project a total period of grading of 3 years. Even this projection is optimistic, and the site could easily experience 4 rain seasons during grading.

Response

As discussed in the Addendum and previously Certified Final Subsequent EIR 566, an average daily grading quantity of 30,000 cubic yards is a reasonable projection which has been achieved on several other large scale mass grading projects in Orange County. The total duration of grading operations, which is based on the 30,000 cubic yards per day factor, is correct.

JRB-3

Comment

EXCAVATION CONDITIONS (Page 29) - The addendum correctly anticipates heavy ground water seepage into excavations at the site. Not addressed is the impact of discharge of collected ground water seepage, the impact of the interruption in subsurface ground water flow on downstream wells, nor the impact of the presence of the deep shear keys for buttress fills on the final ground water conditions. Is there a potential for surfacing of ground water behind the effective subsurface dam created by the shear key of the buttress fill?

Response

Groundwater seepage, subsurface groundwater flow, impacts on wells, and the effect of shear key construction on groundwater have all been addressed in the previous Response to Comments Document prepared for Certified Final EIR 566.

JRB-4

Comment

LONG-TERM SETTLEMENT (Page 31) - Fill depths exceeding 50 feet are suggested, with settlements associated with those fills of 4 to 6 inches. Construction of shear keys for buttress fills, however, will result in fills as deep as 130 feet. Fills of such great depths require additional evaluation that may necessitate compaction criteria well in excess of code minimums, special moisture conditioning of fill during compaction, and long-term settlement monitoring prior to building construction. These considerations are not addressed in the addendum.

Response

Specific settlement related requirements are regulated by the Orange County Grading & Excavation Code. The grading review process includes final engineering design, including any special requirements to mitigate any settlement problems. The County's grading inspection process includes monitoring grading activities by a soils engineer to ensure compliance with the Grading and Excavation Code.

JRB-5

Comment

PHASING OF EARTHWORK (Page 31) - The addendum continues to project a buttress backcut failure rate of 10 percent. Considering the subsurface conditions typified by landslides within landslides, this failure rate is surely unrealistically optimistic. Further, the effect of backcut failures on upstream and adjacent properties is not addressed.

These are the Comments that I have been able to prepare during the time allotted by the County's short notice to your firm regarding the public hearing to be held on August 25, 1998. I hope my comments have been helpful under the circumstances. Should there be questions, please feel free to call.

Response

The documented buttress backcut failure rate of 10 % is reasonable based upon other similar grading operations in similar geological conditions.

CONNOR, CULVER, BLAKE & GRIFFIN LLP, (CCBG) **August 25, 1998**

CCBG-1

Comment

On behalf of (1) the Vedanta Society; of Southern California ("Vedanta"); (2) the Norbertine Fathers of Orange (the "Norbertines"); and the Saddleback Meadows Land Conservancy LLC (the "Conservancy"), we respectfully submit this letter in opposition to California Quartet's application for approval of Zone Change 98-3 ("CZ 98-3" or the "Zone Change") and Area Plan 98-2 ("AP 98-2" or the "Area Plan") relating to a proposed 299-unit single family detached housing project (the "299-Unit Project"), which has been dubbed "Contingency Plan."

Based on the list of objections attached hereto, and based also on all oral and written Comments which are presented in opposition to the proposed Zone Change and Area Plan at the August 25 public hearing, including, but not limited to, all expert opinions expressed by Royce Riggan, John Byerly, Warren Singleton, or Saundra Jacobs either orally or in writing in connection with the hearing, Vedanta, the Norbertines, and the Conservancy respectfully submit that the CEQA review process relating to, and the environmental documentation which has been prepared in support of ZC 98-3 and AP 98-2 is woefully inadequate from both a procedural and substantive standpoint.

Response

The Comment presents the views of the commentator relative to Addendum PA980103 and the CEQA review process employed by the County of Orange for the 299-unit Contingency Plan. No additional response is required.

CCBG-2

Comment

By (1) purporting to rely on a previously Certified Final Subsequent EIR for an *entirely different* project which is, itself, grossly deficient and is now being challenged in court, (2) failing to provide the public and responsible agencies (such as the state and federal wildlife agencies) with the 45-days' notice required by law, and (3) refusing to prepare, and circulate for public review and Comment, a new EIR to properly address important new information and substantial project changes involving new environmental impacts and additional project alternatives and mitigation measures which have not been addressed in any earlier EIR, the County is poised to violate CEQA and the Guidelines in numerous different respects in connection with the proposed Zone Change and Area Plan for the 299-Unit Project.

As a result of these CEQA violations, my office has not been afforded adequate time to prepare and submit Comments on ZC 98-3 and AP 98-2 and the environmental documentation relating thereto. Regrettably, history seems to be repeating itself in this case.

Indeed, one year ago last week, I submitted a lengthy letter to County staff objecting to the many procedural improprieties and substantive deficiencies relating to Draft Subsequent Environmental Impact Report No. 566 ("SEIR 566") which had been prepared to evaluate the environmental

impacts associated with the issuance of a grading permit for the construction of 705 units of manufactured housing at the Saddleback Meadows site. Because of the failure of the Draft SEIR to include the grading plans and soils reports upon which the grading permit application was based, and given the County's refusal to make these materials available for public review during the Comment period on the Draft SEIR, I was compelled to submit my August 1997 letter under protest.

Response

The addendum has been prepared based on Certified Final Subsequent EIR 566, which was certified as adequate and in compliance with CEQA by the Orange County Board of Supervisors on February 24, 1998. The proposed project does not rely on a previously prepared EIR, as described in CEQA Guidelines Section 15153. Rather, it incorporates the use of an addendum to Certified Final Subsequent EIR 566 for a project clearly within the scope of that document. Public Resources Code Section 21000 and Section 15164 of the CEQA Guidelines outline the statutory requirements and conditions for the use of an addendum. Section 15164 states:

> *The lead agency or responsible agency shall prepare an addendum to a previously Certified Final Subsequent EIR if some changes or additions are necessary, but none of the conditions described in Section 15162 calling for the preparation of a subsequent EIR have occurred. (c) an addendum need not be circulated for public review, but can be included in, or attached to the final EIR . (d) the decision making body shall consider the addendum with the final EIR prior to making a decision on the project, (e) A brief explanation of the decision not to prepare a subsequent EIR, pursuant to Section 15162 should be included in an addendum to an EIR, the lead agencies required findings on the project, or elsewhere in the record. The explanation must be supported by substantial evidence.*

An addendum to Certified Final Subsequent EIR 566 is the appropriate environmental document for the proposed project, as it is in keeping with the intent of Section 15021 of the CEQA Guidelines, which requires the lead agency to minimize environmental damage associated with proposed projects. In addition, the proposed project does not exceed any of the thresholds outlines in CEQA Guidelines 15162, which would require the preparation of a subsequent EIR. All of the identified environmental effects associated with the 299 unit project are less than those associated with the 705 unit project evaluated in Certified Final Subsequent EIR 566

CCBG-3

Comment

How ironic it is that, one year later, I must also submit this letter under protest because of the County's clear-cut violation of those provisions of the CEQA Guidelines which require a local agency to provide 45 days' written notice to interested persons of its intention to use an EIR, which was prepared in connection with an earlier project, as the environmental documentation for a separate, later project. Instead of the 45-day public notice required to be given under CEQA Guidelines sections 15087, 15105, and 15153, the County has inexplicably decided to provide only 18 days' written notice of its intention to use Final SEIR 566 for the 705-unit manufactured housing project (the "705-Unit Project") as the EIR for the 299-Unit Project.

Response

As indicated in Section 15164 of the CEQA Guidelines, an addendum does not require circulation or response to Comments received thereon. In sum, the addendum has adequately evaluated the environmental effects of the proposed 299 unit project, in compliance with the mandates of CEQA and no new EIR is required.

It should also be noted that both Proposed Final EIR 561 and Certified Final Subsequent EIR 566 contained Alternatives which were virtually identical to the proposed 299-unit Contingency Plan project evaluated by Addendum PA980103. Staff Alternative 8 and the proponent's Alternative 9 in Proposed FEIR 561 and Alternative 4 in Certified FEIR 566 are very close to the design of the proposed 299-unit Contingency Plan.

CCBG-4

Comment

At first blush, one might wonder how it is possible to use and EIR initially prepared to analyze the impacts of developing 705 units of manufactured housing as the EIR for an *entirely different* project--namely, a 299-unit single-family detached housing project which, among other things (1) involves building houses on land which was proposed to be left undeveloped by the 705-Unit Project; (2) proposed to develop a wildlife corridor through the middle of the project where none had been previously provided under the 705-Unit Project; and (3) purports to fully exempt the 299-Unit Project from compliance with the Foothill/Trabuco Specific Plan, despite express language in the Specific Plan requiring any new projects for the Saddleback Meadows property to be made "consistent" with the plan.

Admittedly, CEQA Guidelines section 15153(b) does allow a previously prepared EIR to be used as the environmental documentation for a "separate, later project" *provided* that the EIR for the earlier project meets certain criteria and *provided also* that the public is properly notified of the local agency's intention to rely on the previous EIR instead of preparing a *new* EIR for the *new* project. Unfortunately, the County has chosen to ignore the adequacy and public notice requirements set forth in CEQA Guidelines section 15153(b) and is trying, instead, to process and addendum (the "addendum") to Final SEIR 566 in an apparent attempt to avoid these requirements. Of course, the County's attempt to use the Addendum as the environmental documentation for the 299-Unit Project is illegal and improper for two very basic reasons.

Response

Please refer to response to Comment CCBG-2. The proposed 299 unit project is not exempt from the provisions of the Foothill/Trabuco Specific Plan (FTSP) and has been determined to be in substantial compliance / conformance with the policies and programs of the FTSP. As indicated in the response to CCBG-2 above, Section 15164 of the CEQA Guidelines require the Addendum to contain a statement explaining why a subsequent EIR has not been prepared pursuant to requirements outlined by Section 15162 of the CEQA Guidelines. This statement is included on pages 2 - 4 of Addendum PA980103.

CCBG-5

Comment

First, section 15164 of the CEQA Guidelines, which authorizes the preparation of "an addendum to a previously Certified Final Subsequent EIR if some changes or additions are necessary," only applies when the *same* project addressed in the previous EIR is being considered for a subsequent government approval at a more detailed level of planning. Obviously, when an entirely *different* project is being considered – such as a full-scale revision and redesign of the project which was analyzed in the previous EIR -- an addendum is *not* the appropriate document by which to describe and analyze substantial project changes involving new impacts, alternatives, and mitigation measures not discussed in the earlier EIR. Indeed, an addendum is only to be used to address minor technical changes or additions to a previously Certified Final Subsequent EIR, not to report on substantial project changes or significant new information about a *completely different* project.

Response

Please refer to Response to Comments CCBG-2 , CCBG-3 and CCBG-4.

CCBG-6

Comment

The second reason that the County is not allowed to adopt the Addendum in this case is that, assuming for the sake of argument that the Zone Change and the Area Plan actually involved the *same* 705-Unit Project addressed in Final SEIR 566 (which, of course, they do not), the provisions of section 15162 of the CEQA Guidelines would require the preparation of a subsequent of supplemental EIR. Specifically, new information and project changes relating to environmental impacts, project alternatives, mitigation measures not previously discussed in Final SEIR 566 would require the County to prepare another EIR and circulate it for public review and Comment.

County staff has determined that none of the conditions described in CEQA Guidelines section 15162 would require the preparation of a subsequent or supplemental EIR to address the environmental impacts associated with the proposed Zone Change and Area Plan for the 299-Unit Project. Vedanta, the Norbertines, and the Conservancy certainly disagree with this determination and wish to underscore what several California courts have already held, i.e., that Guidelines section 15162 and its companion section 21166 of CEQA only apply when the question is whether more than one EIR must be prepared for what is essentially the *same* project. When the proposed new activity constitutes a *separate* project, the "fair argument" test applies to the local agency's decision regarding whether to require a new EIR for the later project.

Response

Please refer to Response to Comments CCBG-2 , CCBG-3 and CCBG-4.

CCBG-7

Comment

Indisputably, the oral and written Comments which will be submitted in opposition to the proposed Zone Change and Area Plan at the August 25 public hearing will constitute substantial evidence supporting a "fair argument" that the 299-Unit Project may cause significant environmental effects, and may involve important new project alternatives and mitigation measures, which were not previously addressed in Final SEIR 566 -- thereby necessitating the preparation of a new EIR to be circulated for public review and comment.

By submitting this letter, and by incorporating the oral and written Comments made at the August 25 public hearing in opposition to the proposed Zone Change and the Area Plan, my clients do not intend to waive their objections to the County's failure to provide the appropriate notice of its intention to rely on Final SEIR 566 as the EIR for the 299-Unit Project. However, within the little time afforded by the inadequate notice provided by the County, my office has attempted to formulate the attached objections and hereby submits them to the Planning Commission with the sincere hope that the County will review them in good faith and will correct the many defects and deficiencies which pervade the CEQA review process for the proposed Zone Change and the Area Plan.

Response

Please refer to Response to Comments CCBG-2 , CCBG-3 and CCBG-4.

CCBG-8

Comment

OBJECTIONS TO ADDENDUM PA980103 TO FSEIR 566, ZONE CHANGE 98-3, AND AREA PLAN 98-2

1. The County of Orange (the "County") has violated section 15153(b) of the CEQA Guidelines in that it has improperly determined that FSEIR 566 adequately describes the significant environmental impacts of the 299-unit single family detached housing project referred to as the Saddleback Meadows Contingency Plan (the 299-Unit Project"), which impacts are more particularly described in the oral and written Comments (the "Comments") submitted to the Orange County Planning commission prior to or at its August 25, 19987 public hearing, including, but not limited to, the expert opinions of Royce B. Riggan, Jr., John R. Byerly, Warren W. Singleton, and Saundra F. Jacobs. (The comments of John R. Byerly regarding the geotechnical aspects of the 299-Unit Project are set forth in an August 21, 1998 letter to counsel which is attached hereto as Exhibit "A" and is incorporated herein by reference.)

Response

The Orange County Board of Supervisors Certified Final Subsequent EIR 566 as adequate on February 24, 1998. Responses to the Comment letters identified in the comment are contained elsewhere in this document.

CCBG-9

Comment

2. The County has violated section 15153(b) of the CEQA Guidelines in that it has improperly determined the FSEIR 566 adequately describes the alternatives and mitigation measures related to the significant environmental impacts of the 299-Unit Project, as more particularly described in the Comments.

Response

Please refer to response to Comments CCBG-2 , CCBG-3 and CCBG-4.

CCBG-10

Comment

3. The County has violated section 15153(b) 15087, and 15105 of the CEQA Guidelines in that it has failed to provide (a) public notice of its plans to use FSEIR 566 as the environmental documentation for the 299-Unit Project and (b) 45-day public review and Comment period on such key issues as "whether [FSEIR 566] should be used for [the 299-Unit Project] and whether there are any additional, reasonable, alternatives or mitigation measures that should be considered as ways of avoiding or reducing the significant effects of [the 299-Unit Project]."

Response

The county does not intend to use Certified Final Subsequent EIR 566 as the environmental documentation for the proposed 299 unit project, as described above. An addendum has been prepared to serve as the requisite CEQA mandated environmental documentation for the proposed project.

CCBG-11

Comment

4. The County has violated section 15063(g) of the CEQA Guidelines in that, at the time it determined that an initial study was required for the 299-Unit Project, it failed to consult with the United States Fish and Wildlife Service, the California Department of Fish and Game, the Army Corp. of Engineers, and all other responsible and trustee agencies responsible for the resources affected by the 299-Unit Project, to obtain the recommendation of those agencies as to the appropriate environmental documentation for the 299-Unit Project.

Response

Section 15164 of the CEQA Guidelines does not require consultation with responsible, trustee or other agencies as part of the requirements for preparation of an addendum. These agencies were formally consulted with during the preparation of EIRs 561 and 566, and their Comments and concerns have been a matter of public record since this consultation. In fact, several of the concerns identified by the identified resource agencies for both EIR 561 and 566 have been incorporated in to the 299 unit project.

CCBG-12

Comment

5. The County has violated CEQA and the CEQA Guidelines, to the extent that it has sought to invoke the provisions of section 15164 of the CEQA Guidelines, in that section 15164 only allows the preparation of an addendum when the same "project" is involved. In this case, there are two separate and distinct projects, i.e., a grading application for a 705-unit mobilehome/manufactured housing project (the "705-Unit Project") and an application for a zone change and area plan for the 299-Unit Project.

Response

Please refer to Response to Comments CCBG-2 , CCBG-3 and CCBG-4.

CCBG-13

Comment

6. Assuming *arguendo* that the 299-Unit Project and the 705-Unit Project are the same "project", which they clearly are not, the County has violated section 15162(a)(1) and (2) of the CEQA Guidelines in that it has improperly determined that a subsequent EIR is not required to address the effects of the 299-Unit Project, which proposes substantial changes in the "project" and is based upon substantial changes in the circumstances surrounding the "project", in that, among other things, (a) the 299-Unit Project will involve mass grading and permanent alteration of land that was to be left undisturbed and undeveloped by the 705-Unit Project; (b) the 299-Unit Project will involve a proposed wildlife corridor for which there is no analysis in FSEIR 566 and about which the public has not had an opportunity to Comment with respect to its viability, and (c) the U.S. Fish and Wildlife Service and the California Department of Fish and Game have indicated in an August 11, 1998 correspondence to the Orange County Board of Supervisors that the adoption of the 299-Unit Project may jeopardize the approval of the Southern Region of the NCCP program in the (i) "Saddleback Meadows is the only remaining wildlife corridor linkage to the NCCp Central/Coastal Subregion" and (ii) the proposed wildlife corridor may not prove to be viable. (A true and correct copy of the August 11, 1998 correspondence from U.S. fish and Wildlife Service and the California Department of Fish and Game to the Orange County Board of Supervisors is attached hereto as Exhibit "B" and is incorporated herein by reference.)

Response

The 299 unit project does not result in any additional grading impacts as compared to the 705 unit project evaluated in EIR 566. In fact, as indicated in the Addendum, the 299 unit project will impact approximately 30 acres less than the approved 705 unit project. FSEIR 566 contains several alternatives which contain an almost identical wildlife movement corridor .to that proposed by the 299 unit project., which has been evaluated. The identified letter from the USFWS and CDFG is responded to separately in this document.

CCBG-14

Comment

7. Assuming *arguendo* that the 299-Unit Project and the 705-Unit Project are the same "project," the County has violated section 15162(a)(3)(A) and (B) of the CEQA Guidelines in that it has improperly determined that a subsequent EIR is not required to address the 299-Unit Project, despite the new information of substantial importance described in the Comments which shows that the 299-Unit Project will have significant effects on the environment that are not discussed in FSEIR 566 and/or are substantially more severe than the impacts discussed in FSEIR 566, including, but not limited to, (a) the grading and permanent alteration of land that was to be left undisturbed and undeveloped by the 705-Unit Project, (b) the categorical exemption of the Saddleback Meadows property from the provisions of the Foothill/Trabuco Specific Plan, and (c) the additional reduction and/or destruction of valuable biological resources.

Response

Please refer to Response to Comments CCBG-2 , CCBG-3 and CCBG-4.

CCBG-15

Comment

8. Assuming *arguendo* that the 299-Unit Project and the 705-Unit Project are the same "project," the County has violated section 15162(a)(3)(C) of the CEQA Guidelines in that it has improperly determined that ta subsequent EIR is not required to address the 299-Unit Project, despite the new information of substantial importance which shows that the mitigation measures that were proposed during the public review period for Draft SEIR 566 (but which FSEIR 566 failed to consider and deemed infeasible because of its erroneous assumption that the County was precluded from even considering any mitigation measures that would cause the "project" to deviate from Recorded Tract Map 10692 are now feasible because the Recorded Tract Map is to be superseded *in toto*.

Response

The proposed 299 unity project contains many mitigating features as compared to the approved 705 unit project. These mitigating features are detailed in the addendum.

CCBG-16

Comment

9. Assuming *arguendo* that the 299-Unit Project and the 705-Unit Project are the same "project," the County has violated section 15162(a)(3)(D) of the CEQA Guidelines in that it has improperly determined that a subsequent EIR is not required to address the 299-Unit Project, despite the new information of substantial importance that has come to light since FSEIR 566 was certified regarding new project alternatives which are considerably different from those analyzed in FSEIR 566 and would reduce one or more of the significant impacts identified in the Comments, but that California Quartet, Ltd., has, to date, declined to adopt, including but

not limited to, (a) the Mathews' alternative for the development of a 65-unit single family detached housing project on 44 acres of the property.

Response

The identified alternatives have not been submitted to the County for review and, as such, have not been the subject of any environmental analysis / review to date. Should any of these identified alternatives be submitted to the County, they will be subjected to environmental review as required by CEQA. Both EIR 561 and 566 contain an extensive and reasonable range of alternatives to the proposed project.

CCBG-17

Comment

10. Assuming *arguendo* that the 299-Unit Project and the 705-Unit Project are the same "project," the County has violated section 15153(d) of the CEQA Guidelines in that it has improperly determined that none of the conditions described in section 15162 would require the preparation of a subsequent or supplemental EIR.

Response

Please refer to Response to Comments CCBG-2 , CCBG-3 and CCBG-4.

CCBG-18

Comment

11. Assuming *arguendo* that the 299-Unit Project and the 705-Unit Project are the same "project," the County has violated section 15164(a) of the CEQA Guidelines in that it has improperly determined that the processing of an addendum would be appropriate and that none of the conditions described in section 15162 would require the preparation of a subsequent or supplemental EIR.

Response

Please refer to Response to Comments CCBG-2 , CCBG-3 and CCBG-4.

CCBG-19

Comment

12. Assuming *arguendo* that the 299-Unit Project and the 705-Unit Project are the same "project," the County has violated section 15164(e) of the CEQA Guidelines in that it has failed to provide a brief explanation, supported by substantial evidence, of its determination that none of the conditions described in section 15162 would require the preparation of a subsequent or supplemental EIR.

Response

Please refer to Response to Comments CCBG-2 , CCBG-3 and CCBG-4.

CCBG-20

Comment

Zone Change 98-3 and Area Plan 98-2 violate the provisions of the Foothill Trabuco Specific Plan (the "FTSP") in that they are part of a development proposal for the 299-Unit Project which deviates from Recorded Tract Map 10692 without providing for an amendment to the FTSP that (a) is adopted pursuant to the amendment procedures established by the FTSP and (b) is consistent with all of the provisions of the FTSP, including, but not limited to, (i) the development and design guidelines established by the FTSP, (ii) the goals and objectives of the FTSP, and (iii) all other provisions of the FTSP identified in the Comments.

Response

The proposed 299 unit project will be subject to all of the policies and requirements of the FTSP, as they relate to the Bridlewood Residential District.

CCBG-21

Comment

14. The County has violated CEQA and the CEQA Guidelines in that it has improperly relied upon FSEIR 566, which is a legally inadequate CEQA document that was improperly certified for the reasons set forth in that certain "Complaint for Declaratory Relief and Petition for Writ of Mandate," which is attached hereto as Exhibit "C" and is incorporated herein by reference, including, but not limited to:

    a) In certifying FSEIR 566, the County did not comply with the special CEQA review process the Board of Supervisors adopted for the review of FSEIR 566;

    b) The special CEQA review process the Board of Supervisors adopted for the review of FSEIR 566 violated CEQA in that, *inter alia*, it unlawfully separated the decision whether to certify FSEIR 566 without taking action on the project for which the FSEIR was prepared;

    c) It improperly limits the mitigation measures its considers to only those that would not cause the project to deviate from Recorded Tract Map 10692;

    d) The analysis and information set forth in FSEIR 566 is legally inadequate under CEQA and the CEQA Guidelines in that, *inter alia:*

        (i) It fails to properly describe the discretionary approval which it was prepared to analyze;

        (ii) It fails to provide the required level of specificity;

        (iii) It fails to provide the required level of technical detail;

        (iv) It was not amended and recirculated after significant new information regarding the discretionary approval it was prepared to analyze was released;

(v) Its certification was separated from the discretionary approval it was prepared to analyze;

(vi) It fails to adequately address all environmental impacts of the discretionary approval it was prepare to analyze, including, but not limited to:

a. Soils and Geology;
b. Water/Hydrology;
c. Transportation/Circulation;
d. Air Quality;
e. Biological Resources;
f. Archeological/Cultural Resources; and
g. Public Services;

(vii) It fails to provide legally adequate mitigation measures and an adequate mitigation measures and an adequate mitigation monitoring program was not adopted;

(viii) It fails to address the cumulative impacts of the project associated with the discretionary approval it was prepared to analyze;

(ix) It fails to consider project alternatives; and

(x) It fails to adequately respond to Comments;

(e) Adequate and proper findings, supported by substantial evidence in the record, were not made in support of the certification of FSEIR 566; and

(f) The Statement of Overriding Considerations was improperly adopted in connection with the certification of FSEIR 566.

Response

The Comment lists the challenges in the litigation that is pending and cannot be addressed at this time. The County Board of Supervisors Certified Final Subsequent EIR 566 as adequate on February 24, 1998. The County assumes that its actions will be upheld. However, no ruling has been reached by the Courts as of the date of the preparation of this Response to Comments Document to Addendum PA980103.

CCBG-22

Comment

15. The County has violated CEQA and the CEQA Guidelines, to the extent that the "Draft Area Plan Conditions of Approval" attempt in any way to eliminate or modify any of the "Standard Conditions of Approval" that are set forth in FSEIR 566 and Addendum PA980103 as mitigation measures which must be completed prior to the issuance of any grading permit, including, but not limited to, (a) SC 7-2 requiring a 1603 Streambed Alteration Agreement from the California Department of Fish and Game, (b) SC 7-3 requiring the necessary individual or nationwide permit from the Army Corp. of Engineers pursuant to section 404 of the Federal Clean Water Act, and (c) SC 7-5 and 7-7 requiring from the U.S. Fish and Wildlife Service (i) appropriate federal approvals required for impacts to Coastal Sage Scrub and (ii) written proof that the removal of any native vegetation from the project site complies with the Federal Endangered Species Act, in that it has attempted to reduce or eliminate

feasible mitigation measures that are set froth in FSEIR 566 and Addendum PA980103 to reduce significant environmental impacts.

Response

All Standard Conditions of Approval identified in Certified Final Subsequent EIR 566 remain valid for the proposed 299-unit Contingency Plan project. These Conditions of Approval include the requirements that the project proponent secure permits from the United States Fish & Wildlife Service (USFWS), the California Department of Fish & Game (CDFG) and the Army Corps of Engineers (ACOE).

CCBG-23

Comment

13. The County has violated CEQA and the CEQA Guidelines in that Addendum PA980103 to FSEIR 566 is inadequate and incomplete due to, *inter alia*, the omission of volume two of Appendix "G", the "Supplemental Geotechnical Assessment for Contingency Pan – 299 Lots," which purportedly contains the computer output documents for the slope stability analysis performed by G.A. Nicoll and Associates, Inc.

Response

As stated earlier in this Response to Comments Document, an Addendum does not require Noticing or Circulation. The County of Orange has distributed copies of the Addendum as a courtesy to community and homeowner groups. The identified technical geotechnical information is available for review at the County of Orange, Planning and Development Services Department, Environmental & Project Planning Services Division, located at 300 North Flower Street, Ste. 321, Santa Ana, California 92702.

R.B. RIGGEN & ASSOCIATES, (RBR) **August 24, 1998**

RBR-1

Comment

In the 24-plus years I have served as an environmental consultant (both in the preparation and defense of EIR's, and as an expert witness) I have never seen such a blatant attempt to circumvent the requirements of CEQA in the name of expediency. The fact that Zone Change 98-3 and Area Plan 98-2 for the 299-unit single family detached housing project are being processed as a "contingency plan" does not excuse compliance with state laws nor does it allow for any corners to be cut just so the contingency plan can be voted on before the end of the year.

However, by purporting to rely on a fatally flawed Addendum to SEIR 566 as the environmental documentation for the Zone Change and the Area Plan, the County of Orange has shirked its responsibility to conduct a careful, deliberate, and legally proper environmental assessment of the impacts, alternatives, and mitigation relating to the 299-unit project. In violation of CEQA Guidelines sections 15063, 15153, 15162 and 15164, the County has sought to "short cut" the environmental review process by using a so-called "Addendum" to avoid the public notice and consultation requirements. Approval of this "Addendum" will place Orange County at legal (and financial) risk, and will severely compromise the County's ability to complete a South County NCCP plan. Granting entitlements for 299-homes will not be viewed favorably by either the California Department of Fish and Game or the United States Fish and Wildlife Service - neither of which appears to have been properly notified or consulted about the new project.

I urge the Commission to reject both the Addendum to SEIR 566 and the associated Zone Change 98-3 and Area Plan 98-2 for the 299 Single-family-unit project. I would also urge the Commission to direct staff to have prepared a legally adequate CEQA document and have that document circulated for public review and Comment.

Response

The Comment represents the opinion of the commentator, who indicates extensive experience in environmental consulting. CEQA allows disagreements among experts. It is the County's contention that the Addendum to Certified Final Subsequent EIR 566 has been prepared in compliance with the requirements of CEQA and the County of Orange procedures. Please refer to Response to Comments CCBG-2 , CCBG-3 and CCBG-4.

The statement regarding the future review by CDFG and USFWS is speculative and is not within the responsibility of the County of Orange. The County has fulfilled its responsibilities by analyzing known and potential impacts to biological resources and including mitigation measures which ensure compliance with resource agencies' requirements.

RBR-2

Comment

I have reviewed this document and make these Comments on behalf of the Vedanta Society of Southern California. I should note that, although I have previously testified before the Board of Supervisors on SEIR 566, I received no notice at all from the County as to the availability of the

"Addendum". In fact, I received a copy of the "Addendum" from Counsel within the week, leaving inadequate time to review and respond to the document.

Response

The Planning & Development Services Department, Environmental & Project Planning Services Division did not receive a request to add the Commentator on the Saddleback Meadows distribution list. Please refer to Response to Comment CCBG-2 and 3.

RBR-3

Comment

Addendum PA 98013 is not a legally permissive document under the California Environmental Quality Act. The document is seriously flawed in the following ways:

A. SEIR 566, to which this document purports to be an Addendum, is itself deficient and is currently the subject of a lawsuit to invalidate its certification.

B. The project and its circumstances have triggered the tests of Guidelines Section 15162 in numerous ways. Substantial project changes, new information from the wildlife agencies, additional project alternatives which have come to light, and feasible mitigation measures which have not been adequately considered all mandate the preparation of a new or subsequent EIR. An addendum is not, therefore, an appropriate environmental document to support the Zone Change and Area Plan.

C. Substantive technical issues are ignored or are addressed in the most cursory way. The document is materially defective by its silence on numerous issues including the lack of mitigation for several significant effects.

D. The use of an Addendum is a transparent attempt to avoid the Public Notice and Review process that would be mandated under Guidelines Sections 15153 and 15162.

Response

The Commentator is correct that Certified FEIR 566 is in litigation. The statement that the document is deficient is speculative since no court ruling has occurred regarding the litigation. The public review process on Saddleback Meadows has exceeded all state and County requirements. Please refer to Response to Comments CCBG-2 , CCBG-3 and CCBG-4.

RBR-4

Comment

Subsequent Environmental Impact Report (SEIR) 566. I had the opportunity to provide the Board of Supervisors with written Comments as to the adequacy of SEIR 566. I include that letter by reference and have attached a copy for the Commissions review and use. In addition, the United States Fish and Wildlife Service and the California Department of Fish and Game commented extensively on the adequacy of SEIR 566. The wildlife agency's comments were never responded to adequately in writing, as is required by law (see Guidelines Section 15088). That letter (dated 8 August 1997) is also attached for the Commission's information and review.

Response

The Orange County Board of Supervisors has responsibilities for the County of Orange. The wildlife agencies have responsibilities related to preserving biological resources. The County and wildlife agencies disagreed on Certified Final Subsequent EIR 566, which the BOS found adequate and complete on February 24, 1998. Specific provisions were included in FSEIR 566 which ensured that the project proponent would mitigate for any impacts to biological resources. The concerns identified by the wildlife agencies were specifically addressed in the Response to Comments Document; the Statement of Overriding Considerations, adopted in Certified FEIR 566, made specific findings regarding Saddleback Meadows's impacts on biological resources.

RBR-5

Comment

An Addendum is NOT the Appropriate CEQA Document. Section 15162 of the CEQA Guidelines (California Code of Regulations) governs when an Addendum to an EIR can be prepared and when a Supplemental or Subsequent EIR is the appropriate document. The relevant parts of that code section read as follows:

"(a) When an EIR has been certified...no subsequent EIR for that project shall be prepared unless...the lead agency determines, on the basis of substantial evidence in light of the whole record, one or more of the following:

"(1) Substantial changes are proposed in the project which will required revisions...due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects.

"2) Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR...due to the involvement of new significant environmental effects of a substantial increase in the severity of previously identified significant effects.

"(3) New information of substantial importance which was not known and could not have been known with the exercise of reasonable diligence at the time of the previous EIR was certified..., shows any of the following:

"(A) The project will have one or more significant effects not discussed in the previous EIR,

"(B) Significant effects previously examined will be substantially more sever than shown in the previous EIR,

"(C) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project but the project proponents decline to adopt the mitigation measure or alternative,

"(D) Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative."

Response

The Comment represents a disagreement among experts. Please refer to Response to Comments CCBG-2 , CCBG-3 and CCBG-4 for the County's position.

RBR-6

Comment

While one might argue that an Addendum to SEIR 566 would be appropriate for *some* issues (i.e., air quality effects are reduced with the smaller project), there is a more compelling argument that a new EIR and public review period are required for a number of the aspects of the new 299-unit project. For example:

- **New Project Alternatives.** Subsequent to the certification of SEIR 566, Saint Michael's Abbey and the Ramakrishna Monastery have entered into a series of negotiations with the Saddleback Meadows developer with the intent of purchasing the bulk of the property (178-acres) for open space purposes. The balance of the property (35- to 44-acres following purchase) would be considered for various development alternatives ranging from 65 to 130 single family homes. These are clearly reasonable alternatives not discussed in SEIR 566 and are alternatives that the project proponent has, to date, declined to adopt. Clearly the tests of 15162(a)(3)(C) and (D) are met and a subsequent EIR and public review period is required.
- **Southern Subregion NCCP.** On 11 August 1998, a letter jointly signed by the United States Fish and Wildlife Service and the California Department of Fish and Game (copy attached) was submitted to the Board of Supervisors of Orange County. This letter states that "County maps show that Saddleback Meadows is the only remaining wildlife corridor linkage to the NCCP Central/Coastal Subregion." SEIR 566 (at pages 4-128, 4-148, and, 4-150) refers briefly to the wildlife corridor issue. Under the heading "Significant Impacts of Project Prior to Mitigation" (p. 4-150), the SEIR indicates that "Implementation of the proposed project would conflict with existing wildlife movement corridors..." Subsequent to this statement, the SEIR offers no mitigation.

In that the discussion of the NCCP wildlife corridor is cursory at best in SEIR 566, and since this is identified by the wildlife agencies in their 11 August 1998 letter as the "only" corridor linking the NCCP subregions, the "... substantial increase in the severity of previously identified significant effects" test of 15162 is clearly met and a new Subsequent EIR and public review period are required.

This requirement for a "new EIR" is doubly compelling when one considers that the County is, with this project, potentially compromising its ability to obtain the approval of the Southern Subregion NCCP, a point of critical interest to many builder/developers besides the Saddleback Meadows developer, California Quartet, Ltd.

Response

The identified alternatives noted in the Comment are not the subject of this environmental review. The Project under consideration at this time is the Contingency Project of California Quartet, Inc. No other alternative has been submitted to the County for environmental review. Should the

identified alternatives be submitted to the County, they will be subjected to the same CEQA environmental documentation requirements as the proposed project.

With regard to the Southern Subregion NCCP related Comments have been evaluated in Certified Final Subsequent EIR 566 and Proposed Final EIR 561. In fact, the 299-unit Contingency Plan has incorporated many of the concerns identified in the two (2) previous EIRs relative to the NCCP, including a central wildlife corridor, preservation of, or replacement measures to ensure the continued sustainability of, valuable biological resources.

RBR-7

Comment

The Addendum for the 299-unit alternative includes a narrow, ostensible "wildlife corridor" through the subdivision. A road traverses the central part of the "corridor" and includes lands that would be extensively graded, thereby requiring revegetation of native plant species. In addition, the revegetation area and the narrowest part of the corridor contain the fuel modification zones associated with the surrounding residential developments. Fuel modification zones are, by definition lacking in both horizontal and vertical cover and are not properly part of a wildlife corridor. The wildlife agencies have not reviewed this proposal, however, although the County is required to have consulted these agencies under section 15063(g) of the Guidelines. That the County has not consulted the Wildlife agencies on this "project" is extraordinary, given the *purported* close working relationship between those agencies and the County staff on the Southern Subregion NCCP.

Response

The Comment restates information contained in EIR 566 and the Addendum relative to the features of the wildlife movement corridor. The resource agencies have previously commented on the adequacy of the proposed wildlife corridor. Please refer to Response to Comments Document on Draft EIR 566.

RBR-8

Comment

Technical Errors and Lack of Mitigation. The California Courts, in interpreting the implementation of CEQA, have been most specific in their requirements for adequate mitigation measures. Feasible, implementable, mitigation measures must be specified by the CEQA document for each of the potentially significant impacts or effects identified for the project. Neither the so-called Addendum nor the original SEIR 566 meet this test. My letter of 17 February 1998 (copy attached) cities case law in support of this conclusion. to cite a few of several possible examples of technical deficiencies from the Addendum and SEIR:

- **Wetlands/Fairy Shrimp.** Both SEIR 566 and Addendum PA 98013 are clear (albeit very brief) in showing that the implementation of either the approved project or the 299 d.u. alternative will result in a significant loss of wetlands and the Federally designated Endangered Riverside Fairy Shrimp. However, no mitigation for this loss is identified, other than generalized statements that permits will be required from the Army Corps of Engineers

(ACOE) and from the California Department of Fish and Game, and that mitigation can be accomplished on-site. None of the critical questions about this mitigation are answered. Can the on-site vernal pools be moved?, Can newly created pools support the endangered Fairy Shrimp?, In order to obtain an ACOE permit, a 401 (c)(3) "alternatives" analysis must be prepared - can an analysis supportive of development be prepared in light of the presence of the endangered species and the rarity of this habitat type in Orange County? Clearly this is a legally significant omission of the Addendum.

Response

The Comment is incorrect. Both the Addendum and Certified Final Subsequent EIR 566 include a comprehensive mitigation program designed to offset impacts to onsite sensitive biological resources. In total, 15 separate mitigation measures are proposed to mitigate impacts to biological resources. All Resource Agency Permit requirements must be satisfied prior to the issuance of grading permits.

RBR-9

Comment

- **Wildlife Corridor.** The 299 d.u. plan ostensibly includes a wildlife corridor through the subdivision. However, the bulk of this narrow corridor, at the "pinch point" is on land that will be graded and then revegetated to native species. Obviously this revegetation will be critical to the success of the corridor concept, yet no revegetation plans are given in the Addendum, no species lists, no information that will allow a reviewer to gage the potential (or actual) success of the revegetation/mitigation measure. Clearly this is a significant technical flaw in the document.

Response

The Comment is incorrect. Both the Addendum and Certified Final Subsequent EIR 566 contain a comprehensive mitigation program designed to offset impacts to onsite sensitive biological resources. In total, 15 separate mitigation measures are proposed to mitigate impacts to biological resources.

RBR-10

Comment

- **Gnatcatcher.** At a minimum an EIR (or an Addendum) must assess those effects that require a mandatory finding of significance. Saddleback Meadows has not been the subject of a directed survey for the Coastal California Gnatcatcher in four years. (Addendum, p. 76). However, recent studies for the NCCP (Dudek and Associates) have identified breeding pairs of Gnatcatchers literally at the periphery of the project site. An EIR (or an Addendum) that makes no attempt to assess the potential effect of the project on a Federally listed species is flawed on its face (see CEQA Guidelines section 15065).

"Take" as defined under the Federal Endangered Species Act also includes indirect effects on the listed species. To the extent that the proposed wildlife corridor through the project is inadequate to allow the passage of Gnatcatchers between the Southern and Central NCCP subregions, then there is a fair argument that a "take" has been committed. Yet the Addendum is silent on this issue and gives the question of the Gnatcatcher the most minimal discussion. Clearly the "Addendum" is fatally flawed in its discussion of this listed species.

Response

The project site has been the subject of previous directed surveys for coastal California gnatcatchers, with none identified onsite. Mitigation Measure SC 7-11 contained in the Addendum PA980103 requires the resurvey of the project site to determine if gnatcatchers occur onsite.

RBR-11

Comment

Avoidance of Public Review. "Public participation is an essential part of the CEQA process" (Guidelines Section 15201). This concept is pervasive throughout both the Act and the Guidelines. When the document is not an original EIR, but a follow-on document as is the case here, *Sutter Sensible Planning, Inc. v Sutter County Board of Supervisors* [(3d Dist. 1981) 122 Cal. App..3d 813] provides appropriate guidance as to the need for recirculation for additional public review:

"[R]ecirculation is required, for example, when the new information added to an EIR discloses:

"(1) a new substantial environmental impact resulting from the project or from a new mitigation measure proposed to be implemented;

"(2) a substantial increase in the severity of an environmental impact unless mitigation measures are adopted that reduce the impact to a level of insignificance;

"(3) a feasible project alternative or mitigation measure that clearly would lessen the environmental impact of the project, but which the project's proponents decline to adopt."

Response

The Comment denies the extensive public review and special requirements imposed by the County in conjunction with the review of the Saddleback Meadows project since 1994. The thresholds noted by the comment with regard to requirements for recirculating an EIR have not been reached by the Contingency Plan. Please refer to Response to Comments CCBG-2 , CCBG-3 and CCBG-4.

RBR-12

Comment

As discussed above, the *Sutter* Court's tests for recirculation to public review are clearly met by the so-called "Addendum." For example:

- With the publication earlier this year of the Alternatives for the Southern Subregion NCCP and with the wildlife agency's letter of 11 August 1998 (see attached) it is now abundantly clear that this project will potentially impact the ability of Orange County to obtain an approvable South County plan. Certainly this is a "substantial increase" in a significant effect for which the Addendum offers no mitigation that will reduce the effect to a level of insignificance.
- Saint Michael's Abbey and Ramakrishna Monastery have been discussing feasible alternatives with the developer and the County, alternatives which would preserve a substantial amount of open space. Since these alternatives would clearly lessen the impacts of the project, and in that the proponent has declined to adopt any of these alternatives, recirculation of the document is mandated.

Response

Please refer to the Response to Comments RBR-11. Please also refer to Response to Comments CCBG-2 , CCBG-3 and CCBG-4.

RBR-13

Comment

In conclusion, the apparent "rush" to approve a 299-unit project involving massive impacts without even coming close to preparing the proper CEQA documentation is unseemly and unjustified. Moreover, given the critical importance of the Saddleback Meadows property to the success of the Southern Subregion NCCP, the failure to provide the wildlife agencies with even the courtesy of a notification regarding a new 299-unit project that would directly and significantly impact the viability of the NCCP is inexplicable, particularly when these agencies have shown such interest in the development of the Saddleback Meadows property.

According, the Planning Commission should not participate in such a legally improper process and should direct the staff to comply with all applicable CEQA requirements before presenting the Zone Change and the Area Plan for consideration. At a minimum, this will require preparation of a new Environmental Impact Report and circulation of that document for Public Review and Comment.

Response

Comment noted regarding consultation with the wildlife agencies. Since the Planning Commission hearing on August 25, copies of the Addendum have been provided for review and comment to both the California Department of Fish and Game and the Fish and Wildlife Service. In addition, County staff have also met with these agencies.

SFC CONSULTANTS,(SFC) **August 25, 1998**

SFC-1

Comment

SFC Consultants (SFC) has hurriedly reviewed the Saddleback Meadows Addendum to Certified Final Subsequent EIR 566 for CEQA compliance and consistency, and provides the following Comments for you and your Planning Commission's consideration at it's meeting of August 25, 1998. By submitting these comments on the Addendum, SFC does not intend to waive its objections to the many procedural irregularities relating to how the EIR is being processed by the County of Orange.

In fact, it is with great concern that I am submitting these Comments at all since I was not notified of the availability of an Addendum to Saddleback Meadows SEIR 566, even though I have made a clear record of my continued interest in participating in, and being informed about, any CEQA review process relating to the Saddleback Meadows property. It was by pure luck that I happened to be at the County Clerk Recorder Office when I walked to the Administration building to review the Public Hearing notices. It was at this time that I noted the Addendum EIR and Planning Commission hearing scheduled for August 25, 1998.

With the considerable amount of time that I have spent to date in Commenting on previous CEQA documents for the Saddleback Meadows project, I would expect to be included in all distributions of any subsequent documents. According to my conversation with Mr. Bill Grieman, the Addendum was distributed to selected private residents, homeowner associations, concerned legal entities and the surrounding religious organizations, totaling eleven Addendum recipients. IT does not appear that even the City of Mission Viejo or other affected local agencies were notified of what is being referred to an the 299-unit "contingency plan."

In fact I contacted Ms. Karen Steele, Senior Planner at the City of Mission Viejo, in order to confirm their receipt of the Addendum. Ms. Steele indicated that the City was not aware of any Addendum, and it the City had been notified, a thorough review of the Addendum would have been undertaken by the City Planning and Transportation Departments. I believe the same would be true with respect to the City of Lake Forest. At any rate, for future reference, please add me to the mailing list of interested persons for all future land use matters relating to the development of the Saddleback Meadows property.

As an EIR preparer myself, it is clear that the applicant is once again trying to avoid full public disclosure and involvement by relying on an Addendum which does not require public circulation. Under CEQA Guidelines Sections 15162 and 15164, it is not proper to rely on the Addendum as the CEQA documentation for a 299-unit single family detached housing project that purports to exempt itself wholesale from the Foothill/Trabuco Specific Plan.

New information regarding project impacts, reasonable project alternatives, and available mitigation measures not previously considered clearly mandates the preparation and circulation of a new EIR for the decidedly different project.

Response

As promulgated by, and in compliance with, Section 15164 of the CEQA Guidelines, the County of Orange determined that an Addendum is the appropriate environmental document for the Contingency Plan based upon the fact that only minor changes and modifications to Certified Final Subsequent EIR 566 are required to make that document adequate under the California Environmental Quality Act and County of Orange procedures.

An Addendum does not require recirculation and/or Noticing of Availability of the document. However, the County of Orange, as a courtesy, provided copies of the document for public review. Additionally, the Planning Commission hearing of August 25, 1998 was a properly noticed hearing, and the public, as always, was invited to provide testimony on the project.

Although SFC Consultants was not notified and given copies of the Addendum previously, the County will ensure that Ms. Jacobs, as well as the cities of Lake Forest and Mission Viejo, will be individually notified of all future public hearings involving the proposed project.

SFC-2

Comment

Over one year ago, on August 22, 1997, SFC provided you and your Planning Commission with nineteen pages of Comments on the Draft SEIR 566, which at that time was proposed for 705 units. Within that document, I highlighted numerous deficiencies in the SEIR which I felt required correction or supplementation prior to the SEIR being certified.

At the October 22, 1997 Planning Commission meeting, I presented major concerns about the inadequacy of the written responses to my Comments, and I raised other questions regarding the adequacy of the SEIR which have not been answered to date. SFC acknowledges that, in the weeks following after the October 22 Planning Commission hearing, the County made additional reports, materials, and technical studies regarding the project, available for public review. With the additional information which was made available, the County's written responses to many of SFC's comments from my August 22 letter were no longer valid. More importantly, the additional materials (e.f., mitigation monitoring program, grading plans and soils reports) which were made available, are the type of "significant new information" which would have required the Draft SEIR to be recirculated under section 15088.5 of the CEQA Guidelines.

On December 2, 1997, SFC provided the County with fifteen pages of Comments, which addressed concerns that were not adequately addressed within the SEIR 566. Within my December 2, 1997 letter, I addressed those comments from my August 22 letter to which no substantive response had been provided. I am disappointed that, even in the recent Addendum, the County has still not responded to my comments, despite ample time to have done so.

In conclusion, I cannot believe that the County has sought to process the 299-unit project without full public disclosure and proper CEQA compliance. Relying on a previously prepared SEIR (which is itself deficient and is currently being litigated) without properly informing the public and responsible state and federal agencies, and trying to process a Zone Change and an Area Plan for 299 homes on the basis of an "Addendum" which is not circulated for public review and Comment does not come close to complying with CEQA and the Guidelines. To protect the record,

however, I have prepared the attached comments within the very little time which has been afforded to me.

Response

The Comment reflects the fact that SFC Consultants disagrees with the County. The County maintains that the comments provided by SFC Consultants on Draft EIR 566 were completely responded to in the Response to Comments Document, which became part of the Certified Final Subsequent EIR.

Regarding the Comment on the choice of an Addendum, please refer to Response to Comments SFC-1 and CCBG-2 , CCBG-3 and CCBG-4 found elsewhere in this document.

SFC-3

Comment

Section II, 3. Project Description

1) **Page 5-15, Project Description**. Nowhere in the project description does the proposed Zone Change (AC98-3) or Area Plan (AP98-2) appear as a description or mitigation measure, yet the title of the addendum indicates both a Zone Change and Area Plan. How can the title of the Addendum refer to two significant changes to the Saddleback Meadows project yet have no substantive discussion of these changes? One short sentence beginning at the end of Page 14 and continuing at the top of page 15 refers to the Zone Change, but that appears to be the only reference to it. What is inexplicably missing from the Project Description section is a detailed explanation that the Zone Change includes an amendment of the Foothill/Trabuco Specific Plan to *exempt* the 299-unit project from the development criteria and restrictions set for the in the Specific Plan. Since the Specific Plan expressly requires that any new project for the Saddleback Meadows property by "consistent" with the Specific Plan, the exemption subsumed within the Zone Change represents the type of "substantial changes" referred to in the Guidelines section 15162 (a) which necessitates the preparation of another EIR to address the numerous respects in which the 299-unit project would significantly deviate from the Specific Plan and subvert the overall goals, objectives and policies that Plan was designed to achieve.

Response

The Commentator is partially correct. As noted, the title page of Addendum PA980103 identifies the required discretionary approvals. The Project Description would have been more clear if the Section had included the details on the Zone Change and Area Plan. This is not a fatal flaw of the document. In stating that any reference to the proposed Area Plan and Zone Change is not substantively discussed in the body of the Addendum, Zone Change 98-3 is referenced on page 14 of the Addendum.

The Area Plan is required of any project and the zone change is mandated to amend the FTSP to allow for a significantly reduced density project. These actions are procedural in nature and will result in the net reduction in impacts as com[pared to the approved 705 unit project.. The requirement for an Area Plan and zone change does not exceed the threshold which would require additional environmental analysis. Please refer to Response to Comment CCBG-3.

However, the Commentator confuses Project with Project Description. The "Project"according to Section 15378 of the CEQA Guidelines, represents the whole of the action, which is the construction of a 299-unit single family development. The Project is substantially less impactful than the previous 705-unit manufactured housing development.

SFC-4

Comment

Page 1, Housing Element. The original 705 unit project description within SEIR 566 indicated that the removal of the mandated inclusionary Housing Program (HP) requirements could undermine the Countywide calculations used to eliminate the affordable housing mandate. Yet no thorough discussion of housing issues, including the possibility of eliminating the need for affordable units was considered in the SEIR, nor was it considered in the response to Comments on the SEIR. This section of the Addendum indicates that the 299-unit project would still be required to apply the IHP even though the County-mandated affordable housing requirements have since been rescinded. Yet page 15, top of page, indicates that the County of Orange would be required to implement a General Plan Amendment to modify project-related affordable housing requirements. Is the County planning to initiate a General Plan Amendment as part of this project application? And if so, will it include a thorough discussion of housing issues?" This discussion of housing issues within the County and their applicability to the Saddleback Meadows project would constitute new information under CEQA Guidelines 15162 and would require a new EIR and a public circulation thereof.

Response

Implementation of the proposed project would effectively eliminate the Bridlewood Residential District related requirements for affordable housing under the now defunct affordable housing program.

SFC-5

Comment

Section III, 1. Land Use Compatibility

3) Page 17 Foothill-Trabuco Specific Plan. This section is grossly misleading and false to the extent that it states that "the project is exempt from the provisions of the Specific Plan." In fact, just the opposite is true. As clearly stated on Page III-20 of the Specific Plan, the exemption that the 705-unit manufactured housing project currently enjoys is to be automatically revoked in the event a new project, such as a 299-unit project, is approved and the new project is to be "consistent" with the Specific Plan.

Response

Please refer to Response to Comment SFC-3 and CCBG-4.

SFC-6

Comment

4) Pages 17 and 18. What is not being disclosed here is that Zone Change (ZC) 98-3 provides a *new* exemption for the 299-unit project to exclude it from coverage by the Specific Plan. Such an

exemption is completely at odds with what the Board of Supervisors intended when it adopted the Specific Plan in December 1991 and expressly stated that any development proposal for the saddleback Meadows property which deviated from Recorded Tract Map No. 10692 had to be brought into consistency with "all of the provisions of the specific Plan." (FTSP at p. III-20, s 3.2 (b)(3).) The proposed *new* exemption provided for in Section 3.4c of ZC 98-3 is a blatant reversal of the Board's 1991 directive and thus represents a significant new change under CEQA Guidelines section 15162 which should be addressed as part of a new EIR to be circulated for public review and Comment. The failure of the Addendum to quote the relevant portion of the Specific Plan imposing a "consistency" requirement on all new project relating to Saddleback Meadows, and the failure to mention the new exemption provided for in ZC 98-03, are quite troubling and clearly inexcusable.

Response

Please refer to Response to Comment SFC-3 and CCBG-4.

SFC-7

Comment

5) Page 19 , Mitigation Measures. Attachment A of Appendix A at the back of the Addendum is the Saddleback Meadows Rural Character Statement. Yet the mitigation measures for the Addendum do not include provisions for the inclusion of these attached guidelines. SFC's previous Comments to SEIR 566 suggested that land use mitigation should include: Setback criteria, buffer zones of vegetation, pet restrictions, ridgeline protection, project phasing coupled with an Annual Monitoring Report under Zoning Code section 7-9-103.2(a)(12) to identify imbalances between development and infrastructure, etc. Notwithstanding the requirements of CEQA Guidelines section 15126(c), these new mitigations represent measures not previous introduced in SEIR 566, through identified pictorially in the site plan (buffer zone), and should be included in a revised draft Subsequent EIR and circulated for public review and input.

Response

The referenced rural character statement is hereby incorporated into the mitigation measure section of the land use portion of the addendum. With regard to specific setback criteria, buffer zones of vegetation, pet restrictions, etc., these are land use regulations and are included in the project conditions; they do not belong in the environmental document.

SFC-8

Comment

6. CEQA Guidelines Section 15131 (b) expressly recognizes that construction can adversely impact religious practices: "if the construction of a road and the resulting increase in noise in an area disturbed existing religious practices in the area, the disturbance of the religious practices could be used to determine that the construction and use of the road and the resulting noise would be significant effects on the environment". Although the Land Use Compatibility section of the Addendum indicates that the reduction of residential units from 705 to 299 and the incorporation of the Saddleback Meadows "Rural Character Statement" responds to the project team's intent for a rural community as expressed by Saint Michael's Abbey and the Ramakrishna Monastery, these measures should be included as

additional mitigation and should be addressed in a new EIR and be circulated for public and agency review. Without incorporation of these measures as mitigation, the current Addendum and mitigation is deficient, as SEIR 566 was, with no attempt to mitigate impacts on surrounding religious uses to any level at all.

Response

One of the primary design criteria for the 299 unit project was to buffer existing surrounding land uses, including the Ramakrishna Monastery and Saint Michael's Abbey. The 299 unit project provides for enhanced buffering of the monastery through a variety of design features including berming, density reduction, backcut grading, etc These design features substantially reduce the impact of the proposed project as compared to the approved 705-unit manufactured home project.

SFC-9

Comment

Section III. 2. Soils and Geology

7) Page 22, Geotechnical Conditions, last paragraph at bottom of page. The Addendum briefly indicates that Pages 4-13 through 4-33 of SEIR 566 remain appropriate for the project. However, the Groundwater section of SEIR 566 was never properly addressed and remains deficient. The major areas of groundwater Comments and concerns are located within pages 4-13 through 4-33 of the SEIR 566, precisely those pages that are not addressed in the Addendum.

Excerpted from SFC Consultants Comments letter dated August 22, 1997 for SEIR 566: **Page 4-16,** Ground Water: It appears from the State Water Resources Board map of wells in the area that there are at least five wells located northerly, westerly and southerly of the site and landslide areas. These wells depend on the groundwater and saturated zones will be encountered (according to the geotechnical study). This excess groundwater will require pumping to a point to where the bottom layer of the 120-foot key cut will need to be cleaned out. The EIR does not discuss the high probability that his excessive pumping may impact groundwater and groundwater recharge to these surrounding wells. Impacts to groundwater and surrounding wells are considered a significant impact in CEQA Guidelines Appendix G(h) and (i). The EIR provides neither discussion of this important issue, nor any mitigation for potential impacts to these wells. While the EIR preparer, or the geotechnical engineer of the project, may speculate that the surrounding wells are being fed by Aliso Creek or "other groundwater", **there is no factual basis to support the conclusion that there will be "no significant groundwater impact" caused by the project grading and development.** The Planning Commission must be provided with complete information on this issue before passing on the adequacy of DSEIR 566, and gathering groundwater information during remedial grading for future decisions, and complying with the water resource agencies, is not the proper way to proceed.

The EIR preparer's response to my Comments of SEIR 566 indicated that this comment is speculative and declines to deal with the very real concern about the impacts on surrounding water wells. Interestingly, the EIR itself includes speculative information that the surrounding wells are being fed by Aliso Creek or other groundwater (in addition to other speculative statements in the SEIR which SFC has previously pointed out). My concern here is that the

Planning Commission is about to rely on a previous SEIR that incorrectly states that there will be "no significant groundwater impact" caused by the project grading and development. The EIR preparer appears unwilling or unable to perform the analysis necessary to comment on the actual impacts to surrounding wells.

Response

Both Proposed Final EIR 561 and Certified Final EIR 566 include comprehensive discussions, as well as complete technical reports, on geotechnical and hydrological impacts associated with the proposed Saddleback Meadows project.

Additionally, the Commentator is reminded that, whether or not the environmental document specifically calls out a specific mitigation, all grading and any required groundwater pumping must be conducted in compliance with the Orange County Grading and Excavation Code. Please refer to previous Response to Comments Document from SFC Consultants on Draft EIR 566, dated October, 1997.

SFC-10

Comment

8) Excerpted from SFC Consultants Comments letter dated August 22, 1997 for SEIR 566: **Page 4-24**, last two paragraphs. These paragraphs state that "unfavorable conditions (i.e. "some ground water") can be mitigated by implementing corrective grading concepts". Yet DSEIR only speculates on the mitigation necessary to truly lessen future impacts to the development from groundwater and postpones for <u>future</u> analysis whatever specific mitigation measures might eventually be proposed by the soils engineer for the project (see page 4-25). This is not keeping with CEQA.

Again, the concerns expressed above are still valid and should be addressed as part of a new EIR that is circulated for public and agency review.

Response

Both Proposed Final EIR 561 and Certified Final EIR 566 contain comprehensive discussions on geotechnical and hydrological impacts associated with the Saddleback Meadows project. Again, the Commentator is reminded that all grading and any required groundwater pumping must be conducted in compliance with the Orange County Grading and Excavation Code. Please refer to previous Response to Comments Document from SFC Consultants on Draft EIR 566, dated October, 1997.

SFC-11

Comment

9) Excerpted from SFC Consultants Comments letter dated August 22, 1997 for SEIR 566: **Page 4-31,** Mitigation Measure 2-34. Ironically, this so-called "mitigation measure" provided more detailed information regarding groundwater problems and dewatering than any discussion set forth in the text of DSEIR 566. Although page 4-24 of the text merely alludes to "some" groundwater that might be encountered during grading, this mitigation measure paints a far more

graphic and alarming picture, **"Heavy seepage was encountered, as indicated on the Boring Logs, at multiple elevations. Consequently, considerable water can be expected within planned excavations, typically reaching maximum discharge within 2 to 5 days after exposure. Additional nuisance water is foreseen in nearly all major cuts decreasing in volume with time, and being less at high elevations as well as in cuts made late in the year."**

As indicated above groundwater wells are located adjacent to the site and landslide areas. Impacts to surrounding groundwater and groundwater wells from required pumping and dewatering are not even discussed in the text of the DSEIR, yet this mitigation measure appears to expect it. Again, the DSEIR does not, but certainly should discuss the extreme likelihood that this excessive pumping may impact groundwater wells and groundwater recharge to these surrounding wells. Impacts to groundwater and surrounding wells are considered a significant impact under CEQA.

The Planning Commission must be provided with enough factual information before it is asked to certify this EIR. Gathering groundwater information during remedial grading is not proper mitigation.

My previous Comment on groundwater, seepage, and impacts to down gradient wells should be addressed prior to approving any Addendum.

Response

Please refer to previous Response to Comments from SFC Consultants on Draft EIR 566, dated October, 1997.

SFC-12

Comment

10) Excerpted from SFC Consultants Comments letter dated August 22, 1997 for SEIR 566: Page 4-33, Section 4.2.7. of the DEIR should be changed to read "Implementation of this proposed project, with the mitigation measures outlined above will result in unavoidable adverse geotechnical impacts." At a minimum, there are significant groundwater impacts and slope stability issues that have not been adequately discussed or mitigated in DSEIr 566 and revision and recirculation of the DSEIR is in order to allow public comment on these matters when they are completed.

Again, the concerns expressed above are still valid and should be addressed as part of a new EIR that is circulated for public and agency review.

Response

Please refer to previous response to Comments from SFC Consultants on Draft EIR 566, dated October, 1997.

SFC-13

Comment

Section III.3 Water/Hydrology

11) Page 22, Geotechnical Conditions, last paragraph at bottom of page. The addendum briefly indicates that Pages 4-33 through 4-43 of SEIR 566 remain appropriate for the project. However, the tru facts are that the Water Hydrology section of SEIR 566 was never properly addressed and remains deficient. The major areas of water and hydrology Comments and concerns are located within pages 4-33 through 4-43 of SEIR 566, precisely those pages that are not addressed in the Addendum.

Excerpted from SFC Consultants Comments letter dated August 22, 1997 for SEIR 566: **Page 4-38** The EIR states that alterations of the rate of flow of groundwater or impacts to groundwater quality are considered to be insignificant. The geotechnical report indicates that groundwater and saturated zones will require dewatering during grading and excavation of the sheer key. Groundwater from these slide planes will require pumping for an undetermined period of times (as demonstrated in Mitigation Measure 2-34). At least five (5) groundwater wells are located near this project site, directly in the path of the groundwater flow.

The geotechnical report has completely disregarded the impacts that may be incurred downstream during construction dewatering. ***This EIR section should consider impacts to groundwater as significant,*** *otherwise the Planning Commission should not certify this EIR with an incorrect impact finding.*

SEIR 566 incorrectly states that there will be no significant impacts to groundwater caused by the project grading and development, and the SEIR was certified with these incorrect findings. The SEIR should have stated that "significant impacts may occur to groundwater due to project grading and development," The Addendum which addresses this project cannot rely on a SEIR that was certified with incorrect findings.

Response

Please refer to previous Response to Comments from SFC Consultants dated October 1997.

SFC-14

Comment

12) Excerpted from SFC Consultants Comments letter dated August 22, 1997 for SEIR 566: Page 4-42, Mitigation Measure 3-5. How and why is this mitigation important to reducing hydrologic impacts to less than significant levels? What if the upstream and downstream property owners do not sign or agree to a letter of consent? Does the Manager, PDS/Subdivision and Grading Services Division override the property owner and allow consent? The mitigation measure is not enforceable and does not reduce impacts in any way. It should be deleted.

The response to this Comment to SEIR 566 was non-responsive and yet the SEIR 566 was still certified. Again, how and why is this mitigation important to reducing hydrologic impacts to less than significant levels? What if the upstream and downstream property owners do not sign or agree to a letter of consent? Does the Manager, PDS/Subdivision and Grading Services Division override the property owner and allow consent?

Response

Please refer to previous Response to Comments from SFC Consultants dated October 1997.

SFC-15

Comment

13) Excerpted from SFC Consultants Comments letter dated August 22, 1197 for SEIR 566: Page 4-43, Section 4.3.7. indicates that implementation of the proposed mitigation measures would result in no unavoidable adverse impacts to groundwater hydrology, yet there is no information on impacts to downstream wells from excessive dewatering to support the less than significant impact. This conclusion should be changed to **potentially significant impacts will result after implementation of the mitigation measures.** In addition, the new information associated with the new finding will require recirculation of DSEIR 566.

No information has yet been presented to support the SEIR's conclusion that unavoidable adverse impacts to groundwater hydrology will not occur. Since the SEIR has been certified with this incorrect finding, the Addendum is also deficient. The impact statement should be changed to state that "significant impacts may occur to groundwater due to project grading and development," then a new EIR should be circulated for public and agency Comment.

Response

Please refer to previous response to Comments from SFC Consultants on Draft EIR 566, dated October, 1997.

SFC-16

Comment

Section III.4. Transportation/Circulation

14) Page 42, Second Paragraph. The Addendum briefly indicates that Pages 4-44 through 4-83 of SEIR 566 remain appropriate for the 299-unit project, but the Transportation/Circulation section of SEIR 566 was never properly addressed and remains deficient. The major areas of traffic and circulation Comments and concerns are located within pages 4-43 through 4-83 ;of the SEIr, precisely those pages that are not addressed in the Addendum.

Excerpted from SFC Consultants Comments letter dated August 22, 1997 for SEIR 566: The traffic section of the DSEIR unfairly limits its review of intersection impacts to El Toro Road/Santa Margarita Parkway and north. No explanation is given in the DSEIR for this limiting factor, and no analysis is included for the intersections along El Toro south to the San Diego Freeway (I-5). The DSEIR should include all intersections that will be impacted by the 705-unit project.

The EIR preparer for SEIR 566 had justified the lack of analysis south of Santa Margarita Parkway to "Distribution of project related traffic generation...has been reviewed and approved by the County of Orange, Traffic Engineering Division." Yet the Response went on to say "...the majority of traffic will be oriented to the south/west of the site." I am disappointed that, even in

the recent Addendum, the County has still not responded to my Comment, despite ample time to have don so. Please clarify what EIR preparer is trying to say and respond to the comment properly.

Response

Please refer to previous response to Comments from SFC Consultants on Draft EIR 566, dated October, 1997.

SFC -17

Comment

Section III.6 Noise Analysis

15) Page 66, First Paragraph. The Addendum makes a poor and questionable attempt to actually respond to a Comment from SEIR 566 relating to the noise impacts on adjacent religious facilities. The Addendum attempts to justify these impacts by; indicating that "These facilities are already exposed to single event aircraft noise that is much louder than a distant barking dog, lawnmower or auto horn associated with project residential uses." The Addendum goes on to indicated that intervening topography" and reduction in the number of units from 705 to 299 would offset such noise impacts. Such a conclusory response unsupported by a revised noise analysis for this Addendum is prohibited under CEQA Guideline Section 15088(b). Before the Addendum attempts to make conslusory statements such as this, a revised noise analysis should be prepared and discussed in a new EIR that is circulated for public and agency review.

Response

Please refer to previous response to Comments from SFC Consultants on Draft EIR 566, dated October, 1997.

SFC-18

Comment

16) Page 66, Third Paragraph. By means of a passing reference to Page 4-101 through 4-118 of SEIR 566, the Addendum suggests that the noise impacts of the 299-unit project are adequately addressed in the SEIR. The Noise section of SEIR 566 however, never properly addressed the impacts of noise on religious facilities and remains deficient. The major areas of noise Comments and concerns are located within pages 4-101 through 4-118 of SEIR 566, precisely those pages that are not addressed in the Addendum.

Excerpted from SFC Consultants Comments letter dated August 22, 1997 for SEIR 566: Notwithstanding the requirements of CEQA Guidelines Section 15130(b)(1)(B), the DSEIR fails to provide a cumulative analysis of the noise impacts from the reuse of the El Toro Marine Corp Air Station as a commercial airport or the noise from traffic associated with the commercial airport.

Once this information has been included in this DSEIR, this document should be recirculated for public review.

Page 4-102, Baseline Noise Levels. The Noise section of the DSEIR provides a baseline discussion of the current impacts from the El Toro MCAS fly-overs which exist at present, but the impact section of the EIR fails to identify potential CNEL contours as a result of the base reuse plan as an active commercial airport.

Page 4-103, the first paragraph discusses an area of proposed open space as the project location where the 62 dB CNEL contour falls. This may have been true for the previous EIR 561, however, page 7 of the noise study provided in Appendix G states that the 62dB CNEL location is in an area of proposed commercial development. The proper location of the 63 dB CNEL should be verified prior to EIR certification.

*Page 4-103, third paragraph, states "Depending upon future site re-use, aircraft noise may or may not be an important issue." **The aircraft noise from a commercial airport at El Toro will be an important issue.** Nowhere else in the DSEIR is the El Toro MCAS reuse discussed or incorporated by reference. No commercial aircraft noise impact analysis is provided. The DSEIR should include project related noise impacts as a result of the El Toro reuse plan as a commercial airport and traffic related impacts. Once this information has been included in this DSEIR, the document should be recirculated for public review.*

Page 4-103, fourth paragraph indicates that individual fly-over events may be noise intrusive and mitigation has been provided. However, neither the baseline discussion, impacts analysis nor the mitigation measures in the DSEIR include mitigation for a multiple fly-over commercial airport.

The EIR preparer for SEIR 566 made no attempt to respond to any of the issues concerning the future use of the El Toro MCAS. I am disappointed that, even in the recent Addendum, the County has still not responded to my Comment, despite ample time to have done so. Please respond to the issues regarding the future use of the El Toro MCAS as a commercial airport.

Response

Please refer to previous response to Comments from SFC Consultants on Draft EIR 566, dated October, 1997.

SFC-19

Comment

Section III.7. Biological Resources

17) Page 73, First Paragraph. The Addendum includes the same discussion of the NCCP as SEIR 566, however, a footnote has been added to this paragraph. Unfortunately, the actual text of the footnote has been omitted leaving the reader to guess at its significance. Please provide the text of this footnote.

18) Page 73, First Paragraph. The Addendum refers to a new analysis of biological issues that was recently prepared for the 299-unit project which is currently proposed. However, the body of the Addendum does not clearly refer the reader to Appendix G where a copy of this new analysis is located. The new biological report within Appendix G contains new information which has never been publicly reviewed or Commented upon. Notwithstanding the requirements of CEQA

Guidelines section 15126(c), this new report represent information not previous discussed in SEIR 566, and should be included in a new EIR that is circulated for public review and input under.

18) Page 79, Last paragraph at bottom of page. The Addendum briefly indicates that Pages 4-118 through 4-154 of SEIR 566 remain appropriate for the 299-unit project. However, the tru facts are that the Biological Resources section of SEIR 566 was never properly addressed and remains deficient. The major areas of biological resource Comments and concerns are located within pages 4-118 through 4-154 of the SEIR, precisely those pages that are not addressed in the Addendum.

Excerpted from SFC Consultants Comments letter dated August 22, 1997 for SEIR 566: Page 4-153, Mitigation Measures SC 7-1 through 7-7 and measures 7-111 through 7-14 would appear to be of ;no value in light of the ;note placed on the preliminary grading plans...this EIR does not adequately satisfy CEQA Guidelines Section 15126 (c) requirements at this time. Gathering further information and complying with resource agencies in the future is not proper mitigation. Biological mitigation for ACOE and CDFG coordination may change the development plan, which would then require a revised EIR.

This Comment was not adequately addressed in SEIR 566 and the Addendum likewise fails to address the issue raised by this comment. These important issues must be addressed before any further action is taken.

Response

Please refer to previous response to Comments from SFC Consultants on Draft EIR 566, dated October, 1997.

SFC-20

Comment

19) Page 84, Mitigation Measure SC 7-8

Excerpted from SFC Consultants Comments letter dated August 22, 1997 for SEIR 566: Page 4-155, Mitigation Measure 7-8, F, states that an experienced nursery or other landscape contractor shall care for the transplanted trees for only six (6) months. The biological report states on page 49, second paragraph, **"In order to ensure the success of mitigation, the Project proponent should enter into a five year secured agreement with the County of Orange to cover the projected cost to install, monitor, and report on the mitigation Project. This agreement will be in the form of a 100 percent bond."** This extremely important mitigation measure is found nowhere in the DSEIR. If the DSEIR does not reflect the recommendations of the expert biologist, then mitigation measure 7-8 F is ineffective and invalid. The DSEIR cannot be certified without amending this measure to reflect the biologist's recommendation.

The EIR preparer for SEIR 566 stated in their response to this Comment that "[t]he provision for five years of biological resource mitigation monitoring is hereby incorporated into the DEIR. However, rather than incorporate this mitigation measure, the Corrections and Additions section

of the SEIR 566 simply states: "Page 4-155, Mitigation Measure 7-8: the following mitigation measure is added to the draft EIR: *All biological resource mitigation measures shall be monitored for compliance with applicable resource agency requirements and established success criteria, to the satisfaction of the manager PDS/Subdivisions and the Administrator Planning and Zoning."* Nowhere in the Corrections section is the five year mitigation monitoring mentioned. Moreover, neither the Addendum, nor the new biology report, located in Appendix G of the Addendum makes any reference whatsoever to this mitigation measure.

Response

Please refer to previous response to Comments from SFC Consultants on Draft EIR 566, dated October, 1997.

SFC-21

Comment

20) Page 87, Mitigation Measure SC 7-11. Although this mitigation measure requires a gnatcatcher survey to be conducted pursuant to the current USFWS protocol, and to the satisfaction of the WSFWS and the County, it does not provide for sufficient mitigation in the event the gnatcatcher is found to exist on the Saddleback Meadows property. This mitigation measure was a good start, but it is inadequate for the real purpose of protecting endangered species. The measure should include provisions for mitigation of gnatcatcher habitat, including on- and off-site mitigation, if necessary.

21) Page 88, Mitigation Measures. The mitigation measure noted in the Response to Comments of SEIR 566, Section H, Corrections and Additions to the Draft EIR for Page 4-153, Paragraph 4 has not been incorporated into the Addendum, even through the County has had ample time to have done so.

Response

Please refer to previous response to Comments from SFC Consultants on Draft EIR 566, dated October, 1997.

SFC-22

Comment

Section III.8. Aesthetics

2) Page 94, Mitigation Measure PDF 8-4. The mitigation measure noted in the Response to Comments of SEIR 566, Section H, Corrections and Additions to the Draft EIR for Page 4-174, Mitigation Measure 8-4, has not been incorporated into the Addendum, despite ample time for the County to have done so.

Response

Please refer to previous response to Comments from SFC Consultants on Draft EIR 566, dated October, 1997.

SFC-23

Comment

Section III.9. Cultural/Scientific Resources

23) Page 103, History. The Addendum briefly indicates that Pages 4-173 through 4-192 of SEIR 566 remain appropriate for the project, but the Cultural Resources section of SEIR 566 never properly addressed the direct or indirect environmental impacts of the project on the religious or sacred uses within the potential impact area. The major areas of Cultural/Scientific Resources Comments and concerns are located within pages 4-192 through 4-192 of the SEIR, precisely those pages that are not addressed in the Addendum.

Excerpted from SFC Consultants Comments letter dated August 22, 1997 for SEIR 566: Page 4-178. The DSEIR makes no attempt to analyze either the direct or indirect environmental impacts of the project on the religious or sacred uses within the potential impact area. In this case, the potential impact area extends outside of the boundary. This important issue should be discussed in the DSEIR prior to certification.

The EIR preparer was non-responsive to this Comment. This commend should be addressed as part of the Addendum.

Response

Please refer to previous response to Comments from SFC Consultants on Draft EIR 566, dated October, 1997.

SFC-24

Comment

Mitigation Monitoring Plan

An EIR preparer, I believe that the mitigation monitoring program is the most important document that will come out of the final approval process for the Addendum or any future EIR. The Monitoring Program should be user friendly and a dynamic document, not something to file away on a shelf once approved. As indicated in my Response to the County of Orange dated December 2, 1997:

A) The County should require that the applicant hire an independent mitigation monitor, as selected by the County, to assist the County in monitoring and verifying implementation of both the standard county mitigation measures and the additional mitigation measures. For example:

Air Quality. Most of the air quality mitigation measures are the responsibility of the applicant. The applicant, or the applicant's contractor, may not have specialized knowledge of mitigation monitoring, but a specialized mitigation monitor would.

Biological Resources. The applicant is responsible for plan relocation. This should be delegated to a mitigation monitor to verify implementation.

B) No where in the mitigation monitoring program does the USFWS, the CDFG, or the ACOE show up in the Responsible Person column. These agencies should be added as responsible parties.

C) None of the additional mitigation measures listed in the Response to Comments are reflected in the Mitigation Monitoring Program. The new mitigation should be reflected in the monitoring program prior to certification.

No Mitigation Monitoring Plan has yet been made available for the Addendum.

Response

Please refer to previous response to Comments from SFC Consultants on Draft EIR 566, dated October, 1997.

CALIFORNIA DEPARTMENT OF FISH AND GAME,(CDFG) August 11, 1998

CDFG-1

Comment

The California Department of Fish and Game and the U.S. Fish and Wildlife Service collectively the Wildlife Agencies) recently learned about a Planning Application Hearing for the Saddleback Meadows project scheduled for the County Board of Supervisors on August 11, 1998. The applicant is proposing a 299 single-family dwelling u;nit project at Saddleback Meadows. The wildlife Agencies and County have a lengthy history of communication concerning the project site and a variety of development proposal alternatives have been reviewed. The project site provides a critical habitat connection between the County of Orange's Central/Coastal and Southern Subregional Conservation Plans. In this letter we reiterate our position on the proposed Saddleback Meadows project and provide Comments on a recent proposal that could affect the project.

Response

The Comment restates information contained in the Draft EIR. No response is required.

CDFG-2

Comment

The Wildlife Agencies, other Federal and State agencies, County of Orange, and local jurisdictions are participating in the Natural Community Conservation Planning (NCCP) program to conserve wildlife and habitat resources while accommodating economic growth and development. Our previous Comments on Saddleback Meadows Project - Draft Environmental Impact Report (DEIR) No. 561 (February 1996) and in our August 8, 1997, letter concerning the Saddleback Meadows Draft Subsequent Environmental Report No. 566 (DSEIR) (June 1997) identified significant biological issues related to the project site. These biological issues include habitat connectivity, wildlife corridors, sensitive habitats, and occupied wetlands with a federally listed animal. These sensitive habitats include about 65 acres of coastal sage scrub (CSS), 14 acres of oak woodland, and about 4 acres of wetland vegetation communities. The federally endangered Riverside fairy shrimp *(Streptocephalus woottoni)* is known to occur within at least seven wetlands (identified as "ephemeral ponds") spread throughout the site. Our letter evaluating the DSEIR identified Alternative '3' which proposed a clustered, lower density development, presented the least environmental impact, but would nonetheless substantially impact the wildlife corridor integrity. The 299-unit development posed a significant impact to the existing habitat connecting from O'Neill Regional Park (Southern Subregion) to the Cleveland National Forest and other open space habitat in the central portion of the Central/Coastal Subregion. The Wildlife Agencies are willing to work with the project applicant to redesign a cluster development in order to preserve the wildlife corridor.

Response

The Comment restates information contained in Addendum PA980103 and Certified Final Subsequent EIR 566 relative to biological resources. The agencies position relative to the wildlife corridor and the project in general is noted.

It should be noted that the proposed 299-unit Contingency Plan proposal represents an evolution of project to incorporate the majority of the features identified by the resource agencies in previous Comments to Proposed Final EIR 561 and Certified Final Subsequent EIR 566, to mitigate impacts to biological resources. These include the proposed 400-foot wide wildlife movement corridor, preservation or replacement of eight (8) ephemeral ponds, preservation of the majority of the oak woodland habitat and onsite native Rougetata, offsite hanbitat creation and replanting with native plant species.

CDFG-3

Comment

Other animal species considered sensitive by the Wildlife Agencies occur on or adjacent to the project site. The Wildlife Agencies documented rare and sensitive Cactus wren (Camphylorhynchus brunneicapillus) on site. The coastal California gnatcatcher (Polikoptila californica californica) (gnatcatcher), a federally threatened species, could utilize the site based on the presence of CSS and gnatcatcher-occupied CSS in surrounding areas. Both of these animals, as well as other wildlife, would utilize Saddleback Meadows as a wildlife corridor. County maps show that Saddleback Meadows is the only remaining wildlife corridor linkage to the NCCP Central/Coastal Subregion.

Response

The Comment restates information discussed in detail in Proposed FEIR 561and Certified Final Subsequent EIR 566. This information was also included in Addendum PA980103. No additional response is required.

CDFG-4

Comment

We have been informed by two interested parties, Saint Michael's Abbey and Vedanta Society of Southern California, that a new clustered development alternative proposal and purchase of significant open space on the site have been offered to the current property owner. The Wildlife Agencies are willing to work with the current landowners and all interested parties in reaching a workable development solution.

Response

The referenced negotiations are ongoing with no agreement in place or expected to be in place in the near future. In the absence of such agreement, no additional Response regarding alternative development plans is appropriate at this time.

CDFG-5

Comment

The Wildlife Agencies believe a workable solution exists to permit development, while maintaining an essential biological connection between the NCCP Central/Coastal and Southern Subregions. We request that the Board consider this alternative approach that may provide a solution acceptable to all parties. If you have any questions or Comments, we are available to discuss this matter further. Please feel free to contact us at your earliest convenience.

Response

The referenced negotiations are ongoing with no agreement in place or expected to be in place in the near future. In the absence of such agreement, no additional Response is appropriate at this time.

CONNOR, CULVER, BLAKE & GRIFFIN, LLP (CCBG2) **September 2, 1998**

CCBG2-1

Comment

Without waiving any of the objections set forth in my letter to the Planning Commission, dated August 25, 1998, including, but not limited to, the lack of adequate public notice under CEQA Guidelines section 15153 (b)(2), but in the interest of ensuring that County staff, the Planning Commission, and responsible state and federal agencies, are afforded an opportunity to consider whether to require the preparation of a new EIR to analyze the additional impacts, alternatives, and mitigation measures associated with proposed Zone Change 98-3 and Area Plan 98-2 permit development of a 299-unit single-family detached housing project (the "299-Unit Project") on the Saddleback Meadows property (the "Property"), please find enclosed the following:

1) An 8-1/2x2/11" copy of a conceptual site plan (entitled and hereinafter referred to as the "6-Unit Alternative"), which was prepared by County staff on or about March 23, 1998, to show the proposed layout on the Property of 65 single-family detached dwelling units on approximately 35 acres out of the 222 total acres which comprise the Property;

2) A 3'x4' copy of a site plan (entitle and hereinafter referred to as the "127-Unit Alternative") which was prepared on or about July 13, 1998, by California Quartet's consultant, Michael Madden Associates, to show the proposed layout on the Property of 127 single-family detached dwelling u;nits on approximately 5,000 to 6,000 sq. ft. lots, covering a development footprint of approximately 44 acres located in the same general vicinity as the 65-Unit Alternative; and

3) An 18"X51" copy of a site plan (entitled and hereinafter referred to as the "12-Unit Alternative"), which was prepared on or about August 31, 1998, and was revised on September 2, 1998, by the consultant for Vedanta Society/St. Michael's Abbey, Warren W. Singleton, P.E., to show the proposed layout on the Property of 120 single-family detached dwelling units on basically the same development footprint covered by the 127-Unit Alternative, except for certain grading and fuel modification pull-backs for ridgeline protection and canyon preservation purposed. Also enclosed is a copy of a letter from Mr. Singleton, dated August 31, 1998, providing some explanatory notes regarding the 120-Unit Alternative.

Response

The alternatives referenced in the Comment letter have not been submitted to the county for review and as such are not appropriate for inclusion in the addendum or any other environmental document at this time. Should additional alternative development scenarios become a component of the negotiation, and subsequently submitted to the county for review, additional environmental documentation will be completed at that time.

CCBG2-2

Comment

Since the County is proposing to "use an EIR from an earlier project [i.e., FSEIR 566] as the EIR for a

separate, later project [i.e., the 299-Unit Project]," then section 15153(b)(2)(D) provides that one of the "key issues" involving the use of the previously-Certified Final Subsequent EIR "whether the EIR should be used for this project and whether there are any *additional, reasonable alternatives* for mitigation measures that should be considered as ways of avoiding or reducing the significant effects of the project." Of course, if additional reasonable alternatives exist which were not considered by the lead agency in certifying the EIR for the "earlier project," that earlier EIR should not be used as the environmental documentation for the "separate, later project."

Indeed, subsection (d) of section 15153 clearly states that "an EIR prepared for an earlier project shall *not* be used as the EIR for a later project if any of the conditions described in Section 15162 would require preparation of a subsequent of supplemental EIR.) (Emphasis added.) Under CEQA Guidelines section 15162(a((3)(D), a subsequent EIR must be prepared if "new information" shows that "alternatives which are considerably different from those analyzed in the previous EIR would *substantially reduce* one or more significant effects on the environment, but the project proponents decline to adopt the ... alternative[s]. (Emphasis added).

Obviously, FSEIR 566 did not analyze the 65-Unit Alternative, the 120-Unit Alternative, or the 127-Unit Alternative. In differing degrees, each of these Alternatives would *significantly* reduce the environmental impacts associated with the 299-unit project in that they would preserve virtually all of the oak woodlands, coastal sage scrub habitats, and vernal ponds on the Property, and would provide for an ample wildlife corridor over undisturbed terrain. Of course, only the 120-Unit Alternative would ensure that no grading or construction occurred in the biologically-sensitive canyon areas south of the east/west ridgeline on the Property which are to serve as part of the wildlife connectivity links between Whiting Ranch Wilderness Park and O'Neill Park.

Response

The alternatives referenced in the Comment letter have not been submitted to the county for review and as such are not appropriate for inclusion in the addendum or any other environmental document at this time. Should additional alternative development scenarios become a component of the negotiation,s and subsequently submitted to the county for review, additional environmental documentation will be completed at that time.

CCBG2-3

Comment

The indisputable fact of the matter is that the 65-Unit, 120-Unit, and 127-Unit Alternatives would each avoid the substantial environmental devastation that would otherwise be wreaked upon the Property by the 299-Unit Project in connection with the mass grading of the proposed wildlife corridor, particularly in the lush canyons which presently link up with O'Neill Park. Accordingly, a new or subsequent EIR should be prepared to, among other things, analyze each of these three Alternatives from two different perspectives: (1) as stand-alone projects which would require California Quartet to dedicate all of the non-development areas of the Property (approximately 178 acres) as permanent open space and (2) projects which would involve California Quartet's sale of the same non-development acres to third parties, such as my clients and the County of Orange, for cash consideration.

Response

The alternatives referenced in the Comment letter have not been submitted to the county for review and as such are not appropriate for inclusion in the addendum or any other environmental document at this time. Should additional alternative development scenarios become a component of the negotiations, and subsequently submitted to the county for review, additional environmental documentation will be completed at that time.

CCBG2-4

Comment

As your Department has been made well aware, based on the extensive factual chronology presented by Mr. Frank Elfend at the August 25 session of the Planning Commission's hearing on the 299-Unit Project, and as a result of Mr. Elfend's earlier public presentations to the Board of Supervisors on June 23, and August 11, 1998, my clients and the County are currently involved in negotiations with California Quartet for the purchase of the approximately 178 acres which would be left undeveloped under the three Alternatives discussed above. Indeed, it is precisely because these negotiations are still ongoing that the 299-Unit Project has been dubbed a "Contingency Plan" which California Quartet intends to pursue in the event that the negotiations do not prove fruitful.

If, the next-scheduled session of the Planning commission's hearing on the 299-Unit Project – which, by stipulated court order of August 31, 1998, has been continued to October 7, 1998 – you determine that California Quartet, for whatever reason, has declined to proceed with any of the three Alternatives discussed above, I presume that you Department will order the preparation of a subsequent EIR under the terms of CEQA Guidelines section 15162(a(3)(D). In the Staff Report, dated August 25, 1998, which the Environmental & Project Planning Services Division submitted to the Planning Commission in connection with its public hearing on the 299-Unit Project, it was stated that "none of the conditions described in Section 15162 calling for preparing a supplemental or Subsequent EIR have occurred ..." Of course, that statement would no longer be true if California Quartet proceeds to reject any of the Alternatives discussed above as of the next Planning commission hearing scheduled for October 7, 1998. For example, if California Quartet were to refuse to accept the 120-Unit Alternative as of the October 7 hearing, then a subsequent EIR would be required to analyze this alternative under the provisions of section 15162(a)(3)(D) because no discussion of this alternative is to be found in FSEIR 566.

Response

The alternatives referenced in the Comment letter have not been submitted to the County for review and as such are not appropriate for inclusion in the Addendum or any other environmental document at this time. Should additional alternative development scenarios become a component of the negotiations, and subsequently submitted to the county for review, additional environmental documentation will be completed at that time.

CCBG2-5

Comment

However, I do not believe it is necessary for your Department to wait until the October 7 Planning Commission hearing to make the determination that a *new* EIR should be prepared for the 299-Unit

Project. As I explained at the August 25 hearing, my clients, the Vedanta Society of Southern California, the Norbertine Fathers of Orange, and the Saddleback Meadows Land Conservancy LLC, do not necessarily agree with you Department's determination that section 15162 of the CEQA Guidelines applies in this case. The California courts have clearly held that CEQA section 21166, and its companion section 15162 of the Guidelines, only apply when the question is whether more than one EIR must be prepared for what is essentially the *same* project.

When the proposed new activity is a *separate* project – as it certainly is in this case – the "fair argument" test is the standard which applies in determining whether a new (as opposed to a subsequent or supplemental) EIR must be prepared to analyze the *separate* project. Under the "fair argument" test, a new EIR must be prepared whenever it can be fairly argued on the basis of substantial evidence that the proposed project may have a significant environmental impact.

Response

A new EIR is not required for the reasons as outlined in Response to Comment CCBG-2, and the fact that the existing addendum adequately evaluated the environmental effects of the proposed 299 unit project.

CCBG2-6

Comment

In light of the oral and written Comments which were submitted by my firm, Royce Riggan, John Byerly, Warren Singleton, and Saundra Jacobs at the August 25 public hearing, there are numerous environmental impacts associated with the development of the 299-Unit Project which were not addressed in FSEIR 566 and which mandate the preparation of a new EIR under the "fair argument" test. Aside from the obvious impacts which will be caused by the fact that the 299-Unit Project pushes grading and development activities significantly closer to the Ramakrishna Monastery and raised unanswered questions regarding water runoff and drainage impacts that will be caused by the new houses to be build northeast of St. Michael's Abbey, there is no discussion in FSEIR 566 regarding (1) whether the wildlife corridor proposed for the 299-Unit Project would comport with the goals and objectives of the NCCP planning process and (2) whether it would preclude or any way *jeopardize* finalization of the Southern Subregion component of the NCCP. Clearly, these impacts should be addressed in a new EIR and the public, as well as the appropriate federal and state wildlife agencies, should be allowed to comment on these important environmental matters.

In closing, my clients would request that the County immediately cease processing the 299-Unit Project unless and until the County complies with CEQA and sends out a Notice of Preparation for a new EIR to address the environmental impacts, reasonable project alternatives and feasible mitigation measures associated with the development of the 299-Unit Project.

Response

A new EIR is not required for the reasons outlined in Response to Comment 2, and the fact that the existing addendum adequately evaluated the environmental effects of the proposed 299 unit project

CCBG2-7

Transmitted with this letter are six blackline copies of the Alternate (120) Lot Study which was presented at last Thursday's meeting. The map is a compilation of the three work sketches presented last week.

The lots and street shown in solid lines are the revised layout. The lots and streets which are not changed are outlined with dashed lines. The revised total lot count is one hundred and twenty (120) units.

Comments regarding the design proposals:

- The grades on the main entry street were held per the proposed California Quartet Study (CQ).
- In order to provide lots in the upper eastern portion of the site grading, remedial grading and fuel modification were allowed to occur in the one hundred (100) foot setback zone which Vedanta originally proposed to be north of the ridgeline.
- The ridgeline has generally been protected in the upper portion of the site, from the second Cul-de-sac south of the spine road to the eastern limits. The moving of the spine road and lots north away from the ridgeline provides for the one hundred and fifty foot Fire Fuel Modification area and maintains the ridgeline. Although the cut slope is at the ridgeline or slightly beyond, the road or lots will likely not require remedial grading beyond the ridge and down into the bottom of the first or second canyon as all of the previous proposals have done.
- The first long Cul-de-sac south of the spine road impacts the lower ridgeline and some Coastal Sage Scrub. The Hidden Hill development south of this area has already disturbed a portion of this Coastal Sage area. This was not changed from the CQ study.
- The addition of the twelve lots on the lower portion of the spine road should be of benefit geotechnically. The proposed spine road was being cut deeply into the hill, up to ninety (90) feet. This removal of material should benefit the stability of the area: The addition of lots north of the spine road removes additional material and contours the remaining hill as previously proposed. If additional unloading is desirable the hill could be layed back further.
- The extension of the second Cul-de-sac north of the spine road, adding eight (8(lots, was sloped down away from the spine road to minimize the fill depth and the limits of grading. This should not trigger extensive additional remedial grading since the same geologic features are involved.
- The second Cul-de-sac south of the spine road was pulled back to accommodate Fire Fuel Modification. The lot count was reduced from six (6) to three (3). The ridgeline is being lowered in this area. The proposed grading created a cut slope facing north and west away; from the Monastery. The slope becomes small at the end of the Cul-de-sac allowing some view of the homes on this street. The grading should not impact the Coastal Sage Scrub which is down slope to the south and east.

The California Quartet (127) Study and the Vedanta Alternate (120) Study are just that, studies. Once the features of the original and alternate studies are agreed upon a precise engineered site plan should be prepared. The fine tuning of horizontal and vertical alignments and lot layouts may result in the gaining of two or three lots. This precise design would be the next step and be use for a Tentative Map.

Response

Processing of the 299 unit project is scheduled to continue at the October 7, 1998 Planning Commission public hearing.

IV. LETTERS RECEIVED FROM AGENCIES AND PERSONS

Rpt. No.: 5833
File No.: S-8753

Subject: Saddleback Meadows, El Toro Road, Orange County, California; Geotechnical Review of Addendum to Environmental Impact Report 566

Reference: Addendum PA980103 to Certified Final Subsequent Environmental Impact Report 566, Urban Vision, August 19, 1998

Dear Mr. Hesseltine:

Within the little time afforded by the County's expedited processing of the 299-unit "Contingency Plan" for the Saddleback Meadows property, I have attempted to review the geotechnical aspects of the referenced addendum to the earlier environmental impact report. This addendum anticipates the construction of 299 single-family dwelling units on the 222.2-acre site. Extensive grading (2.1 million cubic yards of cut and fill) is proposed to construct the building pads, associated streets, and open areas. Even more extensive grading (6.8 million cubic yards) is anticipated to remediate demonstrated unstable geologic conditions, including existing landslides, adverse bedding orientation, and loose and compressible alluvium and colluvium.

The problematic geotechnical issues associated with the 299-unit proposal remain unchanged from those that have been discussed in great detail with reference to the 705-unit manufactured housing project, and presented to the Planning Commission and the Board of Supervisors with no meaningful response. The issues of primary concern to this reviewer which mandate further analysis in an appropriate environmental impact report would include the following:

GEOTECHNICAL ENGINEERS • TESTING AND INSPECTION
2257 South Lilac Ave., Bloomington, CA 92316-2903
Bloomington (909) 877-1324 Riverside (909) 783-1910 Fax (909) 877-5210

GRADING (Page 20)

The addendum continues to assume an average daily grading of 30,000 cubic yards per day, projecting a total time of grading of 10 months. At 30,000 cubic yards per day for 8.9 million cubic yards of fill, grading needs to be performed 7 days a week–no allowance for off-days for weekends or for inclement weather is provided in this estimate. It seems to this reviewer that it might be possible to achieve the average 30,000 cubic yards per day goal for the conventional grading. It seems highly unlikely that the grading to accomplish the alluvium/colluvium removals, construction of buttress fills, and other remedial grading that will be required can approach the projected rate of fill movement. If, as seems likely, the remedial grading would be performed at an average rate of 10,000 cubic yards per day, and grading is performed on a 5-day per week basis, the remedial grading would require 31 months. With down-time for inclement weather, it is more realistic to project a total period of grading of 3 years. Even this projection is optimistic, and the site could easily experience 4 rain seasons during grading.

EXCAVATION CONDITIONS (Page 29)

The addendum correctly anticipates heavy ground water seepage into excavations at the site. Not addressed is the impact of discharge of collected ground water seepage, the impact of the interruption in subsurface ground water flow on downstream wells, nor the impact of the presence of the deep shear keys for buttress fills on the final ground water conditions. Is there a potential for surfacing of ground water behind the effective subsurface dam created by the shear key of the buttress fill?

LONG-TERM SETTLEMENT (Page 31)

Fill depths exceeding 50 feet are suggested, with settlements associated with those fills of 4 to 6 inches. Construction of shear keys for buttress fills, however, will result in fills as deep as 130 feet. Fills of such great depths require additional evaluation that may necessitate compaction criteria well in excess of code minimums, special moisture conditioning of fill during compaction, and long-term settlement monitoring prior to building construction. These considerations are not addressed in the addendum.

PHASING OF EARTHWORK (Page 31)

The addendum continues to project a buttress backcut failure rate of 10 percent. Considering the subsurface conditions typified by landslides within landslides, this failure rate is surely unrealistically optimistic. Further, the effect of backcut failures on upstream and adjacent properties is not addressed.

These are the comments that I have been able to prepare during the time allotted by the County's short notice to your firm regarding the public hearing to be held on August 25, 1998. I hope my comments have been helpful under the circumstances. Should there be questions, please feel free to call.

Sincerely,

JOHN R. BYERLY, INC.

Re: *Zone Change 98-3/Area Plan 98-2/EIR Addendum PA980103*
299-Unit Contingency Plan
Public Hearing of August 25, 1998

Honorable Members of the Planning Commission:

On behalf of (1) the Vedanta Society of Southern California ("Vedanta"); (2) the Norbertine Fathers of Orange (the "Norbertines"); and the Saddleback Meadows Land Conservancy LLC (the "Conservancy"), we respectfully submit this letter in opposition to California Quartet's application for approval of Zone Change 98-3 ("ZC 98-3" or the "Zone Change") and Area Plan 98-2 ("AP 98-2" or the "Area Plan") relating to a proposed 299-unit single family detached housing project (the "299-Unit Project"), which has been dubbed a "Contingency Plan."

Based on the list of objections attached hereto, and based also on all oral and written comments which are presented in opposition to the proposed Zone Change and Area Plan at the August 25 public hearing, including, but not limited to, all expert opinions expressed by Royce Riggan, John Byerly, Warren Singleton, or Saundra Jacobs either orally or in writing in connection with the hearing, Vedanta, the Norbertines, and the Conservancy respectfully submit that the CEQA review process relating to, and the environmental documentation which has been prepared in support of, ZC 98-3 and AP 98-2 is woefully inadequate from both a procedural and substantive standpoint.

By (1) purporting to rely on a previously certified EIR for an *entirely different* project which is, itself, grossly deficient and is now being challenged in court, (2) failing to provide the public and responsible agencies (such as the state and federal wildlife agencies) with the 45-days' notice required by law, and (3) refusing to prepare, and circulate for public review

and comment, a new EIR to properly address important new information and substantial project changes involving new environmental impacts and additional project alternatives and mitigation measures which have not been addressed in any earlier EIR, the County is poised to violate CEQA and the Guidelines in numerous different respects in connection with the proposed Zone Change and Area Plan for the 299-Unit Project.

As a result of these CEQA violations, my office has not been afforded adequate time to prepare and submit comments on ZC 98-3 and AP 98-2 and the environmental documentation relating thereto. Regrettably, history seems to be repeating itself in this case.

Indeed, one year ago last week, I submitted a lengthy letter to County staff objecting to the many procedural improprieties and substantive deficiencies relating to Draft Subsequent Environmental Impact Report No. 566 ("SEIR 566") which had been prepared to evaluate the environmental impacts associated with the issuance of a grading permit for the construction of 705 units of manufactured housing at the Saddleback Meadows site. Because of the failure of the Draft SEIR to include the grading plans and soils reports upon which the grading permit application was based, and given the County's refusal to make these materials available for public review during the comment period on the Draft SEIR, I was compelled to submit my August 1997 letter under protest.

How ironic it is that, one year later, I must also submit this letter under protest because of the County's clear-cut violation of those provisions of the CEQA Guidelines which require a local agency to provide 45 days' written notice to interested persons of its intention to use an EIR, which was prepared in connection with an earlier project, as the environmental documentation for a separate, later project. Instead of the 45-day public notice required to be given under CEQA Guidelines sections 15087, 15105, and 15153, the County has inexplicably decided to provide only 18 days' written notice of its intention to use Final SEIR 566 for the 705-unit manufactured housing project (the "705-Unit Project") as the EIR for the 299-Unit Project.

At first blush, one might wonder how it is possible to use an EIR initially prepared to analyze the impacts of developing 705 units of manufactured housing as the EIR for an *entirely different* project – namely, a 299-unit single-family detached housing project which, among other things (1) involves building houses on land which was proposed to be left undeveloped by the 705-Unit Project; (2) proposes to develop a wildlife corridor through the middle of the project where none had been previously provided under the 705-Unit Project; and (3) purports to fully exempt the 299-Unit Project from compliance with the Foothill/Trabuco Specific Plan, despite express language in the Specific Plan requiring any new projects for the Saddleback Meadows property to be made "consistent" with the Plan.

Admittedly, CEQA Guidelines section 15153(b) does allow a previously prepared EIR to be used as the environmental documentation for a "separate, later project" *provided* that

the EIR for the earlier project meets certain criteria and *provided also* that the public is properly notified of the local agency's intention to rely on the previous EIR instead of preparing a *new* EIR for the *new* project. Unfortunately, the County has chosen to ignore the adequacy and public notice requirements set forth in CEQA Guidelines section 15153(b) and is trying, instead, to process an addendum (the "Addendum") to Final SEIR 566 in an apparent attempt to avoid these requirements. Of course, the County's attempt to use the Addendum as the environmental documentation for the 299-Unit Project is illegal and improper for two very basic reasons.

First, section 15164 of the CEQA Guidelines, which authorizes the preparation of "an addendum to a previously certified EIR if some changes or additions are necessary," only applies when the *same* project addressed in the previous EIR is being considered for a subsequent government approval at a more detailed level of planning. Obviously, when an entirely *different* project is being considered -- such as a full-scale revision and redesign of the project which was analyzed in the previous EIR -- an addendum is *not* the appropriate document by which to describe and analyze substantial project changes involving new impacts, alternatives, and mitigation measures not discussed in the earlier EIR. Indeed, an addendum is only to be used to address minor technical changes or additions to a previously certified EIR, not to report on substantial project changes or significant new information about a *completely different* project.

The second reason that the County is not allowed to adopt the Addendum in this case is that, assuming for the sake of argument that the Zone Change and the Area Plan actually involved the *same* 705-Unit Project addressed in Final SEIR 566 (which, of course, they do not), the provisions of section 15162 of the CEQA Guidelines would require the preparation of a subsequent or supplemental EIR. Specifically, new information and project changes relating to environmental impacts, project alternatives, mitigation measures not previously discussed in Final SEIR 566 would require the County to prepare another EIR and circulate it for public review and comment.

County staff has determined that none of the conditions described in CEQA Guidelines section 15162 would require the preparation of a subsequent or supplemental EIR to address the environmental impacts associated with the proposed Zone Change and Area Plan for the 299-Unit Project. Vedanta, the Norbertines, and the Conservancy certainly disagree with this determination and wish to underscore what several California courts have already held, i.e., that Guidelines section 15162 and its companion section 21166 of CEQA only apply when the question is whether more than one EIR must be prepared for what is essentially the *same* project. When the proposed new activity constitutes a *separate* project, the "fair argument" test applies to the local agency's decision regarding whether to require a new EIR for the later project.

Indisputably, the oral and written comments which will be submitted in opposition to the proposed Zone Change and Area Plan at the August 25 public hearing will constitute substantial evidence supporting a "fair argument" that the 299-Unit Project may cause significant

environmental effects, and may involve important new project alternatives and mitigation measures, which were not previously addressed in Final SEIR 566 -- thereby necessitating the preparation of a new EIR to be circulated for public review and comment.

By submitting this letter, and by incorporating the oral and written comments made at the August 25 public hearing in opposition to the proposed Zone Change and the Area Plan, my clients do not intend to waive their objections to the County's failure to provide the appropriate notice of its intention to rely on Final SEIR 566 as the EIR for the 299-Unit Project. However, within the little time afforded by the inadequate notice provided by the County, my office has attempted to formulate the attached objections and hereby submits them to the Planning Commission with the sincere hope that the County will review them in good faith and will correct the many defects and deficiencies which pervade the CEQA review process for the proposed Zone Change and the Area Plan.

Very truly yours,

Edmond M. Connor

OBJECTIONS TO ADDENDUM PA980103 TO FSEIR 566, ZONE CHANGE 98-3, AND AREA PLAN 98-2

1. The County of Orange (the "County") has violated section 15153(b) of the CEQA Guidelines in that it has improperly determined that FSEIR 566 adequately describes the significant environmental impacts of the 299-unit single family detached housing project referred to as the Saddleback Meadows Contingency Plan (the "299-Unit Project"), which impacts are more particularly described in the oral and written comments (the "Comments") submitted to the Orange County Planning Commission prior to or at its August 25, 1998 public hearing, including, but not limited to, the expert opinions of Royce B. Riggan, Jr., John R. Byerly, Warren W. Singleton, and Saundra F. Jacobs. (The comments of John R. Byerly regarding the geotechnical aspects of the 299-Unit Project are set forth in an August 21, 1998 letter to counsel which is attached hereto as Exhibit "A" and is incorporated herein by reference.)

2. The County has violated section 15153(b) of the CEQA Guidelines in that it has improperly determined that FSEIR 566 adequately describes the alternatives and mitigation measures related to the significant environmental impacts of the 299-Unit Project, as more particularly described in the Comments.

3. The County has violated section 15153(b), 15087, and 15105 of the CEQA Guidelines in that it has failed to provide (a) public notice of its plans to use FSEIR 566 as the environmental documentation for the 299-Unit Project and (b) a 45-day public review and comment period on such key issues as "whether [FSEIR 566] should be used for [the 299-Unit Project] and whether there are any additional, reasonable, alternatives or mitigation measures that should be considered as ways of avoiding or reducing the significant effects of [the 299-Unit Project]."

4. The County has violated section 15063(g) of the CEQA Guidelines in that, at the time it determined that an initial study was required for the 299-Unit Project, it failed to consult with the United States Fish and Wildlife Service, the California Department of Fish and Game, the Army Corp. of Engineers, and all other responsible and trustee agencies responsible for the resources affected by the 299-Unit Project, to obtain the recommendation of those agencies as to the appropriate environmental documentation for the 299-Unit Project.

5. The County has violated CEQA and the CEQA Guidelines, to the extent that it has sought to invoke the provisions of section 15164 of the CEQA Guidelines, in that section 15164 only allows the preparation of an addendum when the same "project" is involved. In this case, there are two separate and distinct projects, i.e., a grading application for a 705-unit mobilehome/manufactured housing project (the "705-Unit Project") and an application for a zone change and area plan for the 299-Unit Project.

6. Assuming *arguendo* that the 299-Unit Project and the 705-Unit Project are the same "project," which they clearly are not, the County has violated section 15162(a)(1) and (2) of the CEQA Guidelines in that it has improperly determined that a subsequent EIR is not required to address the effects of the 299-Unit Project, which proposes substantial changes in the "project" and is based upon substantial changes in the circumstances surrounding the "project," in that, among other things, (a) the 299-Unit Project will involve mass grading and permanent alteration of land that was to be left undisturbed and undeveloped by the 705-Unit Project; (b) the 299-Unit Project will involve a proposed wildlife corridor for which there is no analysis in FSEIR 566 and about which the public has not had an opportunity to comment with respect to its viability, and (c) the U.S. Fish and Wildlife Service and the California Department of Fish and Game have indicated in an August 11, 1998 correspondence to the Orange County Board of Supervisors that the adoption of the 299-Unit Project may jeopardize the approval of the Southern Region of the NCCP program in that (i) "Saddleback Meadows is the only remaining wildlife corridor linkage to the NCCP Central/Coastal Subregion" and (ii) the proposed wildlife corridor may not prove to be viable. (A true and correct copy of the August 11, 1998 correspondence from U.S. Fish and Wildlife Service and the California Department of Fish and Game to the Orange County Board of Supervisors is attached hereto as Exhibit "B" and is incorporated herein by reference.)

7. Assuming *arguendo* that the 299-Unit Project and the 705-Unit Project are the same "project," the County has violated section 15162(a)(3)(A) and (B) of the CEQA Guidelines in that it has improperly determined that a subsequent EIR is not required to address the 299-Unit Project, despite the new information of substantial importance described in the Comments which shows that the 299-Unit Project will have significant effects on the environment that are not discussed in FSEIR 566 and/or are substantially more severe than the impacts discussed in FSEIR 566, including, but not limited to, (a) the grading and permanent alteration of land that was to be left undisturbed and undeveloped by the 705-Unit Project, (b) the categorical exemption of the Saddleback Meadows property from the provisions of the Foothill/Trabuco Specific Plan, and (c) the additional reduction and/or destruction of valuable biological resources.

8. Assuming *arguendo* that the 299-Unit Project and the 705-Unit Project are the same "project," the County has violated section 15162(a)(3)(C) of the CEQA Guidelines in that it has improperly determined that a subsequent EIR is not required to address the 299-Unit Project, despite the new information of substantial importance which shows that the mitigation measures that were proposed during the public review period for Draft SEIR 566 (but which FSEIR 566 failed to consider and deemed infeasible because of its erroneous assumption that the County was precluded from even considering any mitigation measures that would cause the "project" to deviate from Recorded Tract Map 10692) are now feasible because the Recorded Tract Map is to be superseded *in toto*.

9. Assuming *arguendo* that the 299-Unit Project and the 705-Unit Project are the same "project," the County has violated section 15162(a)(3)(D) of the CEQA Guidelines in that it has improperly determined that a subsequent EIR is not required to address the 299-Unit Project, despite the new information of substantial importance that has come to light since FSEIR 566 was certified regarding new project alternatives which are considerably different from those analyzed in FSEIR 566 and would reduce one or more of the significant impacts identified in the Comments, but that California Quartet, Ltd., has, to date, declined to adopt, including but not limited to, (a) the Mathews' alternative for the development of a 65-unit single family detached housing project on 35 acres of the Saddleback Meadows property and (b) the modified Mathews' alternative for the development of a 130-unit single family detached housing project on 44 acres of the property.

10. Assuming *arguendo* that the 299-Unit Project and the 705-Unit Project are the same "project," the County has violated section 15153(d) of the CEQA Guidelines in that it has improperly determined that none of the conditions described in section 15162 would require the preparation of a subsequent or supplemental EIR.

11. Assuming *arguendo* that the 299-Unit Project and the 705-Unit Project are the same "project," the County has violated section 15164(a) of the CEQA Guidelines in that it has improperly determined that the processing of an addendum would be appropriate and that none of the conditions described in section 15162 would require the preparation of a subsequent or supplemental EIR.

12. Assuming *arguendo* that the 299-Unit Project and the 705-Unit Project are the same "project," the County has violated section 15164(e) of the CEQA Guidelines in that it has failed to provide a brief explanation, supported by substantial evidence, of its determination that none of the conditions described in section 15162 would require the preparation of a subsequent or supplemental EIR.

13. Zone Change 98-3 and Area Plan 98-2 violate the provisions of the Foothill Trabuco Specific Plan (the "FTSP") in that they are part of a development proposal for the 299-Unit Project which deviates from Recorded Tract Map 10692 without providing for an amendment to the FTSP that (a) is adopted pursuant to the amendment procedures established by the FTSP and (b) is consistent with all of the provisions of the FTSP, including, but not limited to, (i) the development and design guidelines established by the FTSP, (ii) the goals and objectives of the FTSP, and (iii) all other provisions of the FTSP identified in the Comments.

14. The County has violated CEQA and the CEQA Guidelines in that it has improperly relied upon FSEIR 566, which is a legally inadequate CEQA document that was improperly certified for the reasons set forth in that certain "Complaint for Declaratory Relief and Petition for Writ of Mandate," which is attached hereto as Exhibit "C" and is incorporated herein by reference, including, but not limited to:

(a) In certifying FSEIR 566, the County did not comply with the special CEQA review process the Board of Supervisors adopted for the review of FSEIR 566;

(b) The special CEQA review process the Board of Supervisors adopted for the review of FSEIR 566 violated CEQA in that, *inter alia*, it unlawfully separated the decision whether to certify FSEIR 566 without taking action on the project for which the FSEIR was prepared;

(c) It improperly limits the mitigation measures its considers to only those that would not cause the project to deviate from Recorded Tract Map 10692;

(d) The analysis and information set forth in FSEIR 566 is legally inadequate under CEQA and the CEQA Guidelines in that, *inter alia*:

(i) It fails to properly describe the discretionary approval which it was prepared to analyze;

(ii) It fails to provide the required level of specificity;

(iii) It fails to provide the required level of technical detail;

(iv) It was not amended and recirculated after significant new information regarding the discretionary approval it was prepared to analyze was released;

(v) Its certification was separated from the discretionary approval it was prepared to analyze;

(vi) It fails to adequately address all environmental impacts of the discretionary approval it was prepare to analyze, including, but not limited to:

a. Soils and Geology;
b. Water/Hydrology;
c. Transportation/Circulation;
d. Air Quality;
e. Biological Resources;
f. Archeological/Cultural Resources; and
g. Public Services;

(vii) It fails to provide legally adequate mitigation measures and an adequate mitigation monitoring program was not adopted;

(viii) It fails to address the cumulative impacts of the project associated with the discretionary approval it was prepared to analyze;

(ix) It fails to consider project alternatives; and

(x) It fails to adequately respond to comments;

(e) Adequate and proper findings, supported by substantial evidence in the record, were not made in support of the certification of FSEIR 566; and

(f) The Statement of Overriding Considerations was improperly adopted in connection with the certification of FSEIR 566.

15. The County has violated CEQA and the CEQA Guidelines, to the extent that the "Draft Area Plan Conditions of Approval" attempt in any way to eliminate or modify any of the "Standard Conditions of Approval" that are set forth in FSEIR 566 and Addendum PA980103 as mitigation measures which must be completed

prior to the issuance of any grading permit, including, but not limited to, (a) SC 7-2 requiring a 1603 Streambed Alteration Agreement from the California Department of Fish and Game, (b) SC 7-3 requiring the necessary individual or nationwide permit from the Army Corp. of Engineers pursuant to section 404 of the Federal Clean Water Act, and (c) SC 7-5 and 7-7 requiring from the U.S. Fish and Wildlife Service (i) appropriate federal approvals required for impacts to Coastal Sage Scrub and (ii) written proof that the removal of any native vegetation from the project site complies with the Federal Endangered Species Act, in that it has attempted to reduce or eliminate feasible mitigation measures that are set forth in FSEIR 566 and Addendum PA980103 to reduce significant environmental impacts.

16. The County has violated CEQA and the CEQA Guidelines in that Addendum PA980103 to FSEIR 566 is inadequate and incomplete due to, *inter alia*, the omission of volume two of Appendix "G," the "Supplemental Geotechnical Assessment for Contingency Pan – 299 Lots," which purportedly contains the computer output documents for the slope stability analysis performed by G.A. Nicoll and Associates, Inc.

RBRiggan and Associates

24 August 1998

The Honorable Chairman and Members
of the Planning Commission
Orange County
10 Civic Center Plaza
Santa Ana, California 92702

Reference: Saddleback Meadows — EIR Addendum PA980103 — Request for Preparation of a Legally Adequate Document

Dear Chairman and Members of the Planning Commission:

In the 24-plus years I have served as an environmental consultant (both in the preparation and defense of EIR's, and as an expert witness) I have never seen such a blatant attempt to circumvent the requirements of CEQA in the name of expediency. The fact that Zone Change 98-3 and Area Plan 98-2 for the 299-unit single family detached housing project are being processed as a "contingency plan" does not excuse compliance with state laws nor does it allow for any corners to be cut just so the contingency plan can be voted on before the end of the year.

However, by purporting to rely on a fatally flawed Addendum to SEIR 566 as the environmental documentation for the Zone Change and the Area Plan, the County of Orange has shirked its responsibility to conduct a careful, deliberate, and legally proper environmental assessment of the impacts, alternatives, and mitigation relating to the 299-unit project. In violation of CEQA Guidelines sections 15063, 15153, 15162 and 15164, the County has sought to "short cut" the environmental review process by using a so-called "Addendum" to avoid the public notice and consultation requirements. Approval of this "Addendum" will place Orange County at legal (and financial) risk, and will severely compromise the County's ability to complete a South County NCCP plan. Granting entitlements for 299-homes will not be viewed favorably by either the California Department of Fish and Game or the United States Fish and Wildlife Service — neither of which appears to have been properly notified or consulted about the new project.

I urge the Commission to **reject** both the Addendum to SEIR 566 and the associated Zone Change 98-3 and Area Plan 98-2 for the 299 Single-family-unit project. I would also urge the Commission to direct staff to have prepared a legally adequate CEQA document and have that document circulated for public review and comment.

I have reviewed this document and make these comments on behalf of the Vedanta Society of Southern California. I should note that, although I have previously testified before the Board of Supervisors on SEIR 566, I received no notice at all from the County as to the availability of the "Addendum." In fact, I received a copy of the "Addendum" from Counsel within the week, leaving inadequate time to review and respond to the document.

Addendum PA980103 is not a legally permissive document under the California Environmental Quality Act. The document is seriously flawed in the following ways:

A. SEIR 566, to which this document purports to be an Addendum, is itself deficient and is currently the subject of a lawsuit to invalidate its certification;

B. The project and its circumstances have triggered the tests of Guidelines Section 15162 in numerous ways. Substantial project changes, new information from the wildlife agencies, additional project alternatives which have come to light, and feasible mitigation measures which have not been adequately considered all mandate the preparation of a new or subsequent EIR. An Addendum is not, therefore, an appropriate environmental document to support the Zone Change and Area Plan.

C. Substantive technical issues are ignored or are addressed in the most cursory way. The document is materially defective by its silence on numerous issues including the lack of mitigation for several significant effects.

D. The use of an Addendum is a transparent attempt to avoid the Public Notice and Review process that would be mandated under Guidelines Sections 15153 and 15162.

Subsequent Environmental Impact Report (SEIR) 566. I had the opportunity to provide the Board of Supervisors with written comments as to the adequacy of SEIR 566. I include that letter by reference and have attached a copy for the Commissions review and use. In addition, the United States Fish and Wildlife Service and the California Department of Fish and Game commented extensively on the adequacy of SEIR 566. The wildlife agency's comments were never responded to adequately in writing, as is required by law (see Guidelines Section 15088). That letter (dated 8 August 1997) is also attached for the Commission's information and review.

An Addendum is NOT the Appropriate CEQA Document. Section 15162 of the CEQA Guidelines (California Code of Regulations) governs when an Addendum to an EIR can be prepared and when a Supplemental or Subsequent EIR is the appropriate document. The relevant parts of that code section read as follows:

> "(a) When an EIR has been certified . . . no subsequent EIR for that project shall be prepared unless . . . the lead agency determines, on the basis of substantial evidence in light of the whole record, one or more of the following:
>
> > "(1) Substantial changes are proposed in the project which will required revisions . . . due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects.

> "(2) Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR . . . due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects.
> "(3) New information of substantial importance which was not known and could not have been known with the exercise of reasonable diligence at the time of the previous EIR was certified . . . , shows any of the following:
>
> > "(A) The project will have one or more significant effects not discussed in the previous EIR,
> > "(B) Significant effects previously examined will be substantially more sever than shown in the previous EIR,
> > "(C) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project but the project proponents decline to adopt the mitigation measure or alternative,
> > "(D) Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative."

While one might argue that an Addendum to SEIR 566 would be appropriate for *some* issues (i.e., air quality effects are reduced with the smaller project), there is a more compelling argument that a new EIR and public review period are required for a number of the aspects of the new 299-unit project. For example:

- **New Project Alternatives**. Subsequent to the certification of SEIR 566, Saint Michael's Abbey and the Ramakrishna Monastery have entered into a series of negotiations with the Saddleback Meadows developer with the intent of purchasing the bulk of the property (178-acres) for open space purposes. The balance of the property (35- to 44-acres following purchase) would be considered for various development alternatives ranging from 65 to 130 single family homes. These are clearly reasonable alternatives not discussed in SEIR 566 and are alternative that the project proponent has, to date, declined to adopt. Clearly the tests of 15162(a)(3)(C) and (D) are met and a subsequent EIR and public review period is required.

- **Southern Subregion NCCP**. On 11 August 1998, a letter jointly signed by the United States Fish and Wildlife Service and the California Department of Fish and Game (copy attached) was submitted to the Board of Supervisors of Orange County. This letter states that "County

maps show that Saddleback Meadows is the only remaining wildlife corridor linkage to the NCCP Central/Coastal Subregion." SEIR 566 (at pages 4-128, 4-148, and, 4-150) refers briefly to the wildlife corridor issue. Under the heading "Significant Impacts of Project Prior to Mitigation" (p. 4-150), the SEIR indicates that "Implementation of the proposed project would conflict with existing wildlife movement corridors . . ." Subsequent to this statement, the SEIR offers no mitigation.

In that the discussion of the NCCP wildlife corridor is cursory at best in SEIR 566, and since this is identified by the wildlife agencies in their 11 August 1998 letter as the "only" corridor linking the NCCP subregions, the ". . . substantial increase in the severity of previously identified significant effects" test of 15162 is clearly met and a new Subsequent EIR and public review period are required.

This requirement for a "new EIR" is doubly compelling when one considers that the County is, with this project, potentially compromising its ability to obtain the approval of the Southern Subregion NCCP, a point of critical interest to many builder/developers besides the Saddleback Meadows developer, California Quartet, Ltd.

The Addendum for the 299-unit alternative includes a narrow, ostensible "wildlife corridor" through the subdivision. A road traverses the central part of the "corridor" and includes lands that would be extensively graded, thereby requiring revegetation of native plant species. In addition, the revegetation area and the narrowest part of the corridor contain the fuel modification zones associated with the surrounding residential developments. Fuel modification zones are, by definition lacking in both horizontal and vertical cover and are not properly part of a wildlife corridor. The wildlife agencies have not reviewed this proposal, however, although the County is required to have consulted these agencies under section 15063(g) of the Guidelines. That the County has not consulted the Wildlife agencies on this "project" is extraordinary, given the *purported* close working relationship between those agencies and the County staff on the Southern Subregion NCCP.

Technical Errors and Lack of Mitigation. The California Courts, in interpreting the implementation of CEQA, have been most specific in their requirements for adequate mitigation measures. Feasible, implementable, mitigation measures must be specified by the CEQA document for each of the potentially significant impacts or effects identified for the project. Neither the so-called Addendum nor the original SEIR 566 meet this test. My letter of 17 February 1998 (copy attached) cites case law in support of this conclusion. To cite a few of several possible examples of technical deficiencies from the Addendum and SEIR:

- **Wetlands/Fairy Shrimp.** Both SEIR 566 and Addendum PA980103 are clear (albeit very brief) in showing that the implementation of either the approved project or the 299 d.u. alternative will result in a significant loss of wetlands and the Federally designated

Endangered Riverside Fairy Shrimp. However, no mitigation for this loss is identified, other than generalized statements that permits will be required from the Army Corps of Engineers (ACOE) and from the California Department of Fish and Game, and that mitigation can be accomplished on-site. None of the critical questions about this mitigation are answered. Can the on-site vernal pools be moved?, Can newly created pools support the endangered Fairy Shrimp?, In order to obtain an ACOE permit, a 401(c)(3) "alternatives" analysis must be prepared — can an analysis supportive of development be prepared in light of the presence of the endangered species and the rarity of this habitat type in Orange County? Clearly this is a legally significant omission of the Addendum.

- **Wildlife Corridor**. The 299 d.u. plan ostensibly includes a wildlife corridor through the subdivision. However, the bulk of this narrow corridor, at the "pinch point" is on land that will be graded and then revegetated to native species. Obviously this revegetation will be critical to the success of the corridor concept, yet no revegetation plans are given in the Addendum, no species lists, no information that will allow a reviewer to gage the potential (or actual) success of the revegetation/mitigation measure. Clearly this is a significant technical flaw in the document.

- **Gnatcatcher**. At a minimum an EIR (or an Addendum) must assess those effects that require a mandatory finding of significance. Saddleback Meadows has not been the subject of a directed survey for the Coastal California Gnatcatcher in four years (Addendum, p. 76). However, recent studies for the NCCP (Dudek and Associates) have identified breeding pairs of Gnatcatchers literally at the periphery of the project site. An EIR (or an Addendum) that makes no attempt to assess the potential effect of the project on a Federally listed species is flawed on its face (see CEQA Guidelines section 15065).

  "Take" as defined under the Federal Endangered Species Act also includes indirect effects on the listed species. To the extent that the proposed wildlife corridor through the project isinadequate to allow the passage of Gnatcatchers between the Southern and Central NCCP subregions, then there is a fair argument that a "take" has been committed. Yet the Addendum is silent on this issue and gives the question of the Gnatcatcher the most minimal discussion. Clearly the "Addendum" is fatally flawed in its discussion of this listed species.

Avoidance of Public Review. "Public participation is an essential part of the CEQA process" (Guidelines Section 15201). This concept is pervasive throughout both the Act and the Guidelines. When the document is not an original EIR, but a follow-on document as is the case here, *Sutter Sensible Planning, Inc. v. Sutter County Board of Supervisors* [(3d Dist. 1981) 122 Cal. App. 3d 813] provides appropriate guidance as to the need for recirculation for additional public review:

> "[R]ecirculation is required, for example, when the new information added to an EIR discloses:
>
> > "(1) a new substantial environmental impact resulting from the project or from a new mitigation measure proposed to be implemented;
> > "(2) a substantial increase in the severity of an environmental impact unless mitigation measures are adopted that reduce the impact to a level of insignificance;
> > "(3) a feasible project alternative or mitigation measure that clearly would lessen the environmental impact of the project, but which the project's proponents decline to adopt."

As discussed above, the *Sutter* Court's tests for recirculation to public review are clearly met by the so-called "Addendum." For example:

- With the publication earlier this year of the Alternatives for the Southern Subregion NCCP and with the wildlife agency's letter of 11 August 1998 (see attached) it is now abundantly clear that this project will potentially impact the ability of Orange County to obtain an approvable South County plan. Certainly this is a "substantial increase" in a significant effect for which the Addendum offers no mitigation that will reduce the effect to a level of insignificance.

- Saint Michael's Abbey and the Ramakrishna Monastery have been discussing feasible alternatives with the developer and the County, alternatives which would preserve a substantial amount of open space. Since these alternatives would clearly lessen the impacts of the project, and in that the proponent has declined to adopt any of these alternatives, recirculation of the document is mandated.

In conclusion, the apparent "rush" to approve a 299-unit project involving massive impacts without even coming close to preparing the proper CEQA documentation is unseemly and unjustified. Moreover, given the critical importance of the Saddleback Meadows property to the success of the Southern Subregion NCCP, the failure to provide the wildlife agencies with even the courtesy of a notification regarding a new 299-unit project that would directly and significantly impact the viability of the NCCP is inexplicable, particularly when these agencies have shown such interest in the development of the Saddleback Meadows property.

According, the Planning Commission should not participate in such a legally improper process and should direct the staff to comply with all applicable CEQA requirements before presenting the Zone Change and the Area Plan for consideration. At a minimum, this will require preparation of a new Environmental Impact Report and circulation of that document for Public Review and comment.

Sincerely,

Royce B. Riggan, Jr., AICP

Honorable Members of
Board of Supervisors of Orange County
10 Civic Center Plaza
Santa Ana, California 92702

Reference: Saddleback Meadows — Appeal of Certification of Final Subsequent Environmental Impact Report 566

Dear Members of the Board:

RBRiggan and Associates has reviewed the Saddleback Meadows' Final Subsequent Environmental Impact Report No. 566. We find the document to be woefully inadequate in its treatment of biological resources, and not in compliance with the dictates of CEQA and the CEQA Guidelines. Specifically, we have noted the following deficiencies:

Impacts Not Defined. An EIR is required to identify and address the possible significant impacts of the project (see Calif. Code of Regulations, Section 15126(a)). The Saddleback Meadows EIR is fatally flawed as written in that it ignores certain potentially significant impacts to biological resources and/or puts off to some future time the identification of such impacts. For example:

- Current Federal protocols for the California Gnatcatcher (*Polioptila californica californica*) require reliance on surveys less than a year old. Regional populations of the Gnatcatcher have increased significantly since the last survey of the subject property in 1994. The site may very well be occupied habitat in 1998; despite the conclusionary language in the EIR (see page 4-130) "The coastal California Gnatcatcher . . . [is] not found onsite." The EIR does not identify the potential impact to this federally listed species. Instead, the determination of impact is improperly deferred to some future point (see EIR, page 4-157, paragraph SC 7-11).

- The EIR indicates that (page 4-119) "On June 1994, PSBS documented the . . . potential for additional fairy shrimp [species] in all onsite ponds." The presence or absence of additional federally listed wildlife species is a critical question. If project implementation will effect additional endangered species not identified in the EIR (such as the federally listed Vernal Pool Fairy Shrimp, *Branchinecta lynchi*) then the impacts of the EIR are significantly understated and the EIR is defective on its face.

- The Quino Checkerspot Butterfly (*Euphydryas editha quino*) was listed as endangered under the federal Endangered Species Act in January of 1997. Mentioned in the EIR text only in Table 27 (see page 4-140), the EIR opines that: "Focused surveys are needed for detection but are not warranted." This is a conclusionary statement not supported by any evidence in

the record. The species was once common at various points within the County (see Orsak, 1977, *The Butterflies of Orange County*, California, pp. 135-138). Potential impacts of the project to this federally listed, endangered species, can only be determined by a protocol survey for the species. Absent such a survey, the EIR is clearly inadequate.

Vernal Pools. The EIR states (page 4-120) that "The ephemeral ponds onsite are not vernal pools, but rather are holding ponds for watering cattle which graze on the site." This is a conclusionary statement of the EIR and is not supported by evidence presented within the document. The *Vernal Pools of Southern California Draft Recovery Plan* (Fish and Wildlife Service, 1997) clearly identifies these "ephemeral ponds" as vernal pools and suggests that their origin is as slump ponds on landslides in clay soils, certainly an origin consistent with the geology of the project site. If these are functional vernal pools then the significance assessment of the EIR is flawed and needs to be materially revised. A comprehensive survey of these pools (one that is seasonally appropriate) needs to be conducted to determine their functional classification.

Mitigation of Biological Impacts. The mitigation measures outlined for the anticipated impacts of the project on biological resources are generic and contemplate that, at some future unspecified time, the actual form and content of the measures will be defined. The majority of the mitigation measures are addressed as "standard conditions of approval" and are keyed to some future time in the development of the project. The EIR itself states (at page 4-152) that: ". . . specific standard county conditions . . . have been developed to ensure that a comprehensive biological resources mitigation program is devised and approved . . . prior to the issuance of grading permits." This is a clear violation of CEQA. Both the Act and case law require specificity in mitigation measures and require that the public have an opportunity to review those mitigation measures as a part of the EIR. For example:

- *Sundstrom v. County of Mendocino* (1st Dist. 1988) 202 Cal. App 3d 296 (248 Cal.Rptr. 352) — The court of appeals faulted the county for assuming that various other agencies would be able to devise mitigation measures which would avoid potential significant impacts. Because there was no certainty that success could be achieved, in this regard the agency had no basis for finding that the project's impacts would be insignificant.

- *Oro Fino Gold Mining Corporation v. County of El Dorado* (3d Dist. 1990) 225 Cal. App. 3d 872-885 (274 Cal.Rptr. 720) — The court disapproved of mitigation measures requiring post-approval formulation of a reclamation plan, erosion control plan, dust plan, and fire plan, saying ". . . the CEQA process demands that mitigation measures timely be set forth, that environmental information be complete and relevant, and that environmental decisions be made in an accountable arena."

- *Gentry v. City of Murrieta* (4th Dist. 1995) 36 Cal. App. 4th 13589 (43 Cal. Rptr. 2d 170) — The court held that, in adopting a Negative Declaration the city improperly deferred the formulation of specific mitigation measures. The City had required the project applicant to obtain a Stephens' Kangaroo Rat report and to ". . .comply with any recommendations in the report." However, the court noted that since ". . . there was substantial evidence to support a fair argument that the Project, even as mitigated . . ., would have a significant impact on the Stephens' Kangaroo Rat," any proposed mitigation for this impact had to be made available for public review and could not be left to be formulated in the future (Gentry, supra, 36 Cal. App. 4th at 1397 (43 Cal. Rptr. 2d. 170)).

Absent specificity in the mitigation measures the approving officials cannot determine whether or not the identified impacts can be mitigated or whether a wholesale redesign of the project will be necessary. In addition, the public cannot determine the adequacy of the proposed mitigation and is denied any ability to provide input to the approval process. Absent specificity in the mitigation measures, the EIR is fatally flawed.

Significant and Not Mitigable Impacts. It cannot be determined from the EIR which impacts to biological resources are not mitigable. If there are impacts which cannot be mitigated and thus are unavoidable, then CEQA requires the Lead Agency to adopt appropriate findings (see Calif. Code of Regulations, section 15091(a)). At present, the analysis of the biological resources is sufficiently flawed and the recommended mitigation measures are sufficiently vague that it cannot be determined whether or not overriding considerations will be required.

In addition, to the extent that the following are not mitigable, then there are additional ramifications for both the developer and the County. Approval of the project as proposed could significantly affect the County's ability to complete the NCCP planning effort. The lack of feasibility inherent in the identified mitigation measures in the EIR could also force abandonment of the present development plants and preparation of a significant project redesign. Specifically:

- The EIR (page 4-144) indicates that the loss of Coastal Sage Scrub Habitat would be permitted under the "Interim Take 4(d) Rule." However, certain findings must be made relative to the 4(d) Rule, to the effect that the anticipated habitat loss ". . . will not preclude connectivity between areas of high habitat values" and will not ". . . preclude or prevent the preparation of the subregional NCCP." It would appear that these findings cannot be made.

- Loss of 97 percent and "312 individuals" (EIR page 4-145) of Coast Live Oak Woodland. This impact is considered significant ". . . because of their [the oaks] . . . function as part of the planned NCCP regional wildlife corridor." "Implementation of the project as proposed

will directly impact wildlife movement through the project site, as it does not contain any design features which seek to facilitate wildlife movement. It cannot be assumed that wildlife would be able to move through the project site as currently designed." (EIR, page 4-148). Approval of the project, therefore, would appear to significantly compromise the NCCP planning effort.

- A total of 3.43 acres of definable wetlands would be impacted by the project (EIR page 4-146). It is extremely unlikely that a section 404 permit for the loss of 3.43 acres of wetlands and populations of one or more federally endangered species can be obtained. In this special instance, therefore, the County should require that the 404-Permit be obtained *prior* to issuance of any grading permit by the County Building Official.

Additional Public Review Required. CEQA Section 21092.1, Section 15088.5 of the CEQA Guidelines, and relevant case law clearly requires the EIR to be recirculated for an additional public review period when "significant new information" is added to an EIR. Clear-cut identification of the actual impacts to biological resources, re-writing of the mitigation measures to provide the level of specificity required by the statutes, and completion of the required additional field work, all constitute "significant new information." The courts have been most clear, the public must be given a ". . . meaningful opportunity to comment upon a substantial adverse environmental effect of the project or a feasible way to mitigate or avoid such an effect . . ." Recirculation of the Subsequent EIR (once the necessary corrections have been made) for an additional public review period is clearly required.

Requirements to Bring the EIR to Legal Adequacy. Additional field work, a comprehensive reassessment and re-writing of the mitigation measures, and re-circulation of the EIR for an additional public review period will be required to bring the document to legal adequacy. Specifically, before FSEIR 566 can properly be certified as being adequate and complete under CEQA, it will be necessary to:

- Complete a comprehensive survey of the property to determine the presence or absence of the threatened Coastal California Gnatcatcher. Once a survey has been completed to federal protocols, revise the EIR's assessment of impacts accordingly and provide specific mitigation measures.

- Complete a comprehensive survey of the on-site ponds to determine the presence or absence of other listed species of Anostraca (fairy shrimp). If additional listed species of Fairy Shrimp are identified, then revise the EIR's assessment of impacts accordingly and provide specific mitigation measures.

- Complete a protocol survey for the Quino Checkerspot Butterfly. If this endangered species is found within the bounds of the project, then revise the EIR's assessment of impacts accordingly and provide specific mitigation measures.

- Conduct a comprehensive survey of the "vernal pools" to determine the presence or absence of additional vernal pool plant and animal indicator species. This survey should be conducted without the presence of cattle and should be conducted at seasonally appropriate times. If these "ponds" prove to be definable vernal pools, then revise the EIR's assessment of impacts accordingly and provide specific mitigation measures.

- Prepare comprehensive and impact specific mitigation measures. This can be accomplished, obviously, only after a complete list of impacts (and their significance) has been developed. The mitigation measures must be substantively related to the impact identified.

Sincerely,

Royce B. Riggan. Jr., AICP

Saddleback Meadows Project
Orange County, California

Dear Board of Supervisors:

The California Department of Fish and Game and the U. S. Fish and Wildlife Service (collectively the Wildlife Agencies) recently learned about a Planning Application Hearing for the Saddleback Meadows project scheduled for the County Board of Supervisors on August 11, 1998. The applicant is proposing a 299 single-family dwelling unit project at Saddleback Meadows. The Wildlife Agencies and County have a lengthy history of communication concerning the project site and a variety of development proposal alternatives have been reviewed. The project site provides a critical habitat connection between the County of Orange's Central/Coastal and Southern Subregional Conservation Plans. In this letter we reiterate our position on the proposed Saddleback Meadows project and provide comments on a recent proposal that could affect the project.

The Wildlife Agencies, other Federal and State agencies, County of Orange, and local jurisdictions are participating in the Natural Community Conservation Planning (NCCP) program to conserve wildlife and habitat resources while accommodating economic growth and development. Our previous comments on Saddleback Meadows Project - Draft Environmental Impact Report (DEIR; No. 561 ,February 1996) and in our August 8, 1997, letter concerning the Saddleback Meadows Draft Subsequent Environmental Report No. 566 (DSEIR) (June 1997) identified significant biological issues related to the project site. These biological issues include habitat connectivity, wildlife corridors, sensitive habitats, and occupied wetlands with a federally listed animal. These sensitive habitats include about 65 acres of coastal sage scrub (CSS), 14 acres of oak woodland, and about 4 acres of wetland vegetation communities. The federally endangered Riverside fairy shrimp (*Streptocephalus woottoni*) is known to occur within at least seven wetlands (identified as "ephemeral ponds") spread throughout the site. Our letter

evaluating the DSEIR identified Alternative '3' which proposed a clustered, lower density development, presented the least environmental impact, but would nonetheless substantially impact the wildlife corridor integrity. The 299-unit development posed a significant impact to the existing habitat connection from O'Neill Regional Park (Southern Subregion) to the Cleveland National Forest and other open space habitat in the central portion of the Central/Coastal Subregion. The Wildlife Agencies are willing to work with the project applicant to redesign a cluster development in order to preserve the wildlife corridor.

Other animal species considered sensitive by the Wildlife Agencies occur on or adjacent to the project site. The Wildlife Agencies documented rare and sensitive Cactus wren (*Camphylorhynchus brunneicapillus*) on site. The coastal California gnatcatcher (*Polioptila californica californica*)(gnatcatcher), a federally threatened species, could utilize the site based on the presence of CSS and gnatcatcher-occupied CSS in surrounding areas. Both of these animals, as well as other wildlife, would utilize Saddleback Meadows as a wildlife corridor. County maps show that Saddleback Meadows is the only remaining wildlife corridor linkage to the NCCP Central/Coastal Subregion.

We have been informed by two interested parties, Saint Michael's Abbey and Vedanta Society of Southern California, that a new clustered development alternative proposal and purchase of significant open space on the site have been offered to the current property owner. The Wildlife Agencies are willing to work with the current landowners and all interested parties in reaching a workable development solution.

The Wildlife Agencies believe a workable solution exists to permit development, while maintaining an essential biological connection between the NCCP Central/Coastal and Southern Subregions. We request that the Board consider this alternative approach that may provide a solution acceptable to all parties. If you have any questions or comments, we are available to discuss this matter further. Please feel free to contact us at your earliest convenience.

Sincerely,

Jim A. Bartel
Assistant Field Supervisor

Draft Subsequent Environmental Report (DSEIR) No. 566
for the Saddleback Meadows Project, Orange County, California.

Dear Mr. Brantley:

The U. S. Fish and Wildlife Service (Service) and California Department of Fish and Game (Department) Natural Community Conservation Planning (NCCP) program staffs (i.e., "the Wildlife Agencies") have reviewed the above DSEIR. The project is located within the Southern Subregion Orange County NCCP Planning Area, near the border with the NCCP Central Subregion. The preferred project proposes the phased development of 705 manufactured, single-family residential units on a 222.9-acre site near the intersection of El Toro Road and Live Oak Canyon Road, impacting a total of about 191 acres on site and 20 acres off site. About 14% of the project site is proposed to remain as open space.

Biological resources on site include about 65 acres of coastal sage scrub (CSS), 14 acres of oak woodland, and about four acres of wetland vegetation communities. The federally endangered Riverside fairy shrimp (*Streptocephalus woottoni*) is known to occur within at least seven wetlands (identified in the DSEIR as "ephemeral ponds") spread throughout the site. Several plant and animal species considered sensitive by the Wildlife Agencies occur (e.g., cactus wren [*Campylorhynchus brunneicapillus*]) or may occur. The coastal California gnatcatcher (*Polioptila californica californica*) hereafter "gnatcatcher," a federally threatened species, is likely to occur on site based on the presence of CSS and gnatcatcher-occupied CSS in surrounding areas. The Quino checkerspot butterfly (*Euphydras editha quino*), a federally endangered species, may occur as well.

Along with the No Project/No Development Alternative ("Alternative 1") required by the California Environmental Quality Act (CEQA), there are four other alternatives presented in the DSEIR. Alternative '1' would avoid any adverse environmental impacts to the project site. Alternative '2' proposes 150 housing units with a minimum lot size of 20,000 feet^2, disturbing more than 138 acres. This would result in elimination of oak woodlands, CSS, and ephemeral ponds of which some rare and sensitive species are obligate residents. Noise decibel levels would increase and possibly affect wildlife in adjacent O'Neill Regional Park. Alternative '3' proposes

100 single family units on a 31.7 acre portion of the site. This alternative avoids about 191 acres of habitat, thereby appearing to allow connection between open space areas north, south, and east of the project site. However, this project alternative will impact two ephemeral ponds and CSS habitat. Alternative '4' proposes 299 housing units, disturbing about 165 acres. A wildlife corridor, narrowing to 400 feet in width and going up a nearly vertical slope, is proposed to be bisected by a road. Alternative '5' proposes 318 housing units within a development area of 113 acres, leaving about 110 acres in open space. The wildlife corridor would be the same as for Alternative '4' except that the minimum width would be about 700 feet. The proposed project appears to conflict with the earlier-adopted Foothill-Trabuco and Aliso Creek Corridor Specific Plans and also fails to describe adequate project design for maintaining corridor integrity of the Orange County NCCP Reserves. In evaluating alternatives 2-5, Alternative '3' would have the least environmental impact; but would nonetheless, substantially impact wildlife corridor integrity between subregional NCCP reserve areas in Orange County.

The Wildlife Agencies have formally commented at different stages of the proposed project. We have also met with the project applicant and their consultants, including a meeting at the project site on May 20, 1996. On June 29, 1994, the Service wrote a letter stating that project approval must be deferred until the Southern Subregion NCCP was finalized. In 1996, both agencies commented on the DEIR (No. 561). The Service letter stated that the location of this development within and adjacent to occupied habitat of rare species could compromise the NCCP reserve and its ability to function as a wildlife corridor through the direct and indirect impacts of habitat destruction, fragmentation, noise, and lighting. Our comments were based upon a project alternative, similar to alternative four, which provided more open space than the proposed preferred alternative presented in this DSEIR.

In general, the DSEIR does not adequately describe the biological resources of the project area. The document only describes and analyzes impacts of the different alternatives in a superficial manner. Referring to our joint Wildlife Agency letter of January 30, 1997, responding to the Notice of Preparation, at least eight of our requested information items were completely or partially ignored, without explanation. Available data were not identified. Further, the Initial Study (p. 17) states that the scope of the EIR discussion will provide a "detailed discussion" and "[A] re-inventory of the existing unique, sensitive . . . flora and fauna within the project site . . . " Also to be provided was "[A] detailed analysis of the project's impacts to wildlife movement, including mitigation measures to avoid or reduce those impacts." Neither of these items was adequately accomplished.

The Wildlife Agencies offer the following specific information and recommendations to assist the County and the project applicant in planning for the preservation of sensitive wildlife species, habitats, and wildlife corridors within the proposed project area, and as a means to assist you in complying with pertinent statutes. Page numbers refer to the DSEIR unless otherwise noted.

1-1, paragraph 2 and 4-41, paragraph 4. Both of these statements should read as "effect."

4-41, exhibits 21, 22, 53. Interference with existing hydrology on site is shown with the construction of the preferred alternative. Impacts to "ephemeral ponds" not directly within the project footprint would also occur. Analyze these impacts further.

4-43, last paragraph. The Wildlife Agencies disagree with the conclusions that there would be "... no unavoidable adverse impacts to surface or groundwater hydrology" and that water quality impacts would be "... to less than significant levels" since current hydrological conditions support the existence of these areas. Implementation of the preferred alternative, including alteration of drainage patterns, would result in the direct loss of a minimum of seven ephemeral ponds on site.

4-110. The noise impact analysis is cursory and needs to refer to appropriate literature attributing impact to avian populations due to noise. Also, in the cases of "major airport runways" the analysis is biased by not considering adjacent land use changes in the context of the distribution of the coastal California gnatcatcher.

4-119, paragraph 2. There was no Service protocol for presence/absence of gnatcatchers in 1993 and 1994.

4-122, exhibit 50. Western spadefoot toad (*Scaphiopus hammondi*) is identified in the exhibit (and on page 4-137) as occurring on site; however, the discussion about amphibians on page 4-126 states that "[N]o amphibians were observed during the surveys of the site." Correct this discrepancy.

4-123, paragraph 2. Add that the NCCP refers to the Southern Orange County Subregion to distinguish this planning effort from other ongoing and completed efforts.

4-125, "Ephemeral Ponds." The Wildlife Agencies disagree with the assertion that "all of the ephemeral ponds were artificially created a number of years ago..." Given the geological conditions of frequent landslides in the area, these wetlands could have been "slump" or "slope" ponds that underwent human modification at a later time. These types of wetlands are known in both Orange and San Diego counties. Further information is needed in the DSEIR regarding the origin of these wetlands in the context of the proposed impacts.

As identified by Maria Simovich, Ph.D., a consultant for the former applicant, some of the on site wetlands contain a high diversity of aquatic invertebrates, strongly suggestive of the more natural origin of these wetlands. Known to occur in at least some ponds with Riverside fairy shrimp and western spadefoot are cladocerans (e.g., *Daphnia*, 2 or 3 species likely), copepods, ostracods (seed shrimp), and clam shrimp (*Cyzicus californicus*). Clam shrimp have a restricted distribution in coastal southern California. Further information is needed in the DSEIR regarding aquatic invertebrates in the context of the proposed impacts.

4-126, Invertebrates, last sentence. The DSEIR states that "[H]undreds of additional invertebrates are expected to use the site." No data are provided to support this statement. The Wildlife Agencies presume that this statement refers to the expected number of species, not the number of individuals. Please qualify and support the statement.

4-126, Amphibians. The last sentence erroneously implies that the distribution of amphibians is restricted to steep slopes. No data are provided to support this statement. The likely widespread distribution on site of western spadefoot toad, Pacific treefrog (*Hyla regilla*), and western toad (*Bufo boreas*) needs to be noted and discussed. Please revise the discussion.

4-126, Reptiles. The correct name is the orange-throated whiptail lizard. Please correct this name throughout the document (e.g., 4-138, -147).

4-130, paragraph 1. The DSEIR states that the "[Southern] subregion will incorporate public lands of the Cleveland National Forest (CNF)." We suggest that this statement be removed or properly qualified since no additional conservation benefits would occur unless the U.S. Forest Service (USFS) is a signatory to an NCCP agreement. The USFS is not participating in the Orange County Central/Coastal NCCP and has not indicated that it wishes to be a "participating landowner" in the Southern Subregion. The DSEIR should not presume that future CNF management activities will be compatible with an NCCP.

4-130, paragraph 2. The DSEIR states that the gnatcatcher is not found onsite. Surveys to current Service protocol were not done. The last gnatcatcher surveys were done in 1994. Surveys should be conducted according to Service protocol to determine the baseline status for the species. The results of these surveys will be needed to assess impacts, including the number of gnatcatchers subject to "take," in accordance with the Intra-Service Biological Opinion for the 4(d) rule.

4-130, paragraph 3. The correct name is the Central-Coastal Subregion.

4-130, paragraph 4. The DSEIR refers to the "disturbed nature of the site" in the context of fulfilling wildlife corridor "needs in the area." No additional information is provided to support this assertion. The existing landscape linkages and documented presence of mountain lion (*Felis concolor*), mule deer (*Odocoileus hemionus*), and coyote (*Canis latrans*), all of which would use a wildlife corridor within the project area, needs to be noted and discussed. Mountain lion movement through the area was not disclosed in the DSEIR. This study was undertaken by Paul Beier, Ph.D, and reported in the scientific literature. For further explanation of our request that these data be disclosed and discussed in the context of this proposed project, refer to item number eight in our joint wildlife agency letter of January 30, 1997.

4-131. exhibit 51. This exhibit is difficult to interpret since it was originally a color map of larger size. For example, gumtrochaea and cactus wrens are noted in the legend but are not available on the exhibit. We suggest that the exhibit be redone to show only relevant information.

4-133. paragraph 3. The DSEIR says that "The fragmented nature of much of the coastal sage scrub onsite makes it low quality." However, the current gnatcatcher status is uncertain and most wildlife surveys were out of date, having been conducted in 1993 and 1994. The paragraph continues by stating that the steep slopes support the highest diversity of animal species, but no data are provided to support this statement.

4-133. paragraph 3. The site also contains a habitat linkage, also qualifying it as at least "intermediate value" according the Revelation Logic Flow Chart.

4-136. exhibit 53. One pond identified as a "potential mitigation area" is in the project footprint of the preferred alternative, as shown on exhibits 18 and 22. Since this area would be under housing and infrastructure and no longer in its present condition, please correct this discrepancy.

4-137. paragraph 3. The western spadefoot toad is a California State Species of Concern.

4-137, -139, and -148. state that the site "must be considered occupied by gnatcatcher until proven otherwise." This is inconsistent with the statement on 4-130 that the gnatcatcher is not found on site. Correct and clarify this discussion.

4-139. The distribution information for the gnatcatcher is incomplete. The species occurs in portions of Ventura, eastern Los Angeles, and San Bernardino Counties. The discussion regarding limited slope characteristics is not valid. Gnatcatchers occur on steep slopes, using them for nesting, foraging, and movement.

4-140. The wildlife agencies disagree that focused surveys for the Quino checkerspot butterfly are not warranted. The limited surveys accomplished do not support the assertion that the probability of occurrence is "low." Appropriate habitat (CSS, chaparral, and grassland) exists within the project site. Surveys consistent with the Service 1997 protocol should be completed.

4-141. The correct scientific name for the sunbeam lanier is *Citrus cavanus*. It is properly referred to as a raptor. The accepted common name for *Agelaius tricolor* is the tricolored blackbird. The "C2 (category two)" category was discontinued by the Service in February 1996. The gnatcatcher is a California State Species of Concern.

4-144. There is no analysis of connectivity loss in this discussion of the project in relation to the NCCP findings. However, 4-148 states that "[t]he project, as currently proposed, may hinder or preclude the preparation of the southern subregional preserve [sic], due to restricted wildlife

movement." Further on page 4-130, paragraph 3 it says, "the project site occupies a linkage area between the Central and Southern NCCP Subregional preserves [sic], where a wildlife corridor is needed." Please clarify and further analyze this crucial issue. We suggest explanatory text with an exhibit or exhibits specifically rendered.

4-145, "Ephemeral Ponds." The use of acreage by itself is inappropriate since it does not sufficiently disclose the impacts of the preferred alternative. The Wildlife Agencies suggest that the number of ponds also be used as a measure of impact. From the diagrams in the DSEIR, it appears that seven of the eight ponds identified as supporting Riverside fairy shrimp would be directly in the project footprint. The other pond would be subject to edge effects and adverse impacts to water quality. This impact is not apparent when only the acreage figure is considered.

4-147, Western spadefoot toad. The DSEIR states that the population is small in size. However, no data are provided to support this statement such as the results of a scientifically valid population survey. In the absence of data, we suggest that the statement be eliminated.

4-148, Wildlife Movement. The statement "It can not [sic] be assumed that wildlife would be able to move through the project site..." should be further explained. Further explanation is needed since it is known that there would be the virtual elimination of wildlife and their movements in a high density residential development as the preferred alternative proposes.

4-151, -152, Conceptual Mitigation Program. The last sentence on 4-151 states that the program was developed based on input from the wildlife agencies. Regarding the mitigation ratios presented, the DSEIR provides no rationale to support these ratios. Further, the position of the Wildlife Agencies is that the ratios are unjustified and inappropriately low in relation to the proposed impacts, given other mitigation agreements.

6-3, table 39. The "no project" alternative states that there would be a continuation of grazing impacts. Include that this is a discretionary landowner activity, otherwise unrelated to the proposed project.

6-4, paragraph 1. The DSEIR states that "[O]ngoing degradation of onsite biological resources related to cattle grazing operations would continue to occur." This degradation should be further described. For example, on our May 20, 1996 site visit, Wildlife Agency representatives observed cattle within some of the onsite wetlands. We also observed apparently free-ranging horses nearby. Further discussion of the presence of livestock and horses is needed in relation to impacts to Riverside fairy shrimp, other invertebrate species, and CSS. Crushing of fairy shrimp "cysts" and adverse changes to water quality are likely to occur within ponds subject to use by cows and horses. Literature references showing CSS impacts due to grazing should also be referred to and discussed.

6-4, and continuing. The discussion of biological resources impacts is cursory, allowing extremely limited comparison opportunity among the alternatives. A detailed matrix chart of alternatives versus type and amount of habitat impact (e.g., CSS, Riverside fairy shrimp) would help to synthesize the data. However, it appears that alternative three, the 100 unit alternative on 32 acres, would directly avoid seven of the eight ponds occupied by Riverside fairy shrimp, most of the loss of CSS habitat, as well as minimize impacts to wildlife movement.

5-1. The Inventory of Unavoidable Adverse Impacts should include the amount of CSS loss and the likely "take" of gnatcatchers.

Appendix C, Notice of Preparation (NOP), page 3. Note that our joint Wildlife Agency NOP commented about "Plant/Animal Life."

Appendices D (Conceptual Wetland Mitigation Plan) and E (Conceptual Upland Mitigation Plan) were missing from Appendix 'H,' the Biological Resources Assessment prepared by Sweetwater Environmental Biologists, Inc. The Assessment is a draft, dated March 20, 1997. If an updated version is available, include it in the revised DSEIR.

In conclusion, the DSEIR is inadequate. Major revisions and additions are needed, including completion of updated field surveys and a literature search. For example, the gnatcatcher discussion should include a description and analysis of the regional distribution of CSS, gnatcatcher, and cactus wrens, in relation to the project area. Vegetation maps and species locations in both digitized and hardcover format are available from the County of Orange.

The Wildlife Agencies anticipate that the issues discussed above will be included and addressed in any additional CEQA documents and be presented to the Wildlife Agencies for review and comment. Until the impact assessment and mitigation recommendations are revised to respond to our concerns, the Wildlife Agencies recommend against certification of the DSEIR as currently proposed.

The Wildlife Agencies appreciate working with the County on NCCP conservation planning issues. Lands within the proposed project area are important in conservation planning for the Southern Subregion NCCP Reserve in Orange County. The area of the proposed project is also the only linkage to the NCCP Central Subregion in Orange County. An improperly implemented project would permanently destroy the integrity of the linkage between the

Subregion reserves. If you have any questions or comments please contact Liann H. Davis, NCCP Associate Wildlife Biologist (Department) at 619-467-4207 or Robert James, Fish and Wildlife Biologist (Service) at 760-431-9440.

Sincerely,

Gail C. Kobetich

Subject: Saddleback Meadows - Comments on Addendum PA980103 for Certified Final EIR 566 and Mitigation Monitoring Program;
Zone Change 98-3 and Area Plan 98-2;
299 Single-Family-Unit Project

Dear Mr. Brantley:

SFC Consultants (*SFC*) has hurriedly reviewed the Saddleback Meadows Addendum to Certified Final Subsequent EIR 566 for CEQA compliance and consistency, and provides the following comments for you and your Planning Commission's consideration at it's meeting of August 25, 1998. By submitting these comments on the Addendum, *SFC* does not intend to waive its objects to the many procedural irregularities relating to how this EIR is being processed by the County of Orange.

In fact, it is with great concern that I am submitting these comments at all since I was not notified of the availability of an Addendum to Saddleback Meadows SEIR 566, even though I have made a clear record of my continued interest in participating in, and being informed about, any CEQA review process relating to the Saddleback Meadows property. It was by pure luck that I happened to be at the County Clerk Recorder Office when I walked to the Administration building to review the Public Hearing notices. It was at this time that I noted the Addendum EIR and Planning Commission hearing scheduled for August 25, 1998.

With the considerable amount of time that I have spent to date in commenting on previous CEQA documents for the Saddleback Meadows project, I would expect to be included in all distributions of any subsequent documents. According to my conversation with Mr. Bill Grieman, the Addendum was distributed to selected private residents, homeowner associations, concerned legal entities and the surrounding religious organizations, totaling eleven Addendum recipients. It does not appear that even the City of Mission Viejo or other affected local agencies were notified of what is being referred to an the 299-unit "contingency plan."

In fact I contacted Ms. Karen Steele, Senior Planner at the City of Mission Viejo, in order to confirm their receipt of the Addendum. Ms. Steele indicated that the City was not aware of any Addendum,

26012 Marguerite Parkway. Suite H424. Mission Viejo. CA 92692
Toll free: (888) 813-1146 Telephone: (949) 859-5852 Fax: (949) 581-2577 Email: sfc1@home.com

and if the City had been notified, a thorough review of the Addendum would have been undertaken by the City Planning and Transportation Departments. I believe the same would be true with respect to the City of Lake Forest. At any rate, for future reference, please add me to the mailing list of interested persons for all future land use matters relating to the development of the Saddleback Meadows property.

As an EIR preparer myself, it is clear that the applicant is once again trying to avoid full public disclosure and involvement by relying on an Addendum which does not require public circulation. Under CEQA Guidelines Sections 15162 and 15164, it is not proper to rely on the Addendum as the CEQA documentation for a 299-unit single family detached housing project that purports to exempt itself wholesale from the Foothill/Trabuco Specific Plan.

New information regarding project impacts, reasonable project alternatives, and available mitigation measures not previously considered clearly mandates the preparation and circulation of a new EIR for the decidedly different project.

Over one year ago, on August 22, 1997, *SFC* provided you and your Planning Commission with nineteen pages of comments on the Draft SEIR 566, which at that time was proposed for 705 units. Within that document, I highlighted numerous deficiencies in the SEIR which I felt required correction or supplementation prior to the SEIR being certified.

At the October 22, 1997 Planning Commission meeting, I presented major concerns about the inadequacy of the written responses to my comments, and I raised other questions regarding the adequacy of the SEIR which have not been answered to date. *SFC* acknowledges that, in the weeks following after the October 22 Planning Commission hearing, the County made additional reports, materials, and technical studies regarding the project, available for public review. With the additional information which was made available, the County's written responses to many of *SFC*'s comments from my August 22 letter were no longer valid. More importantly, the additional materials (e.g., mitigation monitoring program, grading plans and soils reports) which were made available, are the type of "significant new information" which would have required the Draft SEIR to be recirculated under section 15088.5 of the CEQA Guidelines.

On December 2, 1997, *SFC* provided the County with fifteen pages of comments, which addressed concerns that were not adequately addressed within the SEIR 566. Within my December 2, 1997 letter, I addressed those comments from my August 22 letter to which no substantive response had been provided. I am disappointed that, even in the recent Addendum, the County has still not responded to my comments, despite ample time to have done so.

In conclusion, I cannot believe that the County has sought to process the 299-unit project without full public disclosure and proper CEQA compliance. Relying on a previously prepared SEIR (which is itself deficient and is currently being litigated) without properly informing the public and responsible state and federal agencies, and trying to process a Zone Change and an Area Plan for 299 homes on the basis of an "Addendum" which is not circulated for public review and comment,

does not come close to complying with CEQA and the Guidelines. To protect the record, however, I have prepared the attached comments within the very little time which has been afforded to me.

Please call me at my office if you have any questions.

Sincerely,

SFC Consultants

COMMENTS TO ADDENDUM PA980103 FOR CERTIFIED FINAL SUBSEQUENT EIR 566

The following comments are listed in the same order as the Addendum EIR sections for convenience.

Section II, 3. Project Description

1) **Page 5-15, Project Description.** Nowhere in the project description does the proposed Zone Change (ZC98-3) or Area Plan (AP98-2) appear as a description or mitigation measure, yet the title of the Addendum indicates both a Zone Change and Area Plan. How can the title of the Addendum refer to two significant changes to the Saddleback Meadows project yet have no substantive discussion of these changes? One short sentence beginning at the end of Page 14 and continuing at the top of page 15 refers to the Zone Change, but that appears to be the only reference to it. What is inexplicably missing from the Project Description section is a detailed explanation that the Zone Change includes an amendment of the Foothill/Trabuco Specific Plan to *exempt* the 299-unit project from the development criteria and restrictions set forth in the Specific Plan. Since the Specific Plan expressly requires that any new project for the Saddleback Meadows property be "consistent" with the Specific Plan, the exemption subsumed within the Zone Change represents the type of "substantial changes" referred to in the Guidelines section 15162 (a) which necessitates the preparation of another EIR to address the numerous respects in which the 299-unit project would significantly deviate from the Specific Plan and subvert the overall goals, objectives and policies that Plan was designed to achieve.

2) **Page 12, Housing Element.** The original 705 unit project description within SEIR 566 indicated that the removal of the mandated Inclusionary Housing Program (IHP) requirements could undermine the Countywide calculations used to eliminate the affordable housing mandate. Yet no thorough discussion of housing issues, including the possibility of eliminating the need for affordable units was considered in the SEIR, nor was it considered in the response to comments on the SEIR. This section of the Addendum indicates that the 299-unit project would still be required to apply the IHP even though the County-mandated affordable housing requirements have since been rescinded. Yet page 15, top of page, indicates that the County of Orange would be required to implement a General Plan Amendment to modify project-related affordable housing requirements. Is the County planning to initiate a General Plan Amendment as part of this project application? And if so, will it include a thorough discussion of housing issues? This discussion of housing issues within the County and their applicability to the Saddleback Meadows project would constitute new information under CEQA Guidelines 15162 and would require a new EIR and public circulation thereof.

Section III, 1. Land Use Compatibility

3) **Page 17, Foothill-Trabuco Specific Plan**. This section is grossly misleading and false to the extent that it states that "the project is exempt from the provisions of the Specific Plan." In fact, just the opposite is true. As clearly stated on Page III-20 of the Specific Plan, the exemption that the 705-unit manufactured housing project currently enjoys is to be automatically revoked in the event a new project, such as a 299-unit project, is approved and the new project is to be "consistent" with the Specific Plan.

4) **Pages 17 and 18**. What is not being disclosed here is that Zone Change (ZC) 98-3 provides a *new* exemption for the 299-unit project to exclude it from coverage by the Specific Plan. Such an exemption is completely at odds with what the Board of Supervisors intended when it adopted the Specific Plan in December 1991 and expressly stated that any development proposal for the Saddleback Meadows property which deviated from Recorded Tract Map No. 10692 had to be brought into consistency with "all of the provisions of the Specific Plan." (FTSP at p. III-20, s 3.2 (b)(3).) The proposed *new* exemption provided for in Section 3.4c of ZC 98-3 is a blatant reversal of the Board's 1991 directive and thus represents a significant new change under CEQA Guidelines section 15162 which should be addressed as part of a new EIR to be circulated for public review and comment. The failure of the Addendum to quote the relevant portion of the Specific Plan imposing a "consistency" requirement on all new projects relating to Saddleback Meadows, and the failure to mention the new exemption provided for in ZC 98-03, are quite troubling and clearly inexcusable.

5) **Page 19, Mitigation Measures**. Attachment A of Appendix A at the back of the Addendum is the Saddleback Meadows Rural Character Statement. Yet the mitigation measures for the Addendum do not include provisions for the inclusion of these attached guidelines. *SFC*'s previous comments to SEIR 566 suggested that land use mitigation should include: Setback criteria, buffer zones of vegetation, pet restrictions, ridgeline protection, project phasing coupled with an Annual Monitoring Report under Zoning Code section 7-9-103.2(a)(12) to identify imbalances between development and infrastructure, etc. Notwithstanding the requirements of CEQA Guidelines section 15126(c), these new mitigations represent measures not previous introduced in SEIR 566, though identified pictorially in the site plan (buffer zone), and should be included in a revised draft Subsequent EIR and circulated for public review and input.

6) CEQA Guidelines Section 15131 (b) expressly recognizes that construction can adversely impact religious practices: "if the construction of a road and the resulting increase in noise in an area disturbed existing religious practices in the area, the disturbance of the religious practices could be used to determine that the construction and use of the road and the resulting noise would be significant effects on the environment". Although the Land Use Compatibility section of the Addendum indicates that the reduction

of residential units from 705 to 299 and the incorporation of the Saddleback Meadows "Rural Character Statement" responds to the project team's intent for a rural community as expressed by Saint Michael's Abbey and the Ramakrishna Monastery, these measures should be included as additional mitigation and should be addressed in a new EIR and be circulated for public and agency review. Without incorporation of these measures as mitigation, the current Addendum and mitigation is deficient, as SEIR 566 was, with no attempt to mitigate impacts on surrounding religious uses to any level at all.

Section III. 2. Soils and Geology

7) **Page 22, Geotechnical Conditions, last paragraph at bottom of page.** The Addendum briefly indicates that Pages 4-13 through 4-33 of SEIR 566 remain appropriate for the project. However, the Groundwater section of SEIR 566 was never properly addressed and remains deficient. The major areas of groundwater comments and concerns are located within pages 4-13 through 4-33 of the SEIR 566, precisely those pages that are not addressed in the Addendum.

> Excerpted from SFC Consultants comments letter dated August 22, 1997 for SEIR 566: ***Page 4-16,*** *Ground Water: It appears from the State Water Resources Board map of wells in the area that there are at least five wells located northerly, westerly and southerly of the site and landslide areas. These wells depend on the groundwater supplies to remain in operation. During remedial grading, perched groundwater and saturated zones will be encountered (according to the geotechnical study). This excess groundwater will require pumping to a point to where the bottom layer of the 120-foot key cut will need to be cleaned out. The EIR does not discuss the high probability that this excessive pumping may impact groundwater and groundwater recharge to these surrounding wells. Impacts to groundwater and surrounding wells are considered a significant impact in CEQA Guidelines Appendix G(h) and (i). The EIR provides neither discussion of this important issue, nor any mitigation for potential impacts to these wells. While the EIR preparer, or the geotechnical engineer for the project, may speculate that the surrounding wells are being fed by Aliso Creek or "other groundwater",* ***there is no factual basis to support the conclusion that there will be "no significant groundwater impact" caused by project grading and development.*** *The Planning Commission must be provided with complete information on this issue before passing on the adequacy of DSEIR 566, and gathering groundwater information during remedial grading for future decisions, and complying with the water resource agencies, is not the proper way to proceed.*

The EIR preparer's response to my comments of SEIR 566 indicated that this comment is speculative and declines to deal with the very real concern about the impacts on surrounding water wells. Interestingly, the EIR itself includes speculative information that the surrounding wells are being fed by Aliso Creek or other groundwater (in addition to

other speculative statements in the SEIR which *SFC* has previously pointed out). My concern here is that the Planning Commission is about to rely on a previous SEIR that incorrectly states that there will be "no significant groundwater impact" caused by the project grading and development. The EIR preparer appears unwilling or unable to perform the analysis necessary to comment on the actual impacts to surrounding wells.

8)

Excerpted from SFC Consultants comments letter dated August 22, 1997 for SEIR 566: ***Page 4-24**, last two paragraphs. These paragraphs state that "unfavorable conditions (i.e. "some ground water") can be mitigated by implementing corrective grading concepts". Yet the DSEIR only speculates on the mitigation necessary to truly lessen future impacts to the development from groundwater and postpones for future analysis whatever specific mitigation measures might eventually be proposed by the soils engineer for the project (see page 4-25). This is not in keeping with CEQA.*

Again, the concerns expressed above are still valid and should be addressed as part of a new EIR that is circulated for public and agency review.

9)

Excerpted from SFC Consultants comments letter dated August 22, 1997 for SEIR 566: ***Page 4-31**, Mitigation Measure 2-34. Ironically, this so-called "mitigation measure" provides more detailed information regarding groundwater problems and dewatering than any discussion set forth in the text of DSEIR 566. Although page 4-24 of the text merely alludes to "some" groundwater that might be encountered during grading, this mitigation measure paints a far more graphic and alarming picture, **"Heavy seepage was encountered, as indicated on the Boring Logs, at multiple elevations. Consequently, considerable water can be expected within planned excavations, typically reaching maximum discharge within 2 to 5 days after exposure. Additional nuisance water is foreseen in nearly all major cuts decreasing in volume with time, and being less at higher elevations as well as in cuts made late in the year."** As indicated above, groundwater wells are located adjacent to the site and landslide areas. Impacts to surrounding groundwater and groundwater wells from required pumping and dewatering are not even discussed in the text of the DSEIR, yet this mitigation measure appears to expect it. Again, the DSEIR does not, but certainly should, discuss the extreme likelihood that this excessive pumping may impact groundwater wells and groundwater recharge to these surrounding wells. Impacts to groundwater and surrounding wells are considered a significant impact under CEQA. The Planning Commission must be provided with enough factual information before it is asked to certify this EIR. Gathering groundwater information during remedial grading is not proper mitigation.*

My previous comment on groundwater, seepage, and impacts to down gradient wells should be addressed prior to approving any Addendum.

10)

Excerpted from SFC Consultants comments letter dated August 22, 1997 for SEIR 566: ***Page 4-33**, Section 4.2.7 of **the DEIR should be changed to read "Implementation of this proposed project, with the mitigation measures outlined above will result in unavoidable adverse geotechnical impacts."** At a minimum, there are significant groundwater impacts and slope stability issues that have not been adequately discussed or mitigated in DSEIR 566 and revision and recirculation of the DSEIR is in order to allow public comment on these matters when they are completed.*

Again, the concerns expressed above are still valid and should be addressed as part of a new EIR that is circulated for public and agency review.

Section III. 3. Water/Hydrology

11) **Page 22, Geotechnical Conditions, last paragraph at bottom of page.** The Addendum briefly indicates that Pages 4-33 through 4-43 of SEIR 566 remain appropriate for the project. However, the true facts are that the Water/Hydrology section of SEIR 566 was never properly addressed and remains deficient. The major areas of water and hydrology comments and concerns are located within pages 4-33 through 4-43 of SEIR 566, precisely those pages that are not addressed in the Addendum.

Excerpted from SFC Consultants comments letter dated August 22, 1997 for SEIR 566: ***Page 4-38** The EIR states that alterations of the rate of flow of groundwater or impacts to groundwater quality are considered to be insignificant. The geotechnical report indicates that groundwater and saturated zones will require dewatering during grading and excavation of the sheer key. Groundwater from these slide planes will require pumping for an undetermined period of times (as demonstrated in Mitigation Measure 2-34). At least five (5) groundwater wells are located near this project site, directly in the path of the groundwater flow. The geotechnical report has completely disregarded the impacts that may be incurred downstream during construction dewatering. **This EIR section should consider impacts to groundwater as significant**, otherwise the Planning Commission should not certify this EIR with an incorrect impact finding.*

SEIR 566 incorrectly states that there will be no significant impacts to groundwater caused by the project grading and development, and the SEIR was certified with these incorrect findings. The SEIR should have stated that "significant impacts may occur to groundwater due to project grading and development," The Addendum which addresses this project cannot rely on a SEIR that was certified with incorrect findings.

12)

Excerpted from SFC Consultants comments letter dated August 22, 1997 for SEIR 566: *Page 4-42, Mitigation Measure 3-5. How and why is this mitigation important to reducing hydrologic impacts to less than significant levels? What if the upstream and downstream property owners do not sign or agree to a letter of consent? Does the Manager, PDS/Subdivision and Grading Services Division override the property owner and allow consent? The mitigation measure is not enforceable and does not reduce impacts in any way. It should be deleted.*

The response to this comment to SEIR 566 was non-responsive and yet the SEIR 566 was still certified. Again, how and why is this mitigation important to reducing hydrologic impacts to less than significant levels? What if the upstream and downstream property owners do not sign or agree to a letter of consent? Does the Manager, PDS/Subdivision and Grading Services Division override the property owner and allow consent?

13)

Excerpted from SFC Consultants comments letter dated August 22, 1997 for SEIR 566: *Page 4-43, Section 4.3.7 indicates that implementation of the proposed mitigation measures would result in no unavoidable adverse impacts to groundwater hydrology, yet there is no information on impacts to downstream wells from excessive dewatering to support the less than significant impact. This conclusion should be changed to* ***potentially significant impacts will result after implementation of the mitigation measures.*** *In addition, the new information associated with the new finding will require recirculation of DSEIR 566.*

No information has yet been presented to support the SEIR's conclusion that unavoidable adverse impacts to groundwater hydrology will not occur. Since the SEIR has been certified with this incorrect finding, the Addendum is also deficient. The impact statement should be changed to state that "significant impacts may occur to groundwater due to project grading and development," then a new EIR should be circulated for public and agency comment.

Section III. 4. Transportation/Circulation

14) Page 42, Second Paragraph. The Addendum briefly indicates that Pages 4-44 through 4-83 of SEIR 566 remain appropriate for the 299-unit project, but the Transportation/Circulation section of SEIR 566 was never properly addressed and remains deficient. The major areas of traffic and circulation comments and concerns are located within pages 4-43 through 4-83 of the SEIR, precisely those pages that are not addressed in the Addendum.

Excerpted from SFC Consultants comments letter dated August 22, 1997 for SEIR 566: *The traffic section of the DSEIR unfairly limits its review of intersection*

impacts to El Toro Road/ Santa Margarita Parkway and north. No explanation is given in the DSEIR for this limiting factor, and no analysis is included for the intersections along El Toro south to the San Diego Freeway (I-5). The DSEIR should include all intersections that will be impacted by the 705-unit project.

The EIR preparer for SEIR 566 had justified the lack of analysis south of Santa Margarita Parkway to "Distribution of project related traffic generation...has been reviewed and approved by the County of Orange, Traffic Engineering Division." Yet the response went on to say "... the majority of traffic will be oriented to the south/west of the site." I am disappointed that, even in the recent Addendum, the County has still not responded to my comment, despite ample time to have done so. Please clarify what the EIR preparer is trying to say and respond to the comment properly.

Section III. 6. Noise Analysis

15) Page 66, First Paragraph. The Addendum makes a poor and questionable attempt to actually respond to a comment from SEIR 566 relating to the noise impacts on adjacent religious facilities. The Addendum attempts to justify these impacts by indicating that "These facilities are already exposed to single event aircraft noise that is much louder than a distant barking dog, lawnmower or auto horn associated with project residential uses." The Addendum goes on to indicate that "intervening topography" and reduction in the number of units from 705 to 299 would offset such noise impacts. Such a conclusory response unsupported by a revised noise analysis for this Addendum is prohibited under CEQA Guideline Section 15088(b). Before the Addendum attempts to make conclusory statements such as this, a revised noise analysis should be prepared and discussed in a new EIR that is circulated for public and agency review.

16) Page 66, Third Paragraph. By means of a passing reference to Page 4-101 through 4-118 of SEIR 566, the Addendum suggests that the noise impacts of the 299-unit project are adequately addressed in the SEIR. The Noise section of SEIR 566 however, never properly addressed the impacts of noise on religious facilities and remains deficient. The major areas of noise comments and concerns are located within pages 4-101 through 4-118 of SEIR 566, precisely those pages that are not addressed in the Addendum.

Excerpted from SFC Consultants comments letter dated August 22, 1997 for SEIR 566: *Notwithstanding the requirements of CEQA Guidelines Section 15130(b)(1)(B), the DSEIR fails to provide a cumulative analysis of the noise impacts from the reuse of the El Toro Marine Corp Air Station as a commercial airport or the noise from traffic associated with the commercial airport. Once this information has been included in this DSEIR, this document should be recirculated for public review.*

Page 4-102, Baseline Noise Levels. The Noise section of the DSEIR provides a baseline discussion of the current impacts from the El Toro MCAS fly-overs which exist at present, but the impact section of the EIR fails to identify potential CNEL contours as a result of the base reuse plan as an active commercial airport.

Page 4-103, the first paragraph discusses an area of proposed open space as the project location where the 62 dB CNEL contour falls. This may have been true for the previous EIR 561, however, page 7 of the noise study provided in Appendix G states that the 62dB CNEL location is in an area of proposed commercial development. The proper location of the 62 dB CNEL should be verified prior to EIR certification.

Page 4-103, third paragraph, states "Depending upon future site re-use, aircraft noise may or may not be an important issue." ***The aircraft noise from a commercial airport at El Toro will be an important issue.*** *Nowhere else in the DSEIR is the El Toro MCAS reuse discussed or incorporated by reference. No commercial aircraft noise impact analysis is provided. The DSEIR should include project related noise impacts as a result of the El Toro reuse plan as a commercial airport and traffic related impacts. Once this information has been included in this DSEIR, the document should be recirculated for public review.*

Page 4-103, fourth paragraph indicates that individual fly-over events may be noise intrusive and mitigation has been provided. However, neither the baseline discussion, impact analysis nor the mitigation measures in the DSEIR include mitigation for a multiple fly-over commercial airport.

The EIR preparer for SEIR 566 made no attempt to respond to any of the issues concerning the future use of the El Toro MCAS. I am disappointed that, even in the recent Addendum, the County has still not responded to my comment, despite ample time to have done so. Please respond to the issues regarding the future use of the El Toro MCAS as a commercial airport.

Section III. 7. Biological Resources

17) **Page 73, First Paragraph.** The Addendum includes the same discussion of the NCCP as SEIR 566, however, a footnote has been added to this paragraph. Unfortunately, the actual text of the footnote has been omitted leaving the reader to guess at its significance. Please provide the text of this footnote.

18) **Page 77, First Paragraph.** The Addendum refers to a new analysis of biological issues that was recently prepared for the 299-unit project which is currently proposed. However, the body of the Addendum does not clearly refer the reader to Appendix G where a copy of this new analysis is located. The new biological report within Appendix G

contains new information which has never been publicly reviewed or commented upon. Notwithstanding the requirements of CEQA Guidelines section 15126(c), this new report represent information not previous discussed in SEIR 566, and should be included in a new EIR that is circulated for public review and input under.

18) **Page 79, Last paragraph at bottom of page.** The Addendum briefly indicates that Pages 4-118 through 4-154 of SEIR 566 remain appropriate for the 299-unit project. However, the true facts are that the Biological Resources section of SEIR 566 was never properly addressed and remains deficient. The major areas of biological resource comments and concerns are located within pages 4-118 through 4-154 of the SEIR, precisely those pages that are not addressed in the Addendum.

> Excerpted from SFC Consultants comments letter dated August 22, 1997 for SEIR 566: *Page 4-153, Mitigation Measures SC 7-1 through 7-7 and measures 7-11 through 7-14 would appear to be of no value in light of the note placed on the preliminary grading plans...this EIR does not adequately satisfy CEQA Guidelines Section 15126 (c) requirements at this time. Gathering further information and complying with resource agencies in the future is not proper mitigation. Biological mitigation for ACOE and CDFG coordination may change the development plan, which would then require a revised EIR.*

This comment was not adequately addressed in SEIR 566 and the Addendum likewise fails to address the issue raised by this comment. These important issues must be addressed before any further action is taken.

19) **Page 84, Mitigation Measure SC 7-8.**

> Excerpted from SFC Consultants comments letter dated August 22, 1997 for SEIR 566: *Page 4-155, Mitigation Measure 7-8, F, states that an experienced nursery or other landscape contractor shall care for the transplanted trees for only six (6) months. The biological report states on page 49, second paragraph,* ***"In order to ensure the success of mitigation, the Project proponent should enter into a five year secured agreement with the County of Orange to cover the projected cost to install, monitor, and report on the mitigation Project. This agreement will be in the form of a 100 percent bond."*** *This extremely important mitigation measure is found nowhere in the DSEIR. If the DSEIR does not reflect the recommendations of the expert biologist, then mitigation measure 7-8 F is ineffective and invalid. The DSEIR cannot be certified without amending this measure to reflect the biologist's recommendation.*

The EIR preparer for SEIR 566 stated in their response to this comment that "[t]he provision for five years of biological resource mitigation monitoring is hereby incorporated into the DEIR. However, rather than incorporate this mitigation measure, the Corrections

and Additions section of the SEIR 566 simply states: "Page 4-155, Mitigation Measure 7-8: the following mitigation measure is added to the draft EIR: *All biological resource mitigation measures shall be monitored for compliance with applicable resource agency requirements and established success criteria, to the satisfaction of the manager PDS/Subdivisions and the Administrator Planning and Zoning.*" Nowhere in the Corrections section is the five year mitigation monitoring mentioned. Moreover, neither the Addendum, nor the new biology report, located in Appendix G of the Addendum makes any reference whatsoever to this mitigation measure.

20) **Page 87, Mitigation Measure SC 7-11.** Although this mitigation measure requires a gnatcatcher survey to be conducted pursuant to the current USFWS protocol, and to the satisfaction of the USFWS and the County, it does not provide for sufficient mitigation in the event the gnatcatcher is found to exist on the Saddleback Meadows property. This mitigation measure was a good start, but it is inadequate for the real purpose of protecting endangered species. The measure should include provisions for mitigation of gnatcatcher habitat, including on- and off-site mitigation, if necessary.

21) **Page 88, Mitigation Measures.** The mitigation measure noted in the Response to Comments of SEIR 566, Section H, Corrections and Additions to the Draft EIR for Page 4-153, Paragraph 4 has not been incorporated into the Addendum, even though the County has had ample time to have done so.

Section III. 8. Aesthetics

22) **Page 94, Mitigation Measure PDF 8-4.** The mitigation measure noted in the Response to Comments of SEIR 566, Section H, Corrections and Additions to the Draft EIR for Page 4-174, Mitigation Measure 8-4, has not been incorporated into the Addendum, despite ample time for the County to have done so.

Section III. 9. Cultural/Scientific Resources

23) **Page 103, History.** The Addendum briefly indicates that Pages 4-173 through 4-192 of SEIR 566 remain appropriate for the project, but the Cultural Resources section of SEIR 566 never properly addressed the direct or indirect environmental impacts of the project on the religious or sacred uses within the potential impact area. The major areas of Cultural/Scientific Resources comments and concerns are located within pages 4-192 through 4-192 of the SEIR, precisely those pages that are not addressed in the Addendum.

Excerpted from SFC Consultants comments letter dated August 22, 1997 for SEIR 566: *Page 4-178. The DSEIR makes no attempt to analyze either the direct or indirect environmental impacts of the project on the religious or sacred uses within the potential impact area. In this case, the potential impact area extends outside*

of the property boundary. This important issue should be discussed in the DSEIR prior to certification.

The EIR preparer was non-responsive to this comment. This comment should be addressed as part of the Addendum.

Mitigation Monitoring Plan

As an EIR preparer, I believe that the mitigation monitoring program is the most important document that will come out of the final approval process for the Addendum or any future EIR. The Monitoring Program should be user friendly and a dynamic document, not something to file away on a shelf once approved. As indicated in my response to the County of Orange dated December 2, 1997:

A) The County should require that the applicant hire an independent mitigation monitor, as selected by the County, to assist the County in monitoring and verifying implementation of both the standard county mitigation measures and the additional mitigation measures. For example:

***Air Quality.** Most of the air quality mitigation measures are the responsibility of the applicant. The applicant, or the applicant's contractor, may not have specialized knowledge of mitigation monitoring, but a specialized mitigation monitor would.*

***Biological Resources.** The applicant is responsible for plant relocation. This should be delegated to a mitigation monitor to verify implementation.*

B) No where in the mitigation monitoring program does the USFWS, the CDFG, or the ACOE show up in the Responsible Person column. These agencies should be added as responsible parties.

C) None of the additional mitigation measures listed in the Response to Comments are reflected in the Mitigation Monitoring Program. The new mitigation should be reflected in the monitoring program prior to certification.

No Mitigation Monitoring Plan has yet been made available for the Addendum.

Saddleback Meadows Project
Orange County, California

Dear Board of Supervisors:

The California Department of Fish and Game and the U. S. Fish and Wildlife Service (collectively the Wildlife Agencies) recently learned about a Planning Application Hearing for the Saddleback Meadows project scheduled for the County Board of Supervisors on August 11, 1998. The applicant is proposing a 299 single-family dwelling unit project at Saddleback Meadows. The Wildlife Agencies and County have a lengthy history of communication concerning the project site and a variety of development proposal alternatives have been reviewed. The project site provides a critical habitat connection between the County of Orange's Central/Coastal and Southern Subregional Conservation Plans. In this letter we reiterate our position on the proposed Saddleback Meadows project and provide comments on a recent proposal that could affect the project.

The Wildlife Agencies, other Federal and State agencies, County of Orange, and local jurisdictions are participating in the Natural Community Conservation Planning (NCCP) program to conserve wildlife and habitat resources while accommodating economic growth and development. Our previous comments on Saddleback Meadows Project - Draft Environmental Impact Report (DEIR; No. 561 ,February 1996) and in our August 8, 1997, letter concerning the Saddleback Meadows Draft Subsequent Environmental Report No. 566 (DSEIR) (June 1997) identified significant biological issues related to the project site. These biological issues include habitat connectivity, wildlife corridors, sensitive habitats, and occupied wetlands with a federally listed animal. These sensitive habitats include about 65 acres of coastal sage scrub (CSS), 14 acres of oak woodland, and about 4 acres of wetland vegetation communities. The federally endangered Riverside fairy shrimp (*Streptocephalus woottoni*) is known to occur within at least seven wetlands (identified as "ephemeral ponds") spread throughout the site. Our letter

2507

evaluating the DSEIR identified Alternative '3' which proposed a clustered, lower density development, presented the least environmental impact, but would nonetheless substantially impact the wildlife corridor integrity. The 299-unit development posed a significant impact to the existing habitat connection from O'Neill Regional Park (Southern Subregion) to the Cleveland National Forest and other open space habitat in the central portion of the Central/Coastal Subregion. The Wildlife Agencies are willing to work with the project applicant to redesign a cluster development in order to preserve the wildlife corridor.

Other animal species considered sensitive by the Wildlife Agencies occur on or adjacent to the project site. The Wildlife Agencies documented rare and sensitive Cactus wren (*Camphylorhynchus brunneicapillus*) on site. The coastal California gnatcatcher (*Polioptila californica californica*)(gnatcatcher), a federally threatened species, could utilize the site based on the presence of CSS and gnatcatcher-occupied CSS in surrounding areas. Both of these animals, as well as other wildlife, would utilize Saddleback Meadows as a wildlife corridor. County maps show that Saddleback Meadows is the only remaining wildlife corridor linkage to the NCCP Central/Coastal Subregion.

We have been informed by two interested parties, Saint Michael's Abbey and Vedanta Society of Southern California, that a new clustered development alternative proposal and purchase of significant open space on the site have been offered to the current property owner. The Wildlife Agencies are willing to work with the current landowners and all interested parties in reaching a workable development solution.

The Wildlife Agencies believe a workable solution exists to permit development, while maintaining an essential biological connection between the NCCP Central/Coastal and Southern Subregions. We request that the Board consider this alternative approach that may provide a solution acceptable to all parties. If you have any questions or comments, we are available to discuss this matter further. Please feel free to contact us at your earliest convenience.

Sincerely,

Jim A. Bartel
Assistant Field Supervisor

Re: *Saddleback Meadows: Zone Change 98-3/Area Plan 98-2*
Request for New EIR to Analyze Additional Impacts, Alternatives, and Mitigation Measures re 299-Unit Project

Dear Mr. Brantley:

Without waiving any of the objections set forth in my letter to the Planning Commission, dated August 25, 1998, including, but not limited to, the lack of adequate public notice under CEQA Guidelines section 15153(b)(2), but in the interest of ensuring that County staff, the Planning Commission, and responsible state and federal agencies, are afforded an opportunity to consider whether to require the preparation of a new EIR to analyze the additional impacts, alternatives, and mitigation measures associated with proposed Zone Change 98-3 and Area Plan 98-2 to permit development of a 299-unit single-family detached housing project (the "299-Unit Project") on the Saddleback Meadows property (the "Property"), please find enclosed the following:

(1) An 8-1/2x11" copy of a conceptual site plan (entitled and hereinafter referred to as the "65-Unit Alternative"), which was prepared by County staff on or about March 23, 1998, to show the proposed layout on the Property of 65 single-family detached dwelling units on approximately 8,000 sq. ft. estate-size lots, covering a development footprint of approximately 35 acres out of the 222 total acres which comprise the Property;

(2) A 3'x4' copy of a site plan (entitled and hereinafter referred to as the "127-Unit Alternative") which was prepared on or about July 13, 1998, by California Quartet's consultant, Michael Madden Associates, to show the proposed layout on the Property of 127 single-family detached dwelling units on approximately 5,000 to 6,000 sq. ft. lots, covering a development footprint of approximately 44 acres located in the same general vicinity as the 65-Unit Alternative; and

(3) An 18"x51" copy of a site plan (entitled and hereinafter referred to as the "120-Unit Alternative"), which was prepared on or about August 31, 1998, and was revised on September 2, 1998, by the consultant for Vedanta Society/St. Michael's Abbey, Warren W. Singleton, P.E., to show the proposed layout on the Property of 120 single-family detached dwelling units on basically the same development footprint covered by the 127-Unit Alternative, except for certain grading and fuel modification pull-backs for ridgeline protection and canyon preservation purposes. Also enclosed is a copy of a letter from Mr. Singleton, dated August 31, 1998, providing some explanatory notes regarding the 120-Unit Alternative.

Since the County is proposing to "use an EIR from an earlier project [i.e., FSEIR 566] as the EIR for a separate, later project [i.e., the 299-Unit Project]," then section 15153(b)(2)(D) provides that one of the "key issues" involving the use of the previously-certified EIR are "whether the EIR should be used for this project and whether there are any *additional, reasonable alternatives* for mitigation measures that should be considered as ways of avoiding or reducing the significant effects of the project." Of course, if additional reasonable alternatives exist which were not considered by the lead agency in certifying the EIR for the "earlier project," that earlier EIR should not be used as the environmental documentation for the "separate, later project."

Indeed, subsection (d) of section 15153 clearly states that "an EIR prepared for an earlier project shall *not* be used as the EIR for a later project if any of the conditions described in Section 15162 would require preparation of a subsequent or supplemental EIR." (Emphasis added.) Under CEQA Guidelines section 15162(a)(3)(D), a subsequent EIR must be prepared if "new information" shows that "alternatives which are considerably different from those analyzed in the previous EIR would *substantially reduce* one or more significant effects on the environment, but the project proponents decline to adopt the . . . alternative[s]." (Emphasis Added.)

Obviously, FSEIR 566 did not analyze the 65-Unit Alternative, the 120-Unit Alternative, or the 127-Unit Alternative. In differing degrees, each of these

Alternatives would *significantly* reduce the environmental impacts associated with the 299-unit project in that they would preserve virtually all of the oak woodlands, coastal sage scrub habitats, and vernal ponds on the Property, and would provide for an ample wildlife corridor over undisturbed terrain. Of course, only the 120-Unit Alternative would ensure that no grading or construction occurred in the biologically-sensitive canyon areas south of the east/west ridgeline on the Property which are to serve as part of the wildlife connectivity links between Whiting Ranch Wilderness Park and O'Neill Park.

The indisputable fact of the matter is that the 65-Unit, 120-Unit, and 127-Unit Alternatives would each avoid the substantial environmental devastation that would otherwise be wreaked upon the Property by the 299-Unit Project in connection with the mass grading of the proposed wildlife corridor, particularly in the lush canyons which presently link up with O'Neill Park. Accordingly, a new or subsequent EIR should be prepared to, among other things, analyze each of these three Alternatives from two different perspectives: (1) as stand-alone projects which would require California Quartet to dedicate all of the non-development areas of the Property (approximately 178 acres) as permanent open space and (2) projects which would involve California Quartet's sale of the same non-development acres to third parties, such as my clients and the County of Orange, for cash consideration.

As your Department has been made well aware, based on the extensive factual chronology presented by Mr. Frank Elfend at the August 25 session of the Planning Commission's hearing on the 299-Unit Project, and as a result of Mr. Elfend's earlier public presentations to the Board of Supervisors on June 23 and August 11, 1998, my clients and the County are currently involved in negotiations with California Quartet for the purchase of the approximately 178 acres which would be left undeveloped under the three Alternatives discussed above. Indeed, it is precisely because these negotiations are still ongoing that the 299-Unit Project has been dubbed a "Contingency Plan" which California Quartet intends to pursue in the event that the negotiations do not prove fruitful.

If, at the next-scheduled session of the Planning Commission's hearing on the 299-Unit Project -- which, by stipulated court order of August 31, 1998, has been continued to October 7, 1998 -- you determine that California Quartet, for whatever reason, has declined to proceed with any of the three Alternatives discussed above, I presume that your Department will order the preparation of a subsequent EIR under the terms of CEQA Guidelines section 15162(a)(3)(D). In the Staff Report, dated August 25, 1998, which the Environmental & Project Planning Services Division submitted to the Planning Commission in connection with its public hearing on the 299-Unit Project, it was stated that "none of the conditions described in Section 15162 calling for preparing a

Supplemental or Subsequent EIR have occurred. . . ." Of course, that statement would no longer be true if California Quartet proceeds to reject any of the Alternatives discussed above as of the next Planning Commission hearing scheduled for October 7, 1998. For example, if California Quartet were to refuse to accept the 120-Unit Alternative as of the October 7 hearing, then a subsequent EIR would be required to analyze this alternative under the provisions of section 15162(a)(3)(D) because no discussion of this alternative is to be found in FSEIR 566.

However, I do not believe it is necessary for your Department to wait until the October 7 Planning Commission hearing to make the determination that a *new* EIR should be prepared for the 299-Unit Project. As I explained at the August 25 hearing, my clients, the Vedanta Society of Southern California, the Norbertine Fathers of Orange, and the Saddleback Meadows Land Conservancy LLC, do not necessarily agree with your Department's determination that section 15162 of the CEQA Guidelines applies in this case. The California courts have clearly held that CEQA section 21166, and its companion section 15162 of the Guidelines, only apply when the question is whether more than one EIR must be prepared for what is essentially the *same* project.

When the proposed new activity is a *separate* project -- as it certainly is in this case -- the "fair argument" test is the standard which applies in determining whether a new (as opposed to a subsequent or supplemental) EIR must be prepared to analyze the *separate* project. Under the "fair argument" test, a new EIR must be prepared whenever it can be fairly argued on the basis of substantial evidence that the proposed project may have a significant environmental impact.

In light of the oral and written comments which were submitted by my firm, Royce Riggan, John Byerly, Warren Singleton, and Saundra Jacobs at the August 25 public hearing, there are numerous environmental impacts associated with the development of the 299-Unit Project which were not addressed in FSEIR 566 and which mandate the preparation of a new EIR under the "fair argument" test. Aside from the obvious impacts which will be caused by the fact that the 299-Unit Project pushes grading and development activities significantly closer to the Ramakrishna Monastery and raises unanswered questions regarding water runoff and drainage impacts that will be caused by the new houses to be built northeast of St. Michael's Abbey, there is no discussion in FSEIR 566 regarding (1) whether the wildlife corridor proposed for the 299-Unit Project would comport with the goals and objectives of the NCCP planning process and (2) whether it would preclude or in any way *jeopardize* finalization of the Southern Subregion component of the NCCP. Clearly, these impacts should be addressed in a new EIR and the public, as well as the appropriate federal and state wildlife agencies, should be allowed to comment on these important environmental matters.

In closing, my clients would request that the County immediately cease processing the 299-Unit Project unless and until the County complies with CEQA and sends out a Notice of Preparation for a new EIR to address the environmental impacts, reasonable project alternatives and feasible mitigation measures associated with the development of the 299-Unit Project.

Very truly yours,

Edmond M. Connor

Re: Saddleback Meadows Property, Alternate (120) Lot Study

Dear Mr. Connor:

Transmitted with this letter are six blackline copies of the Alternate (120) Lot Study which was presented at last Thursday's meeting. The map is a compilation of the three work sketches presented last week.

The lots and streets shown in solid lines are the revised layout. The lots and streets which are not changed are outlined with dashed lines. The revised total lot count is one hundred and twenty (120) units.

Comments regarding the design proposals:

- The grades on the main entry street were held per the proposed California Quartet Study (CQ).
- In order to provide lots in the upper eastern portion of the site grading, remedial grading and fuel modification were allowed to occur in the one hundred (100) foot setback zone which Vedanta originally proposed to be north of the ridgeline.
- The ridgeline has generally been protected in the upper portion of the site, from the second Cul-de Sac south of the spine road to the eastern limits. The moving of the spine road and lots north away from the ridgeline provides for the one hundred and fifty foot Fire Fuel Modification area and maintains the ridgeline. Although the cut slope is at the ridgeline or slightly beyond, the road or lots will likely not require remedial grading beyond the ridge and down into the bottom of the first or second canyon as all of the previous proposals have done.

2515

- The first long Cul-de-sac south of the spine road impacts the lower ridgeline and some Coastal Sage Scrub. The Hidden Hill development south of this area has already disturbed a portion of this Coastal Sage area. This was not changed from the CQ study.
- The addition of the twelve lots on the lower portion of the spine road should be of benefit geotechnically. The proposed spine road was being cut deeply into the hill, up to ninety (90) feet. This removal of material should benefit the stability of the area. The addition of lots north of the spine road removes additional material and contours the remaining hill as previously proposed. If additional unloading is desirable the hill could be layed back further.
- The extension of the second Cul-de-Sac north of the spine road, adding eight (8) lots, was sloped down away from the spine road to minimize the fill depth and the limits of grading. This should not trigger extensive additional remedial grading since the same geologic features are involved.
- The second Cul-de-Sac south of the spine road was pulled back to accommodate Fire Fuel Modification. The lot count was reduced from six (6) to three (3). The ridgeline is being lowered in this area. The proposed grading creates a cut slope facing north and west away from the Monastery. The slope becomes small at the end of the Cul-de-Sac allowing some view of the homes on this street. The grading should not impact the Coastal Sage Scrub which is down slope to the south and east.

The California Quartet (127) Study and the Vedanta Alternate (120) Study are just that, studies. Once the features of the original and alternate studies are agreed upon a precise engineered site plan should be prepared. The fine tuning of horizontal and vertical alignments and lot layouts may result in the gaining of two or three lots. This precise design would be the next step and be used for a Tentative Map.

Please call me at (949) 240-5808 if you have any questions or require additional information.

Very truly yours,

Warren W. Singleton, P.E.

PLANNING & DEVELOPMENT SERVICES DEPARTMENT REPORT

DATE:	**August 25, 1998**
TO:	**Orange County Planning Commission**
FROM:	**P&DS/Environmental & Project Planning Services Division**
SUBJECT:	**Addendum PA980103 to Final EIR 566 Prepared for the Saddleback Meadows Contingency Plan**
LOCATION:	**North El Toro Road, ½ Mile Southerly of the El Toro/Live Oak/ Santiago Road Intersection in the Foothill/Trabuco Specific Plan Area of Unincorporated Orange County**
CONTACT PERSONS:	**Raymond H. C. Brantley at (714) 834-3763** **William Grieman at (714) 834-5175**

PROPOSAL:

PROJECT DESCRIPTION

The project proposes the construction of 299 single family detached dwelling units, with an average lot size of 6,672 square feet and a minimum lot size of 5,000 square feet. The projects site is approximately 222 acres in size and located on the easterly side of El Toro Road, approximately one-half mile south of the intersection of Santiago Canyon Road/El Toro Road and Live Oak Canyon Road, in east-central unincorporated Orange County.

The project has been designed to minimize impacts on existing landforms. To more effectively screen the project from St. Michaels Abbey, the Ramakrishna Monastery, and the neighboring Hidden Ridge community, specific grading techniques, site planning, and landscape elements will be incorporated in the design. The project features a wildlife corridor, preservation of the southerly ephemeral pond, an extension of O'Neill Regional Park, trail connections, preservation of oak woodland and coastal sage scrub, and the elimination of a commercial use.

The proposed project replaces a previously approved project for a 705-unit manufactured single family development on the same site. Discretionary approvals include Zone Change ZC98-3, Area Plan AP98-2 and a Tentative Tract map.

The development includes extensive remedial grading to stabilize several ancient and surficial landslides and incorporates several project design features which preserve significant biological resources in accordance with the objectives of the Orange County Natural Communities Conservation Program (NCCP).

PROJECT BACKGROUND

During the past four (4) years, the Saddleback Meadows site has received detailed environmental reviews for planning compliance with CEQA on two separate previous occasions:

- EIR 561 was prepared in 1995-96 for a 318-unit, conventional SFD development on lots averaging 5000 sq. ft. The application, which included a Zone Change, Area Plan and Tentative Tract Map, was not not approved by the Board of Supervisors; and

- EIR 566 was prepared in conjunction with Grading Permit Application GA960048 for recorded Tract 10692 for a 705-unit manufactured housing subdivison. This EIR was certified by the Planning Commission on December 3, 1997 and upon appeal, the EIR certification was upheld by the Orange County Board of Supervisors on January 27, 1998.

The currently proposed Contingency Plan for 299 residential units was examined previously for this site in the form of alternatives contained in Proposed Final EIR 561 and Certified Subsequent EIR 566, although with slightly differing site plans. The alternatives contained in the Appendix of the Addendum are Alternative 4 from Certified SEIR 566 and Alternatives 8 and 9 from Proposed FEIR 561, which were previously evaluated. The Contingency Plan results from an extended evaluation by the applicant to address environmental concerns previously analyzed by reconfiguring the proposed project density, land use and location.

LEGISLATIVE INTENT OF CEQA

Section 21000(g) of the Public Resources Code, the CEQA Statutes, states the intent of the California Environmental Quality Act (CEQA) as follows:

> It is the intent of the Legislature that all agencies of the state government which regulate activities of private individuals, corporations, and public agencies which are found to affect the quality of the environment, shall regulate such activities so that major consideration is given to preventing environmental damage, while providing a decent home and satisfying living environment for every Californian.

PROJECT DEFINED

Under Section 15002(d) of CEQA Guidelines, a project is defined as an activity subject to CEQA. Further, the term project refers to an activity which is proposed that has a potential for resulting in a physical change in the environment either directly or ultimately. Section 15377 defines a private project as a project which will be carried out by a person other than a governmental agency, but the project will need a discretionary approval from one or more governmental agencies.

The proposed development is regarded as a private project, because of the discretionary approvals required to implement it. These include a Planning Application/ Zone Change, Area Plan and Tentative Tract map.

STANDARD OF REVIEW

The CEQA Guidelines provide guidance for use of previously certified EIRs with a subsequent activity. Specifically, where a previous EIR has been certified for a larger project, the later activity or project is examined in light of the previously certified EIR. The Guidelines also provide that a Tiered EIR may be incorporated into an Addendum to an EIR to address significant and cumulative program impacts analyzed and considered in the Tiered EIR (Section 15164).

A. **Explanation of a Subsequent EIR:** Guidelines Section 15162 specify where an EIR has been previously prepared, an EIR need not be prepared for subsequent actions unless any of the following conditions prevail:

1. Subsequent changes are proposed in the project which will require important revisions of the previous EIR due to the involvement of new significant environmental impacts not considered in the previous EIR;

2. Substantial changes occur with respect to circumstances under which the project is undertaken, or

3. New information of substantial importance to the project becomes available, and

   a. The new information was not known and could not have been known at the time the previous EIR was certified as complete ..., and

   b. The new information shows any of the following:

      - The project will have one or more significant effects not discussed in the EIR;
      - Significant effects previously examined will be substantially more severe than shown in the EIR;
      - Mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project; or
      - Mitigation measures or alternatives not previously considered in the EIR would substantially lessen one or more significant effects on the environment.

B. **Explanation of an Addendum EIR:** According to CEQA Guidelines Section 15164 (a), the Lead Agency shall prepare an Addendum to an EIR if the following prevail:

1. None of the conditions described in Section 15162 calling for the preparation of a Subsequent EIR have occurred;

2. Only minor technical changes or additions are necessary to make the EIR under consideration adequate under CEQA;

3. The changes made by the Addendum do not raise important new issues about the significant effects on the environment.

DECISION TO PREPARE AN ADDENDUM

None of the conditions described in Section 15162 calling for preparing a Supplemental or Subsequent EIR have occurred, and changes related to the proposed project are of a minor nature. The County of Orange has determined that only minor technical changes to FEIR 566 are necessary in order to properly address the current Project.

In accordance with Guidelines Section 15063, Initial Study (PA980103) was completed. Based upon the foregoing information, it was determined that FEIR 566 adequately analyzes all of the major impacts of the proposed project, that no major, subsequent changes are proposed with respect to the circumstances surrounding this project, and that no new information of significance has become available that would substantially affect the validity of FEIR 566. It was determined an Addendum is appropriate for the proposed project in order to provide project specific analysis, to provide clarification and address minor changes to FEIR 566.

This Addendum has been prepared for the project and will be considered, along with Certified SEIR 566 by the Planning Commission in its consideration of the proposed Zone Change/Area Plan application.

CONSIDERATIONS IN INITIAL STUDY

In order to determine the possible impacts of the proposed Contingency Plan, the County of Orange, as the Lead Agency for the project, is required to consider all relevant data related to the planning and environmental review process regarding the project and also solicit input from Responsible Agencies and interested parties. Following is a listing of key documents, County Divisions, interest groups, and Resource Agencies utilized in the overall review process for Saddleback Meadows and incorporated into the Initial Study review process.

1. Certified Subsequent EIR 566, certified by the Orange County Planning Commission for a 705-unit manufactured single-family residential project for the same site;

2. Proposed Final EIR 561, prepared for a 318-unit conventional single-family residential project for the same site;

3. Foothill/Trabuco Specific Plan FEIR 531 and Specific Plan Land Use Regulations;

4. Site Plan, Tentative Tract Maps and Plot Plans for the proposed project;

5. Comments received from the public and interested parties on the two previous projects on the subject site, including:
   - Rural Canyon Residents Association;
   - The Vedanta Society;
   - Foothill/Trabuco Specific Plan Review Board;

- St. Michael's Abbey; and
- Portola Hills HOA I
- Portola Hills HOA II
- Hidden Ridge HOA
- Canyon View HOA
- ETI Corral 357
- Orange County Horsemen Assoc.
- Serrano Creek Ranch Equestrian Center
- Gabrieleno Indians
- Sierra Club
- National Audubon Society

6. Comments received from the Public Resources Agencies on the two previous projects proposed on the subject site, including:
   - US Fish and Wildlife Service;
   - CA Department of Fish & Game; and
   - US Army Corps of Engineers.

7. Comments received from technical divisions of the County including:
   - PDS: Subdivision & Grading Services Division - Geotechnical & Grading Plan Check Section,
   - PDS: Subdivision & Grading Services Division - NPDES Section;
   - PDS: Subdivision & Grading Services Division – Traffic Section;
   - Current Planning Services Division - Orange County Natural Communities Conservation Program.
   - Environmental & Project Planning Services Division - Advance Planning and Transportation Planning Sections;
   - Building Permits Services Division - Acoustics Section.
   - Public Facilities & Resources Department: HBP Division; Environmental Resources Division; Traffic Engineering Division;
   - Orange County Fire Authority;
   - Field checks of proposed project site and the project vicinity; and
   - A detailed analysis of the CEQA Environmental Checklist.

ANALYSIS OF THE PROPOSED PROJECT'S IMPACTS

The Addendum discusses each of the environmental analysis checklist categories as they relate to the proposed 299 unit project in comparison with the approved 705 unit project. To provide for a comprehensive and accurate comparison of the impacts of the approved and proposed projects, the Addendum utilizes identical impact significance criterion for each of the checklist categories. Additionally, the Addendum discusses cumulative impacts and carries forward appropriate mitigation measures from Certified SEIR 566.

Following is a summary of the key elements of the impact analysis.

Land Use Compatibility

The land use compatibility impacts associated with the approved 705 unit project are significant, as demonstrated in Certified SEIR 566 and reiterated in the Addendum. This is due to the approved project's high number of units and attending intensity-related impacts. In comparison, the proposed project will result in reduced land use compatibility impacts, largely a result of the substantially fewer number of units. Additionally, the proposed project provides additional buffering through site design utilizing landform berming and contour grading in concert with landscaping to further screen and filter views of the development edges. A major design feature of the proposed project for 299 units is the single loaded primary spine road (residential development south of the spine road and landform grading to the north), which is intended to screen off-site views of the on-site development area. The proposed project also features a cluster design concept, providing room for a wildlife movement corridor system and effectively providing visual relief through the apportionment of the development into three residential enclaves. Additional single-family residential dwellings were located within the north central portion of the project site in the approved project, as compared to the proposed project, which has undisturbed open space in the same area.

Grading

Due to its larger scale and greater intensity, implementation of the approved project for 705 units would require 2.6 million cubic yards of conventional grading to achieve planned elevations and profiles and associated access roadways and 8.9 million cubic yards of remedial grading to stabilize the proposed slopes through the creation of buttresses, shear keys, and stabilization fills for a total grading quantity of 11.5 million cubic yards. In comparison, implementation of the proposed project for 299 units would require approximately 2.1 million cubic yards of conventional grading and 6.8 million cubic yards of remedial grading for a total grading quantity of 8.9 million cubic yards. Accordingly, the required grading for the proposed project would require 2.6 million cubic yards less than that required to implement the proposed project. Grading quantities incrementally decrease under the proposed project as a result of the reduced earthwork required to create the landform grading along the visually prominent project edges.

Based on an average daily grading volume of 30,000 cubic yards/day, total grading for the approved 705 unit project (11.5 million cubic yards) would require approximately 18 months to complete. In comparison, the proposed 299 unit project, based on a total grading quantity of 8.9 million cubic yards, would require approximately 10 months to complete. For both projects, all preliminary grading would be completed in one continuous phase.

A supplemental geotechnical evaluation of the proposed project is included in Appendix A of the Addendum. The supplemental investigation (G.A. Nicoll, 6/22/98) evaluates the proposed project and its impact on site conditions, revises the previous geotechnical cross sections to reflect the new grades, conducts stability analyses, and provides other additional geotechnical data to supplement the previous geotechnical investigation of November, 1995. The study confirms that the remedial grading quantity for the proposed project (299 lots) is significantly reduced from the 705 unit grading concept for the original entitled plan. The total remedial grading quantity for the

proposed project is approximately 6.8 million cubic yards compared to the approved project with 8.9 million cubic yards. The study concluded that the site is developable.

Biological Resources

The Biological Resources section of the Addendum discusses the biological resource impacts associated with the proposed 299 unit project in comparison with the approved 705 unit project. A biological issues analysis (Helix, 2/20/98) was prepared for the proposed 299 unit project and is included in the Addendum as Appendix G. The results of the analysis are presented under the four categories of corridor analysis, vegetation impacts, oak tree impacts, and sensitive species impacts, paralleling the discussion in Certified SEIR 566, and are also discussed in the body of the Addendum. Following is a summary of the discussion.

Wildlife Corridor

Implementation of the approved 705 unit project would directly impact wildlife movement through the project site, as it contains no design features which seek to facilitate wildlife movement. It cannot be assumed that wildlife would be able to move through the project site as currently designed. The approved project, as currently proposed, may hinder or preclude the preparation of the southern subregional preserve, due to restricted wildlife movement.

In comparison, the proposed 299 unit project features a 400 foot wide wildlife corridor which will increase the viability of wildlife connectivity through Saddleback Meadows. The corridor, as planned in the proposed project, is expected to be wide enough for wildlife movement. Topography on either side of the corridor is conducive to wildlife movement because it coincides with an area of natural canyon topography. The revegetation within the corridor is expected to provide the necessary cover for wildlife to add to the corridor's viability. The 50-foot wide spine road crossing the corridor is not expected to inhibit wildlife movement due to the low traffic levels anticipated for this road. The wildlife corridor is expected to function adequately.

NCCP

Impacts to coastal sage scrub resulting from implementation of the proposed 299 unit project would be similar to those for the approved 705 unit project. Under the approved project, 50.3 acres of coastal sage scrub would be impacted, while 45.8 acres will be impacted under the proposed project. In accordance with the NCCP, the loss of 45.8 acres of Venturan-Diegan transitional coastal sage scrub due to project implementation is less than the allowable five percent loss of the total coastal sage scrub in the subregion. Accordingly, the proposed project is in compliance with the NCCP. Mitigation measures related to accounting and preservation of coastal sage scrub and compliance with the NCCP through the securing of appropriate Resource Agency permits have been carried forward in the Addendum from Certified SEIR 566.

Riparian Resources

The loss of riparian resources associated with the proposed project, which include 0.6 acres of ephemeral pond (all but two of the ponds), 0.21 acres of southern sycamore riparian woodland, and 2.01 acres of mule fat scrub, are similar to, although slightly less than, those resulting from implementation of the approved 705 unit project. Mitigation measures from Certified SEIR 566, which require the securing of appropriate permits from the Resource Agencies for the protection of riparian resources, have been carried forward in the Addendum.

Coast Live Oak Woodland

Implementation of the approve project would result in the loss of 14.0 acres (284 individual trees) of the total 14.5 acres (298 individual trees) of coast live oak woodland on the project site. However, the proposed 299 unit project would impact only 5.7 acres (175 individual trees). A total of 123 oak trees (approximately 41 percent) occur outside the remedial grading zone and are considered preserved. Mitigation measures related to preservation and enhancement of the impacted coast live oak woodland habitat have been carried forward from Certified SEIR 566 to the Addendum.

Riverside fairy shrimp

As stated under Riparian Resources above, all but two of the ephemeral ponds, habitat supporting the Riverside fairy shrimp, will be directly impacted by both the approved and the proposed projects. Mitigation measures relating to the relocation and establishment of a mitigation plan designed to mitigate impacts to Riverside fairy shrimp/pond habitat have been carried forward from Certified SEIR 566 to the Addendum.

Coastal California Gnatcatcher

Previous field surveys have determined that on-site coastal sage scrub habitat is not occupied by coastal California gnatcatchers, although current surveys have not been completed to USFWS presence/absence protocol. As such, on-site coastal sage scrub habitats must be considered occupied by coastal California gnatcatcher until proven otherwise. Mitigation measures relating to conducting adequate studies to determine the presence of the coastal California gnatcatcher have been carried forward from Certified SEIR 566 to the Addendum.

Aesthetics

As with the approved project, the proposed project for 299 units would substantially alter the existing topography and visual character of the project site. The landform/contour grading, berming, and wildlife corridor system included in the proposed project would help to break up the long linear massing of housing which would result with implementation of the approved 705 unit project and create areas of housing separated by 150 to 500 foot stretches of open space.

Visual impacts to St. Michael's Abbey would be substantially reduced under the proposed project as compared to the approved project due to the relocation of residential lots north of the on-site spine road, extensive landform grading, and implementation of a trail head/staging area. View impacts of the project site from the Ramakrishna Monastery would be reduced as compared with the approved project by implementation of the berming/contour grading, the wildlife corridor system and associated open space areas, and through the elimination of several loffel walls which would reduce the height and intensity of adjacent manufactured slopes.

Other Impacts

The remaining environmental analysis checklist categories, including water/hydrology, transportation and circulation, air quality, noise, cultural/scientific resources, recreation, hazards, public services, and utilities and service systems are fully discussed in the Addendum. Mitigation measures pertaining to these impact categories have been carried forward from Certified SEIR 566 to the Addendum.

CONCLUSION

As is evident from the foregoing discussion, the County of Orange places a high priority on meeting its responsibilities under the California Environmental Quality Act in a thorough and comprehensive manner. As Lead Agency on the Saddleback Meadows Contingency Plan, the County is in full control of the CEQA review process and the preparation of its environmental document. In this regard, the County has supplemented the requirements of the CEQA Statutes and Guidelines with its own set of rigorous standards and requirements. In the case of the proposed Saddleback Meadows Contingency Plan, the County imposed additional requirements in order to ensure the integrity of the document.

RECOMMENDATIONS

1. Receive Staff Report and oral presentation;
2. Open public hearing to receive public testimony; and
3. Based upon the Addendum and the Environmental & Project Planning Services Report, make the recommendation that the Board of Supervisors adopt the attached Draft Resolution.

Respectfully submitted,

George Britton

George Britton, Manager
Environmental & Project Planning Services Division

Attachment 2 – Draft Board of Supervisors Resolution

PLANNING & DEVELOPMENT SERVICES DEPARTMENT REPORT

HEARING DATE: August 25, 1998

TO: Orange County Planning Commission

FROM: Current Planning Services Division

SUBJECT: Zone Change 98-3/Area Plan 98-2 (aka Contingency Plan)

LOCATION: Saddleback Meadows (easterly side of El Toro Road near Valley Vista Way). District 3.

STAFF CONTACT: Frank McGill (834-2099)

PROPOSAL: California Quartet, Ltd. proposes an amendment to the Foothill/Trabuco Specific Plan (ZC 98-3) and a conceptual plan of development (AP 98-2) to allow for the development of 299 standard detached single-family homes with 158 dedicated open space acres.

SYNOPSIS: This is an orientation briefing for the Planning Commission and an opportunity for the public to comment on the applicant's proposed project. Staff recommends the hearing be continued to September 22, 1998.

CEQA COMPLIANCE

EIR Addendum PA 980103 has been prepared to satisfy CEQA. It is discussed in a separate staff report for this item.

PUBLIC NOTICE AND REVIEW

A display ad noticing this hearing was posted on-site on August 7, 1998 and published in the Saddleback Valley News on August 14, 1998. Additionally, those individuals and entities listed in Attachment A were sent a public notice and copies of ZC 98-3, AP 98-2, and the EIR Addendum on August 7, 1998. Currently, there are no members of the F/TSP Review Board to send the project for review and comment.

PROJECT BACKGROUND

Attachment B contains a detailed chronology of events from 1978 regarding Saddleback Meadows (aka Bridlewood). In summary, the existing entitlements for the property are based on land use regulations originally approved by the County of Orange over 15 years ago. Saddleback Meadows Tract Map 10692 was recorded in 1988. When the Foothill/Trabuco Specific Plan (F/TSP) was adopted in 1991, the Saddleback Meadows Planned Community District Regulations and Recorded Tract Map 10692 were incorporated into the F/TSP. Per those regulations, the developer is only required to obtain

an administratively approved grading permit and building permits in order to develop 705 manufactured homes.

In 1996, the Planning Commission and Board of Supervisors considered several development alternatives, but did not approve any of them. One of the alternates, which was recommended by staff, was for 299 dwelling units. That alternative is similar to the applicant's current proposal called the "Contingency Plan". This plan is being processed in the event negotiations involving the Board of Supervisors and other parties to purchase Saddleback Meadows do not come to fruition. Various alternative development projects are discussed in EIRs 561 and 566. The Contingency Plan is discussed below.

PROJECT DESCRIPTION

Location and Surrounding Land Uses

The Saddleback Meadows property (technically referred to as the Bridlewood Residential District) is located on the easterly side of El Toro Road and north of Valley Vista Way. North of the project site is St. Michael's Abbey, which operates a boarding school for boys. South of the project site is Hidden Hills/Hidden Ridge residential development, O'Neill Regional Park, and the Ramakrishna Monastery. West of the project site and El Toro Road is the Portola Hills residential development. East of the property over a major ridgeline is the Trabuco Canyon Residential District. (See Attachment B, Regional Map.)

Direction	Existing Use	Density	Zoning
Project Site	Agriculture	N/A	F/T Specific Plan
North	School/Abbey	N/A	F/T Specific Plan
South	Residential	3.1 du/ac.	Conventional Zoning
East	Open Space	N/A	F/T Specific Plan
West	Residential	3.2 du/ac.	Portola Hills PC

The land is presently used for grazing cattle and has been used for farming. There are many steep slopes and much erosion due to man's influence and naturally unstable geology. Most of the property rests on ancient landslides that remain unstable. Much of the site has been invaded by non-native plants.

Design Summary

- Total property: 222.2 acres
- 299 standard detached single-family homes
- Proposed open space dedication: 158.5 acres
- Density: 1.3 dwelling units per acre
- Average residential lot: 6,672 sq. ft.

Zone Change 98-3

The applicant's proposed zone change (see Attachment D) would amend the F/TSP Bridlewood Residential District Regulations as follows:

1. Replace the reference to "Saddleback Meadows Planned Community" with "Residential Estates (Planned Development)"
2. Lower the maximum number of homes from 705 to 299.
3. Require at least 155 acres of dedicated open space. (The Area Plan proposes 158.5 acres.)
4. Add the requirement for an approved area plan prior to any subdivision or grading activity.
5. Add the requirement for an approved use permit prior to issuance of building permits.
6. Require a performance bond prior to issuance of a grading permit.
7. Eliminate the requirement for 66 2/3 percent affordable housing.
8. Eliminate the requirement for a 1.7-acre neighborhood commercial site along El Toro Road.
9. Maintain the existing exemption from all the other regulations and guidelines in the F/TSP.

Area Plan 98-2

The applicant's proposed area plan (see Attachment E) consists of a text and four concept plans: (1) Development Plan, (2) Landscape and Re-vegetation, (3) Grading, and (4) Open Space/Trails. The area plan also includes a lengthy discussion of "rural character" with several illustrations.

PROJECT ANALYSIS

Density

The issue of density was the foremost issue discussed by the Planning Commission and Board of Supervisors in 1996. Saddleback Meadows may be regarded as a rural transition area because of its location along a heavily traveled road (El Toro Road) and at the western edge of the F/TSP area. The General Plan designates Saddleback Meadows and neighboring sites to the south and west as "Suburban Residential." Neighboring property to the north and east are designated as "Rural Residential." It is also separated from much of the F/TSP area by a major ridgeline to the east.

The current zoning for this property allows 705 dwelling units. The Community Profile map would provide up to 444 dwelling units for Saddleback Meadows. The existing density for neighboring properties Portola Hills and Hidden Hills/Hidden Ridge, if applied to this site, would allow 666 dwelling units for Saddleback Meadows. The F/TSP zoning for the Upper Aliso Residential District to the north would allow 222 dwelling units for Saddleback Meadows while the F/TSP zoning for the Trabuco Canyon Residential District to the east would allow 111 dwelling units for Saddleback Meadows. Therefore, 299 units, or 1.3 dwelling units per acre, may be a reasonable density for this location.

Grading

Saddleback Meadows is a geologically unstable site. A landslide could naturally occur at any time and such a slide could impact adjoining properties. The proposed grading, when completed, is expected to eliminate the threat of slides to onsite residents and adjoining property owners. In order to accomplish this, extensive remedial grading is required. (Any significant project for this site is going to require extensive remedial grading due to the existing geological problems.) For the 705 dwelling unit project, there is 2.6 million cubic yards of conventional grading and 8.9 million yards of remedial grading. The Contingency Plan is proposing 2.1 million cubic yards of conventional grading and 6.8 million cubic yards of remedial grading. All grading is to take place on the site (i.e., no off-site trucking of material).

Open Space

The 705 dwelling unit project provides 129 acres of dedicated open space. The Area Plan provides 158.5 acres of dedicated open space: 90 acres dedicated in fee for O'Neill Regional Park and 68.5 acres of restricted scenic preservation easement dedicated to the County. Some of this open space area (mostly in the scenic preservation area) will be disturbed during development for the following purposes:

- Removal of landslide hazards.
- Revegetation that would enhance animal and plant habitats.
- Erosion control and drainage improvements.
- Fuel modification (thinning out vegetation for fire safety).
- Oak tree relocation.
- Trail improvements.

After development is completed, these graded areas would be landscaped to have a natural looking appearance and remain undisturbed thereafter except for possible County required and approved fuel modification.

The dedicated open space area provides a very important east-west wildlife corridor, which is a major Natural Communities Conservation Program (NCCP) environmental goal in this region. A minor north-south wildlife corridor is also provided. The 705 dwelling unit project does not provide for any wildlife corridor.

Within the dedicated open space, the applicant is proposing about one mile of improved recreational trails, specifically:

- A missing link in the Live Oak Canyon Regional Riding & Hiking Trail.
- A connecting trail between Aliso Creek Regional Riding & Hiking Trail to the Viewpoint Spur Trail and O'Neill Regional Park.
- A staging area near El Toro Road.

The final trail alignments, regional park boundaries and trail/park improvements would be determined by the Manager, Harbors, Beaches & Parks after remedial grading has been completed.

Consistency with the F/TSP

The existing F/TSP states that the Bridlewood Residential District is exempt from all the other regulations and guidelines of the F/TSP. The Contingency Plan proposes to maintain that exemption. However, the Contingency Plan is largely, although not entirely, consistent with the other regulations and guidelines of the F/TSP for the following reasons:

1. The F/TSP Resources Overlay Component calls for the preservation of wildlife corridors, oak woodlands, major ridgelines, and scenic roadway corridors. The Contingency Plan fully complies with this except for a few of the oak trees being removed because of necessary remedial grading.
2. The F/TSP requires the dedication of 66 to 70 percent of a property for open space. The Contingency Plan proposes to dedicate 71 percent.
3. The F/TSP limits conventional grading volume to a maximum of 9,000 cubic yards per dwelling unit and manufactured slopes to a maximum of 30 feet in height. The Contingency Plan averages out to 7,023 cubic yards of conventional grading per dwelling unit. Most, but not all, manufactured slopes are less than 30 feet in height.
4. The F/TSP Development & Design Guidelines have largely been followed by Contingency Plan via the Rural Character Statement, Landscape and Revegetation Concept, and Contour Grading Concept in AP 98-2.

Conditions of Approval

Staff has drafted 32 conditions of approval regarding Area Plan 98-2. (See Attachment F.) Many of these conditions are requirements of the F/TSP which this project would not otherwise be subject to for reasons discussed above. An example is the requirement to prepare a tree preservation plan. Other conditions require the payment of fees for a number of public facilities: fire station, library, sheriff station, schools, local park improvements, and road/intersection improvements. Another condition requires that prior to any residential construction, precise plans will be available for public review and Planning Commission approval regarding landscaping, fuel modification, grading, and the design and location of structures. These draft conditions will be the basis for preparing and presenting the Planning Commission Resolution to approve this project at your next meeting.

CONCLUSION

Compared to the approved project allowing 705 manufactured homes, the proposed project is a substantial reduction in the number of homes and amount of grading involved. It offers major public benefits in the form of parks, trails and wildlife corridors. It offers more opportunities for public review before build-out than the approved project. The proposed project is less dense than surrounding residential development and is substantially, but not entirely, consistent with all the regulations and guidelines of the F/TSP.

We would appreciate receiving any input from the Planning Commission as well as public comments about the project at this hearing.

RECOMMENDATIONS

1. Receive staff report and public testimony.
2. Continue hearing to September 22, 1998.

Respectfully submitted,

John B. Buzas, Manager
Current Planning Services Division

ATTACHMENT F

DRAFT AREA PLAN CONDITIONS OF APPROVAL

Revised August 17, 1998

DRAFT
Conditions of Approval
For
Saddleback Meadows Contingency Plan
Area Plan 98-2

1. CP NA NA TIME LIMIT
Approval of Area Plan 98-2 is subject to approval of Zone Change 98-3 by the Board of Supervisors. Upon such approval, Area Plan 98-2 is valid for a period of 48 months thereafter. If the preliminary grading permit is not issued within such period of time, this approval shall be terminated and Area Plan 98-2 shall thereafter be null and void.

2. CP CP NA REVOCATION
Failure to abide by and faithfully comply with any and all conditions attached to this approving action shall constitute grounds for the revocation of said action by the Orange County Planning Commission.

3. CP CP G TENTATIVE TRACT MAP
Prior to the issuance of any grading permits, Tentative Tract Map 15230 shall be approved by the Subdivision Committee after a public hearing. Said tentative tract map must be found consistent with Area Plan 98-2.

4. CP CP G GRADING REVIEW
Prior to the issuance of any grading permits, the Manager, Current Planning Services, shall determine that the grading plan is consistent with Area Plan 98-2 and the approved tree preservation plan.

5. HP HP G TREE PRESERVATION PLAN
Prior to the issuance of any preliminary grading permit, a tree preservation plan shall be prepared which identifies the location, size and species of all trees having a trunk diameter of 5 inches or greater (measured at four and on-half feet above ground level). The tree preservation plan shall be consistent with the Area Plan 98-2 and the Foothill/Trabuco Specific Plan and approved by the Manager, Harbors Beaches, and Parks. The plan shall be signed and certified by a biologist or arborist.

6. EP SG/EP G FED ENDGD SPEC ACT
Prior to the issuance of any preliminary grading permit, approval of any activity that involves removal of any native vegetation from subject site including clearing, grubbing, mowing, discing, trenching, grading, fuel modification, or other related construction-related activities, the applicant shall obtain written proof from the U.S. Fish and Wildlife Services that said activity complies with the Federal Endangered Species Act. Additionally, the applicant shall obtain approval of a mitigation plan to replace lost ephemeral ponds at a 2 to 1 ratio. This evidence shall be submitted to the Manager, Subdivision and Grading, for review and approval, in consultation with the Manager, Environmental & Project Planning.

7. SG SG G GEOLOGY RPT
Prior to the issuance of any grading permits, the applicant shall submit a geotechnical report to the Manager, Subdivision and Grading, for approval. The report shall include the information and be in a form as required by the Grading Manual.

8. SG SG G DRAINAGE
Prior to the issuance of any grading permits, the applicant shall, in a manner meeting the approval of the Manager, Subdivision and Grading, provide:

A. A drainage study determining the effect the proposed development and associated drainage patterns will have on existing drainage facilities.

B Mitigate either by on-site retardation or by providing improvements appropriately to impacted existing drainage facilities.

9. SG SG G CROSS-LOT DRAINAGE
Prior to the issuance of any grading permits, and if determined necessary by the Manager, Subdivision and Grading, a letter of consent, in a form approved by the Manager, Subdivision and Grading, suitable for recording, shall be obtained from the affected property owners for offsite grading and/or drainage. The owner/applicant shall record said letters of consent for offsite drainage and/or cross-lot drainage prior to the issuance of any grading permit. Acceptance of cross-lot drainage on lots within the tract map boundaries shall be noted on the recorded map.

10. SG SG G VECTOR CONTROL
Prior to the issuance of any preliminary grading permits, the subdivider shall provide evidence to the Manager, Subdivision and Grading, that the Vector Control District has surveyed the site to determine if vector control measures are necessary. If warranted, the developer shall conduct such measures in a manner meeting the approval of the Manager, Subdivision and Grading.

11. HP HP G ARCHAEO OBS & SALVAGE
Prior to the issuance of any preliminary grading permit, the project applicant shall provide written evidence to the Manager, Subdivision and Grading, that a County-certified archeologist has been retained, shall be present al the pre-grading conference, shall establish procedures for archaeological resource surveillance, and shall establish, in cooperation with the project developer, procedures for temporarily halting or redirecting work to permit the sampling, identification, and evaluation of the artifacts as appropriate. If the archaeological resources are found to be significant, the archaeologist shall submit a follow-up report to the Manager, Harbors, Beaches & Parks, which shall include the period of inspection, an analysis of any artifacts fond and the present repository of the artifacts. Excavated finds shall be offered to the County of Orange, or designee, on a first refusal basis. These actions, as well as final mitigation and disposition of the resources, shall be subject to the approval of the Manager, Harbors, Beaches & Parks.

12. HP HP G PALEO OBS & SALVAGE

Prior to the issuance of an preliminary grading permit, the project applicant shall provide written evidence to the Manager, Subdivision and Grading, that a County-certified paleontologist has been retained to observe grading activities and salvage and catalogue fossils as necessary. The paleontologist shall be present at the pre-grading conference, shall establish procedures for paleontological resource surveillance, and shall establish, in cooperation with the project developer, procedures for temporarily halting or redirecting work to permit sampling, identification, and evaluation of the fossils. If major paleontological resources are discovered, the paleontologist shall determine appropriate actions, in cooperation with the project developer, which ensure proper exploration and/or salvage. Excavated finds shall be offered to the County of Orange, or its designee, on a first refusal basis. The paleontologist shall submit a follow-up report for approval by the Manager, Harbors, Beaches & Parks, which shall include the period of inspection, a catalogue and analysis of the fossils found, and present repository of the fossils. These actions, as well as final mitigation and disposition of the resources, shall be subject to approval by the Manager, Harbors, Beaches & Parks.

13. SG SG G GRADING NOTES

Prior to the issuance of any grading permits, the following guidelines shall be included in the "Notes Section" of the grading plans meeting the approval of the Manager, Subdivision and Grading.

A. During all grading and construction operations, all oak trees on the site, located adjacent to the approved limits of grading and identified in an approved Tree Management/Preservation Plan as trees to be preserved, shall be adequately fenced and protected from encroachment by grading and construction equipment. Grading, placement of fill, and storage of building materials and heavy equipment, shall be prohibited within the dripline of any tree identified for preservation as part of an approved Tree Management/Preservation Plan.

B. If required, retaining walls shall be used to protect the existing grades of oaks identified for preservation from surrounding cut and fill. However, these should not alter drainage from around the trees.

C. No type of surface, whether pervious or impervious, shall be placed within a six-foot radius of oak tree trunks. Where surfacing cannot be avoided, alternative types of paving should be utilized, such as gravel or porous brick with sand joints.

D. Oak trees shall not be subjected to increased runoff from irrigation systems, impermeable surfaces, storm drain discharge, etc.

E. Natural drainage courses and natural grades outside the remedial grading impact area in proximity to and providing seasonal irrigation to oak trees shall not be altered.

F. In proximity to oak trees, only one trench should be dug to accommodate all utility lines. Where necessary, the impacted trees should be carefully pruned by an arborist in proportion to the total amount of root zone lost.

14. BP BP G CONSTRUCTION NOISE

A. Prior to the issuance of any grading permits, the project proponent shall produce evidence acceptable to the Manager, Building Permits, that:

1. All construction vehicles or equipment, fixed or mobile, operated within 1000' of a dwelling shall be equipped with properly operating and maintained mufflers.

2. All operations shall comply with Orange County Codified Ordinance Division 6 (Noise Control).

3. Stockpiling and/or vehicle staging areas shall be located as far as practicable from dwellings.

B. Notations in the above format, appropriately numbered and included with other notations on the front sheet of the grading plans, will be considered as adequate evidence of compliance with this condition.

15. CP SG G PERFORMANCE BOND

Prior to the issuance of a preliminary grading permit, the applicant shall provide a performance bond and related agreement to the satisfaction of the Manager, Subdivision and Grading.

16. HP HP G RE-ROUTING

Prior to the issuance of a preliminary grading permit, which includes the utilization of either the Aliso Creek Class I Off-Road Bikeway or the Live Oak Canyon Regional Riding and Hiking Trail, a re-routing plan shall be submitted by the applicant and approved by the Manager, Harbors, Beaches and Parks.

17. CP SG R

Prior to the recordation of any subdivision map which creates residential building sites, the preliminary grading activity for all of Area Plan 98-2 shall be completed to the satisfaction of the Manager, Subdivision and Grading.

18. HP HP R OPEN SPACE

Prior to the recordation of any subdivision map that creates residential building sites, the applicant shall dedicate to the County of Orange a minimum of seventy (70) percent of the project site as open space in a manner meeting the approval of the Manager, Harbors, Beaches & Parks. The open space dedication shall be for: (1) regional park, and (2) restricted scenic preservation purposes. The Manager, Harbors, Beaches & Parks shall determine the final boundary between these open space acres.

Within the regional park area, the Manager, Harbors, Beaches & Parks shall determine what improvements, if any, shall be made. If determined appropriate by the Manager, Harbors, Beaches & Parks, the applicant shall be required to provide those improvements as shown and discussed in the Area Plan 09-2.

Within the restricted scenic preservation easement area, no grading, structures (including stables and corrals), or commercial agriculture activities shall be permitted in this area. River rock walls not to exceed three feet, approved Loffel walls, and open fencing shall be permitted. An entry gate and identification sign shall be permitted subject to approval of a site development or use permit for such use. Future fuel modification, landscaping, and tree preservation shall be permitted subject to prior approvals granted by the Planning Commission.

19. HP HP R RECREATIONAL TRAILS

Prior to the recordation of any subdivision map that creates residential building sites, the applicant shall dedicate a recreation easement for those bikeways and regional riding and hiking trails shown and discussed in Area Plan 98-2 in a manner meeting the approval of the Manager, Harbors, Beaches & Parks. Also, the applicant shall design the necessary improvements and enter into an agreement, accompanied by financial security, with the County of Orange to install the necessary improvements in a manner meeting the approval of the Manager, Harbors, Beaches & Parks.

20. HP HP R CLEANING UP

Prior to the recordation of any subdivision map that creates residential building sites, the existing old ranch house and all abandoned automobiles shall be removed in a manner meeting the approval of the Manager, Harbors, Beaches & Parks.

21. HP HP R LANDSCAPE PLAN

Prior to the recordation of any subdivision map which creates residential building sites, the subdivider shall enter into an agreement and post financial security guaranteeing landscape improvements and the maintenance thereof based on preliminary landscape plan showing major plant material and uses, and a cost estimate for the landscape improvements. The preliminary plan and cost estimates shall be reviewed and approved by the Manager, Subdivision and Grading, in consultation with the Manager, Harbors, Beaches & Parks. Said plan shall take into account the County Standard Plans for landscaped areas, adopted plant palette guides, applicable scenic and Foothill Trabuco Specific Plan requirements, Water Conservation Measures contained in Board Resolution 90-487 (Water Conservation Measures), and Board Resolution 90-1341 (Water Conservation Implementation Plan).

22. EP EP FIRE STATION FACILITY

Prior to the recordation of any subdivision map that creates residential building sites, the applicant shall enter into an agreement with the Orange County Fire Authority to pay pro-rata capital facility fees for Fire Station No. 42 in a manner meeting the approval of the Manager, Environmental & Project Planning. Said agreement shall be accompanied by financial security.

23. EP EP LIBRARY FACILITY

Prior to the recordation of any subdivision map that creates residential building sites, the applicant shall enter into an agreement with the County of Orange to pay development fees for the South County Canyons Library as provided in Sections 7-9-700 through 7-9-713 of the Codified Ordinances of the County of Orange and Board Resolution 87-1684 in a manner meeting the approval of the Manager, Environmental & Project Planning. Said agreement shall be accompanied by financial security.

24. EP EP SHERIFF STATION

Prior to the recordation of an subdivision map that creates residential building sites, the project proponent shall enter into a secured agreement with the County of Orange, subject to approval of the Sheriff-Coroner, to participate on a pro rata basis in funding (a) Sheriff substation facilities and (b) the initial costs of providing additional patrols plus support necessary to serve the project in a manner meeting the approval of the Manager, Environmental & Project Planning.

25. EC F F FUEL MODIFICATION

Prior to the recordation of any subdivision map that creates residential building sites, the applicant shall demonstrate to the satisfaction of the Fire Chief that necessary fuel modification in off-site locations will be maintained in perpetuity.

26. EP EP R AFFORDABLE HOUSING

Prior to the recordation of a subdivision map that creates residential building sites, the landowner shall provide a cash contribution to the County's General Plan Trust Fund. The specific methodology and amount of said contribution shall be subject to the approval of the Manager, Environmental & Project Planning. These funds shall be directed to support the County's overall efforts toward providing affordable housing, including but not limited to, future updates of the Orange County Housing Element and related programs for maintaining existing affordable housing and providing new affordable housing opportunities.

27. CP CP B USE PERMIT

Prior to the issuance of any building permits for residential structures, the applicant shall submit a use permit application for review by the Foothill/Trabuco Review Board and approval by the Planning Commission after a public hearing. Said use permit shall include, but not be limited to, the location of all structures and uses, precise landscaping plan, precise fuel modification plan and program, grading plan, and architectural plans for all structures. Said use permit must be found consistent with Area Plan 98-2.

28. F F GBU FUEL MOD PLAN

Prior to the approval of the use permit to construct residential structures, the applicant shall obtain the Fire Chief's approval, in consultation with the Manager, Environmental and Project Planning, of a precise fuel modification plan and program. The plan shall indicate the proposed means of achieving an acceptable level of risk to structures by vegetation. Include the method (mechanical or hand labor) for removal of combustible vegetation and the planting of drought tolerant fire resistant plants. However, only the minimum necessary fuel modification shall be approved by the Fire Chief. All practical mitigation measures to minimize the need for fuel modification shall be recommended by the Fire Chief such as use of non-combustible construction materials, interior fire sprinkler system and double-glassed windows. The required fuel modification shall be performed in a manner to minimize impacts on the natural environment as much as possible. The fuel modification plan shall then become effective after the Planning Commission approves the use permit.

29. SG SG B ROAD REE PROG

Prior to the issuance of building permits for residential construction, the applicant shall pay fees for the Major Thoroughfare and Bridge Fee Program listed below, in a manner meeting the approval of the Manager, Subdivision and Grading.

A. Foothill Circulation Phasing Program
B. Foothill/Eastern Transportation Corridor
C. El Toro Road
D. Santiago Canyon Road

30. HP HP R LOCAL PARK FEES

Prior to the issuance of building permits for residential construction, the applicant shall pay in-lieu fees per the Local Park Code Requirements.

31. FTSP CP B SCHOOL FEES

Prior to the issuance of any building permits for residential construction, the applicant shall provide written verification from the School District, in a manner meeting the approval of the Manager, Current Planning, that he has reached a mitigation agreement with the District for the subject project proposal.

32. CP NA NA INDEMNIFICATION

Applicant shall defend at his/her sole expense any action brought against the County because of issuance of this permit. Applicant will reimburse the County for any court costs and attorney's fees which the County may be required by a court to pay as a result of such action. The County may, at its sole discretion, participate in the defense of any such action, but such participation shall not relieve applicant of his/her obligations under this condition.

RE: Saddleback Meadows 299-unit "Contingency" Proposal, Subdivisions

- Since the Foothill/Trabuco Specific Plan and the Zoning Code do require it, we urge you to await the recommendation of the Foothill/Trabuco Specific Plan Review Board, scheduled for October 16, prior to any action on this proposal.

- Another federally-listed threatened species, the California gnatcatcher, has recently been discovered inhabiting the Saddleback Meadows site. Two individuals were observed during a limited survey, and more may inhabit the site. This new information now necessitates revision and recirculation of the environmental documentation under CEQA.

- Approval of this proposal rejected by the Board in 1996 would remove all incentive to conclude ongoing negotiations for acquisition of this scenic site.

- Approval jeopardizes continued public ownership of the prime 240-acre section of O'Neill Park donated by the Vedanta Society in the 1970's, and the continued existence of the Ramakrishna Monastery and St. Michael's Abbey--will your administration be remembered for driving these unique, public-serving institutions out of Orange County?

- The Specific Plan also requires referral of all tentative subdivision maps to the Review Board prior to action by the Subdivision Committee, yet county staff has scheduled tract maps for October 21 approval.

- Please give the interests of present and future Orange County residents the priority they deserve in considering this proposal benefiting foreign-based land speculators.

Re: *Proposed Zone Change 98-3 and Area Plan 98-2/EIR*
Saddleback Meadows: 299-Unit Project

Dear Members of the Planning Commission:

As a supplement to my letters of August 25, September 2, and September 23, 1998, and without waiving any objections which have been stated to date on behalf of my clients, the Norbertine Fathers of Orange, the Saddleback Meadows Land Conservancy LLC, and the Vedanta Society of Southern California, I submit the following additional arguments in opposition to California Quartet's application for approval of Zone Change 98-3 ("ZC 98-3") and Area Plan 98-2 ("AP 98-2") for the development of a 299-unit, single-family detached residential housing project (the "299-Unit Project" or the "Project") at the Saddleback Meadows property (the "Property"):

A. Coastal California Gnatcatchers Have Recently Been Found on a Portion of The Property, Thereby Rendering the Developer's Prior Gnatcatcher Surveys Outdated and Invalid. A Formal Protocol Survey of the Entire Property Should Now Be Conducted as Part of a New or Subsequent EIR to Properly Assess the Impact of the Project on This Endangered Species.

The CEQA documentation relating to the presence of coastal California gnatcatchers on the Property is fatally flawed and must be corrected and recirculated for public review and comment -- particularly comments from the California Department of Fish & Game and the U.S. Fish & Wildlife Service.

determined that on-site coastal sage scrub habitat is *not* occupied by coastal California gnatcatchers . . . ." (Emphasis Added.) Likewise, on pages 4-130 and 4-139 of FSEIR 566, similar statements are made to the effect that no coastal California gnatcatchers were observed in connection with the surveys which California Quartet's consultants conducted four and five years ago in 1993 and 1994. However, a brief informal survey of but a small portion of the Property by my firm's consultant, Royce B. Riggan, has demonstrated that the prior gnatcatcher surveys are clearly outdated and incorrect because coastal California gnatcatchers *do* presently occupy the coastal sage scrub habitat at the Property.

At the August 25 session of the Planning Commission's hearing on ZC 98-3 and AP 98-2, my firm's consultant, Warren Singleton, pointed out that, in the southeast corner of the Property, the proposed rough grading operations for the 299-Unit Project would decimate a great many more acres of coastal sage scrub habitat than would otherwise be destroyed as part of the rough grading for the 705-unit manufactured housing/mobile home project (the "705-Unit Project") which was the subject of FSEIR 566. Mr. Singleton graphically demonstrated to the Planning Commission that, instead of reducing adverse environmental effects as claimed in the Addendum, the 299-Unit Project would actually have far worse impacts on (1) the biologically sensitive habitats and species found in the lush canyons located in the southeast corner of the Property because rough grading operations would be far more extensive at that location than under the 705-Unit Project; and (2) the Ramakrishna Monastery because a great many more residential units would be built much closer to the Monastery than would have occurred under the 705-Unit Project.

Following the August 25 Planning Commission hearing, I dispatched Royce Riggan -- who holds Federal Permit PRT-780195 and thus is officially licensed to conduct gnatcatcher surveys -- to visit the Property and determine whether the new areas to be impacted by the 299-Unit Project in the southeastern corner of the Property were occupied by coastal California gnatcatchers. While on a tour of that portion of the Property which was conducted by California Quartet's consultants in July 1998, I had noted how extensive the coastal sage scrub habitat was and how verdant and secluded the adjacent canyons were, and I could not believe that FSEIR 566 and the Addendum were correct in stating that *no* coastal California gnatcatchers were to be found in those locations.

2 weeks ago. Why is it just

I was not surprised, therefore, when, on September 23, 1998, after only two and a half hours at the site, Mr. Riggan, and his associate, Lisa Seneca observed two coastal California gnatcatchers: a juvenile of the year and an adult male. A copy of the California Native Species Field Survey Form confirming the two gnatcatcher sightings, which Mr. Riggan dutifully submitted to the Natural Diversity Database maintained by the California Department of Fish & Game, is attached as Exhibit "A" hereto. Based on the two sightings documented by Mr. Riggan and his associate, there is no longer any justification for the County's highly questionable actions

in allowing California Quartet to delay completing the May 1997 gnatcatcher survey of the Property in accordance with the USFWS presence/absence protocol. Both FSEIR 566 and the Addendum *concede* that a formal protocol gnatcatcher survey of the Project has not been conducted in recent years, and this is nothing short of unconscionable since the County is now considering whether to allow California Quartet to *decimate* virtually *all* of the coastal sage scrub habitat on the Property without even knowing the number of endangered birds that might be affected.

In addition to a formal protocol survey being undertaken, a new or subsequent EIR must now be prepared to fully and properly assess the impacts on this federally-listed endangered species, the coastal California gnatcatcher. Indeed, as underscored in the case cited in the letter to the Planning Commission from California Quartet's attorney, dated September 30, 1998, *Fund for Environmental Defense v. County of Orange* (1998) 204 Cal.App.3d 1538, 1550, CEQA section 21166 requires the preparation of a subsequent EIR when a "new protected or rare habitat or species of flora or fauna" is discovered after an EIR has been prepared. As explained in the *Fund for Environmental Defense* case, such a discovery constitutes a type of "change in circumstances" and "new information" under section 21166 which mandates the preparation of a subsequent EIR.

Of course, my clients continue to maintain that ZC 98-3 and AP 98-2 constitute a *new* project which is not the *same* as the 705-Unit Project manufactured housing/mobile home project authorized under Tract Map 10692. Although County staff now maintains that the 299-Unit Project and the 207-Unit Project are actually the *same* project for purposes of CEQA compliance, the County took an entirely different position two years ago when it stated on page 3-1 of Draft EIR No. 561 that "the proposed project [i.e., the 318-unit project] represents the *complete revision and redesign* of previously approved and recorded Tract Map 10692." (Emphasis added.) If, as my clients contend, the 299-Unit Project is *not* the same as the 705-Unit Project, then a new EIR must be prepared, particularly in light of the mandatory finding of significance which must now be made under CEQA Guidelines section 15065(a) because of the potential impact which the 299-Unit Project will have on "an endangered, rare, or threatened species."

B. <u>The Drainage and Grading Impacts Associated With the 299-Unit Project Should Be Addressed in a New or Subsequent EIR.</u>

As explained in great detail in the letter prepared by our firm's consultant, Warren Singleton, dated October 7, 1998, a copy of which is attached as Exhibit "B" hereto, the critically important drainage impacts of the 299-Unit Project have essentially been ignored in the CEQA documentation prepared by the County for ZC 98-3 and AP 98-2. Nowhere in FSEIR 566 or in the Addendum is a concept drainage plan for the 299-Unit Project to be found. Incredibly,

County staff is asking the Planning Commission to approve the development of 299 homes without any information being provided to the Commission or to the public as to exactly *where* storm, irrigation, and urban runoff from these hundreds of homes will be discharged on the Property.

The Addendum admits that such runoff will be dumped into natural drainage courses on the site which is a *radical* change from the stormdrain system proposed for the 705-Unit Project. However, although this major project change will be allowed to occur and huge volumes of water will be dumped on site, no document has been provided or referenced in the Addendum which would indicate the locations of the respective storm drain outlets to be constructed on the Property.

One can only *speculate*, based on the concept drainage plan for the 318-Unit Project described in Draft EIR 561 that, on a *daily* basis, a huge increase in runoff will be discharged into the geologically-unstable canyon areas adjacent to St. Michael's Abbey and the Ramakrishna Monastery. This is a frightening prospect because no analysis has been undertaken as to whether the introduction of the steady flow of water in these unstable canyon areas will create new geotechnical hazards by activating the landslide conditions which are clearly known to exist in the very locations where the water will be discharged.

Obviously, the major change in the stormdrain system for the 299-Unit Project necessitates the preparation of a new or subsequent EIR to address what has always been one of the most important concerns on the part of the Abbey and the Monastery, i.e., the potential geotechnical hazards created by the 299-Unit Project which could seriously undermine the stability of their respective facilities -- which are already suffering the effects of soils movement. To date, the CEQA documentation which has been prepared for the 299-Unit Project has simply ignored the very serious impacts which will be caused when a constant flow of water is added to areas on the Property which are known to be seriously unstable and prone to landsliding. This deficiency should be corrected and a new document should be circulated for public review and comment.

C. <u>The "44-178 Alternative" Should Be Analyzed in A New Or Subsequent EIR.</u>

In my September 2 letter to the County, I submitted plans relating to three different project alternatives, the 65-Unit Alternative, the 120-Unit Alternative, and the 127-Unit Alternative. Strangely, in what can only be described in a *Twilight Zone* statement, County staff has taken the position that the three alternatives have *not* been "submitted" for their review and thus they are free to overlook them for purposes of CEQA compliance. This appears to be a

rather convenient way for County staff to avoid *ever* having to address any reasonable project alternatives proposed by members of the public.

Undaunted by the strange tactics being employed by County staff, I will venture to suggest another project alternative that should be analyzed in a new or subsequent EIR *before* the Planning Commission takes any further action on ZC 98-3 and AP 98-2. Attached as Exhibit "C" hereto is an 11x17" plan showing the 44-acre portion of the Property which has been outlined in orange. This plan represents what I will refer to as the "44/178 Alternative," and it represents a project alternative which would allow a 44-acre parcel of the Property to be developed with residential uses, with the balance of the Property, i.e., 178 acres, being dedicated by the developer free of charge to the County to be preserved as permanent, undisturbed, undeveloped, natural open space. The number of units to be developed within the 44-acre parcel could vary depending on the desire of the developer and could include a mix of condominium units, assisted living facilities, single-family detached homes, etc.

The reason that it is so important to analyze the 44/178 Alternative is because the 44-acre development parcel would be situated on what is perceived to be the most "stable" soil at the Property, relatively speaking, and, if development were confined within that 44-acre parcel, very few sensitive habitats or species on the Property would be adversely impacted. In addition, such an Alternative would facilitate approval of the Southern Subregion NCCP because it would provide the wildlife corridor contemplated by the NCCP. As stated in the August 11 letter which was sent to the Board of Supervisors by the California Department of Fish & Game and the U.S. Fish & Wildlife Service, the wildlife agencies are interested in analyzing the 44/178 Alternative because of the many environmental benefits it affords. Accordingly, this Alternative should be studied in detail in a new or subsequent EIR before ZC 98-3 and AP 98-2 are approved by the Planning Commission.

D. <u>The Planning Commission Is Unlawfully Proceeding to Take Final Action on AP 98-2 Without Affording the Foothill/Trabuco Specific Plan Review Board an Opportunity to Make Its Recommendations on the Project</u>.

As I stated in my September 23 letter to Tom Mathews, the Planning Commission will violate both the Foothill/Trabuco Specific Plan and the Orange County Zoning Code if it proceeds to take any further action on the discretionary permit application relating to AP 98-2 *before* the Foothill/Trabuco Specific Plan Review Board (the "Review Board") has been afforded at least twenty-one (21) days within which to consider the merits of AP 98-2 and to report its recommendations thereon to the Planning Commission. Clearly, the Planning Commission is the "approving authority" with respect to *all* applications for Area Plans submitted to the County. Indeed, if no appeal is taken from the Planning Commission's approval of any given Area Plan, that approval becomes *final*.

Moreover, the Review Board is supposed to make its recommendations to the Planning Commission, *not* to the Board of Supervisors. As the County noted at page 4-11 of Draft EIR 561, "[d]iscretionary actions within the Specific Plan area are reviewed by the Foothill-Trabuco Specific Plan Review Board, who function as an advisory body to the *County Planning Commission*." (Emphasis added.) Aside from common courtesy, the Planning Commission is required by law to refrain from even *considering* California Quartet's application for approval of AP 98-2 until after the Review Board has been given at least 21 days to forward its recommendations on whether that Area Plan should be approved or denied.

Since the Review Board is charged with implementing the Foothill/Trabuco Specific Plan, it would seem only logical, not to mention lawful, to allow the Review Board adequate time within which to consider the impacts that will flow from *exempting* the 299-Unit Project from complying with the provisions of the Specific Plan. The CEQA documentation relating to ZC 98-3 and AP 98-2 is obviously deficient in that it does not address these impacts.

However, since it appears inevitable that the Planning Commission will refuse to honor the request of the Review Board for at least a two-week continuance of the Planning Commission's October 7 hearing, my clients must now face the sad fact that this matter appears headed for litigation. Accordingly, please be advised that, in addition to the objections raised in letters previously submitted by my firm and its consultants, my clients hereby incorporate and restate in opposition to ZC 98-3 and AP 98-2 each and every procedural and substantive contention, objection, comment, or argument raised in the letters which are listed in Exhibit "D" attached hereto. In addition, my clients also incorporate and restate each of the objections raised, or comments or arguments made, by any of their respective attorneys, representatives, or consultants at the public hearings or meetings held by the Planning Commission or the Board of Supervisors in connection with the review of FSEIR 566, including, but not limited to, hearings and meetings held on October 22, November 25, and December 3, 1997, and on February 24, 1998.

Very truly yours,

Edmond M. Connor

September 30, 1998

The Honorable Chuck McBurney, Chairman
and Members of the Orange County Planning Commission
300 N. Flower Street, Room 356
Santa Ana, California 92702

Re: Zone Change 98-3; Plan 98-2 Addendum PA 980103; Continued Commission Hearing Date: October 7, 1998

Dear Chairman McBurney and Members of the Commission:

This communication responds to issues raised in the Commission's hearing of August 25, 1998 on behalf of the Project Applicant, California Quartet ("CQ") for approval of Zone Change 98-3 and Area Plan 98-2 (collectively, the "Project"). Project approval would authorize a 299-unit single-family detached housing development on the Saddleback Meadows property ("subject property") adjacent to El Toro Road in unincorporated territory of the County of Orange ("County").

This communication will respond to issues raised during the Commission hearing by Commission members and to issues raised in a August 25, 1998 communication by Mr. Edmond Connor, counsel for the Vedanta Society of Southern California, the Norbertine Fathers of Orange and the Saddleback Meadows Land Conservancy LLC (collectively "the Opposition").

I. FACTUAL SUMMARY

A. Issues Raised Concerning Commission Procedure

Questions raised at the prior hearing centered on the Zone Change and Area Plan requests and their relationship to the Foothill/Trabuco Specific Plan ("Specific Plan") and how the Project could be found to be consistent with the Specific Plan which provides that as long

as the Saddleback Meadow property is developed in accordance with the existing Saddleback Meadows Plan Community Zoning, Zone Change 84-3P and Recorded Tract 10692 the subsequent project would be exempt from the Plan's regulations and guidelines. (Specific Plan, p. III-20). Questions were also raised as to the status of negotiations between the County Board of Supervisors and the Applicant and others with respect to another project configuration for the subject property.

B. Environmental Analysis Issues

Also raised was the propriety of the method of environmental assessment of impact of the Project on the environment under provisions of the California Environmental Quality Act (Public Resources Code section 21000 *et seq.*, "CEQA"). Specifically, advanced was the issue of whether the Project Addendum and prior certified Final Subsequent Environmental Impact Report No. 566 (the "FSEIR") which assessed the implementation of the 705-unit development proposal[1] for the subject property by Grading Permit, could assess the Project impacts.

The Opposition claims that the addendum method of Project environmental impact analysis is inadequate under CEQA and the CEQA Guidelines[2] because:

1. The Addendum relies on a previously certified environmental impact report ("EIR") for an entirely different project;

2. A 45 day notice is required by CEQA Guidelines sections 15153(b), 15087 and 15105 for reliance on a prior EIR; and,

3. A new EIR "which addressed important new information and substantial project changes involving new environmental impact and additional project alternatives and mitigation measures not addressed in the previous EIR should have been accomplished."

The argument advanced by the Opposition is based on the unsupported contention that the Zone Change and Area Plan are a "*different* project" that:

1. Would build homes on land which was proposed to be left undeveloped by the 705-unit project;

---

[1] The 705-unit proposal emanates from recorded Tract No. 10692.

[2] The CEQA Guidelines are found at Title 14 California Code of Regulations section 15000 *et seq.*

2. Would result in wildlife corridor through the middle of the subject property when none had been previously provided under the 705-unit project; and,

3. Purports to be exempt from compliance with the Specific Plan despite the Specific Plan requirements that new projects must be consistent with the Plan.

II. SUMMARY OF RESPONSE TO ISSUES RAISED AT PRIOR HEARING

A. The Project, is consistent with the Specific Plan as either: (1) an exemption for an environmentally preferable alternative for development of the property under CEQA and therefore, consistent with the legislative discretion of the County, may be included as a portion of the Specific Plan as an exception exactly as exists presently for the existing zoning and Recorded Tract Map; or, (2) as a project of incrementally and significantly reduced density and impact on the Project site which is consistent with the Specific Plan.

B. The Addendum method of Project environmental impact analysis complies with CEQA as it contains a refined analysis of a previous alternative for development of the subject property which, through modification by reduction in density and site coverage further reduces Project impacts on the environment, one of the declared legislative purposes of a CEQA analysis.

III. ANALYSIS

A. Approval Of The Zone Change And Area Plan Is Consistent With The Specific Plan.

Consistent with the policies of CEQA (*see infra*, section III.B.) the Project significantly and incrementally reduces density from that authorized by the Recorded Tract and previously designated zoning. As such, it is consistent with the Specific Plan language contained on p. III-20.

Also, it is consistent with the administrative practice of the County as evidenced in the Plan itself to "exempt" this property from provisions of the Specific Plan as was accomplished with the present applicable land use designation for the subject property.

The Applicant has also consistently shown how the Project is consistent with Plan provisions as a portion of the Bridlewood Residential Planning District.

B. Response To CEQA Issues.

Initially, a factual misrepresentation advanced by the Opposition needs to be corrected. The Opposition claims that the addendum method of analysis under CEQA is inappropriate because the Project is a separate project application for which adequate notice and circulation was not given, which, as a separate project, requires the preparation of subsequent or supplemental environmental impact report under the provisions of Public Resources Code section 21166.

In December of 1997, this Commission expressed its intention and recommendation to the Board of Supervisors that the preferred density of development on the subject property would be a 299-unit configuration. A 299-unit configuration substantially similar with the Project was analyzed as Alternative No. 4 to FSEIR No. 566 ("Alternative No. 4"). Alternative No. 4 also analyzes a wildlife corridor configuration substantially similar in location and dimension to that portrayed in the Addendum. (See, FSEIR, Alternative No. 4, Exhibit 68; Addendum, Exhibit 4). The Addendum also shows in Exhibit 4 that housing will not be build on portions of the subject property proposed to be left vacant in the Project analyzed in the FSEIR.

The Project Addendum released on August 7, 1998, offers modifications and technical changes to Alternative No. 4,[3] again, a proposal for a 299-unit development of the subject property.

This method of environmental analysis by the County is consistent with, and legally authorized by, CEQA for approval of both the Zone Change and the Area Plan.

One of the central purposes of CEQA, which is legislative declared, is to prevent significant avoidable damage to the environment by encouraging lead agencies to require changes in projects or requesting that the Applicant provide those change to a project through the approval of project alternatives [CEQA Guideline section 15002(a), (h), section 15021(a)] or by imposing specific conditions to mitigate the identified impacts of the Project (Public Resources Code section 21004). This is precisely what has occurred with respect to the Project. There has been a reduction of the intensity of the proposed use and the imposition of additional mitigation measures to a previously proposed project alternative for the development of the subject property.

The suggestion that the Project is a different separate project is not supported by any substantial evidence in the record. In fact, legal authority exists for the proposition

---

[3] It is respectfully noted that a 299 unit alternative was also assessed with respect to the 318-unit Zone Change and Area Plan proposal in DEIR No. 561 as Alternative No. 8.

specifically emanating from a prior case handled by this Commission and the County where there was an increase in the intensity of the Project and that was not identified as a later separate project or a project which met the criteria under Public Resources Code section 21166 requiring the preparation of a supplemental or subsequent EIR.

In *Fund for Environmental Defense v. County of Orange*, 204 Cal.App.3d 1538 (1988) ("*Fund for Environmental Defense*") the Fourth District Court of Appeal affirmed an Orange County Superior Court decision which denied a petition for writ of mandate challenging the County's decision to issue a new used permit for the development of a medical research and laboratory complex of increased intensity from the previously approved on land surrounded by a wilderness park.

Fund for Environmental Defense involved the challenge of a County decision to issue a new use permit for development of a medical research facility on property surrounded by Casper Wilderness Park. The project had been previously approved in October of 1981 with a certification by the Board of Final EIR No. 234. The new use application was filed in 1986, and among other things, increased the size of the authorized development 30% from 308,000 to 415,000 square feet, authorized twenty-three buildings rather than twenty-two buildings, increased the number of parking spaces from 825 to 900 and the footprint of the project from 308,000 to 331,000 square feet. The development was also changed in that it decentralized the project by spreading out the buildings to be authorized by the new use permit. The changed project was analyzed by way of a lengthy addendum to County FEIR No. 234, which was submitted with the new use permit and approved both by this Commission and the Board. The Court of Appeal held that an addendum was the appropriate method of environmental review as the change in the circumstances surrounding the project did not raise new adverse effects that were not raised, analyzed and discussed in the original EIR. *Fund for Environmental Defense, supra*, 204 Cal.App.3d at 1550-1552. Thus, in *Fund for Environmental Defense*, an addendum was used and approved by the Court of Appeal (serving as precedent state-wide) where there was an increase of significant physical dimensions for the originally approved project. Here, in contrast, there is no increase in the physical dimensions of the originally approved project; rather, the Grading Application is the initial step in development of only a portion of the Final Tract. Here, the Project represents a decrease in intensity from that approved and analyzed in the Recorded Final Tract as implemented through grading as well as the 318-unit proposal advanced in DEIR No. 561.

The method of analysis for compliance with CEQA employed here is identical to that contained in *Fund for Environmental Defense* only that here there is no intensification of the project but rather a significant reduction in the intensity of development proposal.

The administrative construction of County Staff in proposing this legally authorized method of environmental analysis under CEQA is an administrative interpretation of the

statute -- CEQA and the implementing CEQA Guidelines -- that is entitled to great weight. *Benton v. Board of Supervisors*, 226 Cal.App.3d 1467, 1479 (1991). This administrative construction is in addition to the specific authority of *Fund for Environmental Defense* authorizing the precise environmental impact analysis procedure now before you for review.

As to the specific contention raised during the prior hearing that the resource agencies -- the Department of Fish and Game and the United States Fish and Wildlife Service - were not consulted concerning this Project, as noted during your previous Commission hearing, there is an extensive comment letter from the Resource Agencies concerns (FSEIR, Response to Comments, August 8, 1997 Communication of U.S. Wildlife Services and Department of Fish and Game). Additionally, we are informed that the Resource Agencies have again been contacted by County Staff.

Finally, on the notice and circulation contentions of the Opposition there is no requirement for circulation of an addendum under CEQA.[4]

The Opposition's contention that the prior FSEIR is grossly deficient and is being challenged in litigation is accurate only with respect to existing litigation.[5] However, that prior certified EIR is entitled to all presumptions concerning its validity until there is an affirmative order of the court indicating that it is in some manner deficient. Public Resources Code sections 21185; Evidence Code section 664.

The Opposition contention that there is an inadequate geotechnical analysis of that impact on the physical environment associated with the Project is contradicted by the content of the FSEIR and the Addendum. See, FSEIR, pp. 4-14, 4-42. Included in this analysis is an extensive drainage and mitigation monitoring plan as well as several mitigation conditions requiring further geotechnical reports in the grading permit process which would allow for the further imposition of conditions consistent with information which may be forthcoming in those reports.

In summary, if one were to accept the Opposition's analysis of noncompliance with CEQA of the Addendum before you, it is in essence arguing against the well-articulated and confirmed policy of CEQA to continually narrow or reduce the environmental impacts of a

---

[4] See CEQA Guidelines section 15164 which provides that an addendum is not subject to the circulation requirements for other methods of environmental analysis.

[5] *See Vedanta Society of Southern California v. County of Orange, et al.*, Orange County Superior Court Case No. 791309.

project through project modification through use of project alternatives and to mitigate project effects on the environment.[6]

IV. CONCLUSION

A. The Project, is consistent with the Specific Plan as either: (1) an exemption for an environmentally preferable alternative for development of the property under CEQA and therefore, consistent with the legislative discretion of the County, may be included as a portion of the Specific Plan as an exception exactly as exists presently for the existing zoning and Recorded Tract Map; or, (2) as a project of incrementally and significantly reduced density and impact on the Project site which is consistent with the Specific Plan.

B. The Addendum method of Project environmental impact analysis complies with CEQA as it contains a refined analysis of a previous alternative for development of the subject property which, through modification by reduction in density and site coverage further reduces Project impacts on the environment, one of the declared legislative purposes of a CEQA analysis.

Re: *Vedanta Society of Southern California v. County of Orange, et al.*

Dear Mr. Ross:

To assist the parties in drafting (1) a settlement and release agreement and (2) a purchase and sale contract, I have enclosed an exhibit which shows the contours (highlighted in orange) of the 44-acre Development Area which the parties agreed on at the September 22 negotiating session. The balance of the Saddleback Meadows property shown on the exhibit would consist of the 178-acre Conservation Area which would be subject to the language of the Conservation Easement which you supplied to Mr. Winton on August 28, 1998. For your information, the enclosed exhibit is a reduced version of the plan prepared by Michael Madden Associates, dated July 13, 1998, which I displayed on the wall at last Tuesday's negotiating session.

We will need to discuss how we will go about describing the exact boundaries of the 44-acre Development Area and the 178-acre Conservation Area for purposes of the sales contract, the grant deed, the title insurance policies, the Conservation Easement, etc. If a survey needs to be performed to specifically map and describe the boundary lines of the 44-acre parcel and the 178-acre parcel, then we should address that matter immediately.

Also, since the 178-acre Conservation Area will consist of undisturbed open space, with the possible exception of certain passive recreational uses covering a portion thereof, we will want to pursue the suggestion which you raised at our

September 11 meeting regarding the processing of a General Plan Amendment to designate the Conservation Area exclusively as open space so that no annual sewer district assessment(s) would have to be paid on the 178-acre parcel. As we discussed on September 11, the County could process the GPA for the Conservation Area at the same time that it processed the entitlements for the 44-acre Development Area.

We can discuss the proposed GPA in greater detail when we meet tomorrow to finalize the terms of the purchase and sale agreement. You have indicated that it should be a fairly easy task to wrap up the final deal points and I am looking forward to reaching agreement on the final terms so that we can start drafting the necessary documents.

Very truly yours,

Edmond M. Connor

VIA OVERNITE EXPRESS

Re: Proposed Zone Change 98-3 and Area Plan 98-2 for 299-Unit Project -- Saddleback Meadows

Dear Tom:

As you witnessed at yesterday's negotiating session, the parties reached agreement on the contours of a 44-acre "Development Area" and a 178-acre "Conservation Area," as those terms are defined on page 3 of Mr. Ross's letter to me of July 17, 1998. The parties agreed that the boundaries of the 44-acre Development Area would be as depicted on the plan prepared by Michael Madden Associates, dated July 13, 1998, which I displayed on the wall at yesterday's meeting and highlighted in orange. I will endeavor to have reduced copies of that highlighted map prepared and circulated to all parties.

The parties also agreed at yesterday's meeting that the 178-acre Conservation Area would be subject to the terms of the Conservation Easement which Mr. Ross transmitted to Mr. Winton on August 28, 1998. As I noted at the meeting, the Conservation Easement provides that the 178-acre Conservation Area will, among other things, "be retained forever in its natural, undeveloped and unimproved, unspoiled scenic and open space condition." That language provides my clients with the assurance they need that the natural buffer zones surrounding their respective properties will remain the type of undisturbed open space which -- as I tried to explain at yesterday's meeting -- is so vital to their monastic way of life.

The one exception to the language of the Conservation Easement which was discussed at yesterday's meeting was that, unless the County agrees to take a portion of the 178-acre Conservation Area in fee and to annex it to O'Neill Park, the parties may have to

provide for some type of "low impact" recreational use for at least some portion of the 178-acre parcel in order to accommodate the conditions imposed by the State of California for the County to be able to access the $1.5 million of "Strawberry Field" funds which the County is planning on contributing towards the purchase price of the Conservation Area. Dan Winton and I spoke to Stella Oviedo and Ben de Mayo following yesterday's meeting and I think we should be able to work out language to accommodate the "recreational use" needs of the County. Also, since the parties have now agreed that the Development Area will be a total of 44 acres in size and that California Quartet will be free to develop as many single-family units as it would like within that Development Area, we have been assured by the representatives of California Quartet that all of the remaining "deal points" can easily be resolved.

Although the parties reached agreement on the two most important issues facing them: (1) the contours of the 44-acre Development Area and (2) the preservation of 178 acres of undisturbed open space in accordance with the terms of the Conservation Easement, the one troubling aspect about yesterday's meeting was that, despite the objections which Mr. Winton and I voiced to Mr. Elfend's suggestion that the County proceed with its processing of the 299-Unit Project, it was determined that the 299-Unit Project would continue to be processed as a "contingency plan" by the Planning Commission and the Board of Supervisors.

Of course, it was underscored at the meeting that my clients would preserve all of their rights to oppose the approval of the proposed Zone Change and Area Plan for the 299-Unit Project. As such, I am submitting this letter to register my clients' formal protest over the County's failure to comply with the very explicit procedural requirements of the Foothill/Trabuco Specific Plan (the "Specific Plan") with respect to the approval of discretionary permits, such as Area Plan 98-2.

Specifically, on behalf of the Vedanta Society of Southern California, the Norbertine Fathers of Orange, and the Saddleback Meadows Land Conservancy LLC, I object to the fact that, in violation of section III.G.2 of the Specific Plan, your Department has failed to forward California Quartet's application for approval of Zone Change 98-3 and Area Plan 98-2 to the Foothill/Trabuco Specific Plan Review Board (the "Review Board") for its review and recommendations prior to the Planning Commission's consideration of the application. As you know, the application must be sent to the Review Board for its consideration at least twenty-one (21) days prior to the time that the Planning Commission takes action on the application.

Considering the public controversy surrounding this project, there would appear to be no justification for not allowing the Review Board to hold a public meeting and to make appropriate recommendations to the Planning Commission regarding the proposed Zone Change and Area Plan before the Planning Commission takes any further

action on the 299-Unit Project. Indeed, more so in this case than in any other case, it would appear to be absolutely essential -- and clearly beneficial -- to obtain input from the Review Board regarding the 299-Unit Project because the proposed Zone Change and Area Plan are completely at odds with the provisions of the Specific Plan and cannot be approved unless an *exemption* from the Specific Plan is granted. Accordingly, before taking the drastic step of *exempting* the 299-Unit Project from compliance with the Specific Plan, the County should comply with its own ordinances and allow the Review Board to consider this highly-controversial project.

As you are aware, my clients have already objected to, among other things, (a) the County's failure to provide the requisite public notice regarding its decision to use FSEIR 566 as the EIR for the 299-Unit Project and (b) its refusal to prepare a new or subsequent EIR to address the new impacts, alternatives and mitigation measures associated with the 299-Unit Project. We would respectfully request, therefore, that the procedural improprieties which have already taken place not be further compounded by any unlawful acts which would prevent the Review Board from exercising its statutory right and duty to carefully weigh the pros and cons of the proposed Zone Change and Area Plan and to make recommendations to the Planning Commission regarding whether the 299-Unit Projects should be approved.

Very truly yours,

Edmond M. Connor

Re: *Saddleback Meadows: Zone Change 98-3/Area Plan 98-2*
Request for New EIR to Analyze Additional Impacts, Alternatives, and Mitigation Measures re 299-Unit Project

Dear Mr. Brantley:

Without waiving any of the objections set forth in my letter to the Planning Commission, dated August 25, 1998, including, but not limited to, the lack of adequate public notice under CEQA Guidelines section 15153(b)(2), but in the interest of ensuring that County staff, the Planning Commission, and responsible state and federal agencies, are afforded an opportunity to consider whether to require the preparation of a new EIR to analyze the additional impacts, alternatives, and mitigation measures associated with proposed Zone Change 98-3 and Area Plan 98-2 to permit development of a 299-unit single-family detached housing project (the "299-Unit Project") on the Saddleback Meadows property (the "Property"), please find enclosed the following:

(1) An 8-1/2x11" copy of a conceptual site plan (entitled and hereinafter referred to as the "65-Unit Alternative"), which was prepared by County staff on or about March 23, 1998, to show the proposed layout on the Property of 65 single-family detached dwelling units on approximately 8,000 sq. ft. estate-size lots, covering a development footprint of approximately 35 acres out of the 222 total acres which comprise the Property;

(2) A 3'x4' copy of a site plan (entitled and hereinafter referred to as the "127-Unit Alternative") which was prepared on or about July 13, 1998, by California Quartet's consultant, Michael Madden Associates, to show the proposed layout on the Property of 127 single-family detached dwelling units on approximately 5,000 to 6,000 sq. ft. lots, covering a development footprint of approximately 44 acres located in the same general vicinity as the 65-Unit Alternative; and

(3) An 18"x51" copy of a site plan (entitled and hereinafter referred to as the "120-Unit Alternative"), which was prepared on or about August 31, 1998, and was revised on September 2, 1998, by the consultant for Vedanta Society/St. Michael's Abbey, Warren W. Singleton, P.E., to show the proposed layout on the Property of 120 single-family detached dwelling units on basically the same development footprint covered by the 127-Unit Alternative, except for certain grading and fuel modification pull-backs for ridgeline protection and canyon preservation purposes. Also enclosed is a copy of a letter from Mr. Singleton, dated August 31, 1998, providing some explanatory notes regarding the 120-Unit Alternative.

Since the County is proposing to "use an EIR from an earlier project [i.e., FSEIR 566] as the EIR for a separate, later project [i.e., the 299-Unit Project]," then section 15153(b)(2)(D) provides that one of the "key issues" involving the use of the previously-certified EIR are "whether the EIR should be used for this project and whether there are any *additional, reasonable alternatives* for mitigation measures that should be considered as ways of avoiding or reducing the significant effects of the project." Of course, if additional reasonable alternatives exist which were not considered by the lead agency in certifying the EIR for the "earlier project," that earlier EIR should not be used as the environmental documentation for the "separate, later project."

Indeed, subsection (d) of section 15153 clearly states that "an EIR prepared for an earlier project shall *not* be used as the EIR for a later project if any of the conditions described in Section 15162 would require preparation of a subsequent or supplemental EIR." (Emphasis added.) Under CEQA Guidelines section 15162(a)(3)(D), a subsequent EIR must be prepared if "new information" shows that "alternatives which are considerably different from those analyzed in the previous EIR would *substantially reduce* one or more significant effects on the environment, but the project proponents decline to adopt the . . . alternative[s]." (Emphasis Added.)

Obviously, FSEIR 566 did not analyze the 65-Unit Alternative, the 120-Unit Alternative, or the 127-Unit Alternative. In differing degrees, each of these

Alternatives would *significantly* reduce the environmental impacts associated with the 299-unit project in that they would preserve virtually all of the oak woodlands, coastal sage scrub habitats, and vernal ponds on the Property, and would provide for an ample wildlife corridor over undisturbed terrain. Of course, only the 120-Unit Alternative would ensure that no grading or construction occurred in the biologically-sensitive canyon areas south of the east/west ridgeline on the Property which are to serve as part of the wildlife connectivity links between Whiting Ranch Wilderness Park and O'Neill Park.

The indisputable fact of the matter is that the 65-Unit, 120-Unit, and 127-Unit Alternatives would each avoid the substantial environmental devastation that would otherwise be wreaked upon the Property by the 299-Unit Project in connection with the mass grading of the proposed wildlife corridor, particularly in the lush canyons which presently link up with O'Neill Park. Accordingly, a new or subsequent EIR should be prepared to, among other things, analyze each of these three Alternatives from two different perspectives: (1) as stand-alone projects which would require California Quartet to dedicate all of the non-development areas of the Property (approximately 178 acres) as permanent open space and (2) projects which would involve California Quartet's sale of the same non-development acres to third parties, such as my clients and the County of Orange, for cash consideration.

As your Department has been made well aware, based on the extensive factual chronology presented by Mr. Frank Elfend at the August 25 session of the Planning Commission's hearing on the 299-Unit Project, and as a result of Mr. Elfend's earlier public presentations to the Board of Supervisors on June 23 and August 11, 1998, my clients and the County are currently involved in negotiations with California Quartet for the purchase of the approximately 178 acres which would be left undeveloped under the three Alternatives discussed above. Indeed, it is precisely because these negotiations are still ongoing that the 299-Unit Project has been dubbed a "Contingency Plan" which California Quartet intends to pursue in the event that the negotiations do not prove fruitful.

If, at the next-scheduled session of the Planning Commission's hearing on the 299-Unit Project -- which, by stipulated court order of August 31, 1998, has been continued to October 7, 1998 -- you determine that California Quartet, for whatever reason, has declined to proceed with any of the three Alternatives discussed above, I presume that your Department will order the preparation of a subsequent EIR under the terms of CEQA Guidelines section 15162(a)(3)(D). In the Staff Report, dated August 25, 1998, which the Environmental & Project Planning Services Division submitted to the Planning Commission in connection with its public hearing on the 299-Unit Project, it was stated that "none of the conditions described in Section 15162 calling for preparing a

Supplemental or Subsequent EIR have occurred. . . ." Of course, that statement would no longer be true if California Quartet proceeds to reject any of the Alternatives discussed above as of the next Planning Commission hearing scheduled for October 7, 1998. For example, if California Quartet were to refuse to accept the 120-Unit Alternative as of the October 7 hearing, then a subsequent EIR would be required to analyze this alternative under the provisions of section 15162(a)(3)(D) because no discussion of this alternative is to be found in FSEIR 566.

However, I do not believe it is necessary for your Department to wait until the October 7 Planning Commission hearing to make the determination that a *new* EIR should be prepared for the 299-Unit Project. As I explained at the August 25 hearing, my clients, the Vedanta Society of Southern California, the Norbertine Fathers of Orange, and the Saddleback Meadows Land Conservancy LLC, do not necessarily agree with your Department's determination that section 15162 of the CEQA Guidelines applies in this case. The California courts have clearly held that CEQA section 21166, and its companion section 15162 of the Guidelines, only apply when the question is whether more than one EIR must be prepared for what is essentially the *same* project.

When the proposed new activity is a *separate* project – as it certainly is in this case – the "fair argument" test is the standard which applies in determining whether a new (as opposed to a subsequent or supplemental) EIR must be prepared to analyze the *separate* project. Under the "fair argument" test, a new EIR must be prepared whenever it can be fairly argued on the basis of substantial evidence that the proposed project may have a significant environmental impact.

In light of the oral and written comments which were submitted by my firm, Royce Riggan, John Byerly, Warren Singleton, and Saundra Jacobs at the August 25 public hearing, there are numerous environmental impacts associated with the development of the 299-Unit Project which were not addressed in FSEIR 566 and which mandate the preparation of a new EIR under the "fair argument" test. Aside from the obvious impacts which will be caused by the fact that the 299-Unit Project pushes grading and development activities significantly closer to the Ramakrishna Monastery and raises unanswered questions regarding water runoff and drainage impacts that will be caused by the new houses to be built northeast of St. Michael's Abbey, there is no discussion in FSEIR 566 regarding (1) whether the wildlife corridor proposed for the 299-Unit Project would comport with the goals and objectives of the NCCP planning process and (2) whether it would preclude or in any way *jeopardize* finalization of the Southern Subregion component of the NCCP. Clearly, these impacts should be addressed in a new EIR and the public, as well as the appropriate federal and state wildlife agencies, should be allowed to comment on these important environmental matters.

In closing, my clients would request that the County immediately cease processing the 299-Unit Project unless and until the County complies with CEQA and sends out a Notice of Preparation for a new EIR to address the environmental impacts, reasonable project alternatives and feasible mitigation measures associated with the development of the 299-Unit Project.

Very truly yours,

Edmond M. Connor

Re: Saddleback Meadows Property, Alternate (120) Lot Study

Dear Mr. Connor:

Transmitted with this letter are six blackline copies of the Alternate (120) Lot Study which was presented at last Thursday's meeting. The map is a compilation of the three work sketches presented last week.

The lots and streets shown in solid lines are the revised layout. The lots and streets which are not changed are outlined with dashed lines. The revised total lot count is one hundred and twenty (120) units.

Comments regarding the design proposals:

- The grades on the main entry street were held per the proposed California Quartet Study (CQ).
- In order to provide lots in the upper eastern portion of the site grading, remedial grading and fuel modification were allowed to occur in the one hundred (100) foot setback zone which Vedanta originally proposed to be north of the ridgeline.
- The ridgeline has generally been protected in the upper portion of the site, from the second Cul-de Sac south of the spine road to the eastern limits. The moving of the spine road and lots north away from the ridgeline provides for the one hundred and fifty foot Fire Fuel Modification area and maintains the ridgeline. Although the cut slope is at the ridgeline or slightly beyond, the road or lots will likely not require remedial grading beyond the ridge and down into the bottom of the first or second canyon as all of the previous proposals have done.

- The first long Cul-de-sac south of the spine road impacts the lower ridgeline and some Coastal Sage Scrub. The Hidden Hill development south of this area has already disturbed a portion of this Coastal Sage area. This was not changed from the CQ study.
- The addition of the twelve lots on the lower portion of the spine road should be of benefit geotechnically. The proposed spine road was being cut deeply into the hill, up to ninety (90) feet. This removal of material should benefit the stability of the area. The addition of lots north of the spine road removes additional material and contours the remaining hill as previously proposed. If additional unloading is desirable the hill could be layed back further.
- The extension of the second Cul-de-Sac north of the spine road, adding eight (8) lots, was sloped down away from the spine road to minimize the fill depth and the limits of grading. This should not trigger extensive additional remedial grading since the same geologic features are involved.
- The second Cul-de-Sac south of the spine road was pulled back to accommodate Fire Fuel Modification. The lot count was reduced from six (6) to three (3). The ridgeline is being lowered in this area. The proposed grading creates a cut slope facing north and west away from the Monastery. The slope becomes small at the end of the Cul-de-Sac allowing some view of the homes on this street. The grading should not impact the Coastal Sage Scrub which is down slope to the south and east.

The California Quartet (127) Study and the Vedanta Alternate (120) Study are just that, studies. Once the features of the original and alternate studies are agreed upon a precise engineered site plan should be prepared. The fine tuning of horizontal and vertical alignments and lot layouts may result in the gaining of two or three lots. This precise design would be the next step and be used for a Tentative Map.

Please call me at (949) 240-5808 if you have any questions or require additional information.

Very truly yours,

Warren W. Singleton, P.E.

COMMISSIONER MOODY'S MEMO

October 7, 1998

To: Orange County Planning Commission

From: Commissioner Tom Moody

Subject: Bridlewood Zone Change/Area Plan

As Commissioners we have a responsibility to permit private property owners reasonable use of their property within the law (G.P. Zoning). We don't have an obligation to guarantee an applicant profits at the expense of the scenic resources a specific plan was designed to protect.

In making our decision on this project it is not appropriate for us to consider this particular 299 unit plan preferred by the applicant in comparison to the 705 mobile home unit map on the property. Nor is it appropriate to compare it with "Portola Hills." This is what the applicant has asked us to do and incredibly staff supports this approach, as well. An entirely new project has been proposed deviating from the Saddleback Meadows Project. It is appropriate only to consider the project in the context of the Specific Plan of which it is a part.

The Foothill-Trabuco Specific Plan never envisioned the aggressive grading required on this site to build 299 units. The plan's goals and objectives (I-5-I-7) emphasize "resource preservation," "rural character", " provide large lot development in resource constrained areas", "allowing development on hillsides and minor ridge lines provided grading for the structures and building pads is limited."

The staff report indicates that the 299 unit plan is consistent in terms of conventional grading because the plan averages 7,023 cubic yards per unit. (Below the 9,000 limit) The only reason this standard is met is because the divisor (the number of units) is such a high number (299). Using the same logic the project would be even more consistent with the 400 units or the 705.

Incredibly, the staff report also indicates that dedication of 71% of the project in open space meets the requirement for 66% open space dedication. Most of this open space is distributed open space as a result of the massive grading. Page III-52 describes the open space as "permanent natural open space," and specifically prohibits grading in these open space areas.

The objective of the plan includes preservation of natural rural features by limiting both development and grading. This clearly has not been accomplished in the 299 unit plan.

9) The Planning Commission may approve Alternative Grading Standards provided specific findings are made by the Commission pursuant to Section III.G.2.d.

i. Each individual project proposal (excluding building sites of one (1) acre or less which were existing at the time of Specific Plan adoption) shall preserve a minimum of sixty-six (66) percent of the site in permanent, natural open space which shall be offered for dedication in fee or within preservation easements to the County of Orange or its designee in a manner meeting the approval of the Manager, EMA/Harbors, Beaches and Parks/Program Planning Division. No grading, structures (including stables and corrals), walls (except for river rock walls not to exceed three feet), fences (except open fencing) or commercial agricultural activities shall be permitted in the natural open space area. Fuel modification shall be permitted within said open space areas if required by the Fire Chief in conjunction with an approved Fuel Modification Plan; however, the development should be designed so that fuel modification impacts to the open space areas are minimized.

j. Landscaping and fuel modification per the Landscaping and Fuel Modification Regulations (Section III.E) and the Development and Design Guidelines (Section IV.C.).

k. Lighting. All exterior lighting shall be strictly limited to those locations where it is required for safety reasons. All lighting shall be designed so that direct light rays shall be confined to the premises and so that light sources are shielded from off-site view.

l. Off-street parking. Per Zoning Code section 7-9-145, except as follows:

Two covered parking spaces shall be required for each dwelling. An additional covered or uncovered parking space shall be provided within 200 feet of the dwelling; however, on-street parking shall not be utilized for this additional space.

m. Private street standards. Private streets shall be established in accordance with the following:

1) Streets where on-street parking is prohibited: Minimum paved width twenty-four (24) feet.

2) Streets where on-street parking will be limited to one side only: Minimum paved width twenty-eight (28) feet.

3) Streets with on-street parking permitted on both sides: Minimum paved width thirty-six (36) feet.

topographic features." [Also, see related objectives under "Resource Preservation" and "Equestrian/Recreational Opportunities," below.]

d) Minimize the intrusion of development and landform alteration within the viewsheds of Live Oak/Trabuco Canyon Road and Santiago Canyon Road without precluding development which blends into the natural terrain and does not require excessive landform alteration.

2) Resource Preservation:

a) Develop a Resources Overlay Component of the Specific Plan to ensure the preservation of significant landform, biological and scenic resources.

b) Preserve significant landform features, including major ridgelines and rock outcroppings, while allowing limited development on minor ridgelines provided the development blends into the natural terrain and does not require excessive landform alteration.

c) Preserve significant biological resources, including oak woodlands, riparian areas and wildlife mobility corridors.

d) Preserve the oak tree canopy along Live Oak/Trabuco Canyon Road.

e) Preserve the Arroyo Trabuco/Trabuco Creek as permanent open space to ensure the preservation of the wildlife mobility corridor present in the creek and ensure consistency with the Resources Element of the County's General Plan which designates the creek as an Open Space, Conservation and Scenic Corridor. [Also, see related objectives under "Equestrian/Recreational Opportunities," below.]

3) Development Potential:

a) Provide some development potential (minimum of one dwelling unit) on each existing building site except for extreme situations where public health and safety concerns would preclude development of a site. For example, some building sites may be un-developable due to: 1) the site's location entirely within a floodplain where flood hazards cannot be adequately mitigated; 2) the lack of suitable legal access; 3) dependence on a septic system on a site which cannot percolate; or 4) severe topographic or geotechnical constraints. No building sites will be specifically designated as un-developable by the Specific Plan Land Use Plan and Land Use District Regulations; however, the ability of each site to be developed will be

c. Plano Trabuco Planning Area

The Plano Trabuco Planning Area is located south of Trabuco Creek adjacent to existing development in the Rancho Santa Margarita and Robinson Ranch Planned Communities. The planning area is predominantly level in terrain, with minimal native vegetation due to extensive agricultural activities. Because of its proximity to adjacent development and infrastructure and its relatively flat terrain, it is more readily developable than the other two planning areas.

C. GOALS AND OBJECTIVES

1.0 Specific Plan Goals

a. Rural Character/Forest Buffer: To preserve the rural character of the area and provide a buffer between urban development and the Cleveland National Forest.

b. Resource Preservation: To preserve significant landform, biological and scenic resources.

c. Development Potential: To ensure at least some development potential on each individual property.

d. Circulation/Infrastructure: To provide for a circulation system and other infrastructure adequate to serve the ultimate level of development permitted.

e. Equestrian/Recreational Opportunities: To provide equestrian and other recreational opportunities.

2.0 Specific Plan Objectives

The objectives listed below are intended to achieve the Specific Plan Goals. The objectives applicable to the entire Specific Plan Area are listed first, followed by objectives which are specific to the three planning areas.

a. Area-Wide Objectives

1) Rural Character/Forest Buffer:

a) Utilize architectural/design guidelines to establish rural standards.

b) Provide a buffer to the Cleveland National Forest by limiting development in areas adjacent to the forest.

c) Preserve the Arroyo Trabuco/Trabuco Creek as permanent open space to implement the buffer zone policy of the Growth Management Plan Element of the General Plan which requires the "physical separation of major communities by means of open space areas/corridors or on natural features such as creeks or prominent

DRAFT BOARD OF SUPERVISORS RESOLUTION
RE: AP98-2

RESOLUTION OF THE BOARD OF SUPERVISORS OF ORANGE COUNTY, CALIFORNIA

On motion of Supervisor _____, duly seconded and carried, the following Resolution was adopted:

WHEREAS, the Planning Commission conducted public hearings on Zone Change (ZC) 98-3 and Area Plan (AP) 98-2 for the area known as Saddleback Meadows (aka Bridlewood); and

WHEREAS, the Planning Commission has considered EIR Addendum PA980103 and found that it satisfies the requirements of CEQA for this project.

WHEREAS, the Planning Commission approved AP98-2 subject to 32 conditions and recommended that this Board approve ZC98-3; and

WHEREAS, the Planning Commission's action on AP98-2 was appealed to this Board; and

WHEREAS, this Board has conducted a noticed public hearing on ZC98-3 and AP98-2; and

WHEREAS, this Board has reviewed and considered the action of the Foothill/Trabuco Specific Plan Review Board; and

WHEREAS, this Board has considered EIR Addendum PA980103 and, by separate Resolution, found that it satisfies the requirements of CEQA for this project; and

WHEREAS, this Board, by separate Ordinance, has approved ZC98-3.

NOW, THEREFORE, BE IT RESOLVED that this Board makes the following findings:

1. AP98-2 is consistent with the objectives, policies, general land uses and programs specified by the General Plan.
2. AP98-2 is in substantial compliance with the Foothill/Trabuco Specific Plan.
3. AP98-2 is consistent with the provisions of the Zoning Code.
4. The location, size, design and operating characteristics of AP98-2, as conditioned, will not create conditions or situations that may be incompatible with other permitted uses in the vicinity.
5. AP98-2 will not result in conditions or circumstances contrary to the public health and safety and the general welfare.
6. AP98-2, as conditioned, satisfies the requirements of section 7-9-711 regarding public facilities.
7. The RE (PD), "Residential Estates (Planned Development)," site development standards regarding building site areas, building site coverage, area per unit, and number of dwelling units have been satisfied by AP98-2.

8. Condition of Approval No. 27 requires a use permit be approved which is consistent with AP98-2. A use permit may be approved for the entire project site or portions of the project

9. AP98-2, as conditioned, will provide significant public benefits in the form of major recreational trails, an important wildlife corridor for the Natural Communities Conservation Program and a large addition to O'Neill Regional Park.

BE IT FURTHER RESOLVED that this Board upholds the action of the Planning Commission and approves AP98-2 subject to the following conditions:

1. CP NA NA TIME LIMIT
Area Plan 98-2 is valid for a period of 48 months beginning with the effective date for ZC98-3. If the preliminary grading permit is not issued within such period of time, this approval shall be terminated and Area Plan 98-2 shall thereafter be null and void.

2. CP CP NA REVOCATION
Failure to abide by and faithfully comply with any and all conditions attached to this approving action shall constitute grounds for the revocation of said action by the Orange County Planning Commission.

3. CP CP G TENTATIVE TRACT MAP
Prior to the issuance of any grading permits, Tentative Tract Map 15230 shall be approved by the Subdivision Committee after a public hearing. Said tentative tract map must be found consistent with Area Plan 98-2.

4. CP CP G GRADING REVIEW
Prior to the issuance of any grading permits, the Manager, Current Planning Services, shall determine that the grading plan is consistent with Area Plan 98-2 and the approved tree preservation plan.

5. HP HP G TREE PRESERVATION PLAN
Prior to the issuance of any preliminary grading permit, a tree preservation plan shall be prepared which identifies the location, size and species of all trees having a trunk diameter of 5 inches or greater (measured at four and on-half feet above ground level). The tree preservation plan shall be consistent with the Area Plan 98-2 and the Foothill/Trabuco Specific Plan and approved by the Manager, Harbors Beaches, and Parks. The plan shall be signed and certified by a biologist or arborist.

6. EP SG/EP G FED ENDGD SPEC ACT
Prior to the issuance of any preliminary grading permit, approval of any activity that involves removal of any native vegetation from subject site including clearing, grubbing, mowing, discing, trenching, grading, fuel modification, or other related construction-related activities, the applicant shall obtain written proof from the U.S. Fish and Wildlife Services that said activity complies with the Federal Endangered Species Act. Additionally, the applicant shall obtain approval of a mitigation plan to replace lost ephemeral ponds at a 2 to 1 ratio. This evidence shall be submitted to the Manager, Subdivision and Grading, for review and approval, in consultation with the Manager, Environmental & Project Planning.

7. SG SG G GEOLOGY RPT
Prior to the issuance of any grading permits, the applicant shall submit a geotechnical report to the Manager, Subdivision and Grading, for approval. The report shall include the information and be in a form as required by the Grading Manual.

8. SG SG G DRAINAGE
Prior to the issuance of any grading permits, the applicant shall, in a manner meeting the approval of the Manager, Subdivision and Grading, provide:

A. A drainage study determining the effect the proposed development and associated drainage patterns will have on existing drainage facilities.

B Mitigate either by on-site retardation or by providing improvements appropriately to impacted existing drainage facilities.

9. SG SG G CROSS-LOT DRAINAGE
Prior to the issuance of any grading permits, and if determined necessary by the Manager, Subdivision and Grading, a letter of consent, in a form approved by the Manager, Subdivision and Grading, suitable for recording, shall be obtained from the affected property owners for offsite grading and/or drainage. The owner/applicant shall record said letters of consent for offsite drainage and/or cross-lot drainage prior to the issuance of any grading permit. Acceptance of cross-lot drainage on lots within the tract map boundaries shall be noted on the recorded map.

10. SG SG G VECTOR CONTROL
Prior to the issuance of any preliminary grading permits, the subdivider shall provide evidence to the Manager, Subdivision and Grading, that the Vector Control District has surveyed the site to determine if vector control measures are necessary. If warranted, the developer shall conduct such measures in a manner meeting the approval of the Manager, Subdivision and Grading.

11. HP HP G ARCHAEO OBS & SALVAGE
Prior to the issuance of any preliminary grading permit, the project applicant shall provide written evidence to the Manager, Subdivision and Grading, that a County-certified archeologist has been retained, shall be present al the pre-grading conference, shall establish procedures for archaeological resource surveillance, and shall establish, in cooperation with the project developer, procedures for temporarily halting or redirecting work to permit the sampling, identification, and evaluation of the artifacts as appropriate. If the archaeological resources are found to be significant, the archaeologist shall submit a follow-up report to the Manager, Harbors, Beaches & Parks, which shall include the period of inspection, an analysis of any artifacts fond and the present repository of the artifacts. Excavated finds shall be offered to the County of Orange, or designee, on a first refusal basis. These actions, as well as final mitigation and disposition of the resources, shall be subject to the approval of the Manager, Harbors, Beaches & Parks.

12. HP HP G PALEO OBS & SALVAGE
Prior to the issuance of an preliminary grading permit, the project applicant shall provide written evidence to the Manager, Subdivision and Grading, that a County-certified paleontologist has been retained to observe grading activities and salvage and catalogue fossils as necessary. The paleontologist shall be present at the pre-grading conference, shall establish procedures for

paleontological resource surveillance, and shall establish, in cooperation with the project developer, procedures for temporarily halting or redirecting work to permit sampling, identification, and evaluation of the fossils. If major paleontological resources are discovered, the paleontologist shall determine appropriate actions, in cooperation with the project developer, which ensure proper exploration and/or salvage. Excavated finds shall be offered to the County of Orange, or its designee, on a first refusal basis. The paleontologist shall submit a follow-up report for approval by the Manager, Harbors, Beaches & Parks, which shall include the period of inspection, a catalogue and analysis of the fossils found, and present repository of the fossils. These actions, as well as final mitigation and disposition of the resources, shall be subject to approval by the Manager, Harbors, Beaches & Parks.

13. SG SG G GRADING NOTES

Prior to the issuance of any grading permits, the following guidelines shall be included in the "Notes Section" of the grading plans meeting the approval of the Manager, Subdivision and Grading.

A. During all grading and construction operations, all oak trees on the site, located adjacent to the approved limits of grading and identified in an approved Tree Management/Preservation Plan as trees to be preserved, shall be adequately fenced and protected from encroachment by grading and construction equipment. Grading, placement of fill, and storage of building materials and heavy equipment, shall be prohibited within the dripline of any tree identified for preservation as part of an approved Tree Management/Preservation Plan.

B. If required, retaining walls shall be used to protect the existing grades of oaks identified for preservation from surrounding cut and fill. However, these should not alter drainage from around the trees.

C. No type of surface, whether pervious or impervious, shall be placed within a six-foot radius of oak tree trunks. Where surfacing cannot be avoided, alternative types of paving should be utilized, such as gravel or porous brick with sand joints.

D. Oak trees shall not be subjected to increased runoff from irrigation systems, impermeable surfaces, storm drain discharge, etc.

E. Natural drainage courses and natural grades outside the remedial grading impact area in proximity to and providing seasonal irrigation to oak trees shall not be altered.

F. In proximity to oak trees, only one trench should be dug to accommodate all utility lines. Where necessary, the impacted trees should be carefully pruned by an arborist in proportion to the total amount of root zone lost.

14. BP BP G CONSTRUCTION NOISE

A. Prior to the issuance of any grading permits, the project proponent shall produce evidence acceptable to the Manager, Building Permits, that:

1. All construction vehicles or equipment, fixed or mobile, operated within 1000' of a dwelling shall be equipped with properly operating and maintained mufflers.

2. All operations shall comply with Orange County Codified Ordinance Division 6 (Noise Control).

3. Stockpiling and/or vehicle staging areas shall be located as far as practicable from dwellings.

B. Notations in the above format, appropriately numbered and included with other notations on the front sheet of the grading plans, will be considered as adequate evidence of compliance with this condition.

15. CP SG G PERFORMANCE BOND
Prior to the issuance of a preliminary grading permit, the applicant shall provide a performance bond and related agreement to the satisfaction of the Manager, Subdivision and Grading.

16. HP HP G RE-ROUTING
Prior to the issuance of a preliminary grading permit, which includes the utilization of either the Aliso Creek Class I Off-Road Bikeway or the Live Oak Canyon Regional Riding and Hiking Trail, a re-routing plan shall be submitted by the applicant and approved by the Manager, Harbors, Beaches and Parks.

17. CP SG R
Prior to the recordation of any subdivision map which creates residential building sites, the preliminary grading activity for all of Area Plan 98-2 shall be completed to the satisfaction of the Manager, Subdivision and Grading.

18. HP HP R OPEN SPACE
Prior to the recordation of any subdivision map that creates residential building sites, the applicant shall dedicate to the County of Orange a minimum of seventy (70) percent of the project site as open space in a manner meeting the approval of the Manager, Harbors, Beaches & Parks. The open space dedication shall be for: (1) regional park, and (2) restricted scenic preservation purposes. The Manager, Harbors, Beaches & Parks shall determine the final boundary between these open space acres.

Within the regional park area, the Manager, Harbors, Beaches & Parks shall determine what improvements, if any, shall be made. If determined appropriate by the Manager, Harbors, Beaches & Parks, the applicant shall be required to provide those improvements as shown and discussed in the Area Plan 09-2.

Within the restricted scenic preservation easement area, after dedication, no grading, structures (including stables and corrals), or commercial agriculture activities shall be permitted in this area. River rock walls not to exceed three feet, approved Loffel walls, and open fencing shall be permitted. An entry gate and identification sign shall be permitted subject to approval of a site development or use permit for such use. Future fuel modification, landscaping, and tree preservation shall be permitted subject to prior approvals granted by the Planning Commission.

19. HP HP R RECREATIONAL TRAILS
Prior to the recordation of any subdivision map that creates residential building sites, the applicant shall dedicate a recreation easement for those bikeways and regional riding and hiking trails shown and discussed in Area Plan 98-2 in a manner meeting the approval of the Manager,

Harbors, Beaches & Parks. Also, the applicant shall design the necessary improvements and enter into an agreement, accompanied by financial security, with the County of Orange to install the necessary improvements in a manner meeting the approval of the Manager, Harbors, Beaches & Parks.

20. HP HP R CLEANING UP
Prior to the recordation of any subdivision map that creates residential building sites, the existing old ranch house and all abandoned automobiles shall be removed in a manner meeting the approval of the Manager, Harbors, Beaches & Parks.

21. HP HP R LANDSCAPE PLAN
Prior to the recordation of any subdivision map which creates residential building sites, the subdivider shall enter into an agreement and post financial security guaranteeing landscape improvements and the maintenance thereof based on preliminary landscape plan showing major plant material and uses, and a cost estimate for the landscape improvements. The preliminary plan and cost estimates shall be reviewed and approved by the Manager, Subdivision and Grading, in consultation with the Manager, Harbors, Beaches & Parks. Said plan shall take into account the County Standard Plans for landscaped areas, adopted plant palette guides, applicable scenic and Foothill Trabuco Specific Plan requirements, Water Conservation Measures contained in Board Resolution 90-487 (Water Conservation Measures), and Board Resolution 90-1341 (Water Conservation Implementation Plan).

22. EP EP FIRE STATION FACILITY
Prior to the recordation of any subdivision map that creates residential building sites, the applicant shall enter into an agreement with the Orange County Fire Authority to pay pro-rata capital facility fees for Fire Station No. 42 in a manner meeting the approval of the Manager, Environmental & Project Planning. Said agreement shall be accompanied by financial security.

23. EP EP LIBRARY FACILITY
Prior to the recordation of any subdivision map that creates residential building sites, the applicant shall enter into an agreement with the County of Orange to pay development fees for the South County Canyons Library as provided in Sections 7-9-700 through 7-9-713 of the Codified Ordinances of the County of Orange and Board Resolution 87-1684 in a manner meeting the approval of the Manager, Environmental & Project Planning. Said agreement shall be accompanied by financial security.

24. EP EP SHERIFF STATION
Prior to the recordation of an subdivision map that creates residential building sites, the project proponent shall enter into a secured agreement with the County of Orange, subject to approval of the Sheriff-Coroner, to participate on a pro rata basis in funding (a) Sheriff substation facilities and (b) the initial costs of providing additional patrols plus support necessary to serve the project in a manner meeting the approval of the Manager, Environmental & Project Planning.

25. EC F F FUEL MODIFICATION
Prior to the recordation of any subdivision map that creates residential building sites, the applicant shall demonstrate to the satisfaction of the Fire Chief that necessary fuel modification in off-site locations will be maintained in perpetuity.

26. EP EP R AFFORDABLE HOUSING
Prior to the recordation of a subdivision map that creates residential building sites, the landowner shall provide a cash contribution to the County's General Plan Trust Fund. The specific methodology and amount of said contribution shall be subject to the approval of the Manager, Environmental & Project Planning. These funds shall be directed to support the County's overall efforts toward providing affordable housing, including but not limited to, future updates of the Orange County Housing Element and related programs for maintaining existing affordable housing and providing new affordable housing opportunities.

27. CP CP B USE PERMIT
Prior to the issuance of any building permits for residential structures, the applicant shall submit a use permit application for review by the Foothill/Trabuco Review Board and approval by the Planning Commission after a public hearing. Said use permit shall include, but not be limited to, the location of all structures and uses, precise landscaping plan, precise fuel modification plan and program, grading plan, and architectural plans for all structures. Said use permit must be found consistent with Area Plan 98-2.

28. F F GBU FUEL MOD PLAN
Prior to the approval of the use permit to construct residential structures, the applicant shall obtain the Fire Chief's approval, in consultation with the Manager, Environmental and Project Planning, of a precise fuel modification plan and program. The plan shall indicate the proposed means of achieving an acceptable level of risk to structures by vegetation. Include the method (mechanical or hand labor) for removal of combustible vegetation and the planting of drought tolerant fire resistant plants. However, only the minimum necessary fuel modification shall be approved by the Fire Chief. All practical mitigation measures to minimize the need for fuel modification shall be recommended by the Fire Chief such as use of non-combustible construction materials, interior fire sprinkler system and double-glassed windows. The required fuel modification shall be performed in a manner to minimize impacts on the natural environment as much as possible. The fuel modification plan shall then become effective after the Planning Commission approves the use permit.

29. SG SG B ROAD REE PROG
Prior to the issuance of building permits for residential construction, the applicant shall pay fees for the Major Thoroughfare and Bridge Fee Program listed below, in a manner meeting the approval of the Manager, Subdivision and Grading.

A. Foothill Circulation Phasing Program
B. Foothill/Eastern Transportation Corridor
C. El Toro Road
D. Santiago Canyon Road

30. HP HP R LOCAL PARK FEES
Prior to the issuance of building permits for residential construction, the applicant shall pay in-lieu fees per the Local Park Code Requirements.

31. FTSP CP B SCHOOL FEES
Prior to the issuance of any building permits for residential construction, the applicant shall provide written verification from the School District, in a manner meeting the approval of the

Manager, Current Planning, that he has reached a mitigation agreement with the District for the subject project proposal.

32. CP NA NA INDEMNIFICATION

Applicant shall defend at his/her sole expense any action brought against the County because of issuance of this permit. Applicant will reimburse the County for any court costs and attorney's fees which the County may be required by a court to pay as a result of such action. The County may, at its sole discretion, participate in the defense of any such action, but such participation shall not relieve applicant of his/her obligations under this condition.

Analysis

Of

Environmental/CEQA

Issues

ANALYSIS OF ENVIRONMENTAL/CEQA ISSUES

I. CONCLUSIONS

The Planning & Development Services Department (PDSD) is the Agency designated by the County of Orange (Lead Agency) to discharge the responsibilities of the California Environmental Quality Act. As indicated by the August 25 and October 7, 1998 Environmental & Project Planning Services Division Reports to the Planning Commission, the Agency places a high priority on meeting its responsibilities in a thorough and comprehensive manner. Regarding the Saddleback Meadows Contingency Plan, PDSD has been and remains in full control of the CEQA review process and the preparation of its environmental documents, including supplementing the requirements of the CEQA Statutes and Guidelines with its own set of rigorous standards and requirements.

Based upon Addendum PA980103, the Staff Reports and presentations, public comments and issues raised at the Planning Commission hearings, the Planning & Development Services Department has determined that the Addendum, combined with Certified Final Subsequent EIR 566, are the appropriate environmental documentation for the proposed Contingency Plan, Zone Change ZC98-3 and AP98-2.

This document summarizes key issues identified during the CEQA process for the Contingency Plan. It is organized as follows:

- A summary of the CEQA background and conclusions is provided;
- A summary of the Contingency Plan's impacts are provided; and
- A summary of key issues raised at the first Planning Commission hearing on the Contingency Plan is provided.

II. CEQA BACKGROUND

A. PROJECT BACKGROUND

During the past four (4) years, the Saddleback Meadows site has received detailed environmental reviews for planning compliance with CEQA on two separate previous occasions:

- Proposed Final EIR 561 was prepared in 1995-96 for a 318-unit, conventional SFD development on lots averaging 5000 sq. ft. The application, which included a Zone Change, Area Plan and Tentative Tract Map, was not not approved by the Board of Supervisors; and
- Certified Final Subsequent EIR 566 was prepared in conjunction with Grading Permit Application GA960048 for recorded Tract 10692 for a 705-unit manufactured housing subdivison. This EIR was certified by the Planning Commission on December 3, 1997 and upon appeal, the EIR certification was upheld by the Orange County Board of Supervisors on January 27, 1998.

The currently proposed Contingency Plan for 299 residential units was examined previously for this site in the form of alternatives contained in Proposed Final EIR 561 and Certified Subsequent EIR 566, although with slightly differing site plans. The alternatives contained in the Appendix of the Addendum are Alternative 4 from Certified SEIR 566 and Alternatives 8 and 9 from Proposed FEIR 561, which were previously evaluated. The Contingency Plan results from an extended evaluation by the applicant to address environmental concerns previously analyzed by reconfiguring the proposed project density, land use and location.

B. PROJECT DEFINED

Under Section 15002(d) of CEQA Guidelines, a project is defined as an activity subject to CEQA. Further, the term project refers to an activity which is proposed that has a potential for resulting in a physical change in the environment either directly or ultimately. Section 15377 defines a private project as a project which will be carried out by a person other than a governmental agency, but the project will need a discretionary approval from one or more governmental agencies.

The proposed development is regarded as a private project, because of the discretionary approvals required to implement it. These include a Planning Application/ Zone Change, Area Plan and Tentative Tract map.

C. STANDARD OF REVIEW

The CEQA Guidelines provide guidance for use of previously certified EIRs with a subsequent activity. Specifically, where a previous EIR has been certified for a larger project, the later activity or project is examined in light of the previously certified EIR. The Guidelines also provide that a Tiered EIR may be incorporated into an Addendum to an EIR to address significant and cumulative program impacts analyzed and considered in the Tiered EIR (Section 15164).

1. **Explanation of a Subsequent EIR:** Guidelines Section 15162 specify where an EIR has been previously prepared, an EIR need not be prepared for subsequent actions unless any of the following conditions prevail:
   - Subsequent changes are proposed in the project which will require important revisions of the previous EIR due to the involvement of new significant environmental impacts not considered in the previous EIR;
   - Substantial changes occur with respect to circumstances under which the project is undertaken, or
   - New information of substantial importance to the project becomes available.
2. **Explanation of an Addendum EIR:** According to CEQA Guidelines Section 15164 (a), the Lead Agency shall prepare an Addendum to an EIR if the following prevail:
   - None of the conditions described in Section 15162 calling for the preparation of a Subsequent EIR have occurred;

- Only minor technical changes or additions are necessary to make the EIR under consideration adequate under CEQA;
- The changes made by the Addendum do not raise important new issues about the significant effects on the environment.

D. DECISION TO PREPARE AN ADDENDUM

None of the conditions described in Section 15162 calling for preparing a Supplemental or Subsequent EIR have occurred, and changes related to the proposed project are of a minor nature. The Planning & Development Services Department has determined that only minor technical changes to FEIR 566 are necessary in order to properly address the current Project, that FEIR 566 adequately analyzes all of the major impacts of the proposed project, that no major changes are proposed with respect to the circumstances surrounding this project, and that no new information of significance has become available that would substantially affect the validity of FEIR 566. Therefore, an Addendum is appropriate for the proposed project in order to provide project specific analysis, to provide clarification and address minor changes to FEIR 566.

E. CONSIDERATIONS IN INITIAL STUDY

In accordance with Guidelines Section 15063, the Initial Study was completed to determine the possible impacts of the proposed Contingency Plan. Following is a listing of key documents, County Divisions, interest groups, and Resource Agencies utilized in the overall review process for Saddleback Meadows and incorporated into the Initial Study review process.

1. **Documents** - Certified Final Subsequent EIR 566, certified by the Orange County Planning Commission for a 705-unit manufactured single-family residential project for the same site; Proposed Final EIR 561, prepared for a 318-unit conventional single-family residential project for the same site; Foothill/Trabuco Specific Plan FEIR 531 and Specific Plan Land Use Regulations; Site Plan, Tentative Tract Maps and Plot Plans for the proposed project;
2. **Comments** - Input received from the public and interested parties on the two previous projects on the subject site, including: Rural Canyon Residents Association; The Vedanta Society; Foothill/Trabuco Specific Plan Review Board; St. Michael's Abbey; Portola Hills HOA I and Portola Hills HOA II; Hidden Ridge HOA; Canyon View HOA; ETI Corral 357 Orange County Horsemen Assoc.; Serrano Creek Ranch Equestrian Center; the Gabrieleno Indians; Sierra Club; and National Audubon Society
3. **Comments** - Input received from the Public Resources Agencies on the two previous projects proposed on the subject site, including: US Fish and Wildlife Service; CA Department of Fish & Game; and US Army Corps of Engineers.
4. **Comments** - Technical input from divisions of the County including: PDS: Subdivision & Grading Services Division, - Geotechnical & Grading Plan Check Section; NPDES Section; and Traffic Section; Current Planning Services Division -

Orange County Natural Communities Conservation Program; Environmental & Project Planning Services Division - Advance Planning and Transportation Planning Sections; Building Permits Services Division - Acoustics Section; Public Facilities & Resources Department: HBP Division; Environmental Resources Division; Traffic Engineering Division; Orange County Fire Authority;

5. **Field checks** of proposed project site and the project vicinity; and
6. CEQA Checklist - A detailed analysis of the CEQA Environmental Checklist.

III. PROPOSED CONTINGENCY PLAN'S ENVIRONMENTAL IMPACTS

Following is a summary of the key elements of the impact analysis in the Addendum and Staff Reports. The Addendum discusses each of the environmental analysis checklist categories as they relate to the proposed 299 unit project in comparison with the approved 705 unit project.

A LAND USE COMPATIBILITY

The land use compatibility impacts associated with the approved 705 unit project are significant, as demonstrated in Certified SEIR 566 and reiterated in the Addendum. This is due to the approved project's high number of units and attending intensity-related impacts. In comparison, the proposed project will result in reduced land use compatibility impacts, largely a result of the substantially fewer number of units. Additionally, the proposed project provides additional buffering through site design utilizing landform berming and contour grading in concert with landscaping to further screen and filter views of the development edges. A major design feature of the proposed project for 299 units is the single loaded primary spine road (residential development south of the spine road and landform grading to the north), which is intended to screen off-site views of the on-site development area. The proposed project also features a cluster design concept, providing room for a wildlife movement corridor system and effectively providing visual relief through the apportionment of the development into three residential enclaves. Additional single-family residential dwellings were located within the north central portion of the project site in the approved project, as compared to the proposed project, which has undisturbed open space in the same area.

B. GRADING

Due to its larger scale and greater intensity, implementation of the approved project for 705 units would require 2.6 million cubic yards of conventional grading to achieve planned elevations and profiles and associated access roadways and 8.9 million cubic yards of remedial grading to stabilize the proposed slopes through the creation of buttresses, shear keys, and stabilization fills for a total grading quantity of 11.5 million cubic yards. In comparison, implementation of the proposed project for 299 units would require approximately 2.1 million cubic yards of conventional grading and 6.8 million cubic yards of remedial grading for a total grading quantity of 8.9 million cubic

yards. Accordingly, the required grading for the proposed project would require 2.6 million cubic yards less than that required to implement the proposed project. Grading quantities decrease under the Contingency Plan as a result of the reduced earthwork required to create the landform grading along the visually prominent project edges.

C. BIOLOGICAL RESOURCES

The Biological Resources section of the Addendum discusses the biological resource impacts associated with the proposed 299 unit project in comparison with the approved 705 unit project. A biological issues analysis (Helix, 2/20/98) was prepared for the proposed 299 unit project and is included in the Addendum as Appendix G. The results of the analysis are presented under the four categories of corridor analysis, vegetation impacts, oak tree impacts, and sensitive species impacts, paralleling the discussion in Certified SEIR 566, and are also discussed in the body of the Addendum.

D. WILDLIFE CORRIDOR

Implementation of the approved 705 unit project would directly impact wildlife movement through the project site, as it contains no design features which seek to facilitate wildlife movement. It cannot be assumed that wildlife would be able to move through the project site as currently designed. The approved project, as currently proposed, may hinder or preclude the preparation of the southern subregional preserve, due to restricted wildlife movement.

In comparison, the proposed 299 unit project features a 400 foot wide wildlife corridor which will increase the viability of wildlife connectivity through Saddleback Meadows. The corridor, as planned in the proposed project, is expected to be wide enough for wildlife movement. Topography on either side of the corridor is conducive to wildlife movement because it coincides with an area of natural canyon topography. The revegetation within the corridor is expected to provide the necessary cover for wildlife to add to the corridor's viability. The 50-foot wide spine road crossing the corridor is not expected to inhibit wildlife movement due to the low traffic levels anticipated for this road. The wildlife corridor is expected to function adequately.

E. NCCP

Impacts to coastal sage scrub resulting from implementation of the proposed 299 unit project would be similar to those for the approved 705 unit project. Under the approved project, 50.3 acres of coastal sage scrub would be impacted, while 45.8 acres will be impacted under the proposed project. In accordance with the NCCP, the loss of 45.8 acres of Venturan-Diegan transitional coastal sage scrub due to project implementation is less than the allowable five percent loss of the total coastal sage scrub in the subregion. Accordingly, the proposed project is in compliance with the NCCP. Mitigation measures related to accounting and preservation of coastal sage scrub and compliance with the NCCP through the securing of appropriate Resource Agency permits have been carried forward in the Addendum from Certified Final SEIR 566.

F. RIPARIAN RESOURCES

The loss of riparian resources associated with the proposed project, which include 0.6 acres of ephemeral pond (all but two of the ponds), 0.21 acres of southern sycamore riparian woodland, and 2.01 acres of mule fat scrub, are similar to, although slightly less than, those resulting from implementation of the approved 705 unit project. Mitigation measures from Certified SEIR 566, which require the securing of appropriate permits from the Resource Agencies for the protection of riparian resources, have been carried forward in the Addendum.

G. COAST LIVE OAK WOODLAND

Implementation of the approve project would result in the loss of 14.0 acres (284 individual trees) of the total 14.5 acres (298 individual trees) of coast live oak woodland on the project site. However, the proposed 299 unit project would impact only 5.7 acres (175 individual trees). A total of 123 oak trees (approximately 41 percent) occur outside the remedial grading zone and are considered preserved. Mitigation measures related to preservation and enhancement of the impacted coast live oak woodland habitat have been carried forward from Certified SEIR 566 to the Addendum.

H. RIVERSIDE FAIRY SHRIMP

As stated under Riparian Resources above, all but two of the ephemeral ponds, habitat supporting the Riverside fairy shrimp, will be directly impacted by both the approved and the proposed projects. Mitigation measures relating to the relocation and establishment of a mitigation plan designed to mitigate impacts to Riverside fairy shrimp/pond habitat have been carried forward from Certified SEIR 566 to the Addendum.

I. COASTAL CALIFORNIA GNATCATCHER

Previous field surveys have determined that on-site coastal sage scrub habitat is not occupied by coastal California gnatcatchers, although current surveys have not been completed to USFWS presence/absence protocol. As such, on-site coastal sage scrub habitats must be considered occupied by coastal California gnatcatcher until proven otherwise. Mitigation measures relating to conducting adequate studies to determine the presence of the coastal California gnatcatcher have been carried forward from Certified SEIR 566 to the Addendum.

J. AESTHETICS

As with the approved project, the proposed project for 299 units would substantially alter the existing topography and visual character of the project site. The landform/contour grading, berming, and wildlife corridor system included in the proposed project would help to break up the long linear massing of housing which would result with implementation of the approved 705 unit project and create areas of housing separated by 150 to 500 foot stretches of open space.

Visual impacts to St. Michael's Abbey would be substantially reduced under the proposed project as compared to the approved project due to the relocation of residential lots north of the on-site spine road, extensive landform grading, and implementation of a trail head/staging area. View impacts of the project site from the Ramakrishna Monastery would be reduced as compared with the approved project by implementation of the berming/contour grading, the wildlife corridor system and associated open space areas, and through the elimination of several loffel walls which would reduce the height and intensity of adjacent manufactured slopes.

K. OTHER IMPACTS

The remaining environmental analysis checklist categories, including water/hydrology, transportation and circulation, air quality, noise, cultural/scientific resources, recreation, hazards, public services, and utilities and service systems are fully discussed in the Addendum. Mitigation measures pertaining to these impact categories have been carried forward from Certified SEIR 566 to the Addendum.

IV. KEY ISSUES DURING PLANNING COMMISSION HEARINGS

During the Planning Commission hearing on August 25, 1998, several key issues were raised by the public and the Planning Commission requested responses and/or clarification. The following summarizes those issues:

A PUBLIC NOTIFICATION REQUIREMENTS

Several of the Planning Commissioners and members of the public expressed concern that the Addendum was not properly noticed, particularly in view of the fact that it was not distributed to the U.S. Fish and Wildlife Service and the California Department of Fish and Game (Resource Agencies).

The omission of sending the Resource Agencies the Addendum was a clerical error. Staff has rectified this error by, subsequent to the August 25 hearing, distributing copies of the Addendum to the Resource Agencies. On August 31, PDSD staff met with representatives of the Resource Agencies to discuss the Addendum process as it relates to the proposed Contingency Plan. This meeting was constructive in clarifying the process and alleviating their concerns regarding the relationship of the Contingency Plan to Certified Final Subsequent EIR 566. In addition, copies of the document were sent to the Cities of Mission Viejo and Lake Forest.

It should be noted that, notwithstanding this oversight, CEQA Guidelines were followed in that, as indicated in Section 15164 of the CEQA Guidelines, an Addendum does not require circulation or response to comments received thereon. However, it is County policy to fully inform all parties who have exhibited interest in a given project as to that project's latest status. Accordingly, in addition to sending all commentators on the Addendum a copy of the Response to Comments and staff report, staff sent copies of staff reports to all commentators on Certified Final Subsequent EIR 566. In so doing, staff has gone beyond the requirements of CEQA, with regard to Addendum circulation, by informing all commentators on the parent document (CFSEIR 566) of

the Addendum's status. It is for these reasons that staff feels that recirculation of the Addendum is not required or warranted.

B. Recirculation of Certified Final Subsequent EIR 566

A major theme of public comment at the August 25, 1998 hearing was the need for recirculation of Certified Final Subsequent EIR 566 in light of the difference between the Contingency Plan and 705-unit manufactured housing project.

The Section referred to in the public testimony and correspondence regarding recirculation is CEQA Guidelines Section 15153. This section states that " the Lead Agency may employ a single EIR to describe more than one project, if such projects are essentially the same in terms of environmental impact. Further, the lead agency may use an earlier EIR prepared in ;connection with an earlier project to apply to a later project, if the circumstances of the projects are essentially the same."

The basic concept of Section 15153 is to avoid redundancy under CEQA when duplicating very similar projects in very similar locations. Although the County of Orange has determined that Section 15164 of the Guidelines, Addendum to an EIR, is more appropriate, the County has met all the requirements of Section with the proposed Contingency Plan.

C. Wildlife Corridor/NCCP

The Corridor placement and design featured in the proposed Contingency Plan was also featured in Certified Final Subsequent EIR (CFSEIR) 566, which was certified by the Planning Commission, was appealed and upheld by the Board of Supervisors. Alternative 4 of CFSEIR 566 as well as Alternatives 8 and 9 of Proposed Final EIR 561 all reflect the placement of the corridor at this location. The design and dimensions of the Corridor were derived through previous consultation with the Resource Agencies during the environmental review process associated with these two previous EIRs.

In their correspondence to the County, the Resource Agencies did express a preference for the lower density Alternatives contained within the previous EIRs, notwithstanding their verbal concurrence with the basic design parameters of the 400 foot wide Corridor as featured in the proposed Contingency Plan, although they have expressed a preference for a much wider corridor. Accordingly, the Resource Agency's position regarding the Wildlife Corridor featured in the Contingency Plan remains the same in that their previous comments included consideration of an identical corridor.

With regard to the Southern Subregion, NCCP related comments have been evaluated in both Certified Final Subsequent EIR 566 and Proposed Final EIR 561. The 299-unit Contingency Plan has incorporated many of the concerns identified in the two (2) previous EIRs relative to the NCCP, including a central wildlife corridor, preservation of, or replacement measures to ensure the continued sustainability of, valuable biological resources.

E. Consideration of Other Alternatives

The Commission requested additional clarification on the connection between other Alternatives and the Contingency Plan, particularly alternatives associated with the negotiations that are taking place between St. Michaels Abbey, the Vedanta Society, the County and the California Quartet. The Planning Commission asked why such alternative were not included in the Addendum or brought forth in some other way to the Commission.

PDSD was presented with the Contingency Plan as a stand alone project. It has been analyzed as such. Proposed Final EIR 561 and Certified Final Subsequent EIR 566 analyzed a full range of alternatives, ranging from the No Project/No Development Alternative to the 705-unit manufactured housing project. No other alternative has been submitted to the County for environmental review.

An Addendum was determined to be the appropriate environmental documentation for the proposal based on CEQA Guidelines as discussed above and in the previous staff report. Should the identified alternatives be submitted to the County, they will be subjected to the same CEQA environmental documentation requirements as the proposed project.

V. RESPONSE TO COMMENTS DOCUMENT

A Response to Comments Document has been prepared to address all written Comments received on Addendum PA980103 prior to the October 7, 1998 Planning Commission hearing. A copy of this document was attached to the October 7, 1998 Environmental & Project Planning Services Report for the Planning Commission's review and consideration as Attachment A. Additionally, as is the County's policy, copies of the Response to Comments Document and the Report were provided to each person and/or group who submitted comments.

Revised Draft

RESOLUTION OF THE BOARD OF SUPERVISORS

ADDENDUM PA980103 to FEIR 566

SADDLEBACK MEADOWS CONTINGENCY PLAN
Zone Change ZC98-3 and Area Plan 98-2

ORANGE COUNTY, CALIFORNIA

_____, 1998

On the motion of Supervisor _____, duly seconded and carried, the following Resolution was adopted.

WHEREAS, on December 10, 1991, this Board certified Final EIR 531 for the Foothill/Trabuco Specific Plan, which designated the Saddleback Meadows site as a residential site in the Upper Aliso District; and

WHEREAS, Grading Permit application GA940031 was submitted to the County in April 1994, for Phase I of Tract 10692, a 705-unit manufactured single family residential project, for which the County required the preparation of an EIR, which was subsequently appealed in August 1994; and

WHEREAS, the applicant withdrew the appeal on January 31, 1995, whereupon the Planning Commission directed the applicant to revise the project for one more compatible with surrounding land use; and

WHEREAS, the applicant submitted a revised, 318-unit, conventional single-family residential project, including zone change, area plan and tentative tract map for which EIR 561was prepared; and

WHEREAS, the Board of Supervisors denied the revised project zone change on October 22, 1997; and

WHEREAS, applicant submitted Grading Permit application GA960048 for the entirety of Tract 10692, for which the County required the preparation of EIR 566; and

WHEREAS, the Orange County Planning Commission reviewed all documentation comprising proposed Final SEIR 566 for the proposed project, as of December 3, 1997, certifying Final SEIR 566 as complete and adequate and in compliance with all requirements of the CEQA Statutes, the State CEQA Guidelines and County of Orange procedures; and

WHEREAS, the Board of Supervisors upheld the certification of Final Subsequent EIR 566 on February 24, 1998; and

WHEREAS, following negotiations with the County and private parties concerning the possible purchase of the Saddleback Meadows site, the applicant submitted a Zone Change and Area Plan application for the subject 299-unit Contingency Plan, for which the County prepared Addendum PA980103.

NOW THEREFORE, based upon Addendum PA980103 and Certified FSEIR 566, this Board makes the following findings:

1. The Board finds that Final EIR 566 identified all significant environmental effects of the Contingency Plan, as set forth in the STATEMENT OF FINDINGS, FACTS IN SUPPORT OF FINDINGS AND STATEMENT OF OVERRIDING CONSIDERATIONS, in the certification of the Final Subsequent EIR.
2. The Board finds that, per the criteria set forth in Section 15162 of the CEQA Guidelines, the proposed Contingency Plan does not trigger the preparation of a subsequent EIR.
3. The Board finds that, per Section 15164 of the CEQA Guidelines, the proposed Contingency Plan meets all the criteria which would allow the preparation of an Addendum to Certifed FSEIR 566.

4. The Board finds that, together, Addendum PA980103 and Certified FSEIR 566, satisfy all requirements of the State CEQA Statutes and Guidelines and County of Orange procedures for the Saddleback Meadows Contingency Plan.
5. The Board finds that, pursuant to Section 711.4 of the California Fish and Game Code, although there is evidence that the proposed Contingency Plan has a potential for adverse effects on wildlife resources, and thereby is subject to F&G fees, the fees for the proposed project site have been previously paid in conjunction with Certified Final SEIR 566.
6. The Board finds that, although the proposed project will have a significant impact upon Coastal Sage Scrub habitat, because of proposed mitigation measures imposed on the project and project design features, the project will not preclude the ability to prepare an effective Subregional Natural Communities Conservation Planning (NCCP) Program.

SUBDIVISION SECTION CONTACT: Vic Bellaschi 834-5045

LOCATION: On the easterly side of El Toro Road approximately 1,500 feet southerly of Live Oak Canyon Road in the Cooks Corner-Live Oak Canyon area.

ASSESSORS PARCEL NO. 856-011-portion 20; 856-071-01 thru 09; 856-081-01 thru 12; 856-091-01 thru 11.

PROJECT NO. EP/PP 69873

SUMMARY: Proposes a subdivision of approximately 222 acres of land into 299 lots for single family residential development, 1 lot for a pump station, 1 lot for a gated entry, 2 lots for regional park purposes, 20 lots for landscaped slopes/open space and 17 lots for private streets.

Area Plan (AP) 98-2 and Zone Change (ZC) 98-3 were conditionally approved by the Planning Commission on October 7, 1998 and pertain to the development of subject Tentative Tract Map No. 15230

NOTIFICATION:

All federal, state, and county departments, divisions and agencies having cognizance of the affected area, the Foothill/Trabuco Specific Plan Review Board, the Marine Corps Air Station, the Rural Canyons Conservation Fund, and all property owners within 300 feet of this property.

GENERAL PLAN CONSISTENCY/ZONING COMPLIANCE:

Land Use Element: 1B Suburban Residential (.5-18 du/ac)

Community Profile: 1.2 Low Density Residential

Specific Plan: Foothill/Trabuco Specific Plan
Bridlewood Residential (BWR) District

Proposed Density: 1.35 du/ac

This project, as conditioned, is consistent with and in conformance with the General Plan and its implementing documents.

2597

COMPLIANCE WITH THE CALIFORNIA ENVIRONMENTAL QUALITY ACT:

The proposed project is covered by Final EIR No. 566 previously certified on June 2, 1998 and Addendum PA 980103. Prior to project approval, the Subdivision Committee must assert that, together, they are adequate to satisfy the requirements of CEQA for the proposed project.

EXISTING CONDITIONS:

The subject property is sloping undeveloped terrain which is in its natural state.

DRAINAGE:

The subject property is located primarily within the Los Alisos Area Master Plan of Drainage (MPD). MPD Facility J01P09 is involved and requires construction. MPD fees of $550.00 per acre are required to be paid (within the portion of the project that is within the Los Alisos MPD).

SOUND CONSIDERATION:

This property area is impacted by intrusive noises. The extent of mitigation required can be determined in connection with an acoustical report which may be required when future development.

RECREATION AND OPEN SPACE:

Master Plan of Regional Recreation Facilities

Regional Park Dedication: The subdivider is required to dedicate in fee to the County of Orange Lots LL and MM for regional park purposes and an addition to the O'Neill Regional Park.

Master Plan of Regional Riding and Hiking Trails

Regional Trail Dedication:

The Live Oak Canyon Regional Riding and Hiking Trial, which is depicted within the Recreation Element of the General Plan, is aligned along the east side of and adjacent to El Toro Road and runs through a portion of Lot R. The subdivider is required to dedicate to the County of Orange a recreation easement for that portion of the subject Riding and Hiking Trail aligned through Lot R as well as improve said trail, both onsite and offsite, from the south property line near Valley Vista Way to the existing El Toro Road undercrossing located to the north.

Local Riding and Hiking Trail Dedication:

A local riding and hiking trail is described within Area Plan 98-2 text to be dedicated o the County within a recreation easement aligned east-west through the proposed project. A recreation easement for the local riding and hiking trail shall be dedicated to the County for those areas not included within future dedicated regional park land. Moreover, trail improvements shall be made for this trial, both within and outside the future regional park, in addition to a connection from the stating area along the community spine road offsite to the regional riding and hiking trail at El Toro Road. Improvements for the staging area shall also be made including the ability to accommodate parking equestrian trailers a well as vehicle only parking. Dedication of the recreation easement and the improvements, including the staging area shall be required.

Trail Reroutes-Bikeway and Riding and Hiking Trails:

The Aliso Creek Class I Off-Road bikeway, the Live Oak Canyon Regional Riding and Hiking Trail and the El Toro Road Class II On-Road Bikeway will require re-routing plans during construction of the subject tentative tract. The subdivider is required to submit said re-route plans prior to the issuance of any grading permits.

Master Plan of Local Parks (Local Park Code)

The Local Park Code requirement for the subject tentative map is 2.392 net usable acres of park land based upon a proposal to build 299 dwelling units at a gross residential density of 1.35 du/ac (299 du x .008 ac/du).

The Local Park Code requirements for the subject tentative map will be satisfied through the payment of in-lieu fees prior to the issuance of building permits.

Resources Element – Open Space Component

Scenic Preservation Easements: The subdivider is required to dedicate to the County of Orange restricted scenic preservation easements over Lots R, CC, DD, EE, FF, GG, HH, II and JJ.

Landscape Plan: A landscape plan which includes the improvements and maintenance of the restricted scenic preservation easements will be required.

Urban Edge Treatment Plan/Viewshed Analysis: The subdivider is required to submit to the County of Orange for approval an urban edge treatment plan/viewshed analysis.

Master Plan of Countywide Bikeways

The Master Plan of Countywide Bikeways (MPCB) indicates a Class II On-Road Bikeway along the northbound lane of El Toro Road.

PUBLIC SERVICES AND UTILITIES:

Schools

This property is within the boundaries of the Saddleback Valley Unified School District. The developer is subject to the provisions of Assembly Bill AB 2926, or other mitigating measures designed to provide for school facilities and/or funding, such as community facilities districts.

Facilities Fee Programs

This project area is located in a facilities fee program area, as the program is defined in Section 7-9-702, Codified Ordinances of Orange County, for the funding of library service, fire station and sheriff substation facilities.

Water/Sewer

This project is within the boundaries of the Trabuco Canyon Water District. The District stated in their "will-serve" letter that the District will be capable of providing water and sewage disposal service to this development.

Water Quality Control

The Trabuco Canyon Water District operates in accordance with requirements prescribed by the California Regional Water Quality Control Board, San Diego Region.

Fire Protection and Safety

Existing and proposed fire protection services should be capable of providing an adequate level of fire protection services to this development.

This property is located in a very high fire hazard area due to wildland exposure.

County Service Area (CSA)

This property is within the boundaries of County Service Area No. 26.

CIRCULATION:

Scenic Highway Corridors

The Master Plan of Scenic Highways designates El Toro Road as a landscape/viewscape corridor.

Access/Highways/Streets/Roads

Access to the proposed development within the subject tentative tract map will be from El Toro Road, an unimproved major arterial highway, via Spine Street. Emergency access to the proposed development will be provided via Valley Vista Way.

Major Thoroughfare and Bridge Fee Program

This project lies within the area of benefit of the Foothill Circulation Phasing Program. The developer is required to pay fees in accordance with the adopted program.

This project lies within the area of benefit of the Foothill/Eastern Transportation Corridor. The developer is required to pay Foothill/Eastern Major Thoroughfare and Bridge fees in accordance with the adopted program.

This project lies within the proposed area of benefit of the Santiago Canyon Road Fee Program. The developer is required to pay Major Thoroughfare and Bridge fees in accordance with the adopted program.

This property lies within the area of benefit of the El Toro Road Fee Program. The subdivider is required to pay Major Thoroughfare and Bridge fees in accordance with the adopted program.

Off-Site Fee Program

This project will be responsible for participation in fee programs off-site which will involve expenditures in excess of $155,000.00. Accordingly, the provisions of Section 66452.6(a), Subdivision Map Act, do apply to this project.

COMMENTS FROM CIVIC GROUPS AND OTHERS NOTIFIED:

Comments were received from Ray Chandos-Secretary/Treasurer of the Rural Canyons Conservation Fund.

DEVIATIONS FROM STANDARDS OF DESIGN:

The subdivider may request deviations from County-approved standard design criteria in accordance with Section 7-9-291 of the Orange County Subdivision Code. In the absence of any approved deviation request or if there is a conflict between the tentative map and the County-approved standard design criteria, the County-approved standard design criteria will prevail.

Deviations Requested

1. Deviation from the Orange County Subdivision Code Section 7-9-283 (Man Made Slopes) to allow the Type "C" Slopes on certain lots to heights above the maximum permitted height of 20 feet.

2. Deviation from Standard Plan 1107 (Typical Sections) to allow an increase in the maximum permitted grade on "R" Street from 10% to 12%.

3. Deviation from Orange Count Subdivision Code Section 7-9-274 (Curved Local Street and Highway Radii) to allow for the reduction of the centerline radius to less than the required 250 feet as follows:

Street	Radius Requested (Feet)
"L"	215

SUBIVISION COMMITTEE ACTION:

The following findings and conditions are offered for the Subdivision Committee's consideration,.

Findings:

I. That the proposed map is consistent with the Orange County General Plan.

II. That the design and improvement of the proposed subdivision are consistent with the Orange County General Plan.

III. That the proposed site is physically suitable for the proposed type of development.

IV. That the proposed site is physically suitable for the proposed density of development.

V. That the design of the subdivision or the proposed improvements are not likely to cause substantial environmental damage or substantial and avoidable injury to fish or wildlife or their habitat.

VI. That the design of the subdivision and the type of improvements proposed are not likely to cause serious public health problems.

VII. That the design of the subdivision and the type of improvements proposed will not conflict with easements of record or established by court judgment acquired by the public-at-large for access through or use of property within the proposed subdivision.

VIII. That the proposed subdivision complies with the requirements set forth in the Orange County Subdivision Code and the Orange County Zoning Code.

IX. That the proposed subdivision, together with the provisions for its design and improvement, is consistent with the Foothill/Trabuco Specific Plan.

X. That the design and improvement of the proposed subdivision are suitable for the uses proposed, and the subdivision can be developed in compliance with the applicable zoning regulations pursuant to Section 7-9-254 of the Subdivision Code.

XI. That the tentative map is consistent with both Area Plan (AP) 98-2 and Zone Change (ZC) 98-3.

XII. That the Subdivision Committee has considered Final EIR 566, previously certified on 6/2/98, and Addendum PA 980103 prior to project approval. Together they are approved for the proposed project based upon the following findings:

1. Together, these documents are adequate to satisfy the requirements of CEQA by the decision-maker;

2. The additions, clarifications, and/or changes to the original document caused by the Addendum do not raise new significant issues which were not addressed by the EIR; and

3. The approval of the EIR and Addendum for the proposed project reflect the independent judgment of the Subdivision Committee.

XIII. That pursuant to Section 711.4 of the California Fish and Game Code, this project is not exempt from the required fees as it has been determined that adverse impacts to wildlife resources will result from the project. The required fees will need to be paid.

XIV. That the proposed project will have a significant unmitigated impact upon Coastal Sage Scrub habitat and, therefore, will preclude the ability to prepare an effective subregional Natural Communities Conservation Planning (NCPP) Program.

XV. That the discharge of waste from the proposed subdivision into the existing sewer system of the Trabuco Canyon Water District will not result in violations of existing requirements prescribed by the California Regional Water Quality Control Board, San Diego Region.

XVI. That the design of the subdivision and its improvements do provide, to the extent feasible, for future passive or natural heating or cooling opportunities as specified in Section 66473.1 of the Government Code (Subdivision Map Act).

XVII. That the following determinations apply to fees required by Sections 7-9-700 through 713, Codified Ordinances of Orange County:

A. Purpose of fees: Fire protection, paramedic, law enforcement, library, and general County services.

B. Use of fees: Construction of new fire station, sheriff substation, library, and general County facilities in newly developing areas which have inadequate service.

C. Relationship between use of fees and type of development: Dwelling units and commercial/industrial structures and their occupants require fire protection, paramedic, law enforcement, library, and general County services.

D. Relationship between need for facilities and type of project: Project is located in newly developing area which has inadequate fire protection, paramedic, library services, and sheriff substation and general County facilities.

E. Relationship between amount of fees and cost of the portion of the facilities attributable to the development: Fees represent project's pro rata share of the cost of the fire station, sheriff substation, library, and general County facilities.

XVIII. That because of participation in fee programs for off-site improvements, this project will qualify for consideration under Section 66452.6 of the Subdivision Map Act.

XIX. That the deviations from the standards of design set forth in the Subdivision Code Subdivision Committee Report were considered and found to be justified based upon the reasons set forth in the Subdivision Committee Report or special circumstances which apply.

XX. That the Local Park Code Requirement can be met by the payment of in-lieu fees.

XXI. That the monitoring requirements of Public Resources Code Section 21081.6 (AB 3180) will be considered as having been met in that the design of the subject project, the satisfaction of the requirements of the County's building, grading, fire, and other codes and ordinances and the satisfaction of the conditions of approval applied to the project will implement the mitigation measures contained in EIR No. 566 an Addendum PA 980103.

XXII. That the applicant is hereby provided notice that the fees, dedications, reservations or other exactions imposed on this project are as described in this approval as well as the reports and actions accompanying this approval and that the 90-day approval period in which the applicant may protest pursuant to Government Code Section 66020 has begun

Conditions:

Codes (for time of performance/type of condition)

(G)	Grading Permit	(S)	Standard Condition
(R)	Recordation	(SS)	Site Specific Condition
(B)	Building Permit		
(U)	Use and Occupancy		
(SL)	Sale, Lease, or Rental		
(NA)	Timing not Specified		

NOTE: Any improvements required prior to the recordation of a final map shall be completed or the subdivider shall enter into an agreement with the County of Orange guaranteeing the improvements. Said agreement shall be accompanied by financial security guaranteeing the installation of the improvements at the time stated in the agreement.

1. CP NA NA SPECIAL

Approval of Vesting TTM 15230 is subject to final approval of Zone Change 98-3 and Area Plan 98-2. Prior to recordation of VTTM 15230, the Manager, Current Planning shall determine that it is in substantial compliance with final approved Zone Change 98-3 and Area Plan 98-2. Otherwise, a revised tentative map approved by the Subdivision Committee shall be required.

2. Prior to the issuance of any grading permits, the applicant shall satisfy the following conditions from the draft Planning Commission Resolution for Area Plan 98-2.

4. Grading Review
5. Tree Preservation Plan
6. Federal Endangered Species
7. Geology Report
8. Drainage
9. Cross-Lot Drainage
10. Vector Control
11. Archaeo Observation & Salvage
12. Paleo Observation & Salvage
13. Grading Notes
14. Construction Noise
15. Performance Bond
16. Re-Routing Trails

3. Prior to the recordation of a subdivision map which creates residential building sites, the subdivider shall satisfy the following conditions from the draft Planning Commission Resolution for Area Plan 98-2:

    17. Preliminary Grading Completed
    18. Open Space Dedication
    19. Recreational Trails
    20. Ranch House Clean Up
    21. Landscape Plan
    22. Fire Station
    23. Library
    24. Sheriff Station
    25. Off-Site Fuel Modification
    26. Affordable Housing

4. SG SG G LOFFEL WALLS

    Prior to the issuance of a grading permit, a letter of justification and design plans for the proposed loffel walls shall be presented to and approved by the Manager, Subdivision and Grading Services.

5. BP BP RGB RESIDENTIAL ACOUSTICAL REPORT

    All residential lots and dwellings shall be sound attenuated against present and projected noise which shall be the sum of all noise impacting the project so as not to exceed a composite interior standard of 45 dba CNEL in all habitable rooms and a source specific exterior standard of 65 d.b.a. CNEL in outdoor living areas. Evidence prepared by a County-certified acoustical consultant, that these standards will be satisfied in a manner consistent with Zoning Code Section 7-9-137.5, shall be submitted as follows:

    A. Prior to the recordation of a subdivision map or prior to the issuance of grading permits, as determined by the Manager, Building Permits, the applicant shall submit an acoustical analysis report to the Manager, Building Permits, for approval. The report shall describe in detail the exterior noise environment and preliminary mitigation measures. Acoustical design features to achieve interior noise standards may be included in the report.

6. SG SG RG DRAINAGE STUDY

    Prior to issuance of any grading permits, the following drainage studies shall be submitted to and approved by the Manager, Subdivision and Grading:

    A. A drainage study of the subdivision including diversions, off-site areas that drain onto and/or through the subdivision, and justification of any diversions; and

    B. When applicable, a drainage study evidencing that proposed drainage patterns will not overload existing storm drains; and

    C. Detailed drainage studies indicating how the tract map grading, in conjunction with the drainage conveyance systems including applicable swales, channels street flows, catch basins, storm drains and flood water retarding, will allow building pads to be safe from inundation from rainfall runoff which may be expected from all storms up to and including the theoretical 100-year flood.

7. SG SG RG DRAINAGE IMPROVEMENTS

A. Prior to the issuance of any grading permits, the applicant shall in a manner meeting the approval of the Manager, Subdivision and Grading:

1) Design provisions for surface drainage; and

2) Design all necessary storm drain facilities extending to a satisfactory point of disposal for the proper control and disposal of storm runoff; and

3) Dedicate the associated easements to the County of Orange, if determined necessary.

B. Prior to the recordation of a subdivision map (except maps for financing and conveyance purposes only) said improvements shall be constructed in a manner meeting the approval of the Manager, Construction.

8. SG SG R MPD PARTICIPATION

Prior to the recordation of a subdivision map (except maps for financing and conveyance purposes only), the subdivider shall participate in the applicable Master Plan of Drainage in a manner meeting the approval of the Manager, Subdivision and Grading, including payment of fees and the construction of the necessary facilities.

9. SG SG R EASEMENT SUBORDINATION

Prior to the recordation of an subdivision map (except maps for financing and conveyance purposes only), the subdivider shall not grant any easements over any property subject to a requirement of dedication or irrevocable offer to the County of Orange or the Orange County Flood Control District, unless such easements are expressly made subordinate to the easements to be offered for dedication to the County. Prior to granting any of said easements, the subdivider shall furnish a copy of the proposed easement to the Manager, Subdivision and Grading, for review and approval.

10. SG SG G GRADING DEVIATION

Prior to the issuance of any grading permits, if the applicant submits a grading plan and the Manager, Subdivision and Grading, determines that it shows a significant deviation from the grading on the approved tentative tract map and Area Plan 98-2, specifically with regard to slope heights, slope ratios, and pad elevations and configuration, the plan shall be reviewed by the Subdivision Committee for a finding of substantial conformance. Failure to achieve such a finding will require processing a revised tentative map and/or area plan application per Orange County Zoning Code Section 7-9-139 and 7-9-150. Additionally, a new environmental assessment and determination is required

11. CP HP R ACCESS

Prior to recordation of any subdivision map that creates residential building sites, a 400 foot wide access easement across Lot A (Spine Street) from Lot MM to Lot LL shall be dedicated to the County of Orange in a manner meeting the approval of the Manager, Harbors, Beaches & Parks in consultation with the Manager, Subdivision and Grading. The primary purpose of the access easement is to provide for continuity of the wildlife corridor and O'Neill Regional Park.

Signs identifying a wildlife crossing area shall be posted within 100 feet of each point where the street transverses the wildlife corridor.

12. Master Plan of Regional Recreation Facilities:

Regional Park Dedication:

Lots LL and MM shall be dedicated to the County as an addition to O'Neill Regional Park, exclusive of manufactured slopes; which should be retained in separate lots. Regional park dedication shall be in done in compliance with the following conditions:

A. Prior to the recordation of the first subdivision map that creates residential building sites, the subdivider shall make an irrevocable offer of dedication in fee to the County of Orange, or its designee, of Lots LL and MM, exclusive of manufactured slopes, for regional park purposes in a form approved by the Chief, Harbors, Beaches and Parks, Program Management & Coordination suitable for recording. Said offer shall be free and clear of money and all other encumbrances, liens, leases, fees, easements (recorded and unrecorded), assessments and unpaid taxes, except those meeting the approval of the Chief, Harbors, Beaches and Parks, Program Management and Coordination. Until such time as the offer is accepted by the County or its designee, the subdivider or assigns and successors shall be responsible for maintenance and upkeep of the above-referenced lots.

B. Prior to the recordation of any subdivision map that creates residential building sites, the subdivider shall survey and monument all lots dedicated for regional park purposes, and stake the property line of the dedication area(s) with durable, long-lasting, high visibility markers at all angle points and line of sight obstructions to the satisfaction of the Manager, Harbors Beaches & Parks.

C. Prior to recordation of the regional park dedication, the existing old ranch house sited within future regional park land shall be demolished except for the rock work subject to the approval of the Chief, HBP/Program Management & Coordination.

13. Master Plan of Regional Riding and Hiking Trails/County Bikeways:

Regional Trail Dedication:

A. The Live Oak Canyon Regional Riding and Hiking Trail is depicted within the Recreation Element aligned through Lot R, adjacent El Toro Road, through the proposed project. A recreation easement for this riding and hiking trail shall be dedicated to the County which includes trail improvements, including trail improvements just offsite along El Toro Road, north to the intersection of El Toro Road and the community spine road, as well as north to the existing under crossing of El Toro Road, in compliance with the following conditions:

1. Prior to the recordation an applicable subdivision map that creates residential building site the subdivider shall:

a. Irrevocably offer a recreation easement for the Live Oak Canyon Regional Riding and Hiking Trail in a manner meeting the approval of the Chief, HBP/Program Management & Coordination. The subdivider shall not grant any easement(s) over the property subject to the recreation easement unless such easements are first reviewed and approved by the Chief, HBP/Program Management & Coordination.

b. Design the necessary improvements(both onsite and offsite) for the trail, including, but not limited to grading, erosion control, signage and fencing, as applicable, in manner meeting the approval of the Chief, HBP/Program Management & Coordination, in consultation with the Manager, Subdivision & Grading. Further, the subdivider shall enter into an agreement,

accompanied by financial security, with the County of Orange, to insure the installation of the necessary improvements.

2. Prior to the issuance of a grading permit, the grading plans shall be reviewed by the Chief, HBP/Program Management & Coordination, to ensure that the proposed grading provides for, will not interfere with, or preclude the installation of the riding and hiking trail in a location and in a manner meeting the approval of the Chief, HBP/Program Management & Coordination.

3. Prior to the issuance of final certificates of use and occupancy and the release of financial security guaranteeing the riding and hiking trail improvements, the applicant shall install the riding and hiking trail improvements in a manner meeting the approval of the Chief, HBP/Program Management & Coordination, in consultation with the Manager, Construction.

B. Local Riding and Hiking Trail Dedication:

A local riding and hiking trail is described within Area Plan 98-2 text to be dedicated to the County within a recreation easement aligned east-west through the proposed project.

A recreation easement for the local riding and hiking trail shall be dedicated to the County for those areas not included within future dedicated regional park land. Moreover, trail improvements shall be made for this trail, *both* within and outside the future regional park, in addition to a connection from the staging area along the community spine road *offsite* to the regional riding and hiking trail at El Toro Road. Improvements for the staging area shall also be made including the ability to accommodate parking equestrian trailers as well as vehicle only parking. Dedication of the recreation easement and the improvements, including the staging area shall be done in compliance with the above.

C. Trail Reroutes/Bikeway and Riding and Hiking Trails:

1. The Aliso Creek Class I, paved Off-Road Bikeway, as well as the Live Oak Canyon Regional Riding and Hiking Trail will require re-routing plans during construction of the proposed project. Therefore, the following condition shall apply:

   Prior to any grading and/or construction activities which precludes the utilization of either the Aliso Creek Class I Off-Road Bikeway or the Live Oak Canyon Regional Riding and Hiking Trail, a re-routing plan shall be submitted subject to the approval of the Chief, HBP/Program Management & Coordination.

2. The same condition shall also be applicable to the Class II On-Road Bikeway aligned along the north bound lane of El Toro Road contiguous the proposed project.

14. Master Plan Local Parks (Local Park Code):

The Local Park Code requirement is 2.392 acres of park land based upon a proposal to build 299 residential units at a gross density of 1.35 du/ac (299 x .008 ac/du).

Prior to issuance of building permits the Local Park Code requirement shall be met by *payment of in-lieu fees.*

15. Resources Element (Open Space Component):

A. Dedicate Restricted Scenic Preservation Easement:

Fuel modification areas, manufactured slopes and remedial grading areas sited between the regional park dedication area and residential development, the fuel modification and native enhancement transition area contiguous El Toro Road, and northerly most fuel modification and native enhancement transition area, shall be placed within restricted scenic preservation easement areas. These areas include Lots R, CC, DD, EE, FF, GG, HH, II and JJ. *(NOTE: Manufactured slopes now depicted within Lots MM and LL the regional park, should be depicted within separate open space lots and restricted scenic preservation easements placed over them).* Restricted scenic preservation easements shall be dedicated to the County of Orange in compliance with the following conditions:

1. Prior to the recordation of any applicable final tract map which creates residential building sites, the subdivider shall make an irrevocable offer to dedicate an easement to the County of Orange or its designee over Lots R, CC, DD, EE, FF, GG, HH, II, and JJ, for restricted scenic preservation purposes in a manner meeting the approval of the Chief, HBP/Program Management & Coordination. in consultation with the Manager, Current Planning. Maintenance, upkeep and liability for said easement area shall remain the responsibility of the subdivider or assigns and successors (i.e., homeowner's association) or current underlying owner(s) of said easement area and shall not be included in said dedication offer. The subdivider shall not grant any easement over any property subject to said easement unless such easements are made subordinate to said easement offer in a manner meeting the approval of the Chief, HBP/Program Management & Coordination.

2. The subdivider shall note limitations and restrictions for said easement by a reference on the final map to a previously recorded document or by the recordation of a separate document concurrent with the recordation of subject map in a manner meeting the approval of the Chief, HBP/Program Management & Coordination.

3. Prior to recordation of any applicable final tract map or as determined by the Chief, HBP Program Management & Coordination, the subdivider shall survey and monument all parcels of the land to be dedicated for restricted scenic preservation easement purposes, and submit plans showing how the development boundaries of the restricted scenic preservation easement parcel(s) is marked to be visible for monitoring purposes by Grantee to the satisfaction of the Chief, HBP/Coastal & Historical Facilities.

B. Public Area Landscaping:

The areas to be irrevocably offered to the County of Orange for restricted scenic preservation purposes shall be landscaped, equipped for irrigation, as applicable, and improved in accordance with an approved landscape plan as stated below:

1. Preliminary Plan

Prior to the recordation of a subdivision map (except maps for financing and conveyance only), the subdivider shall enter into an agreement and post financial security guaranteeing landscape improvements and the maintenance thereof based on a preliminary landscape plan showing major plant material and uses, and a cost estimate for the landscape improvements. The preliminary plan and cost estimates shall be reviewed and approved by the Manager, Subdivision and Grading, in consultation with the Chief, HBP/Program Management &

Coordination. Said plan shall take into account Area Plan 98-2, County Standard Plans for landscape areas, adopted plant palette guides, applicable scenic and specific plan requirements, Water Conservation Measures contained in Board Resolution 90-487(Water Conservation Measures), and Board Resolution 90-1341(Water Conservation Implementation Plan).

2. Detailed Plan

Prior to the issuance of any building permits, the applicant shall submit a detailed landscape plan for approval to the Manager, Subdivision & Grading, in consultation with the Chief, HBP/Program Management & Coordination. Detailed plans shall show the detailed irrigation and landscaping design.

3. Installation Certification

Prior to the issuance of final certificates of use and occupancy and the release of the financial security guaranteeing the landscape improvements, the applicant shall install said improvements and have the installation certified by a licensed landscape architect or licensed landscape contractor, as having been installed in accordance with the approved detailed plans. The applicant shall furnish said certification, including an irrigation management report for each landscape irrigation system, and any other required implementation report determined applicable to the Manager, Construction, and the Manager, Building Inspection, prior to the issuance of any certificates of use and occupancy.

C. Urban Edge Treatment Plan/Viewshed Analysis:

Prior to the approval of any use permits for residential structures, an urban edge treatment plan/viewshed analysis shall be submitted to the County subject to the approval of the Chief, HBP/Program Management & Coordination. The Urban edge treatment plan/viewshed analysis shall comply with the following criteria:

1. Establish building height and setback limits (i.e., Building Envelope Formula) and grading treatments to preserve views attained from within existing and proposed parks and open space areas as well as from along designated scenic highways (i.e., El Toro Road) as identified by the Master Plan of Regional Recreational Facilities (Recreation Element), Open Space Component (Resources Element) and Master Plan of Scenic Highways (Transportation Element) respectively. Moreover, views from St, Michaels Abbey, the Ramakrishna Monastery and neighboring Hidden Ridge Community shall also be addressed. Viewshed analysis cross sections should be provided as seen from these areas to proposed residential structures.

2. Eliminate and/or reduce to the greatest extent possible conflicts which may impact the existing and future recreational utility of a regional recreation recreational facility and open space areas.

3. Eliminate and/or reduce to the greatest extent possible potential operation and maintenance problems resulting from encroachment, unauthorized entry, private development fuel modification requirements, flood control facilities, and maintenance of privately landscaped manufactured slopes and maintenance roads as they relate to future and existing regional recreational facilities.

4. Establish appropriate landscape/fuel modification treatments and wall and/or fence treatments including berms to provide appropriate transition from regional recreational facilities and open space areas to private development areas.

5. Establish smooth and gradual transition between graded slopes and existing slopes within the park and open space areas using variable slopes (2:1-4:1).

6. Obscure slope drainage structures with a variety of plant materials.

7. Incorporate architectural and design techniques into the project in order to enhance off-site views attained from within parks and significant open space.

8. All landscaping of manufactures slopes interfacing significant open space areas should be exclusively native, as applicable, to preserve the biological and scenic integrity of regional corridors, open space and park lands.

16. FF GBU — FIRE HYDRANTS

A. Prior to the recordation of a subdivision map which creates residential building sites, the applicant shall submit a fire hydrant location plan for the review and approval of the Fire Chief.

17. FF RBU — AUTOMATIC FIRE SPRINKLERS

A. Prior to the recordation of a subdivision map, which creates residential building sites, a note shall be placed on the map stating that all structures shall be protected by an automatic fire sprinkler system, in a manner meeting the approval of the Fire Chief.

18. FF RG — FIRE ACCESS ROADS

A. Prior to the recordation of a subdivision map which creates residential building sites, the applicant shall obtain approval of the Fire Chief for all fire protection access easements and shall dedicate them to the County.

B. Prior to the issuance of any grading permits, the applicant shall submit and obtain approval of plans for all roads, streets and courts, public or private, from the Fire Chief in consultation with the Manager, Subdivision and Grading Services. The plans shall include the plan view, sectional view, and indicate the grade and width (28-ft. minimum) of the street or court measured flow line to flow line. All proposed fire apparatus turnarounds shall be approved by the Fire Chief and if needed, clearly marked when a dead-end street exceeds 150 feet or when otherwise required. Applicable CC&R's, or other approved documents, shall contain provisions which prohibit obstructions such as speed bumps/humps, control gates or other modifications within said easement or access road unless prior approval of the Fire Chief is granted. Grade shall not exceed 10%. Up to 15% is allowed when all structures served by the road are protected by automatic sprinklers.

C. Street signs. A note shall be placed on the fire protection access easement plan indicating that all street/road signs shall be designed and maintained to be either internally or externally illuminated in a manner meeting the approval of the Fire Chief.

19. FF BU STREET MARKINGS

Prior to the recordation of a subdivision map which creates residential building sites, the applicant shall submit plans and obtain approval from the Fire Chief for fire lanes on required fire access roads less than 36 feet in width. The plans shall indicate the locations of red curbing and signage. A drawing of the proposed signage with the height, stroke and coloring of lettering and the contrasting background color shall be submitted to and approved by the Fire Chief.

20. F F R TRAFFIC SIGNAL PREEMPTION

Prior to the recordation of the applicable subdivision map which creates residential building sites, as determined by the Fire Chief in consultation with the Manager, Subdivision and Grading Services, the subdivider shall enter into an agreement with the County for the installation of traffic signal preemption equipment for the surrounding controlled intersections. Said agreement shall be accompanied by financial security.

21. F F RRB FIRE HAZARD NOTIFICATION

A. A Special Fire Protection Area Notification. Prior to the recordation of any final tract map which creates residential building sites, the subdivider shall place a note on the map meeting the approval of the Fire Chief that the property is in a **"Special Fire Protection Area"** and must meet all requirements for development within the area or file for an exclusion with the Fire Chief.

B. Special Fire Protection Area Development. Prior to issuance of a building permit, the applicant shall meet all requirements for development and construction within a Special Fire Protection Area as identified in Orange County Ordinance 3960, including increased street widths, Class A roof assemblies, fire sprinklers, etc.

22. F F G FUEL MODIFICATION

A. Prior to the issuance of a preliminary grading permit, the applicant shall obtain the approval of the Fire Chief, in consultation with the Managers, Environmental and Project Planning Services, Current Planning Services and Subdivision and Grading Services of a conceptual fuel modification plan and program.

B. Prior to the issuance of any precise grading permit, the applicant shall obtain the approval of the Fire Chief, in consultation with the Managers, Environmental and Project Planning Services, Current Planning Services, and Subdivision and Grading Services of a precise fuel modification plan and program. The plan shall indicate the proposed means of achieving an acceptable level of risk to the structures by vegetation, the CC&R's, or other approved documents, shall contain provisions for maintaining the fuel modification zones including the removal of all dead and dying vegetation subject to triennial inspections.

23. F F G ACCESS GATES

Prior to the issuance of any grading permits, the applicant shall submit and obtain the Fire Chief's approval for the construction of any gate across required Fire Authority access roads/drives. Contact the Orange County Fire Authority at (714) 744-0403 for a copy of the "Guidelines for Fire Authority Emergency Access".

24. SG SG B FOOTHILL/EASTERN TRANSPORTATION CORRIDOR

Prior to the issuance of each building permit, payment of fees will be required as prescribed in the Major Thoroughfare and Bridge Fees Program for the Foothill/Eastern Transportation Corridor.

25. SG SG B FOOTHILL CIRCULATION PHASING

Prior to the issuance of each building permit, payment of fees will be required as prescribed in the Major Thoroughfare and Bridge Fee Program for the Foothill Circulation Phasing Program.

26. SG SG B SANTIAGO CANYON ROAD

Prior to the issuance of each building permit, payment of fees will be required as prescribed in the Major Thoroughfare and Bridge Fee Program for Santiago Canyon Road.

27. SG SG B EL TORO ROAD

Prior to the issuance of each building permit, payment of fees will be required as prescribed in the Major Thoroughfare and Bridge Fee Program for El Toro Road.

28. SG SG B ARTERIAL RIGHT-OF-WAY

Prior to recordation of a subdivision map that creates residential building sites, the applicant shall dedicate ultimate half-width road right-of-way to major arterial highway standards across the property frontage in a manner meeting the approval of the Manager, Subdivision and Grading Services.

29. SG SG R SANTIAGO CANYON ROAD

Prior to recordation of any subdivision map that creates residential building sites, the applicant shall pay a cash fair share contribution for the design and construction of improving Santiago Canyon Road from Live Oak Canyon Road to Jamboree Road, in a manner meeting the approval of the Manager, Subdivision and Grading Services.

30. SG SG B EL TORO ROAD

Prior to recordation of a subdivision map that creates residential building sites, the applicant shall provide a cash deposit for the difference in cost of designing and constructing the roadway improvements proposed with the project along the property frontage as compared to the cost associated with the ultimate configuration of El Toro Road, as determined by PF&RD/Program Development Division, all in a manner meeting the approval of the Manager, Subdivision and Grading Services.

31. SG SG B EL TORO ROAD

Prior to recordation of a subdivision map that creates residential building sites, the applicant shall design and construct a northbound right turn lane and a southbound left turn lane on El Toro Road at the project entrance in a manner meeting the approval of the Manager, Subdivision and Grading Services.

32. SG SG G TRAFFIC SIGNAL

Prior to recordation of a subdivision map that creates residential building site, the applicant shall design and construct a traffic signal at the intersection of El Toro and the project entrance in a manner meeting the approval of the Manager, Subdivision and Grading in consultation with the Manager, Program Development Division.

33. SG SG G SIGHT DISTANCE

Prior to issuance of a grading permit, adequate sight distance shall be provided at all intersections per Standard Plan 1117, and at all driveways, in a manner meeting the approval of the Manager, Subdivision and Grading Services; this includes any necessary revisions to the plan to remove slopes and other encroachments from the Limited Use Area.

34. SG SG G "C" STREET

Prior to the issuance of a grading permit, the applicant shall design "C" Street 40' in width, curb to curb, with sidewalk on both sides.

35. SG SG G UTILITY EASEMENT

Prior to the issuance of a grading permit, the applicant shall design both sides of all of the private streets with a 3' public utility easement.

36. SG SG G GATED ENTRY

Prior to the issuance of a grading permit, the applicant shall design the gated entry area to facilitate vehicular turnaround movements prior to reaching the gate in a manner meeting the approval of the Manager, Subdivision and Grading Services.

37. SG SG R LOT 296

Prior to recordation of a final map, the applicant shall design Lot 296 with 20' minimum of property frontage.

38. SG SG G EMERGENCY ACCESS

Prior to the issuance of a grading permit, the applicant shall design the emergency only access between "B" Street and existing Valley Vista in a manner meeting the approval of the Manager, Subdivision and Grading Services.

39. SG SG R PVT STREET NOTIFICATION

Prior to the recordation of a subdivision map (except maps for financing and conveyance only), the subdivider shall place a note on the map that states:

"The private streets constructed within this map shall be owned, operated and maintained by the developer, successors or assigns. The County of Orange shall have no responsibility therefore unless pursuant to appropriate sections of the Streets and Highways Code of the State of California, the said private streets have been accepted into the County Road System by appropriate resolution of the Orange County Board of Supervisors."

40. SG SG R STREET IMPROVEMENTS

Prior to the recordation of a subdivision map (except maps for financing and conveyance only), the subdivider shall design and construct the following improvements in accordance with plans and specifications meeting the approval of the Manager, Subdivision and Grading:

A. Streets, bus stops, on-road bicycle trails, street names, signs, striping and stenciling.

B. The water distribution system and appurtenances which shall also conform to the applicable laws and adopted regulations enforced by the County Fire Chief.

C. Underground utilities (including gas, cable, electrical and telephone), streetlights, and mailboxes.

41. CP CP INDEMNIFICATION

Applicant shall defend at his/her sole expense any action brought against the County because of issuance of this permit or, in the alternative, the relinquishment of such permit. Applicant will reimburse the County for any court costs and attorney's fees which the County may, at its sole discretion, participate in the defense of any such action, but such participation shall not relieve applicant of his/her obligations under this condition.

42. CP CP

Subdivider shall defend, indemnify, and hold harmless the County of Orange, its officers, agents and employees from any claim, action or proceeding against the County, its officers, agents, or employees to attack, set aside, void, or annual approval of the Board of Supervisors, Planning Commission, Zoning Administrator, or Subdivision Committee concerning this subdivision, which action is brought within the time period provided for in Government Code Section 66499.37. The County shall promptly notify the subdivider of any such claim, action or proceeding and shall cooperate fully in the defense. This condition is imposed pursuant to Government Code Section 66474.9(b).

43. CP NOTIFICATION

This condition of approval is intended to give you notice that the fees, dedications, reservations or other exactions imposed on this project are as described in this approval and the reports and actions accompanying this approval. You are also on notice that the 90-day approval period in which the applicant may protest pursuant to Government Code Section 66020 has begun.

RURAL CANYONS CONSERVATION FUND
PO BOX 556
TRABUCO CANYON, CA 92678

October 2, 1998

Patrick J. Stanton, Manager
Subdivision and Grading Services
County of Orange
Planning and Development Services
P.O. Box 4048
Santa Ana, CA 92702-4048

RE: Proposed TTM No. 15230, Project No. EP/PP 69873

Dear Mr. Stanton:

The proposed subdivision cannot legally be approved:

1. It conflicts with the governing zoning ordinance, viz. the Foothill/Trabuco Specific Plan which requires a specific plan amendment prior to any development proposal other than recorded tract map number 10692. Under state law, all subdivisions must be consistent with any governing specific plan.

2. Under the Specific Plan (pages III-86, D-3), the proposal must be reviewed by the Foothill/Trabuco Specific Plan Review Board prior to any action by the County. This has not occurred.

3. EIR 566 no longer suffices as valid environmental documentation for this project under CEQA. A field survey conducted by R.B. Riggan and Associates on September 23, 1998 discovered two California gnatcatchers inhabiting the Saddleback Meadows site. Since the entire site was not surveyed, more gnatcatchers may be present there. The California gnatcatcher is currently protected as a threatened species by both federal and state endangered species acts.

The above constitutes new information about the proposed project's potentially significant environmental impacts. Therefore, a subsequent or supplemental EIR must now be prepared and circulated for review and comment.

Thank you for the opportunity to comment on the proposed subdivision.

Sincerely,

Ray Chandos

Ray Chandos
Secretary/Treasurer

2616

RESOLUTION NO. 98-14
RESOLUTION OF THE PLANNING COMMISSION
OF ORANGE COUNTY, CALIFORNIA

On motion of Commissioner Goacher, duly seconded and carried, the following Resolution was adopted:

WHEREAS, the Planning Commission conducted public hearings on Zone Change (ZC) 98-3 and Area Plan (AP) 98-2 for the area known as Saddleback Meadows (aka Bridlewood); and

WHEREAS, the Planning Commission has considered EIR Addendum PA980103 and, by separate Planning Commission Resolution, found that it satisfies the requirements of CEQA for this project.

NOW, THEREFORE, BE IT RESOLVED that this Commission makes the following findings:

1. ZC98-3/AP98-2 is consistent with the objectives, policies, general land uses and programs specified by the General Plan.

2. AP98-2 is consistent with the provisions of the Zoning Code.

3. The location, size, design and operating characteristics of AP98-2, as conditioned, will not create conditions or situations that may be incompatible with other permitted uses in the vicinity.

4. AP98-2 will not result in conditions or circumstances contrary to the public health and safety and the general welfare.

5. AP98-2, as conditioned, satisfies the requirements of section 7-9-711 regarding public facilities.

6. The RE (PD), "Residential Estates (Planned Development)," site development standards regarding building site areas, building site coverage, area per unit, and number of dwelling units have been satisfied by AP98-2.

7. Condition of Approval No. 27 requires a use permit be approved which is consistent with AP98-2. A use permit may be approved for the entire project site or portions of the project site.

8. AP98-2, as conditioned, will provide significant public benefits in the form of major recreational trails, an important wildlife corridor for the Natural Communities Conservation Program and a large addition to O'Neill Regional Park.

BE IT FURTHER RESOLVED that this Commission recommends that the Board of Supervisors approve ZC98-3.

BE IT STILL FURTHER RESOLVED that this Commission approves AP98-2 subject to the following conditions:

1. CP NA NA TIME LIMIT
Approval of Area Plan 98-2 is subject to approval of Zone Change 98-3 by the Board of Supervisors. Upon such approval, Area Plan 98-2 is valid for a period of 48 months thereafter. If the preliminary grading permit is not issued within such period of time, this approval shall be terminated and Area Plan 98-2 shall thereafter be null and void.

2. CP CP NA REVOCATION
Failure to abide by and faithfully comply with any and all conditions attached to this approving action shall constitute grounds for the revocation of said action by the Orange County Planning Commission.

3. CP CP G TENTATIVE TRACT MAP
Prior to the issuance of any grading permits, Tentative Tract Map 15230 shall be approved by the Subdivision Committee after a public hearing. Said tentative tract map must be found consistent with Area Plan 98-2.

4. CP CP G GRADING REVIEW
Prior to the issuance of any grading permits, the Manager, Current Planning Services, shall determine that the grading plan is consistent with Area Plan 98-2 and the approved tree preservation plan.

5. HP HP G TREE PRESERVATION PLAN
Prior to the issuance of any preliminary grading permit, a tree preservation plan shall be prepared which identifies the location, size and species of all trees having a trunk diameter of 5 inches or greater (measured at four and on-half feet above ground level). The tree preservation plan shall be consistent with the Area Plan 98-2 and the Foothill/Trabuco Specific Plan and approved by the Manager, Harbors Beaches, and Parks. The plan shall be signed and certified by a biologist or arborist.

6. EP SG/EP G FED ENDGD SPEC ACT
Prior to the issuance of any preliminary grading permit, approval of any activity that involves removal of any native vegetation from subject site including clearing, grubbing, mowing, discing, trenching, grading, fuel modification, or other related construction-related activities, the applicant shall obtain written proof from the U.S. Fish and Wildlife Services that said activity complies with the Federal Endangered Species Act. Additionally, the applicant shall obtain approval of a mitigation plan to replace lost ephemeral ponds at a 2 to 1 ratio. This evidence shall be submitted to the Manager, Subdivision and Grading, for review and approval, in consultation with the Manager, Environmental & Project Planning.

7. SG SG G GEOLOGY RPT
Prior to the issuance of any grading permits, the applicant shall submit a geotechnical report to the Manager, Subdivision and Grading, for approval. The report shall include the information and be in a form as required by the Grading Manual.

8. SG SG G DRAINAGE
Prior to the issuance of any grading permits, the applicant shall, in a manner meeting the approval of the Manager, Subdivision and Grading, provide:

A. A drainage study determining the effect the proposed development and associated drainage patterns will have on existing drainage facilities.

B Mitigate either by on-site retardation or by providing improvements appropriately to impacted existing drainage facilities.

9. SG SG G CROSS-LOT DRAINAGE
Prior to the issuance of any grading permits, and if determined necessary by the Manager, Subdivision and Grading, a letter of consent, in a form approved by the Manager, Subdivision and Grading, suitable for recording, shall be obtained from the affected property owners for offsite grading and/or drainage. The owner/applicant shall record said letters of consent for offsite drainage and/or cross-lot drainage prior to the issuance of any grading permit. Acceptance of cross-lot drainage on lots within the tract map boundaries shall be noted on the recorded map.

10. SG SG G VECTOR CONTROL
Prior to the issuance of any preliminary grading permits, the subdivider shall provide evidence to the Manager, Subdivision and Grading, that the Vector Control District has surveyed the site to determine if vector control measures are necessary. If warranted, the developer shall conduct such measures in a manner meeting the approval of the Manager, Subdivision and Grading.

11. HP HP G ARCHAEO OBS & SALVAGE
Prior to the issuance of any preliminary grading permit, the project applicant shall provide written evidence to the Manager, Subdivision and Grading, that a County-certified archeologist has been retained, shall be present al the pre-grading conference, shall establish procedures for archaeological resource surveillance, and shall establish, in cooperation with the project developer, procedures for temporarily halting or redirecting work to permit the sampling, identification, and evaluation of the artifacts as appropriate. If the archaeological resources are found to be significant, the archaeologist shall submit a follow-up report to the Manager, Harbors, Beaches & Parks, which shall include the period of inspection, an analysis of any artifacts fond and the present repository of the artifacts. Excavated finds shall be offered to the County of Orange, or designee, on a first refusal basis. These actions, as well as final mitigatio and disposition of the resources, shall be subject to the approval of the Manager, Harbors, Beaches & Parks.

12. HP HP G PALEO OBS & SALVAGE
Prior to the issuance of an preliminary grading permit, the project applicant shall provide writte evidence to the Manager, Subdivision and Grading, that a County-certified paleontologist has been retained to observe grading activities and salvage and catalogue fossils as necessary. The paleontologist shall be present at the pre-grading conference, shall establish procedures for paleontological resource surveillance, and shall establish, in cooperation with the project developer, procedures for temporarily halting or redirecting work to permit sampling, identification, and evaluation of the fossils. If major paleontological resources are discovered, the paleontologist shall determine appropriate actions, in cooperation with the project develope which ensure proper exploration and/or salvage. Excavated finds shall be offered to the Count of Orange, or its designee, on a first refusal basis. The paleontologist shall submit a follow-up report for approval by the Manager, Harbors, Beaches & Parks, which shall include the period of inspection, a catalogue and analysis of the fossils found, and present repository of the fossils These actions, as well as final mitigation and disposition of the resources, shall be subject to approval by the Manager, Harbors, Beaches & Parks.

13. SG SG G GRADING NOTES

Prior to the issuance of any grading permits, the following guidelines shall be included in the "Notes Section" of the grading plans meeting the approval of the Manager, Subdivision and Grading.

A. During all grading and construction operations, all oak trees on the site, located adjacent to the approved limits of grading and identified in an approved Tree Management/Preservation Plan as trees to be preserved, shall be adequately fenced and protected from encroachment by grading and construction equipment. Grading, placement of fill, and storage of building materials and heavy equipment, shall be prohibited within the dripline of any tree identified for preservation as part of an approved Tree Management/Preservation Plan.

B. If required, retaining walls shall be used to protect the existing grades of oaks identified for preservation from surrounding cut and fill. However, these should not alter drainage from around the trees.

C. No type of surface, whether pervious or impervious, shall be placed within a six-foot radius of oak tree trunks. Where surfacing cannot be avoided, alternative types of paving should be utilized, such as gravel or porous brick with sand joints.

D. Oak trees shall not be subjected to increased runoff from irrigation systems, impermeable surfaces, storm drain discharge, etc.

E. Natural drainage courses and natural grades outside the remedial grading impact area in proximity to and providing seasonal irrigation to oak trees shall not be altered.

F. In proximity to oak trees, only one trench should be dug to accommodate all utility lines. Where necessary, the impacted trees should be carefully pruned by an arborist in proportion to the total amount of root zone lost.

14. BP BP G CONSTRUCTION NOISE

A. Prior to the issuance of any grading permits, the project proponent shall produce evidence acceptable to the Manager, Building Permits, that:

1. All construction vehicles or equipment, fixed or mobile, operated within 1000' of a dwelling shall be equipped with properly operating and maintained mufflers.

2. All operations shall comply with Orange County Codified Ordinance Division 6.(Noise Control).

3. Stockpiling and/or vehicle staging areas shall be located as far as practicable from dwellings.

B. Notations in the above format, appropriately numbered and included with other notations on the front sheet of the grading plans, will be considered as adequate evidence of compliance with this condition.

15. CP SG G PERFORMANCE BOND
Prior to the issuance of a preliminary grading permit, the applicant shall provide a performance bond and related agreement to the satisfaction of the Manager, Subdivision and Grading.

16. HP HP G RE-ROUTING
Prior to the issuance of a preliminary grading permit, which includes the utilization of either the Aliso Creek Class I Off-Road Bikeway or the Live Oak Canyon Regional Riding and Hiking Trail, a re-routing plan shall be submitted by the applicant and approved by the Manager, Harbors, Beaches and Parks.

17. CP SG R
Prior to the recordation of any subdivision map which creates residential building sites, the preliminary grading activity for all of Area Plan 98-2 shall be completed to the satisfaction of the Manager, Subdivision and Grading.

18. HP HP R OPEN SPACE
Prior to the recordation of any subdivision map that creates residential building sites, the applicant shall dedicate to the County of Orange a minimum of seventy (70) percent of the project site as open space in a manner meeting the approval of the Manager, Harbors, Beaches & Parks. The open space dedication shall be for: (1) regional park, and (2) restricted scenic preservation purposes. The Manager, Harbors, Beaches & Parks shall determine the final boundary between these open space acres.

Within the regional park area, the Manager, Harbors, Beaches & Parks shall determine what improvements, if any, shall be made. If determined appropriate by the Manager, Harbors, Beaches & Parks, the applicant shall be required to provide those improvements as shown and discussed in the Area Plan 09-2.

Within the restricted scenic preservation easement area, after dedication, no grading, structures (including stables and corrals), or commercial agriculture activities shall be permitted in this area. River rock walls not to exceed three feet, approved Loffel walls, and open fencing shall b permitted. An entry gate and identification sign shall be permitted subject to approval of a site development or use permit for such use. Future fuel modification, landscaping, and tree preservation shall be permitted subject to prior approvals granted by the Planning Commission.

19. HP HP R RECREATIONAL TRAILS
Prior to the recordation of any subdivision map that creates residential building sites, the applicant shall dedicate a recreation easement for those bikeways and regional riding and hikin trails shown and discussed in Area Plan 98-2 in a manner meeting the approval of the Manager. Harbors, Beaches & Parks. Also, the applicant shall design the necessary improvements and enter into an agreement, accompanied by financial security, with the County of Orange to install the necessary improvements in a manner meeting the approval of the Manager, Harbors, Beaches & Parks.

20. HP HP R CLEANING UP
Prior to the recordation of any subdivision map that creates residential building sites, the existing old ranch house and all abandoned automobiles shall be removed in a manner meeting the approval of the Manager, Harbors, Beaches & Parks.

21. HP HP R LANDSCAPE PLAN
Prior to the recordation of any subdivision map which creates residential building sites, the subdivider shall enter into an agreement and post financial security guaranteeing landscape improvements and the maintenance thereof based on preliminary landscape plan showing major plant material and uses, and a cost estimate for the landscape improvements. The preliminary plan and cost estimates shall be reviewed and approved by the Manager, Subdivision and Grading, in consultation with the Manager, Harbors, Beaches & Parks. Said plan shall take into account the County Standard Plans for landscaped areas, adopted plant palette guides, applicable scenic and Foothill Trabuco Specific Plan requirements, Water Conservation Measures contained in Board Resolution 90-487 (Water Conservation Measures), and Board Resolution 90-1341 (Water Conservation Implementation Plan).

22. EP EP FIRE STATION FACILITY
Prior to the recordation of any subdivision map that creates residential building sites, the applicant shall enter into an agreement with the Orange County Fire Authority to pay pro-rata capital facility fees for Fire Station No. 42 in a manner meeting the approval of the Manager, Environmental & Project Planning. Said agreement shall be accompanied by financial security.

23. EP EP LIBRARY FACILITY
Prior to the recordation of any subdivision map that creates residential building sites, the applicant shall enter into an agreement with the County of Orange to pay development fees for the South County Canyons Library as provided in Sections 7-9-700 through 7-9-713 of the Codified Ordinances of the County of Orange and Board Resolution 87-1684 in a manner meeting the approval of the Manager, Environmental & Project Planning. Said agreement shall be accompanied by financial security.

24. EP EP SHERIFF STATION
Prior to the recordation of an subdivision map that creates residential building sites, the project proponent shall enter into a secured agreement with the County of Orange, subject to approval of the Sheriff-Coroner, to participate on a pro rata basis in funding (a) Sheriff substation facilities and (b) the initial costs of providing additional patrols plus support necessary to serve the project in a manner meeting the approval of the Manager, Environmental & Project Planning.

25. EC F F FUEL MODIFICATION
Prior to the recordation of any subdivision map that creates residential building sites, the applicant shall demonstrate to the satisfaction of the Fire Chief that necessary fuel modification in off-site locations will be maintained in perpetuity.

26. EP EP R AFFORDABLE HOUSING
Prior to the recordation of a subdivision map that creates residential building sites, the landowner shall provide a cash contribution to the County's General Plan Trust Fund. The specific methodology and amount of said contribution shall be subject to the approval of the Manager, Environmental & Project Planning. These funds shall be directed to support the County's overall efforts toward providing affordable housing, including but not limited to, future updates of the Orange County Housing Element and related programs for maintaining existing affordable housing and providing new affordable housing opportunities.

27. CP CP B USE PERMIT

Prior to the issuance of any building permits for residential structures, the applicant shall submit a use permit application for review by the Foothill/Trabuco Review Board and approval by the Planning Commission after a public hearing. Said use permit shall include, but not be limited to, the location of all structures and uses, precise landscaping plan, precise fuel modification plan and program, grading plan, and architectural plans for all structures. Said use permit must be found consistent with Area Plan 98-2.

28. F F GBU FUEL MOD PLAN

Prior to the approval of the use permit to construct residential structures, the applicant shall obtain the Fire Chief's approval, in consultation with the Manager, Environmental and Project Planning, of a precise fuel modification plan and program. The plan shall indicate the proposed means of achieving an acceptable level of risk to structures by vegetation. Include the method (mechanical or hand labor) for removal of combustible vegetation and the planting of drought tolerant fire resistant plants. However, only the minimum necessary fuel modification shall be approved by the Fire Chief. All practical mitigation measures to minimize the need for fuel modification shall be recommended by the Fire Chief such as use of non-combustible construction materials, interior fire sprinkler system and double-glassed windows. The required fuel modification shall be performed in a manner to minimize impacts on the natural environment as much as possible. The fuel modification plan shall then become effective after the Planning Commission approves the use permit.

29. SG SG B ROAD REE PROG

Prior to the issuance of building permits for residential construction, the applicant shall pay fees for the Major Thoroughfare and Bridge Fee Program listed below, in a manner meeting the approval of the Manager, Subdivision and Grading.

A. Foothill Circulation Phasing Program
B. Foothill/Eastern Transportation Corridor
C. El Toro Road
D. Santiago Canyon Road

30. HP HP R LOCAL PARK FEES

Prior to the issuance of building permits for residential construction, the applicant shall pay in-lieu fees per the Local Park Code Requirements.

31. FTSP CP B SCHOOL FEES

Prior to the issuance of any building permits for residential construction, the applicant shall provide written verification from the School District, in a manner meeting the approval of the Manager, Current Planning, that he has reached a mitigation agreement with the District for the subject project proposal.

32. CP NA NA INDEMNIFICATION

Applicant shall defend at his/her sole expense any action brought against the County because of issuance of this permit. Applicant will reimburse the County for any court costs and attorney's fees which the County may be required by a court to pay as a result of such action. The County may, at its sole discretion, participate in the defense of any such action, but such participation shall not relieve applicant of his/her obligations under this condition.

AYES: Commissioners Nielsen, Goacher, Long, McBurney

NOES: Commissioners Moody

ABSENT: Commissioners

I HEREBY CERTIFY that the foregoing Resolution No. 98-14 was adopted on October 7, 1998 by the Orange County Planning Commission.

ORANGE COUNTY PLANNING COMMISSION

by Thomas B. Mathews, Executive Officer

PRELIMINARY

TENTATIVE TRACT MAP REPORT

DATE: October 21, 1998

SUBJECT: Tentative Tract Map No. 15784

SUBDIVIDER: California Quartet, LTD

ENGINEER: Hunsaker & Associates

SUBDIVISION SECTION CONTACT: Vic Bellaschi 834-5045

LOCATION: On the easterly side of El Toro Road approximately 1,500 feet southerly of Live Oak Canyon Road in the Cooks Corner-Live Oak Canyon area.

ASSESSORS PARCEL NO. 856-011-portion 20; 856-071-01 thru 09; 856-081-01 thru 12; 856-091-01 thru 11.

PROJECT NO. EP/PP 69881

SUMMARY: Proposes a subdivision of approximately 222 acres of land into 7 lots for conveyance purposes only.

NOTE: See TT 15230 for the future development of the subject property.

NOTIFICATION:

All federal, state, and county departments, divisions and agencies having cognizance of the affected area, the Foothill/Trabuco Specific Plan Review Board, the Marine Corps Air Station, the Rural Canyons Conservation Fund, and all property owners within 300 feet of this property.

GENERAL PLAN CONSISTENCY/ZONING COMPLIANCE:

Land Use Element: 1B Suburban Residential (.5-18 du/ac)

Community Profile: 1.2 Low Density Residential

Specific Plan: Foothill/Trabuco Specific Plan
Bridlewood Residential (BWR) District

This project, as conditioned, is consistent with and in conformance with the General Plan and its implementing documents.

COMPLIANCE WITH THE CALIFORNIA ENVIRONMENTAL QUALITY ACT:

The proposed project is covered by Final EIR No. 566 previously certified on June 2, 1998 and Addendum PA 980103. Prior to project approval, the Subdivision Committee must assert that, together, they are adequate to satisfy the requirements of CEQA for the proposed project.

EXISTING CONDITIONS:

The subject property is sloping undeveloped terrain ~~which is in its natural state~~.

DRAINAGE:

Master Plan of Drainage requirements will be a consideration in connection with the future development of the subject property.

SOUND CONSIDERATION:

This property area is impacted by intrusive noises. The extent of mitigation required can be determined in connection with the acoustical report which will be required when future development is proposed.

RECREATION AND OPEN SPACE:

Master Plan of Regional Recreation Facilities, Master Plan of Regional Riding and Hiking Trails, Master Plan of Local Parks (Local Park Code), Resources Element – Open Space Component and Master Plan of Countywide Bikeways will be considerations with the future development.

PUBLIC SERVICES AND UTILITIES:

In connection with the future development, schools, water service, sewer service, cable service, water quality control, fire protection and safety, and library services will be considerations.

CIRCULATION:

Regional and internal infrastructure requirements will be a consideration when any future development is proposed. This will include participation in the applicable Major Thoroughfare and Bridge Fee Programs.

COMMENTS FROM CIVIC GROUPS AND OTHERS NOTIFIED:

Comments were received from Ray Chandos – Secretary/Treasurer of the Rural Canyons Conservation Fund.

SUBDIVISION COMMITTEE ACTION:

Tentative Tract No. 15784 is approved, and the approval includes the following 11 findings, and is subject to the 4 conditions which follow the findings:

Findings:

I. That the proposed map is consistent with the Orange County General Plan.

II. That the design and improvement of the proposed subdivision are consistent with the Orange County General Plan.

III. That the proposed site is physically suitable for the proposed type of development.

IV. That the proposed site is physically suitable for the proposed density of development.

V. That the design of the subdivision or the proposed improvements are not likely to cause substantial environmental damage or substantial and avoidable injury to fish or wildlife or their habitat.

VI. That the design of the subdivision and the type of improvements proposed are not likely to cause serious public health problems.

VII. That the design of the subdivision and the type of improvements proposed will not conflict with easements of record or established by court judgment acquired by the public-at-large for access through or use of property within the proposed subdivision.

VIII. That the proposed subdivision complies with the requirements set forth in the Orange County Subdivision Code and the Orange County Zoning Code.

IX. That the Subdivision Committee has considered Final EIR 566, previously certified on 6/2/98, and Addendum PA 980103 prior to project approval. Together they are approved for the proposed project based upon the following findings:

1. Together, these documents are adequate to satisfy the requirements of CEQA by the decision-maker;

2. The additions, clarifications, and/or changes to the original document caused by the Addendum do not raise new significant issues which were not addressed by the EIR; and

3. The approval of the EIR and Addendum for the proposed project reflect the independent judgment of the Subdivision Committee.

X. That pursuant to Section 711.4 of the California Fish and Game Code, this project is not exempt from the required fees as it has been determined that adverse impacts to wildlife resources will result from the project. The required fees will need to be paid.

XI. That the proposed project will have a significant unmitigated impact upon Coastal Sage Scrub habitat and, therefore, will preclude the ability to prepare an effective subregional Natural Communities Conservation Planning (NCPP) Program.

Conditions:

Codes (for time of performance/type of condition)

(G)	Grading Permit	(S)	Standard Condition
(R)	Recordation	(SS)	Site Specific Condition
(NA)	Timing not Specified		

(G) 1. SG SG G GRADING RESTRICTION

(S) Notwithstanding any grading/elevations that are shown on the tentative tract map, or the provisions of Orange County Zoning Code Section 7-9-139 (Grading and Excavation), approval of this tentative tract map does not authorize the issuance of any grading permits.

(NA)2. SG NA NA INDEMNIFICATION

(S) Subdivider shall defend, indemnify, and hold harmless the County of Orange, its officers, agents and employees from any claim, action or proceeding against the County, its officers, agents or employees to attack, set aside, void, or annul an approval of the Board of Supervisors, Planning Commission, Zoning Administrator, or Subdivision Committee concerning this subdivision, which action is brought within the time period provided for in Government Code Section 66499.37. The County shall promptly notify the subdivider of any such claim, action or proceeding and shall cooperate fully in the defense. This condition is imposed pursuant to Government Code Section 66474.9(b).

(R) 3. SG SG R CONVEYANCE MAP

(SS) Prior to the recordation of the final tract map, a note shall be placed on the final tract map stating, "This tract map is for conveyance purposes only and the lots created by this tract map are not legal building sites" in a manner meeting the approval of the Manager, Subdivision and Grading.

(SS)4. CP NOTIFICATION

This condition of approval is intended to give you notice that the fees, dedications, reservations or other exactions imposed on this project are as described in this approval and the reports and actions accompanying this approval.

You are also on notice that the 90-day approval period in which the applicant may protest pursuant to Government Code Section 66020 has begun.

I hereby certify that Tentative Tract Map No. 15784 was approved upon the foregoing conditions by the Orange County Subdivision Committee, on October 21, 1998, and will expire on October 21, 2001.

RE: Proposed TTM No. 15784, Project No. EP/PP 69881

Dear Mr. Stanton:

The proposed subdivision cannot legally be approved:

1. It conflicts with the governing zoning ordinance, viz. the Foothill/Trabuco Specific Plan which requires a specific plan amendment prior to any development proposal other than recorded tract map number 10692. The attached "Project Proposal" says "This is an application for a *development* permit." Under state law, all subdivisions must be consistent with any governing specific plan.

2. Under the Specific Plan (pages III-86, D-3), the proposal must be reviewed by the Foothill/Trabuco Specific Plan Review Board prior to any action by the County. This has not occurred.

3. EIR 566 no longer suffices as valid environmental documentation for this project under CEQA. A field survey conducted by R.B. Riggan and Associates on September 23, 1998 discovered two California gnatcatchers inhabiting the Saddleback Meadows site. Since the entire site was not surveyed, more gnatcatchers may be present there. The California gnatcatcher is currently protected as a threatened species by both federal and state endangered species acts.

The above constitutes new information about the proposed project's potentially significant environmental impacts. Therefore, a subsequent or supplemental EIR must now be prepared and circulated for review and comment.

Thank you for the opportunity to comment on the proposed subdivision.

Sincerely,

Ray Chandos

Ray Chandos
Secretary/Treasurer

2629

PUBLIC NOTICE

of a public meeting to be held by the Orange County Subdivision Committee

DATE OF MEETING: October 21, 1998

TIME OF MEETING: 1:30 P.M. or as soon thereafter as possible

LOCATION: H. George Osborne Building, Room 503, 300 N. Flower Street, Santa Ana, California

PROJECT: TENTATIVE TRACT MAP NO. 15230

FILED BY: CALIFORNIA QUARTET, LTD.

LOCATED: ON THE EASTERLY SIDE OF EL TORO ROAD APPROXIMATELY 1,500 FEET SOUTHERLY OF LIVE OAK CANYON ROAD IN THE COOKS CORNER-LIVE OAK CANYON AREA

PROPOSING: THE SUBDIVISION OF APPROXIMATELY 222 ACRES OF LAND INTO 259 LOTS FOR SINGLE FAMILY RESIDENTIAL DEVELOPMENT, 1 LOT FOR A PUMP STATION, 1 LOT FOR A GATED ENTRY, 2 LOTS FOR REGIONAL PARK PURPOSES, 20 LOTS FOR LANDSCAPED SLOPES/OPEN SPACE AND 17 LOTS FOR PRIVATE STREETS.

WILL BE CONSIDERED AT THIS MEETING: All persons either favoring or opposing this proposal are invited to present their view at this meeting. It is requested that any written response be submitted to the Planning and Development Services Department (PDS) prior to the meeting date. At the hearing, the proposal may be approved, conditionally approved, continued to another date or withdrawn. If you challenge the action taken on this project in court, you may be limited to raising only those issues you or someone else raised at the public meeting described in this notice, or in written correspondence delivered to the Planning and Development Services Department prior to the public meeting.

FOR FURTHER INFORMATION: Telephone 834-6045 or call at the Subdivision Section Office, 300 North Flower Street, Development Processing Center, Santa Ana, California, or write to Planning and Development Services, P.O. Box 4048, Santa Ana, California 92702-4048. To facilitate response, refer to Tentative Tract Map No. 15230

ENVIRONMENTAL INFORMATION: THE REQUIREMENTS OF THE CALIFORNIA ENVIRONMENTAL QUALITY ACT HAVE BEEN MET BY EMA'S DETERMINATION THAT THE PROJECT IS WITHIN THE SCOPE OF PREVIOUSLY FINALIZED EIR 556.

APPEAL PROCEDURE. Any interested person may appeal a decision of the Subdivision Committee on this project to the Planning Commission within ten (10) calendar days upon submittal of required documents and the payment of a fee of $385.00. The appeal must be filed at the Development Processing Center, Subdivision Section, 300 North Flower Street, Santa Ana, California.

2630

Re: *Saddleback Meadows: Public Hearing re Tentative Tract Map Nos. 15230 and 15784*

Dear Mr. Stanton:

On behalf of the Norbertine Fathers of Orange, the Saddleback Meadows Land Conservancy LLC, and the Vedanta Society of Southern California, we oppose the approval of Tentative Tract Map Nos. 15230 and 15784 (collectively, the "Tract Maps") on the basis of each of the previously-stated objections to Zone Change 98-3 and Area Plan 98-2 which are set forth in the letters attached hereto as Exhibits "E" through "J" inclusive. We believe that such objections apply with equal force to the Tract Maps and, accordingly, we incorporate them herein as if set forth in full hereat.

Tentative Tract Map No. 15230 ("TT 15230") would allow the Saddleback Meadows property to be developed as a 299-unit, single-family detached housing project (the "299-Unit Project" or the "Project"). In addition to the objections to the 299-Unit Project which we have already stated on behalf of our clients, we further object to proposed TT 15230 (and its companion financing map) on the grounds listed in Exhibit "A" attached hereto and on each of the following grounds:

A. <u>The Subdivision Committee Should Continue Its Hearing on the Tract Maps Until the FTSP Review Board Has Had an Opportunity to Submit Its Recommendations Thereon.</u>

The bylaws of the Foothill/Trabuco Specific Plan Review Board (the "FTSP Review Board"), which are set forth in Appendix D to the Foothill/Trabuco Specific Plan (the "Specific Plan"), specifically provide at page D-3 that the FTSP Review

Board is to review all "Subdivision Maps" covered by the Specific Plan and to report its findings thereon to the appropriate department of the County of Orange which, in this case, would be the Subdivision Committee. The bylaws also provide that the FTSP Review Board is to be afforded a minimum of twenty-one (21) days within which to complete its assigned task and to report its recommendations. Under the bylaws, only the FTSP Review Board is entitled to *waive* this 21-day requirement.

Less than 21 days ago, County staff apparently transmitted various materials relating to the Tract Maps to the members of the FTSP Review Board, and thus the Subdivision Committee is not authorized to proceed with its October 21 hearing on the Tract Maps because to do so would be a clear violation of the Specific Plan. As such, the Subdivision Committee should continue its hearing on the Tract Maps until the FTSP Review Board has been afforded adequate time to review and report back on the Maps. Indeed, since the Tract Maps are contingent upon the approval of Zone Change 98-3 which will not even be voted on by the Board of Supervisors until November 3 at the earliest, there is absolutely *no* reason that the Subdivision Committee's hearing on the Tract Maps must go forward on October 21 and cannot be postponed until after the November 3 Board hearing on Zone Change 98-3.

The accelerated pace at which the Tract Maps are being processed by the County is unseemly and unjustified. At the public meeting which it conducted last Friday night (October 16) to consider Zone Change 98-3 and Area Plan 98-2, the FTSP Review Board adopted a resolution, a copy of which is attached as Exhibit "B" hereto, demanding that the Tract Maps be removed from the agenda of the Subdivision Committee's October 21 meeting and be referred to the Review Board for its recommendations. Failure to heed the demand of the FTSP Review Board will violate both the letter and the spirit of the Specific Plan, and will constitute an affront to the residents of the Trabuco Canyon area.

B. <u>The CEQA Documentation for the Tract Maps Failed to Address Site-Specific and Cumulative Impacts to Coastal California Gnatcatchers Inhabiting the NCCP Southern Subregion</u>.

Now that the County has reached the "tract map" stage of the 299-Unit Project, there is no possible justification for continuing to ignore the recent discovery of coastal California gnatcatchers at the Property and failing to amend and recirculate the appropriate CEQA documentation to reflect this fact. Also, it is nothing short of a legal and environmental scandal that County staff has allowed California Quartet to delay completion of updated gnatcatcher surveys of the Property which the federal and state agencies started calling for almost *22 months ago*.

On January 30, 1997, the California Department of Fish & Game and the U.S. Fish & Wildlife Service (collectively, the "Resource Agencies") sent a letter to County staff, a copy of which is attached as Exhibit "C" hereto in which they noted that the 1993 and 1994 gnatcatcher surveys of the Property upon which Draft EIR 561 was based were no longer valid and, as such, "updated surveys" needed to be completed in connection with the preparation of Draft SEIR 566:

> "Available data in EIR No. 561 regarding coastal California gnatcatcher . . . surveys indicated that surveys were done in 1993 and 1994. The agencies accept survey results as valid for only 12 months. Gnatcatchers are known to occur adjacent to the proposed project area. *We suggest that updated surveys be done for this species.* This updated survey protocol includes a total of seven surveys in the breeding season or nine in the non-breeding season." (Emphasis added.)

Although almost *two years* have passed since the Resource Agencies made their proposal for updated gnatcatcher surveys of the Property, *such surveys have still not been completed.* This, of course, is inexcusable and renders FSEIR 566 and the Addendum thereto grossly deficient with respect to adequately assessing impacts to an endangered species present at the Property. Although the Addendum to FSEIR 566 *alludes* to gnatcatcher surveys having been commenced in May 1997, no explanation is given as to why these surveys were never completed and were never reported on in the CEQA documentation for TT 15230.

Of course, of even greater concern is the fact that, at the October 7 Planning Commission hearing on Zone Change 98-3 and Area Plan 98-2, the developer's representative, Mr. Pike Oliver, stated at the podium that approximately six gnatcatcher surveys of the Property were performed in April, May, and June of this year. This is a shocking revelation for at least two reasons. First, it is highly improper for the results of these surveys to have been *excluded* from the Addendum to FSEIR 566, even though the Addendum was prepared well *after* the surveys were purportedly completed. Secondly, the fact that California Quartet was still in the process of trying to complete the updated gnatcatcher surveys which the Resource Agencies had called for as far back as January 1997 should have been revealed by County staff because it would have proven that the CEQA documentation for the 299-Unit Project was and remains *incomplete* and that the County is *not* in a position to legally take action on Zone Change 98-3, Area Plan 98-2, and the Tract Maps.

To date, County staff has sought to excuse its failure to obtain updated gnatcatcher surveys of the Property from California Quartet on the grounds that one can just *assume* that the coastal sage scrub habitat at the Property is inhabited by gnatcatchers.

However, County staff has never indicated *how many* gnatcatchers it assumes are present and will be eradicated by the development of the 299-Unit Project. CEQA does not allow County staff the luxury of such an uninformed *assumption* at this late stage in the planning process about what exactly the impacts will be on an endangered species present at the project site. What County staff is essentially admitting is that it assumes there will be an impact on gnatcatchers inhabiting the approximately 50 acres of coastal sage scrub habitat which will be destroyed by the development of the 299-Unit Project, but the *extent* of that impact -- i.e., how many gnatcatchers will actually be killed at the site -- is completely *unknown* to the County as it prepares to approve TT 15230.

To suggest that County staff is engaging in *reckless* environmental planning with respect to gnatcatcher impacts at the Property would be an understatement. This is particularly true in light of a recent *L.A. Times* article, dated September 3, 1998, a copy of which is attached as Exhibit "D" hereto, in which it was reported that the Resource Agencies are gravely concerned that the prescribed limits for interim gnatcatcher "take" in the NCCP Southern Subregion have been exceeded and that no more 4(d) permits for interim "take" of gnatcatchers will be allowed in that Subregion until the NCCP plan for that area is completed sometime in the future.

In light of the information set forth in this article, it is clear that the CEQA documentation for TT 15230 does not adequately address the *cumulative* impacts which the 299-Unit Project will have on coastal California gnatcatchers present in the NCCP Southern Subregion. Moreover, the same CEQA documentation is based on the premise that California Quartet will be allowed to obtain a 4(d) permit to kill gnatcatchers at the Property. What is needed, therefore, is a new or subsequent EIR for TT 15230 which fully and properly assesses project impacts on gnatcatchers present in the NCCP Southern Subregion, both on a site-specific level and on a Subregional level.

C. <u>The Proposed Destruction of Almost 70% of the Property's Coastal Sage Scrub Habitat Will Prevent the County from Making the Findings Required Under the NCCP Conservation Guidelines</u>.

As stated on page 72 of the Addendum to FSEIR 566, the County must be in a position to make the following "NCCP Findings" prior to approving "coastal sage scrub impacts": (1) the habitat loss will not preclude connectivity between areas of high habitat values and (2) "the habitat loss will not preclude or prevent the preparation of the subregional NCCP." In light of (a) its failure to timely and adequately consult with the Resource Agencies regarding the sufficiency of the wildlife corridor proposed as part of TT 15230, (b) the loss of approximately 70% of the coastal sage scrub habitat at the Property which is contemplated by the 299-Unit Project, and (c) the numerous statements made to date by the Resource Agencies with respect to the critical importance of the

Property as constituting the last available link between the NCCP Central/Coastal and Southern Subregions, the County is simply not in a position to make any such findings at this point.

In the joint letter from the Resource Agencies, dated January 30, 1997, which was referred to earlier, the Agencies stated unequivocally that the proposed linkage between the NCCP Central/Coastal and Southern Subregions could be permanently destroyed by the development of the Property:

> "Lands within the proposed project area are important in conservation planning for the Southern Subregion NCCP Reserve in Orange County. The area of the proposed project is also the *only* linkage to the NCCP Central Subregion in Orange County. An improperly implemented project would *permanently destroy* the integrity of the linkage between the Subregion reserves." (Emphasis added.)

Likewise, in their joint letter to the Board of Supervisors, dated August 11, 1998, the Resource Agencies described the Property as a "critical habitat connection between the County of Orange's Central/Coastal and Southern Subregional Conservation Plans." In a recent article in the *Orange County Register*, a copy of which is attached hereto, John Bradley of the U.S. Fish & Wildlife Service clearly stated the Service's preference for a project alternative with less density than the proposed 299-Unit Project. However, County staff has failed to fully engage the representatives of the Resource Agencies to understand and accommodate their views on whether the 299-Unit Project provides the wildlife linkage which they hope to achieve. Moreover, County staff has also sought to minimize, and even misrepresent, the true views of the Resource Agencies with respect to the 299-Unit Project. (See attached letters from National Audubon Society, dated October 15 and 19, 1998.)

Because TT 15230 poses such an obvious risk of jeopardizing or precluding the approval of the Southern Subregion NCCP, the Subdivision Committee should require the preparation of a new or subsequent EIR for TT 15230 to properly assess this risk. Moreover, County staff should accept the invitation of the Resource Agencies, set forth in their August 11 letter to the Board of Supervisors, to work with California Quartet and all interested parties in reaching a workable development solution that would involve a clustered development and a substantial dedication of natural open space which would be sufficient to ensure adequate wildlife corridor/habitat linkage between the NCCP Central/Coastal and Southern Subregions. These discussions should focus initially on the feasibility of the 44/178 Alternative which has been the subject of recent negotiations between the parties or a similar alternative which would ensure that the 178 acres which are the subject of the 44/178 Alternative (see copy of draft

Memorandum of Understanding attached hereto) are permanently preserved as natural, undisturbed open space so as to protect the sensitive biological resources on the Property, while still allowing for approximately 44 acres of the Property to be developed for residential uses.

Without such input being obtained from comprehensive discussions with representatives of the Resource Agencies, the CEQA documentation for TT 15230 is obviously deficient with respect to reasonable project alternatives and with respect to the issues of whether the 299-Unit Project will preclude connectivity between areas of high habitat values and will also preclude preparation and finalization of the Southern Subregional NCCP.

D. The CEQA Documentation for TT 15230 Fails to Adequately Assess Potential Impacts on O'Neill Park Caused by Rough Grading, Fuel Modification, and Drainage Activities Relating to the 299-Unit Project.

Exhibit 6 in the Addendum to FSEIR 566 is noteworthy for what it does *not* show: it does not show whether the development of TT 15230 will impact areas of O'Neill Park in terms of rough grading or fuel modification activities associated with the 299-Unit Project. This particular Exhibit is simply deceptive because if the dotted lines relating to the limits of fuel modification and remedial grading were extended and linked as they should be along the southern boundary of the Property, it would be obvious that portions of O'Neill Park would be impacted by such activities.

The CEQA documentation for 15230 fails to address either the impacts or the risks associated with performing grading and fuel modification in portions of O'Neill Park adjacent to the southern boundary line of the Property. As set forth in the 1974 agreement between the Vedanta Society and the County, a copy of which is attached hereto, the consequences of disturbing those portions of O'Neill Park by activities which would alter or defoliate the topography in those areas would trigger a reverter clause which would allow the Vedanta Society to reclaim title to approximately 240 acres of O'Neill Park. The risk of losing such valuable parkland should be addressed in the CEQA documentation ***before*** TT 15230 is approved in its present form.

Also, TT 15230 should not be approved unless and until adequate CEQA documentation is prepared to discuss the impacts of discharging storm, irrigation, and urban runoff into pristine areas of O'Neill Park adjacent to the southern boundary of the Property. The Addendum to FSEIR 566 contains only general, boilerplate references to possible impacts to natural drainage courses caused by runoff originating from the hundreds of homes to be built as part of the 299-Unit Project. The CEQA documentation for TT 15230 concedes that urban runoff -- consisting of toxic materials such as "oil,

grease, cleaning products, herbicides, pesticides, and fertilizers" -- would be dumped into the natural drainage courses at the Property, but such documentation is devoid of any discussion of what impacts such toxic materials would have on the fragile ecosystem of those portions of O'Neill Park immediately adjacent to the southern boundary of the Property.

Although there is a reference on page 33 of the Addendum to FSEIR 566 that the urban runoff generated by the 299-Unit Project would be subject to a NPDES Permit, that is simply a reference to possible *mitigation* of an impact which is neither discussed nor disclosed in the Addendum. Moreover, since there is no discussion of the extent of the impacts of toxic materials, there is no basis for judging whether the proposed future mitigation would be adequate or even what the mitigation would be to somehow remove toxic waste from stormdrain runoff discharged into natural water course. Of course, trying to gain any reasonable understanding of how O'Neill Park will be affected by the daily flow of toxic waste is complicated by the fact that the CEQA documentation for TT 15230 contains *no* plan or diagram which shows what the proposed storm drain system is for the 299-Unit Project. Indeed, the Addendum to FSEIR 566 directs the reader to the concept drainage plan for the 705-Unit Project which obviously has no relevance to the design of the stormdrain system for the 299-Unit Project. On page 33 of the Addendum to FSEIR 566, the "proposed drainage facility summary" is set forth, but it only refers to *four* stormdrain lines for the 299-Unit Project, but this is entirely at odds with the *eight* stormdrain lines proposed for the 318-Unit Project as depicted on Exhibit 25 to Draft EIR 561.

Does this discrepancy mean that a *new* stormdrain system has been designed for TT 15230, but has not been disseminated for public review and comment? These questions should be answered by preparing and recirculating a new or subsequent EIR to address the critically-important drainage impacts associated with the development of the 299-Unit Project.

Very truly yours,

Edmond M. Connor

APPENDIX TO OCTOBER 21, 1998 LETTER TO ORANGE COUNTY SUBDIVISION COMMITTEE REGARDING TENTATIVE TRACT MAP NOS. 15230 AND 15784

EXHIBIT "A"

ADDITIONAL OBJECTIONS TO TENTATIVE TRACT MAP NOS. 15230 and 15784

In addition to all previously-stated objections to proposed Zone Change 98-3 and Area Plan 98-2 to permit the Saddleback Meadows property (the "Property") to be developed as a 299-unit, single-family detached housing project (the "299-Unit Project" or the "Project"), which objections are incorporated herein as if set forth in full hereat in opposition to Tentative Tract Map Nos. 15230 and 15784 (collectively, the "Tract Maps"), the following additional objections to the Tract Maps are submitted as follows:

(1) The Tract Maps are inconsistent with the goals, objectives, components, regulations, and guidelines set forth in the Foothill/Trabuco Specific Plan (the "Specific Plan"), including (a) the goals and objectives relating to rural character and resource preservation; (b) the resources overlay component relating to wildlife corridors, oak woodlands, tree management/preservation, and streambeds; (c) the Bridlewood Residential District Regulations; (d) landscaping regulations; (e) grading standards relating to the maximum height of manufactured slopes and the 70% "natural open space" requirement; (f) area plan submittal requirements; (g) grading, drainage and site planning guidelines; and (h) architectural guidelines;

(2) There are no overriding considerations which justify exempting the 299-Unit Project from complying with the Specific Plan, and such an exemption coming at the request of a landowner/developer would set a bad precedent and would seriously undermine the important goals and objectives of the Specific Plan;

(3) The Tract Maps involve unavoidable adverse environmental impacts which cannot be mitigated to acceptable levels and will destroy hundreds of acres of oak woodlands, vernal ponds, coastal sage scrub habitat, and other biotic communities teeming with sensitive, threatened, or endangered flora and fauna, including the coastal

California gnatcatcher and the Riverside fairy shrimp. These impacts have not been adequately addressed and mitigated in the CEQA documentation prepared to date for the Tract Maps;

(4) The Tract Maps involve massive and unacceptable grading impacts which would subject the residents of the Trabuco Canyon area to several years of excessive noise, dust, and traffic delays associated with excavating and recompacting approximately nine million cubic yards of soil which will remain exposed to the wind during dry seasons, and the rain during wet seasons, over the course of at least three years before the rough grading is completed. These impacts have not been adequately addressed and mitigated in the CEQA documentation prepared to date for the Tract Maps;

(5) The Tract Maps pose unacceptable geotechnical hazards and risks which would endanger and adversely affect the safety, usability, or stability of the land holdings immediately adjacent to the Property, including St. Michael's Abbey and the Ramakrishna Monastery, both of which are currently experiencing structural damage due to soils subsidence and instability. These impacts have not been adequately addressed and mitigated in the CEQA documentation prepared to date for the Tract Maps;

(6) The Tract Maps will permanently alter and destroy the natural buffer zones which, for almost 50 years, have served as part of a monastic enclave for two religious groups: the Vedanta Society which founded the Ramakrishna Monastery in the late 40's and the Norbertine Fathers of Orange which founded St. Michael's Abbey in the early 60's. These impacts have not been adequately addressed and mitigated in the CEQA documentation prepared to date for the Tract Maps;

(7) The proposed rough grading, fuel modification, and drainage activities associated with the development of the 299-Unit Project could constitute a basis for triggering the reverter clause in the March 1974 Agreement between the Vedanta

Society and the County, thereby entitling Vedanta to regain title and possession of approximately 240 acres of O'Neill Park adjacent to the Ramakrishna Monastery. This is a completely unnecessary and unacceptable risk of losing valuable parkland and open space and the impact of such a loss has not been adequately addressed and mitigated in the CEQA documentation prepared to date for the Tract Maps;

(8) The Tract Maps would jeopardize or destroy a critical habitat connection between the NCCP Central/Coastal and Southern Subregions of the County of Orange by providing an inadequate wildlife corridor to connect Whiting Ranch Wilderness Park and O'Neill Park. In addition, the proposed loss of coastal sage scrub habitat associated with the development of the 299-Unit Project would preclude connectivity between areas of high habitat value and, as a result, would preclude or prevent the preparation and finalization of the Southern Subregion NCCP. These impacts have not been adequately addressed and mitigated in the CEQA documentation prepared to date for the Tract Maps;

(9) The California Department of Fish & Game and the U.S. Fish & Wildlife Service (collectively, the "Resource Agencies") have not been properly and adequately notified and consulted by the County in connection with the Tract Maps, particularly with respect to their input regarding an appropriate wildlife corridor and a possible clustered development on approximately 35-40 acres which would be compatible therewith;

(10) The 299-Unit Project which is the subject of the Tract Maps constitutes a complete revision and redesign of the 705-unit mobilehome project authorized by Tract Map No. 10692 (the "705-Unit Project") and thus constitutes a new project which requires preparation of a new Environmental Impact Report ("EIR"). Alternatively, a Subsequent EIR should be prepared for the Tract Maps in light of (a) the major project changes associated with the 299-Unit Project, including the new wildlife corridor placement, on-site drainage of storm, irrigation, and urban runoff

(including the daily discharge of toxic materials into pristine areas of O'Neill Park), and additional grading in the sensitive southeast canyon areas of the Property; (b) the newly-discovered presence of coastal California gnatcatchers on the Property and the outdated and incomplete nature of the gnatcatcher surveys of the Property which have been undertaken to date; (c) innovative project alternatives not previously considered in the prior CEQA documentation, including the 65-Unit Alternative and the 44/178 Alternative; and (d) feasible mitigation measures not previously considered, such as a 100% performance bond to cover the possibility of the developer's failure to complete all conventional and remedial grading operations;

(11) Final Subsequent Environmental Impact Report No. 566 ("FSEIR 566") and the Addendum thereto are seriously deficient and inadequate to serve as the CEQA documentation for the Tract Maps in that they fail to properly address the adverse impacts, reasonable project alternatives, and feasible mitigation measures associated with the 299-Unit Project and, to the extent that County staff seeks to rely on FSEIR 566 as the EIR for the Tract Maps, the County has failed to provide adequate public notice of its intended action to responsible state and federal agencies and to the general public; and

(12) Although the 299-Unit Project involves fewer residential units than the 705-Unit Project, it still involves massively destructive environmental impacts and, in certain respects, far worse impacts than the 705-Unit Project in terms of drainage, geotechnical hazards, and grading impacts on St. Michael's Abbey and the Ramakrishna Monastery. These impacts have not been adequately addressed and mitigated in the CEQA documentation prepared to date for the Tract Maps.

EXHIBIT "B"

A RESOLUTION OF THE FOOTHILL/TRABUCO SPECIFIC PLAN REVIEW BOARD

Approved October 16, 1998

At its previous meeting on September 29, this Board formally recommended that the Orange County Planning Commission postpone its hearing of the Saddleback Meadows project, scheduled for October 7, to allow this Board the 21-day review period provided by the Foothill/Trabuco Specific Plan and the Orange County Zoning Code. Anticipating the cooperation of the Planning Commission, this Board also scheduled a hearing of the Saddleback Meadows project for October 16. Despite this Board's recommendation, the Planning Commission approved the Saddleback Meadows Area Plan on October 7 , and recommended that the Orange County Board of Supervisors approve the Zone Change at its November 3 meeting. In addition, the subdivision maps for Saddleback Meadows have been scheduled for approval by the Orange County Subdivision Committee on October 21, again not allowing for the 21-day review mandated by the Specific Plan.

In view of these events, the Foothill/Trabuco Specific Plan Review Board:

1. Strongly objects to the Planning Commission's October 7 actions in approving the Area Plan and recommending approval of the Zone Change for Saddleback Meadows as violations of the Specific Plan and Zoning Code, both of which require a minimum 21-day review period for this Board prior to Planning Commission action;

2. Strongly objects to the County's failure to timely refer the Saddleback Meadows subdivision maps to this Board as required by the Specific Plan;

3. Demands that the Orange County Board of Supervisors immediately remove the Saddleback Meadows project from its November 7 agenda, and refer it to this Board for review and recommendation to the Planning Commission, as required by the Specific Plan and Zoning Code;

4. Demands that the County of Orange immediately remove the Saddleback Meadows subdivision maps from the October 21 agenda of the Orange County Subdivision Committee, and refer them to this Board for review and recommendation to the Subdivision Committee, as required by the Specific Plan;

5. Directs the Secretary to transmit this resolution to the Orange County Board of Supervisors, the Orange County Planning Commission, the Orange County Subdivision Committee, and the Director of Planning as soon as possible.

Notice of Preparation to Prepare a Draft Environmental Report (DEIR) No. 566 for Saddleback Meadows Residential Development, Orange County, California.

Dear Mr. Brantley:

The U. S. Fish and Wildlife Service (Service) and California Department of Fish and Game (Department) Natural Community Conservation Planning (NCCP) program staff (i.e., "agencies") have reviewed the above referenced document. The project is located within the Southern Subregion Orange County NCCP Planning Area. The preferred project alternative proposes the phased development of 705 manufactured, single-family residential units on a 222.9-acre site near the intersection of El Toro Road and Live Oak Canyon Road. A total of 10% of the project site is proposed to remain as open space. There are two County of Orange (County) staff alternatives presented. Staff Alternative 'A' would allow 150 sf units with a minimum lot size of 20,000 feet^2. Staff Alternative 'B' would reduce the number of dwelling units on the project site to no more than 100 on approximately 30 acres. The proposed project may conflict with the earlier-adopted Foothill-Trabuco and Aliso Creek Corridor Specific Plans.

The NOP outlines the project chronology from 1978. The agencies have formally commented at different stages of the proposed project. We have also met with the project applicant and their consultants, including a meeting at the project site on May 20, 1996. On June 29, 1994, the Service wrote a letter stating that project approval must be deferred until the Southern Subregion NCCP was finalized. In 1996, both agencies commented on DEIR No. 561. The Service letter stated that the location of this development within and adjacent to occupied habitat of rare species could compromise the NCCP reserve and its ability to function as a wildlife corridor through the direct and indirect impacts of habitat destruction, fragmentation, introduction of exotic species, noise, and lighting. Our comments were based upon a project alternative that provided more open space than the proposed preferred alternative.

The agencies offer the following specific information and recommendations to assist the County in planning for the preservation of sensitive wildlife species, habitats, and wildlife corridors within the proposed project area, and as a means to assist you in complying with pertinent

statutes. To facilitate the evaluation of the proposed project from the standpoint of environmental resource planning, we request that the DEIR contain the following specific information:

1) A complete discussion of the purpose and need for the project and each of the project alternatives.

2) A complete description of the proposed project, including all practicable alternatives that have been considered to reduce project impacts to wetland areas, coastal sage scrub, and other rare habitat types and species.

3) Descriptions of the biological resources associated with each habitat type. These descriptions should include both qualitative and quantitative assessments of the resources present on the proposed project site, such as coastal sage scrub, southern maritime chaparral, oak woodland, southern willow scrub, mulefat scrub, and other wetlands. Information from EIR No. 561 and other sources should be updated as necessary. Maps and tables should be used to summarize these data.

4) Specific acreage and descriptions of coastal sage scrub within the project area and impacts due to project alternatives.

5) An assessment of direct, indirect, and cumulative project impacts to wildlife and associated habitats as a result of this project and other reasonably expected projects. All facets of the project (e.g., construction, implementation, operation and maintenance) should be included in this assessment.

6) Cumulative impacts should include an adequate discussion of past, present, and reasonably anticipated future projects producing related or cumulative impacts, including those projects outside the control of the agency, pursuant to §15130 of the CEQA Guidelines. This discussion should include projects such as the proposed Live Oak Plaza and Foothill Ranch projects.

7) Available data in EIR No. 561 regarding coastal California gnatcatcher (*Polioptila californica californica*) surveys indicated that surveys were done in 1993 and 1994. The agencies accept survey results as valid for only 12 months. Gnatcatchers are known to occur adjacent to the proposed project area. We suggest that updated surveys be done for this species. The updated survey protocol includes a total of seven surveys in the breeding season or nine in the non-breeding season.

8) An assessment of existing wildlife corridors and impacts due to the proposed project and its alternatives. The agencies recommend that the DEIR disclose and analyze any

impacts within this linkage area by utilizing aerial photographs and graphic techniques such as maps and tables. Data from the mountain lion telemetry studies conducted by Paul Beier Ph.D., and other applicable investigations conducted in the area should be included in this assessment. We suggest that this assessment of wildlife corridors include a field survey using applicable techniques to determine wildlife use within the proposed project area. These techniques should include but not be limited to one or more of the following: track pads, scent stations, wildlife sign identification, and automatic photographic techniques.

9) A list of Federal candidate, proposed or listed species, state-listed species, and locally sensitive species that are on or near the project site should be included with a detailed discussion of these species, including information pertaining to their local status and distribution. The Service will provide a list of these species in a separate letter. The real and anticipated impacts of the project on these species should be fully addressed.

10) The status and likely impacts to botanical resources, including rare plants, should be reassessed. A literature search should be conducted, including a review of the Natural Diversity Database maintained by the State of California, for species that are Federal and State listed, proposed, candidate, or are otherwise considered to be endemic or rare by knowledgable authorities such as the California Native Plant Society. These species of interest for this proposed project would include but not necessarily be limited to Catalina mariposa lily (*Calochortus catalinae*) and intermediate mariposa lily (*Calochortus weedii ssp. intermedius*).

11) Surveys should be conducted for the Quino checkerspot (*Euphydryas editha quino*), a Federal endangered species. The biologist conducting this survey should contact the Carlsbad Field Office to obtain the most current survey guidelines.

12) The current status of fairy shrimp on the project site should be discussed. This would include the endangered Riverside fairy shrimp (*Streptocephalus woottoni*), the proposed endangered San Diego fairy shrimp (*Branchinecta sandiegoensis*) and the threatened vernal pool fairy shrimp (*Branchinecta lynchi*). Riverside fairy shrimp is known to occur on the proposed project site.

13) Specific mitigation plans to fully offset project-related impacts, including proposals for mitigating the cumulative impacts of direct and indirect habitat loss, degradation, or modification. The project site supports significant biological resources and is part of a regional wildlife corridor. Adverse project-related impacts should be mitigated, to the maximum extent practicable, through on-site conservation or revegetation of impacted habitat types. The objective of each mitigation plan should be to offset the project-induced qualitative and quantitative losses of wildlife habitat values. These mitigation

plans involving restoration and enhancement should be prepared by persons with specific expertise on southern California ecosystems and state-of-the-art native plant revegetation techniques. Each plan should include, at a minimum: a) the location of the mitigation site; b) the species, actual number, and size of the plants to be used (seeds and seedlings should be obtained from an appropriate on-site location or from a site in the immediate vicinity of the project site); c) a schematic layout depicting the arrangement of the plants within the compensation area; d) time of year that planting will occur; e) identification of the irrigation methodology to be employed; f) measures to be taken to control exotic vegetation on site; g) a detailed monitoring program that includes provisions for replanting areas where planted materials have not survived; and h) identification of the agency or party responsible for assuring the successful creation of the mitigation habitat and providing for the perpetual conservation of the restoration site.

14) An analysis of the effects of the project on the hydrology of any riparian or wetland communities within the sphere of influence of the project. Of particular importance is an analysis of the adequacy of proposed means to convey major flood or runoff flows without impacting vegetation off-site or in the restoration area. Also of great interest would be an analysis of the effects on hydrology of the Riverside fairy shrimp occupied habitat due to the proposed project.

15) Identification of methods to be employed to prevent soil erosion and siltation to adjacent areas designated as open space and NCCP reserve lands.

16) Measures to be taken to perpetually protect habitat values that are created during restoration (mitigation). Issues that should be addressed include restrictions on vehicle and people access, proposed land dedications, monitoring and management programs, control of illegal dumping, restrictions on lighting near mitigation areas, etc.

17) A thorough analysis of expected noise impacts on avian species and other wildlife and measures to be taken to mitigate any adverse impacts resulting from noise levels.

The agencies appreciate working with the County on NCCP conservation planning issues. Lands within the proposed project area are important in conservation planning for the Southern Subregion NCCP Reserve in Orange County. The area of the proposed project is also the only linkage to the NCCP Central Subregion in Orange County. An improperly implemented project would permanently destroy the integrity of the linkage between the Subregion reserves.

If you have any questions or comments please contact Liam H. Davis, Associate Wildlife Biologist (Department) at 619-467-4207 or Robert James, Fish and Wildlife Biologist (Service) at 619-431-9440.

Bird Grounds Some Landowners

■ Development: Officials, concerned about how many endangered gnatcatchers remain in South County, have begun denying permits to clear land on single plots—signaling possible delays on larger projects.

By DEBORAH SCHOCH
TIMES STAFF WRITER

In a move with broad implications for future growth, federal wildlife officials have begun denying permits to some southern Orange County landowners seeking to clear plots of land containing rare California gnatcatchers.

A few landowners recently learned they cannot immediately move ahead and grade single-family lots because of uncertainty over how many of the federally protected birds still reside in the region given the current building boom.

The federal clampdown comes as a reminder of how growth is intrinsically tied to the welfare of a tiny bird that mews like a kitten and dwells on some of the nation's most desirable and expensive coastal real estate.

It also foreshadows what could be in store—significant building delays on a larger scale—if developers, government officials and environmentalists fail to move ahead with a landmark program to create wildlife preserves in Orange County and elsewhere in the region.

"It's frustrating to see this process grinding its gears like this," said conservation biologist Dennis Murphy, a key player in crafting that program in the early 1990s.

The extent of the problem won't be known for several weeks, when the U.S. Fish and Wildlife Service completes a study of the local gnatcatcher population.

Under the best scenario for birds and builders alike, the review could find so many gnatcatchers that regulators can resume issuing permits. But in a worst-case scenario, if regulators find the gnatcatcher's future is imperiled, they could be forced to choose a more time-consuming permitting process, slowing down the rate of South County development until a special nature preserve is completed.

Officials don't know which projects could be slowed. But county has drawn up a list of South County projects that could disrupt gnatcatchers or their habitat before the preserve is in place. That rough-draft list, requested by the Fish and Wildlife Service, includes two car dealerships, homes in Coto de Caza, the controversial Saddleback Meadows housing project and the 434-home Marblehead development in San Clemente.

"We need to ask ourselves again, 'Are we giving too much? Is it jeopardizing the species?' " said John Bradley, the service's supervising biologist for Orange and Los Angeles counties.

The new wariness on the part of wildlife regulators hints at the fragility of a natior ally acclaimed 1993 compromise intende to quell a clash between property rights and the Endangered Species Act in Southern California's sage-specked coastal hills.

The reason: Construction of several major housing projects in the San Clemente area may have exhausted the number of South County gnatcatchers allowed to be harmed or disturbed under the 1993 compromise.

Please see GNATCATCHER, B6

2655

GNATCATCHER: Preserve Is Behind Schedule

Continued from B1

That compromise was supposed to be merely a temporary measure. It permitted limited land development and gnatcatcher losses while wilderness preserves were designed to protect rare species.

But more than five years later, creation of a planned 40,000-acre-plus South County preserve is lagging far behind schedule, stretching the limits of the temporary rules. While county officials overseeing the reserve's creation predicted in May that a draft reserve design could be ready by July, that deadline has been missed. Some say a draft may not materialize until late this year.

In the meantime, with the bird limit reached or exceeded, small landowners have been caught in the squeeze.

Already, some landowners attempting to build homes in Coto de Caza are entangled in endangered species red tape—exactly the scenario the compromise was supposed to avoid. The precise number could change because more permits are in the pipeline.

The property owners are "in shock. I hear from some of them that it's the first time they've heard there are gnatcatchers out there," said Gary Medeiros, county chief of resource planning. "They're not large companies, and they can't afford to be overextended like this. . . . They're a bit upset with the whole situation, and I don't blame them."

Medeiros and Fish and Wildlife officials are working to design short-term solutions so that the Coto de Caza landowners can build their homes. But a larger question remains: What will the service decide when it completes its review of the gnatcatcher's well-being throughout Southern California?

The current situation is rekindling memories of the early 1990s, when the impending listing of the tiny gnatcatcher on the federal endangered species list sparked a regional development debate.

The gnatcatcher lives in coastal sage scrub, a mix of plants that once blanketed the coastal hills of Southern California. Today, with 90% of sage scrub developed, it ranks as one of the most endangered habitats in the United States.

Under the guidelines, no more than 5% of the coastal sage scrub or 5% of gnatcatchers population was to be destroyed during the reserve planning process.

About 562 pair of gnatcatchers remained in South County this spring, federal biologists said. The guidelines allowed for 19 pair—or 38 birds—to be harmed by development in South County. But the Forster Ranch project and other recent permits gave the go-ahead for 58 gnatcatchers to be removed or destroyed, including two lost with plans for a new South County high school.

Now, another review is underway, and some officials believe Forster Ranch pushed the gnatcatcher count below the federal guidelines.

Federal regulators are reviewing how many gnatcatchers really live in the region and whether further building will jeopardize their survival. That study is legally required because federal tallies showed the number of harmed gnatcatchers was near or at the limit. Until the study is completed in late September or early October, officials said they will hold off issuing new permits for clearing areas inhabited by the songbird. They are continuing to allow clearing of bird-free coastal sage scrub.

Some finger-pointing is accompanying the current gnatcatcher snafu.

County planning official Tim Neely calls the small landowners' plight a "procedural crisis," and he criticizes the Fish and Wildlife Service for not moving more quickly to craft a solution after issuing a flurry of permits to major developers in February.

"I don't know why it's taking as long as it is," Neely said.

That's exactly what some federal regulators and environmentalists are saying about the long-delayed South County reserve plan, which many consider the ultimate panacea for the gnatcatcher problem. That reserve is being designed under county oversight in tandem with the Rancho Mission Viejo LLC, southern Orange County's largest landowner.

A rare public meeting on the plan brought a standing room-only crowd of more than 200 people to a San Clemente school auditorium in May. Many voiced concerns about the impact of new development on what some call "the lost wilderness," a huge expanse of open land largely owned by Rancho Mission Viejo LLC and brimming with rare plants and animals such as the gnatcatcher.

"They had that public meeting but nothing's happened," said Dan Silver, coordinator of the Endangered Habitats League, a conservation group.

Diane Gaynor, spokeswoman for the Rancho Mission Viejo, disputed the notion that preserve planning is behind schedule. Instead, talks have expanded to include wetlands preservation as part of the preserve design, she said.

Some critics point to the flurry of permits that the Fish and Wildlife Service issued in the days leading up to the Feb. 15 start of gnatcatcher nesting season, a six-month period when grading is discouraged. One especially controversial permit was issued Feb. 11 to the 1,037-home Forster Ranch project in San Clemente, allowing habitat of 33 gnatcatchers to be destroyed.

In all, four permits allowing the clearing of land containing 49 South County gnatcatchers were granted immediately before nesting season began—including permits for the massive Ladera and Talega Valley developments. By contrast, one landowner recently denied a permit had a lot containing two gnatcatchers, and another man's lot contained a single bird.

Murphy, the chief architect of conservation guidelines for Gov. Pete Wilson's Natural Community Conservation Planning program, criticized the Forster Ranch permit as "a horrible, horrible deal. I don't know what was going on. . . . Some squeaky-wheel event resulted in what I would consider a disproportionate take of habitat on this one property."

24 August 1998

The Honorable Chairman and Members
of the Planning Commission
Orange County
10 Civic Center Plaza
Santa Ana, California 92702

Reference: Saddleback Meadows — EIR Addendum PA980103 — Request for Preparation of a Legally Adequate Document

Dear Chairman and Members of the Planning Commission:

In the 24-plus years I have served as an environmental consultant (both in the preparation and defense of EIR's, and as an expert witness) I have never seen such a blatant attempt to circumvent the requirements of CEQA in the name of expediency. The fact that Zone Change 98-3 and Area Plan 98-2 for the 299-unit single family detached housing project are being processed as a "contingency plan" does not excuse compliance with state laws nor does it allow for any corners to be cut just so the contingency plan can be voted on before the end of the year.

However, by purporting to rely on a fatally flawed Addendum to SEIR 566 as the environmental documentation for the Zone Change and the Area Plan, the County of Orange has shirked its responsibility to conduct a careful, deliberate, and legally proper environmental assessment of the impacts, alternatives, and mitigation relating to the 299-unit project. In violation of CEQA Guidelines sections 15063, 15153, 15162 and 15164, the County has sought to "short cut" the environmental review process by using a so-called "Addendum" to avoid the public notice and consultation requirements. Approval of this "Addendum" will place Orange County at legal (and financial) risk, and will severely compromise the County's ability to complete a South County NCCP plan. Granting entitlements for 299-homes will not be viewed favorably by either the California Department of Fish and Game or the United States Fish and Wildlife Service — neither of which appears to have been properly notified or consulted about the new project.

I urge the Commission to reject both the Addendum to SEIR 566 and the associated Zone Change 98-3 and Area Plan 98-2 for the 299 Single-family-unit project. I would also urge the Commission to direct staff to have prepared a legally adequate CEQA document and have that document circulated for public review and comment.

I have reviewed this document and make these comments on behalf of the Vedanta Society of Southern California. I should note that, although I have previously testified before the Board of Supervisors on SEIR 566, I received no notice at all from the County as to the availability of the "Addendum." In fact, I received a copy of the "Addendum" from Counsel within the week, leaving inadequate time to review and respond to the document.

2658

11228 Zapata Avenue, San Diego, CA 92126 • Riverside Office: (909)351-0809 • San Diego Office: (619)233-5454
professional environmental services

Addendum PA980103 is not a legally permissive document under the California Environmental Quality Act. The document is seriously flawed in the following ways:

A. SEIR 566, to which this document purports to be an Addendum, is itself deficient and is currently the subject of a lawsuit to invalidate its certification;

B. The project and its circumstances have triggered the tests of Guidelines Section 15162 in numerous ways. Substantial project changes, new information from the wildlife agencies, additional project alternatives which have come to light, and feasible mitigation measures which have not been adequately considered all mandate the preparation of a new or subsequent EIR. An Addendum is not, therefore, an appropriate environmental document to support the Zone Change and Area Plan.

C. Substantive technical issues are ignored or are addressed in the most cursory way. The document is materially defective by its silence on numerous issues including the lack of mitigation for several significant effects.

D. The use of an Addendum is a transparent attempt to avoid the Public Notice and Review process that would be mandated under Guidelines Sections 15153 and 15162.

Subsequent Environmental Impact Report (SEIR) 566. I had the opportunity to provide the Board of Supervisors with written comments as to the adequacy of SEIR 566. I include that letter by reference and have attached a copy for the Commissions review and use. In addition, the United States Fish and Wildlife Service and the California Department of Fish and Game commented extensively on the adequacy of SEIR 566. The wildlife agency's comments were never responded to adequately in writing, as is required by law (see Guidelines Section 15088). That letter (dated 8 August 1997) is also attached for the Commission's information and review.

An Addendum is NOT the Appropriate CEQA Document. Section 15162 of the CEQA Guidelines (California Code of Regulations) governs when an Addendum to an EIR can be prepared and when a Supplemental or Subsequent EIR is the appropriate document. The relevant parts of that code section read as follows:

> "(a) When an EIR has been certified . . . no subsequent EIR for that project shall be prepared unless . . . the lead agency determines, on the basis of substantial evidence in light of the whole record, one or more of the following:
>
> > "(1) Substantial changes are proposed in the project which will required revisions . . . due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects.

> "(2) Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR . . . due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects.
> "(3) New information of substantial importance which was not known and could not have been known with the exercise of reasonable diligence at the time of the previous EIR was certified . . . , shows any of the following:
> "(A) The project will have one or more significant effects not discussed in the previous EIR,
> "(B) Significant effects previously examined will be substantially more sever than shown in the previous EIR,
> "(C) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project but the project proponents decline to adopt the mitigation measure or alternative,
> "(D) Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative."

While one might argue that an Addendum to SEIR 566 would be appropriate for *some* issues (i.e., air quality effects are reduced with the smaller project), there is a more compelling argument that a new EIR and public review period are required for a number of the aspects of the new 299-unit project. For example:

- **New Project Alternatives.** Subsequent to the certification of SEIR 566, Saint Michael's Abbey and the Ramakrishna Monastery have entered into a series of negotiations with the Saddleback Meadows developer with the intent of purchasing the bulk of the property (178-acres) for open space purposes. The balance of the property (35- to 44-acres following purchase) would be considered for various development alternatives ranging from 65 to 130 single family homes. These are clearly reasonable alternatives not discussed in SEIR 566 and are alternative that the project proponent has, to date, declined to adopt. Clearly the tests of 15162(a)(3)(C) and (D) are met and a subsequent EIR and public review period is required.

- **Southern Subregion NCCP.** On 11 August 1998, a letter jointly signed by the United States Fish and Wildlife Service and the California Department of Fish and Game (copy attached) was submitted to the Board of Supervisors of Orange County. This letter states that "County

maps show that Saddleback Meadows is the only remaining wildlife corridor linkage to the NCCP Central/Coastal Subregion." SEIR 566 (at pages 4-128, 4-148, and, 4-150) refers briefly to the wildlife corridor issue. Under the heading "Significant Impacts of Project Prior to Mitigation" (p. 4-150), the SEIR indicates that "Implementation of the proposed project would conflict with existing wildlife movement corridors . . ." Subsequent to this statement, the SEIR offers no mitigation.

In that the discussion of the NCCP wildlife corridor is cursory at best in SEIR 566, and since this is identified by the wildlife agencies in their 11 August 1998 letter as the "only" corridor linking the NCCP subregions, the ". . . substantial increase in the severity of previously identified significant effects" test of 15162 is clearly met and a new Subsequent EIR and public review period are required.

This requirement for a "new EIR" is doubly compelling when one considers that the County is, with this project, potentially compromising its ability to obtain the approval of the Southern Subregion NCCP, a point of critical interest to many builder/developers besides the Saddleback Meadows developer, California Quartet, Ltd.

The Addendum for the 299-unit alternative includes a narrow, ostensible "wildlife corridor" through the subdivision. A road traverses the central part of the "corridor" and includes lands that would be extensively graded, thereby requiring revegetation of native plant species. In addition, the revegetation area and the narrowest part of the corridor contain the fuel modification zones associated with the surrounding residential developments. Fuel modification zones are, by definition lacking in both horizontal and vertical cover and are not properly part of a wildlife corridor. The wildlife agencies have not reviewed this proposal, however, although the County is required to have consulted these agencies under section 15063(g) of the Guidelines. That the County has not consulted the Wildlife agencies on this "project" is extraordinary, given the *purported* close working relationship between those agencies and the County staff on the Southern Subregion NCCP.

Technical Errors and Lack of Mitigation. The California Courts, in interpreting the implementation of CEQA, have been most specific in their requirements for adequate mitigation measures. Feasible, implementable, mitigation measures must be specified by the CEQA document for each of the potentially significant impacts or effects identified for the project. Neither the so-called Addendum nor the original SEIR 566 meet this test. My letter of 17 February 1998 (copy attached) cites case law in support of this conclusion. To cite a few of several possible examples of technical deficiencies from the Addendum and SEIR:

- **Wetlands/Fairy Shrimp.** Both SEIR 566 and Addendum PA980103 are clear (albeit very brief) in showing that the implementation of either the approved project or the 299 d.u. alternative will result in a significant loss of wetlands and the Federally designated

Endangered Riverside Fairy Shrimp. However, no mitigation for this loss is identified, other than generalized statements that permits will be required from the Army Corps of Engineers (ACOE) and from the California Department of Fish and Game, and that mitigation can be accomplished on-site. None of the critical questions about this mitigation are answered. Can the on-site vernal pools be moved?, Can newly created pools support the endangered Fairy Shrimp?, In order to obtain an ACOE permit, a 401(c)(3) "alternatives" analysis must be prepared — can an analysis supportive of development be prepared in light of the presence of the endangered species and the rarity of this habitat type in Orange County? Clearly this is a legally significant omission of the Addendum.

- **Wildlife Corridor.** The 299 d.u. plan ostensibly includes a wildlife corridor through the subdivision. However, the bulk of this narrow corridor, at the "pinch point" is on land that will be graded and then revegetated to native species. Obviously this revegetation will be critical to the success of the corridor concept, yet no revegetation plans are given in the Addendum, no species lists, no information that will allow a reviewer to gage the potential (or actual) success of the revegetation/mitigation measure. Clearly this is a significant technical flaw in the document.

- **Gnatcatcher.** At a minimum an EIR (or an Addendum) must assess those effects that require a mandatory finding of significance. Saddleback Meadows has not been the subject of a directed survey for the Coastal California Gnatcatcher in four years (Addendum, p. 76). However, recent studies for the NCCP (Dudek and Associates) have identified breeding pairs of Gnatcatchers literally at the periphery of the project site. An EIR (or an Addendum) that makes no attempt to assess the potential effect of the project on a Federally listed species is flawed on its face (see CEQA Guidelines section 15065).

  "Take" as defined under the Federal Endangered Species Act also includes indirect effects on the listed species. To the extent that the proposed wildlife corridor through the project isinadequate to allow the passage of Gnatcatchers between the Southern and Central NCCP subregions, then there is a fair argument that a "take" has been committed. Yet the Addendum is silent on this issue and gives the question of the Gnatcatcher the most minimal discussion. Clearly the "Addendum" is fatally flawed in its discussion of this listed species.

Avoidance of Public Review. "Public participation is an essential part of the CEQA process" (Guidelines Section 15201). This concept is pervasive throughout both the Act and the Guidelines. When the document is not an original EIR, but a follow-on document as is the case here, *Sutter Sensible Planning, Inc. v. Sutter County Board of Supervisors* [(3d Dist. 1981) 122 Cal. App. 3d 813] provides appropriate guidance as to the need for recirculation for additional public review:

> "[R]ecirculation is required, for example, when the new information added to an EIR discloses:
>
> > "(1) a new substantial environmental impact resulting from the project or from a new mitigation measure proposed to be implemented;
> > "(2) a substantial increase in the severity of an environmental impact unless mitigation measures are adopted that reduce the impact to a level of insignificance;
> > "(3) a feasible project alternative or mitigation measure that clearly would lessen the environmental impact of the project, but which the project's proponents decline to adopt."

As discussed above, the *Sutter* Court's tests for recirculation to public review are clearly met by the so-called "Addendum." For example:

- With the publication earlier this year of the Alternatives for the Southern Subregion NCCP and with the wildlife agency's letter of 11 August 1998 (see attached) it is now abundantly clear that this project will potentially impact the ability of Orange County to obtain an approvable South County plan. Certainly this is a "substantial increase" in a significant effect for which the Addendum offers no mitigation that will reduce the effect to a level of insignificance.

- Saint Michael's Abbey and the Ramakrishna Monastery have been discussing feasible alternatives with the developer and the County, alternatives which would preserve a substantial amount of open space. Since these alternatives would clearly lessen the impacts of the project, and in that the proponent has declined to adopt any of these alternatives, recirculation of the document is mandated.

In conclusion, the apparent "rush" to approve a 299-unit project involving massive impacts without even coming close to preparing the proper CEQA documentation is unseemly and unjustified. Moreover, given the critical importance of the Saddleback Meadows property to the success of the Southern Subregion NCCP, the failure to provide the wildlife agencies with even the courtesy of a notification regarding a new 299-unit project that would directly and significantly impact the viability of the NCCP is inexplicable, particularly when these agencies have shown such interest in the development of the Saddleback Meadows property.

According, the Planning Commission should not participate in such a legally improper process and should direct the staff to comply with all applicable CEQA requirements before presenting the Zone Change and the Area Plan for consideration. At a minimum, this will require preparation of a new Environmental Impact Report and circulation of that document for Public Review and comment.

Sincerely,

Royce B. Riggan, Jr., AICP

20 February 1998

Honorable Members of
Board of Supervisors of Orange County
10 Civic Center Plaza
Santa Ana, California 92702

Reference: Saddleback Meadows — Appeal of Certification of Final Subsequent Environmental Impact Report 566

Dear Members of the Board:

RBRiggan and Associates has reviewed the Saddleback Meadows' Final Subsequent Environmental Impact Report No. 566. We find the document to be woefully inadequate in its treatment of biological resources, and not in compliance with the dictates of CEQA and the CEQA Guidelines. Specifically, we have noted the following deficiencies:

Impacts Not Defined. An EIR is required to identify and address the possible significant impacts of the project (see Calif. Code of Regulations, Section 15126(a)). The Saddleback Meadows EIR is fatally flawed as written in that it ignores certain potentially significant impacts to biological resources and/or puts off to some future time the identification of such impacts. For example:

- Current Federal protocols for the California Gnatcatcher (*Polioptila californica californica*) require reliance on surveys less than a year old. Regional populations of the Gnatcatcher have increased significantly since the last survey of the subject property in 1994. The site may very well be occupied habitat in 1998; despite the conclusionary language in the EIR (see page 4-130) "The coastal California Gnatcatcher . . . [is] not found onsite." The EIR does not identify the potential impact to this federally listed species. Instead, the determination of impact is improperly deferred to some future point (see EIR, page 4-157, paragraph SC 7-11).

- The EIR indicates that (page 4-119) "On June 1994, PSBS documented the . . . potential for additional fairy shrimp [species] in all onsite ponds." The presence or absence of additional federally listed wildlife species is a critical question. If project implementation will effect additional endangered species not identified in the EIR (such as the federally listed Vernal Pool Fairy Shrimp, *Branchinecta lynchi*) then the impacts of the EIR are significantly understated and the EIR is defective on its face.

- The Quino Checkerspot Butterfly (*Euphydryas editha quino*) was listed as endangered under the federal Endangered Species Act in January of 1997. Mentioned in the EIR text only in Table 27 (see page 4-140), the EIR opines that: "Focused surveys are needed for detection but are not warranted." This is a conclusionary statement not supported by any evidence in

the record. The species was once common at various points within the County (see Orsak, 1977, *The Butterflies of Orange County*, California, pp. 135-138). Potential impacts of the project to this federally listed, endangered species, can only be determined by a protocol survey for the species. Absent such a survey, the EIR is clearly inadequate.

Vernal Pools. The EIR states (page 4-120) that "The ephemeral ponds onsite are not vernal pools, but rather are holding ponds for watering cattle which graze on the site." This is a conclusionary statement of the EIR and is not supported by evidence presented within the document. The *Vernal Pools of Southern California Draft Recovery Plan* (Fish and Wildlife Service, 1997) clearly identifies these "ephemeral ponds" as vernal pools and suggests that their origin is as slump ponds on landslides in clay soils, certainly an origin consistent with the geology of the project site. If these are functional vernal pools then the significance assessment of the EIR is flawed and needs to be materially revised. A comprehensive survey of these pools (one that is seasonally appropriate) needs to be conducted to determine their functional classification.

Mitigation of Biological Impacts. The mitigation measures outlined for the anticipated impacts of the project on biological resources are generic and contemplate that, at some future unspecified time, the actual form and content of the measures will be defined. The majority of the mitigation measures are addressed as "standard conditions of approval" and are keyed to some future time in the development of the project. The EIR itself states (at page 4-152) that: ". . . specific standard county conditions . . . have been developed to ensure that a comprehensive biological resources mitigation program is devised and approved . . . prior to the issuance of grading permits." This is a clear violation of CEQA. Both the Act and case law require specificity in mitigation measures and require that the public have an opportunity to review those mitigation measures as a part of the EIR. For example:

- *Sundstrom v. County of Mendocino* (1st Dist. 1988) 202 Cal. App 3d 296 (248 Cal.Rptr. 352) — The court of appeals faulted the county for assuming that various other agencies would be able to devise mitigation measures which would avoid potential significant impacts. Because there was no certainty that success could be achieved, in this regard the agency had no basis for finding that the project's impacts would be insignificant.

- *Oro Fino Gold Mining Corporation v. County of El Dorado* (3d Dist. 1990) 225 Cal. App. 3d 872-885 (274 Cal.Rptr. 720) — The court disapproved of mitigation measures requiring post-approval formulation of a reclamation plan, erosion control plan, dust plan, and fire plan, saying ". . . the CEQA process demands that mitigation measures timely be set forth, that environmental information be complete and relevant, and that environmental decisions be made in an accountable arena."

- *Gentry v. City of Murrieta* (4th Dist. 1995) 36 Cal. App. 4th 13589 (43 Cal. Rptr. 2d 170) — The court held that, in adopting a Negative Declaration the city improperly deferred the formulation of specific mitigation measures. The City had required the project applicant to obtain a Stephens' Kangaroo Rat report and to ". . .comply with any recommendations in the report." However, the court noted that since ". . . there was substantial evidence to support a fair argument that the Project, even as mitigated . . ., would have a significant impact on the Stephens' Kangaroo Rat," any proposed mitigation for this impact had to be made available for public review and could not be left to be formulated in the future (Gentry, supra, 36 Cal. App. 4th at 1397 (43 Cal. Rptr. 2d. 170)).

Absent specificity in the mitigation measures the approving officials cannot determine whether or not the identified impacts can be mitigated or whether a wholesale redesign of the project will be necessary. In addition, the public cannot determine the adequacy of the proposed mitigation and is denied any ability to provide input to the approval process. Absent specificity in the mitigation measures, the EIR is fatally flawed.

Significant and Not Mitigable Impacts. It cannot be determined from the EIR which impacts to biological resources are not mitigable. If there are impacts which cannot be mitigated and thus are unavoidable, then CEQA requires the Lead Agency to adopt appropriate findings (see Calif. Code of Regulations, section 15091(a)). At present, the analysis of the biological resources is sufficiently flawed and the recommended mitigation measures are sufficiently vague that it cannot be determined whether or not overriding considerations will be required.

In addition, to the extent that the following are not mitigable, then there are additional ramifications for both the developer and the County. Approval of the project as proposed could significantly affect the County's ability to complete the NCCP planning effort. The lack of feasibility inherent in the identified mitigation measures in the EIR could also force abandonment of the present development plants and preparation of a significant project redesign. Specifically:

- The EIR (page 4-144) indicates that the loss of Coastal Sage Scrub Habitat would be permitted under the "Interim Take 4(d) Rule." However, certain findings must be made relative to the 4(d) Rule, to the effect that the anticipated habitat loss ". . . will not preclude connectivity between areas of high habitat values" and will not ". . . preclude or prevent the preparation of the subregional NCCP." It would appear that these findings cannot be made.

- Loss of 97 percent and "312 individuals" (EIR page 4-145) of Coast Live Oak Woodland. This impact is considered significant ". . . because of their [the oaks] . . . function as part of the planned NCCP regional wildlife corridor." "Implementation of the project as proposed

will directly impact wildlife movement through the project site, as it does not contain any design features which seek to facilitate wildlife movement. It cannot be assumed that wildlife would be able to move through the project site as currently designed." (EIR, page 4-148). Approval of the project, therefore, would appear to significantly compromise the NCCP planning effort.

- A total of 3.43 acres of definable wetlands would be impacted by the project (EIR page 4-146). It is extremely unlikely that a section 404 permit for the loss of 3.43 acres of wetlands and populations of one or more federally endangered species can be obtained. In this special instance, therefore, the County should require that the 404-Permit be obtained *prior* to issuance of any grading permit by the County Building Official.

Additional Public Review Required. CEQA Section 21092.1, Section 15088.5 of the CEQA Guidelines, and relevant case law clearly requires the EIR to be recirculated for an additional public review period when "significant new information" is added to an EIR. Clear-cut identification of the actual impacts to biological resources, re-writing of the mitigation measures to provide the level of specificity required by the statutes, and completion of the required additional field work, all constitute "significant new information." The courts have been most clear, the public must be given a ". . . meaningful opportunity to comment upon a substantial adverse environmental effect of the project or a feasible way to mitigate or avoid such an effect . . ." Recirculation of the Subsequent EIR (once the necessary corrections have been made) for an additional public review period is clearly required.

Requirements to Bring the EIR to Legal Adequacy. Additional field work, a comprehensive reassessment and re-writing of the mitigation measures, and re-circulation of the EIR for an additional public review period will be required to bring the document to legal adequacy. Specifically, before FSEIR 566 can properly be certified as being adequate and complete under CEQA, it will be necessary to:

- Complete a comprehensive survey of the property to determine the presence or absence of the threatened Coastal California Gnatcatcher. Once a survey has been completed to federal protocols, revise the EIR's assessment of impacts accordingly and provide specific mitigation measures.

- Complete a comprehensive survey of the on-site ponds to determine the presence or absence of other listed species of Anostraca (fairy shrimp). If additional listed species of Fairy Shrimp are identified, then revise the EIR's assessment of impacts accordingly and provide specific mitigation measures.

- Complete a protocol survey for the Quino Checkerspot Butterfly. If this endangered species is found within the bounds of the project, then revise the EIR's assessment of impacts accordingly and provide specific mitigation measures.

- Conduct a comprehensive survey of the "vernal pools" to determine the presence or absence of additional vernal pool plant and animal indicator species. This survey should be conducted without the presence of cattle and should be conducted at seasonally appropriate times. If these "ponds" prove to be definable vernal pools, then revise the EIR's assessment of impacts accordingly and provide specific mitigation measures.

- Prepare comprehensive and impact specific mitigation measures. This can be accomplished, obviously, only after a complete list of impacts (and their significance) has been developed. The mitigation measures must be substantively related to the impact identified.

Sincerely,

Royce B. Riggan. Jr., AICP

**Draft Subsequent Environmental Report (DSEIR) No. 566
for the Saddleback Meadows Project, Orange County, California.**

Dear Mr. Brantley:

The U. S. Fish and Wildlife Service (Service) and California Department of Fish and Game (Department) Natural Community Conservation Planning (NCCP) program staffs (i.e., "the Wildlife Agencies") have reviewed the above DSEIR. The project is located within the Southern Subregion Orange County NCCP Planning Area, near the border with the NCCP Central Subregion. The preferred project proposes the phased development of 705 manufactured, single-family residential units on a 222.3-acre site near the intersection of El Toro Road and Live Oak Canyon Road, impacting a total of about 191 acres on site and 20 acres off site. About 14% of the project site is proposed to remain as open space.

Biological resources on site include about 65 acres of coastal sage scrub (CSS), 14 acres of oak woodland, and about four acres of wetland vegetation communities. The federally endangered Riverside fairy shrimp (*Streptocephalus woottoni*) is known to occur within at least seven wetlands (identified in the DSEIR as "ephemeral ponds") spread throughout the site. Several plant and animal species considered sensitive by the Wildlife Agencies occur (e.g., cactus wren [*Campylorhynchus brunneicapillus*]) or may occur. The coastal California gnatcatcher (*Polioptila californica californica*) hereafter "gnatcatcher," a federally threatened species, is likely to occur on site based on the presence of CSS and gnatcatcher-occupied CSS in surrounding areas. The Quino checkerspot butterfly (*Euphydryas editha quino*), a federally endangered species, may occur as well.

Along with the No Project/No Development Alternative ("Alternative 1") required by the California Environmental Quality Act (CEQA), there are four other alternatives presented in the DSEIR. Alternative "1" would avoid any adverse environmental impacts to the project site. Alternative "2" proposes 150 housing units with a minimum lot size of 20,000 feet^2, disturbing more than 125 acres. This would result in elimination of oak woodlands, CSS, and ephemeral ponds of which some rare and sensitive species are obligate residents. Noise decibel levels would increase and possibly affect wildlife in adjacent O'Neill Regional Park. Alternative "3" proposes

2670

100 single family units on a 31.7 acre portion of the site. This alternative avoids about 191 acres of habitat, thereby appearing to allow connection between open space areas north, south, and east of the project site. However, this project alternative will impact two ephemeral ponds and CSS habitat. Alternative '4' proposes 299 housing units, disturbing about 165 acres. A wildlife corridor, narrowing to 400 feet in width and going up a nearly vertical slope, is proposed to be bisected by a road. Alternative '5' proposes 318 housing units within a development area of 113 acres, leaving about 110 acres in open space. The wildlife corridor would be the same as for Alternative '4' except that the minimum width would be about 700 feet. The proposed project appears to conflict with the earlier-adopted Foothill-Trabuco and Aliso Creek Corridor Specific Plans and also fails to describe adequate project design for maintaining corridor integrity of the Orange County NCCP Reserves. In evaluating alternatives 2-5, Alternative '3' would have the least environmental impact; but would nonetheless, substantially impact wildlife corridor integrity between subregional NCCP reserve areas in Orange County.

The Wildlife Agencies have formally commented at different stages of the proposed project. We have also met with the project applicant and their consultants, including a meeting at the project site on May 20, 1996. On June 29, 1994, the Service wrote a letter stating that project approval must be deferred until the Southern Subregion NCCP was finalized. In 1996, both agencies commented on the DEIR (No. 561). The Service letter stated that the location of this development within and adjacent to occupied habitat of rare species could compromise the NCCP reserve and its ability to function as a wildlife corridor through the direct and indirect impacts of habitat destruction, fragmentation, noise, and lighting. Our comments were based upon a project alternative, similar to alternative four, which provided more open space than the proposed preferred alternative presented in this DSEIR.

In general, the DSEIR does not adequately describe the biological resources of the project area. The document only describes and analyzes impacts of the different alternatives in a superficial manner. Referring to our joint Wildlife Agency letter of January 30, 1997, responding to the Notice of Preparation, at least eight of our requested information items were completely or partially ignored, without explanation. Available data were not identified. Further, the Initial Study (p. 17) states that the scope of the EIR discussion will provide a "detailed discussion" and "[A] re-inventory of the existing unique, sensitive . . . flora and fauna within the project site . . ." Also to be provided was "[A] detailed analysis of the project's impacts to wildlife movement, including mitigation measures to avoid or reduce those impacts." Neither of those items was adequately accomplished.

The Wildlife Agencies offer the following specific information and recommendations to assist the County and the project applicant in planning for the preservation of sensitive wildlife species, habitats, and wildlife corridors within the proposed project area, and as a means to assist you in complying with pertinent statutes. Page numbers refer to the DSEIR unless otherwise noted:

1-1, paragraph 2 and 4-41, paragraph 4. Both of these statements should read as "effect."

4-41, exhibits 21, 22, 53. Interference with existing hydrology on site is shown with the construction of the preferred alternative. Impacts to "ephemeral ponds" not directly within the project footprint would also occur. Analyze these impacts further.

4-43, last paragraph. The Wildlife Agencies disagree with the conclusions that there would be "... no unavoidable adverse impacts to surface or groundwater hydrology" and that water quality impacts would be "... to less than significant levels" since current hydrological conditions support the existence of these areas. Implementation of the preferred alternative, including alteration of drainage patterns, would result in the direct loss of a minimum of seven ephemeral ponds on site.

4-110. The noise impact analysis is cursory and needs to refer to appropriate literature attributing impact to avian populations due to noise. Also, in the cases of "major airport runways" the analysis is biased by not considering adjacent land use changes in the context of the distribution of the coastal California gnatcatcher.

4-119, paragraph 2. There was no Service protocol for presence/absence of gnatcatchers in 1993 and 1994.

4-122, exhibit 50. Western spadefoot toad (*Scaphiopus hammondi*) is identified in the exhibit (and on page 4-137) as occurring on site; however, the discussion about amphibians on page 4-126 states that "[N]o amphibians were observed during the surveys of the site." Correct this discrepancy.

4-123, paragraph 2. Add that the NCCP refers to the Southern Orange County Subregion to distinguish this planning effort from other ongoing and completed efforts.

4-125, "Ephemeral Ponds." The Wildlife Agencies disagree with the assertion that "all of the ephemeral ponds were artificially created a number of years ago..." Given the geological conditions of frequent landslides in the area, these wetlands could have been "slump" or "slope" ponds that underwent human modification at a later time. These types of wetlands are known in both Orange and San Diego counties. Further information is needed in the DSEIR regarding the origin of these wetlands in the context of the proposed impacts.

As identified by Maria Simovich, Ph.D., a consultant for the former applicant, some of the on site wetlands contain a high diversity of aquatic invertebrates, strongly suggestive of the more natural origin of these wetlands. Known to occur in at least some ponds with Riverside fairy shrimp and western spadefoot are cladocerans (e.g., *Daphnia*, 2 or 3 species likely), copepods, ostracods (seed shrimp), and clam shrimp (*Cyzicus californicus*). Clam shrimp have a restricted distribution in coastal southern California. Further information is needed in the DSEIR regarding aquatic invertebrates in the context of the proposed impacts.

4-126, Invertebrates, last sentence. The DSEIR states that "[H]undreds of additional invertebrates are expected to use the site." No data are provided to support this statement. The Wildlife Agencies presume that this statement refers to the expected number of species, not the number of individuals. Please qualify and support the statement.

4-126, Amphibians. The last sentence erroneously implies that the distribution of amphibians is restricted to steep slopes. No data are provided to support this statement. The likely widespread distribution on site of western spadefoot toad, Pacific treefrog (*Hyla regilla*), and western toad (*Bufo boreas*) needs to be noted and discussed. Please revise the discussion.

4-126, Reptiles. The correct name is the orange-throated whiptail lizard. Please correct this name throughout the document (e.g., 4-138, -147).

4-130, paragraph 1. The DSEIR states that the "[Southern] subregion will incorporate public lands of the Cleveland National Forest (CNF)." We suggest that this statement be removed or properly qualified since no additional conservation benefits would occur unless the U.S. Forest Service (USFS) is a signatory to an NCCP agreement. The USFS is not participating in the Orange County Central/Coastal NCCP and has not indicated that it wishes to be a "participating landowner" in the Southern Subregion. The DSEIR should not presume that future CNF management activities will be compatible with an NCCP.

4-130, paragraph 2. The DSEIR states that the gnatcatcher is not found onsite. Surveys to current Service protocol were not done. The last gnatcatcher surveys were done in 1994. Surveys should be conducted according to Service protocol to determine the baseline status for the species. The results of these surveys will be needed to assess impacts, including the number of gnatcatchers subject to "take," in accordance with the Intra-Service Biological Opinion for the 4(d) rule.

4-130, paragraph 3. The correct name is the Central-Coastal Subregion.

4-130, paragraph 4. The DSEIR refers to the "disturbed nature of the site" in the context of fulfilling wildlife corridor "needs in the area." No additional information is provided to support this assertion. The existing landscape linkages and documented presence of mountain lion (*Felis concolor*), mule deer (*Odocoileus hemionus*), and coyote (*Canis latrans*), all of which would use a wildlife corridor within the project area, needs to be noted and discussed. Mountain lion movement through the area was not disclosed in the DSEIR. This study was undertaken by Paul Beier, Ph.D, and reported in the scientific literature. For further explanation of our request that these data be disclosed and discussed in the context of this proposed project, refer to item number eight in our joint wildlife agency letter of January 30, 1997.

4-131, exhibit 51. This exhibit is difficult to interpret since it was originally a color map of larger size. For example, gnatcatchers and cactus wrens are noted in the legend but are invisible on the exhibit. We suggest that the exhibit be redone to show only relevant information.

4-133, paragraph 3. The DSEIR says that "The fragmented nature of much of the coastal sage scrub onsite makes it low quality." However, the current gnatcatcher status is unknown and most wildlife surveys were out of date, having been conducted in 1993 and 1994. The paragraph continues by stating that the steep slopes support the highest diversity of animal species, but no data are provided to support this statement.

4-133, paragraph 3. The site also contains a habitat linkage, also qualifying it as at least "intermediate value" according the Evaluation Logic Flow Chart.

4-136, exhibit 53. One pond identified as a "potential mitigation area" is in the project footprint of the preferred alternative, as shown on exhibits 18 and 22. Since this area would be under housing and infrastructure and no longer in its present condition, please correct this discrepancy.

4-137, paragraph 3. The western spadefoot toad is a California State Species of Concern.

4-137, -139, and -148 state that the site "must be considered occupied by gnatcatcher until proven otherwise." This is inconsistent with the statement on 4-130 that the gnatcatcher is not found on site. Correct and clarify this discussion.

4-139. The distribution information for the gnatcatcher is incomplete. The species occurs in portions of Ventura, eastern Los Angeles, and San Bernardino Counties. The assertion regarding limited slope characteristics is not valid. Gnatcatchers occur on steep slopes, using them for nesting, foraging, and movement.

4-140. The wildlife agencies disagree that focused surveys for the Quino checkerspot butterfly are not warranted. The limited surveys accomplished do not support the assertion that the probability of occurrence is "low." Appropriate habitat (CSS, chaparral, and grassland) exists within the project site. Surveys consistent with the Service 1997 protocol should be completed.

4-141. The correct scientific name for the northern harrier is *Circus cyaneus*. It is properly referred to as a raptor. The accepted common name for *Agelaius tricolor* is the tricolored blackbird. The "C2 (category two)" category was discontinued by the Service in February 1996. The gnatcatcher is a California State Species of Concern.

4-144. There is no analysis of connectivity loss in this discussion of the project in relation to the NCCP Findings. However, 4-148 states that "[T]he project, as currently proposed, may hinder or preclude the preparation of the southern subregional preserve [sic], due to restricted wildlife

movement." Further on page 4-130, paragraph 3 it says, "the project site occupies a linkage area between the Central and Southern NCCP Subregional preserves [sic], where a wildlife corridor is needed." Please clarify and further analyze this crucial issue. We suggest explanatory text with an exhibit or exhibits specifically rendered.

4-145, "Ephemeral Ponds." The use of acreage by itself is inappropriate since it does not sufficiently disclose the impacts of the preferred alternative. The Wildlife Agencies suggest that the number of ponds also be used as a measure of impact. From the diagrams in the DSEIR, it appears that seven of the eight ponds identified as supporting Riverside fairy shrimp would be directly in the project footprint. The other pond would be subject to edge effects and adverse impacts to water quality. This impact is not apparent when only the acreage figure is considered.

4-147, Western spadefoot toad. The DSEIR states that the population is small in size. However, no data are provided to support this statement such as the results of a scientifically valid population survey. In the absence of data, we suggest that the statement be eliminated.

4-148, Wildlife Movement. The statement "It can not [sic] be assumed that wildlife would be able to move through the project site..." should be further explained. Further explanation is needed since it is known that there would be the virtual elimination of wildlife and their movements in a high density residential development as the preferred alternative proposes.

4-151, -152, Conceptual Mitigation Program. The last sentence on 4-151 states that the program was developed based on input from the wildlife agencies. Regarding the mitigation ratios presented, the DSEIR provides no rationale to support these ratios. Further, the position of the Wildlife Agencies is that the ratios are unjustified and inappropriately low in relation to the proposed impacts, given other mitigation agreements.

6-3, table 39. The "no project" alternative states that there would be a continuation of grazing impacts. Include that this is a discretionary landowner activity, otherwise unrelated to the proposed project.

6-4, paragraph 1. The DSEIR states that "[O]ngoing degradation of onsite biological resources related to cattle grazing operations would continue to occur." This degradation should be further described. For example, on our May 20, 1996 site visit, Wildlife Agency representatives observed cattle within some of the onsite wetlands. We also observed apparently free-ranging horses nearby. Further discussion of the presence of livestock and horses is needed in relation to impacts to Riverside fairy shrimp, other invertebrate species, and CSS. Crushing of fairy shrimp "cysts" and adverse changes to water quality are likely to occur within ponds subject to use by cows and horses. Literature references showing CSS impacts due to grazing should also be referred to and discussed.

2675

6-4, and continuing. The discussion of biological resources impacts is cursory, allowing extremely limited comparison opportunity among the alternatives. A detailed matrix chart of alternatives versus type and amount of habitat impact (e.g., CSS, Riverside fairy shrimp) would help to synthesize the data. However, it appears that alternative three, the 100 unit alternative on 32 acres, would directly avoid seven of the eight ponds occupied by Riverside fairy shrimp, most of the loss of CSS habitat, as well as minimize impacts to wildlife movement.

5-1. The Inventory of Unavoidable Adverse Impacts should include the amount of CSS loss and the likely "take" of gnatcatchers.

Appendix C, Notice of Preparation (NOP), page 3. Note that our joint Wildlife Agency NOP comments about "Plant/Animal Life."

Appendices D (Conceptual Wetland Mitigation Plan) and E (Conceptual Upland Mitigation Plan) were missing from Appendix 'H,' the Biological Resources Assessment prepared by Sweetwater Environmental Biologists, Inc. The Assessment is a draft, dated March 20, 1997. If an updated version is available, include it in the revised DSEIR.

In conclusion, the DSEIR is inadequate. Major revisions and additions are needed, including completion of updated field surveys and a literature search. For example, the gnatcatcher discussion should include a description and analysis of the regional distribution of CSS, gnatcatcher, and cactus wren, in relation to the project area. Vegetation maps and species locations in both digitized and hardcover format are available from the County of Orange.

The Wildlife Agencies anticipate that the issues discussed above will be included and addressed in any additional CEQA documents and be presented to the Wildlife Agencies for review and comment. Until the impact assessment and mitigation recommendations are revised to respond to our concerns, the Wildlife Agencies recommend against certification of the DSEIR as currently proposed.

The Wildlife Agencies appreciate working with the County on NCCP conservation planning issues. Lands within the proposed project area are important in conservation planning for the Southern Subregion NCCP Reserve in Orange County. The area of the proposed project is also the only linkage to the NCCP Central Subregion in Orange County. An improperly implemented project would permanently destroy the integrity of the linkage between the

Subregion reserves. If you have any questions or comments please contact Liam H. Davis, NCCP Associate Wildlife Biologist (Department) at 619-467-4207 or Robert James, Fish and Wildlife Biologist (Service) at 760-431-9440.

Sincerely,

Gail C. Kobetich

Re: *Zone Change 98-3/Area Plan 98-2/EIR Addendum PA980103*
299-Unit Contingency Plan
Public Hearing of August 25, 1998

Honorable Members of the Planning Commission:

On behalf of (1) the Vedanta Society of Southern California ("Vedanta"); (2) the Norbertine Fathers of Orange (the "Norbertines"); and the Saddleback Meadows Land Conservancy LLC (the "Conservancy"), we respectfully submit this letter in opposition to California Quartet's application for approval of Zone Change 98-3 ("ZC 98-3" or the "Zone Change") and Area Plan 98-2 ("AP 98-2" or the "Area Plan") relating to a proposed 299-unit single family detached housing project (the "299-Unit Project"), which has been dubbed a "Contingency Plan."

Based on the list of objections attached hereto, and based also on all oral and written comments which are presented in opposition to the proposed Zone Change and Area Plan at the August 25 public hearing, including, but not limited to, all expert opinions expressed by Royce Riggan, John Byerly, Warren Singleton, or Saundra Jacobs either orally or in writing in connection with the hearing, Vedanta, the Norbertines, and the Conservancy respectfully submit that the CEQA review process relating to, and the environmental documentation which has been prepared in support of, ZC 98-3 and AP 98-2 is woefully inadequate from both a procedural and substantive standpoint.

By (1) purporting to rely on a previously certified EIR for an *entirely different* project which is, itself, grossly deficient and is now being challenged in court, (2) failing to provide the public and responsible agencies (such as the state and federal wildlife agencies) with the 45-days' notice required by law, and (3) refusing to prepare, and circulate for public review

and comment, a new EIR to properly address important new information and substantial project changes involving new environmental impacts and additional project alternatives and mitigation measures which have not been addressed in any earlier EIR, the County is poised to violate CEQA and the Guidelines in numerous different respects in connection with the proposed Zone Change and Area Plan for the 299-Unit Project.

As a result of these CEQA violations, my office has not been afforded adequate time to prepare and submit comments on ZC 98-3 and AP 98-2 and the environmental documentation relating thereto. Regrettably, history seems to be repeating itself in this case.

Indeed, one year ago last week, I submitted a lengthy letter to County staff objecting to the many procedural improprieties and substantive deficiencies relating to Draft Subsequent Environmental Impact Report No. 566 ("SEIR 566") which had been prepared to evaluate the environmental impacts associated with the issuance of a grading permit for the construction of 705 units of manufactured housing at the Saddleback Meadows site. Because of the failure of the Draft SEIR to include the grading plans and soils reports upon which the grading permit application was based, and given the County's refusal to make these materials available for public review during the comment period on the Draft SEIR, I was compelled to submit my August 1997 letter under protest.

How ironic it is that, one year later, I must also submit this letter under protest because of the County's clear-cut violation of those provisions of the CEQA Guidelines which require a local agency to provide 45 days' written notice to interested persons of its intention to use an EIR, which was prepared in connection with an earlier project, as the environmental documentation for a separate, later project. Instead of the 45-day public notice required to be given under CEQA Guidelines sections 15087, 15105, and 15153, the County has inexplicably decided to provide only 18 days' written notice of its intention to use Final SEIR 566 for the 705-unit manufactured housing project (the "705-Unit Project") as the EIR for the 299-Unit Project.

At first blush, one might wonder how it is possible to use an EIR initially prepared to analyze the impacts of developing 705 units of manufactured housing as the EIR for an *entirely different* project -- namely, a 299-unit single-family detached housing project which, among other things (1) involves building houses on land which was proposed to be left undeveloped by the 705-Unit Project; (2) proposes to develop a wildlife corridor through the middle of the project where none had been previously provided under the 705-Unit Project; and (3) purports to fully exempt the 299-Unit Project from compliance with the Foothill/Trabuco Specific Plan, despite express language in the Specific Plan requiring any new projects for the Saddleback Meadows property to be made "consistent" with the Plan.

Admittedly, CEQA Guidelines section 15153(b) does allow a previously prepared EIR to be used as the environmental documentation for a "separate, later project" *provided* that

the EIR for the earlier project meets certain criteria and *provided also* that the public is properly notified of the local agency's intention to rely on the previous EIR instead of preparing a *new* EIR for the *new* project. Unfortunately, the County has chosen to ignore the adequacy and public notice requirements set forth in CEQA Guidelines section 15153(b) and is trying, instead, to process an addendum (the "Addendum") to Final SEIR 566 in an apparent attempt to avoid these requirements. Of course, the County's attempt to use the Addendum as the environmental documentation for the 299-Unit Project is illegal and improper for two very basic reasons.

First, section 15164 of the CEQA Guidelines, which authorizes the preparation of "an addendum to a previously certified EIR if some changes or additions are necessary," only applies when the *same* project addressed in the previous EIR is being considered for a subsequent government approval at a more detailed level of planning. Obviously, when an entirely *different* project is being considered – such as a full-scale revision and redesign of the project which was analyzed in the previous EIR – an addendum is *not* the appropriate document by which to describe and analyze substantial project changes involving new impacts, alternatives, and mitigation measures not discussed in the earlier EIR. Indeed, an addendum is only to be used to address minor technical changes or additions to a previously certified EIR, not to report on substantial project changes or significant new information about a *completely different* project.

The second reason that the County is not allowed to adopt the Addendum in this case is that, assuming for the sake of argument that the Zone Change and the Area Plan actually involved the *same* 705-Unit Project addressed in Final SEIR 566 (which, of course, they do not), the provisions of section 15162 of the CEQA Guidelines would require the preparation of a subsequent or supplemental EIR. Specifically, new information and project changes relating to environmental impacts, project alternatives, mitigation measures not previously discussed in Final SEIR 566 would require the County to prepare another EIR and circulate it for public review and comment.

County staff has determined that none of the conditions described in CEQA Guidelines section 15162 would require the preparation of a subsequent or supplemental EIR to address the environmental impacts associated with the proposed Zone Change and Area Plan for the 299-Unit Project. Vedanta, the Norbertines, and the Conservancy certainly disagree with this determination and wish to underscore what several California courts have already held, i.e., that Guidelines section 15162 and its companion section 21166 of CEQA only apply when the question is whether more than one EIR must be prepared for what is essentially the *same* project. When the proposed new activity constitutes a *separate* project, the "fair argument" test applies to the local agency's decision regarding whether to require a new EIR for the later project.

Indisputably, the oral and written comments which will be submitted in opposition to the proposed Zone Change and Area Plan at the August 25 public hearing will constitute substantial evidence supporting a "fair argument" that the 299-Unit Project may cause significant

environmental effects, and may involve important new project alternatives and mitigation measures, which were not previously addressed in Final SEIR 566 -- thereby necessitating the preparation of a new EIR to be circulated for public review and comment.

By submitting this letter, and by incorporating the oral and written comments made at the August 25 public hearing in opposition to the proposed Zone Change and the Area Plan, my clients do not intend to waive their objections to the County's failure to provide the appropriate notice of its intention to rely on Final SEIR 566 as the EIR for the 299-Unit Project. However, within the little time afforded by the inadequate notice provided by the County, my office has attempted to formulate the attached objections and hereby submits them to the Planning Commission with the sincere hope that the County will review them in good faith and will correct the many defects and deficiencies which pervade the CEQA review process for the proposed Zone Change and the Area Plan.

Very truly yours,

Edmond M. Connor

OBJECTIONS TO ADDENDUM PA980103 TO FSEIR 566, ZONE CHANGE 98-3, AND AREA PLAN 98-2

1. The County of Orange (the "County") has violated section 15153(b) of the CEQA Guidelines in that it has improperly determined that FSEIR 566 adequately describes the significant environmental impacts of the 299-unit single family detached housing project referred to as the Saddleback Meadows Contingency Plan (the "299-Unit Project"), which impacts are more particularly described in the oral and written comments (the "Comments") submitted to the Orange County Planning Commission prior to or at its August 25, 1998 public hearing, including, but not limited to, the expert opinions of Royce B. Riggan, Jr., John R. Byerly, Warren W. Singleton, and Saundra F. Jacobs. (The comments of John R. Byerly regarding the geotechnical aspects of the 299-Unit Project are set forth in an August 21, 1998 letter to counsel which is attached hereto as Exhibit "A" and is incorporated herein by reference.)

2. The County has violated section 15153(b) of the CEQA Guidelines in that it has improperly determined that FSEIR 566 adequately describes the alternatives and mitigation measures related to the significant environmental impacts of the 299-Unit Project, as more particularly described in the Comments.

3. The County has violated section 15153(b), 15087, and 15105 of the CEQA Guidelines in that it has failed to provide (a) public notice of its plans to use FSEIR 566 as the environmental documentation for the 299-Unit Project and (b) a 45-day public review and comment period on such key issues as "whether [FSEIR 566] should be used for [the 299-Unit Project] and whether there are any additional, reasonable, alternatives or mitigation measures that should be considered as ways of avoiding or reducing the significant effects of [the 299-Unit Project]."

4. The County has violated section 15063(g) of the CEQA Guidelines in that, at the time it determined that an initial study was required for the 299-Unit Project, it failed to consult with the United States Fish and Wildlife Service, the California Department of Fish and Game, the Army Corp. of Engineers, and all other responsible and trustee agencies responsible for the resources affected by the 299-Unit Project, to obtain the recommendation of those agencies as to the appropriate environmental documentation for the 299-Unit Project.

5. The County has violated CEQA and the CEQA Guidelines, to the extent that it has sought to invoke the provisions of section 15164 of the CEQA Guidelines, in that section 15164 only allows the preparation of an addendum when the same "project" is involved. In this case, there are two separate and distinct projects, i.e., a grading application for a 705-unit mobilehome/manufactured housing project (the "705-Unit Project") and an application for a zone change and area plan for the 299-Unit Project.

6. Assuming *arguendo* that the 299-Unit Project and the 705-Unit Project are the same "project," which they clearly are not, the County has violated section 15162(a)(1) and (2) of the CEQA Guidelines in that it has improperly determined that a subsequent EIR is not required to address the effects of the 299-Unit Project, which proposes substantial changes in the "project" and is based upon substantial changes in the circumstances surrounding the "project," in that, among other things, (a) the 299-Unit Project will involve mass grading and permanent alteration of land that was to be left undisturbed and undeveloped by the 705-Unit Project; (b) the 299-Unit Project will involve a proposed wildlife corridor for which there is no analysis in FSEIR 566 and about which the public has not had an opportunity to comment with respect to its viability, and (c) the U.S. Fish and Wildlife Service and the California Department of Fish and Game have indicated in an August 11, 1998 correspondence to the Orange County Board of Supervisors that the adoption of the 299-Unit Project may jeopardize the approval of the Southern Region of the NCCP program in that (i) "Saddleback Meadows is the only remaining wildlife corridor linkage to the NCCP Central/Coastal Subregion" and (ii) the proposed wildlife corridor may not prove to be viable. (A true and correct copy of the August 11, 1998 correspondence from U.S. Fish and Wildlife Service and the California Department of Fish and Game to the Orange County Board of Supervisors is attached hereto as Exhibit "B" and is incorporated herein by reference.)

7. Assuming *arguendo* that the 299-Unit Project and the 705-Unit Project are the same "project," the County has violated section 15162(a)(3)(A) and (B) of the CEQA Guidelines in that it has improperly determined that a subsequent EIR is not required to address the 299-Unit Project, despite the new information of substantial importance described in the Comments which shows that the 299-Unit Project will have significant effects on the environment that are not discussed in FSEIR 566 and/or are substantially more severe than the impacts discussed in FSEIR 566, including, but not limited to, (a) the grading and permanent alteration of land that was to be left undisturbed and undeveloped by the 705-Unit Project, (b) the categorical exemption of the Saddleback Meadows property from the provisions of the Foothill/Trabuco Specific Plan, and (c) the additional reduction and/or destruction of valuable biological resources.

8. Assuming *arguendo* that the 299-Unit Project and the 705-Unit Project are the same "project," the County has violated section 15162(a)(3)(C) of the CEQA Guidelines in that it has improperly determined that a subsequent EIR is not required to address the 299-Unit Project, despite the new information of substantial importance which shows that the mitigation measures that were proposed during the public review period for Draft SEIR 566 (but which FSEIR 566 failed to consider and deemed infeasible because of its erroneous assumption that the County was precluded from even considering any mitigation measures that would cause the "project" to deviate from Recorded Tract Map 10692) are now feasible because the Recorded Tract Map is to be superseded *in toto*.

9. Assuming *arguendo* that the 299-Unit Project and the 705-Unit Project are the same "project," the County has violated section 15162(a)(3)(D) of the CEQA Guidelines in that it has improperly determined that a subsequent EIR is not required to address the 299-Unit Project, despite the new information of substantial importance that has come to light since FSEIR 566 was certified regarding new project alternatives which are considerably different from those analyzed in FSEIR 566 and would reduce one or more of the significant impacts identified in the Comments, but that California Quartet, Ltd., has, to date, declined to adopt, including but not limited to, (a) the Mathews' alternative for the development of a 65-unit single family detached housing project on 35 acres of the Saddleback Meadows property and (b) the modified Mathews' alternative for the development of a 130-unit single family detached housing project on 44 acres of the property.

10. Assuming *arguendo* that the 299-Unit Project and the 705-Unit Project are the same "project," the County has violated section 15153(d) of the CEQA Guidelines in that it has improperly determined that none of the conditions described in section 15162 would require the preparation of a subsequent or supplemental EIR.

11. Assuming *arguendo* that the 299-Unit Project and the 705-Unit Project are the same "project," the County has violated section 15164(a) of the CEQA Guidelines in that it has improperly determined that the processing of an addendum would be appropriate and that none of the conditions described in section 15162 would require the preparation of a subsequent or supplemental EIR.

12. Assuming *arguendo* that the 299-Unit Project and the 705-Unit Project are the same "project," the County has violated section 15164(e) of the CEQA Guidelines in that it has failed to provide a brief explanation, supported by substantial evidence, of its determination that none of the conditions described in section 15162 would require the preparation of a subsequent or supplemental EIR.

13. Zone Change 98-3 and Area Plan 98-2 violate the provisions of the Foothill Trabuco Specific Plan (the "FTSP") in that they are part of a development proposal for the 299-Unit Project which deviates from Recorded Tract Map 10692 without providing for an amendment to the FTSP that (a) is adopted pursuant to the amendment procedures established by the FTSP and (b) is consistent with all of the provisions of the FTSP, including, but not limited to, (i) the development and design guidelines established by the FTSP, (ii) the goals and objectives of the FTSP, and (iii) all other provisions of the FTSP identified in the Comments.

14. The County has violated CEQA and the CEQA Guidelines in that it has improperly relied upon FSEIR 566, which is a legally inadequate CEQA document that was improperly certified for the reasons set forth in that certain "Complaint for Declaratory Relief and Petition for Writ of Mandate," which is attached hereto as Exhibit "C" and is incorporated herein by reference, including, but not limited to:

(a) In certifying FSEIR 566, the County did not comply with the special CEQA review process the Board of Supervisors adopted for the review of FSEIR 566;

(b) The special CEQA review process the Board of Supervisors adopted for the review of FSEIR 566 violated CEQA in that, *inter alia*, it unlawfully separated the decision whether to certify FSEIR 566 without taking action on the project for which the FSEIR was prepared;

(c) It improperly limits the mitigation measures its considers to only those that would not cause the project to deviate from Recorded Tract Map 10692;

(d) The analysis and information set forth in FSEIR 566 is legally inadequate under CEQA and the CEQA Guidelines in that, *inter alia*:

(i) It fails to properly describe the discretionary approval which it was prepared to analyze;

(ii) It fails to provide the required level of specificity;

(iii) It fails to provide the required level of technical detail;

(iv) It was not amended and recirculated after significant new information regarding the discretionary approval it was prepared to analyze was released;

(v) Its certification was separated from the discretionary approval it was prepared to analyze;

(vi) It fails to adequately address all environmental impacts of the discretionary approval it was prepare to analyze, including, but not limited to:

a. Soils and Geology;
b. Water/Hydrology;
c. Transportation/Circulation;
d. Air Quality;
e. Biological Resources;
f. Archeological/Cultural Resources; and
g. Public Services;

(vii) It fails to provide legally adequate mitigation measures and an adequate mitigation monitoring program was not adopted;

(viii) It fails to address the cumulative impacts of the project associated with the discretionary approval it was prepared to analyze;

(ix) It fails to consider project alternatives; and

(x) It fails to adequately respond to comments;

(e) Adequate and proper findings, supported by substantial evidence in the record, were not made in support of the certification of FSEIR 566; and

(f) The Statement of Overriding Considerations was improperly adopted in connection with the certification of FSEIR 566.

15. The County has violated CEQA and the CEQA Guidelines, to the extent that the "Draft Area Plan Conditions of Approval" attempt in any way to eliminate or modify any of the "Standard Conditions of Approval" that are set forth in FSEIR 566 and Addendum PA980103 as mitigation measures which must be completed

prior to the issuance of any grading permit, including, but not limited to, (a) SC 7-2 requiring a 1603 Streambed Alteration Agreement from the California Department of Fish and Game, (b) SC 7-3 requiring the necessary individual or nationwide permit from the Army Corp. of Engineers pursuant to section 404 of the Federal Clean Water Act, and (c) SC 7-5 and 7-7 requiring from the U.S. Fish and Wildlife Service (i) appropriate federal approvals required for impacts to Coastal Sage Scrub and (ii) written proof that the removal of any native vegetation from the project site complies with the Federal Endangered Species Act, in that it has attempted to reduce or eliminate feasible mitigation measures that are set forth in FSEIR 566 and Addendum PA980103 to reduce significant environmental impacts.

16. The County has violated CEQA and the CEQA Guidelines in that Addendum PA980103 to FSEIR 566 is inadequate and incomplete due to, *inter alia*, the omission of volume two of Appendix "G," the "Supplemental Geotechnical Assessment for Contingency Pan – 299 Lots," which purportedly contains the computer output documents for the slope stability analysis performed by G.A. Nicoll and Associates, Inc.

Rpt. No.: 5833
File No.: S-8753

Subject: Saddleback Meadows, El Toro Road, Orange County, California; Geotechnical Review of Addendum to Environmental Impact Report 566

Reference: Addendum PA980103 to Certified Final Subsequent Environmental Impact Report 566, Urban Vision, August 19, 1998

Dear Mr. Hesseltine:

Within the little time afforded by the County's expedited processing of the 299-unit "Contingency Plan" for the Saddleback Meadows property, I have attempted to review the geotechnical aspects of the referenced addendum to the earlier environmental impact report. This addendum anticipates the construction of 299 single-family dwelling units on the 222.2-acre site. Extensive grading (2.1 million cubic yards of cut and fill) is proposed to construct the building pads, associated streets, and open areas. Even more extensive grading (6.8 million cubic yards) is anticipated to remediate demonstrated unstable geologic conditions, including existing landslides, adverse bedding orientation, and loose and compressible alluvium and colluvium.

The problematic geotechnical issues associated with the 299-unit proposal remain unchanged from those that have been discussed in great detail with reference to the 705-unit manufactured housing project, and presented to the Planning Commission and the Board of Supervisors with no meaningful response. The issues of primary concern to this reviewer which mandate further analysis in an appropriate environmental impact report would include the following:

GRADING (Page 20)

The addendum continues to assume an average daily grading of 30,000 cubic yards per day, projecting a total time of grading of 10 months. At 30,000 cubic yards per day for 8.9 million cubic yards of fill, grading needs to be performed 7 days a week–no allowance for off-days for weekends or for inclement weather is provided in this estimate. It seems to this reviewer that it might be possible to achieve the average 30,000 cubic yards per day goal for the conventional grading. It seems highly unlikely that the grading to accomplish the alluvium/colluvium removals, construction of buttress fills, and other remedial grading that will be required can approach the projected rate of fill movement. If, as seems likely, the remedial grading would be performed at an average rate of 10,000 cubic yards per day, and grading is performed on a 5-day per week basis, the remedial grading would require 31 months. With down-time for inclement weather, it is more realistic to project a total period of grading of 3 years. Even this projection is optimistic, and the site could easily experience 4 rain seasons during grading.

EXCAVATION CONDITIONS (Page 29)

The addendum correctly anticipates heavy ground water seepage into excavations at the site. Not addressed is the impact of discharge of collected ground water seepage, the impact of the interruption in subsurface ground water flow on downstream wells, nor the impact of the presence of the deep shear keys for buttress fills on the final ground water conditions. Is there a potential for surfacing of ground water behind the effective subsurface dam created by the shear key of the buttress fill?

LONG-TERM SETTLEMENT (Page 31)

Fill depths exceeding 50 feet are suggested, with settlements associated with those fills of 4 to 6 inches. Construction of shear keys for buttress fills, however, will result in fills as deep as 130 feet. Fills of such great depths require additional evaluation that may necessitate compaction criteria well in excess of code minimums, special moisture conditioning of fill during compaction, and long-term settlement monitoring prior to building construction. These considerations are not addressed in the addendum.

PHASING OF EARTHWORK (Page 31)

The addendum continues to project a buttress backcut failure rate of 10 percent. Considering the subsurface conditions typified by landslides within landslides, this failure rate is surely unrealistically optimistic. Further, the effect of backcut failures on upstream and adjacent properties is not addressed.

These are the comments that I have been able to prepare during the time allotted by the County's short notice to your firm regarding the public hearing to be held on August 25, 1998. I hope my comments have been helpful under the circumstances. Should there be questions, please feel free to call.

Sincerely,

JOHN R. BYERLY, INC.

Board of Supervisors
County of Orange
10 Civic Center Plaza
Santa Ana, CA 92703

Saddleback Meadows Project
Orange County, California

Dear Board of Supervisors:

The California Department of Fish and Game and the U. S. Fish and Wildlife Service (collectively the Wildlife Agencies) recently learned about a Planning Application Hearing for the Saddleback Meadows project scheduled for the County Board of Supervisors on August 11, 1998. The applicant is proposing a 299 single-family dwelling unit project at Saddleback Meadows. The Wildlife Agencies and County have a lengthy history of communication concerning the project site and a variety of development proposal alternatives have been reviewed. The project site provides a critical habitat connection between the County of Orange's Central/Coastal and Southern Subregional Conservation Plans. In this letter we reiterate our position on the proposed Saddleback Meadows project and provide comments on a recent proposal that could affect the project.

The Wildlife Agencies, other Federal and State agencies, County of Orange, and local jurisdictions are participating in the Natural Community Conservation Planning (NCCP) program to conserve wildlife and habitat resources while accommodating economic growth and development. Our previous comments on Saddleback Meadows Project - Draft Environmental Impact Report (DEIR) No. 561 (February 1996) and in our August 8, 1997, letter concerning the Saddleback Meadows Draft Subsequent Environmental Report No. 566 (DSEIR) (June 1997) identified significant biological issues related to the project site. These biological issues include habitat connectivity, wildlife corridors, sensitive habitats, and occupied wetlands with a federally listed animal. These sensitive habitats include about 65 acres of coastal sage scrub (CSS), 14 acres of oak woodland, and about 4 acres of wetland vegetation communities. The federally endangered Riverside fairy shrimp (*Streptocephalus woottoni*) is known to occur within at least seven wetlands (identified as "ephemeral ponds") spread throughout the site. Our letter

evaluating the DSEIR identified Alternative '3' which proposed a clustered, lower density development, presented the least environmental impact, but would nonetheless substantially impact the wildlife corridor integrity. The 299-unit development posed a significant impact to the existing habitat connection from O'Neill Regional Park (Southern Subregion) to the Cleveland National Forest and other open space habitat in the central portion of the Central/Coastal Subregion. The Wildlife Agencies are willing to work with the project applicant to redesign a cluster development in order to preserve the wildlife corridor.

Other animal species considered sensitive by the Wildlife Agencies occur on or adjacent to the project site. The Wildlife Agencies documented rare and sensitive Cactus wren (*Camphylorhynchus brunneicapillus*) on site. The coastal California gnatcatcher (*Polioptila californica californica*)(gnatcatcher), a federally threatened species, could utilize the site based on the presence of CSS and gnatcatcher-occupied CSS in surrounding areas. Both of these animals, as well as other wildlife, would utilize Saddleback Meadows as a wildlife corridor. County maps show that Saddleback Meadows is the only remaining wildlife corridor linkage to the NCCP Central/Coastal Subregion.

We have been informed by two interested parties, Saint Michael's Abbey and Vedanta Society of Southern California, that a new clustered development alternative proposal and purchase of significant open space on the site have been offered to the current property owner. The Wildlife Agencies are willing to work with the current landowners and all interested parties in reaching a workable development solution.

The Wildlife Agencies believe a workable solution exists to permit development, while maintaining an essential biological connection between the NCCP Central/Coastal and Southern Subregions. We request that the Board consider this alternative approach that may provide a solution acceptable to all parties. If you have any questions or comments, we are available to discuss this matter further. Please feel free to contact us at your earliest convenience.

Sincerely,

Jim A. Bartel
Assistant Field Supervisor

Attorneys For Plaintiff and Petitioner VEDANTA SOCIETY OF SOUTHERN CALIFORNIA

FILED
ORANGE COUNTY SUPERIOR COURT
MAR 0 5 1998
ALAN SLATER, Executive Officer/Clerk
BY K. WOLFE

SUPERIOR COURT OF THE STATE OF CALIFORNIA

COUNTY OF ORANGE

VEDANTA SOCIETY OF SOUTHERN CALIFORNIA, a California non-profit religious corporation,

Plaintiff and Petitioner,

v.

COUNTY OF ORANGE, a political subdivision of the State of California; BOARD OF SUPERVISORS OF COUNTY OF ORANGE, the duly elected legislative body of the County; PLANNING COMMISSION OF COUNTY OF ORANGE, the duly appointed subagency of the Board; LARRY NEES, the duly appointed Building Official of the County; and DOES 1 through 25, inclusive,

Defendants and Respondents.

CALIFORNIA QUARTET, LTD., a California limited partnership; ARADI, LTD., a Nevada limited partnership; ARADI, INC., a Nevada corporation; and DOES 26 through 50, inclusive,

Defendants and Real Parties in Interest.

Case No. 791309

COMPLAINT FOR DECLARATORY RELIEF AND PETITION FOR WRIT OF MANDATE

JUDGE TULLY H. SEYMOUR
DEPT. 30

2696

As a verified Complaint for Declaratory Relief and Petition for Writ of Mandate (the "Complaint and Petition") against (a) defendants and respondents COUNTY OF ORANGE (the "County"), BOARD OF SUPERVISORS OF COUNTY OF ORANGE (the "Board"), PLANNING COMMISSION OF COUNTY OF ORANGE (the "Planning Commission"), LARRY NEES ("Nees"), and DOES 1 through 25, inclusive (hereinafter, the County, the Board, the Planning Commission, NEES, and DOES 1 through 25, inclusive, are sometimes collectively referred to as the "Respondents"), and (b) defendants and real parties in interest CALIFORNIA QUARTET, LTD. ("California Quartet"), ARADI, LTD. ("Aradi, Ltd."), ARADI, INC. ("Aradi, Inc.") [hereinafter, California Quartet, Aradi, Ltd., and Aradi, Inc., are sometimes collectively referred to as "Aradi"], and DOES 26 through 50, inclusive (hereinafter, Aradi and DOES 26 through 50, inclusive, are sometimes collectively referred to as "Real Parties" and the Respondents and the Real Parties are sometimes collectively referred to herein as the "Defendants"), plaintiff and petitioner VEDANTA SOCIETY OF SOUTHERN CALIFORNIA (the "Society") alleges as follows:

I. SUMMARY OF COMPLAINT AND PETITION

1. Neither the public, nor the environment, has been well served by the County's unfortunate and ill-advised actions in (a) purporting to certify that Final Subsequent Environmental Impact Report No. 566 ("FSEIR 566" or the "FSEIR") properly complied with the dictates of the California Environmental Quality Act ("CEQA") and (b) attempting to adopt findings and a statement of overriding considerations as if the County were issuing some form of "project approval" — even though no project approval was ever agendized for consideration by the Planning Commission or the Board at public hearings relating to FSEIR 566.

2. As an informational document, FSEIR 566 is grossly deficient and fails to comply with CEQA in numerous respects. More importantly, however, aside from its many

shortcomings as an environmental compliance document, FSEIR 566 is a legal nullity because it has never been officially certified by the County.

3. Indeed, the County has taken the position that, at the public hearing held on February 24, 1998, the 2-2 vote taken by the Board in connection with Supervisor William Steiner's motion to deny the Society's appeal of the Planning Commission's certification of FSEIR 566 somehow caused the appeal to fail and the certification to be upheld. However, there is no County ordinance which would support such an outcome because the "tie vote" rule set forth in section 7-9-157 of the Orange County Zoning Code only applies if "action on a discretionary permit" is involved, and neither the Planning Commission, nor the Board, took any action in approving or disapproving any such permit.

4. Moreover, the County's position that the Board's tie vote caused the Planning Commission's certification of FSEIR 566 to be upheld is completely at odds with numerous California appellate court decisions holding that a tie vote in this type of situation constitutes *no action* on the part of the Board and does *not* result in the Planning Commission's action being upheld or ratified by the Board.

5. The anomalous situation which has arisen, therefore, is that, contrary to California law, the County is proceeding as if FSEIR 566 has been properly certified under CEQA -- when, in fact, it has not. The tie vote taken by the Board at the February 24 public hearing on the Society's appeal did not result in any type of "determination" being made by the Board with respect to the appeal, even though the Board was expressly required to make such a "determination" in accordance with step no. 3 of the "Approval & Appeal Process for FSEIR 566," which was unlawfully adopted by the Board on November 25, 1997.

6. Regrettably, this litigation has been necessitated because County Counsel erroneously opined at the February 24 hearing -- and the County continues to believe and maintain -- that the Board's tie vote on Supervisor Steiner's motion to deny the Society's appeal caused the Planning Commission's certification of FSEIR 566 to be upheld *by default*. To challenge this unfounded position, the Society is seeking a declaration from the Court that, at the February 24 hearing, the Board did *not* make any determination on the Society's appeal

and certainly did *not* uphold or ratify the Planning Commission's action, either directly or indirectly.

7. Of course, without the Board's affirmative "ratification" of the Planning Commission's approval of FSEIR 566 --which the Board was expressly required to give under step no. 4 of the "Approval & Appeal Process for FSEIR 566" -- the Building Official of the County is not allowed -- according to the County's own rules -- to issue a grading permit to the Real Parties to commence grading operations on the 705-unit manufactured housing/mobile home project (the "Project") to be developed at the Saddleback Meadows property (the "Property"). Unfortunately, however, the County believes that the Board's tie vote amounted to Board ratification of the Planning Commission's action, and thus the Society is seeking injunctive relief herein to ensure that no grading permit is issued to the Real Parties, pending a hearing on the merits of this Complaint and Petition.

8. The Society is also seeking a declaration from the Court that the special CEQA review procedures adopted by the Board on November 25, 1997, were invalid because they unlawfully attempted to separate the certification of FSEIR 566 from the approval of the very project which the FSEIR was designed to evaluate, i.e., Grading Application No. GA960048 (the "Grading Application") which was submitted by Real Parties in December 1996. Moreover, the Society is asking the Court to declare that any future action taken by the County in considering whether to certify FSEIR 566 and approve the Grading Application be conducted jointly by the Planning Commission and the Building Official, with their joint determination being appealable to the Board under CEQA section 21151(c).

9. In addition to the declaratory relief sought in this action, the Society is also seeking a writ of mandate to direct the County to set aside and vacate its purported certification of FSEIR 566 and its purported adoption of the December 1997 "Findings, Facts, & Overriding Considerations" (hereinafter collectively referred to as the "Findings/Considerations") on the grounds that such actions by the County were:

(a) *Entirely unprecedented*, because never before in its history has the County approved an EIR without also taking action on the discretionary

project approval which triggered the preparation of the EIR in the first place, such as a tract map, a site plan, a grading permit, etc.;

(b) *Procedurally defective*, because it was a clear violation of CEQA for the Planning Commission to attempt to certify FSEIR 566 and to adopt the Findings/Considerations as if the Commission were actually approving a "project" when, in fact, no project approval was ever presented to, or considered by, the Planning Commission or the Board relating to Final Tract Map No. 10692 (the "Tract Map") or to Grading Application No. GA960048 (the "Grading Application") -- which, by the County's own admission, was the "initiating activity" which caused FSEIR 566 to be prepared;

(c) *Substantively inadequate*, because (i) the discussion of impacts, project alternatives, and feasible mitigation measures in FSEIR 566 was woefully deficient, (ii) the County's responses to the written comments submitted by members of the public were unbelievably evasive and non-responsive, and (iii) the entire FSEIR was premised on the false and misleading assumption that the Tract Map had somehow acquired a "vesting status" which prevented the County from adopting mitigation measures which might necessitate alterations to the physical design of the Project authorized by the Tract Map; and

(d) *Totally unnecessary*, because both the Planning Commission and the Board made it perfectly clear at the respective public hearings they held on December 3, 1997, and February 24, 1998, that they were opposed to allowing a 705-unit manufactured housing/mobilehome project to be developed at the Property and preferred, instead, to consider various project alternatives which would necessarily cause FSEIR 566 to be rendered useless and obsolete.

A. **Major Error No. 1: Scope of FSEIR Was Unfairly Curtailed Due to Incorrect Legal Assumption Regarding Vesting Status of Tract Map.**

10. Probably the single most egregious error committed by the County which tainted the entire CEQA review process for FSEIR 566 and doomed it to failure was the decision which County staff made sometime after the process got underway to arbitrarily *limit* the scope of the Draft SEIR so as to unfairly *exclude* from consideration any mitigation measures which might result in a change being made to the physical design of the Project as approved by the Tract Map -- such as, for example, mitigation measures which would call for oak tree groves or environmentally-sensitive riparian areas to be preserved, or certain 100-foot-deep excavations to be entirely eliminated, with the result that one or more areas of previously-approved manufactured housing sites could not be developed.

11. A cursory review of FSEIR and the Findings/Considerations will suffice to demonstrate that, throughout these documents, statements were made to the effect that "mitigation measures which would alter features of the final recorded tract map *cannot* be implemented to reduce all project impacts to a level of insignificance [because of the County's] *inability to deviate from the final recorded tract map*." (FSEIR 566, § 2.8, p. 2-10; § 3.2, p. 3-8, emphasis added.)

12. In fact, as one of the six Overriding Considerations adopted by the Planning Commission as part of its Resolution certifying FSEIR 566, the Planning Commission concluded that "Recorded Tract Map 10692 *limits the ability* of the applicant/lead agency to *deviate* from the physical design characteristics of the project to mitigate identified unavoidable adverse effects." (Findings/Considerations, § 5.2.6, p. 83, emphasis added.)

13. By taking the position that its "hands were tied" and that it could not "deviate" from the Tract Map, the County unjustifiably curtailed the scope of the environmental analysis set forth in FSEIR 566 by electing not to consider any feasible mitigation measures which would cause the Tract Map to be changed or altered in any way.

14. What is troublesome, however, is that at the time the "Notice of Preparation" relating to FSEIR 566 was sent out to the public in February 1997, no mention was made by the County of any plan to arbitrarily limit the scope of the Draft SEIR so as to exclude consideration of feasible mitigation measures which might warrant changes being made to the design or intensity of the development authorized by the Tract Map. Indeed, it was not until some four months later when the Draft SEIR was circulated for public review that the public was informed of the County's position regarding the "inviolable" status which the Tract Map had supposedly acquired in the eyes of the County.

15. The unfair manner in which the Draft SEIR was restricted in scope was certainly compounded when the Planning Commission was instructed by County Counsel at the public hearing held on December 3, 1997, that it was *not* allowed to consider any changes or alterations to the Tract Map in contemplating how to lessen or avoid the adverse environmental effects of the Project. This instruction directly contravened the provisions of sections 15002(h) and 15041 of the CEQA Guidelines which clearly authorize the lead agency for a project to "require changes in any or all activities involved in the project in order to lessen or avoid significant effects on the environment."

16. The apparent reason that the County adopted the legally incorrect position that it was not allowed to change or deviate from the Tract Map was that it purportedly believed that the Tract Map had acquired some sort of "vesting status," i.e., that Aradi had supposedly acquired "vested rights" to develop the Project free from any changes or alterations to the Tract Map which might otherwise be called for by the County in seeking to mitigate the adverse impacts of the Project.

17. However, (a) since the Tract Map was not approved as a vesting tentative map and is not otherwise protected by a development agreement, and (b) since the County has never issued any development permits to Aradi or its successors with respect to the Project, it is exceedingly clear under California law that Aradi has *no* vested rights to develop the Property, regardless of whether Aradi has incurred substantial pre-development expenses to date.

B. **Major Error No. 2: Overly-General Project Description in FSEIR Resulted in Failure to Address Construction-Level Impacts Associated with Grading Application.**

18. In addition to incorrectly viewing the Tract Map as if it had risen to the level of a "vested right," the other major error committed by the County which unfairly skewed the CEQA review process for FSEIR 566 was the County's failure and refusal to recognize that, from the outset, the Draft SEIR should have addressed the construction-level impacts associated with the approval of the Grading Application. When the Grading Application was submitted by Aradi in December 1996, the County expressly determined that a "Subsequent EIR is required to evaluate the effects of the *grading application*." (FSEIR 566, § 2.4, pp. 2-8 and 2-9, emphasis added.) Indeed, during the public review proceedings for FSEIR 566, the County expressly conceded that the "Grading Permit Application was the *initiating action* which resulted in the determination that DEIR 566 be prepared . . . ." (Response to Comments, p. 1-1, emphasis added.)

19. Ironically, however, after determining in December 1996 that a Subsequent EIR was needed to study the effects of the Grading Application, the County spent the next 12 months "running away" from this decision by steadfastly refusing -- despite repeated objections by the Society and other members of the public -- to have the Draft SEIR address the specific, construction-level impacts which would flow from the County's approval of the Grading Application.

20. Without any justification or explanation of any kind, the County decided that the Draft SEIR would only have to address the broad impacts of the overall Project, instead of the specific effects of the rough grading, and that a "planning level of detail," as opposed to a construction level of detail, was all that was required for the environmental analysis that was to be set forth in the Draft SEIR.

21. At no time during the public comment period for Draft SEIR 566 did the County make available for public review the 40-scale grading plans submitted in connection

with the Grading Application, nor did it allow the public to gain access to the soils reports which contained the "*more detailed evaluation* of the slope stability . . . [to] be conducted during the 40-scale grading plan review to accompany the grading permit application." (FSEIR 566, Appendix D, ¶ 4, p.4, emphasis added.)

22. By failing to provide the public with critically-important information regarding the 8.9 million cubic yards of remedial grading to be undertaken as part of the Project, such as, for example, the design of the shear keys to be constructed at the site, the County effectively prevented the Society's geotechnical consultants from being able to, *inter alia*, (a) evaluate the adequacy of the proposed remedial grading plan for the Project, (b) determine how the 100-foot-deep shear key excavations could possibly be accomplished without activating massive landsliding on the Property which, in turn, would threaten the stability of the slopes surrounding the Monastery, and (c) develop an accurate estimate of the duration of the proposed rough grading for the Project in order to determine how many *years* the landowners surrounding the Property would be subjected to the impacts of extensive mass grading operations.

23. Despite several letters of protest submitted by the Society, it was not until late October 1997 -- when the members of the Planning Commission balked at considering the adequacy of FSEIR 566 unless they were first allowed to review the 40-scale grading plans and the accompanying soils reports for the Project -- that the County finally made certain grading plans and reports available for public review.

24. Unfortunately, however, this was a case of "too little too late" because, not only did these materials still leave a great many questions unanswered, but, by the time these grading plans and reports were made available in November 1997, the 45-day public comment period for Draft SEIR 566 had been closed for over two months. Despite this fact, the County refused to (a) revise the Draft SEIR in order to analyze and incorporate the new grading plans and reports which the County had belatedly decided to make available for review at only one location and (b) recirculate the revised Draft for public review and comment.

C. Major Error No. 3: Certification of FSEIR and Adoption of Findings/Considerations Were Impermissibly Separated from Approval of the Grading Application.

25. The third major error committed by the County in processing FSEIR 566 was its unprecedented decision (a) to have the Planning Commission and the Board consider the adequacy of FSEIR 566 without simultaneously considering whether to approve the discretionary project, i.e., the Grading Application, which triggered preparation of the FSEIR in the first place and (b) to have the Planning Commission adopt 83 pages of detailed findings and overriding considerations as if it were, in fact, issuing some sort of "project approval." Of course, without any project approval having been agendized for its consideration, the Planning Commission was not authorized under CEQA to make any "findings" which might later be adopted by the County's Building Official in deciding whether to approve Aradi's Grading Application.

26. The administrative record will amply demonstrate that the County was clearly troubled by what procedures it should follow in considering whether to certify FSEIR 566 and to approve the Grading Application. At least four different sets of procedures were separately proposed and then withdrawn by County Counsel in trying to decide how the County should conduct the CEQA review process for FSEIR 566. In the end, however, a five-step procedure was proposed by County Counsel which was neither practical, nor legal, because it divorced (a) the certification of FSEIR 566 and the adoption of the Findings/Considerations from (b) the approval of the Grading Application.

27. Incredibly, after spending so much time formulating this five-step CEQA review process -- which was ultimately amended by the Board to include a sixth step -- the County did not even comply with the special procedures which the Board adopted (referred to collectively as the "Approval & Appeal Process for FSEIR 566") because the Board failed to meet the requirements in step nos. 3 and 4 of the process with respect to making a "determination" on the Society's appeal and issuing a "ratification" of the Planning

Commission's certification of FSEIR 566 The County's insistence, however, that FSEIR 566 has been officially certified, despite the County's failure to comply with the multi-step process it prescribed for itself, has left the Society with no choice but to file this lawsuit to obtain declaratory relief, a writ of mandate, and ancillary injunctive relief.

28. A more detailed statement of the Society's claims against the Defendants, including a summary of the many instances in which the County violated the provisions of CEQA and CEQA Guidelines in attempting to certify FSEIR 566 and to adopt the Findings/Considerations, is set forth below.

II. GENERAL ALLEGATIONS

A. The Parties.

29. The Society is now, and at all time herein mentioned was, a non-profit religious corporation formed, existing, and in good standing under the laws of the State of California and conducting operations in the County.

30. For nearly 50 years, the Society has owned and maintained the Ramakrishna Monastery (the "Monastery") on approximately 40 acres of real property located immediately adjacent to the southeast portion of the Property. The Society's operation and maintenance of the Monastery will be directly and materially affected by the development of the Project.

31. The County is now, and at all times herein mentioned was, a political subdivision of the State of California, created and existing under and by virtue of the laws of the State of California.

32. The Board is now, and at all times herein mentioned was, the duly elected legislative body of the County, organized and existing under the laws of the State of California.

33. The Planning Commission is now, and at all times herein mentioned was, the duly appointed planning subagency of the Board, organized and existing under the laws of the State of California.

34. Nees is now, and at all times herein mentioned was, the Manager of Building Inspection for the County, and the duly-appointed Building Official of the County as defined in the County's Grading and Excavation Code.

35. The true names and capacities, whether individual, corporate, or otherwise, of the Respondents sued herein as DOES 1 through 25, inclusive, are presently unknown to the Society, which therefore sues such Respondents by such fictitious names. The Society will seek leave of Court to amend this Complaint and Petition to show the true names and capacities of such Respondents when such information is ascertained.

36. Each of the Respondents sued herein as DOES 1 through 25, inclusive, performed, participated in, or abetted in some manner, the acts and omissions alleged herein, is responsible for the violations of law described hereinbelow, and is subject to the relief sought herein.

37. In performing the acts and omissions alleged herein, and at all time relevant hereto, each of the Respondents was the agent and employee of each of the other Respondents and was at all times acting within the course and scope of such agency and employment, and within the knowledge and approval of each of the other Respondents.

38. California Quartet is now, and at all times herein mentioned was, a limited partnership organized and existing under the laws of the State of California and doing business in the County. Since in or about 1993, California Quartet has been the record title owner of the Property.

39. Aradi, Ltd., is now, and at all times herein mentioned was, a limited partnership organized and existing under the laws of the State of Nevada and qualified to do business in California. Aradi, Ltd., is currently the general partner of California Quartet.

40. Aradi, Inc., is now, and at all times herein mentioned was, a corporation organized and existing under the laws of the State of Nevada and qualified to do business in California. Aradi, Inc., is currently the general partner of Aradi, Ltd.

41. The true names and capacities, whether individual, corporate, or otherwise, of the Real Parties sued herein as DOES 26 through 50, inclusive, are presently

unknown to the Society, which therefore sues such Real Parties by such fictitious names. The Society will seek leave of Court to amend this Complaint and Petition to show the true names and capacities of such Real Parties when such information is ascertained.

42. Each of the Real Parties has a direct, beneficial interest in the actions of Respondents to attempt to certify FSEIR 566 and each of these Parties will be directly affected by the relief sought herein.

B. **Factual Background.**

43. The Property, commonly known as "Saddleback Meadows," is comprised of approximately 222 acres of mostly hilly terrain located on the east side of El Toro Road approximately one-half mile south of the intersection of El Toro Road, Live Oak Canyon Road, and Santiago Canyon Road in Trabuco Canyon.

44. Since 1949, the Society has owned and maintained the Monastery on 40 acres immediately adjacent to the southeast portion of the Property. The other surrounding land uses include, but are not limited to, St. Michael's Abbey immediately to the northwest, and O'Neill Regional Park immediately to the south. The Cleveland National Forest is approximately one-half mile north of the Property.

45. In 1979, the County, at the request of one of the previous owners of the Property, approved Tentative Tract Map 10692 which allowed for the construction of more than 700 manufactured housing/mobilehome units on the Property. However, some nine years passed before Final Tract Map 10692 (referred to herein as the "Tract Map") was recorded in 1988.

46. On January 9, 1980, the Property was placed in the PC "Planned Community" District when the Planned Community District Regulations for Saddleback Meadows (the "District Regulations") were adopted by the Board to provide the zoning for the Property and to specify the development conditions and criteria which would apply to the Property. The District Regulations were amended by the Board on July 13, 1983, and again on June 13, 1984, pursuant to Ordinance No. 3468 (ZC84-3P) [hereinafter referred to as the "1984 Zoning Ordinance"].

47. The Property is located within the unincorporated area of the County which is covered by Foothill/Trabuco Specific Plan (the "Specific Plan"). The Specific Plan was adopted by the Board in December 1991 for the express purpose of preserving the rural character of the Trabuco Canyon area to serve as a buffer between urban development and the Cleveland National Forest, and to preserve the significant landform, biological, and scenic resources of the area. The Specific Plan, which refers to the Property as the "Bridlewood Residential District" and incorporates the 1984 Zoning Ordinance, exempts the Property from the regulations and guidelines of the Specific Plan and allows the Property to be developed in accordance with the Tract Map, notwithstanding the Board's express finding that development of the Property pursuant to the Tract Map is not consistent with the goals and objectives of the Specific Plan.

48. The Specific Plan states, in relevant part, that the exemption was provided because the then-current owner of the Property was in bankruptcy and the automatic stay arising from the bankruptcy prevented the Board from taking any action that would affect the value of the Property. However, in providing for this exemption, the Specific Plan specified two instances in which the exemption would not apply: (a) if any development proposal for the Property deviated from the Tract Map, then the Specific Plan would have to be amended to (i) determine an appropriate density cap for the Property, (ii) establish new development regulations for the Property, and (iii) require the development of the Property to be consistent with all provisions of the Specific Plan; and (b) if the landowner applied for a grading permit for the Property, all environmental analysis required by CEQA would have to be conducted.

49. In or about 1993, California Quartet purchased the Property at a public auction of the assets of a failed savings and loan association. Thereafter, in April 1994, California Quartet applied to the County for a grading permit to rough grade approximately 98.3 acres of the Property, which it referred to as Phase I of the Project. In August 1994, the County determined that a Subsequent EIR would have to be prepared before the requested grading permit could be issued.

50. California Quartet appealed this determination on August 11, 1994. However, on January 31, 1995, California Quartet withdrew its appeal and, pursuant to the request of the Planning Commission, began to develop a project to address the numerous environmental and other concerns that had been expressed by the public, the County staff, and the Planning Commission regarding the development of the Property.

51. As a result of this effort, a Zone Change and an Area Plan for a 318-unit single-family residential housing project (the "318-Unit Project") were submitted to the County by California Quartet on July 27, 1995. Environmental Impact Report No. 561 ("EIR 561") was then prepared to address the significant environmental impacts that would be caused by the construction of 318 single-family homes on the Property.

52. On July 30, 1996, the Planning Commission conducted a public hearing on the 318-Unit Project. At the conclusion of the hearing, the Planning Commission recommended that EIR 561 be certified by the Board, but also recommended that Zone Change 95-5 and Area Plan 95-7 for the 318-Unit Project be denied. On October 22, 1996, the Board conducted a public hearing regarding the 318-Unit Project and likewise voted to deny Zone Change 95-5 and Area Plan 95-7.

53. Following the Board's rejection of the 318-Unit Project, California Quartet renewed its efforts to develop the Property pursuant to the Tract Map.

54. On December 3, 1996, California Quartet submitted Grading Application No. GA960048 (referred to herein as the "Grading Application") to the County. The Grading Application requested (a) the approval of the Phase 1 grading plans for the Project and (b) the issuance of a grading permit to commence rough grading operations at the Property.

55. On December 16, 1996, the County's Environmental Management Agency, now known as the Planning & Development Services Department, determined that a Subsequent EIR needed to be prepared in order "to evaluate the effects of the grading application." (FSEIR 566 at pp.2-8 and 2-9.) By making this determination that a Subsequent EIR would have to be prepared and certified before the Grading Application could be approved, County EMA implicitly found that the Grading Application was a "discretionary

approval" under CEQA. If county EMA had found the Grading Application to be purely ministerial, CEQA would not have applied and no Subsequent EIR could have been required to be prepared.

56. On December 24, 1996, the County issued the Notice of Preparation for Draft Subsequent Environmental Impact Report No. 566 ("DSEIR 566" or the "DSEIR"), which solicited comments from all interested parties regarding the proposed content and scope of the DSEIR. The Notice of Preparation was re-issued by the County on February 6, 1997, to include a description of the commercial center California Quartet was proposing to construct as part of the Project.

57. The 45-day public review period for DSEIR 566 began on June 27, 1997, when the County distributed the DSEIR to various governmental agencies, surrounding property owners, and other interested parties for their review and comment. All comments on DSEIR 566 were to be submitted to the County no later than August 12, 1997.

58. The ability of the Society, as well as all other interested parties, to review and comment on the adequacy of the DSEIR was substantially impaired by the County's failure to make available for public review all documents and materials that were necessary to fully assess the adequacy of the DSEIR. In particular, the Phase 1 grading plans (the "Grading Plans"), which were the *sine qua non* of the Grading Application were not available for public review because the County had returned them to California Quartet to be revised. On August 1, 1997, the County informed the Society that, if it wished to review a copy of the Grading Plans it would have to arrange to purchase a copy from California Quartet. When the Society did finally receive a copy of the Grading Plans from California Quartet on or about August 6, 1997, the Society discovered that Grading Plans were preliminary in nature and only covered a small portion of the Project.

59. In addition, the in-depth review of the Grading Plans by the soils engineer of record (the "Grading Plan Review") had not yet been completed, and was therefore unavailable. Without access to the Grading Plan Review, it was not possible to fully understand or interpret the Grading Plans.

60. Because these critically important documents were unavailable to the public, the Society wrote to the County on August 6, 1997, to request that the County grant a 30-day extension of time for the Society to submit its comments on DSEIR 566, or, in the alternative, that the County re-notice the 45-day public review period once the Grading Plans and the Grading Plan Review were made available for public review. An extension of time was also requested in writing by Saundra F. Jacobs, by letter of August 5, 1997, and by St. Michael's Abbey, by letter of August 11, 1997, due to the unavailability of these important documents.

61. In its August 12, 1997 response to the Society, the County denied that access to the Grading Plans and the Grading Plan Review was necessary to comment on the adequacy of DSEIR 566 because, although the Grading Application was the "initiating activity" which triggered the preparation of the DSEIR, the County had prepared DSEIR 566 to analyze the general impacts of the entire Project. The County went on to state that the amount of detail provided by the Grading Plans and the Grading Plan Review was "premature" and was not required to be set forth in DSEIR 566 because the County had decided that the information to be incorporated in the DSEIR only needed to be specific enough for some undefined "planning decision."

62. Not only did the County fail to explain what "planning decision" it was referring to in its letter, but it also failed to explain why the scope of the environmental analysis set forth in DSEIR 566 was being arbitrarily limited to a "planning level of detail" when it was supposed to be analyzing the environmental effects of the Grading Application. At any rate, the County refused to re-notice the 45-day public review period, but, "in the spirit of cooperation," provided the Society and other interested parties with a 10-day extension of time within which to submit their comments on the DSEIR.

63. During the public review period, the County received numerous written comments on DSEIR 566 from various governmental agencies, municipalities, groups, and individuals. Included among the written comments on DSEIR 566 were letters from the Society, St. Michael's Abbey, the U.S. Fish & Wildlife Service and the California Department

of Fish & Game, Saundra F. Jacobs, the Southern California Association of Governments, and numerous other interested parties. (Copies of all letters commenting on DSEIR 566, which were received by the County between June 29, 1997, and August 22, 1997, are set forth in DSEIR 566 and are incorporated herein by reference.)

64. On October 10, 1997, the County (a) issued the "Response to Comments" for DSEIR 566 (the "Response to Comments") to address the numerous comments that were submitted regarding the DSEIR, and (b) announced that the Planning Commission would hold a public hearing on October 22, 1997, to consider the certification FSEIR 566.

65. On October 15 and 16, 1997, the Society submitted written objections to the County, taking issue with the Planning Commission's proposed review of FSEIR 566 on October 22, 1997. The principal objection lodged by the Society was that the Planning Commission was being asked to do something unlawful by certifying FSEIR 566 without simultaneously considering whether to approve the Grading Application, i.e., the discretionary project which the FSEIR was originally prepared to evaluate.

66. The Society's objections spawned a series of proposed procedures as to how the County should go about reviewing FSEIR 566 and the Grading Application. The County's first proposal, made on October 20, 1997, acknowledged that the County Building Official (the "Building Official") was the "decision-making body" which must ultimately approve or deny the Grading Application, and that the County's "Environmental Analysis Procedures" allowed the Planning Commission to make only a "recommendation" regarding the adequacy of an EIR when it was not the decision-making body, as that term is defined by CEQA. Accordingly, the County proposed the following procedure: (a) the Planning Commission would review the FSEIR and make a recommendation regarding its adequacy to the Building Official, (b) the Building Official would determine whether FSEIR 566 should be certified, and (c) if the Building Official certified the FSEIR, his determination could be appealed to the Board.

67. A second proposal was made by the County during the Planning Commission's October 22, 1997 public hearing. This proposal was very similar to the first,

except that it expressly provided for, *inter alia*, the Building Official to conduct a public hearing on the adequacy of FSEIR 566. However, the second proposal was unclear as to whether an appeal of the Building Official's determination regarding the FSEIR would be heard by the Board.

68. At the October 22, 1997 public hearing, the Planning Commission refused to render a decision on the FSEIR, principally because the Grading Plans had not been made available for the members of the Planning Commission to review. Instead, the Planning Commission scheduled another hearing for December 3, 1997, and requested that the Planning & Development Services Department make the Grading Plans and related soils reports available for public review. Although County staff complied with this request, the County neither re-noticed the 45-day public review period to solicit comments on this significant new information, nor did it incorporate these materials into the FSEIR and recirculate it to the public.

69. On October 24, 1997, the County made a third proposal regarding the process by which FSEIR 566 and the Grading Application would be reviewed. This third proposal simply clarified the details of the process that the County had suggested in its first two proposals. Written comments and objections to this proposal were submitted to the County by California Quartet and the Society, dated October 31, 1997, and November 3, 1997, respectively.

70. In response to these comments and objections, the County made a fourth, followed by a fifth, proposal -- the latter of which was ultimately submitted to the Board for its approval. This fifth proposal eliminated some of the features that the earlier proposals had incorporated, such as the Building Official determining the adequacy of the FSEIR and the right to appeal the Building Official's decision on the Grading Application. As finally submitted to the Board, the fifth proposal consisted to a five-step process which provided for (a) the Planning Commission to certify the adequacy of FSEIR 566, (b) the right to appeal that determination within fifteen days of the time it was made, (c) the Board to hear any such appeals, (d) the Building Official to render its decision on the Grading Application following

the expiration of the appeal period, or the denial of any appeal and the ratification of the Planning Commission's certification by the Board, and (e) a Notice of Determination to be filed when the grading permit was issued.

71. On November 25, 1997, in response to the Society's continued objections to the legality of the procedures being proposed by the County, the Board amended the five-step proposal by adding a sixth step to allow the issuance of any grading permit for the Project to be "appealed to be Board of Supervisors from the Planning Commission." The Board directed County staff to draft whatever ordinance was necessary to allow such an appeal to take place.

72. However, the ordinance which was drafted by the County staff was inconsistent with the Board's amendment because, instead of allowing for an appeal of the grading permit from the Planning Commission to the Board, it allowed the decision of the Building Official to be appealed to the Board. As drafted, therefore, the proposed ordinance drew strong opposition from the Building Industry Association and failed to receive the approval of a majority of the Board. In rejecting the proposed ordinance on December 16, 1997, the Board did not revisit or reconsider the six-step process it had adopted on November 25, 1997. Indeed, no action was taken at the December 16 hearing to repeal or modify the motion which was passed at the November 25 hearing.

73. By administrative fiat, however, County staff decided to ignore the desire so clearly expressed and voted on by the Board at the November 25 hearing to allow the grading permit for the Project to be "appealed to the Board from the Planning Commission." Without any formal action by the Board, County staff chose to override the Board's expressed intent and did not allow the Grading Application to be considered by the Planning Commission so that it might be appealed to the Board if approved.

74. As noted above, the Society submitted numerous letters to the County objecting to (a) the process by which the FSEIR and the Grading Application were to be reviewed and decided upon by the County, and (b) the sufficiency of the Response to Comments released by the County. These objections were set forth in the Society's letters,

dated October 15 and 16, 1997, November 3, 5, and 26, 1997, and December 1 and 2, 1997, each of which are incorporated herein by reference. Saundra F. Jacobs also submitted objections to the County's Response to Comments on December 2, 1997, which is also incorporated herein by reference.

75. Representatives of the Society, as well as other interested parties, appeared at the public hearings which were held regarding the certification of FSEIR 566 by the Planning Commission on October 22, 1997 and December 3, 1997, and the public hearing which was held regarding the adoption of the special CEQA review process for the FSEIR by the Board on November 25, 1997. During these public hearings representatives of the Society and the other interested parties presented numerous oral comments regarding FSEIR 566 and the process by which it was being reviewed.

76. The written and oral comments submitted to the County and the Planning Commission prior to its approval and certification of FSEIR 566 specifically informed the County and the Planning Commission about the serious deficiencies in the environmental compliance process relating to FSEIR 566 including, but not limited to, the following:

(a) the failure of FSEIR 566 to properly describe the discretionary "project" which it was prepared to evaluate;

(b) the failure of FSEIR 566 to contain the required level of specificity;

(c) the failure of FSEIR 566 to provide the required technical data;

(d) the County's failure to recirculate DSEIR 566 following the release of significant new information prior to certification, including, but not limited to, the Grading Plans and the Grading Plan Review;

(e) the purported approval and certification of FSEIR 566 pursuant to a specially-adopted CEQA review process which, *inter alia*, unlawfully separated the certification of the FSEIR and the decision on the discretionary approval, i.e., the Grading Application, for which the FSEIR was originally prepared;

(f) the failure of FSEIR 566 to adequately address all significant environmental impacts associated with the Project, including, but not limited to, soils and geology, water/hydrology, transportation/circulation, air quality, biological resources, cultural resources, and public services;

(g) the failure of FSEIR 566 to specify all feasible mitigation measures available to lessen the effects of the significant environmental impacts;

(h) the failure of FSEIR 566 to adequately address the cumulative impacts of the Project;

(i) the failure of FSEIR 566 to consider reasonable alternatives to the Project, including, but not limited to, alternative sites;

(j) the failure of FSEIR 566 to adequately address and respond to comments received on the DSEIR;

(k) the County's failure to adopt an adequate Mitigation Monitoring Program;

(l) the failure of the County to adopt adequate and proper findings; and

(m) the failure of the County to adopt an adequate and proper statement of overriding considerations.

77. Despite the numerous comments outlining the deficiencies in FSEIR 566, and the process by which it was brought to the Planning Commission for certification, the Planning Commission took action to approve and certify FSEIR 566 on December 3, 1997, without ever considering whether the Grading Application should be approved, denied, or modified to lessen the environmental impacts associated with the rough grading for the Project.

78. Nonetheless, pursuant to its Resolution of December 3, 1997, the Planning Commission purported (a) to make findings in support of the approval of the entire Project and (b) to adopt a statement of overriding considerations which stated that the benefits of the Project supposedly outweighed its unavoidable impacts.

79. On December 18, 1997, the Society timely appealed the Planning Commission's purported certification of FSEIR 566 by submitting a notice of appeal that outlined the grounds therefor. On February 24,.1998, the Board heard the Society's appeal and after public testimony had been received, Supervisor Steiner moved to deny the appeal. However this motion failed for lack of majority when the Board split 2-2 with Supervisor Silva having recused himself prior to the hearing. Following the Board's vote, County Counsel declared, without any legal or factual support, that the Society's appeal had failed and the Planning Commission's certification of the FSEIR had been upheld.

80. The Society has exhausted all of its administrative remedies, and has no plain, speedy, or adequate remedy in the ordinary course of law, other than the relief sought in this Complaint and Petition.

FIRST CAUSE OF ACTION

(Against All Defendants For Declaratory And Injunctive Relief Re Invalid And Ineffective Certification Of FSEIR 566)

81. The Society realleges and incorporates herein by reference each and every allegation contained in paragraphs 1 through 80, inclusive, as set forth above.

82. To the extent that the Defendants maintain that FSEIR 566 has been validly and officially certified by Respondents, an actual controversy has arisen and now exists between the Society and the Defendants regarding the validity of Respondents' purported certification of FSEIR 566 pursuant to the special CEQA review process which the Board purportedly adopted on November 25, 1997, in that the Society contends, and Defendants deny, ***inter alia***, that:

(a) The November 25 CEQA review process (i) requires that the Board "***make a determination*** whether to uphold [any] appeal [of the certification of the FSEIR] in whole or in part or to deny the appeal" and (ii) prohibits the Building Official from approving the Grading Application, or issuing a grading permit, until the "***denial*** of any appeal and ***ratification*** of the Planning Commission's certification" by the Board (emphasis added); and

(b) The Board's 2-to-2 vote on the Society's appeal did not result in a denial of the Society's appeal, nor did it constitute any Board action upholding or ratifying the Planning Commission's December 3 certification of the FSEIR.

83. Government Code section 25005 provides that no act of a county board of supervisors, such as the Board, is valid unless a majority of all members concur therein. As a five-member panel, the Board needs three votes in order to take any valid action. Unless the Board has three votes in favor of an action, the Board is held to have taken no action.

84. The Society contends, therefore, that the Board took no action on the Society's appeal because three votes were not cast in favor of granting or denying the appeal. The minutes of the public hearing held on February 24, 1998 support this contention and state that the motion to deny the Society's appeal failed for lack of a majority.

85. A further, actual controversy has arisen and now exists between the Society and the Defendants, in that the Society contends, and the Defendants deny, *inter alia*, that:

(a) When a Subsequent EIR is required to be prepared to evaluate the effects of a grading application, there is a conflict between (1) the County's Environmental Analysis Procedures, adopted by the Board on June 25, 1995, and (2) the Orange County Grading and Excavation Code, in that (i) the County's Environmental Analysis Procedures do *not* authorize any decision-making body other than the Board, the Planning Commission, or the Subdivision Committee to approve and certify an EIR and certainly do *not* contemplate that the Building Official under the Grading Code would ever certify an EIR and (ii) the County's Grading Code assumes that all grading permits will be issued by the Building Official, as opposed to the Planning Commission;

(b) In light of the above-described conflict between the County's Environmental Analysis Procedures and the Grading Code, there is no clear rule or procedure set forth in the County's ordinances which indicates how

the County is to proceed in reviewing a Subsequent EIR and the Grading Application for which the Subsequent EIR was prepared to evaluate.

(c) Under CEQA and the CEQA Guidelines, the Planning Commission was not, and is not, authorized by law to certify FSEIR 566 and to adopt findings and overriding considerations without simultaneously approving the Grading Application;

(d) Likewise, under CEQA and the CEQA Guidelines, the Building Official was not, and is not, authorized to approve the Grading Application or issue any grading permits to Real Parties relating to the Project without simultaneously certifying FSEIR 566 and adopting findings and overriding considerations; and

(e) The November 25 CEQA review process unlawfully separated the (i) the decision whether to certify FSEIR 566 and to adopt findings and overriding considerations from (ii) the decision whether to approve the Grading Application.

86. In light of the foregoing, a judicial declaration is necessary and appropriate under the circumstances to resolve the above-described disputes and controversies between the Society and the Defendants with respect to the purported certification of FSEIR 566 by Respondents and the proper procedures for taking action on the FSEIR and the Grading Application in the future. Specifically, the Society seeks a declaration from the Court that:

(a) No final or official certification of FSEIR 566 has occurred under the terms of the CEQA review process adopted by the County on November 25, 1997;

(b) The CEQA review process adopted by the Board on November 25, 1997, was unlawful and invalid and any action take pursuant thereto, or in accordance therewith, is a legal nullity;

(c) The proper process under CEQA, and the County's ordinances and regulations, for considering whether to certify FSEIR 566 and approve the Grading Application is for the Planning Commission and the Building Official to hold a joint public hearing and to take joint, simultaneous action to review the adequacy of FSEIR 566 and to take action on the merits of the Grading Application;

(d) If and when any joint determination is made by the Planning Commission and the Building Official regarding FSEIR 566 and the Grading Application, such action shall be appealable to the Board pursuant to the provisions of CEQA section 21151(c); and

(e) Pursuant to section 21168.9 of CEQA, Respondents must suspend any and all Project activities which are based upon or are undertaken pursuant to the purported certification of FSEIR 566 or the purported adoption of the Findings/Considerations, to the extent that any such activities could result in any adverse change or alteration to the Property until the determination as to whether to certify FSEIR 566 and to approve the Grading Application is brought into compliance with the provisions of CEQA and the CEQA Guidelines.

87. In addition, the Society is entitled to ancillary injunctive relief in the form of a temporary restraining order, preliminary injunction, and permanent injunction, enjoining and prohibiting:

(a) Respondents, their agents, employees and representatives, and all persons acting under, or in concert or participation with them, from taking any action to grant or approve the Grading Application or to issue any grading permits relating to the Project, to Real Parties, or their agents, successors or assigns, pending a hearing on the merits of this Complaint and Petition; and

(b) Real Parties, their agents, employees and representatives, and all persons acting under, or in concert or participation with them, from engaging in (i) any grading, clearing, brushing or grubbing on the natural or existing grade

of the Property or (ii) any other activities which could result in any adverse change or alteration to the physical environment of the Property, pending a hearing on the merits of this Complaint and Petition.

SECOND CAUSE OF ACTION

(Against All Defendants For Declaratory Relief Re Non-Existence of Vested Rights To Develop The Property)

88. The Society realleges and incorporates herein by reference each and every allegation contained in paragraphs 1 through 80, inclusive, and 82 through 85, inclusive, as set forth above.

89. An actual controversy has arisen and now exists between and among the Society and the Defendants regarding the respective rights, duties, and obligations of the Defendants with respect to the development of the Property and ensuring that such development fully complies with CEQA and the Guidelines in that the Society contends, and the Defendants deny, *inter alia*, that:

(a) Real Parties possess *no vested rights* with respect to developing all or any portion of the Property, including, but not limited to, (i) any vested rights to maintain the benefits afforded under the exemption of the Property from the requirements of the Specific Plan, (ii) any vested rights to maintain the entitlements afforded under the 1984 Zoning Ordinance, or (iii) any vested rights to maintain the entitlements afforded under the Tract Map; and

(b) In considering whether to certify FSEIR 566, Respondents were free to, and were actually required to, consider all feasible mitigation measures, project alternatives, and other design features that would have lessened or avoided the environmental impacts associated with the Project, regardless of whether such measures, alternatives, or features would cause the design or intensity of the development authorized by the Tract Map.

90. A judicial declaration is necessary and appropriate under the circumstances to resolve the current between the Society and the Defendants. Specifically, the Society seeks a declaration from the Court that:

(a) Real Parties have *not* acquired any vested rights in, *inter alia*, (i) the exemption of the Property from the requirements of the Specific Plan, (ii) the current zoning for the Property as set forth in the 1984 Zoning Ordinance, or (iii) the current entitlements allowed under the Tract Map;

(b) Respondents have *not* issued any development permits to Real Parties upon which they have relied in good faith, and have performed substantial work and incurred substantial liabilities, so as to acquire any vested rights to develop the Property in accordance with such permits; and

(c) the mitigation measures, project alternatives, and other design features that Respondents were allowed to, and were actually required to, consider in deciding whether to certify FSEIR 566 and to adopt the Findings/Considerations *were not limited* to those measures, alternatives or design features which would not change or alter the physical design of the development authorized by the Tract Map.

THIRD CAUSE OF ACTION

(Against All Defendants For A Writ Of Mandate And Injunctive Relief Based On Violations Of CEQA And The CEQA Guidelines In Purporting To Certify FSEIR 566)

91. The Society realleges and incorporates herein by reference each and every allegation contained in paragraphs 1 through 80, inclusive, paragraphs 82 through 85, inclusive, and paragraph 90 as set forth above.

92. To the extent that the Board's purported action on February 24, 1998 resulted in any determination upholding the Planning Commission's certification of FSEIR 566, which the Society denies, the Society seeks a preemptory writ of mandate pursuant to Code of Civil Procedure section 1094.5, directing Respondents to vacate and set aside, *inter*

alia, the unlawful actions which they have taken, or may hereafter take, in (a) approving and certifying FSEIR 566, or (b) authorizing any other actions in reliance on such approval and certification, including, but not limited to, the approval of the Grading Application or the issuance of any grading permit(s) to Real Parties with respect to the Project. Such mandamus relief is being sought herein based on the numerous violations of CEQA and the CEQA Guidelines which are alleged hereinbelow.

A. **Failure To Properly Describe The Discretionary Project To Be Addressed By FSEIR 566.**

93. Respondents failed to proceed in the manner required by law and abused their discretion to the extent that they violated, *inter alia*, section 15124 of the Guidelines by failing to properly identify and describe the discretionary project approval which initiated and necessitated the preparation of FSEIR 566, i.e., the Grading Application.

94. As stated above, the Project consists of the development of 705 manufactured housing units and a commercial site, as authorized by the Tract Map. The Project was originally approved approximately 19 years ago when the County granted approval for Tentative Tract Map 10692. At the time that approval was issued, an EIR was prepared and certified by the County to address certain of the environmental impacts associated with the development of the Project.

95. In December 1996, Real Parties submitted the Grading Application to the County seeking the issuance of a grading permit to undertake a portion of the rough grading for the Project. As FSEIR 566 acknowledges, at pages 2-8 and 2-9, County EMA determined that the EIR certified in 1979 was no longer sufficient and that, before the County could approve the Grading Application, a Subsequent EIR needed to be prepared to "*evaluate the [environmental] effects of the grading application.*"

96. This determination by County EMA constituted an implicit finding that the Grading Application was the "next discretionary approval for the project," within the meaning of section 15162(c) of the CEQA Guidelines, which would provide the County with the occasion to require a Subsequent EIR to be prepared.

97. Consistent with this finding, FSEIR 566, at pages 3-15, identifies all County discretionary approvals for which it is to provide environmental analysis, as required by Guidelines section 15124(d)(1)(B). The only County approvals which FSEIR 566 identifies are the approval of a grading plan and the issuance of a grading permit, pursuant to the Grading Application. FSEIR 566 does not list the approval of the overall Project (i.e., the construction of 705 units of manufactured housing) as a discretionary approval for which it is to provide environmental analysis.

98. There can be no question, therefore, that the discretionary project approval which precipitated the preparation of FSEIR 566, and which was to be addressed and analyzed in the FSEIR, was the Grading Application. But for the Grading Application being submitted, there would have been no legal basis for the County to have directed that a Subsequent EIR be prepared because there would have been no new project approval which would have required CEQA compliance.

99. However, in calling for a Subsequent EIR to be prepared to update the environmental analysis set forth in the original EIR for the Project, the County inexplicably determined that the Subsequent EIR would only have to be specific enough to provide a "planning level of detail" for the Project in general, and would not have to address the construction-level impacts associated with the approval of the Grading Application.

100. In implementing this improper decision to address only the general "planning level" impacts of the entire Project, and to exclude an analysis of the specific impacts associated with the Grading Application, the County wrongfully described the "project" to be evaluated in the Draft SEIR in overly-broad terms as if it consisted of the overall development of the Project authorized by the Tract Map, but did not include the construction-level activities that would be unleashed by the approval of the Grading Application. The incomplete and overly-broad project description which was incorporated in the Draft SEIR necessarily skewed and improperly limited the environmental analysis set forth in FSEIR 566 in violation of CEQA and the CEQA Guidelines.

B. Failure To Provide The Required Level Of Specificity.

101. Respondents further failed to proceed in the manner required by law and abused their discretion by failing to provide the level of specificity that CEQA and the Guidelines required of FSEIR 566.

102. Specifically, Guidelines section 15146 provides that:

"The degree of specificity required in an EIR will correspond to the degree of specificity involved in the underlying activity which is described in the EIR.

(a) an EIR on a construction level project will necessarily be *more detailed* in the *specific effects* of the project than will be an EIR on the adoption of a local general plan or comprehensive zoning ordinance because the *effects of the construction* can be predicted with greater accuracy." (Emphasis added.)

103. Contrary to any previous statements by Respondents, FSEIR 566 is undeniably a construction-level EIR because, by Respondents' own admission, the document was prepared to analyze the environmental impacts of the Grading Application, which is the last discretionary approval Respondents will issue before the topography of the Property is permanently altered and the biological resources located at the site are forever destroyed.

104. FSEIR 566 does not comply with section 15146 because it postpones for future analysis the specific details of the very activity that it was supposedly prepared to address, i.e., the rough grading of the Property for the construction of 705 units of manufactured housing. As a Subsequent EIR prepared to analyze the effects of the rough grading of the Property, the FSEIR was required by section 15146 to possess a degree of specificity that corresponded to the level of technical detail that must necessarily be provided to the Building Official in order for him to approve the Grading Application.

105. In order to provide this degree of specificity, all technical materials to be reviewed by the Building Official before he approved the Grading Application -- which included, at a minimum, the Grading Plans and the Grading Plan Review -- should have been

made a part of FSEIR 566 so that all the detailed information that was available to the County when it considered the Grading Application was likewise made available to the public through the CEQA review process.

106. However, the level of specificity in FSEIR 566 fell far short of what would be required for properly evaluating the Grading Application because, *inter alia*, FSEIR 566 provided only a vague "conceptual plan" regarding how the rough grading of the Property was to be performed. By failing to include, *inter alia*, the Grading Plans and the Grading Plan Review, the FSEIR lacked the specificity required for a construction-level EIR, and clearly violated section 15146 of the CEQA Guidelines.

107. Respondents' failure to comply with the specificity provisions set forth in the CEQA Guidelines has, *inter alia*, unlawfully deprived the public and other interested public agencies of the right and opportunity to properly assess and comment on the impacts associated with the Grading Application as well as the mitigation measures proposed to reduce those impacts.

C. Failure To Provide The Requisite Technical Detail.

108. Respondents further failed to proceed in the manner required by law and abused their discretion by failing to comply with the mandatory provisions of Guidelines section 15147, which requires that all technical data, maps, plans, diagrams, and similar information that are necessary to make a "full assessment" of the environmental impacts of the project being evaluated must be contained in the environmental impact report or in the appendices thereto. Section 15147 goes on to require that these materials be made "readily available for public examination" during the noticed public review period.

109. Because FSEIR 566 was prepared to evaluate the environmental effects of the Grading Application, section 15147 required that the Grading Plans and the Grading Plan Review, as well as any other materials required for the Grading Application, be made part of the DSEIR before it was circulated for public review. However, the Grading Plans and the Grading Plan Review were never made a part of DSEIR 566, nor were they made available for inspection or copying during the 45-day public review period.

110. The geotechnical reports and maps which were made a part of DSEIR 566 were entirely inadequate in that they either (a) discussed the rough grading for the 318 Unit Project that was earlier rejected by the Planning Commission and the Board, or (b) deferred any detailed analysis of the 705-unit Project until after FSEIR 566 had been certified.

111. This failure by Respondents to comply with the technical detail provisions of the CEQA Guidelines has, *inter alia*, unlawfully deprived the public and other interested public agencies of the right and opportunity to properly assess and comment on the impacts associated with the Grading Application as well as the mitigation measures proposed to reduce those impacts.

D. **Failure To Amend And Recirculate DSEIR 566 After Releasing Significant New Information Regarding The Grading Application.**

112. Respondents further failed to proceed in the manner required by law and abused their discretion by failing to amend and recirculate DSEIR 566 following the release of significant new information regarding the rough grading of the Property.

113. Public review and comment is one of the most fundamental and important aspects of the CEQA review process. Both CEQA and the case law interpreting it have recognized that public review and comment is the strongest assurance of the adequacy of an EIR. For that very reason, CEQA section 21092.1 and CEQA Guidelines section 15088.5 require that if significant new information becomes available before an EIR has been certified, the EIR must be recirculated to allow the public sufficient time to review and comment on that new information. If significant new information becomes available after certification, CEQA and the Guidelines require the preparation of a new, subsequent EIR so that the public will have the opportunity to review and comment on that information.

114. In this case, following the close of the 45-day public review period and the Respondents' release of the Response to Comments for DSEIR 566, Respondents made the Grading Plans, Grading Plan Review, and various other reports and information relating to the rough grading of the Property available for public review. Although these materials still failed to provide important design details regarding the rough grading of the Project, they clearly

constituted significant new information because they supplied substantial additional data which was sorely lacking from the DSEIR when it was circulated for public review. However, in clear violation of, *inter alia*, sections 21092.1 and 15088.5, Respondents refused to (a) amend the DSEIR to incorporate and analyze this new data and (b) recirculate the DSEIR for public review and comment on this significant new information.

115. Respondents have run afoul of CEQA's policies and requirements regarding public participation in the review process. By releasing the Grading Plans and the Grading Plan Review -- each of which clearly contained significant new information -- at the eleventh hour before certifying FSEIR 566, Respondents deprived the public of their right to review and comment on such materials, and shirked their responsibility to provide a reasoned analysis in response to any public comments concerning them.

E. Failure To Certify FSEIR 566 And Adopt The Findings/Considerations In Conjunction With Deciding Whether To Approve The Grading Application.

116. Respondents further failed to proceed in the manner required by law and abused their discretion by allegedly certifying FSEIR 566 pursuant to a special CEQA review process which, *inter alia*, unlawfully separated the certification of FSEIR 566 from the approval, modification, or disapproval of the discretionary project, i.e., the Grading Application, for which the FSEIR was originally prepared.

117. CEQA and the CEQA Guidelines do not apply, and do not require the preparation of an EIR, unless there is some form of discretionary project approval which is being considered by a public agency. (*See, e.g.*, CEQA Guidelines §§15002(i), 15357.) The certification of an EIR, by itself, is not a "project" under CEQA; rather, an EIR is merely an informational document that is to be considered by the public agency at the time that it approves, modifies, or disapproves whatever discretionary project is before it.

118. In this case, since FSEIR 566 was expressly prepared to evaluate the environmental impacts of the Grading Application, Respondents could not legally certify the FSEIR without simultaneously reviewing the Grading Application for approval, disapproval, or modification under section 15002(h) of the CEQA Guidelines. Because Respondents

purported to certify FSEIR 566 without considering, or taking any action on, the Grading Application, they failed to proceed in the manner required by law and abused their discretion.

F. Failure To Adequately Address All Environmental Impacts Of The Project.

119. Respondents further failed to proceed in the manner required by law and abused their discretion by failing to adequately identify and address all significant environmental impacts associated with the rough grading of the Property as required by, *inter alia*, section 15126 of the CEQA Guidelines.

120. Specifically, before approving and certifying FSEIR 566, Respondents were required, *inter alia*, to clearly identify and describe all direct and indirect significant effects of the Project on the environment, giving due consideration to both the short-term and long-term effects. Respondents failed to meet their obligations in this regard with respect to, *inter alia*, the following matters:

(1) Soils and Geology

121. FSEIR 566 fails to identify and discuss each of the numerous geotechnical impacts that will occur as a result of the rough grading of the Property's hilly terrain. The discussion of the geotechnical impacts that is set forth in the FSEIR is woefully inadequate because it provides nothing more than a cursory overview of the Property's unstable soils conditions which may lead to massive landsliding and slope failures when deep excavations are made as part of the rough grading operations to take place at the site. Rather than fully identifying and discussing the critical issues relating to the Property's soils and geology, FSEIR 566 simply promises that a detailed analysis of these issues will be conducted at some undetermined time in the future.

122. FSEIR 566 also fails to contain a discussion regarding the impact of the rough grading on the area's groundwater. The rough grading of the Property will be greatly complicated by the perched groundwater which is present on the Property, as well as the numerous groundwater tables that will be exposed during the vast amount of remedial grading to be performed in an effort to stabilize the Property's unstable slopes. These conditions will require extensive dewatering activities both during and after the rough grading is completed.

123. FSEIR 566 fails to adequately discuss the impact these dewatering activity will have on the numerous water wells that are located on adjacent properties and which rely on the groundwater tables for their very existence. Although there is a substantial likelihood that the dewatering activities will cause these wells to permanently dry up, FSEIR 566 contains no discussion of any such impacts. Moreover, there is no discussion of the effect the rough grading will have on the quality or composition of the groundwater throughout the area or the impact on the streams and waterways into which the dewatering activities will redirect the groundwater.

124. Finally, FSEIR 566 fails to adequately discuss the impact that the rough grading process will have on the stability of the surrounding properties. Many of the slopes on the Property support the slopes on the surrounding properties, and vice versa. FSEIR 566 simply states in a conclusory fashion that there will be no impact on the stability of the surrounding slopes once rough grading is *completed*. FSEIR 566 completely avoids, however, any discussion of how the slope stability of neighboring properties will be impacted *during* the extensive rough grading process.

(2) Water/Hydrology

125. FSEIR 566 also fails to adequately and accurately assess the impacts the rough grading will have upon the hydrology and drainage for the Property and surrounding area.

126. As described above, FSEIR 566 is almost completely devoid of any discussion regarding the impacts the rough grading will have on the area's groundwater. In actuality, these impacts are significant and numerous and should have been addressed in detail.

127. Additionally, FSEIR 566 fails to analyze the Property's drainage after the rough grading has been completed and 705 units of manufactured housing have been constructed thereon. There is no discussion regarding whether the improvements to the County storm drain system that have been proposed will be sufficient to handle the run-off from the Project and there is an inadequate discussion regarding the impact of such run-off in general.

128. Finally, the hydrology report which is included in FSEIR 566 appears to be for the much smaller 318 Unit Project that was previously proposed and rejected for the Property, rather than the 705 unit Project which is the subject of FSEIR 566.

(3) Transportation/Circulation

129. The analysis in FSEIR 566 of the Project's traffic impacts is inadequate because it is limited in its geographic scope and fails to address the adequacy of the parking for the Project.

130. The traffic section of FSEIR 566 unfairly limits its review of the Project's impact on the area's intersections to those intersections which are north of the intersection of El Toro Road and Santa Margarita Parkway. No explanation is given for this limitation and no discussion is provided regarding the Project's impact on the intersections along El Toro Road between Interstate 5 and Santa Margarita Parkway, or the impacts on the heavily used Interstate 5.

131. Moreover, FSEIR 566 fails to address the sufficiency of the parking which is provided for the 705 units of manufactured housing to be constructed on the Property and the adequacy of the access to the Project.

(4) Air Quality

132. FSEIR 566 also fails to contain an adequate discussion of the impacts of the rough grading as well as the Project itself on the air quality for the area. Apparently, in considering the impact of the traffic and vehicle trips from the Project on the area's air quality, FSEIR 566 utilizes the calculations that were performed as part of the previously proposed, and rejected, 318 Unit Project rather than the much larger 705-unit Project. Additionally, FSEIR 566 does not adequately address the impacts that the actual process of grading the Property and constructing the 705 units will have on the area's air quality.

(5) Biological Resources

133. FSEIR 566 is also deficient because it does not adequately describe the biological resources of the Property and surrounding area, and describes and analyzes the impacts of the Project in only a superficial manner. Moreover, FSEIR 566 completely or

partially ignores at least eight requested information items that the U.S. Fish & Wildlife Service and the California Department of Fish and Game requested in their response to the Notice of Preparation for DSEIR 566.

134. Many of the wildlife species that exist on the Property are not adequately identified and considered in FSEIR 566. The wildlife species for which analysis is lacking include, but are not limited to, the following: (1) Riverside fairy shrimp, a federally endangered species, (2) California gnatcatcher, a federally threatened species, (3) Quino checkerspot butterfly, a federally endangered species, (4) western spadefoot toad, a California species of concern, (5) cactus wren, a federal and California sensitive species, (6) cladocerans, (7) copepods, (8) seed shrimp, (9) clam shrimp, and (10) pacific treefrog.

135. Moreover, Respondents improperly certified FSEIR 566 without surveys having been conducted pursuant to the U.S. Fish & Wildlife Service protocol to determine the size of the California gnatcatcher and Quino checkerspot butterfly populations which exist on the Property. As with many of the previously discussed impacts of the rough grading, the FSEIR improperly defers these studies until some indeterminate future date.

136. The FSEIR's discussion regarding the Property's biological resources is also deficient because it fails to adequately identify and discuss the many habitats and plant species which exist on the Property, such as the ephemeral ponds, wetlands, coastal sage scrub, mulefat scrub, coast live oak, southern sycamore riparian woodlands, Catalina mariposa lily, and intermediate mariposa lily. For example, FSEIR 566 does not adequately discuss the origins and importance of the ephemeral ponds which exist on the Property, and there is no discussion of the Project's impacts on the surrounding ephemeral ponds which are not within the Project's footprint. FSEIR 566 also lacks a sufficient discussion of the invertebrates and other species that may be found in these ponds or wetlands.

137. Finally, FSEIR 566 fails to adequately address the Project's impacts on the integrity of the wildlife corridors which currently exist on the Property, as well as the species which use the corridors, including, but not limited to, the mountain lion, mule deer, and coyote. These corridors currently link the Central and Southern Natural Community

Conservation Planning Subregional preserves, but their potential destruction or substantial modification is not sufficiently addressed.

(6) Archeological/Cultural Resources

138. FSEIR 566 is also deficient because it fails to adequately identify the potential array of archeological and cultural resources which currently exist on the Property -- such as, for example, possible Native American burial sites -- and to fully address the significant impacts that the rough grading will have on those resources. CEQA section 21083.2 required Respondents to identify the archaeological resources on the Property and to analyze the impacts of the rough grading on such resources. Despite this requirement, several of the "mitigation measures" proposed in FSEIR 566 stated that a certified archaeologist would be retained to survey the Property for cultural resources *after* FSEIR 566 has been certified. Again, deferring analysis in this manner is not permitted by CEQA or the CEQA Guidelines.

(7) Public Services

139. While acknowledging that the area's schools are already overcrowded and that the Project will add approximately 399 additional students to these schools, FSEIR 566 fails to adequately discuss the impact the Project will have upon the school system for the area.

G. Failure To Provide Legally Adequate Mitigation Measures And To Adopt An Adequate Mitigation Monitoring Program.

140. Respondents further failed to proceed in the manner required by law and abused their discretion by (a) failing to identify and adopt feasible mitigation measures for the numerous and significant environmental impacts of the Project, including, but not limited to, the impacts discussed herein, (b) adopting improper mitigation measures which were Impermissibly vague and which deferred analysis until after certification of the FSEIR, and (c) adopting an inadequate Mitigation Monitoring Program.

141. Guidelines section 15126 requires an EIR to identify and fully discuss all measures which are available to mitigate each and every significant environmental impact of a

proposed project. A project cannot be approved as proposed if there are feasible alternatives and mitigation measures which would substantially lessen the significant environmental impacts of the proposed project, but have not been incorporated into its design. (*See, e.g.*, CEQA § 21002; CEQA Guidelines §§15021, 15041.)

142. FSEIR 566 violates these and other provisions of CEQA and the CEQA Guidelines, as well as the Federal Endangered Species Act, by unlawfully limiting the mitigation measures which it discusses, and which Respondents adopted, to only those measures which would not result in, or require physical change to, the design of the Project as depicted on the Tract Map. FSEIR 566 provides no discussion of any legal or factual basis for such a limitation.

143. FSEIR 566 also violates the above provisions of CEQA and the Guidelines by failing to make any attempt to identify or discuss mitigation measures for many of the environmental impacts that will be caused by the Project, including, but not limited to, the Project's impact on the area's groundwater and its impacts on surrounding land uses, including, but not limited to, the religious uses by the Society and St. Michael's Abbey.

144. The mitigation measures which FSEIR 566 does contain, and which were adopted by Respondents, are legally inadequate because they fail to meet the standards established by CEQA and the Guidelines. Specifically, in order for a mitigation measure to be legally adequate it must be set forth in specific and detailed terms and it must be capable of (a) avoiding the impacts all together, (b) minimizing the impacts by limiting the degree or magnitude of the action and its implementation, (c) rectifying the impact by repairing, rehabilitating, or restoring the impacted environment, (d) reducing or eliminating the impact over time by preservation and maintenance operations during the life of the action, or (e) compensating for the impact by replacing or providing substitute resources or environments.

145. Many of the FSEIR's mitigation measures fail to meet these standards because they are nothing more than vague and generic promises to develop the sort of specific and detailed mitigation measures required by CEQA at some future time *after* the FSEIR has been certified. By deferring the development of the form and content of many of its mitigation

measures, FSEIR 566 deprives the public of the opportunity to review the mitigation measures to determine whether they can in fact mitigate the environmental impacts to which they are directed and meet the above standards. The mitigation measures which possess these deficiencies include, but are not limited to, the thirty-eight examples set forth in Appendix A to the comments to DSEIR 566 which St. Michael's Abbey submitted on August 21, 1997, and which are incorporated herein by reference.

146. Finally, the Mitigation Monitoring Program which Respondents adopted is also inadequate to meet the requirements of CEQA, including, but not limited to section 21081.6, because the mitigation measures set forth therein possess the same defects and deficiencies that are discussed above. Moreover, at least some of the additional mitigation measures which the Response to Comments indicated would be incorporated into the FSEIR have not been carried forward into the Mitigation Monitoring Program. For example, in response to comment SFC.2-66, the Response to Comments indicated that "five years of resource mitigation monitoring is hereby incorporated into the DEIR." However, this measure was neither incorporated into the FSEIR nor was it set forth in the Mitigation Monitoring Program.

H. Failure To Address The Cumulative Impacts Of The Project.

147. Respondents have further failed to proceed in the manner required by law and abused their discretion by failing to comply with the mandatory provisions of CEQA Guideline section 15130, which required Respondents to discuss significant cumulative impacts in FSEIR 566.

148. Specifically, CEQA Guidelines section 15130 requires an EIR to discuss the cumulative impacts of the relevant project and all past, present, and reasonably foreseeable future projects producing related or cumulative impacts, including the severity of those impacts and their likelihood of occurrence. Section 15130 also requires that this discussion of cumulative impacts include a summary of other projects anticipated in the region or area, a summary of expected environmental effects of those projects, and a reasonable analysis of the

cumulative impacts of the relevant project. The discussion of cumulative impacts must also include feasible mitigation measures.

149. Respondents did not comply with CEQA Guidelines section 15130 in that, *inter alia*, they failed to discuss the cumulative effects of the reuse of El Toro Marine Air Station as a commercial airport. In particular, FSEIR 566 is inadequate because it fails to consider the impacts of a commercial airport when conducting its analysis of the traffic, noise, and air quality impacts of the Project.

L. Failure To Consider Project Alternatives.

150. Respondents further failed to proceed in the manner required by law and abused their discretion by failing to comply with the provision of CEQA Guidelines section 15126(d), which required Respondents to describe a range of reasonable alternatives to the Project, including an alternative site for the Project, and to evaluate the comparative merits of the alternatives.

151. Respondents did not comply with CEQA Guidelines section 15126(d) in that, *inter alia*, they failed to discuss viable alternative sites for the Project or properly explain why there were no feasible alternative sites discussed.

152. Moreover, although FSEIR 566 discusses possible on-site alternatives to the Project, it nonetheless violates CEQA and the CEQA Guidelines because throughout FSEIR 566 it is erroneously stated that changes to the Project that would alter the features of the Tract Map cannot be made because Respondents are allegedly unable to deviate therefrom. Hence, without any factual or legal support, FSEIR 566 provides project alternatives, but states that none of them can be considered because they would deviate from the Tract Map.

J. Failure To Adequately Respond To Comments.

153. Respondents further failed to proceed in the manner required by law and abused their discretion by failing to comply with the mandatory provisions of CEQA section 21092.5 and CEQA Guidelines section 15088, which required that the Response to Comments provide a good faith, reasoned analysis of the issues presented by each comment. Conclusory statements unsupported by factual information are insufficient to meet this standard.

154. The Response to Comments which was prepared by Respondents failed to meet any aspect of this standard because it was not conducted in good faith and failed to provide any reasoned analysis of the comments that were submitted. Instead, Respondents simply (a) ignored comments, (b) referred the authors of the comments back to portions of the DSEIR which failed to address their concerns, or (c) stated that an analysis of the relevant issues will be conducted at some indeterminate time in the future.

155. For example, Respondents failed to respond to various legitimate concerns raised by the Society, St. Michael's Abbey, Saundra Jacobs, the U.S. Fish & Wildlife Service, and various other interested parties regarding, *inter alia*, the adequacy of the DSEIR's analysis of the geotechnical issues which exist on the Property, the Project's impacts on the Property's biological resources, and many of the other concerns regarding DSEIR 566 which are identified herein.

156. Moreover, Respondents have also refused to respond to the requests of the Society, St. Michael's Abbey, Saundra Jacobs, and other interested parties that Respondents recirculate DSEIR 566 after including the Grading Plans, Grading Plan Review and other important documents in the DSEIR.

* * *

157. As a result of Respondents' failure to comply with the requirements of CEQA and the CEQA Guidelines in approving and undertaking the actions alleged hereinabove, the Society is entitled to a peremptory writ of mandate which, *inter alia*:

(a) Directs Respondents to vacate and set aside the actions which they took on December 3, 1997, and February 24, 1998, in purporting to certify FSEIR 566; and

(b) Directs Defendants to suspend any and all Project activities which are based upon or are undertaken pursuant to the purported certification of FSEIR 566, to the extent that any such activities could result in any adverse change or alteration to the Property until the determination as to whether to

certify FSEIR 566 and to approve the Grading Application is brought into compliance with the provisions of CEQA and the CEQA Guidelines.

158. In addition, the Society is entitled to a stay pursuant to Code of Civil Procedure section 1094.5(g), or, alternatively, ancillary injunctive relief, prohibiting and enjoining Respondents and Real Parties from taking any actions in reliance upon, or pursuant to, Respondent's purported approval and certification of FSEIR 566.

FOURTH CAUSE OF ACTION

(Against All Defendants For A Writ of Mandate And Injunctive Relief Based On Violations Of CEQA And The Guidelines In Adopting Findings)

159. The Society realleges and incorporates herein by reference each and every allegation contained in paragraphs 1 through 80, inclusive, and paragraphs 82 through 85, inclusive, paragraph 90, and paragraphs 93 through 156, inclusive, as set forth above.

160. To the extent that the Board's purported action on February 24, 1998, resulted in any determination upholding or adopting the findings (collectively, the "Findings") made by the Planning Commission in certifying FSEIR 566, which the Society expressly denies, the Society seeks a preemptory writ of mandate, pursuant to Code of Civil Procedures section 1094.5, directing Respondents to vacate and set aside, *inter alia*, the unlawful actions which they have taken or may hereafter take in (a) purportedly making the Findings, or (b) authorizing any other actions in reliance on, or pursuant to, such Findings.

161. Before an EIR is certified and a project is approved, CEQA section 21081 and CEQA Guidelines section 15091 require a public agency to make certain findings regarding each environmental impact associated with the project, and CEQA section 21081.5 and CEQA Guidelines section 15091(b) require that all such findings must be based upon substantial evidence in the record. Respondents failed to proceed in the manner required by law and abused their discretion by failing to make proper findings and by failing to support the findings that were made with substantial evidence in the record.

162. Specifically, CEQA and the Guidelines required Respondents, *inter alia*, to make one of two findings for each significant environmental impact identified in FSEIR 566

and to provide an explanation of the rationale for each finding they made. The two possible findings which Respondents could have made for each significant impact were that (a) the mitigation measures or project alternatives identified in the FSEIR would reduce the impact to a level of insignificance, or (b) the impact is unavoidable because one or more specific economic, social, or other considerations make infeasible the mitigation measures or project alternatives which are identified in the FSEIR as relating to the impact in question. CEQA and the Guidelines required Respondents to make this later finding for each mitigation measure and project alternative that was identified by the FSEIR, but was not adopted by Respondents.

163. FSEIR 566 and each of the findings which Respondents made are based upon a fundamentally incorrect premise which renders Respondents' findings *per se* inadequate: i.e., that the Tract Map afforded Real Parties vested rights to develop the Project, such that Respondents were supposedly precluded from considering any mitigation measures or project alternatives which would cause the Project to deviate from the Tract Map. By arbitrarily limiting the wide array of mitigation measures and project alternatives that were available to reduce the impacts associated with the Project, Respondents necessarily adopted findings which were legally inadequate because they were based on a false premise regarding the vesting status of the Tract Map.

164. For example, paragraph 2.1 of the Findings expressly acknowledges that the Project, involving the construction of 705 units of manufactured housing, is incompatible with the adjacent wilderness regional park, St. Michael's Abbey, and the Society's Monastery. Nevertheless, the Findings state that this land use incompatibility is "unavoidable" because of "the recorded nature of the tract map."

165. In addition, the Findings are inadequate because they are conclusory, general, and not supported by substantial evidence in the record. For example, the Findings consider Alternative 3 to the Project as one which achieves all of the project objectives, yet rejects the alternative solely because the applicant for the Grading Permit had actually determined it to be economically infeasible. Respondents failed to cite to even one fact in support of this finding.

166. As a result of Respondents' failure to adopt adequate findings supported by substantial evidence as alleged hereinabove, the Society is entitled to a peremptory writ of mandate which, *inter alia*:

(a) Directs Respondents to vacate and set aside the actions which they took on December 3, 1997, and February 24, 1998, in purportedly making and adopting the Findings; and

(b) Directs Defendants to suspend any and all Project activities which are based upon or are undertaken pursuant to the purported adoption of the Findings, to the extent that any such activities could result in any adverse change or alteration to the Property until the determination as to whether to certify FSEIR 566 and to approve the Grading Application is brought into compliance with the provisions of CEQA and the CEQA Guidelines.

167. In addition, the Society is entitled to a stay pursuant to Code of Civil Procedure section 1094.5(g), or, alternatively, ancillary injunctive relief, prohibiting and enjoining Respondents and Real Parties from taking any actions in reliance upon, or pursuant to, Respondent's purported making and adoption of the Findings.

FIFTH CAUSE OF ACTION

(Against All Defendants For A Writ of Mandate And Injunctive Relief Based On Violations Of CEQA And The Guidelines In Adopting A Statement Of Overriding Considerations)

168. The Society realleges and incorporates herein by reference each and every allegation contained in paragraphs 1 through 80, inclusive, and paragraphs 82 through 85, inclusive, paragraph 90, paragraphs 93 through 156, inclusive, and paragraphs 161 through 165, inclusive, as set forth above.

169. To the extent that the Board's purported action on February 24, 1998, resulted in any determination upholding the Planning Commission's adoption of a statement of overriding considerations (hereinafter referred to as the "Overriding Considerations"), which the Society expressly denies, the Society seeks a preemptory writ of mandate, pursuant to

Code of Civil Procedures section 1094.5, directing Respondents to vacate and set aside, *inter alia*, the unlawful actions which they have taken or may hereafter take in (a) purportedly adopting the Overriding Considerations, or (b) authorizing any other actions in reliance on, or pursuant to, such Overriding Considerations.

170. Section 15093 of the CEQA Guidelines provides that the body determining whether to approve the project which is the subject of CEQA review must balance the benefits of the proposed project against its unavoidable environmental risks. If the decision-making body determines that the benefits of a proposed project outweigh the unavoidable adverse environmental effects, the body approving the project must state in writing the specific reasons to support its approval of the project based on the final EIR and/or other information in the record. Such writing, called a statement of overriding considerations, is to be included in the record of the project approval.

171. Respondents failed to proceed in the manner required by law and abused their discretion by adopting the Overriding Considerations--justifying their decision to approve the "project"--without (a) placing project approval on any agenda, (b) considering whether to approve the Project, or (c) voting on project approval or denial. Accordingly, the adoption of the Overriding Considerations was meaningless and remains a nullity.

172. Respondents also failed to proceed in the manner required by law by including, as an overriding consideration the erroneous assumption that the Tract Map had acquired a "vesting status" which supposedly prevented the Planning Commission or the Board from exercising their statutory authority vested in them under the Specific Plan and under sections 15002(h) and 15141 of the CEQA Guidelines to change or modify the Project in order to mitigate the environmental impacts thereof. Specifically, paragraph 5.2.6 of the Overriding Considerations erroneously states that the Tract Map has a "vesting" status which "limits the ability of the applicant/lead agency to deviate from the physical design characteristics of the project to mitigate identified unavoidable adverse effects."

173. Moreover, the Overriding Considerations are inadequate under CEQA and the CEQA Guidelines because there is insufficient evidence in the record to establish that the

considerations upon which Respondents are relying do, in fact, override the numerous significant impacts of the Project. The principal Overriding Considerations which Respondents adopted were that (1) two-thirds of the 705 housing units to be constructed on the Property are to be sold as affordable housing units, and (2) the Project will stabilize existing unstable geotechnical conditions on the Property.

174. However, FSEIR 566 fails to contain any analysis or information that demonstrates that these overriding considerations will actually occur when the Project is completed. FSEIR 566 contains neither a financial analysis that demonstrates that two-thirds of the 705 housing units can be sold as affordable housing units without the developer losing money, nor does FSEIR 566 contain sufficient information to evaluate whether the proposed remedial grading will, in fact, stabilize the unstable geotechnical conditions which exist on the Property.

175. In light of the information that is available, it appears Respondents have made an unwarranted leap of faith because the achievement of these two overriding considerations is highly unlikely given the scope and severity of the geotechnical conditions which exist on the Property and the exorbitantly high costs of grading the Property due to those conditions.

176. As a result of the actions of Respondents in adopting the Overriding Considerations alleged above, the Society is entitled to a peremptory writ of mandate which, *inter alia*:

(a) Directs Respondents to vacate and set aside the actions which they took on December 3, 1997, and February 24, 1998, purportedly adopting the Overriding Considerations; and

(b) Directs Defendants to suspend any and all Project activities which are based upon or are undertaken pursuant to the purported adoption of the Overriding Considerations, to the extent that any such activities could result in any adverse change or alteration to the Property until the determination as to

whether to certify FSEIR 566 and to approve the Grading Application is brought into compliance with the provisions of CEQA and the CEQA Guidelines.

177. In addition, the Society is entitled to a stay pursuant to Code of Civil Procedure section 1094.5(g), or, alternatively, ancillary injunctive relief prohibiting and enjoining Respondents and Real Parties from taking any actions in reliance upon, or pursuant to, Respondent's Statement of Overriding Concerns.

SIXTH CAUSE OF ACTION

(Against All Defendants For Declaratory Relief Re Lack Of Grounds For Continuing To Exempt Property From The Specific Plan)

178. The Society realleges and incorporates herein by reference each and every allegation contained in paragraphs 1 through 80, inclusive, and paragraphs 82 through 85, inclusive, paragraph 90, paragraphs 93 through 156, inclusive, paragraphs 161 through 165, inclusive, and paragraphs 170 through 175, inclusive, as set forth above.

179. An actual controversy has arisen and now exists between the Society and the Defendants regarding whether any legal basis exists for continuing to exempt the Property from the regulations and guidelines of the Specific Plan in that the Society contends, and the Defendants deny, ***inter alia***, that:

(a) In adopting the Specific Plan, the Board expressly found that the Tract Map and the 1984 Zoning Ordinance were not consistent with the goals and objectives of the Specific Plan;

(b) The Board nonetheless exempted the Property from the regulations and guidelines of the Specific Plan, as long as the Property was developed in strict accordance with the Tract Map, because the Board believed that it could not take any action that would affect the value of the Property due to the fact that the then-current owner of the Property was in bankruptcy and a bankruptcy stay was in effect at the time the Board adopted the Specific Plan; and

(c) The grounds which supported the exemption when the Specific Plan was adopted in 1991 no longer exist because Real Parties, who are the current owners of the Property, are not in bankruptcy and there is no bankruptcy stay which prevents Respondents from changing the zoning and other land use regulations which currently apply to the Property.

180. In light of the circumstances alleged hereinabove, a judicial declaration is necessary and appropriate to resolve the above controversies between and among the Society and the Defendants, and to allow Respondents to pursue the land use goals and objectives of the Specific Plan. Respondents are no longer subject to any bankruptcy stay relating to the Property and thus are free to require the Specific Plan to be amended to impose its regulations and guidelines on any future development at the Property, prior to or in conjunction with the review and certification of any environmental documentation for the Grading Application.

WHEREFORE, the Society prays for relief and judgment as follows:

ON THE FIRST CAUSE OF ACTION

1. For declaratory and injunctive relief as prayed for hereinabove;

ON THE SECOND CAUSE OF ACTION

2. For declaratory relief as prayed for hereinabove;

ON THE THIRD CAUSE OF ACTION

3. For a peremptory writ of mandate pursuant to Code of Civil Procedure section 1094.5 as requested hereinabove, and for a stay, or, alternatively, ancillary injunctive relief, as prayed for hereinabove;

ON THE FOURTH CAUSE OF ACTION

4. For a peremptory writ of mandate pursuant to Code of Civil Procedure section 1094.5 as requested hereinabove, and for a stay, or, alternatively, ancillary injunctive relief, as prayed for hereinabove;

ON THE FIFTH CAUSE OF ACTION

5. For a peremptory writ of mandate pursuant to Code of Civil Procedure section 1094.5 as requested hereinabove, and for a stay, or, alternatively, ancillary injunctive relief, as prayed for hereinabove;

ON THE SIXTH CAUSE OF ACTION

6. For declaratory relief as prayed for hereinabove;

ON ALL CAUSES OF ACTION

7. For the Society's attorneys' fees pursuant to, *inter alia*, Code of Civil Procedure section 1021.5;

8. For the Society's cost of suit; and

9. For such other and further relief as the Court may deem just and proper.

DATED: March 5, 1998

VERIFICATION

I, William J. Fray, declare and say:

1. I am the President of the Board of Trustees of plaintiff and petitioner VEDANTA SOCIETY OF SOUTHERN CALIFORNIA, and I am authorized to make this verification on its behalf.

2. I have read the foregoing "**Complaint For Declaratory Relief and Petition For Writ Of Mandate**" and I hereby verify that the facts alleged therein are true.

I declare under penalty of perjury that the foregoing is true and correct.

Executed this 5th day of March, 1998, at Irvine, California.

Subject: Saddleback Meadows - Comments on Addendum PA980103 for Certified Final EIR 566 and Mitigation Monitoring Program;
Zone Change 98-3 and Area Plan 98-2;
299 Single-Family-Unit Project

Dear Mr. Brantley:

SFC Consultants (*SFC*) has hurriedly reviewed the Saddleback Meadows Addendum to Certified Final Subsequent EIR 566 for CEQA compliance and consistency, and provides the following comments for you and your Planning Commission's consideration at it's meeting of August 25, 1998. By submitting these comments on the Addendum, *SFC* does not intend to waive its objects to the many procedural irregularities relating to how this EIR is being processed by the County of Orange.

In fact, it is with great concern that I am submitting these comments at all since I was not notified of the availability of an Addendum to Saddleback Meadows SEIR 566, even though I have made a clear record of my continued interest in participating in, and being informed about, any CEQA review process relating to the Saddleback Meadows property. It was by pure luck that I happened to be at the County Clerk Recorder Office when I walked to the Administration building to review the Public Hearing notices. It was at this time that I noted the Addendum EIR and Planning Commission hearing scheduled for August 25, 1998.

With the considerable amount of time that I have spent to date in commenting on previous CEQA documents for the Saddleback Meadows project, I would expect to be included in all distributions of any subsequent documents. According to my conversation with Mr. Bill Grieman, the Addendum was distributed to selected private residents, homeowner associations, concerned legal entities and the surrounding religious organizations, totaling eleven Addendum recipients. It does not appear that even the City of Mission Viejo or other affected local agencies were notified of what is being referred to an the 299-unit "contingency plan."

In fact I contacted Ms. Karen Steele, Senior Planner at the City of Mission Viejo, in order to confirm their receipt of the Addendum. Ms. Steele indicated that the City was not aware of any Addendum,

26012 Marguerite Parkway, Suite H424, Mission Viejo, CA 92692
Toll free: (888) 813-1146 Telephone: (949) 859-5852 Fax: (949) 581-2577 Email: sfc1@home.com

and if the City had been notified, a thorough review of the Addendum would have been undertaken by the City Planning and Transportation Departments. I believe the same would be true with respect to the City of Lake Forest. At any rate, for future reference, please add me to the mailing list of interested persons for all future land use matters relating to the development of the Saddleback Meadows property.

As an EIR preparer myself, it is clear that the applicant is once again trying to avoid full public disclosure and involvement by relying on an Addendum which does not require public circulation. Under CEQA Guidelines Sections 15162 and 15164, it is not proper to rely on the Addendum as the CEQA documentation for a 299-unit single family detached housing project that purports to exempt itself wholesale from the Foothill/Trabuco Specific Plan.

New information regarding project impacts, reasonable project alternatives, and available mitigation measures not previously considered clearly mandates the preparation and circulation of a new EIR for the decidedly different project.

Over one year ago, on August 22, 1997, *SFC* provided you and your Planning Commission with nineteen pages of comments on the Draft SEIR 566, which at that time was proposed for 705 units. Within that document, I highlighted numerous deficiencies in the SEIR which I felt required correction or supplementation prior to the SEIR being certified.

At the October 22, 1997 Planning Commission meeting, I presented major concerns about the inadequacy of the written responses to my comments, and I raised other questions regarding the adequacy of the SEIR which have not been answered to date. *SFC* acknowledges that, in the weeks following after the October 22 Planning Commission hearing, the County made additional reports, materials, and technical studies regarding the project, available for public review. With the additional information which was made available, the County's written responses to many of *SFC*'s comments from my August 22 letter were no longer valid. More importantly, the additional materials (e.g., mitigation monitoring program, grading plans and soils reports) which were made available, are the type of "significant new information" which would have required the Draft SEIR to be recirculated under section 15088.5 of the CEQA Guidelines.

On December 2, 1997, *SFC* provided the County with fifteen pages of comments, which addressed concerns that were not adequately addressed within the SEIR 566. Within my December 2, 1997 letter, I addressed those comments from my August 22 letter to which no substantive response had been provided. I am disappointed that, even in the recent Addendum, the County has still not responded to my comments, despite ample time to have done so.

In conclusion, I cannot believe that the County has sought to process the 299-unit project without full public disclosure and proper CEQA compliance. Relying on a previously prepared SEIR (which is itself deficient and is currently being litigated) without properly informing the public and responsible state and federal agencies, and trying to process a Zone Change and an Area Plan for 299 homes on the basis of an "Addendum" which is not circulated for public review and comment,

does not come close to complying with CEQA and the Guidelines. To protect the record, however, I have prepared the attached comments within the very little time which has been afforded to me.

Please call me at my office if you have any questions.

Sincerely,

SFC Consultants

COMMENTS TO ADDENDUM PA980103 FOR CERTIFIED FINAL SUBSEQUENT EIR 566

The following comments are listed in the same order as the Addendum EIR sections for convenience.

Section II, 3. Project Description

1) **Page 5-15, Project Description.** Nowhere in the project description does the proposed Zone Change (ZC98-3) or Area Plan (AP98-2) appear as a description or mitigation measure, yet the title of the Addendum indicates both a Zone Change and Area Plan. How can the title of the Addendum refer to two significant changes to the Saddleback Meadows project yet have no substantive discussion of these changes? One short sentence beginning at the end of Page 14 and continuing at the top of page 15 refers to the Zone Change, but that appears to be the only reference to it. What is inexplicably missing from the Project Description section is a detailed explanation that the Zone Change includes an amendment of the Foothill/Trabuco Specific Plan to *exempt* the 299-unit project from the development criteria and restrictions set forth in the Specific Plan. Since the Specific Plan expressly requires that any new project for the Saddleback Meadows property be "consistent" with the Specific Plan, the exemption subsumed within the Zone Change represents the type of "substantial changes" referred to in the Guidelines section 15162 (a) which necessitates the preparation of another EIR to address the numerous respects in which the 299-unit project would significantly deviate from the Specific Plan and subvert the overall goals, objectives and policies that Plan was designed to achieve.

2) **Page 12, Housing Element.** The original 705 unit project description within SEIR 566 indicated that the removal of the mandated Inclusionary Housing Program (IHP) requirements could undermine the Countywide calculations used to eliminate the affordable housing mandate. Yet no thorough discussion of housing issues, including the possibility of eliminating the need for affordable units was considered in the SEIR, nor was it considered in the response to comments on the SEIR. This section of the Addendum indicates that the 299-unit project would still be required to apply the IHP even though the County-mandated affordable housing requirements have since been rescinded. Yet page 15, top of page, indicates that the County of Orange would be required to implement a General Plan Amendment to modify project-related affordable housing requirements. Is the County planning to initiate a General Plan Amendment as part of this project application? And if so, will it include a thorough discussion of housing issues? This discussion of housing issues within the County and their applicability to the Saddleback Meadows project would constitute new information under CEQA Guidelines 15162 and would require a new EIR and public circulation thereof.

Section III, 1. Land Use Compatibility

3) **Page 17, Foothill-Trabuco Specific Plan.** This section is grossly misleading and false to the extent that it states that "the project is exempt from the provisions of the Specific Plan." In fact, just the opposite is true. As clearly stated on Page III-20 of the Specific Plan, the exemption that the 705-unit manufactured housing project currently enjoys is to be automatically revoked in the event a new project, such as a 299-unit project, is approved and the new project is to be "consistent" with the Specific Plan.

4) **Pages 17 and 18.** What is not being disclosed here is that Zone Change (ZC) 98-3 provides a *new* exemption for the 299-unit project to exclude it from coverage by the Specific Plan. Such an exemption is completely at odds with what the Board of Supervisors intended when it adopted the Specific Plan in December 1991 and expressly stated that any development proposal for the Saddleback Meadows property which deviated from Recorded Tract Map No. 10692 had to be brought into consistency with "all of the provisions of the Specific Plan." (FTSP at p. III-20, s 3.2 (b)(3).) The proposed *new* exemption provided for in Section 3.4c of ZC 98-3 is a blatant reversal of the Board's 1991 directive and thus represents a significant new change under CEQA Guidelines section 15162 which should be addressed as part of a new EIR to be circulated for public review and comment. The failure of the Addendum to quote the relevant portion of the Specific Plan imposing a "consistency" requirement on all new projects relating to Saddleback Meadows, and the failure to mention the new exemption provided for in ZC 98-03, are quite troubling and clearly inexcusable.

5) **Page 19, Mitigation Measures.** Attachment A of Appendix A at the back of the Addendum is the Saddleback Meadows Rural Character Statement. Yet the mitigation measures for the Addendum do not include provisions for the inclusion of these attached guidelines. *SFC*'s previous comments to SEIR 566 suggested that land use mitigation should include: Setback criteria, buffer zones of vegetation, pet restrictions, ridgeline protection, project phasing coupled with an Annual Monitoring Report under Zoning Code section 7-9-103.2(a)(12) to identify imbalances between development and infrastructure, etc. Notwithstanding the requirements of CEQA Guidelines section 15126(c), these new mitigations represent measures not previous introduced in SEIR 566, though identified pictorially in the site plan (buffer zone), and should be included in a revised draft Subsequent EIR and circulated for public review and input.

6) CEQA Guidelines Section 15131 (b) expressly recognizes that construction can adversely impact religious practices: "if the construction of a road and the resulting increase in noise in an area disturbed existing religious practices in the area, the disturbance of the religious practices could be used to determine that the construction and use of the road and the resulting noise would be significant effects on the environment". Although the Land Use Compatibility section of the Addendum indicates that the reduction

of residential units from 705 to 299 and the incorporation of the Saddleback Meadows "Rural Character Statement" responds to the project team's intent for a rural community as expressed by Saint Michael's Abbey and the Ramakrishna Monastery, these measures should be included as additional mitigation and should be addressed in a new EIR and be circulated for public and agency review. Without incorporation of these measures as mitigation, the current Addendum and mitigation is deficient, as SEIR 566 was, with no attempt to mitigate impacts on surrounding religious uses to any level at all.

Section III. 2. Soils and Geology

7) **Page 22, Geotechnical Conditions, last paragraph at bottom of page.** The Addendum briefly indicates that Pages 4-13 through 4-33 of SEIR 566 remain appropriate for the project. However, the Groundwater section of SEIR 566 was never properly addressed and remains deficient. The major areas of groundwater comments and concerns are located within pages 4-13 through 4-33 of the SEIR 566, precisely those pages that are not addressed in the Addendum.

> Excerpted from SFC Consultants comments letter dated August 22, 1997 for SEIR 566: ***Page 4-16,*** *Ground Water: It appears from the State Water Resources Board map of wells in the area that there are at least five wells located northerly, westerly and southerly of the site and landslide areas. These wells depend on the groundwater supplies to remain in operation. During remedial grading, perched groundwater and saturated zones will be encountered (according to the geotechnical study). This excess groundwater will require pumping to a point to where the bottom layer of the 120-foot key cut will need to be cleaned out. The EIR does not discuss the high probability that this excessive pumping may impact groundwater and groundwater recharge to these surrounding wells. Impacts to groundwater and surrounding wells are considered a significant impact in CEQA Guidelines Appendix G(h) and (i). The EIR provides neither discussion of this important issue, nor any mitigation for potential impacts to these wells. While the EIR preparer, or the geotechnical engineer for the project, may speculate that the surrounding wells are being fed by Aliso Creek or "other groundwater", **there is no factual basis to support the conclusion that there will be "no significant groundwater impact" caused by project grading and development.** The Planning Commission must be provided with complete information on this issue before passing on the adequacy of DSEIR 566, and gathering groundwater information during remedial grading for future decisions, and complying with the water resource agencies, is not the proper way to proceed.*

The EIR preparer's response to my comments of SEIR 566 indicated that this comment is speculative and declines to deal with the very real concern about the impacts on surrounding water wells. Interestingly, the EIR itself includes speculative information that the surrounding wells are being fed by Aliso Creek or other groundwater (in addition to

other speculative statements in the SEIR which SFC has previously pointed out). My concern here is that the Planning Commission is about to rely on a previous SEIR that incorrectly states that there will be "no significant groundwater impact" caused by the project grading and development. The EIR preparer appears unwilling or unable to perform the analysis necessary to comment on the actual impacts to surrounding wells.

8)

Excerpted from SFC Consultants comments letter dated August 22, 1997 for SEIR 566: ***Page 4-24**, last two paragraphs. These paragraphs state that "unfavorable conditions (i.e. "some ground water") can be mitigated by implementing corrective grading concepts". Yet the DSEIR only speculates on the mitigation necessary to truly lessen future impacts to the development from groundwater and postpones for future analysis whatever specific mitigation measures might eventually be proposed by the soils engineer for the project (see page 4-25). This is not in keeping with CEQA.*

Again, the concerns expressed above are still valid and should be addressed as part of a new EIR that is circulated for public and agency review.

9)

Excerpted from SFC Consultants comments letter dated August 22, 1997 for SEIR 566: ***Page 4-31**, Mitigation Measure 2-34. Ironically, this so-called "mitigation measure" provides more detailed information regarding groundwater problems and dewatering than any discussion set forth in the text of DSEIR 566. Although page 4-24 of the text merely alludes to "some" groundwater that might be encountered during grading, this mitigation measure paints a far more graphic and alarming picture, **"Heavy seepage was encountered, as indicated on the Boring Logs, at multiple elevations. Consequently, considerable water can be expected within planned excavations, typically reaching maximum discharge within 2 to 5 days after exposure. Additional nuisance water is foreseen in nearly all major cuts decreasing in volume with time, and being less at higher elevations as well as in cuts made late in the year."** As indicated above, groundwater wells are located adjacent to the site and landslide areas. Impacts to surrounding groundwater and groundwater wells from required pumping and dewatering are not even discussed in the text of the DSEIR, yet this mitigation measure appears to expect it. Again, the DSEIR does not, but certainly should, discuss the extreme likelihood that this excessive pumping may impact groundwater wells and groundwater recharge to these surrounding wells. Impacts to groundwater and surrounding wells are considered a significant impact under CEQA. The Planning Commission must be provided with enough factual information before it is asked to certify this EIR. Gathering groundwater information during remedial grading is not proper mitigation.*

My previous comment on groundwater, seepage, and impacts to down gradient wells should be addressed prior to approving any Addendum.

10)

Excerpted from SFC Consultants comments letter dated August 22, 1997 for SEIR 566: ***Page 4-33, Section 4.2.7 of the DEIR should be changed to read "Implementation of this proposed project, with the mitigation measures outlined above will result in unavoidable adverse geotechnical impacts."*** *At a minimum, there are significant groundwater impacts and slope stability issues that have not been adequately discussed or mitigated in DSEIR 566 and revision and recirculation of the DSEIR is in order to allow public comment on these matters when they are completed.*

Again, the concerns expressed above are still valid and should be addressed as part of a new EIR that is circulated for public and agency review.

Section III. 3. Water/Hydrology

11) Page 22, Geotechnical Conditions, last paragraph at bottom of page. The Addendum briefly indicates that Pages 4-33 through 4-43 of SEIR 566 remain appropriate for the project. However, the true facts are that the Water/Hydrology section of SEIR 566 was never properly addressed and remains deficient. The major areas of water and hydrology comments and concerns are located within pages 4-33 through 4-43 of SEIR 566, precisely those pages that are not addressed in the Addendum.

Excerpted from SFC Consultants comments letter dated August 22, 1997 for SEIR 566: ***Page 4-38*** *The EIR states that alterations of the rate of flow of groundwater or impacts to groundwater quality are considered to be insignificant. The geotechnical report indicates that groundwater and saturated zones will require dewatering during grading and excavation of the sheer key. Groundwater from these slide planes will require pumping for an undetermined period of times (as demonstrated in Mitigation Measure 2-34). At least five (5) groundwater wells are located near this project site, directly in the path of the groundwater flow. The geotechnical report has completely disregarded the impacts that may be incurred downstream during construction dewatering.* ***This EIR section should consider impacts to groundwater as significant, otherwise the Planning Commission should not certify this EIR with an incorrect impact finding.***

SEIR 566 incorrectly states that there will be no significant impacts to groundwater caused by the project grading and development, and the SEIR was certified with these incorrect findings. The SEIR should have stated that "significant impacts may occur to groundwater due to project grading and development." The Addendum which addresses this project cannot rely on a SEIR that was certified with incorrect findings.

SFC Consultants

12)

Excerpted from SFC Consultants comments letter dated August 22, 1997 for SEIR 566: *Page 4-42, Mitigation Measure 3-5. How and why is this mitigation important to reducing hydrologic impacts to less than significant levels? What if the upstream and downstream property owners do not sign or agree to a letter of consent? Does the Manager, PDS/Subdivision and Grading Services Division override the property owner and allow consent? The mitigation measure is not enforceable and does not reduce impacts in any way. It should be deleted.*

The response to this comment to SEIR 566 was non-responsive and yet the SEIR 566 was still certified. Again, how and why is this mitigation important to reducing hydrologic impacts to less than significant levels? What if the upstream and downstream property owners do not sign or agree to a letter of consent? Does the Manager, PDS/Subdivision and Grading Services Division override the property owner and allow consent?

13)

Excerpted from SFC Consultants comments letter dated August 22, 1997 for SEIR 566: *Page 4-43, Section 4.3.7 indicates that implementation of the proposed mitigation measures would result in no unavoidable adverse impacts to groundwater hydrology, yet there is no information on impacts to downstream wells from excessive dewatering to support the less than significant impact. This conclusion should be changed to* ***potentially significant impacts will result after implementation of the mitigation measures.*** *In addition, the new information associated with the new finding will require recirculation of DSEIR 566.*

No information has yet been presented to support the SEIR's conclusion that unavoidable adverse impacts to groundwater hydrology will not occur. Since the SEIR has been certified with this incorrect finding, the Addendum is also deficient. The impact statement should be changed to state that "significant impacts may occur to groundwater due to project grading and development," then a new EIR should be circulated for public and agency comment.

Section III. 4. Transportation/Circulation

14) **Page 42, Second Paragraph.** The Addendum briefly indicates that Pages 4-44 through 4-83 of SEIR 566 remain appropriate for the 299-unit project, but the Transportation/Circulation section of SEIR 566 was never properly addressed and remains deficient. The major areas of traffic and circulation comments and concerns are located within pages 4-43 through 4-83 of the SEIR, precisely those pages that are not addressed in the Addendum.

Excerpted from SFC Consultants comments letter dated August 22, 1997 for SEIR 566: *The traffic section of the DSEIR unfairly limits its review of intersection*

> *impacts to El Toro Road/ Santa Margarita Parkway and north. No explanation is given in the DSEIR for this limiting factor, and no analysis is included for the intersections along El Toro south to the San Diego Freeway (I-5). The DSEIR should include all intersections that will be impacted by the 705-unit project.*

The EIR preparer for SEIR 566 had justified the lack of analysis south of Santa Margarita Parkway to "Distribution of project related traffic generation...has been reviewed and approved by the County of Orange, Traffic Engineering Division." Yet the response went on to say "... the majority of traffic will be oriented to the south/west of the site." I am disappointed that, even in the recent Addendum, the County has still not responded to my comment, despite ample time to have done so. Please clarify what the EIR preparer is trying to say and respond to the comment properly.

Section III. 6. Noise Analysis

15) **Page 66, First Paragraph.** The Addendum makes a poor and questionable attempt to actually respond to a comment from SEIR 566 relating to the noise impacts on adjacent religious facilities. The Addendum attempts to justify these impacts by indicating that "These facilities are already exposed to single event aircraft noise that is much louder than a distant barking dog, lawnmower or auto horn associated with project residential uses." The Addendum goes on to indicate that "intervening topography" and reduction in the number of units from 705 to 299 would offset such noise impacts. Such a conclusory response unsupported by a revised noise analysis for this Addendum is prohibited under CEQA Guideline Section 15088(b). Before the Addendum attempts to make conclusory statements such as this, a revised noise analysis should be prepared and discussed in a new EIR that is circulated for public and agency review.

16) **Page 66, Third Paragraph.** By means of a passing reference to Page 4-101 through 4-118 of SEIR 566, the Addendum suggests that the noise impacts of the 299-unit project are adequately addressed in the SEIR. The Noise section of SEIR 566 however, never properly addressed the impacts of noise on religious facilities and remains deficient. The major areas of noise comments and concerns are located within pages 4-101 through 4-118 of SEIR 566, precisely those pages that are not addressed in the Addendum.

> Excerpted from SFC Consultants comments letter dated August 22, 1997 for SEIR 566: *Notwithstanding the requirements of CEQA Guidelines Section 15130(b)(1)(B), the DSEIR fails to provide a cumulative analysis of the noise impacts from the reuse of the El Toro Marine Corp Air Station as a commercial airport or the noise from traffic associated with the commercial airport. Once this information has been included in this DSEIR, this document should be recirculated for public review.*

Page 4-102, Baseline Noise Levels. The Noise section of the DSEIR provides a baseline discussion of the current impacts from the El Toro MCAS fly-overs which exist at present, but the impact section of the EIR fails to identify potential CNEL contours as a result of the base reuse plan as an active commercial airport.

Page 4-103, the first paragraph discusses an area of proposed open space as the project location where the 62 dB CNEL contour falls. This may have been true for the previous EIR 561, however, page 7 of the noise study provided in Appendix G states that the 62dB CNEL location is in an area of proposed commercial development. The proper location of the 62 dB CNEL should be verified prior to EIR certification.

Page 4-103, third paragraph, states "Depending upon future site re-use, aircraft noise may or may not be an important issue." ***The aircraft noise from a commercial airport at El Toro will be an important issue.*** *Nowhere else in the DSEIR is the El Toro MCAS reuse discussed or incorporated by reference. No commercial aircraft noise impact analysis is provided. The DSEIR should include project related noise impacts as a result of the El Toro reuse plan as a commercial airport and traffic related impacts. Once this information has been included in this DSEIR, the document should be recirculated for public review.*

Page 4-103, fourth paragraph indicates that individual fly-over events may be noise intrusive and mitigation has been provided. However, neither the baseline discussion, impact analysis nor the mitigation measures in the DSEIR include mitigation for a multiple fly-over commercial airport.

The EIR preparer for SEIR 566 made no attempt to respond to any of the issues concerning the future use of the El Toro MCAS. I am disappointed that, even in the recent Addendum, the County has still not responded to my comment, despite ample time to have done so. Please respond to the issues regarding the future use of the El Toro MCAS as a commercial airport.

Section III. 7. Biological Resources

17) **Page 73, First Paragraph.** The Addendum includes the same discussion of the NCCP as SEIR 566, however, a footnote has been added to this paragraph. Unfortunately, the actual text of the footnote has been omitted leaving the reader to guess at its significance. Please provide the text of this footnote.

18) **Page 77, First Paragraph.** The Addendum refers to a new analysis of biological issues that was recently prepared for the 299-unit project which is currently proposed. However, the body of the Addendum does not clearly refer the reader to Appendix G where a copy of this new analysis is located. The new biological report within Appendix G

contains new information which has never been publicly reviewed or commented upon. Notwithstanding the requirements of CEQA Guidelines section 15126(c), this new report represent information not previous discussed in SEIR 566, and should be included in a new EIR that is circulated for public review and input under.

18) **Page 79, Last paragraph at bottom of page.** The Addendum briefly indicates that Pages 4-118 through 4-154 of SEIR 566 remain appropriate for the 299-unit project. However, the true facts are that the Biological Resources section of SEIR 566 was never properly addressed and remains deficient. The major areas of biological resource comments and concerns are located within pages 4-118 through 4-154 of the SEIR, precisely those pages that are not addressed in the Addendum.

> Excerpted from SFC Consultants comments letter dated August 22, 1997 for SEIR 566: *Page 4-153, Mitigation Measures SC 7-1 through 7-7 and measures 7-11 through 7-14 would appear to be of no value in light of the note placed on the preliminary grading plans...this EIR does not adequately satisfy CEQA Guidelines Section 15126 (c) requirements at this time. Gathering further information and complying with resource agencies in the future is not proper mitigation. Biological mitigation for ACOE and CDFG coordination may change the development plan, which would then require a revised EIR.*

This comment was not adequately addressed in SEIR 566 and the Addendum likewise fails to address the issue raised by this comment. These important issues must be addressed before any further action is taken.

19) **Page 84, Mitigation Measure SC 7-8.**

> Excerpted from SFC Consultants comments letter dated August 22, 1997 for SEIR 566: *Page 4-155, Mitigation Measure 7-8, F, states that an experienced nursery or other landscape contractor shall care for the transplanted trees for only six (6) months. The biological report states on page 49, second paragraph, **"In order to ensure the success of mitigation, the Project proponent should enter into a five year secured agreement with the County of Orange to cover the projected cost to install, monitor, and report on the mitigation Project. This agreement will be in the form of a 100 percent bond."** This extremely important mitigation measure is found nowhere in the DSEIR. If the DSEIR does not reflect the recommendations of the expert biologist, then mitigation measure 7-8 F is ineffective and invalid. The DSEIR cannot be certified without amending this measure to reflect the biologist's recommendation.*

The EIR preparer for SEIR 566 stated in their response to this comment that "[t]he provision for five years of biological resource mitigation monitoring is hereby incorporated into the DEIR. However, rather than incorporate this mitigation measure, the Corrections

and Additions section of the SEIR 566 simply states: "Page 4-155, Mitigation Measure 7-8: the following mitigation measure is added to the draft EIR: *All biological resource mitigation measures shall be monitored for compliance with applicable resource agency requirements and established success criteria, to the satisfaction of the manager PDS/Subdivisions and the Administrator Planning and Zoning.*" Nowhere in the Corrections section is the five year mitigation monitoring mentioned. Moreover, neither the Addendum, nor the new biology report, located in Appendix G of the Addendum makes any reference whatsoever to this mitigation measure.

20) **Page 87, Mitigation Measure SC 7-11.** Although this mitigation measure requires a gnatcatcher survey to be conducted pursuant to the current USFWS protocol, and to the satisfaction of the USFWS and the County, it does not provide for sufficient mitigation in the event the gnatcatcher is found to exist on the Saddleback Meadows property. This mitigation measure was a good start, but it is inadequate for the real purpose of protecting endangered species. The measure should include provisions for mitigation of gnatcatcher habitat, including on- and off-site mitigation, if necessary.

21) **Page 88, Mitigation Measures.** The mitigation measure noted in the Response to Comments of SEIR 566, Section H, Corrections and Additions to the Draft EIR for Page 4-153, Paragraph 4 has not been incorporated into the Addendum, even though the County has had ample time to have done so.

Section III. 8. Aesthetics

22) **Page 94, Mitigation Measure PDF 8-4.** The mitigation measure noted in the Response to Comments of SEIR 566, Section H, Corrections and Additions to the Draft EIR for Page 4-174, Mitigation Measure 8-4, has not been incorporated into the Addendum, despite ample time for the County to have done so.

Section III. 9. Cultural/Scientific Resources

23) **Page 103, History.** The Addendum briefly indicates that Pages 4-173 through 4-192 of SEIR 566 remain appropriate for the project, but the Cultural Resources section of SEIR 566 never properly addressed the direct or indirect environmental impacts of the project on the religious or sacred uses within the potential impact area. The major areas of Cultural/Scientific Resources comments and concerns are located within pages 4-192 through 4-192 of the SEIR, precisely those pages that are not addressed in the Addendum.

Excerpted from SFC Consultants comments letter dated August 22, 1997 for SEIR 566: *Page 4-178. The DSEIR makes no attempt to analyze either the direct or indirect environmental impacts of the project on the religious or sacred uses within the potential impact area. In this case, the potential impact area extends outside*

of the property boundary. This important issue should be discussed in the DSEIR prior to certification.

The EIR preparer was non-responsive to this comment. This comment should be addressed as part of the Addendum.

Mitigation Monitoring Plan

As an EIR preparer, I believe that the mitigation monitoring program is the most important document that will come out of the final approval process for the Addendum or any future EIR. The Monitoring Program should be user friendly and a dynamic document, not something to file away on a shelf once approved. As indicated in my response to the County of Orange dated December 2, 1997:

A) The County should require that the applicant hire an independent mitigation monitor, as selected by the County, to assist the County in monitoring and verifying implementation of both the standard county mitigation measures and the additional mitigation measures. For example:

***Air Quality.** Most of the air quality mitigation measures are the responsibility of the applicant. The applicant, or the applicant's contractor, may not have specialized knowledge of mitigation monitoring, but a specialized mitigation monitor would.*

***Biological Resources.** The applicant is responsible for plant relocation. This should be delegated to a mitigation monitor to verify implementation.*

B) No where in the mitigation monitoring program does the USFWS, the CDFG, or the ACOE show up in the Responsible Person column. These agencies should be added as responsible parties.

C) None of the additional mitigation measures listed in the Response to Comments are reflected in the Mitigation Monitoring Program. The new mitigation should be reflected in the monitoring program prior to certification.

No Mitigation Monitoring Plan has yet been made available for the Addendum.

Re: *Saddleback Meadows: Zone Change 98-3/Area Plan 98-2*
Request for New EIR to Analyze Additional Impacts, Alternatives, and Mitigation Measures re 299-Unit Project

Dear Mr. Brantley:

Without waiving any of the objections set forth in my letter to the Planning Commission, dated August 25, 1998, including, but not limited to, the lack of adequate public notice under CEQA Guidelines section 15153(b)(2), but in the interest of ensuring that County staff, the Planning Commission, and responsible state and federal agencies, are afforded an opportunity to consider whether to require the preparation of a new EIR to analyze the additional impacts, alternatives, and mitigation measures associated with proposed Zone Change 98-3 and Area Plan 98-2 to permit development of a 299-unit single-family detached housing project (the "299-Unit Project") on the Saddleback Meadows property (the "Property"), please find enclosed the following:

(1) An 8-1/2x11" copy of a conceptual site plan (entitled and hereinafter referred to as the "65-Unit Alternative"), which was prepared by County staff on or about March 23, 1998, to show the proposed layout on the Property of 65 single-family detached dwelling units on approximately 8,000 sq. ft. estate-size lots, covering a development footprint of approximately 35 acres out of the 222 total acres which comprise the Property;

(2) A 3'x4' copy of a site plan (entitled and hereinafter referred to as the "127-Unit Alternative") which was prepared on or about July 13, 1998, by California Quartet's consultant, Michael Madden Associates, to show the proposed layout on the Property of 127 single-family detached dwelling units on approximately 5,000 to 6,000 sq. ft. lots, covering a development footprint of approximately 44 acres located in the same general vicinity as the 65-Unit Alternative; and

(3) An 18"x51" copy of a site plan (entitled and hereinafter referred to as the "120-Unit Alternative"), which was prepared on or about August 31, 1998, and was revised on September 2, 1998, by the consultant for Vedanta Society/St. Michael's Abbey, Warren W. Singleton, P.E., to show the proposed layout on the Property of 120 single-family detached dwelling units on basically the same development footprint covered by the 127-Unit Alternative, except for certain grading and fuel modification pull-backs for ridgeline protection and canyon preservation purposes. Also enclosed is a copy of a letter from Mr. Singleton, dated August 31, 1998, providing some explanatory notes regarding the 120-Unit Alternative.

Since the County is proposing to "use an EIR from an earlier project [i.e., FSEIR 566] as the EIR for a separate, later project [i.e., the 299-Unit Project]," then section 15153(b)(2)(D) provides that one of the "key issues" involving the use of the previously-certified EIR are "whether the EIR should be used for this project and whether there are any *additional, reasonable alternatives* for mitigation measures that should be considered as ways of avoiding or reducing the significant effects of the project." Of course, if additional reasonable alternatives exist which were not considered by the lead agency in certifying the EIR for the "earlier project," that earlier EIR should not be used as the environmental documentation for the "separate, later project."

Indeed, subsection (d) of section 15153 clearly states that "an EIR prepared for an earlier project shall *not* be used as the EIR for a later project if any of the conditions described in Section 15162 would require preparation of a subsequent or supplemental EIR." (Emphasis added.) Under CEQA Guidelines section 15162(a)(3)(D), a subsequent EIR must be prepared if "new information" shows that "alternatives which are considerably different from those analyzed in the previous EIR would *substantially reduce* one or more significant effects on the environment, but the project proponents decline to adopt the . . . alternative[s]." (Emphasis Added.)

Obviously, FSEIR 566 did not analyze the 65-Unit Alternative, the 120-Unit Alternative, or the 127-Unit Alternative. In differing degrees, each of these

Alternatives would *significantly* reduce the environmental impacts associated with the 299-unit project in that they would preserve virtually all of the oak woodlands, coastal sage scrub habitats, and vernal ponds on the Property, and would provide for an ample wildlife corridor over undisturbed terrain. Of course, only the 120-Unit Alternative would ensure that no grading or construction occurred in the biologically-sensitive canyon areas south of the east/west ridgeline on the Property which are to serve as part of the wildlife connectivity links between Whiting Ranch Wilderness Park and O'Neill Park.

The indisputable fact of the matter is that the 65-Unit, 120-Unit, and 127-Unit Alternatives would each avoid the substantial environmental devastation that would otherwise be wreaked upon the Property by the 299-Unit Project in connection with the mass grading of the proposed wildlife corridor, particularly in the lush canyons which presently link up with O'Neill Park. Accordingly, a new or subsequent EIR should be prepared to, among other things, analyze each of these three Alternatives from two different perspectives: (1) as stand-alone projects which would require California Quartet to dedicate all of the non-development areas of the Property (approximately 178 acres) as permanent open space and (2) projects which would involve California Quartet's sale of the same non-development acres to third parties, such as my clients and the County of Orange, for cash consideration.

As your Department has been made well aware, based on the extensive factual chronology presented by Mr. Frank Elfend at the August 25 session of the Planning Commission's hearing on the 299-Unit Project, and as a result of Mr. Elfend's earlier public presentations to the Board of Supervisors on June 23 and August 11, 1998, my clients and the County are currently involved in negotiations with California Quartet for the purchase of the approximately 178 acres which would be left undeveloped under the three Alternatives discussed above. Indeed, it is precisely because these negotiations are still ongoing that the 299-Unit Project has been dubbed a "Contingency Plan" which California Quartet intends to pursue in the event that the negotiations do not prove fruitful.

If, at the next-scheduled session of the Planning Commission's hearing on the 299-Unit Project – which, by stipulated court order of August 31, 1998, has been continued to October 7, 1998 – you determine that California Quartet, for whatever reason, has declined to proceed with any of the three Alternatives discussed above, I presume that your Department will order the preparation of a subsequent EIR under the terms of CEQA Guidelines section 15162(a)(3)(D). In the Staff Report, dated August 25, 1998, which the Environmental & Project Planning Services Division submitted to the Planning Commission in connection with its public hearing on the 299-Unit Project, it was stated that "none of the conditions described in Section 15162 calling for preparing a

Supplemental or Subsequent EIR have occurred. . . ." Of course, that statement would no longer be true if California Quartet proceeds to reject any of the Alternatives discussed above as of the next Planning Commission hearing scheduled for October 7, 1998. For example, if California Quartet were to refuse to accept the 120-Unit Alternative as of the October 7 hearing, then a subsequent EIR would be required to analyze this alternative under the provisions of section 15162(a)(3)(D) because no discussion of this alternative is to be found in FSEIR 566.

However, I do not believe it is necessary for your Department to wait until the October 7 Planning Commission hearing to make the determination that a *new* EIR should be prepared for the 299-Unit Project. As I explained at the August 25 hearing, my clients, the Vedanta Society of Southern California, the Norbertine Fathers of Orange, and the Saddleback Meadows Land Conservancy LLC, do not necessarily agree with your Department's determination that section 15162 of the CEQA Guidelines applies in this case. The California courts have clearly held that CEQA section 21166, and its companion section 15162 of the Guidelines, only apply when the question is whether more than one EIR must be prepared for what is essentially the *same* project.

When the proposed new activity is a *separate* project – as it certainly is in this case – the "fair argument" test is the standard which applies in determining whether a new (as opposed to a subsequent or supplemental) EIR must be prepared to analyze the *separate* project. Under the "fair argument" test, a new EIR must be prepared whenever it can be fairly argued on the basis of substantial evidence that the proposed project may have a significant environmental impact.

In light of the oral and written comments which were submitted by my firm, Royce Riggan, John Byerly, Warren Singleton, and Saundra Jacobs at the August 25 public hearing, there are numerous environmental impacts associated with the development of the 299-Unit Project which were not addressed in FSEIR 566 and which mandate the preparation of a new EIR under the "fair argument" test. Aside from the obvious impacts which will be caused by the fact that the 299-Unit Project pushes grading and development activities significantly closer to the Ramakrishna Monastery and raises unanswered questions regarding water runoff and drainage impacts that will be caused by the new houses to be built northeast of St. Michael's Abbey, there is no discussion in FSEIR 566 regarding (1) whether the wildlife corridor proposed for the 299-Unit Project would comport with the goals and objectives of the NCCP planning process and (2) whether it would preclude or in any way *jeopardize* finalization of the Southern Subregion component of the NCCP. Clearly, these impacts should be addressed in a new EIR and the public, as well as the appropriate federal and state wildlife agencies, should be allowed to comment on these important environmental matters.

In closing, my clients would request that the County immediately cease processing the 299-Unit Project unless and until the County complies with CEQA and sends out a Notice of Preparation for a new EIR to address the environmental impacts, reasonable project alternatives and feasible mitigation measures associated with the development of the 299-Unit Project.

Very truly yours,

Edmond M. Connor

Re: Saddleback Meadows Property, Alternate (120) Lot Study

Dear Mr. Connor:

Transmitted with this letter are six blackline copies of the Alternate (120) Lot Study which was presented at last Thursday's meeting. The map is a compilation of the three work sketches presented last week.

The lots and streets shown in solid lines are the revised layout. The lots and streets which are not changed are outlined with dashed lines. The revised total lot count is one hundred and twenty (120) units.

Comments regarding the design proposals:

- The grades on the main entry street were held per the proposed California Quartet Study (CQ).
- In order to provide lots in the upper eastern portion of the site grading, remedial grading and fuel modification were allowed to occur in the one hundred (100) foot setback zone which Vedanta originally proposed to be north of the ridgeline.
- The ridgeline has generally been protected in the upper portion of the site, from the second Cul-de Sac south of the spine road to the eastern limits. The moving of the spine road and lots north away from the ridgeline provides for the one hundred and fifty foot Fire Fuel Modification area and maintains the ridgeline. Although the cut slope is at the ridgeline or slightly beyond, the road or lots will likely not require remedial grading beyond the ridge and down into the bottom of the first or second canyon as all of the previous proposals have done.

- The first long Cul-de-sac south of the spine road impacts the lower ridgeline and some Coastal Sage Scrub. The Hidden Hill development south of this area has already disturbed a portion of this Coastal Sage area. This was not changed from the CQ study.
- The addition of the twelve lots on the lower portion of the spine road should be of benefit geotechnically. The proposed spine road was being cut deeply into the hill, up to ninety (90) feet. This removal of material should benefit the stability of the area. The addition of lots north of the spine road removes additional material and contours the remaining hill as previously proposed. If additional unloading is desirable the hill could be layed back further.
- The extension of the second Cul-de-Sac north of the spine road, adding eight (8) lots, was sloped down away from the spine road to minimize the fill depth and the limits of grading. This should not trigger extensive additional remedial grading since the same geologic features are involved.
- The second Cul-de-Sac south of the spine road was pulled back to accommodate Fire Fuel Modification. The lot count was reduced from six (6) to three (3). The ridgeline is being lowered in this area. The proposed grading creates a cut slope facing north and west away from the Monastery. The slope becomes small at the end of the Cul-de-Sac allowing some view of the homes on this street. The grading should not impact the Coastal Sage Scrub which is down slope to the south and east.

The California Quartet (127) Study and the Vedanta Alternate (120) Study are just that, studies. Once the features of the original and alternate studies are agreed upon a precise engineered site plan should be prepared. The fine tuning of horizontal and vertical alignments and lot layouts may result in the gaining of two or three lots. This precise design would be the next step and be used for a Tentative Map.

Please call me at (949) 240-5808 if you have any questions or require additional information.

Very truly yours,

Warren W. Singleton, P.E.

Re: Proposed Zone Change 98-3 and Area Plan 98-2 for
299-Unit Project -- Saddleback Meadows

Dear Tom:

As you witnessed at yesterday's negotiating session, the parties reached agreement on the contours of a 44-acre "Development Area" and a 178-acre "Conservation Area," as those terms are defined on page 3 of Mr. Ross's letter to me of July 17, 1998. The parties agreed that the boundaries of the 44-acre Development Area would be as depicted on the plan prepared by Michael Madden Associates, dated July 13, 1998, which I displayed on the wall at yesterday's meeting and highlighted in orange. I will endeavor to have reduced copies of that highlighted map prepared and circulated to all parties.

The parties also agreed at yesterday's meeting that the 178-acre Conservation Area would be subject to the terms of the Conservation Easement which Mr. Ross transmitted to Mr. Winton on August 28, 1998. As I noted at the meeting, the Conservation Easement provides that the 178-acre Conservation Area will, among other things, "be retained forever in its natural, undeveloped and unimproved, unspoiled scenic and open space condition." That language provides my clients with the assurance they need that the natural buffer zones surrounding their respective properties will remain the type of undisturbed open space which -- as I tried to explain at yesterday's meeting -- is so vital to their monastic way of life.

The one exception to the language of the Conservation Easement which was discussed at yesterday's meeting was that, unless the County agrees to take a portion of the 178-acre Conservation Area in fee and to annex it to O'Neill Park, the parties may have to

provide for some type of "low impact" recreational use for at least some portion of the 178-acre parcel in order to accommodate the conditions imposed by the State of California for the County to be able to access the $1.5 million of "Strawberry Field" funds which the County is planning on contributing towards the purchase price of the Conservation Area. Dan Winton and I spoke to Stella Oviedo and Ben de Mayo following yesterday's meeting and I think we should be able to work out language to accommodate the "recreational use" needs of the County. Also, since the parties have now agreed that the Development Area will be a total of 44 acres in size and that California Quartet will be free to develop as many single-family units as it would like within that Development Area, we have been assured by the representatives of California Quartet that all of the remaining "deal points" can easily be resolved.

Although the parties reached agreement on the two most important issues facing them: (1) the contours of the 44-acre Development Area and (2) the preservation of 178 acres of undisturbed open space in accordance with the terms of the Conservation Easement, the one troubling aspect about yesterday's meeting was that, despite the objections which Mr. Winton and I voiced to Mr. Elfend's suggestion that the County proceed with its processing of the 299-Unit Project, it was determined that the 299-Unit Project would continue to be processed as a "contingency plan" by the Planning Commission and the Board of Supervisors.

Of course, it was underscored at the meeting that my clients would preserve all of their rights to oppose the approval of the proposed Zone Change and Area Plan for the 299-Unit Project. As such, I am submitting this letter to register my clients' formal protest over the County's failure to comply with the very explicit procedural requirements of the Foothill/Trabuco Specific Plan (the "Specific Plan") with respect to the approval of discretionary permits, such as Area Plan 98-2.

Specifically, on behalf of the Vedanta Society of Southern California, the Norbertine Fathers of Orange, and the Saddleback Meadows Land Conservancy LLC, I object to the fact that, in violation of section III.G.2 of the Specific Plan, your Department has failed to forward California Quartet's application for approval of Zone Change 98-3 and Area Plan 98-2 to the Foothill/Trabuco Specific Plan Review Board (the "Review Board") for its review and recommendations prior to the Planning Commission's consideration of the application. As you know, the application must be sent to the Review Board for its consideration at least twenty-one (21) days prior to the time that the Planning Commission takes action on the application.

Considering the public controversy surrounding this project, there would appear to be no justification for not allowing the Review Board to hold a public meeting and to make appropriate recommendations to the Planning Commission regarding the proposed Zone Change and Area Plan before the Planning Commission takes any further

action on the 299-Unit Project. Indeed, more so in this case than in any other case, it would appear to be absolutely essential – and clearly beneficial – to obtain input from the Review Board regarding the 299-Unit Project because the proposed Zone Change and Area Plan are completely at odds with the provisions of the Specific Plan and cannot be approved unless an *exemption* from the Specific Plan is granted. Accordingly, before taking the drastic step of *exempting* the 299-Unit Project from compliance with the Specific Plan, the County should comply with its own ordinances and allow the Review Board to consider this highly-controversial project.

As you are aware, my clients have already objected to, among other things, (a) the County's failure to provide the requisite public notice regarding its decision to use FSEIR 566 as the EIR for the 299-Unit Project and (b) its refusal to prepare a new or subsequent EIR to address the new impacts, alternatives and mitigation measures associated with the 299-Unit Project. We would respectfully request, therefore, that the procedural improprieties which have already taken place not be further compounded by any unlawful acts which would prevent the Review Board from exercising its statutory right and duty to carefully weigh the pros and cons of the proposed Zone Change and Area Plan and to make recommendations to the Planning Commission regarding whether the 299-Unit Projects should be approved.

Very truly yours,

Edmond M. Connor

Re: *Proposed Zone Change 98-3 and Area Plan 98-2/EIR*
Saddleback Meadows: 299-Unit Project

Dear Members of the Planning Commission:

As a supplement to my letters of August 25, September 2, and September 23, 1998, and without waiving any objections which have been stated to date on behalf of my clients, the Norbertine Fathers of Orange, the Saddleback Meadows Land Conservancy LLC, and the Vedanta Society of Southern California, I submit the following additional arguments in opposition to California Quartet's application for approval of Zone Change 98-3 ("ZC 98-3") and Area Plan 98-2 ("AP 98-2") for the development of a 299-unit, single-family detached residential housing project (the "299-Unit Project" or the "Project") at the Saddleback Meadows property (the "Property"):

A. Coastal California Gnatcatchers Have Recently Been Found on a Portion of The Property, Thereby Rendering the Developer's Prior Gnatcatcher Surveys Outdated and Invalid. A Formal Protocol Survey of the Entire Property Should Now Be Conducted as Part of a New or Subsequent EIR to Properly Assess the Impact of the Project on This Endangered Species.

The CEQA documentation relating to the presence of coastal California gnatcatchers on the Property is fatally flawed and must be corrected and recirculated for public review and comment -- particularly comments from the California Department of Fish & Game and the U.S. Fish & Wildlife Service.

determined that on-site coastal sage scrub habitat is *not* occupied by coastal California gnatcatchers . . . ." (Emphasis Added.) Likewise, on pages 4-130 and 4-139 of FSEIR 566, similar statements are made to the effect that no coastal California gnatcatchers were observed in connection with the surveys which California Quartet's consultants conducted four and five years ago in 1993 and 1994. However, a brief informal survey of but a small portion of the Property by my firm's consultant, Royce B. Riggan, has demonstrated that the prior gnatcatcher surveys are clearly outdated and incorrect because coastal California gnatcatchers *do* presently occupy the coastal sage scrub habitat at the Property.

At the August 25 session of the Planning Commission's hearing on ZC 98-3 and AP 98-2, my firm's consultant, Warren Singleton, pointed out that, in the southeast corner of the Property, the proposed rough grading operations for the 299-Unit Project would decimate a great many more acres of coastal sage scrub habitat than would otherwise be destroyed as part of the rough grading for the 705-unit manufactured housing/mobile home project (the "705-Unit Project") which was the subject of FSEIR 566. Mr. Singleton graphically demonstrated to the Planning Commission that, instead of reducing adverse environmental effects as claimed in the Addendum, the 299-Unit Project would actually have far worse impacts on (1) the biologically sensitive habitats and species found in the lush canyons located in the southeast corner of the Property because rough grading operations would be far more extensive at that location than under the 705-Unit Project; and (2) the Ramakrishna Monastery because a great many more residential units would be built much closer to the Monastery than would have occurred under the 705-Unit Project.

Following the August 25 Planning Commission hearing, I dispatched Royce Riggan – who holds Federal Permit PRT-780195 and thus is officially licensed to conduct gnatcatcher surveys -- to visit the Property and determine whether the new areas to be impacted by the 299-Unit Project in the southeastern corner of the Property were occupied by coastal California gnatcatchers. While on a tour of that portion of the Property which was conducted by California Quartet's consultants in July 1998, I had noted how extensive the coastal sage scrub habitat was and how verdant and secluded the adjacent canyons were, and I could not believe that FSEIR 566 and the Addendum were correct in stating that *no* coastal California gnatcatchers were to be found in those locations.

I was not surprised, therefore, when, on September 23, 1998, after only two and a half hours at the site, Mr. Riggan, and his associate, Lisa Seneca observed two coastal California gnatcatchers: a juvenile of the year and an adult male. A copy of the California Native Species Field Survey Form confirming the two gnatcatcher sightings, which Mr. Riggan dutifully submitted to the Natural Diversity Database maintained by the California Department of Fish & Game, is attached as Exhibit "A" hereto. Based on the two sightings documented by Mr. Riggan and his associate, there is no longer any justification for the County's highly questionable actions

in allowing California Quartet to delay completing the May 1997 gnatcatcher survey of the Property in accordance with the USFWS presence/absence protocol. Both FSEIR 566 and the Addendum *concede* that a formal protocol gnatcatcher survey of the Project has not been conducted in recent years, and this is nothing short of unconscionable since the County is now considering whether to allow California Quartet to *decimate* virtually *all* of the coastal sage scrub habitat on the Property without even knowing the number of endangered birds that might be affected.

In addition to a formal protocol survey being undertaken, a new or subsequent EIR must now be prepared to fully and properly assess the impacts on this federally-listed endangered species, the coastal California gnatcatcher. Indeed, as underscored in the case cited in the letter to the Planning Commission from California Quartet's attorney, dated September 30, 1998, *Fund for Environmental Defense v. County of Orange* (1998) 204 Cal.App.3d 1538, 1550, CEQA section 21166 requires the preparation of a subsequent EIR when a "new protected or rare habitat or species of flora or fauna" is discovered after an EIR has been prepared. As explained in the *Fund for Environmental Defense* case, such a discovery constitutes a type of "change in circumstances" and "new information" under section 21166 which mandates the preparation of a subsequent EIR.

Of course, my clients continue to maintain that ZC 98-3 and AP 98-2 constitute a *new* project which is not the *same* as the 705-Unit Project manufactured housing/mobile home project authorized under Tract Map 10692. Although County staff now maintains that the 299-Unit Project and the 207-Unit Project are actually the *same* project for purposes of CEQA compliance, the County took an entirely different position two years ago when it stated on page 3-1 of Draft EIR No. 561 that "the proposed project [i.e., the 318-unit project] represents the *complete revision and redesign* of previously approved and recorded Tract Map 10692." (Emphasis added.) If, as my clients contend, the 299-Unit Project is *not* the same as the 705-Unit Project, then a new EIR must be prepared, particularly in light of the mandatory finding of significance which must now be made under CEQA Guidelines section 15065(a) because of the potential impact which the 299-Unit Project will have on "an endangered, rare, or threatened species."

B. <u>The Drainage and Grading Impacts Associated With the 299-Unit Project Should Be Addressed in a New or Subsequent EIR.</u>

As explained in great detail in the letter prepared by our firm's consultant, Warren Singleton, dated October 7, 1998, a copy of which is attached as Exhibit "B" hereto, the critically important drainage impacts of the 299-Unit Project have essentially been ignored in the CEQA documentation prepared by the County for ZC 98-3 and AP 98-2. Nowhere in FSEIR 566 or in the Addendum is a concept drainage plan for the 299-Unit Project to be found. Incredibly,

County staff is asking the Planning Commission to approve the development of 299 homes without any information being provided to the Commission or to the public as to exactly *where* storm, irrigation, and urban runoff from these hundreds of homes will be discharged on the Property.

The Addendum admits that such runoff will be dumped into natural drainage courses on the site which is a *radical* change from the stormdrain system proposed for the 705-Unit Project. However, although this major project change will be allowed to occur and huge volumes of water will be dumped on site, no document has been provided or referenced in the Addendum which would indicate the locations of the respective storm drain outlets to be constructed on the Property.

One can only *speculate*, based on the concept drainage plan for the 318-Unit Project described in Draft EIR 561 that, on a *daily* basis, a huge increase in runoff will be discharged into the geologically-unstable canyon areas adjacent to St. Michael's Abbey and the Ramakrishna Monastery. This is a frightening prospect because no analysis has been undertaken as to whether the introduction of the steady flow of water in these unstable canyon areas will create new geotechnical hazards by activating the landslide conditions which are clearly known to exist in the very locations where the water will be discharged.

Obviously, the major change in the stormdrain system for the 299-Unit Project necessitates the preparation of a new or subsequent EIR to address what has always been one of the most important concerns on the part of the Abbey and the Monastery, i.e., the potential geotechnical hazards created by the 299-Unit Project which could seriously undermine the stability of their respective facilities -- which are already suffering the effects of soils movement. To date, the CEQA documentation which has been prepared for the 299-Unit Project has simply ignored the very serious impacts which will be caused when a constant flow of water is added to areas on the Property which are known to be seriously unstable and prone to landsliding. This deficiency should be corrected and a new document should be circulated for public review and comment.

C. <u>The "44-178 Alternative" Should Be Analyzed in A New Or Subsequent EIR.</u>

In my September 2 letter to the County, I submitted plans relating to three different project alternatives, the 65-Unit Alternative, the 120-Unit Alternative, and the 127-Unit Alternative. Strangely, in what can only be described in a *Twilight Zone* statement, County staff has taken the position that the three alternatives have *not* been "submitted" for their review and thus they are free to overlook them for purposes of CEQA compliance. This appears to be a

rather convenient way for County staff to avoid *ever* having to address any reasonable project alternatives proposed by members of the public.

Undaunted by the strange tactics being employed by County staff, I will venture to suggest another project alternative that should be analyzed in a new or subsequent EIR *before* the Planning Commission takes any further action on ZC 98-3 and AP 98-2. Attached as Exhibit "C" hereto is an 11x17" plan showing the 44-acre portion of the Property which has been outlined in orange. This plan represents what I will refer to as the "44/178 Alternative," and it represents a project alternative which would allow a 44-acre parcel of the Property to be developed with residential uses, with the balance of the Property, i.e., 178 acres, being dedicated by the developer free of charge to the County to be preserved as permanent, undisturbed, undeveloped, natural open space. The number of units to be developed within the 44-acre parcel could vary depending on the desire of the developer and could include a mix of condominium units, assisted living facilities, single-family detached homes, etc.

The reason that it is so important to analyze the 44/178 Alternative is because the 44-acre development parcel would be situated on what is perceived to be the most "stable" soil at the Property, relatively speaking, and, if development were confined within that 44-acre parcel, very few sensitive habitats or species on the Property would be adversely impacted. In addition, such an Alternative would facilitate approval of the Southern Subregion NCCP because it would provide the wildlife corridor contemplated by the NCCP. As stated in the August 11 letter which was sent to the Board of Supervisors by the California Department of Fish & Game and the U.S. Fish & Wildlife Service, the wildlife agencies are interested in analyzing the 44/178 Alternative because of the many environmental benefits it affords. Accordingly, this Alternative should be studied in detail in a new or subsequent EIR before ZC 98-3 and AP 98-2 are approved by the Planning Commission.

D. <u>The Planning Commission Is Unlawfully Proceeding to Take Final Action on AP 98-2 Without Affording the Foothill/Trabuco Specific Plan Review Board an Opportunity to Make Its Recommendations on the Project</u>.

As I stated in my September 23 letter to Tom Mathews, the Planning Commission will violate both the Foothill/Trabuco Specific Plan and the Orange County Zoning Code if it proceeds to take any further action on the discretionary permit application relating to AP 98-2 *before* the Foothill/Trabuco Specific Plan Review Board (the "Review Board") has been afforded at least twenty-one (21) days within which to consider the merits of AP 98-2 and to report its recommendations thereon to the Planning Commission. Clearly, the Planning Commission is the "approving authority" with respect to *all* applications for Area Plans submitted to the County. Indeed, if no appeal is taken from the Planning Commission's approval of any given Area Plan, that approval becomes *final*.

Moreover, the Review Board is supposed to make its recommendations to the Planning Commission, *not* to the Board of Supervisors. As the County noted at page 4-11 of Draft EIR 561, "[d]iscretionary actions within the Specific Plan area are reviewed by the Foothill-Trabuco Specific Plan Review Board, who function as an advisory body to the *County Planning Commission*." (Emphasis added.) Aside from common courtesy, the Planning Commission is required by law to refrain from even *considering* California Quartet's application for approval of AP 98-2 until after the Review Board has been given at least 21 days to forward its recommendations on whether that Area Plan should be approved or denied.

Since the Review Board is charged with implementing the Foothill/Trabuco Specific Plan, it would seem only logical, not to mention lawful, to allow the Review Board adequate time within which to consider the impacts that will flow from *exempting* the 299-Unit Project from complying with the provisions of the Specific Plan. The CEQA documentation relating to ZC 98-3 and AP 98-2 is obviously deficient in that it does not address these impacts.

However, since it appears inevitable that the Planning Commission will refuse to honor the request of the Review Board for at least a two-week continuance of the Planning Commission's October 7 hearing, my clients must now face the sad fact that this matter appears headed for litigation. Accordingly, please be advised that, in addition to the objections raised in letters previously submitted by my firm and its consultants, my clients hereby incorporate and restate in opposition to ZC 98-3 and AP 98-2 each and every procedural and substantive contention, objection, comment, or argument raised in the letters which are listed in Exhibit "D" attached hereto. In addition, my clients also incorporate and restate each of the objections raised, or comments or arguments made, by any of their respective attorneys, representatives, or consultants at the public hearings or meetings held by the Planning Commission or the Board of Supervisors in connection with the review of FSEIR 566, including, but not limited to, hearings and meetings held on October 22, November 25, and December 3, 1997, and on February 24, 1998.

Very truly yours,

Edmond M. Connor

Habitat Description: (Plant communities, dominants, associates, substrate/soils, aspect/slope)

The southeastern corner of the Saddleback Meadows property is a well developed Venturan Sage Scrub with high shrub species diversity. Elements of a mixed chaparral are found on steeper north facing slopes. The property is a critical wildlife corridor between the south Orange NCCP area and the existing NCCP preserves to the west and northwest. Other areas of Coastal Sage Scrub occur on adjacent public lands to the south.

Other rare spp? Federally listed species of Anostraca are known to occur in natural and artificial ponds found on the property. Coastal Cactus Wrens are resident at several points within the property.

Site Information: Current/surrounding land use: The property is currently used for extensive cattle grazing. Properties to the north are generally vacant, properties to the south are sparsely developed as are properties to the east.

Visible disturbances, possible threats: The site is threatened by the current cattle grazing activity and by a pending land development plan. The latter would convert the site to urban level residential.

Overall site quality: [✓]Excellent [ ] Good [ ] Fair [ ] Poor **Comments:**
The habitats in the southeastern corner of the site are (despite cattle grazing) in excellent condition.

Re: Saddleback Meadows Property: Drainage and Grading Impacts of Proposed 299-Unit Project; Zone Change 98-3 and Area Plan 98-2

Dear Mr. Connor:

A. Drainage Impacts Have Not Been Adequately Addressed.

At your request, I have reviewed the "Water/Hydrology" section of Addendum PA980103 (pp. 32-37) for the proposed 299-unit project to be undertaken by California Quartet pursuant to Zone Change 98-3 and Area Plan 98-2, and I have determined that the analysis set forth in that section is woefully inadequate to describe the drainage impacts of the 299-unit project.

The Addendum does not provide a concept drainage plan for the 299-unit project. Instead, it merely refers the reader to Exhibit 22 at page 4-40 of FSEIR 566 to review the "master drainage concept" for the 705-unit manufactured housing/mobilehome project. However, that drainage plain is radically different from the storm drain system that would have to be used for the 299-unit project because, under the latter project, storm, irrigation, and urban runoff would be discharged directly into natural drainage courses on the property instead of being confined in drainage pipes running to El Toro Road.

The impact of storm and nuisance water runoff from the houses and streets to be built in the hillside areas of the Saddleback Meadows property is an issue which is not adequately addressed in the Addendum. The collection of runoff from developed areas which subsequently outlets to a local non-regional natural drainage course is the concern.

Southern California is generally a dry semi-arid region with annual rainfall in the range of 15 to 20 inches per year. The small natural local drainage courses, drainage areas up to several hundred acres, do not experience daily flows and are generally dry the majority of the year. Development creates streets and houses with impervious surfaces, therefore generally increasing the runoff. Landscaped and irrigated slopes and lots will receive 35 to 50 inches per year or more in irrigation, far more than the natural condition.

Irrigation runoff creates two concerns. First, water contaminated with pesticides, fertilizers and other man-made chemicals will be introduced to these natural, sensitive habitat areas on a daily basis. Secondly, over an extended period of time, 5, 10, or 20 years, underground migration of a portion of this excess water will affect the ground water condition. The increase in ground water should be studied and mitigation methods installed to protect the proposed development and surrounding properties from geologic instabilities. The Abbey to the northwest and the Monastery to the south have recently experienced ground movement.

Storm runoff from development areas creates several problems. The character of the runoff is changed from the natural condition of carrying soil and debris and concentrating flow over longer time span to one of a clean flow carrying little soil and debris over a considerably shorter time. The outlet of this concentrated clean flow into the steep, natural canyon areas will cause severe erosion and geologic failures. The existing average grade in these natural drainage courses range from 3% to 35%. Grades in man-made channels are limited to 3% or less to minimize erosion.

What is most troubling about this matter is the drainage facility information in the Addendum is not consistent with either Exhibit 22 in FSEIR 566 or Exhibit 25 from the previously disapproved Draft EIR 561 for the 318-unit project. For example, Exhibit 25 from Draft EIR 561 indicates that the 318-unit project was slated for eight storm drain facilities A through H, but the Addendum states that the 299-unit project will only access storm drains A, B, E, and H, without any explanation as to what happened to drain lines C, D, F, and G. The reader is simply left to guess about what the storm drain system will look like and where water will be discharged on the property. Clearly, further CEQA documentation is required.

In addition to providing an adequate discussion of drainage impacts, new CEQA documentation should address the following mitigation measures to avoid the disastrous consequences of dumping substantially increased volumes of runoff into geologically unstable areas of the property:

1) All runoff from developed lots and streets is to be confined to a storm drain collection system within the development. No concentrated flows from the developed area will outlet to natural drainage courses except at the regional facilities at El Toro Road.

2) Require a study of the long term effects of irrigation infiltration on the geologic structures and methods to minimize its impact.

B. Grading Impacts Have Not Been Adequately Addressed.

I have reviewed the "Soils and Geology" section of Addendum PA980103 (pp. 20-32) and I have determined that the analysis set forth in that section is grossly deficient with respect to analyzing the grading impacts of the 299-unit project.

The addendum does not discuss the permanent impacts which the grading will have on the land to be used for the purported "wildlife corridor", nor does it discuss the impacts on the sensitive biological resources in the southeastern canyon areas which will be necessitated by the incredibly long equipment ramps which have to constructed to make the 100 to 120 foot deep removals of landslide debris and construction of the buttress keys. The nature and extent of the remedial grading and the hazards posed by such grading have not been adequately discussed.

The elimination of grading in the north central portion of the site creates the exact situation discussed in the previous drainage section. The remedial grading along the northwest property line abutting the Abbey property has been completely eliminated. The conceptual drainage plan, Exhibit 25 from Draft EIR 561, indicates storm drain lines A and B would outlet increased urban runoff from the development to the existing natural drainage course that follows the common property line. Also storm drain line C, on that same Exhibit, would dump water into the geologicly unstable canyons adjacent to the Ramakrishna Monastery. These are precisely the situations which will cause geologic failures and damage to adjacent properties.

The reduction in impacts to vegetation and habitat are marginal at best. The only significant reduction in impact is to the Oak Woodland, 97% to 59% destruction. The impact to the Ephemeral Ponds is unchanged. The impact to the Coastal Sage Scrub is virtually unchanged, 66% vs. 65%. This is due to the dramatic extension of the proposed 299-unit development in the southeast quadrant. Please refer to the Impacted Vegetation Map, Exhibit No. 42 from the Draft EIR 561 which shows the limit of remedial grading. Compare it to the Geotechnical Hazard Mitigation Plan, Exhibit No. 19 from FSEIR 566. The 299-unit proposal dramatically pushes deep into the coastal sage scrub area.

This is significant because this is a large contiguous area with the "Gifted Property" and O'Neill Regional Park to the south. This area also contains five (5) of the ten (10) Cactus Wren sites on the property. Recently, I have been informed that two Coastal California Gnatcatchers have been observed in this area.

If you should have any questions or comments concerning the above, please call me at your convenience.

Very truly yours,

Warren W. Singleton, P.E.

EXHIBIT "K"

MEMORANDUM OF UNDERSTANDING

1. PURPOSE OF MOU. The purpose of this Memorandum of Understanding (the "MOU") is to outline the primary business terms for the purchase of 178 Acres (the "Conservation Parcel") by the County of Orange (the "County") and Saddleback Meadows Land Conservancy, LLC, a California limited liability company (the "Conservancy," together with County, the "Buyer") from the California Quartet ("CQ"). This MOU is intended only to set forth our mutual current understanding of the key business terms for the potential sale, and shall not constitute a binding contract or bind the parties to purchase or sell the Property. Only a definitive Purchase Agreement shall bind the parties.

2. PURCHASE OF CONSERVATION PARCEL. County and Conservancy will purchase from CQ a 178 acre parcel as shown on attached Exhibit A, together with all rights and interests appurtenant to such parcel. The Conservation Parcel shall consist of the entire Saddleback Meadows property, except for the 44-acre development area (the "Development Parcel") which is outlined in orange on Exhibit A. CQ intends to develop the 44-acre Development Parcel for single-family residential use. The County will purchase that portion of the Conservation Parcel (the "County Portion") which has an appraised value of $1,500,000, and the Conservancy will purchase the balance (the "Conservancy Portion"). What portion of the Conservation Parcel shall be purchased by the County and what portion shall be purchased by the Conservancy will be decided between them before the close of escrow.

3. CONSERVATION EASEMENT. The entire Conservation Parcel shall be subject to a permanent Conservation Easement in the form of attached Exhibit B [this will be substantially the same form as that provided by William Ross by letter dated August 28, 1998], subject only to modification as necessary in order to allow the County to use the County Portion for passive recreation purposes. The Easement shall be in favor of CQ, the County and the Conservancy.

4. PURCHASE PRICE. $5,200,000, with the Conservancy paying $3,700,000 for its portion of the Conservation Parcel, and the County paying $1,500,000 for its portion of the Conservation Parcel.

5. PAYMENT OF PURCHASE PRICE.

5.1 Deposit. $1,000,000 to be deposited by Conservancy upon the opening of escrow. This deposit shall be applicable to the purchase price for the Conservancy Portion and shall serve as liquidated damages if Conservancy defaults in its obligations

under the purchase agreement. However, the deposit shall be fully refundable to the Conservancy if escrow does not close for any reason other than a default on the part of the Conservancy. The $1,000,000 shall be placed into an interest bearing account at the highest available interest rate, with all interest accruing to the Conservancy.

5.2 Payment of Balance of Purchase Price. $4,200,000, representing the balance of the Purchase Price, shall be deposited before the close of escrow and after County and Conservancy have been advised that escrow is in a position to close but for Buyer's deposit of the balance of the Purchase Price.

6. TERMS OF ESCROW.

6.1 Escrow Holder. Fidelity National Title Insurance Company, Santa Ana, California ("Fidelity National").

6.2 Closing. Escrow shall close within fourteen (14) days after the later of, (i) the County's issuance of a Grading Permit for the Development Parcel, or (ii) expiration of all statutory challenge periods for development entitlement, environmental documents and environmental permits, but in no event later than March 31, 1999.

6.3 Cancellation of Escrow. If Escrow does not close before March 31, 1999, any party not then in default under the Agreement may cancel escrow without any penalties.

7. CONDITIONS TO CLOSE.

7.1 Conditions for the Benefit of CQ.

7.1.1 Issuance of Grading Permit. The County's issuance of a grading permit for the Development Parcel.

7.1.2 Expiration of Appeal Periods. All statutory challenge periods for development entitlement, environmental documents and environmental permits for CQ's intended development on the Development Parcel shall have expired.

7.1.3 Evidence of Conservancy's Financial Ability to Perform. Conservancy shall deliver to CQ reasonable evidence that it has the ability to fund the remaining portion of the purchase price. This condition may be satisfied with a letter from a bank or other financial institution.

7.2 Conditions for the Benefit of Conservancy.

7.2.1 Deposit of County Funds. The County shall be in a position to deposit the $1,500,000 purchase price for its portion of the Conservancy Parcel.

7.2.2 **Approval of Geotechnical Studies.** Conservancy and its consultants will be allowed to review and approve all geotechnical studies submitted to the County by CQ in connection with the Grading Permit for the Development Parcel to ensure any geotechnical work on the Development Parcel will not create any potential geotechnical hazards which would endanger or adversely affect the safety, usability, or stability of either the parcel currently owned by the Norbertine Fathers of Orange or the parcel currently owned by the Vedanta Society of Southern California.

7.3 Conditions for Benefit of County.

7.3.1 **Approval of Appraisal.** Approval of an appraisal of the portion of the Conservancy Parcel by the Public Facilities and Resources Department supporting the $1,500,000 purchase price to be paid by County.

7.3.2 **Approval by State.** Approval of the use by the County of the $1,500,000 in funds by the California Department of Parks.

7.3.3 **Approval by County Board of Supervisors.** Approval of the Purchase Agreement by the County Board of Supervisors.

7.4 Conditions for Benefit of both County and Conservancy.

7.4.1 **Title Policy.** The commitment of Fidelity National to issue to County and to Conservancy its CLTA owner's title policy (the "Title Policy") insuring that both County and Conservancy have good and marketable fee simple title to their respective portions of the Conservancy Parcel subject only to the Conservation Easement and to those title matters approved by Buyer during the title review period.

7.4.2 **Assessment.** The Conservation Parcel is no longer subject to assessment for the bonds in favor of the Trabuco Canyon Water District.

7.4.3 **Title Review.** During a 30-day title review period beginning after review of all title documents, Buyer has approved a current preliminary title report for the Property, including without limitation, copies of all underlying documents and a map showing the location of all easements.

7.5 Closing Costs. CQ shall pay the cost of the Title Policy. All other costs shall be divided equally between CQ and Buyer.

8. ENTITLEMENT PROCESSING.

8.1 Responsibility of CQ. CQ will be responsible at its cost for the processing of all entitlements for the development of the Development Parcel, including without limitation, such approvals as necessary to create both the Conservation Parcel and the Development Parcel as separate legal parcels.

8.2 Expedited Processing. County will provide expedited processing for CQ's entitlements.

9. RESTRICTED USE OF DEVELOPMENT PARCEL. By means of a restrictive covenant to be recorded in favor of the Conservancy, the County, the Norbertines and Vedanta, the Development Parcel shall be restricted to residential uses and related landscape and recreational areas only.

10. INDEMNIFICATION AND RELEASES.

10.1 Release of CQ. Upon the purchase of the Conservation Parcel by the County and the Conservancy, CQ shall be released of all liability relating to the condition of the Conservation Parcel, except for any liability or claims which are based upon or arise out of any negligent acts or omissions on the part of CQ.

10.2 Indemnification by County. County agrees to indemnify CQ and Conservancy from any loss, damage or liability either of them may incur or suffer relating to the negligence of the County on the portion of the Conservation Parcel it purchases.

10.3 Indemnification by Conservancy. Conservancy agrees to indemnify CQ and County from any loss, damage or liability either of them may incur or suffer relating to the negligence of the Conservancy on the portion of the Conservation Parcel it purchases.

10.4 Indemnification by CQ. CQ agrees to indemnify Conservancy and County from any loss, damage or liability either of them may incur or suffer relating to the negligence of CQ on the Development Parcel.

11. SETTLEMENT AND RELEASE AGREEMENT. As consideration for entering into the Purchase Agreement, the parties to that Agreement, as well as the Norbertines and Vedanta, shall simultaneously enter into a separate "Settlement and Release Agreement" (the "Settlement Agreement"), the initial draft of which shall be prepared by counsel for the Norbertines and Vedanta. Among other things, the Settlement Agreement shall provide for mutual limited releases to be exchanged between and among the parties thereto and shall further provide that CQ's pending mandamus action and Vedanta's pending lawsuit shall (1) be stayed pending close of escrow and (2) be dismissed with prejudice after escrow actually closes. The Settlement Agreement will also incorporate other standard settlement and release provisions. In addition,

the Settlement Agreement shall provide for a covenant by the Conservancy, the Norbertines, Vedanta, and their respective successors, to refrain from opposing or otherwise challenging (except in accordance with paragraph 7.2.2 above) the efforts of CQ to obtain the necessary permits and entitlements to develop the Development Parcel, provided, however, that CQ is not in default of its covenants to the Conservancy.

12. MOU IS NOT INTENDED TO BE BINDING. This MOU is not intended to be binding as to either CQ or Buyer. The terms and conditions of this letter shall be incorporated into a definitive Purchase Agreement and escrow instructions to be signed by CQ and Buyer.

By executing this MOU, the undersigned parties acknowledge and agree they shall each be bound to bargain in good faith and to use their best efforts to negotiate, draft, and execute a written contract for the purchase and sale of the Conservation Parcel which incorporates the terms and conditions set forth above.

THE ORANGE COUNTY REGISTER, FRIDAY, OCT. 16, 1998

A BATTLEGROUND

ENVIRONMENT: Another county wildlife corridor is at odds with development.

By PAT BRENNAN
The Orange County Register

The land could hardly be called pristine.

It has been trampled by cattle and invaded by thistle; the wear has converted much of it to non-native grassland.

Still, the 222-acre Saddleback Meadows might be the last fully functioning corridor for wildlife between southern and central Orange County. And like at least three other such corridors in the county or on its fringes, it could be closed — or its function vastly reduced — by development.

So say federal wildlife officials, who haved sided with those who want to scale back a proposed 299-home development.

"We'd like to see a minimum of development on the thing," said John Bradley, a U.S. Fish and Wildlife Service biologist. "We've always been concerned about the wildlife corridor."

NEWS FOCUS

Local residents will gather tonight to give their views on the project; the county Board of Supervisors is scheduled to consider approving it Nov. 3.

Wildlife is not the most pressing concern for most of the project's opponents, including neighbors and solitude-loving monks at two nearby monasteries.

They fear the loss of the tranquil refuge they have so far defended as homes and businesses have pushed closer and closer over the years.

"This project will effectively destroy the monastic way of life of these two organizations," said Ed Connor, an attorney representing the monks at St. Michael's Abbey and the Ramakrishna Monastery.

But concerns about nature and open space must be balanced against the property owner's wishes.

Frank Elfend, who represents owner California Quartet Ltd., said the developer is willing to sell 178 acres to the Saddleback Meadows Land Conservancy LLC, a company set up by St. Michael's, and scale back to 130 homes. But, in case an agreement isn't reached, the county

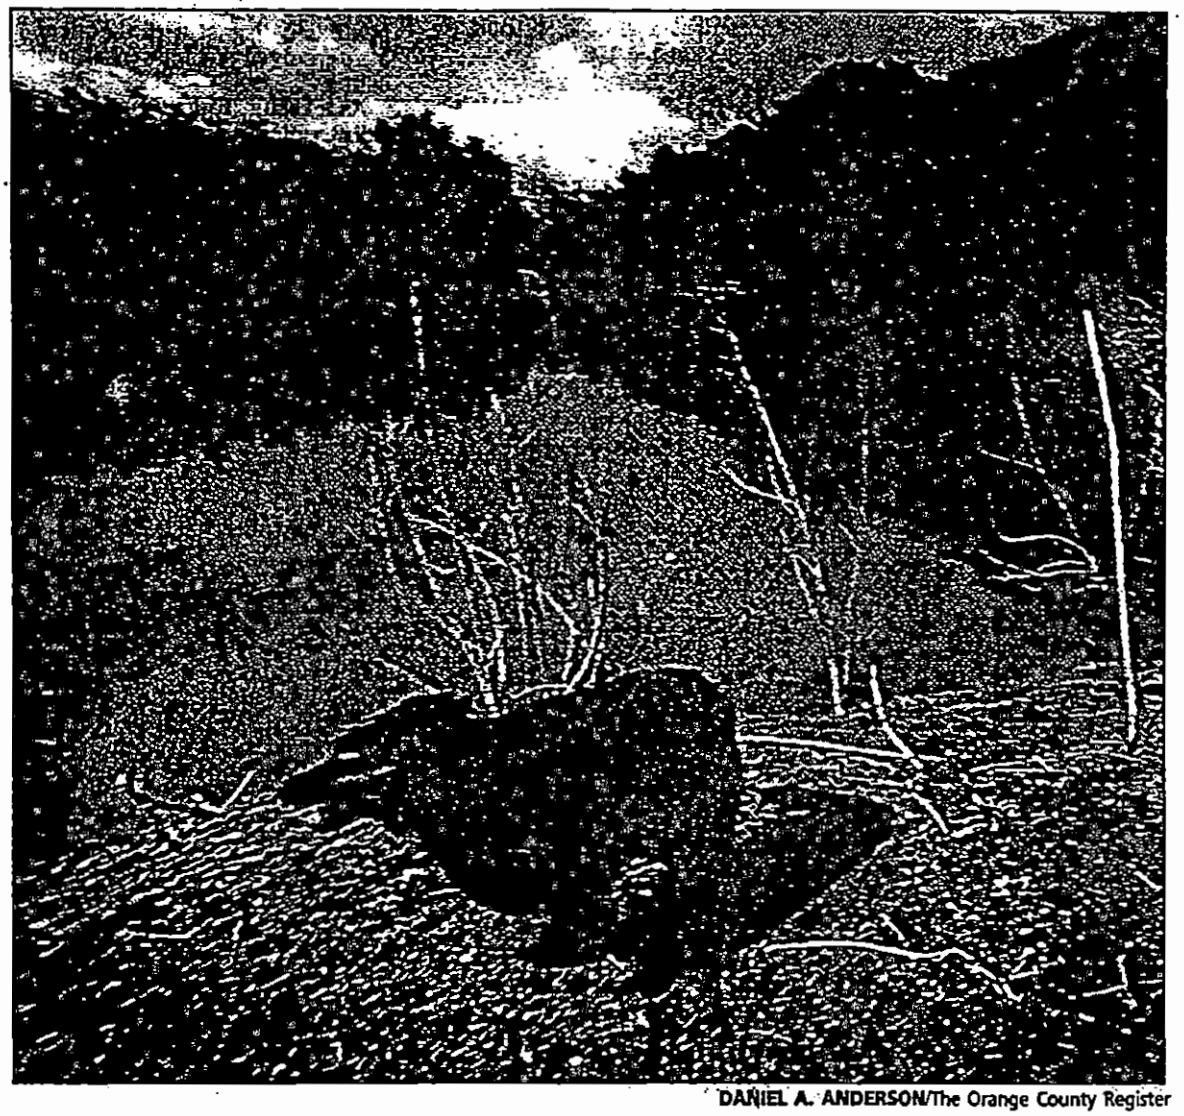
Please see WILDERNESS Page 7

CONTEMPLATING DEVELOPMENT

Monks in two monasteries are protesting a proposed 299-home development in the Saddleback Meadows, saying it would shatter the area's natural tranquility. Wildlife officials say it would also close off an important wildlife corridor.

The Orange County Register

PASTORAL PLACE



DANIEL A. ANDERSON/The Orange County Register

A pond in the proposed Saddleback Meadow development is home to the endangered Riverside fairy shrimp. And it's a fun place for dogs to play, too.

The Orange County Register **ORANGE COUNTY/OBITUARIES** Friday, Oct. 16, 1998

WILDERNESS: Monks' tranquillity in danger

FROM 1

and the developer are pressing ahead with the full 299-home plan.

"Right now there are two parallel processes, and both are moving forward," Elfend said.

The owners would like to see the disagreements resolved, he said. Homes are in demand, and it's a good time to build.

Controversy has haunted the property for as long as 20 years. Development proposals have come and gone. In June, it appeared the monks had reached an agreement to buy the entire property and preserve it, but the deal fell through.

Now, the best the monks can hope for is that the smaller development will win the day.

Richard Jennings, one of the Vedantic monks who live at the Ramakrishna Monastery, said even the scaled-back plan would place homes on a ridge overlooking the property.

The monastery donated most of its property in 1974 to become part of O'Neill Wilderness Park.

"We think it's very unfair," Jennings said. "We give 240 acres to the county for O'Neill park, then the county comes back a few years later to approve a mass-density development."

County planning officials say they, too, prefer the scaled-back plan, but that the property owner's hand cannot be forced.

Tim Neely, a county planner who spent years negotiating delicate agreements with property owners that have resulted in a 37,000-acre wildlife reserve under the Natural Communities Conservation Program, says compromise is the key to making the agreements work.

GIVE YOUR OPINION

A specific-plan review board meets at 7 tonight in the multipurpose room at O'Neill Wilderness Park, 30892 Trabuco Canyon Road. Board members will listen to public comments about a proposal to build homes on the 222-acre Saddleback Meadows property. County supervisors will consider the matter Nov. 3.

Participation in the program is voluntary; landowners must feel they have something to gain by taking part.

Complicating matters further is the nature of wildlife corridors. In this case, the corridor would connect the county's central wildlife reserve with one planned for southern Orange County.

But debates over wildlife corridors are far from black and white. Biologists' opinions can differ, as can the preferences of different types of animals.

Neely, for example, said biological consultants for the Natural Communities Conservation Program believe a 400-foot corridor that would be left in place if the 299-home development is built would be adequate. It would protect species that fall under the program's umbrella, including the threatened California gnatcatcher, he said, thus fulfilling the county's environmental obligations.

But such a narrow passage might not be enough for larger mammals, which are not included in the program's guidelines. Biologists are not sure whether large mammals use the area, but deer tracks were visible as Jennings walked the monastery property this week. Two months ago, he said, a mountain lion was spotted.

Large mammals are easily spooked by the lights and noise of civilization. They and other animals also will shy away from corridors that lack the cover of native vegetation.

State and federal wildlife officials suspect that the effects of a 400-foot corridor on wildlife would be severe. They also worry about choice habitat and protected species living on the property that would be developed.

There are 65 acres of coastal sage scrub that is home to the gnatcatcher, 14 acres of oak woodland and four acres of wetland — including vernal pools that are home to the endangered Riverside fairy shrimp.

Fish and Wildlife is taking a recount of gnatcatchers in south Orange County, made necessary because agency officials mistakenly issued too many permits to clear gnatcatcher habitat.

Until that is complete, Bradley said, new permits are unlikely.

OTHER CORRIDORS

Three other wildlife corridors in or near the county might be closed or diminished by development. Biologists say that without them, habitat areas become isolated, causing the gradual loss of species and weakening of ecosystems.

► **Serrano Creek:** Earlier this month, the U.S. Environmental Protection Agency called a temporary halt to the Irvine Co.'s Spectrum 5 development, saying the creek, near where the San Diego (I-405) and Santa Ana (I-5) freeways meet, would be sealed in concrete. The creek, which runs beneath the freeways, is the last connection for wildlife between two large wilderness reserves. An Army Corps of Engineers decision is pending.

► **La Habra Heights:** Last week, residents of La Habra Heights jammed a City Council meeting to protest the proposed Old Coach Estates development, which would severely restrict a corridor between Whittier and Puente Hills and Chino Hills. Several cities, including Brea, have worked to keep this area open; biologists say loss of the corridor could lead to loss of species on the western end of the 31-mile habitat area. A decision on the matter was postponed.

► **Coal Canyon:** Activists continue trying to raise money to purchase Coal Canyon, the last connection for wildlife between the Chino Hills and the Cleveland National Forest. The landowner wants to fill the canyon property with 1,550 homes. If the connection is lost, biologists say, mountain lions could disappear from the Chino Hills, and plant and animal diversity could plummet on both sides of the corridor.

Re: Saddleback Meadows, AP98-2 and Abuse of Land Use Planning Process

Dear Supervisor Spitzer,

You said something at our meeting several weeks ago that impressed me very much. It was your statement that our land use *process* was a very serious issue for you. It is for me, too. You said this in the context of our discussion on the Goren project, mentioning how displeased you were with the poor advice you were given regarding the litigation. Orange County and the entire Board of Supervisors were literally in contempt of court because County staff and counsel chose to ignore a court order and continued to process the project illegally using specious justifications.

The outcome of the Planning Commission hearing on October 6, 1998 regarding the Saddleback Meadows project provides a more egregious example of the continuing disregard that some staff and all the Planning Commissioners, except for Tom Moody, have for the Foothill Trabuco Specific Plan (FTSP), as well as our overall planning and zoning ordinances. In fact, conduct of some individual staff members displays outright contempt for the process. Worst of all, the appearance of some County staff acting as the developer's advocate is sadly obvious. Where unbiased analysis in project processing is mandated, we see conduct more becoming a lobbyist.

Specifically, the following has occurred:

- The Planning Commission approved a 299 unit project for Saddleback Meadows without meeting the legal requirement of first having the FTSP Review Board look at the plans. County Counsel Mr. de Mayo's claim, in his October 6 memo to the Planning Commission, that the FTSP Review Board did not see the project because "a substantially similar proposal was [already] considered by the Review Board and there was no Review Board to review AP98-2..." is outrageous. First, how does not having a Review Board in place give a green light to circumventing its review responsibilities? The logical and legal response should have been to postpone the approval process until the Review Board was appointed and a 21 day notice was posted. Second, Mr. de Mayo must have forgotten that the Board of Supervisors *denied* the "substantially similar proposal"!

- The Planning Commission also approved an Area Plan for Saddleback Meadows. How can they legally approve an Area Plan *before* the associated general plan amendment and zone change is approved? The answer is: they cannot. Furthermore, Area Plans are required to first go before the FTSP Review Board. This one did not.

• Staff has already scheduled a subdivision hearing on this project, yet the Board of Supervisors have not held a hearing to consider approval of this project and the zone changes necessary for a valid subdivision. Adding insult to injury, the subdivision hearing is scheduled *before* the Board of Supervisors hearing on this project. Such action is in clear violation of the Subdivision Map Act. And again, the review of subdivision plans by the FTSP Review Board is mandated, yet has not occurred.

• Staff and the Planning Commission completely ignored new documentation of California gnatcatchers on the project site, which would call for additional CEQA analysis. Also, it is my understanding that staff testified that this project site did not figure in the wildlife corridor needs of the NCCP planning for the Southern Subregion. Such testimony is 180 degrees apart from the position specifically expressed by the US Fish and Wildlife Service and California Department of Fish and Game. Both these agencies have clearly stated the importance of Saddleback Meadows as a wildlife corridor. As a biologist and one who has participated in the NCCP process from day one, I can vouch for the agencies' position -- which has never changed.

Notwithstanding the procedural abuses described above, the project itself calls for grading that will encroach on O'Neill Park, thus triggering a contractual clause allowing the Ramakrishna Monastery to repossess approximately 250 acres of parkland.

In summary, County planning is so out of control that blatant disregard for the legal planning process has become the norm. And for Saddleback Meadows, for each day that this project is processed in the current manner, the County is placed in greater legal peril. Equally disturbing is that fact that just a few County staff members have decided to take it upon themselves to represent a few residents and developers in an orchestrated effort to not only circumvent, but overturn the FTSP. Your leadership is sorely needed to rein in this arrogant behavior. I request that you immediately pull this project from the November 3rd Board of Supervisors' hearing agenda until it can be brought in line with the legal planning process. Also, I recall that you demanded a full accounting from staff and County counsel regarding the Goren project. I submit that you demand the same and more regarding Saddleback Meadows. In doing so, I suspect that you will find even more evidence of illicit activity.

Regarding the amendments being proposed for the FTSP, I ask that you put an immediate stop to the process. You told me that the appointment of the FTSP Board would slow this process down so that it would meet the required review standards. I'm afraid that the opposite is occurring. County staff is overtly trying to ramrod changes to the FTSP as fast as they can. Again, the fact that there has been no official Board of Supervisor's direction on this matter presents serious legal implications.

Thank you for considering the above. I hope you find that I have provided you with information that will prompt your swift intervention. In my ten years of involvement with land use planning in Orange County, I have never experienced a situation that demanded such immediate attention.

Lastly, and unfortunately, I must formally request that you include this letter as part of the administrative record for this project.

Sincerely,

Pete DeSimone

October 19, 1998

Dear Gentlemen,

You may already know that on October 7, 1998, the Orange County Planning Commission approved a 299 unit project for the Saddleback Meadows property. During the hearing, the U. S. Fish and Wildlife Service and the California Department of Fish and Game position on this project was described to the Commission by Tim Neely. Attached is a copy of his public testimony. On November 3, 1998 the Orange County Board of Supervisors is scheduled to vote on this project.

In comparing Mr. Neely's testimony to your collective letters regarding this same project, I am extremely concerned about how your position was represented. As a veteran of many Planning Commission hearings I can state, without a doubt, that the Commissioners took Mr. Neely's characterizations of your NCCP-related concerns as if they came directly from you. Unfortunately, I believe that you will find Mr. Neely's testimony differs considerably from what you have stated in letters and at meetings that I have attended on this project. And apparently the difference was enough to convince the Commissioners that, for example, wildlife corridor or gnatcatcher issues were not significant enough to merit concern. They must have felt this way since they approved the project despite your documented opposition to it.

Mr. Neely states that it is not appropriate to "speculate at this point about their [Resources Agency] future position", with regard to the 299 units. However, I would characterize everything Mr. Neely said prior to this statement as just that --speculative, or an inaccurate interpretation of what you have already stated in letters and at meetings.

2820

Whether or not you agree with my analysis of the testimony at this hearing is not really the issue. However, I would urge you to do the following two things:

1) In the future, send your respective representatives to hearings such as these so that there will be no question as to where you stand.

2) If you do agree that your position was not accurately represented at this hearing, please notify both the Planning Commissioners and the Board of Supervisors immediately. Again, I believe that the Planning Commissioners' perception of the wildlife issues played a significant role in whether or not they approved this project. I have attached the appropriate contact information.

Also enclosed is the *Orange County Register* article regarding this project. While we all know that the press is notorious for misrepresentation, I thought you should be aware of the quote attributed to Mr. Neely: "...biological consultants for the Natural Communities Conservation Program believe a 400-foot corridor that would be left in place if the 299-home development is built would be adequate." If this is indeed what Mr. Neely said, then who are these consultants? I do not recall Dudek and Associates talking any formal position on Saddleback Meadows and your position clearly does not support such a statement. In fact, you have said just the opposite.

Lastly, let no one misconstrue this letter as an attack on Mr. Neely. He may fully believe that what he testified to is accurate. I am just asking you to judge for yourself and to quickly set the record straight if you believe that you, or the NCCP process, were not accurately represented. A lot is a stake and both the Planning Commission and the Board of Supervisors must hear from you directly.

Sincerely,

Pete DeSimone
Manager
Starr Ranch Sanctuary

AGREEMENT

THIS AGREEMENT is made and entered into this 26th day of March, 1974, by and between the VEDANTA SOCIETY OF SOUTHERN CALIFORNIA, a California corporation, hereinafter referred to as "GRANTOR", and the ORANGE COUNTY HARBORS, BEACHES, AND PARKS DISTRICT, hereinafter referred to as "DISTRICT"

R E C I T A L S

1. GRANTOR owns approximately 286 acres of real property located in Live Oak Canyon, as shown on the map marked "Exhibit A", attached hereto and made a part hereof.

2. GRANTOR desires to quitclaim to DISTRICT all of its right, title, and interest in Parcel GA 550-2.01, as shown on Exhibit A, for preservation as perpetual open space.

3. GRANTOR desires to convey to DISTRICT an easement for road purposes designated as Parcel GA 550-2.11 on Exhibit A, to permit access.

4. GRANTOR desires to retain approximately 41 acres containing its existing Ramakrishna Monastery, together with a permanent road easement to permit access, as shown on Exhibit A.

5. Both GRANTOR and DISTRICT recognize that benefits will accrue mutually to GRANTOR'S remaining property and the general public as a result of the preservation of the subject property as perpetual open space.

6. GRANTOR has executed and delivered to M. J. Trujillo, Real Property Agent for DISTRICT, an easement for road purposes covering said Parcel GA 550-2.11, and a quitclaim deed, quitclaiming all of GRANTOR'S right, title, and interest in said Parcel GA 550-2.01 to DISTRICT.

NOW, THEREFORE, the parties hereto mutually agree as follows:

I. The GRANTOR shall:

A. Convey to DISTRICT and do all things necessary to vest in DISTRICT fee title to Parcel GA 550-2.01, free and clear of all liens, encumbrances, assessments, easements, leases (recorded or unrecorded, and taxes, except:

257-06
2.224

], Any installment of general and special County and City taxes, if any, that is not entirely earned at the time title is vested in or actual or physical possession is taken by DISTRICT, whichever first occurs, and all taxes subsequent thereto.

(However, grantors shall remain liable for payment of any earned taxes, pursuant to the provisions of Section 4986, California Revenue and Taxation Code, as amended, and DISTRICT is authorized to pay, from the amount shown in Clause IIA below, any earned delinquent taxes, together with penalties and interest thereon, delinquent or non-delinquent assessments or bonds.)

2. An easement for pole line purposes conveyed to Southern California Edison Company, as recorded in Book 3772, Page 344, of Official Records.

3. Easements for pipe lines and access purposes in favor of Santa Ana Mountains County Water District, recorded in Book 7767, Page 49], of Official Records.

B. Convey to DISTRICT and do all things necessary to vest in DISTRICT an easement for road purposes shown as Parcel GA 550-2.11 on Exhibit A.

C. Hereby warrants that there are no oral or written leases on all or any portion of the property exceeding a period of one month and GRANTOR agrees to hold DISTRICT harmless and reimburse DISTRICT for any or all of its losses and expenses occasioned by reason of any lease of said property held by any tenant of GRANTOR for a period exceeding one month.

II. The DISTRICT shall:

A. Pay to the order of the undersigned GRANTOR the sum of Twenty Thousand Eight Hundred Six and 21/100 Dollars ($20,806.21) within sixty (60) days after title to the subject property has vested in DISTRICT as specified in Clause IA and IB above.

B. Pay all of the following items: Recording fees and premium charged for title insurance, if such insurance is desired by DISTRICT

C. Construct and maintain a fence following the boundary separating the subject property from GRANTOR'S remaining property. Said fence shall be of a type and construction acceptable to both parties hereto.

D. Construct and maintain a fence surrounding GRANTOR'S existing well site shown on "Exhibit A". Said fence shall be of a type and construction acceptable to both parties hereto.

III. It is mutually understood and agreed that:

A. It is the desire of the parties hereto to preserve the subject property as perpetual open space. The use to which the subject property may be put is expressly limited to public hiking and equestrian trails only.

B. DISTRICT shall cooperate with GRANTOR as much as possible in the design and location of the proposed improvements on the subject property.

257-07
3.254

C. GRANTOR shall have the right to use and maintain its existing access road, shown on Exhibit A. GRANTOR shall also retain the right to collect fallen, dead wood from the subject property for firewood purposes and to utilize the subject property for hiking purposes.

D. DISTRICT shall have the right to construct, use and maintain service roads as reasonably necessary for the maintenance of the subject property.

E. The conveyance of the subject property by GRANTOR to DISTRICT is subject to the following conditions subsequent:

1. No improvements shall be erected, constructed or placed on the subject property other than those presently existing, except as reasonably necessary for the use of the subject property consistent with the terms and conditions contained herein.

2. The general topography of the subject property shall be maintained in its present condition and no excavation, grading or placing of sand, soil, gravel, rocks or other material shall be permitted, except as reasonably necessary for the use of the subject property consistent with the terms and conditions contained herein.

3. No trees, shrubs, or other natural growth shall be removed or destroyed, except as reasonably required for fire prevention or elimination of diseased growth.

4. No hunting camping, or trapping shall be permitted on the subject property.

5. No motor vehicles shall be permitted on the subject property except for emergency purposes; however, DISTRICT vehicle and other vehicles authorized in advance by DISTRICT may go upon the subject property for purposes consistent with the terms and conditions contained herein.

In the event of the breach by DISTRICT of any of said conditions hereinabove set forth, GRANTOR shall give written notice to DISTRICT setting forth the specific breach of said condition or conditions. DISTRICT shall have sixty (60) days from the date of receipt of said notice to correct or cease the actions which constitute said breach.

In the event said breach is not corrected or cured within said sixty (60) day period, title to the subject property herein conveyed shall revert to GRANTOR, and it shall be lawful for GRANTOR to re-enter and have and enjoy said subject property as of its former estate. Title to the subject property shall thereupon vest in GRANTOR and all right, title, and interest therein of DISTRICT shall terminate.

In the event it becomes necessary for GRANTOR to file a legal action to enforce any of its rights of reverter, as hereinabove set forth, it is mutually agreed between the parties hereto that the successful party in said legal action shall reimburse the non-successful party for all reasonable costs and expenses of said action, including reasonable attorney fees.

F. In the event GRANTOR is unable to deliver title in a reasonable time under the terms of this contract, DISTRICT may file an action in eminent domain to pursue the acquisition of this parcel, and this contract shall constitute a stipulation which may be filed in said proceedings as final and conclusive evidence of the total amount of damages for the taking, including all of the items listed in Section 1248 of the Code of Civil Procedure, regarding this parcel.

57-08
.224

G. It is mutually agreed that time is of the essence; and if this transaction is not consummated and the Quitclaim Deed recorded on or before March 31, 1974, this Agreement is null and void.

H. The parties have herein set forth the whole of their agreement. The performance of this agreement constitutes the entire consideration for said document and shall relieve DISTRICT of all further obligations or claims on this account, or on account of the location, grade, or construction of the proposed public improvement.

257-09
2.224

IN WITNESS WHEREOF, the parties hereto have executed this Agreement the day and year first above written.

Supplemental Transmittal
Saddleback Meadows Zone Change/Area Plan
November 3, 1998 Agenda

DATE: October 27, 1998

TO: Board of Supervisors

FROM: Director, Planning and Development Services Department

SUBJECT: Appeal of Area Plan 98-2

Attached is an appeal filed by Edmond Connor of the Planning Commission's approval of Area Plan 98-2 (Attachment I). The appeal was filed on behalf of the Vedanta Society of Southern California, the Norbertine Fathers of Orange, and the Saddleback Meadows Land Conservancy LLC. Also attached is the staff response to that appeal (Attachment II).

On October 6, 1998, your Board directed staff to place the proposed Saddleback Meadows 299 dwelling unit project on the Board agenda for November 3, 1998. On October 7, 1998, the Planning Commission approved Saddleback Meadows Area Plan 98-2 and recommended that your Board approve related Zone Change 98-3. On October 8, 1998, the landowner, California Quartet, Ltd., filed an appeal of Area Plan 98-2 which would otherwise not be brought before your Board. Subsequently, staff scheduled a public hearing before your Board on Zone Change 98-3 and Area Plan 98-2 for November 3, 1998.

On October 22, 1998, the last day of the appeal period, Edmond Connor filed an additional appeal on behalf of several adjoining property owners, including the Vedanta Society, the Norbertine Fathers and Saddleback Meadows Land Conservancy (Attachment I) which is also to be considered by your Board on November 3, 1998. Staff have prepared an analysis of Mr. Connor's appeal (Attachment II).

Lastly, because of the appeal filed by Edmond Conner, California Quartet, Ltd. has now withdrawn their appeal (Attachment III).

No revision to the Recommended Action is necessary.

Respectfully submitted,

Thomas B. Mathews, Director

Re: Notice of Appeal of Planning Commission's Approval of Area Plan 98-2 for Saddleback Meadows

Dear Messrs. Mathews and de Mayo:

The Vedanta Society of Southern California ("Vedanta"), the Norbertine Fathers of Orange (the "Norbertines"), and the Saddleback Meadows Land Conservancy LLC (the "Conservancy") [hereinafter, Vedanta, the Norbertines, and the Conservancy shall collectively be referred to as the "Appellants"] hereby submit this notice of appeal regarding the Planning Commission's approval of Area Plan 98-2 ("AP 98-2") on October 7, 1998.

The Appellants' appeal to the Board of Supervisors (the "Board") of the Planning Commission's action on AP 98-2 (hereinafter referred to as the "Appeal") shall be based upon each and every procedural and substantive contention, objection, comment, or argument raised in the letters (collectively, the "Letters") which are listed in Exhibit "A" attached hereto and are incorporated herein as if set forth in full hereat. In addition, the Appeal shall also be based upon each of the objections raised, or comments or arguments made, by the Appellants' representatives or any other project opponent (hereinafter collectively referred to as the "Oral Comments") at the public hearings or meetings held by the Planning Commission or the Foothill/Trabuco Specific Plan Review Board in connection

with the 299-unit single family detached housing project (the "299-Unit Project") which is the subject of AP 98-2, including, but not limited to, the hearings and meetings held on August 25, September 29, October 7, and October 16, 1998. Finally, the Appeal shall also be based upon any oral or written statements made by Appellants' representatives regarding the 44/178 Alternative, including, but not limited to, any statements made at the Board meetings held on June 23, August 11, or October 6, 1998, or otherwise set forth in any correspondence between the Appellants, the County of Orange (the "County"), or California Quartet, Ltd., or any of their respective representatives, including, but not limited to, the letters identified in Exhibit "A" hereto.

The grounds for the Appeal shall include, but shall not be limited to, the following:

(1) By failing and refusing to provide the Foothill/Trabuco Specific Plan Review Board with a minimum of 21 days within which to review AP 98-2 and to report its findings and recommendations thereon before the Planning Commission took final action on AP 98-2, the Planning Commission violated both section 7-9-150.3(b) of the Orange County Zoning Code and section III.G.2.a of the Foothill/Trabuco Specific Plan (the "Specific Plan");

(2) AP 98-2 is inconsistent with the goals, objectives, components, regulations, and guidelines set forth in the Specific Plan, including (a) the goals and objectives relating to rural character and resource preservation; (b) the resources overlay component relating to wildlife corridors, oak woodlands, tree management/preservation, and streambeds; (c) the Bridlewood Residential District Regulations; (d) landscaping regulations; (e) grading standards relating to the maximum height of manufactured slopes and the 70% "natural open space" requirement; (f) area plan submittal requirements; (g) grading, drainage and site planning guidelines; and (h) architectural guidelines;

(3) In approving AP 98-2, the Planning Commission failed to make adequate findings supported by substantial evidence in the record as required by the Orange County Zoning Code, the California Code of Civil Procedure, the Government Code, and all other applicable land use laws and regulations;

(4) There is no justification for exempting AP 98-2 from complying with the Specific Plan, and such an exemption coming at the request of a landowner/developer would set a bad precedent and would seriously undermine the important goals and objectives of the Specific Plan;

(5) AP 98-2 involves unavoidable adverse environmental impacts which cannot be mitigated to acceptable levels and will destroy hundreds of acres of oak woodlands, vernal ponds, coastal sage scrub habitat, and other biotic communities teeming with sensitive, threatened, or endangered flora and fauna, including the coastal California gnatcatcher and the Riverside fairy shrimp. These impacts have not been adequately addressed and mitigated in the CEQA documentation prepared for AP 98-2;

(6) AP 98-2 involves massive and unacceptable grading impacts which would subject the residents of the Trabuco Canyon area to several years of excessive noise, dust, and traffic delays associated with excavating and recompacting approximately nine million cubic yards of soil which will remain exposed to the wind during dry seasons and the rain during wet seasons over the course of several years before the rough grading is completed. These impacts have not been adequately addressed and mitigated in the CEQA documentation prepared for AP 98-2;

(7) AP 98-2 poses unacceptable geotechnical hazards and risks which would endanger and adversely affect the safety, usability, or stability of the land holdings immediately adjacent to the Saddleback Meadows property (the "Property"), including St. Michael's Abbey and the Ramakrishna Monastery, both of which are currently experiencing structural damage due to soils subsidence and instability. These impacts have not been adequately addressed and mitigated in the CEQA documentation prepared for AP 98-2;

(8) AP 98-2 will permanently alter and destroy the natural buffer zones which, for almost 50 years, have served as part of a monastic enclave for two religious groups: Vedanta which founded the Ramakrishna Monastery in the late 40's and the Norbertines which founded St. Michael's Abbey in the early 60's. These impacts have not been adequately addressed and mitigated in the CEQA documentation prepared for AP 98-2;

(9) The proposed rough grading, fuel modification, and drainage activities associated with the development of the 299-Unit Project pose the risk of triggering the reverter clause in the March 1974 Agreement between Vedanta and the County of Orange (the "County"), thereby entitling Vedanta to regain title and possession of approximately 240 acres of O'Neill Park adjacent to the Ramakrishna Monastery. This is a highly unnecessary and unacceptable risk of losing valuable parkland and the impact of such a loss has not been adequately addressed and mitigated in the CEQA documentation prepared for AP 98-2;

(10) AP 98-2 would jeopardize or destroy a critical habitat connection between the NCCP Central/Coastal and Southern Subregions of the County by providing an inadequate wildlife corridor to connect Whiting Ranch Wilderness Park and O'Neill Park. In addition, the proposed loss of coastal sage scrub habitat associated with the development of the 299-Unit Project would preclude connectivity between areas of high habitat value and, as a result, would preclude or delay the preparation and finalization of the Southern Subregion NCCP. These impacts have not been adequately addressed and mitigated in the CEQA documentation prepared for AP 98-2;

(11) In violation of CEQA and the CEQA Guidelines, the California Department of Fish & Game and the U.S. Fish & Wildlife Service (collectively, the "Resource Agencies") were not properly and adequately notified and consulted by the County in connection with AP 98-2, particularly with respect to their input regarding an appropriate wildlife corridor and a possible clustered development on approximately 35-40 acres which would be compatible therewith;

(12) AP 98-2 constitutes a complete revision and redesign of the 705-unit mobilehome project authorized by Tract Map No. 10692 (the "705-Unit Project") and thus constitutes a new project which requires preparation of a new Environmental Impact Report ("EIR"). Alternatively, a Subsequent EIR should be prepared for AP 98-2 in light of (a) the major project changes associated with the 299-Unit Project, including the new wildlife corridor placement, on-site drainage of storm, irrigation, and urban runoff (including the daily discharge of toxic materials into pristine areas of O'Neill Park), and additional grading in the biologically-sensitive southeast canyon areas of the Property; (b) the newly-discovered presence of coastal California gnatcatchers on the Property and the outdated and incomplete nature of the gnatcatcher surveys of the Property which the Resource Agencies asked to be updated almost two years ago; (c) innovative project alternatives not previously considered in the prior CEQA documentation, including the 65-Unit Alternative and the 44/178 Alternative; and (d) feasible mitigation measures not previously considered, such as a 100% performance bond to cover the possibility of the developer's failure to complete all conventional and remedial grading operations;

(13) Final Subsequent Environmental Impact Report No. 566 ("FSEIR 566") and the Addendum thereto are seriously deficient and inadequate to serve as the CEQA documentation for AP 98-2 in that they fail to properly address the adverse impacts, reasonable project alternatives, and feasible mitigation measures associated with that Project and, to the extent that County staff seeks to rely on FSEIR 566 as the EIR for AP 98-2, the County has failed to provide adequate

public notice of its intended action to responsible state and federal agencies, including the Resource Agencies, and to the general public;

(14) In approving AP 98-2, the Planning Commission violated CEQA and the CEQA Guidelines by failing to (a) make adequate findings supported by substantial evidence in the record, (b) adopt an adequate mitigation monitoring program, and (c) adopt an adequate statement of overriding considerations with respect to AP 98-2; and

(15) Although the 299-Unit Project involves fewer residential units than the 705-Unit Project, it still involves massively destructive environmental impacts and, in certain respects, far worse impacts than the 705-Unit Project in terms of drainage, geotechnical hazards, and grading impacts on St. Michael's Abbey and the Ramakrishna Monastery. These impacts have not been adequately addressed and mitigated in the CEQA documentation prepared for AP 98-2.

As soon as a date has been set on the Board's calendar for a hearing on the Appeal, please provide our office with notice of that hearing at your earliest convenience. Thank you.

Very truly yours,

Edmond M. Connor

encl.

PDSD Responses to Appeal of Area Plan 98-2

Vedanta Society of Southern California, the Norbertine Fathers of Orange, and the Saddleback Meadows Land Conservancy

Filed by Edmond Connor

The following discussion responds to the Appeal of Area Plan AP 98-2, submitted by Edmond Connor on October 22, 1998. Mr. Connor indicates that he is representing the Vedanta Society of Southern California, the Norbertine Fathers of Orange, and the Saddleback Meadows Land Conservancy. Each Appeal Issue, restated from the Appeal Letter, is followed by a response from the Planning & Development Services Department. The Letter of Appeal is attached to

References herein (e.g., Attachment K) are to attachments to the AIT for November 3, 1998 on this item unless otherwise noted.

(1) **Appeal Issue No. 1:**

By failing and refusing to provide the Foothill/Trabuco Specific Plan Review Board with a minimum of 21 days within which to review AP 98-2 and to report its findings and recommendations thereon before the Planning Commission took final action on AP 98-2, the Planning Commission violated both section 7-9-150.3(b) of the Orange County Zoning Code and Section III.G.2.a of the Foothill/Trabuco Specific Plan (the "Specific Plan").

PDSD Response:

On August 7, 1998, the project application and EIR Addendum were distributed for public review. At that time there were no members of the Foothill/Trabuco Specific Plan (F/TSP) Review Board. However, former members were sent this material. On September 22, 1998, F/TSP Review Board members were appointed and on September 25, 1998, they were each given a copy of this material. On October 16, 1998, the F/TSP Review Board made comments and recommendations regarding the proposed project. Those comments and recommendations were forwarded by staff to the Clerk of the Board on October 22, 1998 for the Board of Supervisors to consider prior to taking final action on Zone Change 98-3 and Area Plan 98-2. Therefore, we believe the spirit and intent of Zoning Code section 7-9-150.3(b) and F/TSP Section III.G.2.a. has been satisfied.

(2) **Appeal Issue No. 2:**

AP 98-2 is inconsistent with the goals, objectives, components, regulations and guidelines set forth in the Specific Plan, including (a) the goals and objectives relating to rural character and resource preservation; (b) the resources overlay component relating to wildlife corridors, oak woodlands, tree management/preservation, and streambeds; (c) the Bridlewood Residential District Regulations; (d) landscaping regulations; (e) grading standards relating to the maximum height of manufactured slopes and the 70% "natural open space" requirement; (f) area plan submittal

requirements; (g) grading, drainage and site planning guidelines; and (h) architectural guidelines.

PDSD Response:

AP 98-2 is subject to Zone Change (ZC) 98-3, an amendment to the F/TSP. ZC 98-3 includes the following provision:

"Any development shall be in compliance with every regulation of this District (BWR) and shall be exempt from all of the Regulations and Guidelines included in this Specific Plan other than those provided for by this District."

Nonetheless, AIT Attachment F documents that the proposed project is consistent with all major elements of the F/TSP except for the limitations on the height of manufactured slopes. Overall, the proposed project is in substantial compliance with the existing F/TSP although, per ZC 98-3, it is not required to be.

(3) **Appeal Issue No. 3:**

In approving AP 98-2, the Planning Commission failed to make adequate findings supported by substantial evidence in the record as required by the Orange County Zoning Code, the California Code of Civil Procedure, the Government Code, and all other applicable land use laws and regulations.

PDSD Response:

In the Planning Commission Resolution (AIT Attachment I) and the draft Board of Supervisors Resolution (AIT Attachment K) all findings required by law are included regarding AP 98-2.

(4) **Appeal Issue No. 4:**

There is no justification for exempting AP 98-2 from complying with the Specific Plan, and such an exemption coming at the request of a landowner/developer would set a bad precedent and would seriously undermine the important goals and objectives of the Specific Plan.

PDSD Response:

This issue is discussed in AIT Attachment F. AP 98-2 will provide major public benefits in the form of a large addition to O'Neill Regional Park, public riding and hiking trails, and a critical NCCP wildlife corridor.

(5) **Appeal Issue No. 5:**

AP 98-2 involves unavoidable adverse environmental impacts which cannot be mitigated to acceptable levels and will destroy hundreds of acres of oak woodlands, vernal ponds, coastal sage scrub habitat, and fauna including the coastal California gnatcatcher and the Riverside fairy shrimp. These impacts have not been adequately addressed and mitigated in the CEQA documentation prepared for AP 98-2.

PDSD Response:

The County concurs with Mr. Connor that the Saddleback Meadows project involves unavoidable adverse impacts which cannot be reduced to below a level of significance in the areas of vernal ponds and coastal sage scrub habitat. However, he fails to note that Addendum PA980103 is tiered from Certified Final Subsequent EIR 566, for which the Planning Commission made findings, statements in support of findings and a statement of overriding consideration regarding the impacts on the environment.

Condition Number 6 of the Planning Commission Resolution approving Area Plan AP 98-2 reads as follows:

> Prior to the issuance of any preliminary grading permit, approval of any activity that involves removal of any native vegetation from subject site, including clearing, grubbing, mowing, discing, trenching, grading, fuel modification, or other related construction related activities, the applicant shall obtain written proof from the U.S. Fish and Wildlife Service that said activity complies with the Federal Endangered Species Act. Additionally, the applicant shall obtain approval of a mitigation plan to replace lost ephemeral ponds at a 2 to 1 ratio. This evidence shall be submitted to the Manager, Subdivision and Grading, for review and approval, in consultation with the Manager, Environmental & Project Planning Services Division.

Following is a brief summary of the discussion from the Addendum and Staff Reports from the Planning & Development Services Department regarding the areas noted by the Appellant:

- **Biological Resources**

  The Biological Resources section of the Addendum discusses the biological resource impacts associated with the proposed 299 unit project in comparison with the approved 705 unit project. A biological issues analysis (Helix, 2/20/98) was prepared for the proposed 299 unit project and is included in the Addendum as Appendix G. The results of the analysis are presented under the four categories of corridor analysis, vegetation impacts, oak tree impacts, and sensitive species impacts, paralleling the discussion in Certified SEIR 566, and are also discussed in the body of the Addendum.

- **Wildlife Corridor**

  Implementation of the approved 705 unit project would directly impact wildlife movement through the project site, as it contains no design features which seek to facilitate wildlife movement. It cannot be assumed that wildlife would be able to move through the project site as currently designed. The approved project, as currently proposed, may hinder or preclude the preparation of the southern subregional preserve, due to restricted wildlife movement.

  In comparison, the proposed 299 unit project features a 400 foot wide wildlife corridor which will increase the viability of wildlife connectivity through Saddleback Meadows. The corridor, as planned in the proposed project, is expected to be wide enough for wildlife movement. Topography on either side of the corridor is conducive to wildlife

movement because it coincides with an area of natural canyon topography. The revegetation within the corridor is expected to provide the necessary cover for wildlife to add to the corridor's viability. The 50-foot wide spine road crossing the corridor is not expected to inhibit wildlife movement due to the low traffic levels anticipated for this road. The wildlife corridor is expected to function adequately.

- NCCP

  Impacts to coastal sage scrub resulting from implementation of the proposed 299 unit project would be similar to those for the approved 705 unit project. Under the approved project, 50.3 acres of coastal sage scrub would be impacted, while 45.8 acres will be impacted under the proposed project. In accordance with the NCCP, the loss of 45.8 acres of Venturan-Diegan transitional coastal sage scrub due to project implementation is less than the allowable five percent loss of the total coastal sage scrub in the subregion. Accordingly, the proposed project is in compliance with the NCCP. Mitigation measures related to accounting and preservation of coastal sage scrub and compliance with the NCCP through the securing of appropriate Resource Agency permits have been carried forward in the Addendum from Certified Final SEIR 566.

- **Riparian Resources**

  The loss of riparian resources associated with the proposed project, which include 0.6 acres of ephemeral pond (all but two of the ponds), 0.21 acres of southern sycamore riparian woodland, and 2.01 acres of mule fat scrub, are similar to, although slightly less than, those resulting from implementation of the approved 705 unit project. Mitigation measures from Certified SEIR 566, which require the securing of appropriate permits from the Resource Agencies for the protection of riparian resources, have been carried forward in the Addendum.

- **Coast Live Oak Woodland**

  Implementation of the approve project would result in the loss of 14.0 acres (284 individual trees) of the total 14.5 acres (298 individual trees) of coast live oak woodland on the project site. However, the proposed 299 unit project would impact only 5.7 acres (175 individual trees). A total of 123 oak trees (approximately 41 percent) occur outside the remedial grading zone and are considered preserved. Mitigation measures related to preservation and enhancement of the impacted coast live oak woodland habitat have been carried forward from Certified SEIR 566 to the Addendum.

- **Riverside Fairy Shrimp**

  As stated under Riparian Resources above, all but two of the ephemeral ponds, habitat supporting the Riverside fairy shrimp, will be directly impacted by both the approved and the proposed projects. Mitigation measures relating to the relocation and establishment of a mitigation plan designed to mitigate impacts to Riverside fairy shrimp/pond habitat have been carried forward from Certified SEIR 566 to the Addendum.

- Coastal California Gnatcatcher

  Previous field surveys have determined that on-site coastal sage scrub habitat is not occupied by coastal California gnatcatchers, although current surveys have not been completed to USFWS presence/absence protocol. As such, on-site coastal sage scrub habitats must be considered occupied by coastal California gnatcatcher until proven otherwise. Mitigation measures relating to conducting adequate studies to determine the presence of the coastal California gnatcatcher have been carried forward from Certified SEIR 566 to the Addendum.

(6) Appeal Issue No. 6:

AP 98-2 involves massive and unacceptable grading impacts which would subjected the residents of the Trabuco Canyon area to several years of excessive noise, dust, and traffic delays associated with excavating and recompacting approximately nine million cubic yards of soil which will remain exposed to the wind during dry seasons and the rain during wet seasons over the course of several years before the rough grading is completed. These impacts have not been adequately addressed and mitigated in the CEQA documentation prepared for AP 98-2;

PDSD Response:

The grading impacts of the proposed project have been exhaustively studied in both Proposed Final EIR 561 and Certified Final Subsequent EIR 566. In addition, a grading plan update has been prepared for the Addendum.

Grading for this proposed project is entirely on-site; i.e., no trucking of material on-site or off-site will be required. All grading shall be in compliance with the Grading Code, Grading Manual and conditions of approval of AP 98-2 and related Tentative Tract Map 15230. In addition to addressing this issue in AIT Attachments L, M, and N, an addition CEQA review is required before the issuance of any grading permits.

The conclusions of the Addendum are as follows:

Due to its larger scale and greater intensity, implementation of the approved project for 705 units would require 2.6 million cubic yards of conventional grading to achieve planned elevations and profiles and associated access roadways and 8.9 million cubic yards of remedial grading to stabilize the proposed slopes through the creation of buttresses, shear keys, and stabilization fills for a total grading quantity of 11.5 million cubic yards. In comparison, implementation of the proposed project for 299 units would require approximately 2.1 million cubic yards of conventional grading and 6.8 million cubic yards of remedial grading for a total grading quantity of 8.9 million cubic yards. Accordingly, the required grading for the proposed project would require 2.6 million cubic yards less than that required to implement the proposed project. Grading quantities decrease under the Contingency Plan as a result of the reduced earthwork required to create the landform grading along the visually prominent project edges.

In addition to the foregoing, prior to the development of the proposed project, the applicant must obtain the approval of a Use Permit by the Planning Commission, thereby triggering one additional environmental documentation.

(7) Appeal Issue No. 7:

AP 98-2 poses unacceptable geotechnical hazards and risks which would endanger and adversely affect the safety, usability, or stability of the land holdings immediately adjacent to the Saddleback Meadows property (the "Property"), including St. Michael's Abbey and the Ramakrishna Monastery, both of which are currently experiencing structural damage due to soils subsidence and instability. These impacts have not been adequately addressed and mitigated in the CEQA documentation prepared for AP98-2;

PDSD Response:

Implementation of the proposed project would result in a positive impact regarding the geological stability of the adjacent St. Michael's Abbey site. The extensive remedial grading required on the subject site will stabilize and/or remove ancient landslides which currently threaten the Abbey site.

Extensive review has occurred regarding the geotechnical features and impacts of the proposed project site in conjunction with Proposed Final EIR 561 and Certified Final Subsequent EIR 566. In addition, a geotechnical update has been prepared as Appendix H to the Addendum. The conclusions of the Addendum are as follows:

- The proposed project will not result in the creation of new substantial impacts;
- The Contingency Plan will result in a reduction in geotechnical impacts; and
- The imposition of the 50 Soils/Geology/Grading Mitigation Measures will reduce impacts to below a level of significance.

(8) Appeal Issue No. 8:

AP 98-2 will permanently alter and destroy the natural buffer zones which, for almost 50 years have served as part of a monastic enclave for two religious groups: Vedanta which founded the Ramakrishna Monastery in the late 40's and the Norbertines which founded St. Michael's Abbey in the early 60's. These impacts have not been adequately addressed and mitigated in the CEQA documentation prepared for AP 98-2;

PDSD Response:

Major consideration was devoted to analyzing the proposed project's impacts upon the Ramakrishna Monastery and St. Michael's Abbey. These fall primarily in two categories:

- Land Use Compatibility

  The land use compatibility impacts associated with the approved 705 unit project are significant, as demonstrated in Certified SEIR 566 and reiterated in the Addendum. This

is due to the approved project's high number of units and attending intensity-related impacts.

The subject site is designated 1B Suburban Residential in the Land Use Element (LUE) of the Orange County General Plan. Density allowable under Suburban Residential ranges from 0.5 units per acre to 18 units per acre.

In comparison, the proposed project will result in reduced land use compatibility impacts, largely a result of the substantially fewer number of units. Additionally, the proposed project provides additional buffering through site design utilizing landform berming and contour grading in concert with landscaping to further screen and filter views of the development edges. A major design feature of the proposed project for 299 units is the single loaded primary spine road (residential development south of the spine road and landform grading to the north), which is intended to screen off-site views of the on-site development area. The proposed project also features a cluster design concept, providing room for a wildlife movement corridor system and effectively providing visual relief through the apportionment of the development into three residential enclaves. Additional single-family residential dwellings were located within the north central portion of the project site in the approved project, as compared to the proposed project, which has undisturbed open space in the same area.

- **Aesthetics**

As with the approved project, the proposed project for 299 units would substantially alter the existing topography and visual character of the project site. The landform/contour grading, berming, and wildlife corridor system included in the proposed project would help to break up the long linear massing of housing which would result with implementation of the approved 705 unit project and create areas of housing separated by 150 to 500 foot stretches of open space.

Visual impacts to St. Michael's Abbey would be substantially reduced under the proposed project as compared to the approved project due to the relocation of residential lots north of the on-site spine road, extensive landform grading, and implementation of a trail head/staging area. View impacts of the project site from the Ramakrishna Monastery would be reduced as compared with the approved project by implementation of the berming/contour grading, the wildlife corridor system and associated open space areas, and through the elimination of several loffel walls which would reduce the height and intensity of adjacent manufactured slopes.

(9) Appeal Issue No. 9:

The proposed rough grading, fuel modification, and drainage activities associated with the development of the 299-Unit Project pose the risk of triggering the reverter clause in the March 1974 Agreement between Vedanta and the County of Orange (the "County"), thereby entitling Vedanta to regain title and possession of approximately 240 acres of O'Neill Park adjacent to the Ramakrishna Monastery. This is a highly unnecessary and unacceptable risk of losing valuable parkland and the impact of such

a loss has not been adequately addressed and mitigated in the CEQA documentation prepared for AP 98-2;

PDSD Response:

This issue was investigated by County Counsel and Harbors, Beaches and Parks staff approximately two years ago. It was reported at that time that there is no significant possibility of a reversion occurring on the park site.

(10) **Appeal Issue No. 10:**

AP 98-2 would jeopardize or destroy a critical habitat connection between the NCCP Central/Coastal and Southern Subregions of the County by providing an inadequate wildlife corridor to connect Whiting Ranch Wilderness Park and O'Neill Park. In addition, the proposed loss of coastal sage scrub habit associated with the development of the 299-Unit Project would preclude connectivity between areas of high habitat value and, as a result, would preclude or delay the preparation and finalization of the Southern Subregion NCCP. These impacts have not been adequately addressed and mitigated in the CEQA documentation prepared for AP 98-2;

PDSD Response:

The Corridor placement and design featured in the proposed Contingency Plan was also featured in Proposed Final EIR 561 and Certified Final Subsequent EIR (CFSEIR) 566. CFSEIR 566 was certified by the Planning Commission and was appealed to and upheld by the Board of Supervisors. Alternative 4 of CFSEIR 566 as well as Alternatives 8 and 9 of Proposed Final EIR 561 all reflect the placement of the corridor at this location. The design and dimensions of the Corridor were derived through previous consultation with the Resource Agencies during the environmental review process associated with these two previous EIRs.

In their correspondence to the County, the Resource Agencies did express a preference for the lower density Alternatives contained within the previous EIRs, notwithstanding their verbal concurrence with the basic design parameters of the 400 foot wide Corridor as featured in the proposed Contingency Plan, although they have expressed a preference for a much wider corridor. Accordingly, the Resource Agency's position regarding the Wildlife Corridor featured in the Contingency Plan remains the same in that their previous comments included consideration of an identical corridor.

With regard to the Southern Subregion, NCCP related comments have been evaluated in both Certified Final Subsequent EIR 566 and Proposed Final EIR 561. The 299-unit Contingency Plan has incorporated many of the concerns identified in the two (2) previous EIRs relative to the NCCP, including a central wildlife corridor, preservation of, or replacement measures to ensure the continued sustainability of, valuable biological resources.

(11) Appeal Issue No. 11:

In violation of CEQA and the CEQA Guidelines, the California Department of Fish & Game and the U.S. Fish & Wildlife Service (collectively, the "Resource Agencies") were not properly and adequately and consulted by the County in connection with AP 98-2, particularly with respect to the input regarding an appropriate wildlife corridor a possible clustered development on approximately 35-40 acres would be compatible therewith.

PDSD Response:

The Planning & Development Services Department reported to the Planning Commission and members of the public that the Addendum was not distributed to the U.S. Fish and Wildlife Service and the California Department of Fish and Game (Resource Agencies) prior to the August 25, 1998 hearing. Public testimony indicated that the concerns and position of the Resources Agencies had changed regarding the proposed project and site.

Based upon the foregoing, following the Planning Commission's August 25 hearing and over 30 days prior to its final decision on the Area Plan, on October 7, 1998, PDSD staff took two steps. First, it provided copies of the Addendum to the Resource Agencies; and second, PDSD staff met with representatives of the Agencies. The purpose of this meeting, held on August 31, 1998, was to discuss Addendum PA980103 and the CEQA process as it relates to the proposed Contingency Plan. This meeting was constructive in clarifying the process and alleviating their concerns regarding the relationship of the Contingency Plan to Certified Final Subsequent EIR 566.

As noted elsewhere in this Appeal Issues discussion, the Contingency Plan, as it relates to key issues of concern, has been previously reviewed by the Resources Agencies in conjunction with Proposed Final EIR 561 and Certified Final Subsequent EIR 566.

It should also be noted that Section 15164 of the CEQA Guidelines does not require circulation or response to comments received on an Addendum. However, it is County policy to fully inform all parties who have exhibited interest in a given project as to that project's latest status. Accordingly, in addition to sending all commentators on the Addendum a copy of the Response to Comments and staff reports, staff sent copies of staff reports to all commentators on Certified Final Subsequent EIR 566. In so doing, PDSD has gone beyond the requirements of CEQA, with regard to Addendum circulation, by informing all commentators on the parent document (CFSEIR 566) of the Addendum's status.

(12) Appeal Issue No. 12:

AP 98-2 constitutes a complete revision and redesign of the 705-Unit mobilehome project authorized by Tract Map No. 10692 (the "705-Unit Project") and thus constitutes a new project which requires preparation of a new Environmental Impact Report ("EIR"). Alternatively, a Subsequent EIR should be prepared for AP 98-2 in light of (a) the major project changes associated with the 299-Unit Project, Including the new wildlife corridor placement, on site drainage of storm ,irrigation, and urban runoff (including the daily discharge of toxic materials into pristine areas of O'Neill

Park), and additional grading in the biologically-sensitive southeast canyon areas of the Property; (b) the newly-discovered presence of coastal California gnatcatchers on the Property and the outdated and incomplete nature of the gnatcatcher surveys of the Property which the Resource Agencies asked to be updated almost two years ago; (c) innovative project alternatives not previously considered in the prior CEQA documentation, including the 65-Unit Alternative and the 44/178 Alternative; and (d) feasible mitigation measures not previously considered, such as a 100% performance bond to cover the possibility of the developer's failure to complete all conventional and remedial grading operations;

PDSD Response:

During the past four (4) years, the Saddleback Meadows site has received detailed environmental reviews for planning compliance with CEQA on two separate previous occasions:

- Proposed Final EIR 561 was prepared in 1995-96 for a 318-unit, conventional SFD development on lots averaging 5000 sq. ft. The application, which included a Zone Change, Area Plan and Tentative Tract Map, was not not approved by the Board of Supervisors; and

- Certified Final Subsequent EIR 566 was prepared in conjunction with Grading Permit Application GA960048 for recorded Tract 10692 for a 705-unit manufactured housing subdivison. This EIR was certified by the Planning Commission on December 3, 1997 and, upon appeal, the EIR certification was upheld by the Orange County Board of Supervisors on January 27, 1998.

The currently proposed Contingency Plan for 299 residential units was examined previously for this site in the form of alternatives contained in Proposed Final EIR 561 and Certified Subsequent EIR 566, although with slightly differing site plans. The alternatives contained in the Appendix of the Addendum are Alternative 4 from Certified SEIR 566 and Alternatives 8 and 9 from Proposed FEIR 561, which were previously evaluated. The Contingency Plan results from an extended evaluation by the applicant to address environmental concerns previously analyzed by reconfiguring the proposed project density, land use and location

The CEQA Guidelines provide guidance for use of previously certified EIRs with a subsequent activity. Specifically, where a previous EIR has been certified for a larger project, the later activity or project is examined in light of the previously certified EIR. The Guidelines also provide that a Tiered EIR may be incorporated into an Addendum to an EIR to address significant and cumulative program impacts analyzed and considered in the Tiered EIR (Section 15164).

1. **Explanation of a Subsequent EIR:** Guidelines Section 15162 specify where an EIR has been previously prepared, an EIR need not be prepared for subsequent actions unless any of the following conditions prevail:

- Subsequent changes are proposed in the project which will require important revisions of the previous EIR due to the involvement of new significant environmental impacts not considered in the previous EIR;
- Substantial changes occur with respect to circumstances under which the project is undertaken, or
- New information of substantial importance to the project becomes available.

2. **Explanation of an Addendum EIR:** According to CEQA Guidelines Section 15164 (a), the Lead Agency shall prepare an Addendum to an EIR if the following prevail:

   - None of the conditions described in Section 15162 calling for the preparation of a Subsequent EIR have occurred;
   - Only minor technical changes or additions are necessary to make the EIR under consideration adequate under CEQA;
   - The changes made by the Addendum do not raise important new issues about the significant effects on the environment.

None of the conditions described in Section 15162 calling for preparing a Supplemental or Subsequent EIR have occurred, and changes related to the proposed project are of a minor nature. The Planning & Development Services Department has determined that only minor technical changes to FEIR 566 are necessary in order to properly address the current Project, that FEIR 566 adequately analyzes all of the major impacts of the proposed project, that no major changes are proposed with respect to the circumstances surrounding this project, and that no new information of significance has become available that would substantially affect the validity of FEIR 566. Therefore, an Addendum is appropriate for the proposed project in order to provide project specific analysis, to provide clarification and address minor changes to FEIR 566.

(13) Appeal Issue No. 13:

Final Subsequent Environmental Impact Report No. 566 ("FSEIR 566") and the Addendum thereto are seriously deficient and inadequate to serve as the CEQA documentation for AP 98-2 in that they fail to properly address the adverse impacts, reasonable project alternatives, and feasible mitigation measures associated with that Project and, the extent that County staff seeks to rely on the FSEIR (566) as the EIR for AP 98-2, the County has failed to provide adequate public notice of its intended action to responsible state and federal agencies, including the Recourse Agencies, and to the general public;

PDSD Response:

Based upon public testimony from the Appellant, among others, the Planning Commission requested clarification on the connection between other Alternatives and the Contingency Plan, particularly alternatives associated with the negotiations that are taking place between St. Michaels Abbey, the Vedanta Society, the County and California Quartet. The Planning

Commission asked why such alternative were not included in the Addendum or brought forth in some other way to the Commission.

PDSD was presented with the Contingency Plan as a stand alone project. It has been analyzed as such. Proposed Final EIR 561 and Certified Final Subsequent EIR 566 analyzed a full range of alternatives, ranging from the No Project/No Development Alternative to the 705-unit manufactured housing project. No other alternative has been submitted to the County for environmental review.

An Addendum was determined to be the appropriate environmental documentation for the proposal based on CEQA Guidelines as discussed above and in the previous staff report. Should the identified alternatives be submitted to the County, they will be subjected to the same CEQA environmental documentation requirements as the proposed project.

(14) Appeal Issue No. 14:

In approving AP 98-2, the Planning Commission violated CEQA and the CEQA Guidelines by failing to (a) make adequate findings supported by substantial evidence in the record, (b) adopt an adequate mitigation monitoring program, and (c) adopt and adequate statement of overriding considerations with respect to AP 98-2;

PDSD Response:

In approving the Area Plan, the Planning Commission made a finding that the proposed project was covered by Addendum PA980103 and Certified Final Subsequent EIR 566. In so doing, it adopted the Mitigation Monitoring Program of EIR 566, the Findings and Facts in Support of the Findings and the Statement of Overriding Considerations.

(15) Appeal Issue No. 15:

Although the 299-Unit Project involves fewer residential units that the 750-Unit Project, it still involves massively destructive environmental impacts and, in certain respects, far worse impacts than the 705-Unit Project in terms of drainage geotechnical hazards, and grading impacts on St. Michael's Abbey and the Ramakrishna Monastery. Their impacts have not been adequately addressed and mitigated in the CEQA documentation prepared for AP 98-2.

PDSD Response:

In accordance with Guidelines Section 15063, the Initial Study was completed to determine the possible impacts of the proposed Contingency Plan. Following is a listing of key documents, County Divisions, interest groups, and Resource Agencies utilized in the overall review process for Saddleback Meadows and incorporated into the Initial Study review process.

1. Documents - Certified Final Subsequent EIR 566, certified by the Orange County Planning Commission for a 705-unit manufactured single-family residential project for the same site; Proposed Final EIR 561, prepared for a 318-unit conventional single-family residential project for the same site; Foothill/Trabuco Specific Plan FEIR 531

and Specific Plan Land Use Regulations; Site Plan, Tentative Tract Maps and Plot Plans for the proposed project;

2. **Comments from Public Interest Groups** - Input received from the public and interested parties on the two previous projects on the subject site, including: Rural Canyon Residents Association; The Vedanta Society; Foothill/Trabuco Specific Plan Review Board; St. Michael's Abbey; Portola Hills HOA I and Portola Hills HOA II; Hidden Ridge HOA; Canyon View HOA; ETI Corral 357 Orange County Horsemen Assoc.; Serrano Creek Ranch Equestrian Center; the Gabrieleno Indians; Sierra Club; and National Audubon Society

3. **Comments from State and Federal Public Resources Agencies** - Input received from the Public Resources Agencies on the two previous projects proposed on the subject site, including: US Fish and Wildlife Service; CA Department of Fish & Game; and US Army Corps of Engineers.

4. **Comments from the Technical Divisions of the County** - Technical input from divisions of the County including: PDS: Subdivision & Grading Services Division, - Geotechnical & Grading Plan Check Section; NPDES Section; and Traffic Section; Current Planning Services Division - Orange County Natural Communities Conservation Program; Environmental & Project Planning Services Division - Advance Planning and Transportation Planning Sections; Building Permits Services Division - Acoustics Section; Public Facilities & Resources Department: HBP Division; Environmental Resources Division; Traffic Engineering Division; Orange County Fire Authority;

5. **Field checks** of proposed project site and the project vicinity; and

6. **CEQA** Checklist - A detailed analysis of the CEQA Environmental Checklist.

Based upon the above, the Planning & Development Services Department determined that an Addendum, combined with Certified Final Subsequent EIR 566, is the appropriate environmental documentation for the proposed Contingency Plan, Zone Change ZC98-3 and AP98-2.

After consideration of Addendum PA980103, the Staff Reports and presentations, public comments and issues raised at the Planning Commission hearings, the Orange County Planning Commission concurred with the determination of the Planning & Development Services Department.

Re: Saddleback Meadows - Withdrawl of Appeal of Planning Commission Approval of Area Plan 98-2

Dear Mr. Mathews:

On behalf of California Quartet, Ltd., we hereby formally withdraw our appeal of the Planning Commission's decision of October 7, 1998 on Area Plan 98-2 for Saddleback Meadows, which had been appealed pursuant to Orange County Code section 7-9-150.4 by a formal filing of appeal on October 8, 1998.

Should have any questions conceming this appeal, please contact me at (714) 253-2907.

Very truly yours,

MEETING DATE	SUBJECT	SUPV. DIST.
November 24, 1998	APPEAL OF SADDLEBACK MEADOWS SUBDIVISION MAPS TENTATIVE TRACT MAP 15784 AND VESTING TENTATIVE TRACT MAP 15230 OF CALIFORNIA QUARTET, LTD	3

SUMMARY OF REQUEST (Description for agenda)

Consider the appeal of Tentative Tract Map (TTM) 15784 and Vesting Tentative Tract Map (VTTM) 15230 and uphold the Subdivision Committee action approving TTM 15784 and VTTM 15230.

ADDITIONAL DATA:

On October 21, 1998, the Orange County Subdivision Committee conducted a public hearing and approved TTM 15784 for financing purposes only and VTTM 15230 to create 299 residential building sites. Both subdivision maps cover the entirety of Saddleback Meadows and both maps are directly related to Saddleback Meadows Zone Change 98-3 and Area Plan 98-2, discussed in your AIT for November 3, 1998. (Item #55)

On October 23, 1998, TTM 15784 and VTTM 15230 were appealed to your Board by California Quartet, LTD. (Attachment A)

Re: Saddleback Meadows - Appeal of Subdivision Committee's October 21, 1998 Actions on TTM 15784 (A Map) and VTTM 15230 (B Map)

Dear Mr. Mathews:

On behalf of California Quartet, Ltd., pursuant to Orange County Subdivision Code section 7-9-259(f), we hereby appeal the Subdivision Committee's decision of October 21, 1998 approving the following maps: Tentative Tract Map 15784 Saddleback Meadows (A Map) and Vesting Tentative Tract Map 15230 Saddleback Meadows (B Map); and that such appeal be forwarded to be heard directly by the Orange County Board of Supervisors.

Should you have any questions concerning this appeal, please contact me at (714) 253-2907.

ADDITIONAL DATA:

BACKGROUND

Attachment C contains a detailed chronology of events from 1978 regarding Saddleback Meadows. In summary, the existing Saddleback Meadows Planned Community land use regulations were originally approved by the County of Orange in 1980. Saddleback Meadows Tract Map 10692 was recorded in 1988. When the Foothill/Trabuco Specific Plan (F/TSP) was adopted in 1991, the Saddleback Meadows Planned Community District Regulations and Recorded Tract Map 10692 were incorporated into the F/TSP. Per those regulations, the developer is only required to obtain an administratively approved grading permit and building permits in order to develop 705 manufactured homes.

In 1996, the Planning Commission and Board of Supervisors considered several development alternatives, but did not approve any of them. One of the alternatives, which was recommended by staff, was for 299 dwelling units. That alterative is similar to the applicant's current proposal called the "Contingency Plan". This plan is being processed in the event negotiations involving the Board of Supervisors and other parties to purchase Saddleback Meadows do not come to fruition.

On October 6, 1998, during your discussion of a possible purchase of Saddleback Meadows (Agenda Item #100) you directed that the landowner's application for 299 units be presented to your Board on this date. On October 7, 1998, the Planning Commission, by a vote of 4 to 1, recommended that your Board approve ZC 98-3 and EIR Addendum PA 980103. They also approved related AP 98-2. On October 8, 1998, AP 98-2 was appealed to your Board by California Quartet, Ltd. (Attachment A).

PROJECT DESCRIPTION

Location and Surrounding Land Uses

The Saddleback Meadows property (technically referred to as the Bridlewood Residential District) is located on the easterly side of El Toro Road and north of Valley Vista Way. North of the project site is St. Michael's Abbey, which operates a boarding school for boys. South of the project site is Hidden Hills/Hidden Ridge residential development, O'Neill Regional Park, and the Ramakrishna Monastery. West of the project site and El Toro Road is the Portola Hills residential development. East of the property over a major ridgeline is the Trabuco Canyon Residential District. (See Attachment B, Regional Map.)

Direction	Existing Use	Density	Zoning
Project Site	Agriculture	N/A	F/T Specific Plan
North	School/Abbey	N/A	F/T Specific Plan
South	Residential	3.1 du/ac.	Conventional Zoning
East	Open Space	N/A	F/T Specific Plan
West	Residential	3.2 du/ac.	Portola Hills PC

The land is presently used for grazing cattle and has been used for farming. There are many steep slopes and much erosion due to man's influence and naturally unstable geology. Most of the property rests on ancient landslides that remain unstable. Much of the site has been invaded by non-native plants.

Design Summary

- Total property: 222.2 acres
- 299 standard detached single-family homes
- Proposed open space dedication: 158.5 acres
- Density: 1.3 dwelling units per acre
- Average residential lot: 6,672 sq. ft.

Zone Change 98-3

The zone change (see Attachment D) would amend the F/TSP Bridlewood Residential District Regulations as follows:

1. Replace the reference to "Saddleback Meadows Planned Community" with "Residential Estates (Planned Development)"
2. Lower the maximum number of homes from 705 to 299.
3. Require a minimum of 155 acres of dedicated open space. (The Area Plan proposes 158.5 acres.)
4. Add the requirement for an approved area plan prior to any subdivision or grading activity.
5. Add the requirement for an approved use permit prior to issuance of building permits.
6. Require a performance bond prior to issuance of a grading permit.
7. Eliminate the requirement for 66 2/3 percent affordable housing.
8. Eliminate the requirement for a 1.7-acre neighborhood commercial site along El Toro Road.
9. Maintain the existing exemption from all the other regulations and guidelines in the F/TSP.

Area Plan 98-2

The applicant's proposed area plan (see Attachment E) consists of a text and four concept plans: (1) Development Plan, (2) Landscape and Re-vegetation, (3) Grading, and (4) Open Space/Trails. The area plan also includes a lengthy discussion of "rural character" with several illustrations.

PROJECT ANALYSIS

The analysis of planning issues is contained in Attachment F. The analysis of environmental and CEQA issues is contained in Attachment L. Public comments on this project received prior to October 30, 1998, will be transmitted to you.

F/TSP Review Board

This project was distributed for public review on August 7, 1998. However, no distribution was made to the F/TS Review Board at that time because there were no members. On September 22, 1998, the Board of Supervisors appointed five members to the Review Board. On September 24th each Review Board member was given a cop of the proposed project, the environmental documentation and staff reports. They conducted a public meeting o September 29th and continued it to October 16, 1998. Any comments/recommendations from the Review Board will be transmitted to you.

Collins, Subdivision and Grading Services
Anderson, Subdivision and Grading Services
Ray Chandos, Rural Canyons Conservation Fund
Pete DeSimone
Warren Singleton
Carl Ballard
Carol B. Sherman, Law Offices of William D. Ross
Pike Oliver, California Quartet
Michael McCollum, McCollum & Associates
Mike McKnight
Kris Weber, Hunsaker & Associates
Mari Schroeder, Chamber Group
Ed Connor, Connor, Culver, Blake & Griffin LLP

ITEM 1: PUBLIC HEARING - TENTATIVE TRACT MAP NO. 15784

Bellaschi reviewed the project noting receipt of two additional comments from civic groups - the Foothill/Trabuco Specific Plan Review Board and David Blum, a Trabuco Canyon resident. There were two changes to the findings, and no changes to the conditions.

McGill noted for the record that both maps were mailed to the Foothill/Trabuco Specific Plan Review Board on September 25, as verified by Bellaschi, which is within the 21-day notice period. He also noted that correspondence/comments were received from them requesting that we do not take action on any Saddleback Meadows project and that we do not approve the proposed Saddleback Meadows projects. McGill requested that both tracts be heard simutaneously and voted on separately.

Britton noted a change to finding 11 - "The development of this project will not preclude prevent the preparation of the Southern Subregion NCCP". This relates to Tim Neely's memo of October 19, which parallels his verbal presentation before the Planning Commission.

At the conclusion of the public hearing described under Item 2.

ITEM 2: PUBLIC HEARING - TENTATIVE TRACT MAP NO. 15230 (VESTING)

Bellaschi reviewed the project noting one change to the findings and a change to condition #9. A condition was added regarding Official Vehicular Road Access Easement.

Britton stated that the Mitigation Measures needed to be brought forward and added to the conditions of approval and the same information (as on the previous tract) regarding NCCP be included on this map.

McGill spoke about the Planning Commission's approval of related Zone Change 98-3 and Area Plan 98-2.

Kris Weber, Hunsaker & Associates, representing California Quartet, thanked staff members for all of their efforts and stated that he was in agreement with the conditions and changes as proposed, along with the revisions and amendments. He reserved the right to respond to any additional testimony.

Ray Chandos, Rural Canyons Conservation Fund, requested that the committee not approve this item.

Peter DeSimone, representing the National Audubon Society, and a resident of Trabuco Canyon, stated that he opposed the project.

Ed Connor, of Connors, Culver, Blake & Griffin, LLP, representing Norbertine Fathers of Orange, the Saddleback Meadows Land Conservatory LLC, and the Vedanta Society of Southern California stated that his clients oppose these projects and request an immediate halt to the proceedings.

Mr. Connor closed stressing his opposition to the project and requested the committee to wait to vote on this project.

Warren Singleton, Technical Advisor and Civil Engineer, testified.

Kris Weber stated that the drainage is more than adequate for this project; the grading plan has been reviewed by the grading contractor and he has assured us that 30,000 cubic yards per day is not unreasonable, within a 12- 14 month period; as to the performance bond, he stated that 30% is the standard, and this project should not require anything higher than the standard practice.

Mike McKnight, TPG Management, added that there would be off-site fuel modification on the northerly end of the project.

Pike Oliver stated that Chris Weber had taken care of the technical issues and in terms of the biological issues 12-13 surveys have been conducted since 1989. The biologists who conducted these surveys were independent and licensed, and formulated independent conclusions. As far as specific plan compliance, he stated that this was not an appropriate subject for discussion and that the staff reports prepared for this project are extensive and detailed.

Carol Sherman responded by saying that the forum for the issues raised today is the Planning Commission. The area plan and zone change are consistent with County policy, the standard NPDES plan for drainage will be required prior to grading, claims regarding critical habitat, the Gnatcatcher and Fairy Shrimp, are inadequate, and the 21-day notice period does not apply to the Subdivision Committee.

A motion was made by McGill to approve Tentative Tract Map 15784 as amended. The motion was seconded by Britton and unanimously approved.

A motion was made by Britton to approve Tentative Tract Map 15230 (Vesting) as amended. The motion was seconded by McGill and unanimously approved.

ITEM 3: PUBLIC COMMENTS

There were no public comments

ADJOURNMENT:

A motion was made by Bavan to adjourn the meeting at 3:20. The motion was seconded by the Chair and adjourned.

SUBJECT: TENTATIVE TRACT MAP NO. 15784

On October 21, 1998 the Orange County Subdivision Committee approved the above-referenced tentative tract, subject to the findings and conditions in the attached Orange County Subdivision Committee Final Report.

The Committee's action conditionally approving this tentative map is valid for a period of three (3) years and will expire on October 21, 2001. The expiration date may be extended for a maximum of five (5) additional years provided a written request is filed with the Director of Planning and Development Services, prior to the expiration date shown above.

You are hereby notified that the fees, dedications, reservations or other exactions imposed on this project are as described in this approval, as well as the reports and actions accompanying this approval, and that the 90-day approval period in which the applicant may protest pursuant to Government Code Section 66020 has begun.

You are also on notice that the 90-day approval period in which the applicant may protest pursuant to Government Code Section 66020 has begun.

To avoid unnecessary delays in the recording of this tract map, we suggest that you contact Moe Idris at 834-3470 regarding compliance with all conditions of approval, prior to the filing of the tract map with the County Surveyor.

Very truly yours,

Patrick Stanton

FINAL

TENTATIVE TRACT MAP REPORT

DATE: October 21, 1998

SUBJECT: Tentative Tract Map No. 15784

SUBDIVIDER: California Quartet, LTD

ENGINEER: Hunsaker & Associates

SUBDIVISION SECTION CONTACT: Vic Bellaschi 834-5045

LOCATION: On the easterly side of El Toro Road approximately 1,500 feet southerly of Live Oak Canyon Road in the Cooks Corner-Live Oak Canyon area.

ASSESSORS PARCEL NO. 856-011-portion 20; 856-071-01 thru 09; 856-081-01 thru 12; 856-091-01 thru 11.

PROJECT NO. EP/PP 69881

SUMMARY: Proposes a subdivision of approximately 222 acres of land into 7 lots for conveyance purposes only.

NOTE: See TT 15230 for the future development of the subject property.

NOTIFICATION:

All federal, state, and county departments, divisions and agencies having cognizance of the affected area, the Foothill/Trabuco Specific Plan Review Board, the Marine Corps Air Station, the Rural Canyons Conservation Fund, and all property owners within 300 feet of this property.

GENERAL PLAN CONSISTENCY/ZONING COMPLIANCE:

Land Use Element: 1B Suburban Residential (.5-18 du/ac)

Community Profile: 1.2 Low Density Residential

Specific Plan: Foothill/Trabuco Specific Plan
Bridlewood Residential (BWR) District

This project, as conditioned, is consistent with and in conformance with the General Plan and its implementing documents.

COMPLIANCE WITH THE CALIFORNIA ENVIRONMENTAL QUALITY ACT:

The proposed project is covered by Final EIR No. 566 previously certified on June 2, 1998 and Addendum PA 980103. Prior to project approval, the Subdivision Committee must assert that, together, they are adequate to satisfy the requirements of CEQA for the proposed project.

OFFICIAL COPY

EXISTING CONDITIONS:

The subject property is sloping undeveloped terrain.

DRAINAGE:

Master Plan of Drainage requirements will be a consideration in connection with the future development of the subject property.

SOUND CONSIDERATION:

This property area is impacted by intrusive noises. The extent of mitigation required can be determined in connection with the acoustical report which will be required when future development is proposed.

RECREATION AND OPEN SPACE:

Master Plan of Regional Recreation Facilities, Master Plan of Regional Riding and Hiking Trails, Master Plan of Local Parks (Local Park Code), Resources Element – Open Space Component and Master Plan of Countywide Bikeways will be considerations with the future development.

PUBLIC SERVICES AND UTILITIES:

In connection with the future development, schools, water service, sewer service, cable service, water quality control, fire protection and safety, and library services will be considerations.

CIRCULATION:

Regional and internal infrastructure requirements will be a consideration when any future development is proposed. This will include participation in the applicable Major Thoroughfare and Bridge Fee Programs.

COMMENTS FROM CIVIC GROUPS AND OTHERS NOTIFIED:

Comments were received from Ray Chandos – Secretary/Treasurer of the Rural Canyons Conservation Fund and the Foothill/Trabuco Specific Plan Review Board.

OFFICIAL COPY

SUBDIVISION COMMITTEE ACTION:

Tentative Tract No. 15784 is approved, and the approval includes the following 11 findings, and is subject to the 4 conditions which follow the findings:

Findings:

I. That the proposed map is consistent with the Orange County General Plan.

II. That the design and improvement of the proposed subdivision are consistent with the Orange County General Plan.

III. That the proposed site is physically suitable for the proposed type of development.

IV. That the proposed site is physically suitable for the proposed density of development.

V. That the design of the subdivision or the proposed improvements are not likely to cause substantial environmental damage or substantial and avoidable injury to fish or wildlife or their habitat.

VI. That the design of the subdivision and the type of improvements proposed are not likely to cause serious public health problems.

VII. That the design of the subdivision and the type of improvements proposed will not conflict with easements of record or established by court judgment acquired by the public-at-large for access through or use of property within the proposed subdivision.

VIII. That the proposed subdivision complies with the requirements set forth in the Orange County Subdivision Code and the Orange County Zoning Code.

IX. That the Subdivision Committee has considered Final EIR 566, previously certified on 6/2/98, and Addendum PA 980103 prior to project approval. Together they are approved for the proposed project based upon the following findings:

1. Together, these documents are adequate to satisfy the requirements of CEQA by the decision-maker;

2. The additions, clarifications, and/or changes to the original document caused by the Addendum do not raise new significant issues which were not addressed by the EIR; and

3. The approval of the EIR and Addendum for the proposed project reflect the independent judgment of the Subdivision Committee.

X. That pursuant to Section 711.4 of the California Fish and Game Code, this project is not exempt from the required fees as it has been determined that adverse impacts to wildlife resources will result from the project. The required fees will need to be paid.

XI. The development of this project will not preclude or prevent the preparation of the Southern Subregion NCCP.

Conditions:

Codes (for time of performance/type of condition)

(G)	Grading Permit	(S)	Standard Condition
(R)	Recordation	(SS)	Site Specific Condition
(NA)	Timing not Specified		

(G) 1. SG SG G GRADING RESTRICTION
(S) Notwithstanding any grading/elevations that are shown on the tentative tract map, or the provisions of Orange County Zoning Code Section 7-9-139 (Grading and Excavation), approval of this tentative tract map does not authorize the issuance of any grading permits.

(NA)2. SG NA NA INDEMNIFICATION
(S) Subdivider shall defend, indemnify, and hold harmless the County of Orange, its officers, agents and employees from any claim, action or proceeding against the County, its officers, agents or employees to attack, set aside, void, or annul an approval of the Board of Supervisors, Planning Commission, Zoning Administrator, or Subdivision Committee concerning this subdivision, which action is brought within the time period provided for in Government Code Section 66499.37. The County shall promptly notify the subdivider of any such claim, action or proceeding and shall cooperate fully in the defense. This condition is imposed pursuant to Government Code Section 66474.9(b).

(R) 3. SG SG R CONVEYANCE MAP
(SS) Prior to the recordation of the final tract map, a note shall be placed on the final tract map stating, "This tract map is for conveyance purposes only and the lots created by this tract map are not legal building sites" in a manner meeting the approval of the Manager, Subdivision and Grading.

(SS)4. CP NOTIFICATION
This condition of approval is intended to give you notice that the fees, dedications, reservations or other exactions imposed on this project are as described in this approval and the reports and actions accompanying this approval.

You are also on notice that the 90-day approval period in which the applicant may protest pursuant to Government Code Section 66020 has begun.

I hereby certify that Tentative Tract Map No. 15784 was approved upon the foregoing conditions by the Orange County Subdivision Committee, on October 21, 1998, and will expire on October 21, 2001.

SUBJECT: TENTATIVE TRACT MAP NO. 15230 (VESTING)

On October 21, 1998 the Orange County Subdivision Committee approved the above-referenced tentative tract, subject to the findings and conditions in the attached Orange County Subdivision Committee Final Report.

The Committee's action conditionally approving this tentative map is valid for a period of three (3) years and will expire on October 21, 2001. The expiration date may be extended for a maximum of five (5) additional years provided a written request is filed with the Director of Planning and Development Services, prior to the expiration date shown above.

You are hereby notified that the fees, dedications, reservations or other exactions imposed on this project are as described in this approval, as well as the reports and actions accompanying this approval, and that the 90-day approval period in which the applicant may protest pursuant to Government Code Section 66020 has begun.

You are also on notice that the 90-day approval period in which the applicant may protest pursuant to Government Code Section 66020 has begun.

To avoid unnecessary delays in the recording of this tract map, we suggest that you contact Moe Idris at 834-3470 regarding compliance with all conditions of approval, prior to the filing of the tract map with the County Surveyor.

Very truly yours,

Patrick Stanton

Patrick J. Stanton, Manager
Subdivision and Grading Services

 Attachment F

FINAL

TENTATIVE TRACT MAP REPORT

DATE: October 21, 1998

SUBJECT: Tentative Tract Map No. 15230 (Vesting)

SUBDIVIDER: California Quartet, LTD

ENGINEER: Hunsaker & Associates

SUBDIVISION SECTION CONTACT: Vic Bellaschi 834-5045

LOCATION: On the easterly side of El Toro Road approximately 1,500 feet southerly of Live Oak Canyon Road in the Cooks Corner-Live Oak Canyon area.

ASSESSORS PARCEL NO. 856-011-portion 20; 856-071-01 thru 09; 856-081-01 thru 12; 856-091-01 thru 11.

PROJECT NO. EP/PP 69873

SUMMARY: Proposes a subdivision of approximately 222 acres of land into 299 lots for single family residential development, 1 lot for a pump station, 1 lot for a gated entry, 2 lots for regional park purposes, 20 lots for landscaped slopes/open space and 17 lots for private streets.

Area Plan (AP) 98-2 and Zone Change (ZC) 98-3 were conditionally approved by the Planning Commission on October 7, 1998 and pertain to the development of subject Tentative Tract Map No. 15230

NOTIFICATION:

All federal, state, and county departments, divisions and agencies having cognizance of the affected area, the Foothill/Trabuco Specific Plan Review Board, the Marine Corps Air Station, the Rural Canyons Conservation Fund, and all property owners within 300 feet of this property.

GENERAL PLAN CONSISTENCY/ZONING COMPLIANCE:

Land Use Element: 1B Suburban Residential (.5-18 du/ac)

Community Profile: 1.2 Low Density Residential (.5-2 du/ac)

Specific Plan: Foothill/Trabuco Specific Plan
Bridlewood Residential (BWR) District

Proposed Density: 1.35 du/ac

This project, as conditioned, is consistent with and in conformance with the General Plan and its implementing documents.

OFFICIAL COPY

COMPLIANCE WITH THE CALIFORNIA ENVIRONMENTAL QUALITY ACT:

The proposed project is covered by Final EIR No. 566 previously certified on June 2, 1998 and Addendum PA 980103. Prior to project approval, the Subdivision Committee must assert that, together, they are adequate to satisfy the requirements of CEQA for the proposed project.

EXISTING CONDITIONS:

The subject property is sloping undeveloped terrain.

DRAINAGE:

The subject property is located primarily within the Los Alisos Area Master Plan of Drainage (MPD). MPD Facility J01P09 is involved and requires construction. MPD fees of $550.00 per acre are required to be paid (within the portion of the project that is within the Los Alisos MPD).

SOUND CONSIDERATION:

This property area is impacted by intrusive noises. The extent of mitigation required can be determined in connection with an acoustical report which may be required when future development.

RECREATION AND OPEN SPACE:

Master Plan of Regional Recreation Facilities

Regional Park Dedication: The subdivider is required to dedicate in fee to the County of Orange Lots LL and MM for regional park purposes and an addition to the O'Neill Regional Park.

Master Plan of Regional Riding and Hiking Trails

Regional Trail Dedication:

The Live Oak Canyon Regional Riding and Hiking Trial, which is depicted within the Recreation Element of the General Plan, is aligned along the east side of and adjacent to El Toro Road and runs through a portion of Lot R. The subdivider is required to dedicate to the County of Orange a recreation easement for that portion of the subject Riding and Hiking Trail aligned through Lot R as well as improve said trail, both onsite and offsite, from the south property line near Valley Vista Way to the existing El Toro Road undercrossing located to the north.

Local Riding and Hiking Trail Dedication:

A local riding and hiking trail is described within Area Plan 98-2 text to be dedicated to the County of Orange within a recreation easement aligned east-west through the proposed project. A recreation easement for the local riding and hiking trail shall be dedicated to the County of Orange for those areas not included within future dedicated regional park land. Moreover, trail improvements shall be made for this trail, both within and outside the future regional park, in addition to a connection from the staging area along the community spine road offsite to the regional riding and hiking trail at El Toro Road. Improvements for the staging area shall also be made including the ability to accommodate parking equestrian trailers as well as vehicle only parking. Dedication of the recreation easement and the improvements, including the staging area, shall be required.

2881
OFFICIAL COPY

Trail Reroutes-Bikeway and Riding and Hiking Trails:

The Aliso Creek Class I Off-Road bikeway, the Live Oak Canyon Regional Riding and Hiking Trail and the El Toro Road Class II On-Road Bikeway will require re-routing plans during construction of the subject tentative tract. The subdivider is required to submit said re-route plans prior to the issuance of any grading permits.

Master Plan of Local Parks (Local Park Code)

The Local Park Code requirement for the subject tentative map is 2.392 net usable acres of park land based upon a proposal to build 299 dwelling units at a gross residential density of 1.35 du/ac (299 du x .008 ac/du).

The Local Park Code requirements for the subject tentative map will be satisfied through the payment of in-lieu fees prior to the issuance of building permits.

Resources Element – Open Space Component

Scenic Preservation Easements: The subdivider is required to dedicate to the County of Orange restricted scenic preservation easements over Lots R, CC, DD, EE, FF, GG, HH, II and JJ.

Landscape Plan: A landscape plan which includes the improvements and maintenance of the restricted scenic preservation easements will be required.

Urban Edge Treatment Plan/Viewshed Analysis: The subdivider is required to submit to the County of Orange for approval an urban edge treatment plan/viewshed analysis.

Master Plan of Countywide Bikeways

The Master Plan of Countywide Bikeways (MPCB) indicates a Class II On-Road Bikeway along the northbound lane of El Toro Road.

PUBLIC SERVICES AND UTILITIES:

Schools

This property is within the boundaries of the Saddleback Valley Unified School District. The developer is subject to the provisions of Assembly Bill AB 2926, or other mitigating measures designed to provide for school facilities and/or funding, such as community facilities districts.

Facilities Fee Programs

This project area is located in a facilities fee program area, as the program is defined in Section 7-9-702, Codified Ordinances of Orange County, for the funding of library service, fire station and sheriff substation facilities.

Water/Sewer

This project is within the boundaries of the Trabuco Canyon Water District. The District stated in their "will-serve" letter that the District will be capable of providing water and sewage disposal service to this development.

2882

OFFICIAL COPY

Water Quality Control

The Trabuco Canyon Water District operates in accordance with requirements prescribed by the California Regional Water Quality Control Board, San Diego Region.

Fire Protection and Safety

Existing and proposed fire protection services should be capable of providing an adequate level of fire protection services to this development.

This property is located in a very high fire hazard area due to wildland exposure.

County Service Area (CSA)

This property is within the boundaries of County Service Area No. 26.

CIRCULATION:

Scenic Highway Corridors

The Master Plan of Scenic Highways designates El Toro Road as a landscape/viewscape corridor.

Access/Highways/Streets/Roads

Access to the proposed development within the subject tentative tract map will be from El Toro Road, an unimproved major arterial highway, via Spine Street. Emergency access to the proposed development will be provided via Valley Vista Way.

Major Thoroughfare and Bridge Fee Program

This project lies within the area of benefit of the Foothill Circulation Phasing Program. The developer is required to pay fees in accordance with the adopted program.

This project lies within the area of benefit of the Foothill/Eastern Transportation Corridor. The developer is required to pay Foothill/Eastern Major Thoroughfare and Bridge fees in accordance with the adopted program.

This project lies within the proposed area of benefit of the Santiago Canyon Road Fee Program. The developer is required to pay Major Thoroughfare and Bridge fees in accordance with the adopted program.

This property lies within the area of benefit of the El Toro Road Fee Program. The subdivider is required to pay Major Thoroughfare and Bridge fees in accordance with the adopted program.

Off-Site Fee Program

This project will be responsible for participation in fee programs off-site which will involve expenditures in excess of $155,000.00. Accordingly, the provisions of Section 66452.6(a), Subdivision Map Act, do apply to this project.

2883
OFFICIAL COPY

COMMENTS FROM CIVIC GROUPS AND OTHERS NOTIFIED:

Comments were received from Ray Chandos-Secretary/Treasurer of the Rural Canyons Conservation Fund and the Foothill/Trabuco Specific Plan Review Board.

DEVIATIONS FROM STANDARDS OF DESIGN:

The subdivider may request deviations from County-approved standard design criteria in accordance with Section 7-9-291 of the Orange County Subdivision Code. In the absence of any approved deviation request or if there is a conflict between the tentative map and the County-approved standard design criteria, the County-approved standard design criteria will prevail.

Deviations Requested

1. Deviation from the Orange County Subdivision Code Section 7-9-283 (Man Made Slopes) to allow the Type "C" Slopes on certain lots to heights above the maximum permitted height of 20 feet.

2. Deviation from Standard Plan 1107 (Typical Sections) to allow an increase in the maximum permitted grade on "R" Street from 10% to 12%.

3. Deviation from Orange Count Subdivision Code Section 7-9-274 (Curved Local Street and Highway Radii) to allow for the reduction of the centerline radius to less than the required 250 feet as follows:

Street	Radius Requested (Feet)
"L"	215

SUBIVISION COMMITTEE ACTION:

Tentative Tract Map No. 15230 (Vesting) is approved, and the approval includes the listed deviations, the following 22 findings, and is subject to the 45 conditions which following the findings.

Findings:

I. That the proposed map is consistent with the Orange County General Plan.

II. That the design and improvement of the proposed subdivision are consistent with the Orange County General Plan.

III. That the proposed site is physically suitable for the proposed type of development.

IV. That the proposed site is physically suitable for the proposed density of development.

V. That the design of the subdivision or the proposed improvements are not likely to cause substantial environmental damage or substantial and avoidable injury to fish or wildlife or their habitat.

VI. That the design of the subdivision and the type of improvements proposed are not likely to cause serious public health problems.

VII. That the design of the subdivision and the type of improvements proposed will not conflict with easements of record or established by court judgment acquired by the public-at-large for access through or use of property within the proposed subdivision.

VIII. That the proposed subdivision complies with the requirements set forth in the Orange County Subdivision Code and the Orange County Zoning Code.

IX. That the proposed subdivision, together with the provisions for its design and improvement, is in substantial compliance with the Foothill/Trabuco Specific Plan.

X. That the design and improvement of the proposed subdivision are suitable for the uses proposed, and the subdivision can be developed in compliance with the applicable zoning regulations pursuant to Section 7-9-254 of the Subdivision Code.

XI. That the tentative map is consistent with both Area Plan (AP) 98-2 and Zone Change (ZC) 98-3.

XII. That the Subdivision Committee has considered Final EIR 566, previously certified on 6/2/98, and Addendum PA 980103 prior to project approval. Together they are approved for the proposed project based upon the following findings:

1. Together, these documents are adequate to satisfy the requirements of CEQA by the decision-maker;

2. The additions, clarifications, and/or changes to the original document caused by the Addendum do not raise new significant issues which were not addressed by the EIR; and

3. The approval of the EIR and Addendum for the proposed project reflect the independent judgment of the Subdivision Committee.

2885

OFFICIAL COPY

XIII. That pursuant to Section 711.4 of the California Fish and Game Code, this project is not exempt from the required fees as it has been determined that adverse impacts to wildlife resources will result from the project. The required fees will need to be paid.

XIV. The development of this project will not preclude or prevent the preparation of the Southern Subregion NCCP.

XV. That the discharge of waste from the proposed subdivision into the existing sewer system of the Trabuco Canyon Water District will not result in violations of existing requirements prescribed by the California Regional Water Quality Control Board, San Diego Region.

XVI. That the design of the subdivision and its improvements do provide, to the extent feasible, for future passive or natural heating or cooling opportunities as specified in Section 66473.1 of the Government Code (Subdivision Map Act).

XVII. That the following determinations apply to fees required by Sections 7-9-700 through 713, Codified Ordinances of Orange County:

A. Purpose of fees: Fire protection, paramedic, law enforcement, library, and general County services.

B. Use of fees: Construction of new fire station, sheriff substation, library, and general County facilities in newly developing areas which have inadequate service.

C. Relationship between use of fees and type of development: Dwelling units and commercial/industrial structures and their occupants require fire protection, paramedic, law enforcement, library, and general County services.

D. Relationship between need for facilities and type of project: Project is located in newly developing area which has inadequate fire protection, paramedic, library services, and sheriff substation and general County facilities.

E. Relationship between amount of fees and cost of the portion of the facilities attributable to the development: Fees represent project's pro rata share of the cost of the fire station, sheriff substation, library, and general County facilities.

XVIII. That because of participation in fee programs for off-site improvements, this project will qualify for consideration under Section 66452.6 of the Subdivision Map Act.

XIX. That the deviations from the standards of design set forth in the Subdivision Code Subdivision Committee Report were considered and found to be justified based upon the reasons set forth in the Subdivision Committee Report or special circumstances which apply.

XX. That the Local Park Code Requirement can be met by the payment of in-lieu fees.

2886

OFFICIAL COPY

XXI. That the monitoring requirements of Public Resources Code Section 21081.6 (AB 3180) will be considered as having been met in that the design of the subject project, the satisfaction of the requirements of the County's building, grading, fire, and other codes and ordinances and the satisfaction of the conditions of approval applied to the project will implement the mitigation measures contained in EIR No. 566 an Addendum PA 980103.

XXII. That the applicant is hereby provided notice that the fees, dedications, reservations or other exactions imposed on this project are as described in this approval as well as the reports and actions accompanying this approval and that the 90-day approval period in which the applicant may protest pursuant to Government Code Section 66020 has begun

Conditions:

Codes (for time of performance/type of condition)

(G)	Grading Permit	(S)	Standard Condition
(R)	Recordation	(SS)	Site Specific Condition
(B)	Building Permit		
(U)	Use and Occupancy		
(SL)	Sale, Lease, or Rental		
(NA)	Timing not Specified		

NOTE: Any improvements required prior to the recordation of a final map shall be completed or the subdivider shall enter into an agreement with the County of Orange guaranteeing the improvements. Said agreement shall be accompanied by financial security guaranteeing the installation of the improvements at the time stated in the agreement.

1. CP NA NA SPECIAL

Approval of Vesting TTM 15230 is subject to final approval of Zone Change 98-3 and Area Plan 98-2. Prior to recordation of VTTM 15230, the Manager, Current Planning shall determine that it is in substantial compliance with final approved Zone Change 98-3 and Area Plan 98-2. Otherwise, a revised tentative map approved by the Subdivision Committee shall be required.

2. Prior to the issuance of any grading permits, the applicant shall satisfy the following conditions from the draft Planning Commission Resolution for Area Plan 98-2.

4. Grading Review
5. Tree Preservation Plan
6. Federal Endangered Species
7. Geology Report
8. Drainage
9. Cross-Lot Drainage
10. Vector Control
11. Archaeo Observation & Salvage
12. Paleo Observation & Salvage
13. Grading Notes
14. Construction Noise
15. Performance Bond
16. Re-Routing Trails

2887

OFFICIAL COPY

3. Prior to the recordation of a subdivision map which creates residential building sites, the subdivider shall satisfy the following conditions from the draft Planning Commission Resolution for Area Plan 98-2:

17. Preliminary Grading Completed
18. Open Space Dedication
19. Recreational Trails
20. Ranch House Clean Up
21. Landscape Plan
22. Fire Station
23. Library
24. Sheriff Station
25. Off-Site Fuel Modification
26. Affordable Housing

4. SG SG G LOFFEL WALLS

Prior to the issuance of a grading permit, a letter of justification and design plans for the proposed loffel walls shall be presented to and approved by the Manager, Subdivision and Grading Services.

5. BP BP RGB RESIDENTIAL ACOUSTICAL REPORT

All residential lots and dwellings shall be sound attenuated against present and projected noise which shall be the sum of all noise impacting the project so as not to exceed a composite interior standard of 45 dba CNEL in all habitable rooms and a source specific exterior standard of 65 d.b.a. CNEL in outdoor living areas. Evidence prepared by a County-certified acoustical consultant, that these standards will be satisfied in a manner consistent with Zoning Code Section 7-9-137.5, shall be submitted as follows:

A. Prior to the recordation of a subdivision map or prior to the issuance of grading permits, as determined by the Manager, Building Permits, the applicant shall submit an acoustical analysis report to the Manager, Building Permits, for approval. The report shall describe in detail the exterior noise environment and preliminary mitigation measures. Acoustical design features to achieve interior noise standards may be included in the report.

6. SG SG RG DRAINAGE STUDY

Prior to issuance of any grading permits, the following drainage studies shall be submitted to and approved by the Manager, Subdivision and Grading:

A. A drainage study of the subdivision including diversions, off-site areas that drain onto and/or through the subdivision, and justification of any diversions; and

B. When applicable, a drainage study evidencing that proposed drainage patterns will not overload existing storm drains; and

C. Detailed drainage studies indicating how the tract map grading, in conjunction with the drainage conveyance systems including applicable swales, channels street flows, catch basins, storm drains and flood water retarding, will allow building pads to be safe from inundation from rainfall runoff which may be expected from all storms up to and including the theoretical 100-year flood.

2888
OFFICIAL COPY

7. SG SG RG DRAINAGE IMPROVEMENTS

A. Prior to the issuance of any grading permits, the applicant shall in a manner meeting the approval of the Manager, Subdivision and Grading:

1) Design provisions for surface drainage; and

2) Design all necessary storm drain facilities extending to a satisfactory point of disposal for the proper control and disposal of storm runoff; and

3) Dedicate the associated easements to the County of Orange, if determined necessary.

B. Prior to the recordation of a subdivision map (except maps for financing and conveyance purposes only) said improvements shall be constructed in a manner meeting the approval of the Manager, Construction.

8. SG SG R MPD PARTICIPATION

Prior to the recordation of a subdivision map (except maps for financing and conveyance purposes only), the subdivider shall participate in the applicable Master Plan of Drainage in a manner meeting the approval of the Manager, Subdivision and Grading, including payment of fees and the construction of the necessary facilities.

9. SG SG R EASEMENT SUBORDINATION

Prior to the recordation of an subdivision map (except maps for financing and conveyance purposes only), the subdivider shall not grant any easements over any property subject to a requirement of dedication or irrevocable offer to the County of Orange or the Orange County Flood Control District, unless such easements are expressly made subordinate to the easements to be offered for dedication to the County. Prior to granting any of said easements, the subdivider shall furnish a copy of the proposed easement to the Manager, Subdivision and Grading, for review and approval.

10. SG SG G GRADING DEVIATION

Prior to the issuance of any grading permits, if the applicant submits a grading plan and the Manager, Subdivision and Grading, determines that it shows a significant deviation from the grading on the approved tentative tract map and Area Plan 98-2, specifically with regard to slope heights, slope ratios, and pad elevations and configuration, the plan shall be reviewed by the Subdivision Committee for a finding of substantial conformance. Failure to achieve such a finding will require processing a revised tentative map and/or area plan application per Orange County Zoning Code Section 7-9-139 and 7-9-150. Additionally, a new environmental assessment and determination is required

11. CP HP R ACCESS

Prior to recordation of any subdivision map that creates residential building sites, a 400 foot wide access easement across Lot A (Spine Street) from Lot MM to Lot LL shall be dedicated to the County of Orange in a manner meeting the approval of the Manager, Harbors, Beaches & Parks in consultation with the Manager, Subdivision and Grading. The primary purpose of the access easement is to provide for continuity of the wildlife corridor and O'Neill Regional Park.

Signs identifying a wildlife crossing area shall be posted within 100 feet of each point where the street transverses the wildlife corridor.

OFFICIAL COPY

12. Master Plan of Regional Recreation Facilities:

Regional Park Dedication:

Lots LL and MM shall be dedicated to the County as an addition to O'Neill Regional Park, exclusive of manufactured slopes, which should be retained in separate lots. Regional park dedication shall be in done in compliance with the following conditions:

A. Prior to the recordation of the first subdivision map that creates residential building sites, the subdivider shall make an irrevocable offer of dedication in fee to the County of Orange, or its designee, of Lots LL and MM, exclusive of manufactured slopes, for regional park purposes in a form approved by the Chief, Harbors, Beaches and Parks, Program Management & Coordination suitable for recording. Said offer shall be free and clear of money and all other encumbrances, liens, leases, fees, easements (recorded and unrecorded), assessments and unpaid taxes, except those meeting the approval of the Chief, Harbors, Beaches and Parks, Program Management and Coordination. Until such time as the offer is accepted by the County or its designee, the subdivider or assigns and successors shall be responsible for maintenance and upkeep of the above-referenced lots.

B. Prior to the recordation of any subdivision map that creates residential building sites, the subdivider shall survey and monument all lots dedicated for regional park purposes, and stake the property line of the dedication area(s) with durable, long-lasting, high visibility markers at all angle points and line of sight obstructions to the satisfaction of the Manager, Harbors Beaches & Parks.

C. Prior to recordation of the regional park dedication, the existing old ranch house sited within future regional park land shall be demolished except for the rock work subject to the approval of the Chief, HBP/Program Management & Coordination.

13. Master Plan of Regional Riding and Hiking Trails/County Bikeways:

Regional Trail Dedication:

A. The Live Oak Canyon Regional Riding and Hiking Trail is depicted within the Recreation Element aligned through Lot R, adjacent El Toro Road, through the proposed project. A recreation easement for this riding and hiking trail shall be dedicated to the County which includes trail improvements, including trail improvements just offsite along El Toro Road, north to the intersection of El Toro Road and the community spine road, as well as north to the existing under crossing of El Toro Road, in compliance with the following conditions:

1. Prior to the recordation an applicable subdivision map that creates residential building site the subdivider shall:

a. Irrevocably offer a recreation easement for the Live Oak Canyon Regional Riding and Hiking Trail in a manner meeting the approval of the Chief, HBP/Program Management & Coordination. The subdivider shall not grant any easement(s) over the property subject to the recreation easement unless such easements are first reviewed and approved by the Chief, HBP/Program Management & Coordination.

b. Design the necessary improvements(both onsite and offsite) for the trail, including, but not limited to grading, erosion control, signage and fencing, as applicable, in manner meeting the approval of the Chief, HBP/Program Management & Coordination, in consultation with the Manager, Subdivision & Grading. Further, the subdivider shall enter into an agreement,

OFFICIAL COPY

accompanied by financial security, with the County of Orange, to insure the installation of the necessary improvements.

2. Prior to the issuance of a grading permit, the grading plans shall be reviewed by the Chief, HBP/Program Management & Coordination, to ensure that the proposed grading provides for, will not interfere with, or preclude the installation of the riding and hiking trail in a location and in a manner meeting the approval of the Chief, HBP/Program Management & Coordination.

3. Prior to the issuance of final certificates of use and occupancy and the release of financial security guaranteeing the riding and hiking trail improvements, the applicant shall install the riding and hiking trail improvements in a manner meeting the approval of the Chief, HBP/Program Management & Coordination, in consultation with the Manager, Construction.

B. Local Riding and Hiking Trail Dedication:

A local riding and hiking trail is described within Area Plan 98-2 text to be dedicated to the County within a recreation easement aligned east-west through the proposed project.

A recreation easement for the local riding and hiking trail shall be dedicated to the County for those areas not included within future dedicated regional park land. Moreover, trail improvements shall be made for this trail, *both* within and outside the future regional park, in addition to a connection from the staging area along the community spine road *offsite* to the regional riding and hiking trail at El Toro Road. Improvements for the staging area shall also be made including the ability to accommodate parking equestrian trailers as well as vehicle only parking. Dedication of the recreation easement and the improvements, including the staging area shall be done in compliance with the above.

C. Trail Reroutes/Bikeway and Riding and Hiking Trails:

1. The Aliso Creek Class I, paved Off-Road Bikeway, as well as the Live Oak Canyon Regional Riding and Hiking Trail will require re-routing plans during construction of the proposed project. Therefore, the following condition shall apply:

   Prior to any grading and/or construction activities which precludes the utilization of either the Aliso Creek Class I Off-Road Bikeway or the Live Oak Canyon Regional Riding and Hiking Trail, a re-routing plan shall be submitted subject to the approval of the Chief, HBP/Program Management & Coordination.

2. The same condition shall also be applicable to the Class II On-Road Bikeway aligned along the north bound lane of El Toro Road contiguous the proposed project.

14. Master Plan Local Parks (Local Park Code):

The Local Park Code requirement is 2.392 acres of park land based upon a proposal to build 299 residential units at a gross density of 1.35 du/ac (299 x .008 ac/du).

Prior to issuance of building permits the Local Park Code requirement shall be met by *payment of in-lieu fees*.

2891
OFFICIAL COPY

15. Resources Element (Open Space Component):

A. Dedicate Restricted Scenic Preservation Easement:

Fuel modification areas, manufactured slopes and remedial grading areas sited between the regional park dedication area and residential development, the fuel modification and native enhancement transition area contiguous El Toro Road, and northerly most fuel modification and native enhancement transition area, shall be placed within restricted scenic preservation easement areas. These areas include Lots R, CC, DD, EE, FF, GG, HH, II and JJ. *(NOTE: Manufactured slopes now depicted within Lots MM and LL the regional park, should be depicted within separate open space lots and restricted scenic preservation easements placed over them).* Restricted scenic preservation easements shall be dedicated to the County of Orange in compliance with the following conditions:

1. Prior to the recordation of any applicable final tract map which creates residential building sites, the subdivider shall make an irrevocable offer to dedicate an easement to the County of Orange or its designee over Lots R, CC, DD, EE, FF, GG, HH, II, and JJ, for restricted scenic preservation purposes in a manner meeting the approval of the Chief, HBP/Program Management & Coordination. in consultation with the Manager, Current Planning. Maintenance, upkeep and liability for said easement area shall remain the responsibility of the subdivider or assigns and successors (i.e., homeowner's association) or current underlying owner(s) of said easement area and shall not be included in said dedication offer. The subdivider shall not grant any easement over any property subject to said easement unless such easements are made subordinate to said easement offer in a manner meeting the approval of the Chief, HBP/Program Management & Coordination.

2. The subdivider shall note limitations and restrictions for said easement by a reference on the final map to a previously recorded document or by the recordation of a separate document concurrent with the recordation of subject map in a manner meeting the approval of the Chief, HBP/Program Management & Coordination.

3. Prior to recordation of any applicable final tract map or as determined by the Chief, HBP Program Management & Coordination, the subdivider shall survey and monument all parcels of the land to be dedicated for restricted scenic preservation easement purposes, and submit plans showing how the development boundaries of the restricted scenic preservation easement parcel(s) is marked to be visible for monitoring purposes by Grantee to the satisfaction of the Chief, HBP/Coastal & Historical Facilities.

B. Public Area Landscaping:

The areas to be irrevocably offered to the County of Orange for restricted scenic preservation purposes shall be landscaped, equipped for irrigation, as applicable, and improved in accordance with an approved landscape plan as stated below:

1. Preliminary Plan

Prior to the recordation of a subdivision map (except maps for financing and conveyance only), the subdivider shall enter into an agreement and post financial security guaranteeing landscape improvements and the maintenance thereof based on a preliminary landscape plan showing major plant material and uses, and a cost estimate for the landscape improvements. The preliminary plan and cost estimates shall be reviewed and approved by the Manager, Subdivision and Grading, in consultation with the Chief, HBP/Program Management &

OFFICIAL COPY

Coordination. Said plan shall take into account Area Plan 98-2, County Standard Plans for landscape areas, adopted plant palette guides, applicable scenic and specific plan requirements, Water Conservation Measures contained in Board Resolution 90-487(Water Conservation Measures), and Board Resolution 90-1341(Water Conservation Implementation Plan).

2. Detailed Plan

Prior to the issuance of any building permits, the applicant shall submit a detailed landscape plan for approval to the Manager, Subdivision & Grading, in consultation with the Chief, HBP/Program Management & Coordination. Detailed plans shall show the detailed irrigation and landscaping design.

3. Installation Certification

Prior to the issuance of final certificates of use and occupancy and the release of the financial security guaranteeing the landscape improvements, the applicant shall install said improvements and have the installation certified by a licensed landscape architect or licensed landscape contractor, as having been installed in accordance with the approved detailed plans. The applicant shall furnish said certification, including an irrigation management report for each landscape irrigation system, and any other required implementation report determined applicable to the Manager, Construction, and the Manager, Building Inspection, prior to the issuance of any certificates of use and occupancy.

C. Urban Edge Treatment Plan/Viewshed Analysis:

Prior to the approval of any use permits for residential structures, an urban edge treatment plan/viewshed analysis shall be submitted to the County subject to the approval of the Chief, HBP/Program Management & Coordination. The Urban edge treatment plan/viewshed analysis shall comply with the following criteria:

1. Establish building height and setback limits (i.e., Building Envelope Formula) and grading treatments to preserve views attained from within existing and proposed parks and open space areas as well as from along designated scenic highways (i.e., El Toro Road) as identified by the Master Plan of Regional Recreational Facilities (Recreation Element), Open Space Component (Resources Element) and Master Plan of Scenic Highways (Transportation Element) respectively. Moreover, views from St, Michaels Abbey, the Ramakrishna Monastery and neighboring Hidden Ridge Community shall also be addressed. Viewshed analysis cross sections should be provided as seen from these areas to proposed residential structures.

2. Eliminate and/or reduce to the greatest extent possible conflicts which may impact the existing and future recreational utility of a regional recreation recreational facility and open space areas.

3. Eliminate and/or reduce to the greatest extent possible potential operation and maintenance problems resulting from encroachment, unauthorized entry, private development fuel modification requirements, flood control facilities, and maintenance of privately landscaped manufactured slopes and maintenance roads as they relate to future and existing regional recreational facilities.

OFFICIAL COPY

4. Establish appropriate landscape/fuel modification treatments and wall and/or fence treatments including berms to provide appropriate transition from regional recreational facilities and open space areas to private development areas.

5. Establish smooth and gradual transition between graded slopes and existing slopes within the park and open space areas using variable slopes (2:1-4:1).

6. Obscure slope drainage structures with a variety of plant materials.

7. Incorporate architectural and design techniques into the project in order to enhance off-site views attained from within parks and significant open space.

8. All landscaping of manufactures slopes interfacing significant open space areas should be exclusively native, as applicable, to preserve the biological and scenic integrity of regional corridors, open space and park lands.

16. FF GBU FIRE HYDRANTS

A. Prior to the recordation of a subdivision map which creates residential building sites, the applicant shall submit a fire hydrant location plan for the review and approval of the Fire Chief.

17. FF RBU AUTOMATIC FIRE SPRINKLERS

A. Prior to the recordation of a subdivision map, which creates residential building sites, a note shall be placed on the map stating that all structures shall be protected by an automatic fire sprinkler system, in a manner meeting the approval of the Fire Chief.

18. FF RG FIRE ACCESS ROADS

A. Prior to the recordation of a subdivision map which creates residential building sites, the applicant shall obtain approval of the Fire Chief for all fire protection access easements and shall dedicate them to the County.

B. Prior to the issuance of any grading permits, the applicant shall submit and obtain approval of plans for all roads, streets and courts, public or private, from the Fire Chief in consultation with the Manager, Subdivision and Grading Services. The plans shall include the plan view, sectional view, and indicate the grade and width (28-ft. minimum) of the street or court measured flow line to flow line. All proposed fire apparatus turnarounds shall be approved by the Fire Chief and if needed, clearly marked when a dead-end street exceeds 150 feet or when otherwise required. Applicable CC&R's, or other approved documents, shall contain provisions which prohibit obstructions such as speed bumps/humps, control gates or other modifications within said easement or access road unless prior approval of the Fire Chief is granted. Grade shall not exceed 10%. Up to 15% is allowed when all structures served by the road are protected by automatic sprinklers.

C. Street signs. A note shall be placed on the fire protection access easement plan indicating that all street/road signs shall be designed and maintained to be either internally or externally illuminated in a manner meeting the approval of the Fire Chief.

OFFICIAL COPY
2894

19. FF BU STREET MARKINGS

Prior to the recordation of a subdivision map which creates residential building sites, the applicant shall submit plans and obtain approval from the Fire Chief for fire lanes on required fire access roads less than 36 feet in width. The plans shall indicate the locations of red curbing and signage. A drawing of the proposed signage with the height, stroke and coloring of lettering and the contrasting background color shall be submitted to and approved by the Fire Chief.

20. F F R TRAFFIC SIGNAL PREEMPTION

Prior to the recordation of the applicable subdivision map which creates residential building sites, as determined by the Fire Chief in consultation with the Manager, Subdivision and Grading Services, the subdivider shall enter into an agreement with the County for the installation of traffic signal preemption equipment for the surrounding controlled intersections. Said agreement shall be accompanied by financial security.

21. F F RRB FIRE HAZARD NOTIFICATION

A. A Special Fire Protection Area Notification. Prior to the recordation of any final tract map which creates residential building sites, the subdivider shall place a note on the map meeting the approval of the Fire Chief that the property is in a **"Special Fire Protection Area"** and must meet all requirements for development within the area or file for an exclusion with the Fire Chief.

B. Special Fire Protection Area Development. Prior to issuance of a building permit, the applicant shall meet all requirements for development and construction within a Special Fire Protection Area as identified in Orange County Ordinance 3960, including increased street widths, Class A roof assemblies, fire sprinklers, etc.

22. F F G FUEL MODIFICATION

A. Prior to the issuance of a preliminary grading permit, the applicant shall obtain the approval of the Fire Chief, in consultation with the Managers, Environmental and Project Planning Services, Current Planning Services and Subdivision and Grading Services of a conceptual fuel modification plan and program.

B. Prior to the issuance of any precise grading permit, the applicant shall obtain the approval of the Fire Chief, in consultation with the Managers, Environmental and Project Planning Services, Current Planning Services, and Subdivision and Grading Services of a precise fuel modification plan and program. The plan shall indicate the proposed means of achieving an acceptable level of risk to the structures by vegetation, the CC&R's, or other approved documents, shall contain provisions for maintaining the fuel modification zones including the removal of all dead and dying vegetation subject to triennial inspections.

23. F F G ACCESS GATES

Prior to the issuance of any grading permits, the applicant shall submit and obtain the Fire Chief's approval for the construction of any gate across required Fire Authority access roads/drives. Contact the Orange County Fire Authority at (714) 744-0403 for a copy of the "Guidelines for Fire Authority Emergency Access".

2895

24. SG SG B FOOTHILL/EASTERN TRANSPORTATION CORRIDOR

Prior to the issuance of each building permit, payment of fees will be required as prescribed in the Major Thoroughfare and Bridge Fees Program for the Foothill/Eastern Transportation Corridor.

25. SG SG B FOOTHILL CIRCULATION PHASING

Prior to the issuance of each building permit, payment of fees will be required as prescribed in the Major Thoroughfare and Bridge Fee Program for the Foothill Circulation Phasing Program.

26. SG SG B SANTIAGO CANYON ROAD

Prior to the issuance of each building permit, payment of fees will be required as prescribed in the Major Thoroughfare and Bridge Fee Program for Santiago Canyon Road.

27. SG SG B EL TORO ROAD

Prior to the issuance of each building permit, payment of fees will be required as prescribed in the Major Thoroughfare and Bridge Fee Program for El Toro Road.

28. SG SG B ARTERIAL RIGHT-OF-WAY

Prior to recordation of a subdivision map that creates residential building sites, the applicant shall dedicate ultimate half-width road right-of-way to major arterial highway standards across the property frontage in a manner meeting the approval of the Manager, Subdivision and Grading Services.

29. SG SG R SANTIAGO CANYON ROAD

Prior to recordation of any subdivision map that creates residential building sites, the applicant shall pay a cash fair share contribution for the design and construction of improving Santiago Canyon Road from Live Oak Canyon Road to Jamboree Road, in a manner meeting the approval of the Manager, Subdivision and Grading Services.

30. SG SG B EL TORO ROAD

Prior to recordation of a subdivision map that creates residential building sites, the applicant shall provide a cash deposit for the difference in cost of designing and constructing the roadway improvements proposed with the project along the property frontage as compared to the cost associated with the ultimate configuration of El Toro Road, as determined by PF&RD/Program Development Division, all in a manner meeting the approval of the Manager, Subdivision and Grading Services.

31. SG SG B EL TORO ROAD

Prior to recordation of a subdivision map that creates residential building sites, the applicant shall design and construct a northbound right turn lane and a southbound left turn lane on El Toro Road at the project entrance in a manner meeting the approval of the Manager, Subdivision and Grading Services.

2896

OFFICIAL COPY

32. SG SG G TRAFFIC SIGNAL

Prior to recordation of a subdivision map that creates residential building site, the applicant shall design and construct a traffic signal at the intersection of El Toro and the project entrance in a manner meeting the approval of the Manager, Subdivision and Grading in consultation with the Manager, Program Development Division.

33. SG SG G SIGHT DISTANCE

Prior to issuance of a grading permit, adequate sight distance shall be provided at all intersections per Standard Plan 1117, and at all driveways, in a manner meeting the approval of the Manager, Subdivision and Grading Services; this includes any necessary revisions to the plan to remove slopes and other encroachments from the Limited Use Area.

34. SG SG G "C" STREET

Prior to the issuance of a grading permit, the applicant shall design "C" Street 40' in width, curb to curb, with sidewalk on both sides.

35. SG SG G UTILITY EASEMENT

Prior to the issuance of a grading permit, the applicant shall design both sides of all of the private streets with a 3' public utility easement.

36. SG SG G GATED ENTRY

Prior to the issuance of a grading permit, the applicant shall design the gated entry area to facilitate vehicular turnaround movements prior to reaching the gate in a manner meeting the approval of the Manager, Subdivision and Grading Services.

37. SG SG R LOT 296

Prior to recordation of a final map, the applicant shall design Lot 296 with 20' minimum of property frontage.

38. SG SG G EMERGENCY ACCESS

Prior to the issuance of a grading permit, the applicant shall design the emergency only access between "B" Street and existing Valley Vista in a manner meeting the approval of the Manager, Subdivision and Grading Services.

39. SG SG R PVT STREET NOTIFICATION

Prior to the recordation of a subdivision map (except maps for financing and conveyance only), the subdivider shall place a note on the map that states:

"The private streets constructed within this map shall be owned, operated and maintained by the developer, successors or assigns. The County of Orange shall have no responsibility therefore unless pursuant to appropriate sections of the Streets and Highways Code of the State of California, the said private streets have been accepted into the County Road System by appropriate resolution of the Orange County Board of Supervisors."

OFFICIAL COPY

2897

40. SG SG R STREET IMPROVEMENTS

Prior to the recordation of a subdivision map (except maps for financing and conveyance only), the subdivider shall design and construct the following improvements in accordance with plans and specifications meeting the approval of the Manager, Subdivision and Grading:

A. Streets, bus stops, on-road bicycle trails, street names, signs, striping and stenciling.

B. The water distribution system and appurtenances which shall also conform to the applicable laws and adopted regulations enforced by the County Fire Chief.

C. Underground utilities (including gas, cable, electrical and telephone), streetlights, and mailboxes.

41. HP HP R ACCESS EASEMENT

Prior to, or concurrent with the recordation of Tentative Tract 15230, an Official County Vehicular Road Access Easement shall be recorded by separate instrument which notes limitations and restrictions for this easement subject to the approval of the Chief, PFRD/Harbors, Beaches and Parks, Program Management & Coordination. It shall permit access over Spine Street (Lot A) of Official County vehicles for regional park management purposes.

42. The following Mitigation Measures from Addendum PA980103 are added as conditions of approval:

SC 2-4	SC 2-5	SC 2-6
SC 2-12	SC 2-13	SC 2-14
SC 7-2	SC 7-9	SC 9-2
SC 9-10	AM 8-15	

43. CP CP INDEMNIFICATION

Applicant shall defend at his/her sole expense any action brought against the County because of issuance of this permit or, in the alternative, the relinquishment of such permit. Applicant will reimburse the County for any court costs and attorney's fees which the County may, at its sole discretion, participate in the defense of any such action, but such participation shall not relieve applicant of his/her obligations under this condition.

44. CP CP

Subdivider shall defend, indemnify, and hold harmless the County of Orange, its officers, agents and employees from any claim, action or proceeding against the County, its officers, agents, or employees to attack, set aside, void, or annual approval of the Board of Supervisors, Planning Commission, Zoning Administrator, or Subdivision Committee concerning this subdivision, which action is brought within the time period provided for in Government Code Section 66499.37. The County shall promptly notify the subdivider of any such claim, action or proceeding and shall cooperate fully in the defense. This condition is imposed pursuant to Government Code Section 66474.9(b).

OFFICIAL COPY

45. CP NOTIFICATION

This condition of approval is intended to give you notice that the fees, dedications, reservations or other exactions imposed on this project are as described in this approval and the reports and actions accompanying this approval. You are also on notice that the 90-day approval period in which the applicant may protest pursuant to Government Code Section 66020 has begun.

I hereby certify that Tentative Tract Map No. 15230 (Vesting) was approved upon the foregoing conditions by the Orange County Subdivision Committee, on October 21, 1998, and will expire on October 21, 2001.

Patrick Stanton

P. J. Stanton, Manager
Subdivision and Grading Services
Chairperson, Subdivision Committee

PJS/VB:no[W]

RESOLUTION NO. 98-14
RESOLUTION OF THE PLANNING COMMISSION
OF ORANGE COUNTY, CALIFORNIA

On motion of Commissioner Goacher, duly seconded and carried, the following Resolution was adopted:

WHEREAS, the Planning Commission conducted public hearings on Zone Change (ZC) 98-3 and Area Plan (AP) 98-2 for the area known as Saddleback Meadows (aka Bridlewood); and

WHEREAS, the Planning Commission has considered EIR Addendum PA980103 and, by separate Planning Commission Resolution, found that it satisfies the requirements of CEQA for this project.

NOW, THEREFORE, BE IT RESOLVED that this Commission makes the following findings:

1. ZC98-3/AP98-2 is consistent with the objectives, policies, general land uses and programs specified by the General Plan.

2. AP98-2 is consistent with the provisions of the Zoning Code.

3. The location, size, design and operating characteristics of AP98-2, as conditioned, will not create conditions or situations that may be incompatible with other permitted uses in the vicinity.

4. AP98-2 will not result in conditions or circumstances contrary to the public health and safety and the general welfare.

5. AP98-2, as conditioned, satisfies the requirements of section 7-9-711 regarding public facilitie

6. The RE (PD), "Residential Estates (Planned Development)," site development standards regarding building site areas, building site coverage, area per unit, and number of dwelling uni have been satisfied by AP98-2.

7. Condition of Approval No. 27 requires a use permit be approved which is consistent with AP98-2. A use permit may be approved for the entire project site or portions of the project sit

8. AP98-2, as conditioned, will provide significant public benefits in the form of major recreational trails, an important wildlife corridor for the Natural Communities Conservation Program and a large addition to O'Neill Regional Park.

BE IT FURTHER RESOLVED that this Commission recommends that the Board of Supervisors approve ZC98-3.

BE IT STILL FURTHER RESOLVED that this Commission approves AP98-2 subject to the following conditions:

1. CP NA NA TIME LIMIT
Approval of Area Plan 98-2 is subject to approval of Zone Change 98-3 by the Board of Supervisors. Upon such approval, Area Plan 98-2 is valid for a period of 48 months thereafte If the preliminary grading permit is not issued within such period of time, this approval shall b terminated and Area Plan 98-2 shall thereafter be null and void.

OFFICIAL COPY

2. CP CP NA REVOCATION
Failure to abide by and faithfully comply with any and all conditions attached to this approv action shall constitute grounds for the revocation of said action by the Orange County Planning Commission.

3. CP CP G TENTATIVE TRACT MAP
Prior to the issuance of any grading permits, Tentative Tract Map 15230 shall be approved by the Subdivision Committee after a public hearing. Said tentative tract map must be found consistent with Area Plan 98-2.

4. CP CP G GRADING REVIEW
Prior to the issuance of any grading permits, the Manager, Current Planning Services, shall determine that the grading plan is consistent with Area Plan 98-2 and the approved tree preservation plan.

5. HP HP G TREE PRESERVATION PLAN
Prior to the issuance of any preliminary grading permit, a tree preservation plan shall be prepared which identifies the location, size and species of all trees having a trunk diameter of 5 inches or greater (measured at four and on-half feet above ground level). The tree preservation plan shall be consistent with the Area Plan 98-2 and the Foothill/Trabuco Specific Plan and approved by the Manager, Harbors Beaches, and Parks. The plan shall be signed and certified by a biologist or arborist.

6. EP SG/EP G FED ENDGD SPEC ACT
Prior to the issuance of any preliminary grading permit, approval of any activity that involve removal of any native vegetation from subject site including clearing, grubbing, mowing, discing, trenching, grading, fuel modification, or other related construction-related activities, th applicant shall obtain written proof from the U.S. Fish and Wildlife Services that said activity complies with the Federal Endangered Species Act. Additionally, the applicant shall obtain approval of a mitigation plan to replace lost ephemeral ponds at a 2 to 1 ratio. This evidence shall be submitted to the Manager, Subdivision and Grading, for review and approval, in consultation with the Manager, Environmental & Project Planning.

7. SG SG G GEOLOGY RPT
Prior to the issuance of any grading permits, the applicant shall submit a geotechnical report to the Manager, Subdivision and Grading, for approval. The report shall include the information and be in a form as required by the Grading Manual.

8. SG SG G DRAINAGE
Prior to the issuance of any grading permits, the applicant shall, in a manner meeting the approval of the Manager, Subdivision and Grading, provide:

A. A drainage study determining the effect the proposed development and associated drainage patterns will have on existing drainage facilities.

B Mitigate either by on-site retardation or by providing improvements appropriately to impacted existing drainage facilities.

2901
OFFICIAL COPY

9. SG SG G CROSS-LOT DRAINAGE

Prior to the issuance of any grading permits, and if determined necessary by the Manager, Subdivision and Grading, a letter of consent, in a form approved by the Manager, Subdivision and Grading, suitable for recording, shall be obtained from the affected property owners for offsite grading and/or drainage. The owner/applicant shall record said letters of consent for offsite drainage and/or cross-lot drainage prior to the issuance of any grading permit. Acceptance of cross-lot drainage on lots within the tract map boundaries shall be noted on the recorded map.

10. SG SG G VECTOR CONTROL

Prior to the issuance of any preliminary grading permits, the subdivider shall provide evidence to the Manager, Subdivision and Grading, that the Vector Control District has surveyed the site to determine if vector control measures are necessary. If warranted, the developer shall conduc such measures in a manner meeting the approval of the Manager, Subdivision and Grading.

11. HP HP G ARCHAEO OBS & SALVAGE

Prior to the issuance of any preliminary grading permit, the project applicant shall provide written evidence to the Manager, Subdivision and Grading, that a County-certified archeologis has been retained, shall be present al the pre-grading conference, shall establish procedures for archaeological resource surveillance, and shall establish, in cooperation with the project developer, procedures for temporarily halting or redirecting work to permit the sampling, identification, and evaluation of the artifacts as appropriate. If the archaeological resources are found to be significant, the archaeologist shall submit a follow-up report to the Manager, Harbors, Beaches & Parks, which shall include the period of inspection, an analysis of any artifacts fond and the present repository of the artifacts. Excavated finds shall be offered to the County of Orange, or designee, on a first refusal basis. These actions, as well as final mitigatic and disposition of the resources, shall be subject to the approval of the Manager, Harbors, Beaches & Parks.

12. HP HP G PALEO OBS & SALVAGE

Prior to the issuance of an preliminary grading permit, the project applicant shall provide writt evidence to the Manager, Subdivision and Grading, that a County-certified paleontologist has been retained to observe grading activities and salvage and catalogue fossils as necessary. The paleontologist shall be present at the pre-grading conference, shall establish procedures for paleontological resource surveillance, and shall establish, in cooperation with the project developer, procedures for temporarily halting or redirecting work to permit sampling, identification, and evaluation of the fossils. If major paleontological resources are discovered. the paleontologist shall determine appropriate actions, in cooperation with the project develop which ensure proper exploration and/or salvage. Excavated finds shall be offered to the Coun of Orange, or its designee, on a first refusal basis. The paleontologist shall submit a follow-up report for approval by the Manager, Harbors, Beaches & Parks, which shall include the period of inspection, a catalogue and analysis of the fossils found, and present repository of the fossil These actions, as well as final mitigation and disposition of the resources, shall be subject to approval by the Manager, Harbors, Beaches & Parks.

13. SG SG G GRADING NOTES

Prior to the issuance of any grading permits, the following guidelines shall be included in the "Notes Section" of the grading plans meeting the approval of the Manager, Subdivision and Grading.

A. During all grading and construction operations, all oak trees on the site, located adjacent to the approved limits of grading and identified in an approved Tree Management/Preservation Plan as trees to be preserved, shall be adequately fenced and protected from encroachment by grading and construction equipment. Grading, placement of fill, and storage of building materials and heavy equipment, shall be prohibited within the dripline of any tree identified for preservation as part of an approved Tree Management/Preservation Plan.

B. If required, retaining walls shall be used to protect the existing grades of oaks identified for preservation from surrounding cut and fill. However, these should not alter drainage from around the trees.

C. No type of surface, whether pervious or impervious, shall be placed within a six-foot radius of oak tree trunks. Where surfacing cannot be avoided, alternative types of paving should b utilized, such as gravel or porous brick with sand joints.

D. Oak trees shall not be subjected to increased runoff from irrigation systems, impermeable surfaces, storm drain discharge, etc.

E. Natural drainage courses and natural grades outside the remedial grading impact area in proximity to and providing seasonal irrigation to oak trees shall not be altered.

F. In proximity to oak trees, only one trench should be dug to accommodate all utility lines. Where necessary, the impacted trees should be carefully pruned by an arborist in proportior to the total amount of root zone lost.

14. BP BP G CONSTRUCTION NOISE

A. Prior to the issuance of any grading permits, the project proponent shall produce evidence acceptable to the Manager, Building Permits, that:

1. All construction vehicles or equipment, fixed or mobile, operated within 1000' of a dwelling shall be equipped with properly operating and maintained mufflers.

2. All operations shall comply with Orange County Codified Ordinance Division 6.(Noise Control).

3. Stockpiling and/or vehicle staging areas shall be located as far as practicable from dwellings.

B. Notations in the above format, appropriately numbered and included with other notations c the front sheet of the grading plans, will be considered as adequate evidence of compliance with this condition.

2903

OFFICIAL COPY

15. CP SG G PERFORMANCE BOND
Prior to the issuance of a preliminary grading permit, the applicant shall provide a performance bond and related agreement to the satisfaction of the Manager, Subdivision and Grading.

16. HP HP G RE-ROUTING
Prior to the issuance of a preliminary grading permit, which includes the utilization of either th Aliso Creek Class I Off-Road Bikeway or the Live Oak Canyon Regional Riding and Hiking Trail, a re-routing plan shall be submitted by the applicant and approved by the Manager, Harbors, Beaches and Parks.

17. CP SG R
Prior to the recordation of any subdivision map which creates residential building sites, the preliminary grading activity for all of Area Plan 98-2 shall be completed to the satisfaction of the Manager, Subdivision and Grading.

18. HP HP R OPEN SPACE
Prior to the recordation of any subdivision map that creates residential building sites, the applicant shall dedicate to the County of Orange a minimum of seventy (70) percent of the project site as open space in a manner meeting the approval of the Manager, Harbors, Beaches & Parks. The open space dedication shall be for: (1) regional park, and (2) restricted scenic preservation purposes. The Manager, Harbors, Beaches & Parks shall determine the final boundary between these open space acres.

Within the regional park area, the Manager, Harbors, Beaches & Parks shall determine what improvements, if any, shall be made. If determined appropriate by the Manager, Harbors, Beaches & Parks, the applicant shall be required to provide those improvements as shown and discussed in the Area Plan 09-2.

Within the restricted scenic preservation easement area, after dedication, no grading, structures (including stables and corrals), or commercial agriculture activities shall be permitted in this area. River rock walls not to exceed three feet, approved Loffel walls, and open fencing shall l permitted. An entry gate and identification sign shall be permitted subject to approval of a site development or use permit for such use. Future fuel modification, landscaping, and tree preservation shall be permitted subject to prior approvals granted by the Planning Commission

19. HP HP R RECREATIONAL TRAILS
Prior to the recordation of any subdivision map that creates residential building sites, the applicant shall dedicate a recreation easement for those bikeways and regional riding and hikir trails shown and discussed in Area Plan 98-2 in a manner meeting the approval of the Manage Harbors, Beaches & Parks. Also, the applicant shall design the necessary improvements and enter into an agreement, accompanied by financial security, with the County of Orange to install the necessary improvements in a manner meeting the approval of the Manager, Harbors Beaches & Parks.

20. HP HP R CLEANING UP
Prior to the recordation of any subdivision map that creates residential building sites, the existing old ranch house and all abandoned automobiles shall be removed in a manner meetin the approval of the Manager, Harbors, Beaches & Parks.

OFFICIAL COPY

21. HP HP R LANDSCAPE PLA

Prior to the recordation of any subdivision map which creates residential building sites, the subdivider shall enter into an agreement and post financial security guaranteeing landscape improvements and the maintenance thereof based on preliminary landscape plan showing maj plant material and uses, and a cost estimate for the landscape improvements. The preliminary plan and cost estimates shall be reviewed and approved by the Manager, Subdivision and Grading, in consultation with the Manager, Harbors, Beaches & Parks. Said plan shall take in account the County Standard Plans for landscaped areas, adopted plant palette guides, applicable scenic and Foothill Trabuco Specific Plan requirements, Water Conservation Measures contained in Board Resolution 90-487 (Water Conservation Measures), and Board Resolution 90-1341 (Water Conservation Implementation Plan).

22 EP EP FIRE STATION FACILITY

Prior to the recordation of any subdivision map that creates residential building sites, the applicant shall enter into an agreement with the Orange County Fire Authority to pay pro-rata capital facility fees for Fire Station No. 42 in a manner meeting the approval of the Manager, Environmental & Project Planning. Said agreement shall be accompanied by financial securit

23. EP EP LIBRARY FACILITY

Prior to the recordation of any subdivision map that creates residential building sites, the applicant shall enter into an agreement with the County of Orange to pay development fees for the South County Canyons Library as provided in Sections 7-9-700 through 7-9-713 of the Codified Ordinances of the County of Orange and Board Resolution 87-1684 in a manner meeting the approval of the Manager, Environmental & Project Planning. Said agreement shal be accompanied by financial security.

24. EP EP SHERIFF STATION

Prior to the recordation of an subdivision map that creates residential building sites, the project proponent shall enter into a secured agreement with the County of Orange, subject to approval of the Sheriff-Coroner, to participate on a pro rata basis in funding (a) Sheriff substation facilities and (b) the initial costs of providing additional patrols plus support necessary to serve the project in a manner meeting the approval of the Manager, Environmental & Project Planning.

25. EC F F FUEL MODIFICATION

Prior to the recordation of any subdivision map that creates residential building sites, the applicant shall demonstrate to the satisfaction of the Fire Chief that necessary fuel modificatior in off-site locations will be maintained in perpetuity.

26. EP EP R AFFORDABLE HOUSING

Prior to the recordation of a subdivision map that creates residential building sites, the landowner shall provide a cash contribution to the County's General Plan Trust Fund. The specific methodology and amount of said contribution shall be subject to the approval of the Manager, Environmental & Project Planning. These funds shall be directed to support the County's overall efforts toward providing affordable housing, including but not limited to, future updates of the Orange County Housing Element and related programs for maintaining existing affordable housing and providing new affordable housing opportunities.

IAL COPY

27. CP CP B — USE PERMIT

Prior to the issuance of any building permits for residential structures, the applicant shall submi a use permit application for review by the Foothill/Trabuco Review Board and approval by the Planning Commission after a public hearing. Said use permit shall include, but not be limited to, the location of all structures and uses, precise landscaping plan, precise fuel modification plan and program, grading plan, and architectural plans for all structures. Said use permit must be found consistent with Area Plan 98-2.

28. F F GBU — FUEL MOD PLAN

Prior to the approval of the use permit to construct residential structures, the applicant shall obtain the Fire Chief's approval, in consultation with the Manager, Environmental and Project Planning, of a precise fuel modification plan and program. The plan shall indicate the propose means of achieving an acceptable level of risk to structures by vegetation. Include the method (mechanical or hand labor) for removal of combustible vegetation and the planting of drought tolerant fire resistant plants. However, only the minimum necessary fuel modification shall be approved by the Fire Chief. All practical mitigation measures to minimize the need for fuel modification shall be recommended by the Fire Chief such as use of non-combustible construction materials, interior fire sprinkler system and double-glassed windows. The require fuel modification shall be performed in a manner to minimize impacts on the natural environment as much as possible. The fuel modification plan shall then become effective after the Planning Commission approves the use permit.

29. SG SG B — ROAD REE PROG

Prior to the issuance of building permits for residential construction, the applicant shall pay fee for the Major Thoroughfare and Bridge Fee Program listed below, in a manner meeting the approval of the Manager, Subdivision and Grading.

A. Foothill Circulation Phasing Program
B. Foothill/Eastern Transportation Corridor
C. El Toro Road
D. Santiago Canyon Road

30. HP HP R — LOCAL PARK FEES

Prior to the issuance of building permits for residential construction, the applicant shall pay in-lieu fees per the Local Park Code Requirements.

31. FTSP CP B — SCHOOL FEES

Prior to the issuance of any building permits for residential construction, the applicant shall provide written verification from the School District, in a manner meeting the approval of the Manager, Current Planning, that he has reached a mitigation agreement with the District for th subject project proposal.

32. CP NA NA — INDEMNIFICATION

Applicant shall defend at his/her sole expense any action brought against the County because issuance of this permit. Applicant will reimburse the County for any court costs and attorney fees which the County may be required by a court to pay as a result of such action. The Coun may, at its sole discretion, participate in the defense of any such action, but such participation shall not relieve applicant of his/her obligations under this condition.

ABSENT: Commissioners

I HEREBY CERTIFY that the foregoing Resolution No. 98-14 was adopted on October 7, 1998 by the Orange County Planning Commission.

ORANGE COUNTY PLANNING COMMISSION

by Thomas B. Mathews, Executive Officer

SADDLEBACK MEADOWS
ADDENDUM PA980103
Mitigation Measures

SOILS AND GEOLOGY

MITIGATION MEASURES

Standard County Conditions and Mitigation Measures

SC 2-4 Prior to the issuance of the first grading permit, for projects located immediately adjacent to or including portions of regional parks, significant open space corridors, or other environmentally sensitive areas, the project proponent shall provide evidence acceptable to the Manager, PDS/Subdivision and Grading Services Division, in consultation with the Manager, PFRD/Harbors Beaches & Parks Division, that graded areas will be compatible with natural land characteristics of the adjacent open space areas including techniques to enhance a smooth and gradual transition, urban edge treatment plans and incorporating view enhancement through architectural and design techniques.

SC 2-5 Prior to the issuance of any grading permit, off-site grading and/or drainage shall be conducted in a manner meeting the approval of the Manager, PDS/Subdivision and Grading Services Division.

SC 2-6 Prior to the issuance of a grading permit, substantial compliance with the following shall be certified by a registered engineer in a manner meeting the approval of the Manager, PDS/Subdivision and Grading Services Division:

- Fill soils shall be placed in layers that are less than 8 inches thick and moisture-conditioned generally 1- to 2-percent above optimum moisture content. The existing diatomaceous soils should be moisture-conditioned to 125-percent of optimum moisture content.

- For preliminary earthwork computations, the following shrinkage/bulking factors are recommended for the on-site material (these do not include handling losses): Bedrock - 5% bulking; slopewash - 5% shrinkage; and Other Soils - 15% shrinkage. Grading plans shall include an area where finish grades can be raised or lowered to accommodate changes in actual material quantities.

- Dewatering shall be achieved using sumps and pumps located strategically within the excavated area. However, the excavation

OFFICIAL COP

shall be carefully observed; if the conditions warrant, supplementary dewatering provisions shall be made. It is the responsibility of the contractor to provide an adequate dewatering system during construction.

SC 2-12 Prior to the issuance of any preliminary grading permits, the subdivider shall request that the Vector Control District initiate the survey process of the tract/parcel map site to determine if vector control measures are necessary. If warranted, such measures shall be conducted by the developer in a manner meeting the approval of the Manager, PDS/Subdivision and Grading Services Division.

SC 2-13 Prior to issuance of grading permits, a Water Quality Management Plan (WQMP) shall be submitted to and approved by the Manager, PDS/Subdivision and Grading Services Division. The WQMP shall identify, at a minimum, the application and incorporation of those routine structural and non-structural BMPs outlined in the Countywide NPDES Drainage Area Management Plan (DAMP) Appendix G detailing implementation of BMPs not dependent on specific land uses, in a manner meeting the approval of the Manager, PDS/Subdivision and Grading Services Division.

SC 2-14 Prior to the issuance of any grading permits, the applicant shall provide, in accordance with criteria supply by PDS, a "Hazardous Materials Assessment" and a "Disclosure Statement" covering the property (both fee and easement) which will be offered for dedication to the County of Orange, for review and approval by the Manager, PDS/Subdivision and Grading Services Division, in consultation with the Manager, PFRD/Monitoring Programs Division.

BIOLOGICAL RESOURCES

MITIGATION MEASURES

SC 7-2 Prior to the issuance of any grading permits, the applicant shall obtain a Streambed Alteration Agreement covering the affected water courses and wetland areas within the proposed project area from the California Department of Fish and Game. A 1603 Streambed Application has been submitted to CDFG. All Streambed alteration activities shall be carried out in accord with the requirements of an approved Streambed Alteration Agreement.

SC 7-9 Prior to the issuance of grading permits, the applicant shall prepare a habitat restoration plan for all areas proposed for revegetation of coastal scrub habitat to the satisfaction of the Administrator / Planning and Zoning. As part

FICIAL COPY

investigation and surface collection as appropriate. The test level report evaluating the site shall include discussion of significance (depth, nature, conditions and extent of the resources), final mitigation recommendations and cost estimates and shall be approved by the Manager, PFRD/Harbors Beaches and Parks Division. Excavated finds shall be offered to the County of Orange, or designee, on a first refusal basis.

Paleontology

SC 9-10 Prior to the issuance of any grading permit, the project applicant shall provide written evidence to the Manager, PDS/Subdivision and Grading Services Division, that a County-certified paleontologist has been retained by the applicant to conduct pregrade salvage and prepare a catalogue of the exposed resources. Excavated finds shall be offered to the County of Orange, or designee, on a first refusal basis. The paleontologist shall submit a follow-up report for approval by the Manager, PFRD/Harbors Beaches and Parks Division, for review and approval, which shall include methodology, an analysis of artifacts found, a catalogue of artifacts, and their present repository. This mitigation measure has been completed.

Subdivision Committee
County of Orange
300 North Flower Street, Room 503
Santa Ana, California 92702

Re: *Saddleback Meadows: Public Hearing re Tentative Tract Map Nos. 15230 and 15784*

Dear Mr. Stanton:

On behalf of the Norbertine Fathers of Orange, the Saddleback Meadows Land Conservancy LLC, and the Vedanta Society of Southern California, we oppose the approval of Tentative Tract Map Nos. 15230 and 15784 (collectively, the "Tract Maps") on the basis of each of the previously-stated objections to Zone Change 98-3 and Area Plan 98-2 which are set forth in the letters attached hereto as Exhibits "E" through "J" inclusive. We believe that such objections apply with equal force to the Tract Maps and, accordingly, we incorporate them herein as if set forth in full hereat.

Tentative Tract Map No. 15230 ("TT 15230") would allow the Saddleback Meadows property to be developed as a 299-unit, single-family detached housing project (the "299-Unit Project" or the "Project"). In addition to the objections to the 299-Unit Project which we have already stated on behalf of our clients, we further object to proposed TT 15230 (and its companion financing map) on the grounds listed in Exhibit "A" attached hereto and on each of the following grounds:

A. <u>The Subdivision Committee Should Continue Its Hearing on the Tract Maps Until the FTSP Review Board Has Had an Opportunity to Submit Its Recommendations Thereon.</u>

The bylaws of the Foothill/Trabuco Specific Plan Review Board (the "FTSP Review Board"), which are set forth in Appendix D to the Foothill/Trabuco Specific Plan (the "Specific Plan"), specifically provide at page D-3 that the FTSP Review

Board is to review all "Subdivision Maps" covered by the Specific Plan and to report its findings thereon to the appropriate department of the County of Orange which, in this case, would be the Subdivision Committee. The bylaws also provide that the FTSP Review Board is to be afforded a minimum of twenty-one (21) days within which to complete its assigned task and to report its recommendations. Under the bylaws, only the FTSP Review Board is entitled to *waive* this 21-day requirement.

Less than 21 days ago, County staff apparently transmitted various materials relating to the Tract Maps to the members of the FTSP Review Board, and thus the Subdivision Committee is not authorized to proceed with its October 21 hearing on the Tract Maps because to do so would be a clear violation of the Specific Plan. As such, the Subdivision Committee should continue its hearing on the Tract Maps until the FTSP Review Board has been afforded adequate time to review and report back on the Maps. Indeed, since the Tract Maps are contingent upon the approval of Zone Change 98-3 which will not even be voted on by the Board of Supervisors until November 3 at the earliest, there is absolutely *no* reason that the Subdivision Committee's hearing on the Tract Maps must go forward on October 21 and cannot be postponed until after the November 3 Board hearing on Zone Change 98-3.

The accelerated pace at which the Tract Maps are being processed by the County is unseemly and unjustified. At the public meeting which it conducted last Friday night (October 16) to consider Zone Change 98-3 and Area Plan 98-2, the FTSP Review Board adopted a resolution, a copy of which is attached as Exhibit "B" hereto, demanding that the Tract Maps be removed from the agenda of the Subdivision Committee's October 21 meeting and be referred to the Review Board for its recommendations. Failure to heed the demand of the FTSP Review Board will violate both the letter and the spirit of the Specific Plan, and will constitute an affront to the residents of the Trabuco Canyon area.

B. <u>The CEQA Documentation for the Tract Maps Failed to Address Site-Specific and Cumulative Impacts to Coastal California Gnatcatchers Inhabiting the NCCP Southern Subregion</u>.

Now that the County has reached the "tract map" stage of the 299-Unit Project, there is no possible justification for continuing to ignore the recent discovery of coastal California gnatcatchers at the Property and failing to amend and recirculate the appropriate CEQA documentation to reflect this fact. Also, it is nothing short of a legal and environmental scandal that County staff has allowed California Quartet to delay completion of updated gnatcatcher surveys of the Property which the federal and state agencies started calling for almost *22 months ago*.

On January 30, 1997, the California Department of Fish & Game and the U.S. Fish & Wildlife Service (collectively, the "Resource Agencies") sent a letter to County staff, a copy of which is attached as Exhibit "C" hereto in which they noted that the 1993 and 1994 gnatcatcher surveys of the Property upon which Draft EIR 561 was based were no longer valid and, as such, "updated surveys" needed to be completed in connection with the preparation of Draft SEIR 566:

> "Available data in EIR No. 561 regarding coastal California gnatcatcher . . . surveys indicated that surveys were done in 1993 and 1994. The agencies accept survey results as valid for only 12 months. Gnatcatchers are known to occur adjacent to the proposed project area. *We suggest that updated surveys be done for this species.* This updated survey protocol includes a total of seven surveys in the breeding season or nine in the non-breeding season." (Emphasis added.)

Although almost *two years* have passed since the Resource Agencies made their proposal for updated gnatcatcher surveys of the Property, *such surveys have still not been completed.* This, of course, is inexcusable and renders FSEIR 566 and the Addendum thereto grossly deficient with respect to adequately assessing impacts to an endangered species present at the Property. Although the Addendum to FSEIR 566 *alludes* to gnatcatcher surveys having been commenced in May 1997, no explanation is given as to why these surveys were never completed and were never reported on in the CEQA documentation for TT 15230.

Of course, of even greater concern is the fact that, at the October 7 Planning Commission hearing on Zone Change 98-3 and Area Plan 98-2, the developer's representative, Mr. Pike Oliver, stated at the podium that approximately six gnatcatcher surveys of the Property were performed in April, May, and June of this year. This is a shocking revelation for at least two reasons. First, it is highly improper for the results of these surveys to have been *excluded* from the Addendum to FSEIR 566, even though the Addendum was prepared well *after* the surveys were purportedly completed. Secondly, the fact that California Quartet was still in the process of trying to complete the updated gnatcatcher surveys which the Resource Agencies had called for as far back as January 1997 should have been revealed by County staff because it would have proven that the CEQA documentation for the 299-Unit Project was and remains *incomplete* and that the County is *not* in a position to legally take action on Zone Change 98-3, Area Plan 98-2, and the Tract Maps.

To date, County staff has sought to excuse its failure to obtain updated gnatcatcher surveys of the Property from California Quartet on the grounds that one can just *assume* that the coastal sage scrub habitat at the Property is inhabited by gnatcatchers.

However, County staff has never indicated *how many* gnatcatchers it assumes are present and will be eradicated by the development of the 299-Unit Project. CEQA does not allow County staff the luxury of such an uninformed *assumption* at this late stage in the planning process about what exactly the impacts will be on an endangered species present at the project site. What County staff is essentially admitting is that it assumes there will be an impact on gnatcatchers inhabiting the approximately 50 acres of coastal sage scrub habitat which will be destroyed by the development of the 299-Unit Project, but the *extent* of that impact -- i.e., how many gnatcatchers will actually be killed at the site -- is completely *unknown* to the County as it prepares to approve TT 15230.

To suggest that County staff is engaging in *reckless* environmental planning with respect to gnatcatcher impacts at the Property would be an understatement. This is particularly true in light of a recent *L.A. Times* article, dated September 3, 1998, a copy of which is attached as Exhibit "D" hereto, in which it was reported that the Resource Agencies are gravely concerned that the prescribed limits for interim gnatcatcher "take" in the NCCP Southern Subregion have been exceeded and that no more 4(d) permits for interim "take" of gnatcatchers will be allowed in that Subregion until the NCCP plan for that area is completed sometime in the future.

In light of the information set forth in this article, it is clear that the CEQA documentation for TT 15230 does not adequately address the *cumulative* impacts which the 299-Unit Project will have on coastal California gnatcatchers present in the NCCP Southern Subregion. Moreover, the same CEQA documentation is based on the premise that California Quartet will be allowed to obtain a 4(d) permit to kill gnatcatchers at the Property. What is needed, therefore, is a new or subsequent EIR for TT 15230 which fully and properly assesses project impacts on gnatcatchers present in the NCCP Southern Subregion, both on a site-specific level and on a Subregional level.

C. <u>The Proposed Destruction of Almost 70% of the Property's Coastal Sage Scrub Habitat Will Prevent the County from Making the Findings Required Under the NCCP Conservation Guidelines</u>.

As stated on page 72 of the Addendum to FSEIR 566, the County must be in a position to make the following "NCCP Findings" prior to approving "coastal sage scrub impacts": (1) the habitat loss will not preclude connectivity between areas of high habitat values and (2) "the habitat loss will not preclude or prevent the preparation of the subregional NCCP." In light of (a) its failure to timely and adequately consult with the Resource Agencies regarding the sufficiency of the wildlife corridor proposed as part of TT 15230, (b) the loss of approximately 70% of the coastal sage scrub habitat at the Property which is contemplated by the 299-Unit Project, and (c) the numerous statements made to date by the Resource Agencies with respect to the critical importance of the

Property as constituting the last available link between the NCCP Central/Coastal and Southern Subregions, the County is simply not in a position to make any such findings at this point.

In the joint letter from the Resource Agencies, dated January 30, 1997, which was referred to earlier, the Agencies stated unequivocally that the proposed linkage between the NCCP Central/Coastal and Southern Subregions could be permanently destroyed by the development of the Property:

> "Lands within the proposed project area are important in conservation planning for the Southern Subregion NCCP Reserve in Orange County. The area of the proposed project is also the *only* linkage to the NCCP Central Subregion in Orange County. An improperly implemented project would *permanently destroy* the integrity of the linkage between the Subregion reserves." (Emphasis added.)

Likewise, in their joint letter to the Board of Supervisors, dated August 11, 1998, the Resource Agencies described the Property as a "critical habitat connection between the County of Orange's Central/Coastal and Southern Subregional Conservation Plans." In a recent article in the *Orange County Register*, a copy of which is attached hereto, John Bradley of the U.S. Fish & Wildlife Service clearly stated the Service's preference for a project alternative with less density than the proposed 299-Unit Project. However, County staff has failed to fully engage the representatives of the Resource Agencies to understand and accommodate their views on whether the 299-Unit Project provides the wildlife linkage which they hope to achieve. Moreover, County staff has also sought to minimize, and even misrepresent, the true views of the Resource Agencies with respect to the 299-Unit Project. (See attached letters from National Audubon Society, dated October 15 and 19, 1998.)

Because TT 15230 poses such an obvious risk of jeopardizing or precluding the approval of the Southern Subregion NCCP, the Subdivision Committee should require the preparation of a new or subsequent EIR for TT 15230 to properly assess this risk. Moreover, County staff should accept the invitation of the Resource Agencies, set forth in their August 11 letter to the Board of Supervisors, to work with California Quartet and all interested parties in reaching a workable development solution that would involve a clustered development and a substantial dedication of natural open space which would be sufficient to ensure adequate wildlife corridor/habitat linkage between the NCCP Central/Coastal and Southern Subregions. These discussions should focus initially on the feasibility of the 44/178 Alternative which has been the subject of recent negotiations between the parties or a similar alternative which would ensure that the 178 acres which are the subject of the 44/178 Alternative (see copy of draft

Memorandum of Understanding attached hereto) are permanently preserved as natural, undisturbed open space so as to protect the sensitive biological resources on the Property, while still allowing for approximately 44 acres of the Property to be developed for residential uses.

Without such input being obtained from comprehensive discussions with representatives of the Resource Agencies, the CEQA documentation for TT 15230 is obviously deficient with respect to reasonable project alternatives and with respect to the issues of whether the 299-Unit Project will preclude connectivity between areas of high habitat values and will also preclude preparation and finalization of the Southern Subregional NCCP.

D. The CEQA Documentation for TT 15230 Fails to Adequately Assess Potential Impacts on O'Neill Park Caused by Rough Grading, Fuel Modification, and Drainage Activities Relating to the 299-Unit Project.

Exhibit 6 in the Addendum to FSEIR 566 is noteworthy for what it does *not* show: it does not show whether the development of TT 15230 will impact areas of O'Neill Park in terms of rough grading or fuel modification activities associated with the 299-Unit Project. This particular Exhibit is simply deceptive because if the dotted lines relating to the limits of fuel modification and remedial grading were extended and linked as they should be along the southern boundary of the Property, it would be obvious that portions of O'Neill Park would be impacted by such activities.

The CEQA documentation for 15230 fails to address either the impacts or the risks associated with performing grading and fuel modification in portions of O'Neill Park adjacent to the southern boundary line of the Property. As set forth in the 1974 agreement between the Vedanta Society and the County, a copy of which is attached hereto, the consequences of disturbing those portions of O'Neill Park by activities which would alter or defoliate the topography in those areas would trigger a reverter clause which would allow the Vedanta Society to reclaim title to approximately 240 acres of O'Neill Park. The risk of losing such valuable parkland should be addressed in the CEQA documentation *before* TT 15230 is approved in its present form.

Also, TT 15230 should not be approved unless and until adequate CEQA documentation is prepared to discuss the impacts of discharging storm, irrigation, and urban runoff into pristine areas of O'Neill Park adjacent to the southern boundary of the Property. The Addendum to FSEIR 566 contains only general, boilerplate references to possible impacts to natural drainage courses caused by runoff originating from the hundreds of homes to be built as part of the 299-Unit Project. The CEQA documentation for TT 15230 concedes that urban runoff -- consisting of toxic materials such as "oil,

grease, cleaning products, herbicides, pesticides, and fertilizers" -- would be dumped into the natural drainage courses at the Property, but such documentation is devoid of any discussion of what impacts such toxic materials would have on the fragile ecosystem of those portions of O'Neill Park immediately adjacent to the southern boundary of the Property.

Although there is a reference on page 33 of the Addendum to FSEIR 566 that the urban runoff generated by the 299-Unit Project would be subject to a NPDES Permit, that is simply a reference to possible *mitigation* of an impact which is neither discussed nor disclosed in the Addendum. Moreover, since there is no discussion of the extent of the impacts of toxic materials, there is no basis for judging whether the proposed future mitigation would be adequate or even what the mitigation would be to somehow remove toxic waste from stormdrain runoff discharged into natural water course. Of course, trying to gain any reasonable understanding of how O'Neill Park will be affected by the daily flow of toxic waste is complicated by the fact that the CEQA documentation for TT 15230 contains *no* plan or diagram which shows what the proposed storm drain system is for the 299-Unit Project. Indeed, the Addendum to FSEIR 566 directs the reader to the concept drainage plan for the 705-Unit Project which obviously has no relevance to the design of the stormdrain system for the 299-Unit Project. On page 33 of the Addendum to FSEIR 566, the "proposed drainage facility summary" is set forth, but it only refers to *four* stormdrain lines for the 299-Unit Project, but this is entirely at odds with the *eight* stormdrain lines proposed for the 318-Unit Project as depicted on Exhibit 25 to Draft EIR 561.

Does this discrepancy mean that a *new* stormdrain system has been designed for TT 15230, but has not been disseminated for public review and comment? These questions should be answered by preparing and recirculating a new or subsequent EIR to address the critically-important drainage impacts associated with the development of the 299-Unit Project.

Very truly yours,

Edmond M. Connor

TRABUCO CANYON, CA 92678

ORANGE COUNTY SUBDIVISION COMMITTEE
October 21, 1998

Statement of Ray Chandos Regarding Tentative Tract Maps 15784 and 15230

I request that you not approve the proposed subdivisions at this time for the following reasons.

1. VIOLATION OF THE FOOTHILL/TRABUCO SPECIFIC PLAN

Procedurally, the Foothill/Trabuco Specific Plan (Page III-86, and Bylaws, Exhibit A, II) requires that these subdivisions be forwarded to the Specific Plan Review Board at least 21 days prior to your acting on them. That would have meant they needed them on September 30. At last Friday's Review Board meeting, however, the secretary of the review board confirmed that he did not receive these maps until the week of the October 16th meeting. In fact, the Review Board passed a resolution on Friday recommending that you not take action today, and that you allow the Review the full 21 days provided by the Specific Plan.

2. VIOLATION OF CEQA

Since preparation of EIR 566 and the Addendum, significant new information has materialized in the form of a survey for California Gnatcatchers, a federally listed threatened species, on the site. Although the entire site was not surveyed, two Gnatcatchers were found. They were found in the southern region of the site in areas slated for future remedial grading.

Since neither the EIR addendum nor the addendum conceded any significant unavoidable impact on the Gnatcatcher, this new information now requires the County to prepare and circulate a supplemental EIR addressing this new information. So the EIR and addendum cannot be relied upon for approval of these subdivisions.

2. POSSIBLE INCONSISTENCY WITH ZONING AND AREA PLAN

I also notice that you are making a finding of consistency with Area Plan 98-2 and Zone Change 98-3. While the necessary rezoning to allow these subdivisions is in process, the Review Board has asked for the opportunity to consider that rezoning prior to further Planning Commission and Board of Supervisors action on it. If the Board of Supervisors ultimately approves the rezoning, it may modify that zoning in such a way that this 299-unit subdivision would not be consistent with it. For example, the Board may

require a wildlife corridor where residential are now proposed.

Also, the Area Plan has been appealed to the Board of Supervisors, and may also be modified or denied.

For these reason, subdivision approval today is premature. Why the rush to put the cart before the horse? If approved today, these subdivisions will be appealed to the Planning Commission and possibly also to the Board of Supervisors, delaying finality well beyond the 21 extra days the Review Board has requested.

Please include my statement in the official record of proceedings for these projects.

Thank you.

RE: Proposed TTM No. 15230, Project No. EP/PP 69873

Dear Mr. Stanton:

The proposed subdivision cannot legally be approved:

1. It conflicts with the governing zoning ordinance, viz. the Foothill/Trabuco Specific Plan which requires a specific plan amendment prior to any development proposal other than recorded tract map number 10692. Under state law, all subdivisions must be consistent with any governing specific plan.

2. Under the Specific Plan (pages III-86, D-3), the proposal must be reviewed by the Foothill/Trabuco Specific Plan Review Board prior to any action by the County. This has not occurred.

3. EIR 566 no longer suffices as valid environmental documentation for this project under CEQA. A field survey conducted by R.B. Riggan and Associates on September 23, 1998 discovered two California gnatcatchers inhabiting the Saddleback Meadows site. Since the entire site was not surveyed, more gnatcatchers may be present there. The California gnatcatcher is currently protected as a threatened species by both federal and state endangered species acts.

The above constitutes new information about the proposed project's potentially significant environmental impacts. Therefore, a subsequent or supplemental EIR must now be prepared and circulated for review and comment.

Thank you for the opportunity to comment on the proposed subdivision.

Sincerely,

Ray Chandos

RE: Proposed TTM No. 15784, Project No. EP/PP 69881

Dear Mr. Stanton:

The proposed subdivision cannot legally be approved:

1. It conflicts with the governing zoning ordinance, viz. the Foothill/Trabuco Specific Plan which requires a specific plan amendment prior to any development proposal other than recorded tract map number 10692. The attached "Project Proposal" says "This is an application for a *development* permit." Under state law, all subdivisions must be consistent with any governing specific plan.

2. Under the Specific Plan (pages III-86, D-3), the proposal must be reviewed by the Foothill/Trabuco Specific Plan Review Board prior to any action by the County. This has not occurred.

3. EIR 566 no longer suffices as valid environmental documentation for this project under CEQA. A field survey conducted by R.B. Riggan and Associates on September 23, 1998 discovered two California gnatcatchers inhabiting the Saddleback Meadows site. Since the entire site was not surveyed, more gnatcatchers may be present there. The California gnatcatcher is currently protected as a threatened species by both federal and state endangered species acts.

The above constitutes new information about the proposed project's potentially significant environmental impacts. Therefore, a subsequent or supplemental EIR must now be prepared and circulated for review and comment.

Thank you for the opportunity to comment on the proposed subdivision.

County of Orange Environmental Management Agency
P.O. Box 4048
Santa Ana, CA 92702-4048

October 17, 1998

Committee members,

I am writing regarding Tentative Tract Map No. 15230, California Quartet, Ltd.'s proposed subdivision in the Cook's Corner area east of El Toro Road. A previous family commitment out of state will not allow me to attend this meeting, so I thank you very much for accepting this written reply in lieu of a personal response. At my request, a gentleman with your agency kindly provided me with a map of the proposed development.

My family and I reside on eight acres at 19041 Live Oak Canyon Road, directly adjoining this site. If this development is approved, it will decrease the value of our home and property and alter our way of life due to the following:

- Proximity - This proposal would place 299 houses directly over a small hilltop behind our home. We settled in this location for its seclusion. We paid a substantial cost for the privacy and security this isolation provides, both of which would no longer exist if this subdivision is built as proposed. Currently, there is no easy access to the back of our home. This development would invite intrusion into our backyard and take away the privacy and security we purchased.
- Noise - I conduct my business out of a small office on our property. I currently must shut the windows to block construction noise coming from similar building projects down the road in the Portola Hills area. I cannot imagine conducting business as usual with months of earthmoving equipment and construction noise just beyond our backyard.
- Traffic safety - A segment of Live Oak Canyon Road lies across our property. The County of Orange has secured the rights to a portion of our property for maintenance and public use of this roadway. Live Oak Canyon Road was never intended to be the thoroughfare it has become. This is a hilly, winding road with a speed limit of 35 mph meant to provide access to homes in this canyon. In just the past two years, use of this roadway has increased substantially due to the dramatic increase in subdivision development in the area. Our driveway is just over the top of a blind hill. My family and I are in danger each day pulling out of our own driveway. Previously, traffic was light, and canyon residents respected the slow speed limit, aware of the dangerous nature of the placement of their neighbors' driveways. More and more, this roadway is being used as a main thoroughfare between subdivisions. Motorists from neighboring housing projects often do not respect the speed limit, as evidenced by the traffic accidents that are now occurring regularly on our property.
- Light pollution - No matter how a developer promises to contain light pollution with reflectors pointing streetlights downward, there is an inevitable glow that eminates from developments such as this. These lights, no matter how well shielded, would cast a glow over the area and our home.
- Wildlife - We share our property with coyotes, mountain lions, bobcats, oppossums, quail and many other animals. We respect their trails and dens and do as little as possible to impact their movements. Despite what any environmental impact surveys purchased by a developer may conclude, these animals will never use a manmade "wildlife corridor." Once this habitat is destroyed, it can never be reclaimed. This development would forever change the nature of wildlife living on our property and traveling through this area.
- Further development - A project of this magnitude will invite more development of gas stations and stores to accommodate the hundreds of new residents that will flood the area should this plan be approved. Trabuco Canyon, one of Orange County's last remaining rural areas, is rapidly being destroyed by development. This proposal is in direct violation of the Trabuco Foothills Specific Plan. We read this plan thoroughly when my family settled on this property, confident that this beautiful canyon would be protected by the County from development.

Thank you very much for hearing our opposition to this proposal. As just one family, we feel powerless against a large development company with its lawyers and money. However, we will do what we can through appeals and litigation to protect our safety, our privacy and the lifetime investment we have made in our home and property. At this point, all we can do is sincerely ask that you not to approve this proposed development. Thank you, again, for your consideration.

Respectfully,

David A. Blum

RE: Saddleback Meadows Tentative Tract Map 15230

Dear Subdivision Committee,

By way of this letter I would like to formally include the attached August 11, 1998 letter from the U. S. Fish and Wildlife Service and the California Department of Fish and Game and the California Native Species Field Survey Form and Figure 1 prepared by RBRiggan as part of the administrative record for this project.

I would also like to formally object to any approval of this project in its current form, as well as the manner in which this project is being processed.

First, this project has not met the legal requirement of coming before the Foothill Trabuco Specific Plan Review Board.

Second, in their August 11, 1998 letter, the U. S. Fish and Wildlife Service and California Department of Fish and Game clearly stated that "[t]he 299-unit development posed a significant impact to the existing habitat connection from O'Neill Regional Park (Southern Subregion) to the Cleveland National Forest and other open space habitat in the Central/Coastal Subregion." Despite this assertion, you are considering approving this exact project. Such action not only is contrary to federal and state agency demands, but it also jeopardizes the integrity of the Natural Communities Conservation Program, to which the County of Orange has made unmistakable commitment.

Notwithstanding Natural Communities Conservation Program non-compliance, you have before you significant new evidence of California gnatcatchers on the project site, triggering additional CEQA analysis prior to any type of development approval. Your failure to acknowledge such new information as significant under CEQA places the County of Orange at legal risk and further subjects its tax payers to financial obligations over and above that which you have already caused through the inefficient and illegal manner in which this project has been processed.

Sincerely,

Pete DeSimone

Saddleback Meadows Project
Orange County, California

Dear Board of Supervisors:

The California Department of Fish and Game and the U. S. Fish and Wildlife Service (collectively the Wildlife Agencies) recently learned about a Planning Application Hearing for the Saddleback Meadows project scheduled for the County Board of Supervisors on August 11, 1998. The applicant is proposing a 299 single-family dwelling unit project at Saddleback Meadows. The Wildlife Agencies and County have a lengthy history of communication concerning the project site and a variety of development proposal alternatives have been reviewed. The project site provides a critical habitat connection between the County of Orange's Central/Coastal and Southern Subregional Conservation Plans. In this letter we reiterate our position on the proposed Saddleback Meadows project and provide comments on a recent proposal that could affect the project.

The Wildlife Agencies, other Federal and State agencies, County of Orange, and local jurisdictions are participating in the Natural Community Conservation Planning (NCCP) program to conserve wildlife and habitat resources while accommodating economic growth and development. Our previous comments on Saddleback Meadows Project - Draft Environmental Impact Report (DEIR; No. 561 ,February 1996) and in our August 8, 1997, letter concerning the Saddleback Meadows Draft Subsequent Environmental Report No. 566 (DSEIR) (June 1997) identified significant biological issues related to the project site. These biological issues include habitat connectivity, wildlife corridors, sensitive habitats, and occupied wetlands with a federally listed animal. These sensitive habitats include about 65 acres of coastal sage scrub (CSS), 14 acres of oak woodland, and about 4 acres of wetland vegetation communities. The federally endangered Riverside fairy shrimp (*Streptocephalus woottoni*) is known to occur within at least seven wetlands (identified as "ephemeral ponds") spread throughout the site. Our letter

2925

evaluating the DSEIR identified Alternative '3' which proposed a clustered, lower density development, presented the least environmental impact, but would nonetheless substantially impact the wildlife corridor integrity. The 299-unit development posed a significant impact to the existing habitat connection from O'Neill Regional Park (Southern Subregion) to the Cleveland National Forest and other open space habitat in the central portion of the Central/Coastal Subregion. The Wildlife Agencies are willing to work with the project applicant to redesign a cluster development in order to preserve the wildlife corridor.

Other animal species considered sensitive by the Wildlife Agencies occur on or adjacent to the project site. The Wildlife Agencies documented rare and sensitive Cactus wren (*Campylorhynchus brunneicapillus*) on site. The coastal California gnatcatcher (*Polioptila californica californica*)(gnatcatcher), a federally threatened species, could utilize the site based on the presence of CSS and gnatcatcher-occupied CSS in surrounding areas. Both of these animals, as well as other wildlife, would utilize Saddleback Meadows as a wildlife corridor. County maps show that Saddleback Meadows is the only remaining wildlife corridor linkage to the NCCP Central/Coastal Subregion.

We have been informed by two interested parties, Saint Michael's Abbey and Vedanta Society of Southern California, that a new clustered development alternative proposal and purchase of significant open space on the site have been offered to the current property owner. The Wildlife Agencies are willing to work with the current landowners and all interested parties in reaching a workable development solution.

The Wildlife Agencies believe a workable solution exists to permit development, while maintaining an essential biological connection between the NCCP Central/Coastal and Southern Subregions. We request that the Board consider this alternative approach that may provide a solution acceptable to all parties. If you have any questions or comments, we are available to discuss this matter further. Please feel free to contact us at your earliest convenience.

Sincerely,

Jim A. Bartel

Habitat Description: (Plant communities, dominants, associates, substrate/soils, aspect/slope)

The southeastern corner of the Saddleback Meadows property is a well developed Venturan Sage Scrub with high shrub species diversity. Elements of a mixed chaparral are found on steeper north facing slopes. The property is a critical wildlife corridor between the south Orange NCCP area and the existing NCCP preserves to the west and northwest. Other areas of Coastal Sage Scrub occur on adjacent public lands to the south.

Other rare spp? Federally listed species of Anostraca are known to occur in natural and artificial ponds found on the property. Coastal Cactus Wrens are resident at several points within the property.

Site Information: Current/surrounding land use: The property is currently used for extensive cattle grazing. Properties to the north are generally vacant, properties to the south are sparsely developed as are properties to the east.

Visible disturbances, possible threats: The site is threatened by the current cattle grazing activity and by a pending land development plan. The latter would convert the site to urban level residential.

Overall site quality: [✓]Excellent [ ] Good [ ] Fair [ ] Poor Comments:
The habitats in the southeastern corner of the site are (despite cattle grazing) in excellent condition.

Attn: Mr. John Buzas

Re: Meeting results October 16, 1998

Gentlemen:

On October 16th last, the Review Board held its second public meeting after posting notice of the meeting in accordance with the Brown act, and as explained to us by the county staff.

This communication is a report of actions by the review board concerning their agenda item # 2, "The Saddleback Meadows" application for 299 single family homes (alternative area plan and proposed zone change and their applications for certain tentative tract map approvals). The meeting was well attended by the public who had garnered information about the meeting and the proposed project from news accounts, the public posting and word of mouth.

After a lengthy public comment period in which many complaints about an absence of communication between the County, the property owners and the public were repeatedly expressed, and after consideration of a presentation by opponents of the proposed project, the Board took the following actions:

1.- In a five in favor and none against vote, resolved that:

A.- The Board strongly objects to the Planning Commission's October 7th actions, approving the area plan for the proposed Saddleback Meadows 299 alternative application, and recommending approval of the Zone Change on the basis that such action violates the review board process mandated by the specific plan;

B.- The Board strongly requests that the Board of Supervisors remove all consideration of the Saddleback Meadows project from its November 7th agenda and refer the project to this Board for review and recommendation to the Planning Commission in a manner which is consistent with the provisions of the Specific Plan;

C.- Demands that the County and staff immediately remove the Saddleback Meadows subdivision maps from consideration on the October 21st agenda of the Orange County Subdivision Committee and refer such subdivision maps to this Board for review and recommendation to the Planning Commission in a manner which is consistent with the provisions of the Specific Plan and the Zoning code;

2929

RECEIVED TIME OCT.20. 11:31AM PRINT TIME OCT.20. 11:33AM

2,- In a four in favor and one abstention vote, resolved:

A.- That based upon the information provided to the Board by the county staff, the proponents and the opponents of the project, and the absence of sufficient time to understand and form recommendations on the very complex issues related to the proposed project, and in consideration of the concerns of the public about the impact of the project both during and after construction/development of the property, we recommend against the 299 single family home alternative.

3.- In a five in favor none against vote, resolved:

A.- That the Board discerns a grave community concern about the proposed amendments to the Foothill/Trabuco Specific Plan and urges the Board of Supervisors to remove any action/consideration of the proposed amendments from their November 1998 agenda, and refer the matter of such proposed amendments to this Board for recommendations thereon to the Planning Commission prior to any final action by the Supervisors.

OTHER BUSINESS

For the attention of Mr. Frank McGill:

Enclosed is a copy of the minutes of the September 29th meeting, a copy of the September 29th notice of public hearing and agenda.

The Review Board has determined to hold its meetings on the second Friday of each month, at 7:00 A.M. in the multi-purpose room at O'Neill Regional Park.

The next meeting of the Review Board will be November 13th, at 7:00 P.M. That agenda will include a consideration of three of the thirteen proposed amendments to the Specific Plan.. As discussed today, I will recommend that the Board consider one or more special meetings to cover the proposed amendments in view of the Staff's intention to request continuance of their consideration by the Planning Commission until their December 9th meeting.

Minutes of the October 16th meeting will be available by noon-tomorrow October 21st. The above report contains the jest of the meeting minutes and correctly states the actions of the Board.

Sincerely,

Robert A. Wilks
Secretary of the Board

MINUTES OF MEETING
FOOTHILL TRABUCO SPECIFIC PLAN REVIEW BOARD
O'NEILL REGIONAL PARK - MULTI PURPOSE ROOM
DATE: September 29,1998

Present at this meeting were: Ray Mills, Chairman, Bruce Conn Vice-chairman; Robert A. Wilks, Secretary; Jeanne Porter Member and Adam Smith, Member. Absent were none. Also present were members of the public, and representatives of California Quartet, landowner and project proponent; St. Michael's Abby; Ramakrishna Monestary project opponents, and other members of the public at large. The meeting was called to order by the Chairman at 7:10 P.M.

The agenda contained four items of business, to wit:

1,- The introduction of the Board Members to those present and to the public;

2.- A discussion of the SADDLEBACK MEADOWS ALTERNATIVE PLAN concerning the development of 299 single family residences;

3.- A general discussion of amendments to the Foothill Trabuco Specific Plan;

4.- Those certain administrative matters deemed necessary by the Board for its current and future administration.

Following the introductions of the members of the board, and the persons present in the hearing room, the meeting proceeded to a discussion of the SADDLEBACK MEADOWS ALTERNATIVE PLAN concerning 299 single residential homes sites, (the project). It was first brought to the attention of the Board that the Orange County Planning Commission was scheduled to hear and vote upon the approval of the project on October 7, 1998 at a regularly scheduled meeting of the commission.

A detailed "overview" presentation of the project was provided by representatives of California Quartet. This included a historical review which set forth how the current proposal for 299 SFR has reached its current position and what action is expected within the immediate foreseeable future.

Members of the Board made inquiry about certain particulars of the project, and answers were given by the proponent's representatives. At the conclusion of the proponents presentation, other persons present were given the floor.

Representatives of the St. Michael's Abby and the Ramakrishna Monestary suggested that this Board had been only very recently appointed and sworn, and that the public meeting for this Board to consider the SADDLEBACK MEADOWS ALTERNATIVE PLAN for 299 SFR had been hastily called and noticed, urged the Board to ask the Planning Commission for the statutory 21 days allowed by law for the Board to consider any project brought before it's deliberations. Upon the motion of Bruce Conn seconded by Adam Smith that the Board postpone any action upon the application of CALIFORNIA QUARTET regarding the SADDLEBACK MEADOWS ALTERNATIVE PLAN until the expiration of twenty one days, and after brief discussion among the Board, the motion was carried four in favor and Mr. Ray Mills abstaining.

RECEIVED TIME OCT.20. 11:39AM PRINT TIME OCT.20. 11:42AM

The Board determined to comply with the 21 day provision, and accordingly scheduled its next meeting for OCTOBER 16, 1998 in order to allow sufficient opportunity for the members to become familiar with and assimilate the provisions of the 299 SFR alternative for the project.

The next business coming before the Board concerned a general discussion of proposed amendments to the Foothill Trabuco Specific Plan. Upon the motion of Adam Smith which was duly seconded, that the Board postpone its discussion of such topic until a later meeting, and after brief discussion, the motion was carried unanimously, and the topic was continued until October 16, 1998.

The next business coming before the Board concerned the administrative matters. The Board resolved that the following general matters would be, until such time as they may be later amended, be the general policies of the Board, to wit:

A.- Meetings shall be held regularly on the second Friday of each month, commencing with October 16, 1998 commencing at 7:00 P.M. and scheduled for termination not later than 10:00 P.M.;

B.- Notice of such meetings containing an agenda shall be posted at three public places not less than seventy two (72) hours prior to such meetings at (1) the Emory General Store Bulletin Board; (2) the U.S. Postal Service General PostBox Area and (3) the Hamilton Trial Public Bulletin Board all of which sites are within Trabuco Canyon, California.

C.- Robert's Rules of Order shall control the proceedings of Board hearings; When motions shall be made and seconded, the matter of the motion shall proceed to discussion and vote;

D.- No pre-determined limitation upon time shall be set for presentation of proposed project(s) and no pre-determined limitations upon time for rebuttal thereof shall be set. The Chairman shall determine in his absolute discretion the allowable time for (1) presentations and rebuttals; (2) public comment in support or opposed and (3) expert explanation and rebuttal.

E.- The officer conducting the meeting shall notify the person speaking when the speaker has but three (3) minutes of time left, to conclude his/her presentation. Upon expiration of said three (3) minute warning, the meeting leader shall inform the speaker to terminate the presentation which may be by opening the topic to questions of the members of the Board. The chairman shall determine the time allowable for the conduct of questions from the Board allowing a reasonable opportunity for each member to inquire.

F.- Minutes of the meeting shall be prepared in writing and circulated to the members prior to the next regularly scheduled meeting. The first topic of each successive meeting shall be a review, amendment and approval of the minutes of the prior meeting.

G.- Such other and further administrative matters are reserved to the Board pending its action at any duly noticed meeting or agenda. Any member may request that an administrative matter be scheduled for discussion at any future meeting whereupon such matter shall become an agenda matter.

There being no further business coming before the board, and upon motion duly made and seconded, the meeting was adjourned.

Robert A. Wilks, Secretary

MINUTES OF MEETING
FOOTHILL TRABUCO SPECIFIC PLAN REVIEW BOARD
O'NEILL REGIONAL PARK - MULTI PURPOSE ROOM
DATE: October 16, 1998

Present at this meeting were: Ray Mills, Chairman, Bruce Conn Vice-chairman; Robert A. Wilks, Secretary; Jeanne Porter Member and Adam Smith, Member. Absent were none. Also present were members of the public, and representatives of California Quartet, landowner and project proponent; St. Michael's Abby; Ramakrishna Monestary project opponents, and other members of the public at large. The meeting was called to order by the Chairman at 7:05 P.M.

The agenda contained three items of business, to wit:

1.- A review and action upon the minutes of the Board's prior meeting;

2.- A discussion of the SADDLEBACK MEADOWS ALTERNATIVE PLAN concerning the development of 299 single family residences and action thereon;

3.- A general discussion of amendments to the Foothill Trabuco Specific Plan;

The first order of business coming before the Board concerned the minutes from the September 29, 1998 meeting. Members had received copies of such proposed minutes and had the opportunity to review same prior to the commencement of the October 16th meeting. The topic of the minutes was opened for discussion, and after brief discussion, and upon motion duly made and seconded, the minutes of the meeting of September 29, 1998 were approved without amendment, deletion or addition.

The next order of business coming before the Board concerned a discussion of the SADDLEBACK MEADOWS ALTERNATIVE DEVELOPMENT PROPOSAL for 299 homes (the proposal). Members of the community stated their various opinions and positions about the proposal, raised numerous questions about the extent of grading required by the project, stated concerns about the wildlife corridor, water drainage, and other aspects of the proposed development. Many members of the public stated their surprise and anger that the project would be moving ahead without their knowledge or their ability to have community participation with many aspects of the project and generally expressed displeasure and frustration about the lack of communication between the community at large and the County and/or the property owners.

It was also pointed out during this discussion that there is a possibility that should the project be approved by the Supervisors, that the 240 acres of "gift" lands transferred by the Ramakrishna Society to the O'Neill Regional Park would/could be revoked under the reversion clause contained in the 1974 agreement between the society and the County of Orange.

The meeting then proceeded to a presentation of technical aspects of the proposed grading element and the ground water runoff aspect. This was offered by opponents of the project and was presented by Mr. Singleton an experienced Civil Engineer. It was pointed out that in the opinion of Mr. Singleton, that the remedial grading would be three (3) time "mass-x" and that this much grading is seldom considered economically feasible and would take up to as much as three or three and one-half

years just to complete the grading. It was suggested that a condition to any permit should be a very high public works bond to assure the community and the County ample funds to mitigate and render safe the property should the owners abandon the project or otherwise be unable to complete the grading of the property.

Mr. Singleton also presented information about the current project plans for disposal of urban water runoff. It was pointed out that much of the water runoff is directed into existing canyons where there are known landslides, and that the addition of water into these slopes will only render them more likely to break and slide. That such is particularly likely considering that the subject canyons are presently only subject to seasonal rain water, but will, under the project proposal, be saturated with consistent urban water runoff, and when presented with heavy rains, may more likely slide, causing extensive damage and expense to the homeowners association or the governing authority.

Mr. Singleton presented information about the Oak Woodland aspects of the project as related to the FTSP, tree removal and mitigation provisions. Currently the FTSP tree removal and mitigation provisions require a five to one mitigation reforestation. That is, to replant five Live Oak or other species of tree, for each one tree removed during property development. It was pointed out that there are currently 298 "protected" trees on the project property and that the project proposes to remove 59% of the Oak Woodlands. That reforestation under the FTSP would require the planting of 1,400 new trees to accomplish mitigation. Mr. Singleton pointed out that there is insufficient property in the project to achieve the planting of 1,400 new trees, consequently the current proposed project does not meet the provisions of the FTSP concerning tree removal and mitigation.

Mr. Singleton also presented information about the FTSP requirement for "natural open space". The Plan currently requires that 70% of the project lands remain as "natural open space". It should be noted that the current provisions of the FTSP do NOT consider manufactured slopes as "Natural Open Space". However, under certain proposed amendments to the FTSP, manufactured slopes could be considered as "Natural Open Space" and that county staff has informed the proponents of the project that their proposed manufactured slopes do or will comply with the FTSP so as to meet the requirement of 70% "natural open space". The opponents contend that the manufactured slope exception under current provisions of the FTSP render the project out of compliance regarding the open space requirement.

Mr. Singleton also presented information about the project's use of manufactured slopes beyond the limits established by the current provisions of the FTSP. Specifically, the FTSP now limits the height of any manufactured slope to 30 feet. Whereas the project plans call for the manufacture of several slopes in excess of thirty feet, and a few as much as eighty (80) feet tall. Opponents of the Project contend that there is no viable reason to exempt the property or project from the provisions of the FTSP and thus conclude that the current project proposal of manufactured slopes in excess of thirty feet violate the Specific Plan and should not be permitted.

Upon the conclusion of the presentation by Mr. Singleton, questions were taken from the public and from the Board. Mr. Singleton concluded his presentation and was followed by Mr. Riggan, a licensed and experienced Biologist who addressed the meeting concerning the proposed wildlife corridor (the corridor).

Mr. Riggan pointed out that many wildlife studies have determined that to be effective, a wildlife

corridor must be a minimum of 1000 feet wide. That the corridor in the project is set at 600 feet and will diminish to 400 feet or less when impacted by the fuel modification requirements of the Fire Marshall.

Mr. Riggan also pointed out that studies have clearly shown that the preferred configuration of a corridor is in a stright line so that wildlife are not presented a route with left or right turns or angles, but that the project corridor has both left and right turns at angles of 90 degrees or less.

Mr. Riggan also pointed out that the property of SADDLEBACK MEADOWS has consistently been seen by Federal and State wildlife authorities, as a total wildlife corridor. That is that 100 % of the project land should be set aside and dedicated as a corridor without development of any kind.

Mr. Riggan concluded that based upon the failure of the project to adequately address the wildlife issues that this Board should recommend a wildlife consultation/resolution aspect for the project with Federal and State wildlife authorities as a condition to a favorable recommendation.

Upon the conclusion of the presentation by Mr. Riggan, questions were taken from the public and from the Board. Mr. Riggan concluded his presentation and was followed by Mr. Ross, a representative for the property owner, California Quarret.

Mr. Ross pointed out that the project has been previously reviewed by this Board and that the Planning Commission has approved the project, that the County planing staff has recommended approval of the project and that with respect to the development issues raised by both Mr. Singleton and Mr. Riggan, that those concerns would be adequately addressed in future decisions with the appropriate agencies as they might arise. Mr. Ross addressed the question of the public works bonding and pointed out that the approving authority has the ability to require increases in the bond amount as the project progresses.

Those present were allowed a final five minutes to speak to the issues, and upon conclusion of the public comments, the board began deliberations. During the period of public comment, it was suggested that this Board should strenuously object to the actions of the Planning Commission taken October 7, 1998 and ask the Board of Supervisors to remove consideration of the project from their November agenda, and demand that the County Subdivision Committee take no action upon the proposed tentative tract map application on October 21, 1998.

1. A motion was made and seconded that:

A.- "The Board strongly objects to the Planning Commission's October 7th actions, approving the area plan for the proposed Saddleback Meadows 299 alternative application, and recommending approval of the Zone Change on the basis that such action violates the review board process mandated by the specific plan;

B.- The Board strongly requests that the Board of Supervisors remove all consideration of the Saddleback Meadows project from its November 7th agenda and refer the project to this Board for review and recommendation to the Planning Commission in a manner which is consistent with the provisions of the Specific Plan;

C.- Demands that the County and staff immediately remove the Saddleback

Meadows subdivision maps from consideration on the October 21st agenda of the Orange County Subdivision Committee and refer such subdivision maps to this Board for review and recommendation to the Planning Commission in a manner which is consistent with the provisions of the Specific Plan and the Zoning code";

After discussion the Chairman called for a vote and upon a five in favor and none against vote, the resolution was passed.

2.- A motion was made and seconded:

"That based upon the information provided to the Board by the county staff, the proponents and the opponents of the project, and the absence of sufficient time to understand and form recommendations on the very complex issues related to the proposed project, and in consideration of the concerns of the public about the impact of the project both during and after conversion/development of the property, we recommend against the 299 single family home alternative."

After discussion the Chairman called for a vote and upon a four in favor and one abstention vote, the resolution was passed.

OTHER ACTION BY THE BOARD:

The Board then proceeded to a discussion of the third agenda item, a general discussion of the proposed amendments to the Foothill/Trabuco Specific Plan. In that only a short time remained in the scheduled meeting time, it was determined that insufficient considerations had been given to the proposed amendments and that the community appeared to be gravely concerned about the scope of some or most of the proposed amendments. It was pointed out that the Board of Supervisors has scheduled a public meeting to consider the amendments on November 3, 1998. In consideration of the forgoing, a motion was made and seconded:

"That the Board discerns a grave community concern about the proposed amendments to the Foothill/Trabuco Specific Plan and urges the Board of Supervisors to remove any action/consideration of the proposed amendments from their November 1998 agenda, and refer the matter of such proposed amendments to this Board for recommendations thereon to the Planning Commission prior to any final action by the Supervisors."

After discussion the Chairman called for a vote and upon a five in favor and none against vote, the resolution was passed.

The Board then determined to place on the next agenda three elements of the proposed amendments to the FTSP for their next meeting November 13, 1998. The three elements are: (1) The 66 percent Dedication of Open space; (2) Tree removal and mitigation reforestation and (3) Additional uses in open space.

Upon motion duly made and seconded, a motion for adjournment was made and unanimously passed, whereupon the meeting was adjourned.

RE: Saddleback Meadows; FTSP Amendments; Code Enforcement Issues; Goren

Dear Supervisor Spitzer:

I am writing on a few subjects of importance and hope you will take the time to review this letter carefully.

SADDLEBACK MEADOWS

In a word or two, the Planning Department is again getting you and your fellow Board members into hot water. Not only have they disregarded CEQA in failing to address the recent discovery of two gnatcatchers on the Saddleback Meadows site [they must, under law, rewrite and recirculate the CEQA document], they have failed to send the issue to the Foothill Trabuco Review as required by law. Both issues, along with others, are litigable and these are the court's favorite issues; issues of procedure.

If it is your desire to send this thing to court, you are definitely on the right path, as is planning and the Planning Commission.

It is Frank McGill in planning, with the blessing of Tom Mathews, that is pushing this through. Then, YOUR Planning Commissioner, Rick Goacher, headed up the move to approve the 299-unit plan. I would like an explanation as to why you retain Goacher when he continues to rub your nose, and our lives, in such rubbish. The man is out of touch and is not representing the community. Why didn't he address the CEQA issues? Why didn't he address the endangered species issues? Whether he agrees or not with the law is not the point. The law is the law and his refusal to obey it is infuriating. Why do you allow him to force the public to sue every time we turn around? Why shouldn't the onus be on the developer, not the public? Do you really believe this is the best way to deal with problems?

McGill lied to the Commission in saying residents support the 299 plan. They don't, and he either knows it, or is incredibly out of touch. Either way, he lied. McGill and Mathews are directly and personally responsible for misrepresenting the issues, and I expect that you will take them to task for this.

Every time the county does something like this, especially when the law is clear and the court must deal with procedural issues, the taxpayers pick up the tab for County Counsel, private counsel, and the costs of litigation which, in this case, will undoubtedly include a multiple number of groups *proper* and otherwise. It's an insulting waste of hundreds of thousands of dollars and this type of thing must stop. In fact, I am preparing a review of the costs of needless litigation just in the canyons which may surprise you. I'm sure we have all kinds of places (like code enforcement officers) where $500K+ would be more valuable and productive when compared to needless litigation. This prodevelopment cycle has always worked this way and always will until someone (you?) stops it. And it's a great taxpayer issue. Enforce the law and stay the spending. That's it in a nutshell.

FTSP AMENDMENTS

The above Saddleback Meadows issue aside, now consider what Frank McGill told the Planning Commission in reference to the proposed FTSP: that the [Foothill Trabuco] Specific Plan would soon be amended to allow other projects similar to Saddleback Meadows. What gall. This is exactly what we know they have been focusing on for some time, and your support of the Amendments process has added fuel to this fire. Is this really want you want? Do you believe this is what your constituents want?

And, by the way, did you know that you appointment to the FTSP Review Board at least two individuals (Mills and Porter) who support a complete revision if not wipe out of the FTSP? If you did know, shame on you! If you didn't know, then perhaps you need to ask the appropriate staffer why you didn't know and why they didn't bother to find this out. Clearly, the community does not support the proposed revisions. So to appoint three members to the FTSP Review Board hostile to the FTSP was inappropriate. If you didn't know, I don't blame you personally. But the staffer dealing with this deserves a stern lecture. All this comes down to you, and this doesn't help.

When you commented to me, when we took the illegal grading tour, that Beazer didn't fit, I wanted to shout, "DUH"! So as you consider the amendments, remember every single day what you saw and how you felt. That is a mere shadow of how we feel.

I hope that you will make time, someday, to explain to me exactly what you mean when you say you are a land rights advocate. I hope you understand what that means not only legally, but in the real world.

CODE ENFORCEMENT ISSUES

As you know, and as Paul Hernandez knows, I was furious with the proposed make-up of the Code Enforcement Task Force. I just received, without attachments, the first Meeting Minutes of the Task Force, dated September 24, 1998.

Three things:

1. Who is our "community representative"? Please provide to me the name of the person serving our area where this issue was started.

2. Under Section III(B) you will note that Canyon grading violations are addressed by writing, "This issue is being addressed through a separate effort by Planning and Development Services". What does this mean?

3. Why are these meetings being held during the day when those of us who work--and I have worked on this issue hard and long for over 10 years--cannot attend the meetings? I am insulted and angry that these issues are being relegated to business times as usual so the public, and/or their representatives, cannot attend. Why was I never notified about the meeting times or consulted about who would be "representing" us? Exactly who do you believe can represent us if not one of us? It is no secret that Mathews hates me. But his dislike of me should not stop you, or your staff, from making sure that we are included. I would like to know who on your staff was responsible for staffing this Task Force for the Third District.

GOREN

As you remember, when Goren was approved it came out that Goren (who admitted they did not pay their permit fees at the Board Hearing) did not pay fees. You asked for an accounting of all fees paid since September 16, 1997 to the date of your Board Approval (later overturned by the court, as we predicted). Where is that information? — we got it

If Mathews has not provided it to you, I would request that you force him to do so immediately. I would like an explanation as to why every time he is in hot water (code enforcement, etc.) that he gets away with not providing information, not responding to requests, etc.

I am tonight sending a California Open Records Act Request for the information, and I better not have any difficulty with it, and better not be required to pay a fee. I've had it

with Mathews. Anyone and everyone who does not hold him accountable and ask questions is allowing him to get away with illegalities, etc., on a constant basis that, deminimus, cost us precious dollars, and time (dollars), and expands the power of his position from Director to Czar. Mathews has exhibited a pattern of behavior over the last 13 years which borders, and may, indeed, cross the line of malfeasance, at minimum. His part in many issues, whether the airport or land use, is extremely significant. As a department head, his behavior is akin to a butcher dressed as a barber. In the end, his razor is positioned at both your and our necks. Is this really how we should be pinned by a county employee? Held hostage by the irrational whimsy of one singular man?

I ask that you research these issues and schedule with me a call to address them. Our situation is not getting better, it is getting worse, and I need to know why. So do you.

With best wishes,

Sherry Lee Meddick

NOTICE OF PUBLIC HEARING

BY THE ORANGE COUNTY BOARD OF SUPERVISORS

SUBJECT: Zone Change 98-3 and Area Plan 98-2

LOCATION: Saddleback Meadows (east of El Toro Road and north of Valley Vista Way)

PROPOSAL: 299 single-family detached homes with 155+ acres of dedicated open space

Environmental Documentation: EIR Addendum PA 980103
Applicant: California Quartet, Ltd.
Hearing Date: November 3, 1998
Hearing Time: 9:30 A.M.
Hearing Location: Hall of Administration
10 Civic Center Plaza
Santa Ana, CA

The applicant and all persons either favoring or opposing this proposal and supporting documents are invited to present their views at the hearing. It is requested that any written response be submitted to the Planning & Development Services Dept. prior to the hearing date. If you challenge the action taken on this proposal in court, you may be limited to raising only those issues you or someone else raised at the public hearing described in this notice, or in written correspondence delivered to the Planning & Development Services Dept. prior to the public hearing.

For further information please call Frank McGill at (714) 834-2099 or come to the Development Processing Center at the address indicated below.

Saddleback Meadows Subdivision Maps
November 24, 1998, Agenda

DATE: November 17, 1998

TO: Board of Supervisors

FROM: Director, Planning & Development Services Department

SUBJECT: Appeal of Saddleback Meadows Subdivision Maps Tentative Tract Map 15784 and Vesting Tentative Tract Map 15230

Attached is an appeal by Edmond Connor of the Orange County Subdivision Committee's approval of Saddleback Meadows subdivision maps Tentative Tract Map (TTM) 15784 and Vesting Tentative Tract Map (VTTM) 15230 (Attachment I). The appeal was filed on behalf of the Vedanta Society of Southern California, the Norbertine Fathers of Orange, and the Saddleback Meadows Land Conservancy LLC. Also attached is the staff response to that appeal (Attachment II).

On November 3, 1998, your Board continued the proposed Saddleback Meadows 299-unit project (i.e., Zone Change 98-3 and Area Plan 98-2) to November 24, 1998. TTM 15784 and VTTM 15230 are directly related to the proposed 299-unit project and subject to the approval of Zone Change 98-3 and Area Plan 98-2.

On October 23, 1998, the landowner, California Quartet, Ltd., filed an appeal of TTM 15784 and VTTM 15230 which would otherwise not be brought before your Board. Because of the appeal filed by Edmond Connor, California Quartet, Ltd. has now withdrawn their appeal (Attachment III), but the previously submitted AIT and Attachments are still germane.

No revision to the Recommended Action is necessary.

Respectfully submitted,

Thomas B. Mathews, Director

Re: Notice of Appeal of Subdivision Committee's Approval of Tentative Tract Map Nos. 15784 (A Map) and 15230 (B Map) for Saddleback Meadows

Dear Messrs. Mathews and de Mayo:

The Vedanta Society of Southern California ("Vedanta"), the Norbertine Fathers of Orange (the "Norbertines"), and the Saddleback Meadows Land Conservancy LLC (the "Conservancy") [hereinafter, Vedanta, the Norbertines, and the Conservancy shall collectively be referred to as the "Appellants"] hereby submit this notice of appeal regarding the Subdivision Committee's approval of Tentative Tract Map Nos. 15230 and 15784 (collectively, the "Tract Maps") on October 21, 1998.

The Appellants' appeal of the Subdivision Committee's action on the Tract Maps (hereinafter referred to as the "Appeal") shall be based upon each and every procedural and substantive contention, objection, comment, or argument, whether written or oral, which are made, referenced, or otherwise incorporated into the letters (collectively, the "Letters") which are listed in Exhibit "A" attached hereto and are incorporated herein as if set forth in full hereat. In addition, the Appeal shall also be based upon each of the objections raised, or comments or arguments made, by the Appellants' representatives or

any other project opponent (hereinafter collectively referred to as the "Oral Comments") at the public hearings or meetings held by the Subdivision Committee, the Planning Commission, or the Foothill/Trabuco Specific Plan Review Board in connection with the 299-unit single family detached housing project (the "299-Unit Project") which is the subject of the Tract Maps, including, but not limited to, the hearings and meetings held on August 25, September 29, October 7, October 16, and October 21, 1998. Finally, the Appeal shall also be based upon any oral or written statements (the "Statements") made by Appellants' representatives regarding the 44/178 Alternative, including, but not limited to, any statements made at the Board meetings held on June 23, August 11, or October 6, 1998, or otherwise set forth in any correspondence between the Appellants, the County of Orange, or California Quartet, Ltd., or any of their respective representatives, including, but not limited to, the letters identified in Exhibit "A" hereto.

In addition to the contentions, objections, comments, or arguments made, referenced, or incorporated in the Letters, the Oral Comments, and the Statements -- which in the interest of administrative economy are being incorporated by reference as if set forth in full hereat -- the Appeal shall also be based on the following grounds:

(1) To the extent that the Subdivision Committee adopted a finding that the development of the 299-Unit Project will not preclude or prevent the preparation of the Southern Subregion NCCP, such a finding is belied and contradicted by the contents of the October 29, 1998 letter from the U.S. Fish & Wildlife Service ("USFWS") and the California Department of Fish & Game to the Orange County Board of Supervisors, a true and correct copy of which is attached hereto as Exhibit "B" and is incorporated herein by reference. Also attached hereto as Exhibit "C" and incorporated herein by reference is a copy of the November 2, 1998 news article from the *Los Angeles Times* which contains information from USFWS which does not support the Subdivision Committee's finding;

(2) In approving the Tract Maps, the Subdivision Committee failed to make adequate findings supported by substantial evidence in the record as required by the Orange County Zoning Code and Subdivision Code, the California Code of Civil Procedure, the Government Code, and all other applicable land use laws and regulations;

(3) In approving the Tract Maps, the Subdivision Committee violated CEQA and the State CEQA Guidelines by failing to (a) make adequate findings supported by substantial evidence in the record, (b) adopt an adequate mitigation monitoring program, and (c) adopt an adequate statement of overriding considerations with respect to the Tract Maps;

(4) As noted in prior letters submitted on behalf of the Appellants, the drainage impacts associated with the 299-Unit Project have not been properly analyzed or mitigated. The National Pollutant Discharge Elimination System Construction Stormwater Discharge Permit which has been referenced as a mitigation measure only applies to construction stormwater, it has no application to any discharge of storm, irrigation, or urban runoff occurring after construction has been completed. Although a Water Quality Management Plan has been required for the 299-Unit Project as an additional mitigation measure, the preparation of the Plan has been improperly deferred until the grading permit stage of development which will preclude any public review or comment on the Plan. Moreover, even if a WQMP is prepared in connection with the Tract Maps, it will not adequately mitigate the harmful effects of dumping toxic materials (e.g., oil, grease, cleaning products, herbicides, pesticides, and fertilizers) into biologically-sensitive areas of O'Neill Park on a daily basis. The "Drainage Area Management Plan" administered by the County of Orange does *not* impose *any* structural BMP requirements on WQMP's for single family residential projects and thus there is no legal basis in place for requiring the developer of the Tract Maps to install facilities to attempt to detoxify the urban runoff that will flow daily into O'Neill Park.

(5) Tentative Tract Map No. 15230 was improperly approved on October 21, 1998 as a vesting tentative tract map because (a) the public notice regarding such map did not refer to it as a vesting tentative tract map (a true and correct copy of the public notice is attached hereto as Exhibit "D"), and (b) in violation of, *inter alia*, section 7-9-236 of the County of Orange Subdivision Code, the submittal for such map did not identify it as a vesting tentative tract map (a true and correct copy of the "Planning Application" is attached hereto as Exhibit "E").

Accordingly, in light of the contentions, objections, comments, and arguments set forth herein, as well as those which are made, referenced, or incorporated into the Letters, Oral Comments, and Statements, the Appellants recommend that the approval of the Tract Maps by the Subdivision Committee be invalidated.

Very truly yours,

Edmond M. Connor

Saddleback Meadows Project Zone Change 98-3, Area Plan 98-2
and Tentative Tract Maps 15230 and 15784

Dear Board of Supervisors:

The California Department of Fish and Game (Department) and U.S. Fish and Wildlife Service (Service), collectively the wildlife agencies, request that the following information regarding the referenced project actions be included into the hearing record that is the basis for the Board of Supervisors' November 3, 1998 hearing and decision. The hearing item involves land use approvals for a 299-dwelling unit (DU) Contingency Plan development on the 222-acre parcel that is known as Saddleback Meadows. Our comments reflect the wildlife agencies' position on the proposed project that has been developed during 4 years of meetings and environmental document reviews which have preceded this hearing. As described below, the wildlife agencies do not concur that the 299 DU Contingency Plan adequately addresses two critical biological impact issues that have been raised previously by our agencies.

The wildlife agencies, County of Orange, local jurisdictions, major landowners and environmental community are participating in the Natural Communities Conservation Planning (NCCP) program to conserve wildlife and habitat resources while accommodating compatible economic growth and development. Orange County's Central-Coastal NCCP and reserve design was the first major jurisdictional plan approved under the NCCP. That plan identified a limited number of locations at which the habitat that is assured of conservation in the Central NCCP reserve could connect with habitat that is currently undeveloped in the Southern Orange County NCCP planning area. Saddleback Meadows supports significant habitat that was identified as one of the key connection points. Although reserve design concepts and linkages to the Central NCCP reserve are only now being prepared for public review for the Southern NCCP planning area, this site provides a critical habitat connection between Central and Southern Orange County.

Previous letters provided by the wildlife agencies (individually or jointly) on the Draft Environmental Impact Report No. 561 and Draft Supplemental EIR No. 566 identified significant biological impacts associated with the preferred projects and many of the alternatives (including a previous 299 DU alternative) that we concluded were not mitigated to below a level of significance) pursuant to the California Environmental Quality Act (CEQA). The two most critical impacts were the diminished value of the wildlife corridor/linkage (particularly for large mammals) and impacts to wetlands that contain the federally-listed endangered Riverside fairy shrimp *(Streptocephalus wootoni)*. In addition to the CEQA concerns, the proposed projects and alternatives appeared to preclude the opportunity to ensure the linkage between the Central and Southern NCCP reserve lands. The proposed project (299 DU Contingency Plan) that is the subject of this hearing would result in the same inadequately mitigated impacts that the wildlife agencies have previously concluded were not acceptable.

Recent information provided by the County staff at the October 7, 1998 Orange County Planning Commission hearing and in the November 3, 1998 hearing information package has misinterpreted our position on the wildlife corridor, stating that we had concurred with the corridor design as presented in the Contingency Plan. This is not a correct representation of our position.

The Saddleback Meadows property provides the corridor/linkage, although natural habitat areas of the adjacent parcels also have wildlife habitat value. To retain this critical corridor/linkage, the critical factors are the amount, configuration, and topography of the habitat that remain on Saddleback Meadows after development. We believe that the development "bubbles" on the eastern and northern portions of the property essentially eliminate the corridor. The wildlife agencies would concur with a project alternative that provides sufficient habitat at the appropriate locations within the site, even if this included a point of constriction that still allowed for adequate animal movement. The wildlife agencies have provided written responses to the County during each project environmental review stage the wildlife corridor issue had not been adequately addressed in those project documents. Our biologists' professional opinion is that neither of the two previously submitted preferred projects (318 DU and 705 DU) nor the 299 DU Contingency Plan retain appropriate topography and habitat to ensure the continued function of the wildlife movement corridor/linkage that exists on Saddleback Meadows. As currently proposed, the 299 DU Contingency Plan development "footprint" would severely constrain wildlife movement from O'Neill Regional Park (i.e., southern NCCP planning area) to the Central NCCP reserve and Cleveland National Forest and is not acceptable.

In addition, the previously submitted preferred projects and the Contingency Plan alternative cause significant impacts to the wetland areas that support the Riverside fairy shrimp. This is the most significant population of Riverside fairy shrimp in the Southern NCCP area, and no acceptable mitigation proposals have been presented in any of the project plans.

Our primary biological impact concerns could be addressed by a project redesign that removed development from the eastern and northern ridgelines, focussing development on the western portion of the property. This would retain the function of the wildlife corridor and conserve the most significant wetland

areas that support Riverside fairy shrimp. With these changes, the project would likely be able to mitigate its impacts to below a level of significance.

The wildlife agencies' staffs remain available to work with the project's representatives and County staff to address our concerns about the wildlife corridor/linkage and fairy shrimp. We remain optimistic that a solution will be found that provides an acceptable development project while retaining and conserving the wildlife corridor/linkage and species-specific resources.

Thank you for the opportunity to clarify the position of the wildlife agencies on the Saddleback Meadows Project.

Sincerely,

Jim A. Bartel

Open Space in Project Criticized

■ **Land use:** Regulators wonder if Saddleback Meadows' 'wildlife corridors' are big enough.

By DEBORAH SCHOCH
TIMES STAFF WRITER

At first glance, Saddleback Meadows looks like a cookie-cutter version of many other projects springing up in the Orange County foothills. It's to be a gated community of single-family homes grouped around cul-de-sacs in the Trabuco Canyon area, with price tags of $300,000 and up.

But a unique and highly contentious feature can be found in one corner of the project map: a 500-foot gap between house lots labeled a "wildlife corridor," through which rare birds and other wild creatures would travel.

AL SCHABEN / Los Angeles Times

Richard Jennings, a monk at the nearby Ramakrishna monastery, looks over the site of the proposed Saddleback Meadows.

And on the eve of a vote Tuesday on the project by the Board of Supervisors, concerns have escalated as to whether that corridor is wide enough to serve as the crucial link for a much-hailed county network of wildlife preserves.

While county planners appear satisfied, state and federal regulators continue to raise concerns that the corridor is flawed. In fact, the state Department of Fish and Game plans to provide information to supervisors Tuesday, said department official Bill Tippets.

"It's a big deal. It's a critical linkage area," added biologist John Bradley of the U.S. Fish and Wildlife Service.

In fact, Saddleback Meadows promises to be a litmus test of a nationally touted program intended to help stave off extinction

Please see PROJECT, B5

PROJECT

Continued from B1

for Orange County's rare plants and animals. That program, launched by Gov. Pete Wilson with the support of U.S. Interior Secretary Bruce Babbitt, has already produced a sprawling, 37,000-acre preserve in the county's central and coastal areas, and a second preserve in South County is planned.

A key link between the two reserves: the picturesque wilds of Saddleback Meadows, flanked by two religious centers and hills rich with native plants and animals. And with supervisors poised to approve the housing project on 222 acres, some state and federal regulators worry that it will block the flow of wildlife.

Some regulators and environmentalists fear that if rare songbirds and other animals cannot travel between the two reserves, the costly and complex Natural Community Conservation Plan reserve program blessed by Babbitt and Wilson could be derailed. Instead of a network of reserves, the county could have two reserve "islands," with encroaching suburbanization threatening the future of rare wildlife.

County planning administrator Tim Neely defends the proposed link.

"Obviously a wider corridor would be preferable, but this project has a long and complicated history. And, in light of that history, I'm not sure that this proposed corridor is unreasonable," Neely said.

"It's hard for me to imagine this is so terrible in light of all the work we've done," said Pike Oliver, a principal with Newport Beach-based TPG Management Inc., which is managing the project for landowner California Quartet. As for the concerns of state and federal regulators, Oliver said: "I've never seen an agency that hasn't asked for more."

The debate over Saddleback Meadows stretches back two decades, with plans taking many forms, from a 318-home project to a cluster of 705 mobile homes.

Opponents include environmental groups and the neighboring St. Michael's Abbey and the Ramakrishna monastery. The abbey is owned by the Norbertine Fathers of Orange, a Catholic religious order, while the Ramakrishnas are an independent faith tied to Hinduism.

The two religious centers have retained attorney Edmond Connor, who heads the county Bar Assn., and have spent months attempting to craft a compromise. One plan calls for a conservancy to buy 178 acres of the California Quartet property to preserve it for open space.

The purchase would be financed with $1.5 million from the county and $3.7 million from the Saddleback Meadows Land Conservancy, formed by the Norbertine fathers and benefactor Kathryn Swiss, Connor said. The developer could then build homes on the remaining 44 acres.

But the negotiations, assisted by Supervisor Todd Spitzer, apparently ran aground, although talks reportedly will continue today. The 299-home project, meanwhile, was approved 4-1 on Oct. 7 by the county Planning Commission.

"The story here is that the county is processing this thing at breakneck speed," Connor said.

A local review board, in fact, has asked the supervisors to postpone action because it lacked time to study it properly. Based on the information at hand, the Foothill Trabuco Specific Plan Review Board voted 4 to 0 with one abstention to oppose the project.

But others say the county has had ample time for study.

"It's time for the county to decide what it wants—to at least decide the outside of what's going to happen on this property," said Oliver with the firm managing the project.

"I believe we've done what we can do within the limits of our discretion to advance an alternative that our biologist has advised us satisfies reserve design requirements," said Neely at the county.

Yet, state and federal officials have failed to reconcile their differences with the county over the project's effects on wildlife.

In a joint Aug. 11 letter to county supervisors, the U.S. Fish and Wildlife Service and the state Department of Fish and Game outline what they term "significant biological issues related to the project site."

For instance, the federally endangered Riverside fairy shrimp can be found in at least seven wetlands on the property, the letter states. The rare cactus wren has been found on site, with the threatened California gnatcatcher found nearby.

A 299-home project poses "a significant threat" to the existing habitat connection, the letter states. It asks the board to consider an alternative that would allow development "while maintaining an essential biological connection" between the two reserve areas.

But in an Oct. 19 memorandum, Neely reported that a biologist with Dudek and Associates, which works for the county and South County landowners, had concluded that with proper replanting of vegetation, the proposed corridor would allow movement of birds and small mammals. Neely recommends the county conclude that the project "will not preclude or prevent the preparation" of a South County preserve.

That conclusion is "premature," said Bradley at Fish and Wildlife. "We haven't gotten far enough along on the analysis of reserve designs." And environmentalist Pete DeSimone goes even further.

"If the 299 homes go in, and the wildlife movement area is impacted to the extent we expect," DeSimone said, "then our ability to come up with a viable [South County preserve] is severely compromised, if not impossible."

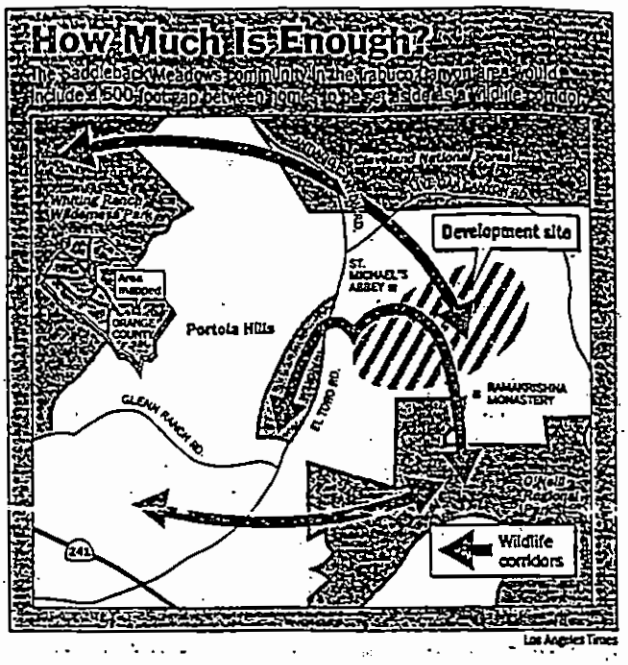

EXHIBIT D

PUBLIC NOTICE

of a public meeting to be held by the Orange County Subdivision Committee

DATE OF MEETING: October 21, 1998

TIME OF MEETING: 1:30 P.M. or as soon thereafter as possible

LOCATION: H. George Osborne Building, Room 903, 300 N. Flower Street, Santa Ana, California

PROJECT: TENTATIVE TRACT MAP NO. 15230

FILED BY: CALIFORNIA QUARTET, LTD.

LOCATED: ON THE EASTERLY SIDE OF EL TORO ROAD APPROXIMATELY 1,500 FEET SOUTHERLY OF LIVE OAK CANYON ROAD IN THE COOKS CORNER-LIVE OAK CANYON AREA.

PROPOSING: THE SUBDIVISION OF APPROXIMATELY 222 ACRES OF LAND INTO 269 LOTS FOR SINGLE FAMILY RESIDENTIAL DEVELOPMENT, 1 LOT FOR A PUMP STATION, 1 LOT FOR A GATED ENTRY, 2 LOTS FOR REGIONAL PARK PURPOSES, 20 LOTS FOR LANDSCAPED SLOPES/OPEN SPACE AND 17 LOTS FOR PRIVATE STREETS.

WILL BE CONSIDERED AT THIS MEETING: All persons either favoring or opposing this proposal are invited to present their view at this meeting. It is requested that any written response be submitted to the Planning and Development Services Department (PDS) prior to the meeting date. At the hearing, the proposal may be approved, conditionally approved, continued to another date or withdrawn. If you challenge the action taken on this project in court, you may be limited to raising only those issues you or someone else raised at the public meeting described in this notice, or in written correspondence delivered to the Planning and Development Services Department prior to the public meeting.

FOR FURTHER INFORMATION: Telephone 834-6045 or call at the Subdivision Section Office, 300 North Flower Street, Development Processing Center, Santa Ana, California, or write to Planning and Development Services, P.O. Box 4048, Santa Ana, California 92702-4048. To facilitate response, refer to Tentative Tract Map No. 15230.

ENVIRONMENTAL INFORMATION: THE REQUIREMENTS OF THE CALIFORNIA ENVIRONMENTAL QUALITY ACT HAVE BEEN MET BY EMA'S DETERMINATION THAT THE PROJECT IS WITHIN THE SCOPE OF PREVIOUSLY FINALIZED EIR 566.

APPEAL PROCEDURE. Any interested person may appeal a decision of the Subdivision Committee on this project to the Planning Commission within ten (10) calendar days upon submittal of required documents and the payment of a fee of $385.00. The appeal must be filed at the Development Processing Center, Subdivision Section, 300 North Flower Street, Santa Ana, California.

PROJECT PROPOSAL:
This is an application for a development permit.
This application is for a subdivision of 222 acres into 299 single-family residential lots, lot 300 for pump station purposes, lot 301 for a gated entry, lots A-O and lot DD for open space, lots P-V for scenic preservation, lots W-CC for a regional park, and lots EE-TT for private streets. This project is located in the Foothill/Trabuco Specific Plan. The main cross street is El Toro Road.

The following deviation is requested on this Tentative Tract Map:

1. Type "C" slope heights over 20' as shown on map.
2. Centerline radius less than 250' on "L" Street.
3. 12% grade on "R" Street.

EXISTING SITE CONDITIONS:
The site is vacant.

ATTACHMENT II

STAFF RESPONSE TO APPEAL OF TTM 15784 AND VTTM 15230

FILED BY EDWARD CONNOR

1. **APPEAL ISSUE**

To the extent that the Subdivision Committee adopted a finding that the development of the 299-Unit Project will not preclude or prevent the preparation of the Southern Subregion NCCP, such a finding is belied and contradicted by the contents of the October 29, 1998 letter from the U.S. Fish & Wildlife Service ("USGWS") and the California Department of Fish & Game to the Orange County Board of Supervisors, a true and correct copy of which is attached hereto as Exhibit "B" and is incorporated herein by reference. Also attached hereto as Exhibit "C" and incorporated herein is a copy of the November 2, 1998 news article from the *Los Angeles Times* which contains information from USFWS, which does not support the Subdivision Committee's finding,

STAFF RESPONSE

The Subdivision Committee adopted a finding that the Contingency Plan will not preclude or prevent the preparation of the Southern Subregion NCCP upon recommendation from the Environmental & Project Planning Services Division in consultation with the Administrator, Planning and Zoning. The determination was based upon mitigation measures required in conjunction with Addendum PA980103 to Certified Final Subsequent EIR 566. The Addendum indicated that the design of the Contingency Plan reduced the impacts to the NCCP by providing a viable corridor, which when combined with the mitigation measures, would not preclude or prevent the preparation of the Southern Subregion NCCP Program.

2. **APPEAL ISSUE**

In approving the Tract Maps, the Subdivision Committee failed to make adequate findings supported by substantial evidence in the record as required by the Orange County Zoning Code and Subdivision Code, the California Code of Civil Procedure, the Government Code, and all other applicable land use laws and regulations;

STAFF RESPONSE

All findings required by the State Subdivision Map Act and the Orange County Subdivision Code were made. Such findings are supported by substantial evidence in the record, which includes Zone Change 98-3, Area Plan 98-2, and EIR Addendum PA 980103.

3. **APPEAL ISSUE**

In approving the Tract Maps, the Subdivision Committee violated CEQA and the State CEQA Guidelines by failing to (a) make adequate findings supported by substantial evidence in the record, (b) adopt an adequate mitigation monitoring program, and (c) adopt an adequate statement of overriding considerations with respect to the Tract Maps;

STAFF RESPONSE

The adequacy of the environmental documentation on the subject project has been previously raised by the appellant and is the subject of litigation on the project. The County has determined that the Subdivision Committee did not violate CEQA and the State CEQA Guidelines.

- The findings made by the Subdivision Committee reflect the most accurate information known and made available at the time of the decision.

- In certifying Final Subsequent EIR 566, the Planning Commission adopted, and upon appeal, the Board of Supervisors upheld a Mitigation Monitoring Program in compliance with Section 21081.6 of the Public Resources Code. The action by the Subdivision Committee was a later action of the original approval and reflected mitigation measures from the Mitigation Monitoring Program. No new mitigation-monitoring program is required.

- In certifying Final Subsequent EIR 566, the Planning Commission adopted, and upon appeal, the Board of Supervisors upheld a Statement of Overriding Considerations in compliance with Section 15093 of the State CEQA Guidelines. The Subdivision Committee was not required to adopt a new Statement of Overriding Considerations.

4. **APPEAL ISSUE**

As noted in prior letters submitted on behalf of the Appellants, the drainage impacts associated with the 299-Unit Project have not been properly analyzed or mitigated. The National Pollutant Discharge Elimination System Construction Stormwater Discharge Permit which was referenced as a mitigation measure only applies to construction stormwater, it has no application to any discharge of storm, irrigation, or urban runoff occurring after construction has been completed. Although a Water Quality Management Plan has been required for the 299-Unit Project as an additional mitigation measure, the preparation of the Plan has been improperly deferred until the grading permit stage of development which will preclude any public review or comment on the Plan. Moreover, even if a WQMP is prepared in connection with the Tract Maps, it will not adequately mitigate the harmful effects of dumping toxic materials (e.g., oil, grease, cleaning products, herbicides, pesticides, and fertilizers) into biologically-sensitive areas of O'Neill Park on a daily basis. The "Drainage Area Management Plan" administered by the County of Orange does not impose any structural BMP requirements on WQMP's for single family residence projects and thus there is no legal basis in place for requiring the developer of the Tract Maps to install facilities to attempt to detoxify the urban runoff that will flow daily into O'Neill Park.

STAFF RESPONSE

The preparation of a Water Quality Management Plan will identify best management practices to control the discharge of pollution. The County's State issued NPDES Permit includes a Drainage Area Management Plan (DAMP), which identifies the structural and nonstructural best management practices, which are to be used to control non-point source pollutant runoff from residential development and minimize the introduction of pollutants into the drainage system. Since the measures to be used in the Water Quality Management Plan are already identified in the DAMP, the timing of the official submittal will not change the nature of the measures proposed. The implementation of these features will control the discharge of pollutants from the development.

5. **APPEAL ISSUE**

Tentative Tract Map No. 15230 was improperly approved on October 21, 1998 as a vesting tentative tract map because (a) the public notice regarding such map did not refer to it as a vesting tentative tract map (a true and correct copy of the public notice is attached hereto as Exhibit "D"), and (b) in violation of, inter alia, Section 7-9-236 of the County of Orange Subdivision Code, the submittal for such map did not identify it as a vesting tentative tract map (a true and correct copy of the "Planning Application" is attached hereto as Exhibit "E").

STAFF RESPONSE

The State Subdivision Map Act requires notice of a hearing be given pursuant to the State Government Code Sections 65090 and 65091, which in turn requires the information of such notice comply with the State Government Code Section 65094:

> ". . . . notice that includes the date, time and place of a public hearing, the identity of the hearing body or office, a general explanation of the matter to be considered, and a general description, in text or diagram, of the location of the real property, if any, that is subject to the hearing".

The public notice for the Subdivision Committee hearing complies with this requirement. The public notice for the Board of Supervisors hearing clearly identifies TTM15230 as a "vesting subdivision map". Furthermore, TTM 15230, which was distributed for public review, which was before the Subdivision Committee, and which is now before the Board of Supervisors, is clearly and boldly labeled "Vesting".

NOTICE OF PUBLIC HEARING

BY THE ORANGE COUNTY BOARD OF SUPERVISORS

SUBJECT: Appeal of TTM 15784 and VTTM 15230

LOCATION: Saddleback Meadows (along El Toro Road and north of Valley Vista Way)

PROPOSAL: A subdivision map for financing purposes only (TTM 15734) and a vesting subdivision map to create 299 residential building sites (VTTM 15230)

Environmental Documentation: EIR Addendum PA 980103
Applicant: California Quartet, Ltd.
Hearing Date: November 24, 1998
Hearing Time: 6:00 P.M.
Hearing Location: Hall of Administration
10 Civic Center Plaza
Santa Ana, CA

The applicant and all persons either favoring or opposing this proposal and supporting documents are invited to present their views at the hearing. It is requested that any written response be submitted to the Planning & Development Services Dept. prior to the hearing date. If you challenge the action taken on this proposal in court, you may be limited to raising only those issues you or someone else raised at the public hearing described in this notice, or in written correspondence delivered to the Planning & Development Services Dept. prior to the public hearing.

For further information please call Frank McGill at (714) 834-2099 or come to the Development Processing Center at the address indicated below.

Re: Saddleback Meadows - Withdrawal of Appeal of Subdivision Committee's October 21, 1998 Actions on TTM 15784 (A Map) and VTTM 15230 (B Map)

Dear Mr. Mathews:

On behalf of California Quartet, Ltd., we hereby formally withdraw our appeal of the Subdivision Committee's decision of October 21, 1998 approving the following maps: Tentative Tract Map 15784 Saddleback Meadows (A Map) and Vesting Tentative Tract Map 15230 Saddleback Meadows (B Map); which had been appealed pursuant to the Orange County Subdivision Code section 7-9-259(f) by a formal filing of appeal on October 23, 1998.

Should you have any questions concerning the withdrawal of our appeal, please contact me at (714) 253-2907.

Very truly yours,

H. Mike McKnight

Supplemental Transmittal
Saddleback Meadows 299 Unit Project
Agenda Item Nos. 52 & 53
November 24, 1998, Agenda

DATE: November 24, 1998

TO: Board of Supervisors

FROM: Director, Planning & Development Services Department

SUBJECT: Ordinance and Resolutions for Final Action

The Saddleback Meadows 299 dwelling unit project (aka Contingency Plan) on your Agenda for November 24, 1998 consists of the following elements:

(1) EIR Addendum PA 980103 to satisfy the requirements of CEQA.

(2) Zone Change 98-3 to amend the Foothill/Trabuco Specific Plan.

(3) Area Plan 98-2 to establish a conceptual plan of development for 299 dwelling units.

(4) Tentative Tract Map 15784, a subdivision map which is for financing purposes only and creates no building sites.

(5) Vesting Tentative Tract Map 15230 to create 299 legal residential building sites.

Attached are documents prepared in consultation with County Counsel for your Board to take final action on all the above elements. We suggest that you receive the staff presentation and conduct the public hearing for Agenda Item Nos. 52 and 53 simultaneously. After you close the public hearing, we recommend that you act on each element as stated below.

RECOMMENDED ACTION:

1. Adopt the draft Resolution (Attachment A) which approves EIR Addendum PA 980103.
2. Adopt the draft Ordinance (Attachment B) which approves Zone Change 98-3.
3. Adopt the draft Resolution (Attachment C) which approves Area Plan 98-2.

4. Adopt the draft Resolution (Attachment D) which approves Tentative Tract Map 15784.
5. Adopt the draft Resolution (Attachment E) which approves Vesting Tentative Tract Map 15230.

Respectfully submitted,

Thomas B. Mathews, Director

DRAFT RESOLUTION - EIR ADDENDUM

RESOLUTION OF THE BOARD OF SUPERVISORS

ADDENDUM PA980103 to FEIR 566

SADDLEBACK MEADOWS CONTINGENCY PLAN
Zone Change ZC98-3, Area Plan 98-2 & Tentative Tracts 15230 and 15784

ORANGE COUNTY, CALIFORNIA

_____, 1998

On the motion of Supervisor _____, duly seconded and carried, the following Resolution was adopted.

WHEREAS, on December 10, 1991, this Board certified Final EIR 531 for the Foothill/Trabuco Specific Plan, which designated the Saddleback Meadows site as a residential site in the Upper Aliso District; and

WHEREAS, Grading Permit application GA940031 was submitted to the County in April 1994, for Phase I of Tract 10692, a 705-unit manufactured single family residential project, for which the County required the preparation of an EIR, which was subsequently appealed in August 1994; and

WHEREAS, the applicant set aside the appeal on January 31, 1995, whereupon the Planning Commission directed the applicant to revise the project for one more compatible with surrounding land use; and

WHEREAS, after discussions with nearby residents, the applicant submitted a revised, 318-unit, conventional single-family residential project, including zone change, area plan and tentative tract map for which EIR 561was prepared; and

WHEREAS, the Board of Supervisors denied the revised project zone change and area plan on October 22, 1996; and

WHEREAS, applicant submitted Grading Permit application GA960048 for the entirety of recorded Tract 10692, consisting of 705 manufactured housing lots, for which the County required the preparation of EIR 566; and

WHEREAS, the Orange County Planning Commission reviewed all documentation comprising proposed Final SEIR 566 for the proposed project, as of December 3, 1997, certifying Final SEIR 566 as complete and adequate and in compliance with all requirements of the CEQA Statutes, the State CEQA Guidelines and County of Orange procedures; and

WHEREAS, the Board of Supervisors upheld the certification of Final Subsequent EIR 566 on February 24, 1998; and

WHEREAS, following negotiations between the County and private parties concerning the possible purchase of all and/or portions of the Saddleback Meadows site, the applicant submitted a Zone Change and Area Plan application for the subject 299-unit Contingency Plan, for which the Planning & Development Services Department required the preparation of Addendum PA980103; and

WHEREAS, Addendum PA980103 incorporated Certified Final Subsequent EIR 566, including its Mitigation Monitoring and Reporting Program, its STATEMENT OF FINDINGS, FACTS IN SUPPORT OF FINDINGS and the STATEMENT OF OVERRIDING CONSIDERATIONS; and

WHEREAS, on October 7, 1998, the Planning Commission concurred with the recommendation of the Planning & Development Services Department for the Contingency Plan to be found within the scope of Certified Final Subsequent EIR 566, and approved Addendum PA980103 as the appropriate environmental documentation for the Zone Change and Area Plan; and

WHEREAS, the Planning Commission considered the comments and concerns of all reviewers and commentators on Addendum PA980103, including the US Fish & Wildlife Service and the California

Department of Fish & Game and the organizations that later appealed the Area Plan and Subdivision Map approvals, and concurred in the recommendation of the Planning & Development Services Department that the noted concerns be found to be adequately addressed in the Addendum and Certified Final SEIR 566; and

WHEREAS, the Orange County Subdivision Committee approved Tentative Tract Map Nos. 15230 and 15784 on October 21, 1998, finding Addendum PA980103 as the appropriate environmental documentation for the subdivision maps in compliance with the Subdivision Map Act; and

WHEREAS, the Board has reviewed the Appeal of the Planning Commission's approval of Area Plan 98-2, dated October 22, 1998, and filed by Edmond Connor on behalf of the Vedanta Society of Southern California, the Norbertine Fathers of Orange and the Saddleback Meadows Land Conservancy, LLC, as it relates to the claims that the environmental documentation for the project is inadequate; and

WHEREAS, the Board has reviewed the Appeal of the Subdivision Committee's approval of Tentative Tract Map Nos. 15230 and 15784, dated November 5, 1998, and filed by Edmond Connor on behalf of the Vedanta Society of Southern California, the Norbertine Fathers of Orange and the Saddleback Meadows Land Conservancy, LLC, as it relates to the claims that the environmental documentation for the project is inadequate; and

WHEREAS, the Board has reviewed and considered correspondence from the California Department of Fish & Game and US Fish & Wildlife Service expressing concern regarding the Saddleback Meadows Contingency Plan.

NOW THEREFORE, based upon Addendum PA980103 and Certified FSEIR 566, this Board makes the following findings:

1. The Board finds that Certified Final Subsequent EIR 566 identified all significant environmental effects of the Contingency Plan, as set forth in the STATEMENT OF FINDINGS, FACTS IN SUPPORT

OF FINDINGS AND STATEMENT OF OVERRIDING CONSIDERATIONS, in the certification of the Final Subsequent EIR.

2. The Board finds that, per the criteria of Section 21081.6 of the Public Resources Code, the mitigation monitoring responsibilities of the County as the Lead Agency for the Contingency Plan have been met, as exemplified by the incorporation of appropriate mitigation measures from Certified Final Subsequent EIR 566 into conditions of approvals on the Zone Change, the Area Plan and the Tentative Tract Maps.

3. The Board finds that, per the criteria set forth in Section 15162 of the CEQA Guidelines, the proposed Contingency Plan does not trigger the preparation of a subsequent EIR.

4. The Board finds that, per Section 15164 of the CEQA Guidelines, the proposed Contingency Plan meets all the criteria which would allow the preparation of an Addendum to Certifed FSEIR 566.

5. The Board finds that, based upon the administrative record of the project, including the report of the Planning and Development Services Department, as put forth in Attachment II to Item 52, Supplemental to Agenda Item Transmittal dated November 3, 1998 and postponed to November 24, 1998, the Appeal of the Area Plan approval has no merit.

6. The Board finds that, based upon the administrative record of the project, including the report of the Planning and Development Services Department, as put forth in Attachment II to Item 53, Supplemental to Agenda Item Transmittal dated November 24, 1998, the Appeal of the approval of Tentative Tract Map Nos. 15230 and 15784 has no merit.

7. The Board finds that, together, Addendum PA980103 and Certified FSEIR 566, satisfy all requirements of the State CEQA Statutes and Guidelines and County of Orange procedures for the Saddleback Meadows Contingency Plan.

8. The Board finds that, pursuant to Section 711.4 of the California Fish and Game Code, although there is evidence that the proposed Contingency Plan has a potential for adverse effects on wildlife

resources, and thereby is subject to F&G fees, the fees for the proposed project site have been previously paid in conjunction with Certified Final SEIR 566.

9. The Board finds that, although the proposed project will have a significant impact upon Coastal Sage Scrub habitat, because of proposed mitigation measures imposed on the project and project design features, the project will not preclude the ability to prepare an effective Subregional Natural Communities Conservation Planning (NCCP) Program.

ORDINANCE NO. ____

AN ORDINANCE OF THE COUNTY OF ORANGE, CALIFORNIA ADOPTED PURSUANT TO THE STATE PLANNING AND ZONING LAWS, AMENDING THE FOOTHILL/TRABUCO SPECIFIC PLAN FOR SADDLEBACK MEADOWS (ZC98-3)

The Board of Supervisors of the County of Orange, California, does ordain as follows:

SECTION 1. Ordinance Nos. 3177, 3398, and 3468, which established regulations for the Saddleback Meadows (a.k.a. Bridlewood) Planned Community, are hereby repealed.

SECTION 2. The Foothill/Trabuco Specific Plan Section III.D.3, "Bridlewood Residential District," is hereby amended per Zone Change 98-3 as shown in Exhibit 1.

///

///

///

///

///

///

///

EXHIBIT 1

3.0 Bridlewood Residential (BWR) District

3.1 Purpose and Intent

The Bridlewood Residential District is established to provide for the development and maintenance of low density detached single-family residential neighborhoods in steep hillside areas in such a manner that generous open space areas are featured.

3.2 Uses Permitted

Per the Residential Estates (Planned Development) District Regulations: Zoning Code sections 7-9-68 and 7-9-110.

3.3 Site Development Standards

Per the Residential Estates (Planned Development) District Regulations: Zoning Code sections 7-9-68 and 7-9-110.

3.4 Special Provisions

a. The maximum number of dwelling units for this District shall be 299.

b. The minimum amount of open space shall be 70% (155 acres). Such open space shall be defined as follows: The open space area remaining after approved development is completed that has a natural appearance and will remain undisturbed thereafter except for possible approved fuel modification. Such areas may include, depending on design and landscaping, parks, manufactured slopes, and recreation trails.

c. Any development shall be in compliance with every regulation of this District (BWR) and shall be exempt from all of the Regulations and Guidelines included in this Specific Plan other than those provided for by this District.

d. Prior to the approval of any tentative subdivision map, an area plan addressing the entire District shall be approved.

e. A preliminary grading permit may be issued in compliance with the Grading & Excavation Code subsequent to the approval of an area plan and tentative tract map which creates residential building sites. The Grading Official shall require a performance bond prior to the issuance of the grading permit.

f. Prior to the issuance of any building permits for residential structures, a use permit shall be approved by the Planning Commission per Zoning Code section 7-9-150.

ATTACHMENT C

DRAFT RESOLUTION - AREA PLAN

Revised 11/18/1998

RESOLUTION OF THE BOARD OF SUPERVISORS OF ORANGE COUNTY, CALIFORNIA

On motion of Supervisor _____, duly seconded and carried, the following Resolution was adopted:

WHEREAS, the Planning Commission conducted public hearings on Zone Change (ZC) 98-3 and Area Plan (AP) 98-2 for the area known as Saddleback Meadows (aka Bridlewood); and

WHEREAS, the Planning Commission has considered EIR Addendum PA980103 and found that it satisfies the requirements of CEQA for this project.

WHEREAS, the Planning Commission approved AP98-2 subject to 32 conditions and recommended that this Board approve ZC98-3; and

WHEREAS, the Planning Commission's action on AP98-2 was appealed to this Board; and

WHEREAS, this Board has conducted a noticed public hearing on ZC98-3 and AP98-2; and

WHEREAS, this Board has reviewed and considered the action of the Foothill/Trabuco Specific Plan Review Board; and

WHEREAS, this Board has considered EIR Addendum PA980103 and, by separate Resolution, found that it satisfies the requirements of CEQA for this project; and

WHEREAS, this Board, by separate Ordinance, has approved ZC98-3.

NOW, THEREFORE, BE IT RESOLVED that this Board makes the following findings:

1. AP98-2 is consistent with the objectives, policies, general land uses and programs specified by the General Plan.
2. AP98-2 is in substantial compliance with, the Foothill/Trabuco Specific Plan.
3. AP98-2 is consistent with the provisions of the Zoning Code.
4. The location, size, design and operating characteristics of AP98-2, as conditioned, will not create conditions or situations that may be incompatible with other permitted uses in the vicinity.
5. AP98-2 will not result in conditions or circumstances contrary to the public health and safety and the general welfare.
6. AP98-2, as conditioned, satisfies the requirements of section 7-9-711 regarding public facilities.
7. The RE (PD), "Residential Estates (Planned Development)," site development standards regarding building site areas, building site coverage, area per unit, and number of dwelling units have been satisfied by AP98-2.
8. Condition of Approval No. 27 requires a use permit be approved which is consistent with AP98-2. A use permit may be approved for the entire project site or portions of the project site.

9. AP98-2, as conditioned, will provide significant public benefits in the form of major recreational trails, an important wildlife corridor for the Natural Communities Conservation Program and a large addition to O'Neill Regional Park.

10. That the issues raised in the appeal letter by Edmond Connor dated October 22, 1998 have been adequately addressed in the supplemental staff report dated October 7, 1998. Those responses are hereby incorporated by this reference.

BE IT FURTHER RESOLVED that this Board denies the appeal and upholds the action of the Planning Commission approving AP98-2 subject to the following conditions:

1. CP NA NA TIME LIMIT
Area Plan 98-2 is valid for a period of 48 months beginning with the effective date for ZC98-3. If the preliminary grading permit is not issued within such period of time, this approval shall be terminated and Area Plan 98-2 shall thereafter be null and void.

2. CP CP NA REVOCATION
Failure to abide by and faithfully comply with any and all conditions attached to this approving action shall constitute grounds for the revocation of said action by the Orange County Planning Commission.

3. CP CP G TENTATIVE TRACT MAP
Prior to the issuance of any grading permits, Tentative Tract Map 15230 shall be approved by the Subdivision Committee after a public hearing. Said tentative tract map must be found consistent with Area Plan 98-2.

4. CP CP G GRADING REVIEW
Prior to the issuance of any grading permits, the Manager, Current Planning Services, shall determine that the grading plan is consistent with Area Plan 98-2 and the approved tree preservation plan.

5. HP HP G TREE PRESERVATION PLAN
Prior to the issuance of any preliminary grading permit, a tree preservation plan shall be prepared which identifies the location, size and species of all trees having a trunk diameter of 5 inches or greater (measured at four and on-half feet above ground level). The tree preservation plan shall be consistent with the Area Plan 98-2 and the Foothill/Trabuco Specific Plan and approved by the Manager, Harbors Beaches, and Parks. The plan shall be signed and certified by a biologist or arborist.

6. EP SG/EP G FED ENDGD SPEC ACT
Prior to the issuance of any preliminary grading permit, approval of any activity that involves removal of any native vegetation from subject site including clearing, grubbing, mowing, discing, trenching, grading, fuel modification, or other related construction-related activities, the applicant shall obtain written proof from the U.S. Fish and Wildlife Service that said activity complies with the Federal Endangered Species Act. Additionally, the applicant shall obtain approval of a mitigation plan to replace lost ephemeral ponds at a 2 to 1 ratio or at such greater ratio as may be required by the U.S. Fish and Wildlife Service. This evidence shall be submitted to the Manager, Subdivision and Grading, for review and approval, in consultation with the Manager, Environmental & Project Planning.

7. SG SG G GEOLOGY RPT
Prior to the issuance of any grading permits, the applicant shall submit a geotechnical report to the Manager, Subdivision and Grading, for approval. The report shall include the information and be in a form as required by the Grading Manual.

8. SG SG G DRAINAGE
Prior to the issuance of any grading permits, the applicant shall, in a manner meeting the approval of the Manager, Subdivision and Grading, provide:

A. A drainage study determining the effect the proposed development and associated drainage patterns will have on existing drainage facilities.

B Mitigate either by on-site retardation or by providing improvements appropriately to impacted existing drainage facilities.

9. SG SG G CROSS-LOT DRAINAGE
Prior to the issuance of any grading permits, and if determined necessary by the Manager, Subdivision and Grading, a letter of consent, in a form approved by the Manager, Subdivision and Grading, suitable for recording, shall be obtained from the affected property owners for offsite grading and/or drainage. The owner/applicant shall record said letters of consent for offsite drainage and/or cross-lot drainage prior to the issuance of any grading permit. Acceptance of cross-lot drainage on lots within the tract map boundaries shall be noted on the recorded map.

10. SG SG G VECTOR CONTROL
Prior to the issuance of any preliminary grading permits, the subdivider shall provide evidence to the Manager, Subdivision and Grading, that the Vector Control District has surveyed the site to determine if vector control measures are necessary. If warranted, the developer shall conduct such measures in a manner meeting the approval of the Manager, Subdivision and Grading.

11. HP HP G ARCHAEO OBS & SALVAGE
Prior to the issuance of any preliminary grading permit, the project applicant shall provide written evidence to the Manager, Subdivision and Grading, that a County-certified archeologist has been retained, shall be present al the pre-grading conference, shall establish procedures for archaeological resource surveillance, and shall establish, in cooperation with the project developer, procedures for temporarily halting or redirecting work to permit the sampling, identification, and evaluation of the artifacts as appropriate. If the archaeological resources are found to be significant, the archaeologist shall submit a follow-up report to the Manager, Harbors, Beaches & Parks, which shall include the period of inspection, an analysis of any artifacts fond and the present repository of the artifacts. Excavated finds shall be offered to the County of Orange, or designee, on a first refusal basis. These actions, as well as final mitigation and disposition of the resources, shall be subject to the approval of the Manager, Harbors, Beaches & Parks.

12. HP HP G PALEO OBS & SALVAGE
Prior to the issuance of an preliminary grading permit, the project applicant shall provide written evidence to the Manager, Subdivision and Grading, that a County-certified paleontologist has been retained to observe grading activities and salvage and catalogue fossils as necessary. The paleontologist shall be present at the pre-grading conference, shall establish procedures for paleontological resource surveillance, and shall establish, in cooperation with the project developer, procedures for temporarily halting or redirecting work to permit sampling, identification, and evaluation of the fossils. If major paleontological resources are discovered, the paleontologist shall determine appropriate actions, in cooperation with the project developer,

which ensure proper exploration and/or salvage. Excavated finds shall be offered to the County of Orange, or its designee, on a first refusal basis. The paleontologist shall submit a follow-up report for approval by the Manager, Harbors, Beaches & Parks, which shall include the period of inspection, a catalogue and analysis of the fossils found, and present repository of the fossils. These actions, as well as final mitigation and disposition of the resources, shall be subject to approval by the Manager, Harbors, Beaches & Parks.

13. SG SG G GRADING NOTES

Prior to the issuance of any grading permits, the following guidelines shall be included in the "Notes Section" of the grading plans meeting the approval of the Manager, Subdivision and Grading.

A. During all grading and construction operations, all oak trees on the site, located adjacent to the approved limits of grading and identified in an approved Tree Management/Preservation Plan as trees to be preserved, shall be adequately fenced and protected from encroachment by grading and construction equipment. Grading, placement of fill, and storage of building materials and heavy equipment, shall be prohibited within the dripline of any tree identified for preservation as part of an approved Tree Management/Preservation Plan.

B. If required, retaining walls shall be used to protect the existing grades of oaks identified for preservation from surrounding cut and fill. However, these should not alter drainage from around the trees.

C. No type of surface, whether pervious or impervious, shall be placed within a six-foot radius of oak tree trunks. Where surfacing cannot be avoided, alternative types of paving should be utilized, such as gravel or porous brick with sand joints.

D. Oak trees shall not be subjected to increased runoff from irrigation systems, impermeable surfaces, storm drain discharge, etc.

E. Natural drainage courses and natural grades outside the remedial grading impact area in proximity to and providing seasonal irrigation to oak trees shall not be altered.

F. In proximity to oak trees, only one trench should be dug to accommodate all utility lines. Where necessary, the impacted trees should be carefully pruned by an arborist in proportion to the total amount of root zone lost.

14. BP BP G CONSTRUCTION NOISE

A. Prior to the issuance of any grading permits, the project proponent shall produce evidence acceptable to the Manager, Building Permits, that:

1. All construction vehicles or equipment, fixed or mobile, operated within 1000' of a dwelling shall be equipped with properly operating and maintained mufflers.

2. All operations shall comply with Orange County Codified Ordinance Division 6 (Noise Control).

3. Stockpiling and/or vehicle staging areas shall be located as far as practicable from dwellings.

B. Notations in the above format, appropriately numbered and included with other notations on the front sheet of the grading plans, will be considered as adequate evidence of compliance with this condition.

15. CP SG G PERFORMANCE BOND
Prior to the issuance of a preliminary grading permit, the applicant shall provide a performance bond and related agreement to the satisfaction of the Manager, Subdivision and Grading.

16. HP HP G RE-ROUTING
Prior to the issuance of a preliminary grading permit, which includes the utilization of either the Aliso Creek Class I Off-Road Bikeway or the Live Oak Canyon Regional Riding and Hiking Trail, a re-routing plan shall be submitted by the applicant and approved by the Manager, Harbors, Beaches and Parks.

17. CP SG R
Prior to the recordation of any subdivision map which creates residential building sites, the preliminary grading activity for all of Area Plan 98-2 shall be completed to the satisfaction of the Manager, Subdivision and Grading.

18. HP HP R OPEN SPACE
Prior to the recordation of any subdivision map that creates residential building sites, the applicant shall dedicate to the County of Orange a minimum of seventy (70) percent of the project site as open space in a manner meeting the approval of the Manager, Harbors, Beaches & Parks. The open space dedication shall be for: (1) regional park, and (2) restricted scenic preservation purposes. The Manager, Harbors, Beaches & Parks shall determine the final boundary between these open space areas.

Within the regional park area, the Manager, Harbors, Beaches & Parks shall determine what improvements, if any, shall be made. If determined appropriate by the Manager, Harbors, Beaches & Parks, the applicant shall be required to provide those improvements as shown and discussed in the Area Plan 98-2.

Within the restricted scenic preservation easement area, after dedication, no grading, structures (including stables and corrals), or commercial agriculture activities shall be permitted in this area. River rock walls not to exceed three feet, approved Loffel walls, and open fencing shall be permitted. An entry gate and identification sign shall be permitted subject to approval of a site development or use permit for such use. Future fuel modification, landscaping, and tree preservation shall be permitted if consistent with Area Plan 98-2 and conditions of approval No. 28 (fuel modification), No. 21 (landscaping), and No. 5 (tree preservation).

19. HP HP R RECREATIONAL TRAILS
Prior to the recordation of any subdivision map that creates residential building sites, the applicant shall dedicate a recreation easement for those bikeways and regional riding and hiking trails shown and discussed in Area Plan 98-2 in a manner meeting the approval of the Manager, Harbors, Beaches & Parks. Also, the applicant shall design the necessary improvements and enter into an agreement, accompanied by financial security, with the County of Orange to install the necessary improvements in a manner meeting the approval of the Manager, Harbors, Beaches & Parks.

20. HP HP R CLEANING UP
Prior to the recordation of any subdivision map that creates residential building sites, the existing old ranch house and all abandoned automobiles shall be removed in a manner meeting the approval of the Manager, Harbors, Beaches & Parks.

21. HP HP R LANDSCAPE PLAN
Prior to the recordation of any subdivision map which creates residential building sites, the subdivider shall enter into an agreement and post financial security guaranteeing landscape

improvements and the maintenance thereof based on preliminary landscape plan showing major plant material and uses, and a cost estimate for the landscape improvements. The preliminary plan and cost estimates shall be reviewed and approved by the Manager, Subdivision and Grading, in consultation with the Manager, Harbors, Beaches & Parks. Said plan shall take into account the County Standard Plans for landscaped areas, adopted plant palette guides, applicable scenic and Foothill Trabuco Specific Plan requirements, Water Conservation Measures contained in Board Resolution 90-487 (Water Conservation Measures), and Board Resolution 90-1341 (Water Conservation Implementation Plan).

22. EP EP FIRE STATION FACILITY
Prior to the recordation of any subdivision map that creates residential building sites, the applicant shall enter into an agreement with the Orange County Fire Authority to pay pro-rata capital facility fees for Fire Station No. 42 in a manner meeting the approval of the Manager, Environmental & Project Planning. Said agreement shall be accompanied by financial security.

23. EP EP LIBRARY FACILITY
Prior to the recordation of any subdivision map that creates residential building sites, the applicant shall enter into an agreement with the County of Orange to pay development fees for the South County Canyons Library as provided in Sections 7-9-700 through 7-9-713 of the Codified Ordinances of the County of Orange and Board Resolution 87-1684 in a manner meeting the approval of the Manager, Environmental & Project Planning. Said agreement shall be accompanied by financial security.

24. EP EP SHERIFF STATION
Prior to the recordation of an subdivision map that creates residential building sites, the project proponent shall enter into a secured agreement with the County of Orange, subject to approval of the Sheriff-Coroner, to participate on a pro rata basis in funding (a) Sheriff substation facilities and (b) the initial costs of providing additional patrols plus support necessary to serve the project in a manner meeting the approval of the Manager, Environmental & Project Planning.

25. EC F F FUEL MODIFICATION
Prior to the recordation of any subdivision map that creates residential building sites, the applicant shall demonstrate to the satisfaction of the Fire Chief that necessary fuel modification in off-site locations will be maintained in perpetuity.

26. EP EP R AFFORDABLE HOUSING
Prior to the recordation of a subdivision map that creates residential building sites, the landowner shall provide a cash contribution to the County's General Plan Trust Fund. The specific methodology and amount of said contribution shall be subject to the approval of the Manager, Environmental & Project Planning. These funds shall be directed to support the County's overall efforts toward providing affordable housing, including but not limited to, future updates of the Orange County Housing Element and related programs for maintaining existing affordable housing and providing new affordable housing opportunities.

27. CP CP B USE PERMIT
Prior to the issuance of any building permits for residential structures, the applicant shall submit a use permit application for review by the Foothill/Trabuco Review Board and approval by the Planning Commission after a public hearing. Said use permit shall include, but not be limited to, the location of all structures and uses, precise landscaping plan, precise fuel modification plan and program, grading plan, and architectural plans for all structures. Said use permit must be found consistent with Area Plan 98-2.

28. F F GBU FUEL MOD PLAN
Prior to the approval of the use permit to construct residential structures, the applicant shall obtain the Fire Chief's approval, in consultation with the Manager, Environmental and Project Planning, of a precise fuel modification plan and program. The plan shall indicate the proposed means of achieving an acceptable level of risk to structures by vegetation. Include the method (mechanical or hand labor) for removal of combustible vegetation and the planting of drought tolerant fire resistant plants. However, only the minimum necessary fuel modification shall be approved by the Fire Chief. All practical mitigation measures to minimize the need for fuel modification shall be recommended by the Fire Chief such as use of non-combustible construction materials, interior fire sprinkler system and double-glassed windows. The required fuel modification shall be performed in a manner to minimize impacts on the natural environment as much as possible. The fuel modification plan shall then become effective after the Planning Commission approves the use permit.

29. SG SG B ROAD REE PROG
Prior to the issuance of building permits for residential construction, the applicant shall pay fees for the Major Thoroughfare and Bridge Fee Program listed below, in a manner meeting the approval of the Manager, Subdivision and Grading.

A. Foothill Circulation Phasing Program
B. Foothill/Eastern Transportation Corridor
C. El Toro Road
D. Santiago Canyon Road

30. HP HP R LOCAL PARK FEES
Prior to the issuance of building permits for residential construction, the applicant shall pay in-lieu fees per the Local Park Code Requirements.

31. FTSP CP B SCHOOL FEES
Prior to the issuance of any building permits for residential construction, the applicant shall provide written verification from the School District, in a manner meeting the approval of the Manager, Current Planning, that he has reached a mitigation agreement with the District for the subject project proposal.

32. CP NA NA INDEMNIFICATION
Applicant shall defend at his/her sole expense any action brought against the County because of issuance of this permit. Applicant will reimburse the County for any court costs and attorney's fees which the County may be required by a court to pay as a result of such action. The County may, at its sole discretion, participate in the defense of any such action, but such participation shall not relieve applicant of his/her obligations under this condition.

DRAFT RESOLUTION - TTM

(Draft November 24)

RESOLUTION OF THE BOARD OF SUPERVISORS
ORANGE COUNTY, CALIFORNIA

On motion of Supervisor _____, duly seconded and carried, the following Resolution was adopted:

WHEREAS, the Orange County Subdivision Committee conducted a noticed public hearing and approved Saddleback Meadows Tentative Tract Map (TTM) 15784 which creates no building sites; and

WHEREAS, the action of the Subdivision Committee on TTM 15784 was appealed to the Board of Supervisors; and

WHEREAS, this Board, by two separate Resolutions and an Ordinance, has approved related Zone Change 98-3, Area Plan 98-2, and EIR Addendum PA 980103; and

WHEREAS, this Board has conducted a noticed public hearing on TTM 15784.

NOW, THEREFORE, BE IT RESOLVED that this Board makes the following findings:

I. That the proposed map is consistent with the Orange County General Plan.

II. That the design and improvement of the proposed subdivision are consistent with the Orange County General Plan.

III. That the proposed site is physically suitable for the proposed type of development.

IV. That the proposed site is physically suitable for the proposed density of development.

V. That the design of the subdivision or the proposed improvements are not likely to cause substantial environmental damage or substantial and avoidable injury to fish or wildlife or their habitat.

VI. That the design of the subdivision and the type of improvements proposed are not likely to cause serious public health problems.

VII. That the design of the subdivision and the type of improvements proposed will not conflict with easements of record or established by court judgment acquired by the public-at-large for access through or use of property within the proposed subdivision.

VIII. That the proposed subdivision complies with the requirements set forth in the Orange County Subdivision Code and the Orange County Zoning Code.

IX. That the Board of Supervisors has considered Final EIR 566, previously certified on 6/2/98, and Addendum PA 980103 prior to project approval. Together they are approved for the proposed project based upon the following findings:

1. Together, these documents are adequate to satisfy the requirements of CEQA by the decision-maker;

2. The additions, clarifications, and/or changes to the original document caused by the Addendum do not raise new significant issues which were not addressed by the EIR; and

3. The approval of the EIR and Addendum for the proposed project reflect the independent judgment of the Subdivision Committee.

X. That pursuant to Section 711.4 of the California Fish and Game Code, this project is not exempt from the required fees as it has been determined that adverse impacts to wildlife resources will result from the project. The required fees will need to be paid.

XI. That the development of this project will not preclude or prevent the preparation of the Southern Subregion NCCP.

XII. That the issues raised in the appeal letter by Edward Connor dated November 5, 1998 have been adequately addressed in the supplemental staff report dated November 17, 1998. Those responses are hereby incorporated by this reference.

XIII. That the Board, by two separate Resolutions and an Ordinance has approved related Zone Change 98-3, Area Plan 98-2, and EIR Addendum PA980103, the findings from which are incorporated herein by reference.

BE IT FURTHER RESOLVED that this Board denies the appeal and upholds the Subdivision Committee action on TTM 15230 subject to the following conditions:

(G) 1. SG SG G GRADING RESTRICTION
(S) Notwithstanding any grading/elevations that are shown on the tentative tract map, or the provisions of Orange County Zoning Code Section 7-9-139 (Grading and Excavation), approval of this tentative tract map does not authorize the issuance of any grading permits.

(NA)2. SG NA NA INDEMNIFICATION
(S) Subdivider shall defend, indemnify, and hold harmless the County of Orange, its officers, agents and employees from any claim, action or proceeding against the County, its officers, agents or employees to attack, set aside, void, or annul an approval of the Board of Supervisors, Planning Commission, Zoning Administrator, or Subdivision Committee concerning this subdivision, which action is brought within the time period provided for in Government Code Section 66499.37. The County shall promptly notify the subdivider of any such claim, action or proceeding and shall cooperate fully in the defense. This condition is imposed pursuant to Government Code Section 66474.9(b).

(R) 3. SG SG R CONVEYANCE MAP
(SS) Prior to the recordation of the final tract map, a note shall be placed on the final tract map stating, "This tract map is for conveyance purposes only and the lots created by this tract map are not legal building sites" in a manner meeting the approval of the Manager, Subdivision and Grading.

(SS) 4. CP NOTIFICATION
This condition of approval is intended to give you notice that the fees, dedications, reservations or other exactions imposed on this project are as described in this approval and the reports and actions accompanying this approval.

You are also on notice that the 90-day approval period in which the applicant may protest pursuant to Government Code Section 66020 has begun.

ATTACHMENT E

DRAFT RESOLUTION - VTTM

(Draft November 24)

RESOLUTION OF THE BOARD OF SUPERVISORS
ORANGE COUNTY, CALIFORNIA

On motion of Supervisor _____, duly seconded and carried, the following Resolution was adopted:

WHEREAS, the Orange County Subdivision Committee conducted a noticed public hearing and approved Saddleback Meadows Vesting Tentative Tract Map (VTTM) 15230 to create 299 residential building sites; and

WHEREAS, the action of the Subdivision Committee on VTTM 15230 was appealed to the Board of Supervisors; and

WHEREAS, this Board, by two separate Resolutions and an Ordinance, has approved related Zone Change 98-3, Area Plan 98-2, and EIR Addendum PA 980103; and

WHEREAS, this Board has conducted a noticed public hearing on VTTM 15230.

NOW, THEREFORE, BE IT RESOLVED that this Board makes the following findings:

I. That the proposed map is consistent with the Orange County General Plan.

II. That the design and improvement of the proposed subdivision are consistent with the Orange County General Plan.

III. That the proposed site is physically suitable for the proposed type of development.

IV. That the proposed site is physically suitable for the proposed density of development.

V. That the design of the subdivision or the proposed improvements are not likely to cause substantial environmental damage or substantial and avoidable injury to fish or wildlife or their habitat.

VI. That the design of the subdivision and the type of improvements proposed are not likely to cause serious public health problems.

VII. That the design of the subdivision and the type of improvements proposed will not conflict with easements of record or established by court judgment acquired by the public-at-large for access through or use of property within the proposed subdivision.

VIII. That the proposed subdivision complies with the requirements set forth in the Orange County Subdivision Code and the Orange County Zoning Code.

IX. That the proposed subdivision, together with the provisions for its design and improvement, is in substantial compliance with the Foothill/Trabuco Specific Plan.

X. That the design and improvement of the proposed subdivision are suitable for the uses proposed, and the subdivision can be developed in compliance with the applicable zoning regulations pursuant to Section 7-9-254 of the Subdivision Code.

XI. That the tentative map is consistent with both Area Plan (AP) 98-2 and Zone Change (ZC) 98-3.

XII. That the Board of Supervisors has considered Final EIR 566, previously certified on 6/2/98, and Addendum PA 980103 prior to project approval. Together they are approved for the proposed project based upon the following findings:

1. Together, these documents are adequate to satisfy the requirements of CEQA by the decision-maker;

2. The additions, clarifications, and/or changes to the original document caused by the Addendum do not raise new significant issues which were not addressed by the EIR; and

3. The approval of the EIR and Addendum for the proposed project reflect the independent judgment of the Subdivision Committee.

XIII. That pursuant to Section 711.4 of the California Fish and Game Code, this project is not exempt from the required fees as it has been determined that adverse impacts to wildlife resources will result from the project. The required fees will need to be paid.

XIV. That the development of this project will not preclude or prevent the preparation of the Southern Subregion NCCP.

XV. That the discharge of waste from the proposed subdivision into the existing sewer system of the Trabuco Canyon Water District will not result in violations of existing requirements prescribed by the California Regional Water Quality Control Board, San Diego Region.

XVI. That the design of the subdivision and its improvements do provide, to the extent feasible, for future passive or natural heating or cooling opportunities as specified in Section 66473.1 of the Government Code (Subdivision Map Act).

XVII. That the following determinations apply to fees required by Sections 7-9-700 through 713, Codified Ordinances of Orange County:

A. Purpose of fees: Fire protection, paramedic, law enforcement, library, and general County services.

B. Use of fees: Construction of new fire station, sheriff substation, library, and general County facilities in newly developing areas which have inadequate service.

C. Relationship between use of fees and type of development: Dwelling units and commercial/industrial structures and their occupants require fire protection, paramedic, law enforcement, library, and general County services.

D. Relationship between need for facilities and type of project: Project is located in newly developing area which has inadequate fire protection, paramedic, library services, and sheriff substation and general County facilities.

E. Relationship between amount of fees and cost of the portion of the facilities attributable to the development: Fees represent project's pro rata share of the cost of the fire station, sheriff substation, library, and general County facilities.

XVIII. That because of participation in fee programs for off-site improvements, this project will qualify for consideration under Section 66452.6 of the Subdivision Map Act.

XIX. That the deviations from the standards of design set forth in the Subdivision Code Subdivision Committee Report were considered and found to be justified based upon the reasons set forth in the Subdivision Committee Report or special circumstances which apply.

XX. That the Local Park Code Requirement can be met by the payment of in-lieu fees.

XXI. That the monitoring requirements of Public Resources Code Section 21081.6 (AB 3180) will be considered as having been met in that the design of the subject project, the satisfaction of the requirements of the County's building, grading, fire, and other codes and ordinances and the satisfaction of the conditions of approval applied to the project will implement the mitigation measures contained in EIR No. 566 an Addendum PA 980103.

XXII. That the applicant is hereby provided notice that the fees, dedications, reservations or other exactions imposed on this project are as described in this approval as well as the reports and actions accompanying this approval and that the 90-day approval period in which the applicant may protest pursuant to Government Code Section 66020 has begun

XXIII. That the issues raised in the appeal letter by Edward Connor dated November 5, 1998 have been adequately addressed in the supplemental staff report dated November 17, 1998. Those responses are hereby incorporated by this reference.

XXIV. That the Board, by two separate Resolutions and an Ordinance has approved related Zone Change 98-3, Area Plan 98-2, and EIR Addendum PA980103, the findings from which are incorporated herein by reference.

BE IT FURTHER RESOLVED that this Board denies the appeal and upholds the action of the Subdivision Committee subject to the following conditions:

1. CP NA NA SPECIAL

Approval of Vesting TTM 15230 is subject to final approval of Zone Change 98-3 and Area Plan 98-2. Prior to recordation of VTTM 15230, the Manager, Current Planning shall determine that it is in substantial compliance with final approved Zone Change 98-3 and Area Plan 98-2. Otherwise, a revised tentative map approved by the Subdivision Committee shall be required.

2. Prior to the issuance of any grading permits, the applicant shall satisfy the following conditions from the Board of Supervisors Resolution for Area Plan 98-2.

4. Grading Review
5. Tree Preservation Plan
6. Federal Endangered Species
7. Geology Report
8. Drainage
9. Cross-Lot Drainage
10. Vector Control
11. Archaeo Observation & Salvage
12. Paleo Observation & Salvage
13. Grading Notes
14. Construction Noise
15. Performance Bond
16. Re-Routing Trails

3. Prior to the recordation of a subdivision map which creates residential building sites, the subdivider shall satisfy the following conditions from the Board of Supervisors Resolution for Area Plan 98-2:

17. Preliminary Grading Completed
18. Open Space Dedication
19. Recreational Trails
20. Ranch House Clean Up
21. Landscape Plan
22. Fire Station
23. Library
24. Sheriff Station
25. Off-Site Fuel Modification
26. Affordable Housing

4. SG SG G LOFFEL WALLS

Prior to the issuance of a grading permit, a letter of justification and design plans for the proposed loffel walls shall be presented to and approved by the Manager, Subdivision and Grading Services.

5. BP BP RGB RESIDENTIAL ACOUSTICAL REPORT

All residential lots and dwellings shall be sound attenuated against present and projected noise which shall be the sum of all noise impacting the project so as not to exceed a composite interior standard of 45 dba CNEL in all habitable rooms and a source specific exterior standard of 65 d.b.a. CNEL in outdoor living areas. Evidence prepared by a County-certified acoustical consultant, that these standards will be satisfied in a manner consistent with Zoning Code Section 7-9-137.5, shall be submitted as follows:

A. Prior to the recordation of a subdivision map or prior to the issuance of grading permits, as determined by the Manager, Building Permits, the applicant shall submit an acoustical analysis report to the Manager, Building Permits, for approval. The report shall describe in detail the exterior noise environment and preliminary mitigation measures. Acoustical design features to achieve interior noise standards may be included in the report.

6. SG SG RG DRAINAGE STUDY

Prior to issuance of any grading permits, the following drainage studies shall be submitted to and approved by the Manager, Subdivision and Grading:

A. A drainage study of the subdivision including diversions, off-site areas that drain onto and/or through the subdivision, and justification of any diversions; and

B. When applicable, a drainage study evidencing that proposed drainage patterns will not overload existing storm drains; and

C. Detailed drainage studies indicating how the tract map grading, in conjunction with the drainage conveyance systems including applicable swales, channels street flows, catch basins, storm drains and flood water retarding, will allow building pads to be safe from inundation from rainfall runoff which may be expected from all storms up to and including the theoretical 100-year flood.

7. SG SG RG DRAINAGE IMPROVEMENTS

A. Prior to the issuance of any grading permits, the applicant shall in a manner meeting the approval of the Manager, Subdivision and Grading:

1) Design provisions for surface drainage; and

2) Design all necessary storm drain facilities extending to a satisfactory point of disposal for the proper control and disposal of storm runoff; and

3) Dedicate the associated easements to the County of Orange, if determined necessary.

B. Prior to the recordation of a subdivision map (except maps for financing and conveyance purposes only) said improvements shall be constructed in a manner meeting the approval of the Manager, Construction.

8. SG SG R MPD PARTICIPATION

Prior to the recordation of a subdivision map (except maps for financing and conveyance purposes only), the subdivider shall participate in the applicable Master Plan of Drainage in a manner meeting the approval of the Manager, Subdivision and Grading, including payment of fees and the construction of the necessary facilities.

9. SG SG R EASEMENT SUBORDINATION

Prior to the recordation of an subdivision map (except maps for financing and conveyance purposes only), the subdivider shall not grant any easements over any property subject to a requirement of dedication or irrevocable offer to the County of Orange or the Orange County Flood Control District, unless such easements are expressly made subordinate to the easements to be offered for dedication to the County. Prior to granting any of said easements, the subdivider shall furnish a copy of the proposed easement to the Manager, Subdivision and Grading, for review and approval.

10. SG SG G GRADING DEVIATION

Prior to the issuance of any grading permits, if the applicant submits a grading plan and the Manager, Subdivision and Grading, determines that it shows a significant deviation from the grading on the approved tentative tract map and Area Plan 98-2, specifically with regard to slope heights, slope ratios, and pad elevations and configuration, the plan shall be reviewed by the Subdivision Committee for a finding of substantial conformance. Failure to achieve such a finding will require processing a revised tentative map and/or area plan application per Orange County Zoning Code Section 7-9-139 and 7-9-150. Additionally, a new environmental assessment and determination is required

11. CP HP R ACCESS

Prior to recordation of any subdivision map that creates residential building sites, a 400 foot wide access easement across Lot A (Spine Street) from Lot MM to Lot LL shall be dedicated to the County of Orange in a manner meeting the approval of the Manager; Harbors, Beaches & Parks in consultation with the Manager, Subdivision and Grading. The primary purpose of the access easement is to provide for continuity of the wildlife corridor and O'Neill Regional Park.

Signs identifying a wildlife crossing area shall be posted within 100 feet of each point where the street transverses the wildlife corridor.

12. Master Plan of Regional Recreation Facilities:

Regional Park Dedication:

Lots LL and MM shall be dedicated to the County as an addition to O'Neill Regional Park, exclusive of manufactured slopes, which should be retained in separate lots. Regional park dedication shall be in done in compliance with the following conditions:

A. Prior to the recordation of the first subdivision map that creates residential building sites, the subdivider shall make an irrevocable offer of dedication in fee to the County of Orange, or its

designee, of Lots LL and MM, exclusive of manufactured slopes, for regional park purposes in a form approved by the Chief, Harbors, Beaches and Parks, Program Management & Coordination suitable for recording. Said offer shall be free and clear of money and all other encumbrances, liens, leases, fees, easements (recorded and unrecorded), assessments and unpaid taxes, except those meeting the approval of the Chief, Harbors, Beaches and Parks, Program Management and Coordination. Until such time as the offer is accepted by the County or its designee, the subdivider or assigns and successors shall be responsible for maintenance and upkeep of the above-referenced lots.

B. Prior to the recordation of any subdivision map that creates residential building sites, the subdivider shall survey and monument all lots dedicated for regional park purposes, and stake the property line of the dedication area(s) with durable, long-lasting, high visibility markers at all angle points and line of sight obstructions to the satisfaction of the Manager, Harbors Beaches & Parks.

C. Prior to recordation of the regional park dedication, the existing old ranch house sited within future regional park land shall be demolished except for the rock work subject to the approval of the Chief, HBP/Program Management & Coordination.

13. Master Plan of Regional Riding and Hiking Trails/County Bikeways:

Regional Trail Dedication:

A. The Live Oak Canyon Regional Riding and Hiking Trail is depicted within the Recreation Element aligned through Lot R, adjacent El Toro Road, through the proposed project. A recreation easement for this riding and hiking trail shall be dedicated to the County which includes trail improvements, including trail improvements just offsite along El Toro Road, north to the intersection of El Toro Road and the community spine road, as well as north to the existing under crossing of El Toro Road, in compliance with the following conditions:

1. Prior to the recordation an applicable subdivision map that creates residential building site the subdivider shall:

   a. Irrevocably offer a recreation easement for the Live Oak Canyon Regional Riding and Hiking Trail in a manner meeting the approval of the Chief, HBP/Program Management & Coordination. The subdivider shall not grant any easement(s) over the property subject to the recreation easement unless such easements are first reviewed and approved by the Chief, HBP/Program Management & Coordination.

   b. Design the necessary improvements(both onsite and offsite) for the trail, including, but not limited to grading, erosion control, signage and fencing, as applicable, in manner meeting the approval of the Chief, HBP/Program Management & Coordination, in consultation with the Manager, Subdivision & Grading. Further, the subdivider shall enter into an agreement, accompanied by financial security, with the County of Orange, to insure the installation of the necessary improvements.

2. Prior to the issuance of a grading permit, the grading plans shall be reviewed by the Chief, HBP/Program Management & Coordination, to ensure that the proposed grading provides for, will not interfere with, or preclude the installation of the riding and hiking trail in a location and in a manner meeting the approval of the Chief, HBP/Program Management & Coordination.

3. Prior to the issuance of final certificates of use and occupancy and the release of financial security guaranteeing the riding and hiking trail improvements, the applicant shall install the riding and hiking trail improvements in a manner meeting the approval of the Chief, HBP/Program Management & Coordination, in consultation with the Manager, Construction.

B. Local Riding and Hiking Trail Dedication:

A local riding and hiking trail is described within Area Plan 98-2 text to be dedicated to the County within a recreation easement aligned east-west through the proposed project.

A recreation easement for the local riding and hiking trail shall be dedicated to the County for those areas not included within future dedicated regional park land. Moreover, trail improvements shall be made for this trail, *both* within and outside the future regional park, in addition to a connection from the staging area along the community spine road *offsite* to the regional riding and hiking trail at El Toro Road. Improvements for the staging area shall also be made including the ability to accommodate parking equestrian trailers as well as vehicle only parking. Dedication of the recreation easement and the improvements, including the staging area shall be done in compliance with the above.

C. Trail Reroutes/Bikeway and Riding and Hiking Trails:

1. The Aliso Creek Class I, paved Off-Road Bikeway, as well as the Live Oak Canyon Regional Riding and Hiking Trail will require re-routing plans during construction of the proposed project. Therefore, the following condition shall apply:

   Prior to any grading and/or construction activities which precludes the utilization of either the Aliso Creek Class I Off-Road Bikeway or the Live Oak Canyon Regional Riding and Hiking Trail, a re-routing plan shall be submitted subject to the approval of the Chief, HBP/Program Management & Coordination.

2. The same condition shall also be applicable to the Class II On-Road Bikeway aligned along the north bound lane of El Toro Road contiguous the proposed project.

14. Master Plan Local Parks (Local Park Code):

The Local Park Code requirement is 2.392 acres of park land based upon a proposal to build 299 residential units at a gross density of 1.35 du/ac (299 x .008 ac/du).

Prior to issuance of building permits the Local Park Code requirement shall be met by *payment of in-lieu fees.*

15. Resources Element (Open Space Component):

A. Dedicate Restricted Scenic Preservation Easement:

Fuel modification areas, manufactured slopes and remedial grading areas sited between the regional park dedication area and residential development, the fuel modification and native enhancement transition area contiguous El Toro Road, and northerly most fuel modification and native enhancement transition area, shall be placed within restricted scenic preservation easement areas. These areas include Lots R, CC, DD, EE, FF, GG, HH, II and JJ. *(NOTE: Manufactured slopes now depicted within Lots MM and LL the regional park, should be depicted within separate open space lots and restricted scenic preservation easements placed over them).* Restricted scenic preservation easements shall be dedicated to the County of Orange in compliance with the following conditions:

1. Prior to the recordation of any applicable final tract map which creates residential building sites, the subdivider shall make an irrevocable offer to dedicate an easement to the County of Orange or its designee over Lots R, CC, DD, EE, FF, GG, HH, II, and JJ, for restricted scenic preservation purposes in a manner meeting the approval of the Chief, HBP/Program Management & Coordination. in consultation with the Manager, Current Planning.

Maintenance, upkeep and liability for said easement area shall remain the responsibility of the subdivider or assigns and successors (i.e., homeowner's association) or current underlying owner(s) of said easement area and shall not be included in said dedication offer. The subdivider shall not grant any easement over any property subject to said easement unless such easements are made subordinate to said easement offer in a manner meeting the approval of the Chief, HBP/Program Management & Coordination.

2. The subdivider shall note limitations and restrictions for said easement by a reference on the final map to a previously recorded document or by the recordation of a separate document concurrent with the recordation of subject map in a manner meeting the approval of the Chief, HBP/Program Management & Coordination.

3. Prior to recordation of any applicable final tract map or as determined by the Chief, HBP Program Management & Coordination, the subdivider shall survey and monument all parcels of the land to be dedicated for restricted scenic preservation easement purposes, and submit plans showing how the development boundaries of the restricted scenic preservation easement parcel(s) is marked to be visible for monitoring purposes by Grantee to the satisfaction of the Chief, HBP/Coastal & Historical Facilities.

B. Public Area Landscaping:

The areas to be irrevocably offered to the County of Orange for restricted scenic preservation purposes shall be landscaped, equipped for irrigation, as applicable, and improved in accordance with an approved landscape plan as stated below:

1. Preliminary Plan

Prior to the recordation of a subdivision map (except maps for financing and conveyance only), the subdivider shall enter into an agreement and post financial security guaranteeing landscape improvements and the maintenance thereof based on a preliminary landscape plan showing major plant material and uses, and a cost estimate for the landscape improvements. The preliminary plan and cost estimates shall be reviewed and approved by the Manager, Subdivision and Grading, in consultation with the Chief, HBP/Program Management & Coordination. Said plan shall take into account Area Plan 98-2, County Standard Plans for landscape areas, adopted plant palette guides, applicable scenic and specific plan requirements, Water Conservation Measures contained in Board Resolution 90-487(Water Conservation Measures), and Board Resolution 90-1341(Water Conservation Implementation Plan).

2. Detailed Plan

Prior to the issuance of any building permits, the applicant shall submit a detailed landscape plan for approval to the Manager, Subdivision & Grading, in consultation with the Chief, HBP/Program Management & Coordination. Detailed plans shall show the detailed irrigation and landscaping design.

3. Installation Certification

Prior to the issuance of final certificates of use and occupancy and the release of the financial security guaranteeing the landscape improvements, the applicant shall install said improvements and have the installation certified by a licensed landscape architect or licensed landscape contractor, as having been installed in accordance with the approved detailed plans. The applicant shall furnish said certification, including an irrigation management report for each landscape irrigation system, and any other required implementation report

determined applicable to the Manager, Construction, and the Manager, Building Inspection, prior to the issuance of any certificates of use and occupancy.

C. Urban Edge Treatment Plan/Viewshed Analysis:

Prior to the approval of any use permits for residential structures, an urban edge treatment plan/viewshed analysis shall be submitted to the County subject to the approval of the Chief, HBP/Program Management & Coordination. The Urban edge treatment plan/viewshed analysis shall comply with the following criteria:

1. Establish building height and setback limits (i.e., Building Envelope Formula) and grading treatments to preserve views attained from within existing and proposed parks and open space areas as well as from along designated scenic highways (i.e., El Toro Road) as identified by the Master Plan of Regional Recreational Facilities (Recreation Element), Open Space Component (Resources Element) and Master Plan of Scenic Highways (Transportation Element) respectively. Moreover, views from St, Michaels Abbey, the Ramakrishna Monastery and neighboring Hidden Ridge Community shall also be addressed. Viewshed analysis cross sections should be provided as seen from these areas to proposed residential structures.

2. Eliminate and/or reduce to the greatest extent possible conflicts which may impact the existing and future recreational utility of a regional recreation recreational facility and open space areas.

3. Eliminate and/or reduce to the greatest extent possible potential operation and maintenance problems resulting from encroachment, unauthorized entry, private development fuel modification requirements, flood control facilities, and maintenance of privately landscaped manufactured slopes and maintenance roads as they relate to future and existing regional recreational facilities.

4. Establish appropriate landscape/fuel modification treatments and wall and/or fence treatments including berms to provide appropriate transition from regional recreational facilities and open space areas to private development areas.

5. Establish smooth and gradual transition between graded slopes and existing slopes within the park and open space areas using variable slopes (2:1-4:1).

6. Obscure slope drainage structures with a variety of plant materials.

7. Incorporate architectural and design techniques into the project in order to enhance off-site views attained from within parks and significant open space.

8. All landscaping of manufactures slopes interfacing significant open space areas should be exclusively native, as applicable, to preserve the biological and scenic integrity of regional corridors, open space and park lands.

16. FF GBU FIRE HYDRANTS

A. Prior to the recordation of a subdivision map which creates residential building sites, the applicant shall submit a fire hydrant location plan for the review and approval of the Fire Chief.

17. FF RBU AUTOMATIC FIRE SPRINKLERS

A. Prior to the recordation of a subdivision map, which creates residential building sites, a note shall be placed on the map stating that all structures shall be protected by an automatic fire sprinkler system, in a manner meeting the approval of the Fire Chief.

18. FF RG FIRE ACCESS ROADS

A. Prior to the recordation of a subdivision map which creates residential building sites, the applicant shall obtain approval of the Fire Chief for all fire protection access easements and shall dedicate them to the County.

B. Prior to the issuance of any grading permits, the applicant shall submit and obtain approval of plans for all roads, streets and courts, public or private, from the Fire Chief in consultation with the Manager, Subdivision and Grading Services. The plans shall include the plan view, sectional view, and indicate the grade and width (28-ft. minimum) of the street or court measured flow line to flow line. All proposed fire apparatus turnarounds shall be approved by the Fire Chief and if needed, clearly marked when a dead-end street exceeds 150 feet or when otherwise required. Applicable CC&R's, or other approved documents, shall contain provisions which prohibit obstructions such as speed bumps/humps, control gates or other modifications within said easement or access road unless prior approval of the Fire Chief is granted. Grade shall not exceed 10%. Up to 15% is allowed when all structures served by the road are protected by automatic sprinklers.

C. Street signs. A note shall be placed on the fire protection access easement plan indicating that all street/road signs shall be designed and maintained to be either internally or externally illuminated in a manner meeting the approval of the Fire Chief.

19. FF BU STREET MARKINGS

Prior to the recordation of a subdivision map which creates residential building sites, the applicant shall submit plans and obtain approval from the Fire Chief for fire lanes on required fire access roads less than 36 feet in width. The plans shall indicate the locations of red curbing and signage. A drawing of the proposed signage with the height, stroke and coloring of lettering and the contrasting background color shall be submitted to and approved by the Fire Chief.

20. F F R TRAFFIC SIGNAL PREEMPTION

Prior to the recordation of the applicable subdivision map which creates residential building sites, as determined by the Fire Chief in consultation with the Manager, Subdivision and Grading Services, the subdivider shall enter into an agreement with the County for the installation of traffic signal preemption equipment for the surrounding controlled intersections. Said agreement shall be accompanied by financial security.

21. F F RRB FIRE HAZARD NOTIFICATION

A. A Special Fire Protection Area Notification. Prior to the recordation of any final tract map which creates residential building sites, the subdivider shall place a note on the map meeting the approval of the Fire Chief that the property is in a **"Special Fire Protection Area"** and must meet all requirements for development within the area or file for an exclusion with the Fire Chief.

B. Special Fire Protection Area Development. Prior to issuance of a building permit, the applicant shall meet all requirements for development and construction within a Special Fire Protection Area as identified in Orange County Ordinance 3960, including increased street widths, Class A roof assemblies, fire sprinklers, etc.

22. F F G FUEL MODIFICATION

A. Prior to the issuance of a preliminary grading permit, the applicant shall obtain the approval of the Fire Chief, in consultation with the Managers, Environmental and Project Planning Services, Current Planning Services and Subdivision and Grading Services of a conceptual fuel modification plan and program.

B. Prior to the issuance of any precise grading permit, the applicant shall obtain the approval of the Fire Chief, in consultation with the Managers, Environmental and Project Planning Services, Current Planning Services, and Subdivision and Grading Services of a precise fuel modification plan and program. The plan shall indicate the proposed means of achieving an acceptable level of risk to the structures by vegetation, the CC&R's, or other approved documents, shall contain provisions for maintaining the fuel modification zones including the removal of all dead and dying vegetation subject to triennial inspections.

23. F F G ACCESS GATES

Prior to the issuance of any grading permits, the applicant shall submit and obtain the Fire Chief's approval for the construction of any gate across required Fire Authority access roads/drives. Contact the Orange County Fire Authority at (714) 744-0403 for a copy of the "Guidelines for Fire Authority Emergency Access".

24. SG SG B FOOTHILL/EASTERN TRANSPORTATION CORRIDOR

Prior to the issuance of each building permit, payment of fees will be required as prescribed in the Major Thoroughfare and Bridge Fees Program for the Foothill/Eastern Transportation Corridor.

25. SG SG B FOOTHILL CIRCULATION PHASING

Prior to the issuance of each building permit, payment of fees will be required as prescribed in the Major Thoroughfare and Bridge Fee Program for the Foothill Circulation Phasing Program.

26. SG SG B SANTIAGO CANYON ROAD

Prior to the issuance of each building permit, payment of fees will be required as prescribed in the Major Thoroughfare and Bridge Fee Program for Santiago Canyon Road.

27. SG SG B EL TORO ROAD

Prior to the issuance of each building permit, payment of fees will be required as prescribed in the Major Thoroughfare and Bridge Fee Program for El Toro Road.

28. SG SG B ARTERIAL RIGHT-OF-WAY

Prior to recordation of a subdivision map that creates residential building sites, the applicant shall dedicate ultimate half-width road right-of-way to major arterial highway standards across the property frontage in a manner meeting the approval of the Manager, Subdivision and Grading Services.

29. SG SG R SANTIAGO CANYON ROAD

Prior to recordation of any subdivision map that creates residential building sites, the applicant shall pay a cash fair share contribution for the design and construction of improving Santiago Canyon Road from Live Oak Canyon Road to Jamboree Road, in a manner meeting the approval of the Manager, Subdivision and Grading Services.

30. SG SG B EL TORO ROAD

Prior to recordation of a subdivision map that creates residential building sites, the applicant shall design and construct a northbound right turn lane and a southbound left turn lane on El Toro Road at the project entrance in a manner meeting the approval of the Manager, Subdivision and Grading Services.

31. SG SG B EL TORO ROAD

Prior to recordation of a subdivision map that creates residential building sites, the applicant shall provide a cash deposit to pay the cost of designing and constructing the ultimate configuration of El Toro Road as determined by PFRD/Program Development Division, all in a manner meeting the approval of the Manger, Subdivision and Grading Services.

32. SG SG G TRAFFIC SIGNAL

Prior to recordation of a subdivision map that creates residential building site, the applicant shall design and construct a traffic signal at the intersection of El Toro and the project entrance in a manner meeting the approval of the Manager, Subdivision and Grading in consultation with the Manager, Program Development Division.

33. SG SG G SIGHT DISTANCE

Prior to issuance of a grading permit, adequate sight distance shall be provided at all intersections per Standard Plan 1117, and at all driveways, in a manner meeting the approval of the Manager, Subdivision and Grading Services; this includes any necessary revisions to the plan to remove slopes and other encroachments from the Limited Use Area.

34. SG SG G "C" STREET

Prior to the issuance of a grading permit, the applicant shall design "C" Street 40' in width, curb to curb, with sidewalk on both sides.

35. SG SG G UTILITY EASEMENT

Prior to the issuance of a grading permit, the applicant shall design both sides of all of the private streets with a 3' public utility easement.

36. SG SG G — GATED ENTRY

Prior to the issuance of a grading permit, the applicant shall design the gated entry area to facilitate vehicular turnaround movements prior to reaching the gate in a manner meeting the approval of the Manager, Subdivision and Grading Services.

37. SG SG R — LOT 296

Prior to recordation of a final map, the applicant shall design Lot 296 with 20' minimum of property frontage.

38. SG SG G — EMERGENCY ACCESS

Prior to the issuance of a grading permit, the applicant shall design the emergency only access between "B" Street and existing Valley Vista in a manner meeting the approval of the Manager, Subdivision and Grading Services.

39. SG SG R — PVT STREET NOTIFICATION

Prior to the recordation of a subdivision map (except maps for financing and conveyance only), the subdivider shall place a note on the map that states:

"The private streets constructed within this map shall be owned, operated and maintained by the developer, successors or assigns. The County of Orange shall have no responsibility therefore unless pursuant to appropriate sections of the Streets and Highways Code of the State of California, the said private streets have been accepted into the County Road System by appropriate resolution of the Orange County Board of Supervisors."

40. SG SG R — STREET IMPROVEMENTS

Prior to the recordation of a subdivision map (except maps for financing and conveyance only), the subdivider shall design and construct the following improvements in accordance with plans and specifications meeting the approval of the Manager, Subdivision and Grading:

A. Streets, bus stops, on-road bicycle trails, street names, signs, striping and stenciling.

B. The water distribution system and appurtenances which shall also conform to the applicable laws and adopted regulations enforced by the County Fire Chief.

C. Underground utilities (including gas, cable, electrical and telephone), streetlights, and mailboxes.

41. HP HP R — ACCESS EASEMENT

Prior to, or concurrent with the recordation of Tentative Tract 15230, an Official County Vehicular Road Access Easement shall be recorded by separate instrument which notes limitations and restrictions for this easement subject to the approval of the Chief, PFRD/Harbors, Beaches and Parks, Program Management & Coordination. It shall permit access over Spine Street (Lot A) of Official County vehicles for regional park management purposes.

42. The following Mitigation Measures from Addendum PA980103 are added as conditions of approval:

SC 2-4	SC 2-5	SC 2-6
SC 2-12	SC 2-13	SC 2-14
SC 7-2	SC 7-9	SC 9-2
SC 9-10	AM 8-15	

43. CP CP INDEMNIFICATION

Applicant shall defend at his/her sole expense any action brought against the County because of issuance of this permit or, in the alternative, the relinquishment of such permit. Applicant will reimburse the County for any court costs and attorney's fees which the County may, at its sole discretion, participate in the defense of any such action, but such participation shall not relieve applicant of his/her obligations under this condition.

44. CP CP

Subdivider shall defend, indemnify, and hold harmless the County of Orange, its officers, agents and employees from any claim, action or proceeding against the County, its officers, agents, or employees to attack, set aside, void, or annual approval of the Board of Supervisors, Planning Commission, Zoning Administrator, or Subdivision Committee concerning this subdivision, which action is brought within the time period provided for in Government Code Section 66499.37. The County shall promptly notify the subdivider of any such claim, action or proceeding and shall cooperate fully in the defense. This condition is imposed pursuant to Government Code Section 66474.9(b).

45. CP NOTIFICATION

This condition of approval is intended to give you notice that the fees, dedications, reservations or other exactions imposed on this project are as described in this approval and the reports and actions accompanying this approval. You are also on notice that the 90-day approval period in which the applicant may protest pursuant to Government Code Section 66020 has begun.

BOARD OF SUPERVISORS

RESOLUTION ON AREA PLAN 98-2

(PLACEHOLDER)

SADDLEBACK MEADOWS
ADDENDUM PA980103
Mitigation Measures

SOILS AND GEOLOGY

MITIGATION MEASURES

Standard County Conditions and Mitigation Measures

SC 2-4 Prior to the issuance of the first grading permit, for projects located immediately adjacent to or including portions of regional parks, significant open space corridors, or other environmentally sensitive areas, the project proponent shall provide evidence acceptable to the Manager, PDS/Subdivision and Grading Services Division, in consultation with the Manager, PFRD/Harbors Beaches & Parks Division, that graded areas will be compatible with natural land characteristics of the adjacent open space areas including techniques to enhance a smooth and gradual transition, urban edge treatment plans and incorporating view enhancement through architectural and design techniques.

SC 2-5 Prior to the issuance of any grading permit, off-site grading and/or drainage shall be conducted in a manner meeting the approval of the Manager, PDS/Subdivision and Grading Services Division.

SC 2-6 Prior to the issuance of a grading permit, substantial compliance with the following shall be certified by a registered engineer in a manner meeting the approval of the Manager, PDS/Subdivision and Grading Services Division:

- Fill soils shall be placed in layers that are less than 8 inches thick and moisture-conditioned generally 1- to 2-percent above optimum moisture content. The existing diatomaceous soils should be moisture-conditioned to 125-percent of optimum moisture content.

- For preliminary earthwork computations, the following shrinkage/bulking factors are recommended for the on-site material (these do not include handling losses): Bedrock - 5% bulking; slopewash - 5% shrinkage; and Other Soils - 15% shrinkage. Grading plans shall include an area where finish grades can be raised or lowered to accommodate changes in actual material quantities.

- Dewatering shall be achieved using sumps and pumps located strategically within the excavated area. However, the excavation

OFFICIAL CO

shall be carefully observed; if the conditions warrant, supplementary dewatering provisions shall be made. It is the responsibility of the contractor to provide an adequate dewatering system during construction.

SC 2-12 Prior to the issuance of any preliminary grading permits, the subdivider shall request that the Vector Control District initiate the survey process of the tract/parcel map site to determine if vector control measures are necessary. If warranted, such measures shall be conducted by the developer in a manner meeting the approval of the Manager, PDS/Subdivision and Grading Services Division.

SC 2-13 Prior to issuance of grading permits, a Water Quality Management Plan (WQMP) shall be submitted to and approved by the Manager, PDS/Subdivision and Grading Services Division. The WQMP shall identify, at a minimum, the application and incorporation of those routine structural and non-structural BMPs outlined in the Countywide NPDES Drainage Area Management Plan (DAMP) Appendix G detailing implementation of BMPs not dependent on specific land uses, in a manner meeting the approval of the Manager, PDS/Subdivision and Grading Services Division.

SC 2-14 Prior to the issuance of any grading permits, the applicant shall provide, in accordance with criteria supply by PDS, a "Hazardous Materials Assessment" and a "Disclosure Statement" covering the property (both fee and easement) which will be offered for dedication to the County of Orange, for review and approval by the Manager, PDS/Subdivision and Grading Services Division, in consultation with the Manager, PFRD/Monitoring Programs Division.

BIOLOGICAL RESOURCES

MITIGATION MEASURES

SC 7-2 Prior to the issuance of any grading permits, the applicant shall obtain a Streambed Alteration Agreement covering the affected water courses and wetland areas within the proposed project area from the California Department of Fish and Game. A 1603 Streambed Application has been submitted to CDFG. All Streambed alteration activities shall be carried out in accord with the requirements of an approved Streambed Alteration Agreement.

SC 7-9 Prior to the issuance of grading permits, the applicant shall prepare a habitat restoration plan for all areas proposed for revegetation of coastal scrub habitat to the satisfaction of the Administrator / Planning and Zoning. As part

OFFICIAL COPY

investigation and surface collection as appropriate. The test level report evaluating the site shall include discussion of significance (depth, nature, conditions and extent of the resources), final mitigation recommendations and cost estimates and shall be approved by the Manager, PFRD/Harbors Beaches and Parks Division. Excavated finds shall be offered to the County of Orange, or designee, on a first refusal basis.

Paleontology

SC 9-10 Prior to the issuance of any grading permit, the project applicant shall provide written evidence to the Manager, PDS/Subdivision and Grading Services Division, that a County-certified paleontologist has been retained by the applicant to conduct pregrade salvage and prepare a catalogue of the exposed resources. Excavated finds shall be offered to the County of Orange, or designee, on a first refusal basis. The paleontologist shall submit a follow-up report for approval by the Manager, PFRD/Harbors Beaches and Parks Division, for review and approval, which shall include methodology, an analysis of artifacts found, a catalogue of artifacts, and their present repository. This mitigation measure has been completed.

DRAFT RESOLUTION - VTTM

(Draft November 24)

RESOLUTION OF THE BOARD OF SUPERVISORS
ORANGE COUNTY, CALIFORNIA

On motion of Supervisor _____, duly seconded and carried, the following Resolution was adopted:

WHEREAS, the Orange County Subdivision Committee conducted a noticed public hearing and approved Saddleback Meadows Vesting Tentative Tract Map (VTTM) 15230 to create 299 residential building sites; and

WHEREAS, the action of the Subdivision Committee on VTTM 15230 was appealed to the Board of Supervisors; and

WHEREAS, this Board, by two separate Resolutions and an Ordinance, has approved related Zone Change 98-3, Area Plan 98-2, and EIR Addendum PA 980103; and

WHEREAS, this Board has conducted a noticed public hearing on VTTM 15230.

NOW, THEREFORE, BE IT RESOLVED that this Board makes the following findings:

I. That the proposed map is consistent with the Orange County General Plan.

II. That the design and improvement of the proposed subdivision are consistent with the Orange County General Plan.

III. That the proposed site is physically suitable for the proposed type of development.

IV. That the proposed site is physically suitable for the proposed density of development.

V. That the design of the subdivision or the proposed improvements are not likely to cause substantial environmental damage or substantial and avoidable injury to fish or wildlife or their habitat.

VI. That the design of the subdivision and the type of improvements proposed are not likely to cause serious public health problems.

VII. That the design of the subdivision and the type of improvements proposed will not conflict with easements of record or established by court judgment acquired by the public-at-large for access through or use of property within the proposed subdivision.

VIII. That the proposed subdivision complies with the requirements set forth in the Orange County Subdivision Code and the Orange County Zoning Code.

IX. That the proposed subdivision, together with the provisions for its design and improvement, is in substantial compliance with the Foothill/Trabuco Specific Plan.

X. That the design and improvement of the proposed subdivision are suitable for the uses proposed, and the subdivision can be developed in compliance with the applicable zoning regulations pursuant to Section 7-9-254 of the Subdivision Code.

XI. That the tentative map is consistent with both Area Plan (AP) 98-2 and Zone Change (ZC) 98-3.

XII. That the Board of Supervisors has considered Final EIR 566, previously certified on 6/2/98, and Addendum PA 980103 prior to project approval. Together they are approved for the proposed project based upon the following findings:

1. Together, these documents are adequate to satisfy the requirements of CEQA by the decision-maker;

2. The additions, clarifications, and/or changes to the original document caused by the Addendum do not raise new significant issues which were not addressed by the EIR; and

3. The approval of the EIR and Addendum for the proposed project reflect the independent judgment of the Subdivision Committee.

XIII. That pursuant to Section 711.4 of the California Fish and Game Code, this project is not exempt from the required fees as it has been determined that adverse impacts to wildlife resources will result from the project. The required fees will need to be paid.

XIV. That the development of this project will not preclude or prevent the preparation of the Southern Subregion NCCP.

XV. That the discharge of waste from the proposed subdivision into the existing sewer system of the Trabuco Canyon Water District will not result in violations of existing requirements prescribed by the California Regional Water Quality Control Board, San Diego Region.

XVI. That the design of the subdivision and its improvements do provide, to the extent feasible, for future passive or natural heating or cooling opportunities as specified in Section 66473.1 of the Government Code (Subdivision Map Act).

XVII. That the following determinations apply to fees required by Sections 7-9-700 through 713, Codified Ordinances of Orange County:

A. Purpose of fees: Fire protection, paramedic, law enforcement, library, and general County services.

B. Use of fees: Construction of new fire station, sheriff substation, library, and general County facilities in newly developing areas which have inadequate service.

C. Relationship between use of fees and type of development: Dwelling units and commercial/industrial structures and their occupants require fire protection, paramedic, law enforcement, library, and general County services.

D. Relationship between need for facilities and type of project: Project is located in newly developing area which has inadequate fire protection, paramedic, library services, and sheriff substation and general County facilities.

E. Relationship between amount of fees and cost of the portion of the facilities attributable to the development: Fees represent project's pro rata share of the cost of the fire station, sheriff substation, library, and general County facilities.

XVIII. That because of participation in fee programs for off-site improvements, this project will qualify for consideration under Section 66452.6 of the Subdivision Map Act.

XIX. That the deviations from the standards of design set forth in the Subdivision Code Subdivision Committee Report were considered and found to be justified based upon the reasons set forth in the Subdivision Committee Report or special circumstances which apply.

XX. That the Local Park Code Requirement can be met by the payment of in-lieu fees.

XXI. That the monitoring requirements of Public Resources Code Section 21081.6 (AB 3180) will be considered as having been met in that the design of the subject project, the satisfaction of the requirements of the County's building, grading, fire, and other codes and ordinances and the satisfaction of the conditions of approval applied to the project will implement the mitigation measures contained in EIR No. 566 an Addendum PA 980103.

XXII. That the applicant is hereby provided notice that the fees, dedications, reservations or other exactions imposed on this project are as described in this approval as well as the reports and actions accompanying this approval and that the 90-day approval period in which the applicant may protest pursuant to Government Code Section 66020 has begun

XXIII. That the issues raised in the appeal letter by Edward Connor dated November 5, 1998 have been adequately addressed in the supplemental staff report dated November 17, 1998. Those responses are hereby incorporated by this reference.

XXIV. That the Board, by two separate Resolutions and an Ordinance has approved related Zone Change 98-3, Area Plan 98-2, and EIR Addendum PA980103, the findings from which are incorporated herein by reference.

BE IT FURTHER RESOLVED that this Board denies the appeal and upholds the action of the Subdivision Committee subject to the following conditions:

1. CP NA NA SPECIAL

Approval of Vesting TTM 15230 is subject to final approval of Zone Change 98-3 and Area Plan 98-2. Prior to recordation of VTTM 15230, the Manager, Current Planning shall determine that it is in substantial compliance with final approved Zone Change 98-3 and Area Plan 98-2. Otherwise, a revised tentative map approved by the Subdivision Committee shall be required.

2. Prior to the issuance of any grading permits, the applicant shall satisfy the following conditions from the Board of Supervisors Resolution for Area Plan 98-2.

4. Grading Review
5. Tree Preservation Plan
6. Federal Endangered Species
7. Geology Report
8. Drainage
9. Cross-Lot Drainage
10. Vector Control
11. Archaeo Observation & Salvage
12. Paleo Observation & Salvage
13. Grading Notes
14. Construction Noise
15. Performance Bond
16. Re-Routing Trails

3. Prior to the recordation of a subdivision map which creates residential building sites, the subdivider shall satisfy the following conditions from the Board of Supervisors Resolution for Area Plan 98-2:

17. Preliminary Grading Completed
18. Open Space Dedication
19. Recreational Trails
20. Ranch House Clean Up
21. Landscape Plan
22. Fire Station
23. Library
24. Sheriff Station
25. Off-Site Fuel Modification
26. Affordable Housing

4. SG SG G LOFFEL WALLS

Prior to the issuance of a grading permit, a letter of justification and design plans for the proposed loffel walls shall be presented to and approved by the Manager, Subdivision and Grading Services.

5. BP BP RGB RESIDENTIAL ACOUSTICAL REPORT

All residential lots and dwellings shall be sound attenuated against present and projected noise which shall be the sum of all noise impacting the project so as not to exceed a composite interior standard of 45 dba CNEL in all habitable rooms and a source specific exterior standard of 65 d.b.a. CNEL in outdoor living areas. Evidence prepared by a County-certified acoustical consultant, that these standards will be satisfied in a manner consistent with Zoning Code Section 7-9-137.5, shall be submitted as follows:

A. Prior to the recordation of a subdivision map or prior to the issuance of grading permits, as determined by the Manager, Building Permits, the applicant shall submit an acoustical analysis report to the Manager, Building Permits, for approval. The report shall describe in detail the exterior noise environment and preliminary mitigation measures. Acoustical design features to achieve interior noise standards may be included in the report.

6. SG SG RG DRAINAGE STUDY

Prior to issuance of any grading permits, the following drainage studies shall be submitted to and approved by the Manager, Subdivision and Grading:

A. A drainage study of the subdivision including diversions, off-site areas that drain onto and/or through the subdivision, and justification of any diversions; and

B. When applicable, a drainage study evidencing that proposed drainage patterns will not overload existing storm drains; and

C. Detailed drainage studies indicating how the tract map grading, in conjunction with the drainage conveyance systems including applicable swales, channels street flows, catch basins, storm drains and flood water retarding, will allow building pads to be safe from inundation from rainfall runoff which may be expected from all storms up to and including the theoretical 100-year flood.

7. SG SG RG DRAINAGE IMPROVEMENTS

A. Prior to the issuance of any grading permits, the applicant shall in a manner meeting the approval of the Manager, Subdivision and Grading:

1) Design provisions for surface drainage; and

2) Design all necessary storm drain facilities extending to a satisfactory point of disposal for the proper control and disposal of storm runoff; and

3) Dedicate the associated easements to the County of Orange, if determined necessary.

B. Prior to the recordation of a subdivision map (except maps for financing and conveyance purposes only) said improvements shall be constructed in a manner meeting the approval of the Manager, Construction.

8. SG SG R MPD PARTICIPATION

Prior to the recordation of a subdivision map (except maps for financing and conveyance purposes only), the subdivider shall participate in the applicable Master Plan of Drainage in a manner meeting the approval of the Manager, Subdivision and Grading, including payment of fees and the construction of the necessary facilities.

9. SG SG R EASEMENT SUBORDINATION

Prior to the recordation of an subdivision map (except maps for financing and conveyance purposes only), the subdivider shall not grant any easements over any property subject to a requirement of dedication or irrevocable offer to the County of Orange or the Orange County Flood Control District, unless such easements are expressly made subordinate to the easements to be offered for dedication to the County. Prior to granting any of said easements, the subdivider shall furnish a copy of the proposed easement to the Manager, Subdivision and Grading, for review and approval.

10. SG SG G GRADING DEVIATION

Prior to the issuance of any grading permits, if the applicant submits a grading plan and the Manager, Subdivision and Grading, determines that it shows a significant deviation from the grading on the approved tentative tract map and Area Plan 98-2, specifically with regard to slope heights, slope ratios, and pad elevations and configuration, the plan shall be reviewed by the Subdivision Committee for a finding of substantial conformance. Failure to achieve such a finding will require processing a revised tentative map and/or area plan application per Orange County Zoning Code Section 7-9-139 and 7-9-150. Additionally, a new environmental assessment and determination is required

11. CP HP R ACCESS

Prior to recordation of any subdivision map that creates residential building sites, a 400 foot wide access easement across Lot A (Spine Street) from Lot MM to Lot LL shall be dedicated to the County of Orange in a manner meeting the approval of the Manager, Harbors, Beaches & Parks in consultation with the Manager, Subdivision and Grading. The primary purpose of the access easement is to provide for continuity of the wildlife corridor and O'Neill Regional Park.

Signs identifying a wildlife crossing area shall be posted within 100 feet of each point where the street transverses the wildlife corridor.

12. Master Plan of Regional Recreation Facilities:

Regional Park Dedication:

Lots LL and MM shall be dedicated to the County as an addition to O'Neill Regional Park, exclusive of manufactured slopes, which should be retained in separate lots. Regional park dedication shall be in done in compliance with the following conditions:

A. Prior to the recordation of the first subdivision map that creates residential building sites, the subdivider shall make an irrevocable offer of dedication in fee to the County of Orange, or its

designee, of Lots LL and MM, exclusive of manufactured slopes, for regional park purposes in a form approved by the Chief, Harbors, Beaches and Parks, Program Management & Coordination suitable for recording. Said offer shall be free and clear of money and all other encumbrances, liens, leases, fees, easements (recorded and unrecorded), assessments and unpaid taxes, except those meeting the approval of the Chief, Harbors, Beaches and Parks, Program Management and Coordination. Until such time as the offer is accepted by the County or its designee, the subdivider or assigns and successors shall be responsible for maintenance and upkeep of the above-referenced lots.

B. Prior to the recordation of any subdivision map that creates residential building sites, the subdivider shall survey and monument all lots dedicated for regional park purposes, and stake the property line of the dedication area(s) with durable, long-lasting, high visibility markers at all angle points and line of sight obstructions to the satisfaction of the Manager, Harbors Beaches & Parks.

C. Prior to recordation of the regional park dedication, the existing old ranch house sited within future regional park land shall be demolished except for the rock work subject to the approval of the Chief, HBP/Program Management & Coordination.

13. Master Plan of Regional Riding and Hiking Trails/County Bikeways:

Regional Trail Dedication:

A. The Live Oak Canyon Regional Riding and Hiking Trail is depicted within the Recreation Element aligned through Lot R, adjacent El Toro Road, through the proposed project. A recreation easement for this riding and hiking trail shall be dedicated to the County which includes trail improvements, including trail improvements just offsite along El Toro Road, north to the intersection of El Toro Road and the community spine road, as well as north to the existing under crossing of El Toro Road, in compliance with the following conditions:

1. Prior to the recordation an applicable subdivision map that creates residential building site the subdivider shall:

   a. Irrevocably offer a recreation easement for the Live Oak Canyon Regional Riding and Hiking Trail in a manner meeting the approval of the Chief, HBP/Program Management & Coordination. The subdivider shall not grant any easement(s) over the property subject to the recreation easement unless such easements are first reviewed and approved by the Chief, HBP/Program Management & Coordination.

   b. Design the necessary improvements(both onsite and offsite) for the trail, including, but not limited to grading, erosion control, signage and fencing, as applicable, in manner meeting the approval of the Chief, HBP/Program Management & Coordination, in consultation with the Manager, Subdivision & Grading. Further, the subdivider shall enter into an agreement, accompanied by financial security, with the County of Orange, to insure the installation of the necessary improvements.

2. Prior to the issuance of a grading permit, the grading plans shall be reviewed by the Chief, HBP/Program Management & Coordination, to ensure that the proposed grading provides for, will not interfere with, or preclude the installation of the riding and hiking trail in a location and in a manner meeting the approval of the Chief, HBP/Program Management & Coordination.

3. Prior to the issuance of final certificates of use and occupancy and the release of financial security guaranteeing the riding and hiking trail improvements, the applicant shall install the riding and hiking trail improvements in a manner meeting the approval of the Chief, HBP/Program Management & Coordination, in consultation with the Manager, Construction.

B. Local Riding and Hiking Trail Dedication:

A local riding and hiking trail is described within Area Plan 98-2 text to be dedicated to the County within a recreation easement aligned east-west through the proposed project.

A recreation easement for the local riding and hiking trail shall be dedicated to the County for those areas not included within future dedicated regional park land. Moreover, trail improvements shall be made for this trail, *both* within and outside the future regional park, in addition to a connection from the staging area along the community spine road *offsite* to the regional riding and hiking trail at El Toro Road. Improvements for the staging area shall also be made including the ability to accommodate parking equestrian trailers as well as vehicle only parking. Dedication of the recreation easement and the improvements, including the staging area shall be done in compliance with the above.

C. Trail Reroutes/Bikeway and Riding and Hiking Trails:

1. The Aliso Creek Class I, paved Off-Road Bikeway, as well as the Live Oak Canyon Regional Riding and Hiking Trail will require re-routing plans during construction of the proposed project. Therefore, the following condition shall apply:

   Prior to any grading and/or construction activities which precludes the utilization of either the Aliso Creek Class I Off-Road Bikeway or the Live Oak Canyon Regional Riding and Hiking Trail, a re-routing plan shall be submitted subject to the approval of the Chief, HBP/Program Management & Coordination.

2. The same condition shall also be applicable to the Class II On-Road Bikeway aligned along the north bound lane of El Toro Road contiguous the proposed project.

14. Master Plan Local Parks (Local Park Code):

The Local Park Code requirement is 2.392 acres of park land based upon a proposal to build 299 residential units at a gross density of 1.35 du/ac (299 x .008 ac/du).

Prior to issuance of building permits the Local Park Code requirement shall be met by *payment of in-lieu fees*.

15. Resources Element (Open Space Component):

A. Dedicate Restricted Scenic Preservation Easement:

Fuel modification areas, manufactured slopes and remedial grading areas sited between the regional park dedication area and residential development, the fuel modification and native enhancement transition area contiguous El Toro Road, and northerly most fuel modification and native enhancement transition area, shall be placed within restricted scenic preservation easement areas. These areas include Lots R, CC, DD, EE, FF, GG, HH, II and JJ. *(NOTE: Manufactured slopes now depicted within Lots MM and LL the regional park, should be depicted within separate open space lots and restricted scenic preservation easements placed over them).* Restricted scenic preservation easements shall be dedicated to the County of Orange in compliance with the following conditions:

1. Prior to the recordation of any applicable final tract map which creates residential building sites, the subdivider shall make an irrevocable offer to dedicate an easement to the County of Orange or its designee over Lots R, CC, DD, EE, FF, GG, HH, II, and JJ, for restricted scenic preservation purposes in a manner meeting the approval of the Chief, HBP/Program Management & Coordination. in consultation with the Manager, Current Planning.

Maintenance, upkeep and liability for said easement area shall remain the responsibility of the subdivider or assigns and successors (i.e., homeowner's association) or current underlying owner(s) of said easement area and shall not be included in said dedication offer. The subdivider shall not grant any easement over any property subject to said easement unless such easements are made subordinate to said easement offer in a manner meeting the approval of the Chief, HBP/Program Management & Coordination.

2. The subdivider shall note limitations and restrictions for said easement by a reference on the final map to a previously recorded document or by the recordation of a separate document concurrent with the recordation of subject map in a manner meeting the approval of the Chief, HBP/Program Management & Coordination.

3. Prior to recordation of any applicable final tract map or as determined by the Chief, HBP Program Management & Coordination, the subdivider shall survey and monument all parcels of the land to be dedicated for restricted scenic preservation easement purposes, and submit plans showing how the development boundaries of the restricted scenic preservation easement parcel(s) is marked to be visible for monitoring purposes by Grantee to the satisfaction of the Chief, HBP/Coastal & Historical Facilities.

B. Public Area Landscaping:

The areas to be irrevocably offered to the County of Orange for restricted scenic preservation purposes shall be landscaped, equipped for irrigation, as applicable, and improved in accordance with an approved landscape plan as stated below:

1. Preliminary Plan

Prior to the recordation of a subdivision map (except maps for financing and conveyance only), the subdivider shall enter into an agreement and post financial security guaranteeing landscape improvements and the maintenance thereof based on a preliminary landscape plan showing major plant material and uses, and a cost estimate for the landscape improvements. The preliminary plan and cost estimates shall be reviewed and approved by the Manager, Subdivision and Grading, in consultation with the Chief, HBP/Program Management & Coordination. Said plan shall take into account Area Plan 98-2, County Standard Plans for landscape areas, adopted plant palette guides, applicable scenic and specific plan requirements, Water Conservation Measures contained in Board Resolution 90-487(Water Conservation Measures), and Board Resolution 90-1341(Water Conservation Implementation Plan).

2. Detailed Plan

Prior to the issuance of any building permits, the applicant shall submit a detailed landscape plan for approval to the Manager, Subdivision & Grading, in consultation with the Chief, HBP/Program Management & Coordination. Detailed plans shall show the detailed irrigation and landscaping design.

3. Installation Certification

Prior to the issuance of final certificates of use and occupancy and the release of the financial security guaranteeing the landscape improvements, the applicant shall install said improvements and have the installation certified by a licensed landscape architect or licensed landscape contractor, as having been installed in accordance with the approved detailed plans. The applicant shall furnish said certification, including an irrigation management report for each landscape irrigation system, and any other required implementation report

determined applicable to the Manager, Construction, and the Manager, Building Inspection, prior to the issuance of any certificates of use and occupancy.

C. Urban Edge Treatment Plan/Viewshed Analysis:

Prior to the approval of any use permits for residential structures, an urban edge treatment plan/viewshed analysis shall be submitted to the County subject to the approval of the Chief, HBP/Program Management & Coordination. The Urban edge treatment plan/viewshed analysis shall comply with the following criteria:

1. Establish building height and setback limits (i.e., Building Envelope Formula) and grading treatments to preserve views attained from within existing and proposed parks and open space areas as well as from along designated scenic highways (i.e., El Toro Road) as identified by the Master Plan of Regional Recreational Facilities (Recreation Element), Open Space Component (Resources Element) and Master Plan of Scenic Highways (Transportation Element) respectively. Moreover, views from St, Michaels Abbey, the Ramakrishna Monastery and neighboring Hidden Ridge Community shall also be addressed. Viewshed analysis cross sections should be provided as seen from these areas to proposed residential structures.

2. Eliminate and/or reduce to the greatest extent possible conflicts which may impact the existing and future recreational utility of a regional recreation recreational facility and open space areas.

3. Eliminate and/or reduce to the greatest extent possible potential operation and maintenance problems resulting from encroachment, unauthorized entry, private development fuel modification requirements, flood control facilities, and maintenance of privately landscaped manufactured slopes and maintenance roads as they relate to future and existing regional recreational facilities.

4. Establish appropriate landscape/fuel modification treatments and wall and/or fence treatments including berms to provide appropriate transition from regional recreational facilities and open space areas to private development areas.

5. Establish smooth and gradual transition between graded slopes and existing slopes within the park and open space areas using variable slopes (2:1-4:1).

6. Obscure slope drainage structures with a variety of plant materials.

7. Incorporate architectural and design techniques into the project in order to enhance off-site views attained from within parks and significant open space.

8. All landscaping of manufactures slopes interfacing significant open space areas should be exclusively native, as applicable, to preserve the biological and scenic integrity of regional corridors, open space and park lands.

16. FF GBU FIRE HYDRANTS

A. Prior to the recordation of a subdivision map which creates residential building sites, the applicant shall submit a fire hydrant location plan for the review and approval of the Fire Chief.

17. FF RBU AUTOMATIC FIRE SPRINKLERS

A. Prior to the recordation of a subdivision map, which creates residential building sites, a note shall be placed on the map stating that all structures shall be protected by an automatic fire sprinkler system, in a manner meeting the approval of the Fire Chief.

18. FF RG FIRE ACCESS ROADS

A. Prior to the recordation of a subdivision map which creates residential building sites, the applicant shall obtain approval of the Fire Chief for all fire protection access easements and shall dedicate them to the County.

B. Prior to the issuance of any grading permits, the applicant shall submit and obtain approval of plans for all roads, streets and courts, public or private, from the Fire Chief in consultation with the Manager, Subdivision and Grading Services. The plans shall include the plan view, sectional view, and indicate the grade and width (28-ft. minimum) of the street or court measured flow line to flow line. All proposed fire apparatus turnarounds shall be approved by the Fire Chief and if needed, clearly marked when a dead-end street exceeds 150 feet or when otherwise required. Applicable CC&R's, or other approved documents, shall contain provisions which prohibit obstructions such as speed bumps/humps, control gates or other modifications within said easement or access road unless prior approval of the Fire Chief is granted. Grade shall not exceed 10%. Up to 15% is allowed when all structures served by the road are protected by automatic sprinklers.

C. Street signs. A note shall be placed on the fire protection access easement plan indicating that all street/road signs shall be designed and maintained to be either internally or externally illuminated in a manner meeting the approval of the Fire Chief.

19. FF BU STREET MARKINGS

Prior to the recordation of a subdivision map which creates residential building sites, the applicant shall submit plans and obtain approval from the Fire Chief for fire lanes on required fire access roads less than 36 feet in width. The plans shall indicate the locations of red curbing and signage. A drawing of the proposed signage with the height, stroke and coloring of lettering and the contrasting background color shall be submitted to and approved by the Fire Chief.

20. F F R TRAFFIC SIGNAL PREEMPTION

Prior to the recordation of the applicable subdivision map which creates residential building sites, as determined by the Fire Chief in consultation with the Manager, Subdivision and Grading Services, the subdivider shall enter into an agreement with the County for the installation of traffic signal preemption equipment for the surrounding controlled intersections. Said agreement shall be accompanied by financial security.

21. F F RRB FIRE HAZARD NOTIFICATION

A. A Special Fire Protection Area Notification. Prior to the recordation of any final tract map which creates residential building sites, the subdivider shall place a note on the map meeting the approval of the Fire Chief that the property is in a "Special Fire Protection Area" and must meet all requirements for development within the area or file for an exclusion with the Fire Chief.

B. Special Fire Protection Area Development. Prior to issuance of a building permit, the applicant shall meet all requirements for development and construction within a Special Fire Protection Area as identified in Orange County Ordinance 3960, including increased street widths, Class A roof assemblies, fire sprinklers, etc.

22. F F G FUEL MODIFICATION

A. Prior to the issuance of a preliminary grading permit, the applicant shall obtain the approval of the Fire Chief, in consultation with the Managers, Environmental and Project Planning Services, Current Planning Services and Subdivision and Grading Services of a conceptual fuel modification plan and program.

B. Prior to the issuance of any precise grading permit, the applicant shall obtain the approval of the Fire Chief, in consultation with the Managers, Environmental and Project Planning Services, Current Planning Services, and Subdivision and Grading Services of a precise fuel modification plan and program. The plan shall indicate the proposed means of achieving an acceptable level of risk to the structures by vegetation, the CC&R's, or other approved documents, shall contain provisions for maintaining the fuel modification zones including the removal of all dead and dying vegetation subject to triennial inspections.

23. F F G ACCESS GATES

Prior to the issuance of any grading permits, the applicant shall submit and obtain the Fire Chief's approval for the construction of any gate across required Fire Authority access roads/drives. Contact the Orange County Fire Authority at (714) 744-0403 for a copy of the "Guidelines for Fire Authority Emergency Access".

24. SG SG B FOOTHILL/EASTERN TRANSPORTATION CORRIDOR

Prior to the issuance of each building permit, payment of fees will be required as prescribed in the Major Thoroughfare and Bridge Fees Program for the Foothill/Eastern Transportation Corridor.

25. SG SG B FOOTHILL CIRCULATION PHASING

Prior to the issuance of each building permit, payment of fees will be required as prescribed in the Major Thoroughfare and Bridge Fee Program for the Foothill Circulation Phasing Program.

26. SG SG B SANTIAGO CANYON ROAD

Prior to the issuance of each building permit, payment of fees will be required as prescribed in the Major Thoroughfare and Bridge Fee Program for Santiago Canyon Road.

27. SG SG B EL TORO ROAD

Prior to the issuance of each building permit, payment of fees will be required as prescribed in the Major Thoroughfare and Bridge Fee Program for El Toro Road.

28. SG SG B ARTERIAL RIGHT-OF-WAY

Prior to recordation of a subdivision map that creates residential building sites, the applicant shall dedicate ultimate half-width road right-of-way to major arterial highway standards across the property frontage in a manner meeting the approval of the Manager, Subdivision and Grading Services.

29. SG SG R SANTIAGO CANYON ROAD

Prior to recordation of any subdivision map that creates residential building sites, the applicant shall pay a cash fair share contribution for the design and construction of improving Santiago Canyon Road from Live Oak Canyon Road to Jamboree Road, in a manner meeting the approval of the Manager, Subdivision and Grading Services.

30. SG SG B EL TORO ROAD

Prior to recordation of a subdivision map that creates residential building sites, the applicant shall design and construct a northbound right turn lane and a southbound left turn lane on El Toro Road at the project entrance in a manner meeting the approval of the Manager, Subdivision and Grading Services.

31. SG SG B EL TORO ROAD

Prior to recordation of a subdivision map that creates residential building sites, the applicant shall provide a cash deposit to pay the cost of designing and constructing the ultimate configuration of El Toro Road as determined by PFRD/Program Development Division, all in a manner meeting the approval of the Manger, Subdivision and Grading Services.

32. SG SG G TRAFFIC SIGNAL

Prior to recordation of a subdivision map that creates residential building site, the applicant shall design and construct a traffic signal at the intersection of El Toro and the project entrance in a manner meeting the approval of the Manager, Subdivision and Grading in consultation with the Manager, Program Development Division.

33. SG SG G SIGHT DISTANCE

Prior to issuance of a grading permit, adequate sight distance shall be provided at all intersections per Standard Plan 1117, and at all driveways, in a manner meeting the approval of the Manager, Subdivision and Grading Services; this includes any necessary revisions to the plan to remove slopes and other encroachments from the Limited Use Area.

34. SG SG G "C" STREET

Prior to the issuance of a grading permit, the applicant shall design "C" Street 40' in width, curb to curb, with sidewalk on both sides.

35. SG SG G UTILITY EASEMENT

Prior to the issuance of a grading permit, the applicant shall design both sides of all of the private streets with a 3' public utility easement.

36. SG SG G — GATED ENTRY

Prior to the issuance of a grading permit, the applicant shall design the gated entry area to facilitate vehicular turnaround movements prior to reaching the gate in a manner meeting the approval of the Manager, Subdivision and Grading Services.

37. SG SG R — LOT 296

Prior to recordation of a final map, the applicant shall design Lot 296 with 20' minimum of property frontage.

38. SG SG G — EMERGENCY ACCESS

Prior to the issuance of a grading permit, the applicant shall design the emergency only access between "B" Street and existing Valley Vista in a manner meeting the approval of the Manager, Subdivision and Grading Services.

39. SG SG R — PVT STREET NOTIFICATION

Prior to the recordation of a subdivision map (except maps for financing and conveyance only), the subdivider shall place a note on the map that states:

"The private streets constructed within this map shall be owned, operated and maintained by the developer, successors or assigns. The County of Orange shall have no responsibility therefore unless pursuant to appropriate sections of the Streets and Highways Code of the State of California, the said private streets have been accepted into the County Road System by appropriate resolution of the Orange County Board of Supervisors."

40. SG SG R — STREET IMPROVEMENTS

Prior to the recordation of a subdivision map (except maps for financing and conveyance only), the subdivider shall design and construct the following improvements in accordance with plans and specifications meeting the approval of the Manager, Subdivision and Grading:

A. Streets, bus stops, on-road bicycle trails, street names, signs, striping and stenciling.

B. The water distribution system and appurtenances which shall also conform to the applicable laws and adopted regulations enforced by the County Fire Chief.

C. Underground utilities (including gas, cable, electrical and telephone), streetlights, and mailboxes.

41. HP HP R — ACCESS EASEMENT

Prior to, or concurrent with the recordation of Tentative Tract 15230, an Official County Vehicular Road Access Easement shall be recorded by separate instrument which notes limitations and restrictions for this easement subject to the approval of the Chief, PFRD/Harbors, Beaches and Parks, Program Management & Coordination. It shall permit access over Spine Street (Lot A) of Official County vehicles for regional park management purposes.

42. The following Mitigation Measures from Addendum PA980103 are added as conditions of approval:

SC 2-4	SC 2-5	SC 2-6
SC 2-12	SC 2-13	SC 2-14
SC 7-2	SC 7-9	SC 9-2
SC 9-10	AM 8-15	

43. CP CP INDEMNIFICATION

Applicant shall defend at his/her sole expense any action brought against the County because of issuance of this permit or, in the alternative, the relinquishment of such permit. Applicant will reimburse the County for any court costs and attorney's fees which the County may, at its sole discretion, participate in the defense of any such action, but such participation shall not relieve applicant of his/her obligations under this condition.

44. CP CP

Subdivider shall defend, indemnify, and hold harmless the County of Orange, its officers, agents and employees from any claim, action or proceeding against the County, its officers, agents, or employees to attack, set aside, void, or annual approval of the Board of Supervisors, Planning Commission, Zoning Administrator, or Subdivision Committee concerning this subdivision, which action is brought within the time period provided for in Government Code Section 66499.37. The County shall promptly notify the subdivider of any such claim, action or proceeding and shall cooperate fully in the defense. This condition is imposed pursuant to Government Code Section 66474.9(b).

45. CP NOTIFICATION

This condition of approval is intended to give you notice that the fees, dedications, reservations or other exactions imposed on this project are as described in this approval and the reports and actions accompanying this approval. You are also on notice that the 90-day approval period in which the applicant may protest pursuant to Government Code Section 66020 has begun.

RESOLUTION ON AREA PLAN 98-2

(PLACEHOLDER)

SADDLEBACK MEADOWS
ADDENDUM PA980103

Mitigation measures

SOILS AND GEOLOGY

MITIGATION MEASURES

Standard County Conditions and Mitigation Measures

SC 2-4 Prior to the issuance of the first grading permit, for projects located immediately adjacent to or including portions of regional parks, significant open space corridors, or other environmentally sensitive areas, the project proponent shall provide evidence acceptable to the Manager, PDS/Subdivision and Grading Services Division, in consultation with the Manager, PFRD/Harbors Beaches & Parks Division, that graded areas will be compatible with natural land characteristics of the adjacent open space areas including techniques to enhance a smooth and gradual transition, urban edge treatment plans and incorporating view enhancement through architectural and design techniques.

SC 2-5 Prior to the issuance of any grading permit, off-site grading and/or drainage shall be conducted in a manner meeting the approval of the Manager, PDS/Subdivision and Grading Services Division.

SC 2-6 Prior to the issuance of a grading permit, substantial compliance with the following shall be certified by a registered engineer in a manner meeting the approval of the Manager, PDS/Subdivision and Grading Services Division:

- Fill soils shall be placed in layers that are less than 8 inches thick and moisture-conditioned generally 1- to 2-percent above optimum moisture content. The existing diatomaceous soils should be moisture-conditioned to 125-percent of optimum moisture content.

- For preliminary earthwork computations, the following shrinkage/bulking factors are recommended for the on-site material (these do not include handling losses): Bedrock - 5% bulking; slopewash - 5% shrinkage; and Other Soils - 15% shrinkage. Grading plans shall include an area where finish grades can be

raised or lowered to accommodate changes in actual material quantities.

- Dewatering shall be achieved using sumps and pumps located strategically within the excavated area. However, the excavation shall be carefully observed; if the conditions warrant, supplementary dewatering provisions shall be made. It is the responsibility of the contractor to provide an adequate dewatering system during construction.

SC 2-12 Prior to the issuance of any preliminary grading permits, the subdivider shall request that the Vector Control District initiate the survey process of the tract/parcel map site to determine if vector control measures are necessary. If warranted, such measures shall be conducted by the developer in a manner meeting the approval of the Manager, PDS/Subdivision and Grading Services Division.

SC 2-13 Prior to issuance of grading permits, a Water Quality Management Plan (WQMP) shall be submitted to and approved by the Manager, PDS/Subdivision and Grading Services Division. The WQMP shall identify, at a minimum, the application and incorporation of those routine structural and non-structural BMPs outlined in the Countywide NPDES Drainage Area Management Plan (DAMP) Appendix G detailing implementation of BMPs not dependent on specific land uses, in a manner meeting the approval of the Manager, PDS/Subdivision and Grading Services Division.

SC 2-14 Prior to the issuance of any grading permits, the applicant shall provide, in accordance with criteria supply by PDS, a "Hazardous Materials Assessment" and a "Disclosure Statement" covering the property (both fee and easement) which will be offered for dedication to the County of Orange, for review and approval by the Manager, PDS/Subdivision and Grading Services Division, in consultation with the Manager, PFRD/Monitoring Programs Division.

BIOLOGICAL RESOURCES

MITIGATION MEASURES

SC 7-2 Prior to the issuance of any grading permits, the applicant shall obtain a Streambed Alteration Agreement covering the affected water courses and wetland areas within the proposed project area from the California Department of Fish and Game. A 1603 Streambed Application has been submitted to CDFG. All Streambed alteration activities shall be carried out in

accord with the requirements of an approved Streambed Alteration Agreement.

SC 7-9 Prior to the issuance of grading permits, the applicant shall prepare a habitat restoration plan for all areas proposed for revegetation of coastal scrub habitat to the satisfaction of the Administrator / Planning and Zoning. As part of the restoration plan, the subdivider shall enter into an agreement and post financial security guaranteeing installation of restored habitat and on-going maintenance thereof. The agreement shall also identify the entity responsible for the long-term maintenance and operation of these restoration areas and include provisions that allow the County to cite the entity for non-compliance with the restoration plan. If the management entity should fail to respond to correct a work order for a performance deficiency, the agreement shall include provisions that authorize the County and/or firm under contract to the County to enter the restoration area, remedy the deficiency and demand payment in full for all costs within 30 days of receipt of request for payment. A lien on all properties will be initiated within 60 days in the event of non-payment of these remedies.

AESTHETICS

MITIGATION MEASURES

Light and Glare

AM 8-15 Prior to map recordation, issuance of any building permit or issuance of any certificate of use and/or occupancy, as determined by the Manager, Subdivision & Grading Services Division, the potentially adverse impact of night lighting on surrounding land use shall be mitigated to the satisfaction of the Manager, PDS/Subdivision and Grading Services Division by the following measures:

a) Street lights shall only be installed at intersections and as required to insure public safety.

b) Low intensity halogen street lamps shall be used.

b) Street lights shall be shielded to direct the light beam downward and to avoid direct glare into open space areas and adjacent property.

CULTURAL / SCIENTIFIC RESOURCES

MITIGATION MEASURES

Standard County Conditions and Mitigation Measures

Archaeology

SC 9-2 Prior to issuance of any grading permit, a county-certified archaeologist shall be retained by the applicant to perform a subsurface test level investigation and surface collection as appropriate. The test level report evaluating the site shall include discussion of significance (depth, nature, conditions and extent of the resources), final mitigation recommendations and cost estimates and shall be approved by the Manager, PFRD/Harbors Beaches and Parks Division. Excavated finds shall be offered to the County of Orange, or designee, on a first refusal basis.

Paleontology

SC 9-10 Prior to the issuance of any grading permit, the project applicant shall provide written evidence to the Manager, PDS/Subdivision and Grading Services Division, that a County-certified paleontologist has been retained by the applicant to conduct pregrade salvage and prepare a catalogue of the exposed resources. Excavated finds shall be offered to the County of Orange, or designee, on a first refusal basis. The paleontologist shall submit a follow-up report for approval by the Manager, PFRD/Harbors Beaches and Parks Division, for review and approval, which shall include methodology, an analysis of artifacts found, a catalogue of artifacts, and their present repository. This mitigation measure has been completed.

VIA HAND DELIVERY

Re: *Public Hearing re Zone Change 98-3, Appeal of Area Plan 98-2, and Appeal of Tract Map Nos. 15230 and 15784*

Honorable Members of the Board:

On behalf of the Vedanta Society of Southern California ("Vedanta"), the Norbertine Fathers of Orange (the "Norbertines"), and the Saddleback Meadows Land Conservancy LLC (the "Conservancy") [hereinafter, Vedanta, the Norbertines, and the Conservancy shall collectively be referred to as the "Project Opponents"], we respectfully submit this letter in opposition to California Quartet's proposal for the construction of a 299-unit single family detached housing project (the "299-Unit Project") on the Saddleback Meadows property. Specifically, this letter is submitted (1) in opposition to California Quartet's application for approval of Zone Change 98-3 ("ZC 98-3") and (2) in support of the appeals previously filed by the Project Opponents regarding (a) the approval of Area Plan 98-2 ("AP 98-2") by the Orange County Planning Commission (the "Planning Commission") and (b) the approval of Tentative Tract Map Nos. 15230 and 15784 (collectively, the "Maps") by the Orange County Subdivision Committee (the "Subdivision Committee").

The Project Opponents' opposition to ZC 98-3, and their appeals regarding AP 98-2 and the Maps (hereinafter referred to as the "Opposition"), is based upon each and every procedural and substantive contention, objection, comment, or argument, whether written or oral, which are made, referenced, or otherwise incorporated into the letters (collectively, the "Letters") which are listed in Exhibit "A" attached hereto and are incorporated herein as if set forth in full hereat. In addition, the Opposition is based upon each of the objections raised, or comments or arguments made, by the Project Opponents' representatives or any other project opponent (hereinafter collectively referred to as the "Oral Comments") at the public hearings or meetings held by the Planning Commission, the

Subdivision Committee, or the Foothill/Trabuco Specific Plan Review Board in connection with the 299-Unit Project, including, but not limited to, the hearings and meetings held on August 25, September 29, October 7, October 16, and October 21, 1998. Finally, the Opposition is also based upon any oral or written statements (the "Statements") made by the Project Opponents' representatives regarding the 44/178 Alternative, including, but not limited to, any statements made at the Orange County Board of Supervisors meetings held on June 23, August 11, or October 6, 1998, or otherwise set forth in any correspondence between the Appellants, the County of Orange, or California Quartet, Ltd., or any of their respective representatives, including, but not limited to, any correspondence referenced or incorporated into the Letters identified in Exhibit "A" hereto.

In the interest of administrative economy, the contentions, objections, comments, or arguments which the Project Opponents have previously made, referenced, or incorporated in the Letters, the Oral Comments, and the Statements, will not be repeated and restated in this letter; rather, they will be incorporated herein by reference as if set forth in full hereat in opposition to ZC 98-3, AP 98-2, and the Maps.

In addition to all points being incorporated herein by reference, the Opposition will also be based on the following grounds:

On November 23, 1998, Thomas B. Mathews, the Director of the Planning & Development Services Department of the County of Orange, sent a memorandum to Supervisor Todd Spitzer setting forth Mr. Mathews' comments regarding a conceptual remedial grading plan prepared in connection with what Mr. Mathews referred to in his memo as the "Saddleback Meadows 44-Acre Reduced Development Plan." A copy of Mr. Mathews' memo to Supervisor Spitzer is attached as Exhibit "B" hereto and is incorporated herein by reference. The "Reduced Development Plan," which is referenced in Mr. Mathews' memo, is a project alternative which contemplates the development of 130 single-family homes on a 44-acre development parcel, with approximately 30 additional acres of land surrounding the development parcel being subjected to remedial grading and fuel modification activities. Although this alternative has been studied by County staff, the CEQA documentation for ZC 98-3, AP 98-2 and the Maps contains no discussion whatsoever of this alternative and is therefore patently deficient and in violation of CEQA and the CEQA Guidelines because this alternative would obviously result in substantially reduced impacts on the sensitive biological resources present at the Saddleback Meadows property and should be fully and properly analyzed by the County and circulated for public review and comment before any approvals are given for ZC 98-3, AP 98-2, or the Maps.

Of course, in addition to failing to address the "Reduced Development Plan" referenced in Mr. Mathews' memo of November 23, 1998, the CEQA documentation for the 299-Unit Project also fails to address another reasonable project alternative, known as

the "44/178 Alternative," which would confine development to a 44-acre development area in order to avoid any adverse impacts on the oak trees, vernal ponds, and coastal sage scrub habitat present at Saddleback Meadows property. In order to comply with CEQA and the CEQA Guidelines, the Board of Supervisors should direct staff to prepare a new or subsequent EIR to address these two project alternatives which County staff has clearly been made aware of as of this date.

Very truly yours,

Edmond M. Connor

FROM: Director, Planning & Development Services Department

SUBJECT: Saddleback Meadows 44-acre Reduced Development Plan - Conceptual Remedial Grading Plan dated November 17, 1998

On October 30, 1998 at the conclusion of discussions relating to the subject reduced development alternative, it was decided that the project applicant would compose a grading concept for review by the adjacent property owners and by technical staff of this department. On November 17, 1998 a grading concept was submitted and we have the following comments:

1. The remedial grading limits line on the south and east side of the project appears to be justified.
2. The remedial grading line on the north and west side of the project would appear to be more appropriately located along the identified fuel modification line where it extends beyond the remedial grading line.
3. The conceptual remedial grading plan does not contain sufficient information upon which to issue a grading permit.

NOTICE OF PUBLIC HEARING

BY THE ORANGE COUNTY BOARD OF SUPERVISORS

SUBJECT: Appeal of TTM 15784 and VTTM 15230

LOCATION: Saddleback Meadows (along El Toro Road and north of Valley Vista Way)

PROPOSAL: A subdivision map for financing purposes only (TTM 15784) and a vesting subdivision map to create 299 residential building sites (VTTM 15230)

Environmental Documentation: EIR Addendum PA 980103
Applicant: California Quartet, Ltd.
Hearing Date: November 24, 1998
Hearing Time: 6:00 P.M.
Hearing Location: Hall of Administration
10 Civic Center Plaza
Santa Ana, CA

The applicant and all persons either favoring or opposing this proposal and supporting documents are invited to present their views at the hearing. It is requested that any written response be submitted to the Planning & Development Services Dept. prior to the hearing date. If you challenge the action taken on this proposal in court, you may be limited to raising only those issues you or someone else raised at the public hearing described in this notice, or in written correspondence delivered to the Planning & Development Services Dept. prior to the public hearing.

For further information please call Frank McGill at (714) 834-2099 or come to the Development Processing Center at the address indicated below.

Supplemental Transmittal
Saddleback Meadows 299 Unit Project
Agenda Item Nos. 75 and 76
December 8, 1998, Agenda

DATE: December 4, 1998

TO: Board of Supervisors

FROM: Director, Planning & Development Services Department

SUBJECT: Responses to Public Comments

On November 24, 1998, your Board conducted a public hearing on the proposed Saddleback Meadows 299 dwelling unit project. The public hearing was then closed and further Board consideration of the proposed project was continued to December 8, 1998. Attached are staff responses to public comments made at the public hearing on November 24th.

There is no change to the Recommended Action from my letter to you dated November 24, 1998.

Respectfully submitted,

Thomas B. Mathews, Director

Responses to Issues Raised

This report addresses several issues which were highlighted at the Board of Supervisors hearing on November 24, 1998, in oral testimony or written submittals. These are not new issues. The Planning Commission and the Subdivision Committee considered these ideas in their deliberations that led to those bodies taking positive action on the items which are now before the Board of Supervisors. Nevertheless, as a means of ensuring that the Planning and Development Services Department's position on the issues is clear, information is provided on these issues.

1. **ISSUE - CONSISTENCY WITH GENERAL PLAN**

   The proposed project is not consistent with the General Plan, specifically the Land Use Element and the Growth Management Element

   PDSD RESPONSE:

   This issue was previously discussed before the Planning Commission and Subdivision Committee. The Land Use Element designates the project site as "Suburban Residential " which allows a density up to 18 dwelling units per acre. The proposed project has a density well below that standard. Also, the proposed project of 299 units constitutes a reduction of 58 percent from the approved zoning, which allows a total of 705 manufactured, single-family dwelling units. The Ramakrishna Monastery and St. Michael's Abbey, which border the proposed project, are both designated "Rural Residential" by the Land Use Element and zoned "Public/Quasi-Public" by the Foothill/Trabuco Specific Plan. There is nothing inherently incompatible about this juxtaposition and many similar relationships exist in other parts of the unincorporated area of Orange County.

   The purpose of the Growth Management Element is to provide necessary traffic improvements and public facilities related to new development. Normally, the appropriate time during the development process to implement the policies of the Growth Management Element is prior to the issuance of building permits. The zoning regulations and area plan for the proposed project require that prior to the issuance of any building permits, the Planning Commission must approve a detailed use permit. That would normally be the appropriate time to apply conditions of approval to ensure compliance with the Growth Management Element.

   Area Plan AP98-2 and Vesting Tentative Tract Map TT15230 include the following conditions of approval for the proposed project to ensure necessary public facilities are provided:

- ***FIRE STATION FACILITY***
  Prior to the recordation of any subdivision map that creates residential building sites, the applicant shall enter into an agreement with the Orange County Fire Authority to pay pro-rata capital facility fees for Fire Station No. 42 in a manner meeting the approval of the Manager, Environmental & Project Planning Services Division. Said agreement shall be accompanied by financial security.

- ***LIBRARY FACILITY***
  Prior to the recordation of any subdivision map that creates residential building sites, the applicant shall enter into an agreement with the County of Orange to pay development fees for the South County Canyons Library as provided in Sections 7-9-700 through 7-9-713 of the Codified Ordinances of the County of Orange and Board Resolution 87-1684 in a manner meeting the approval of the Manager, Environmental & Project Planning Services Division. Said agreement shall be accompanied by financial security.

- ***SHERIFF STATION***
  Prior to the recordation of any subdivision map that creates residential building sites, the project proponent shall enter into a secured agreement with the County of Orange, subject to the approval of the Sheriff-Coroner, to participate on a pro rata basis in funding (a) Sheriff substation facilities and (b) the initial costs of providing additional patrols plus support necessary to serve the project in a manner meeting the approval of the Manager, Environmental & Project Planning Services Division. -

- ***LOCAL PARK FEES***
  Prior to the issuance of any building permits for residential construction, the applicant shall pay in lieu fees per the Local Park Code Requirements.

- ***SCHOOL FEES***
  Prior to the issuance of any building permits for residential construction, the applicant shall provide written verification from the School District, in a manner meeting the approval of the Manager, Current Planning Services Division, that he has reached a mitigation agreement with the District for the subject project proposal.

With regard to traffic issues, adetailed traffic analysis was prepared for the proposed Saddleback Meadows project. The study was prepared consistent with the County's Growth Management Plan (GMP) Element as reflected in the Transportation Implementation Manual. The GMP defines the County's Level of Services (LOS) Policies and traffic study methodology, as applicable to all Master Plan of Arterial Highways (MPAH) intersections and Santiago Canyon Road which are under the sole control of the County. The GMP establishes LOS"D" at intersections and LOS "C" for Santiago Canyon Road as thresholds to be attained within the near term (3-5 years) implementation of the project. The GMP also requires a LOS analysis on Santiago Canyon Road if a project increases the existing critical movement by one percentage or more during the AM or PM peak period on Santiago Canyon Road.

The traffic study prepared for the proposed Saddleback Meadows Contingency Plan not only meets all the provisions of the GMP, but also includes a General Plan build-out analysis. All significant traffic impacts of the project are mitigated through conditions of development approval. Consistent with the County's Growth Management Plan these mitigations will be implemented within the 3-5 years time frame.

The following traffic related conditions of approval/mitigation measures have been applied to Area Plan AP98-2 and VTTM 15280:

- ***ROAD REE PROGRAM***
  Prior to the issuance of any building permits for residential construction, the applicant shall pay fees for the Major Thoroughfare and Bridge Fee Program listed below, in a manner meeting the approval of the Manager, PDS/Subdivision and Grading Services Division.

  Foothill Circulation Phasing Program
  Foothill/Eastern Transportation Corridor
  El Toro Road
  Santiago Canyon Road

- ***ARTERIAL RIGHT-OF-WAY***
  Prior to recordation of a subdivision map that creates any residential building sites, the applicant shall dedicate ultimate half-width road right-of-way to major arterial highway standards across the property frontage in a manner meeting the approval of the Manager, PDS/Subdivision and Grading Services Division.

- ***SANTIAGO CANYON ROAD***
  Prior to recordation of any subdivision map that creates any residential building sites, the applicant shall pay a cash fair share contribution for the design and construction of improving Santiago Canyon Road from Live Oak Canyon Road to Jamboree Road in a manner meeting the approval of the Manager, PDS/Subdivision and Grading Services Division.

- ***EL TORO ROAD***
  Prior to recordation of any subdivision map that creates any residential building sites, the applicant shall design and construct a northbound right turn land and a southbound left turn lane on El Toro Road at the project entrance in a manner meeting the approval of the Manager, PDS/Subdivision and Grading Services Division

- ***EL TORO ROAD***
  Prior to recordation of any subdivision map that creates any residential building sites, the applicant shall provide a cash deposit to pay the cost of designing and constructing the ultimate configuration of El Toro Road as determined by PFRD/Program Development Division, all in a manner meeting the approval of the Manager, PDS/Subdivision and Grading Services Division.

- *TRAFFIC SIGNAL*
  Prior to recordation of any subdivision map that creates any residential building site, the applicant shall design and construct a traffic signal at the intersection of El Toro and the project entrance in a manner meeting the approval of the Manager, PDS/Subdivision and Grading Services Division *in consultation with the Manager, Program Development Division.*

2. ISSUE - SPECIFIC PLAN REVIEW BOARD

Comments were made that the following requirement of the Foothill/Trabuco Specific Plan was not satisfied:

> "EMA **(changed to PDSD)** shall forward all discretionary permit applications to the FTSPRB for their review and recommendation at least 21 days prior to Planning Commission consideration of the application."

PDSD RESPONSE:

This issue was previously discussed before the Planning Commission.

As stated in previous PDSD Reports to the Planning Commission and the Board of Supervisors, the Contingency Plan is not an unfamiliar project to the Foothill/Trabuco Specific Plan Review Board. Prior to the appointment of the new Board, the previous Boards had reviewed the project in conjunction with two previous reviews:

- Planning Application PA950151, consisting of Zone Change ZC95-5, Area Plan AP95-7, and Tentative Tract TT15230 and related EIR 561 (Alternatives 8 and 9); and
- Alternative 4 in Certified EIR 566, prepared for recorded Tract 10692.

With regard to the Saddleback Meadows Contingency Plan Zone Change ZC98-3 and Area Plan AP98-2 were distributed for public review on August 7, 1998. However, no distribution was made to the Foothill/Trabuco Specific Plan Review Board at that time because the Review Board had not been appointed.

On September 22, 1998 the Board of Supervisors appointed five members to the Review Board. On September 24, 1998, the new Review Board members were provided with copies of the proposed project, the environmental documentation, and staff reports. The Review Board conducted a public meeting on September 29,1 998 to discuss this project. After discussion, the Board voted to continue the meeting to October 16, 1998 and also requested that the Planning Commission postpone taking final action on the Contingency Plan until after that date.

On October 6, 1998, the Board of Supervisors directed that the 299 unit project be placed on the Board of Supervisors Agenda for November 3, 1998. On October 7, 1998, the Planning Commission took its final action on Zone Change ZC98-3, thereby

recommending that the Board approve the Zone Change. The Planning Commission also approved Area Plan AP98-2, subject to the finalization of the Zone Change.

On October 20, 1998, PDSD received the minutes of the Foothill/Trabuco Specific Plan Review Board action on the proposed project and immediately forwarded them via supplemental transmittal to the Board of Supervisors.

Based upon the foregoing, the Planning and Development Services Department has determined that the Review Board has been duly consulted on the proposed project.

3. ISSUE - IMPACTS ON BIOLOGICAL RESOURCES

Comments have been made that the proposed Contingency Plan will severely impact biological resources, including the destruction of coastal sage scrub habitat, oak woodland habitat, vernal ponds, and fauna, including the coastal California gnatcatcher and the Riverside fairy shrimp. These impacts have not been adequately addressed and mitigated in the CEQA documentation prepared for AP98-2.

PDSD RESPONSE:

Issues related to the proposed plan's impacts on biological resources have been consistently raised regarding the project site in conjunction with Proposed Final EIR 561, Certified Final Subsequent EIR 566 and Addendum PA980103. Impacts to biological resources have been previously addressed in written reports and oral presentations to the Planning Commission, the Subdivision Committee and the Board of Supervisors.

The Planning & Development Services Department has always maintained that the Saddleback Meadows project would result in unavoidable adverse impacts to biological resources. Even with the 13 mitigation measures placed on the project during the CEQA process, these impacts cannot be reduced to below a level of significance. In the case of the Saddleback Meadows Contingency Plan, it must be noted that Addendum PA980103 is tiered from Certified Final Subsequent EIR 566, for which the Planning Commission adopted Facts and Findings and Statements in Support of Facts and Findings and a Statement of Overriding Considerations. Upon the appeal of the EIR certification, the Board of Supervisors upheld the action of the Planning Commission. The following four (4) significant impacts to biological resource were addressed in the Statement of Overriding Consideration:

Coastal sage scrub habitat and the NCCP;
Coast live oak woodland;
Ephemeral ponds/endangered species;
Wildlife movement.

It is important to note that Condition Number 6 of the Planning Commission Resolution approving Area Plan AP 98-2 for the Contingency Plan provides for mitigation of impacted biological resources. The condition reads as follows:

Prior to the issuance of any preliminary grading permit, approval of any activity that involves removal of any native vegetation from subject site, including clearing, grubbing, mowing, discing, trenching, grading, fuel modification, or other related construction related activities, the applicant shall obtain written proof from the U.S. Fish and Wildlife Service that said activity complies with the Federal Endangered Species Act. Additionally, the applicant shall obtain approval of a mitigation plan to replace lost ephemeral ponds at a 2 to 1 ratio or at such greater ratio as may be required by the U.S. Fish and Wildlife Service. This evidence shall be submitted to the Manager, PDS/Subdivision and Grading Services Division, for review and approval, in consultation with the Manager, Environmental & Project Planning Services Division.

The Biological Resources section of the Addendum discusses the biological resource impacts associated with the proposed 299 unit project in comparison with the approved 705 unit project. A biological issues analysis (Helix, 2/20/98) was prepared for the proposed 299 unit project and is included in the Addendum as Appendix G. The results of the analysis are presented under the four categories of corridor analysis, vegetation impacts, oak tree impacts, and sensitive species impacts, paralleling the discussion in Certified SEIR 566, and are also discussed in the body of the Addendum. Following is a brief summary of the discussion from the Addendum and Staff Reports from the Planning & Development Services Department regarding biological resources:

A. **Wildlife Corridor:** Implementation of the approved 705 unit project would directly impact wildlife movement through the project site, as it contains no design features which seek to facilitate wildlife movement. It cannot be assumed that wildlife would be able to move through the project site as currently designed. The approved project, as currently proposed, may hinder or preclude the preparation of the southern subregional preserve, due to restricted wildlife movement. In comparison, the proposed 299 unit project features a 400 foot wide wildlife corridor which will increase the viability of wildlife connectivity through Saddleback Meadows. The corridor, as planned in the proposed project, is expected to be wide enough for wildlife movement. Topography on either side of the corridor is conducive to wildlife movement because it coincides with an area of natural canyon topography. The revegetation within the corridor is expected to provide the necessary cover for wildlife to add to the corridor's viability. The 50-foot wide spine road crossing the corridor is not expected to inhibit wildlife movement due to the low traffic levels anticipated for this road. The wildlife corridor is expected to function adequately.

   The County's NCCP consulting biologist, Phil Behrends, confirmed that the wildlife corridor proposed in conjunction with the 299 unit alternative is adequate to provide for reserve design functions. This means that the corridor will accommodate gnatcatcher connectivity as well as small mammal linkages. The corridor will not provide for large mammal movement. However, there is no evidence that the site was ever used for large mammal movement and the NCCP biologist believes that an adequate reserve design can be established with only a small mammal linkage. With this conclusion from the NCCP biologist, the County could make an affirmative

finding that the proposed project will not preclude the preparation of an adequate NCCP reserve design. However, the recommendation of the County's NCCP biologist regarding the adequacy of the wildlife corridor has been contested by the Wildlife Agencies who, in a joint letter to the Board of Supervisors dated October 29, 1998, state that the proposed project appeared to preclude the opportunity to ensure the linkage between the Central and Southern NCCP reserve lands.

B. **NCCP:** NCCP impacts to coastal sage scrub resulting from implementation of the proposed 299 unit project would be similar to those for the approved 705 unit project. Under the approved project, 50.3 acres of coastal sage scrub would be impacted, while 45.8 acres will be impacted under the proposed project. In accordance with the NCCP, the loss of 45.8 acres of Venturan-Diegan transitional coastal sage scrub due to project implementation is less than the allowable five percent loss of the total coastal sage scrub in the subregion. Accordingly, the proposed project is in compliance with the NCCP. Mitigation measures related to accounting and preservation of coastal sage scrub and compliance with the NCCP through the securing of appropriate Resource Agency permits have been carried forward in the Addendum from Certified Final SEIR 566.

C. **Riparian Resources:** The loss of riparian resources associated with the proposed project, which include 0.6 acres of ephemeral pond (all but two of the ponds), 0.21 acres of southern sycamore riparian woodland, and 2.01 acres of mule fat scrub, are similar to, although slightly less than, those resulting from implementation of the approved 705 unit project. Mitigation measures from Certified SEIR 566, which require the securing of appropriate permits from the Wildlife Agencies for the protection of riparian resources, have been carried forward in the Addendum.

D. **Coast Live Oak Woodland:** Implementation of the approved project would result in the loss of 14.0 acres (284 individual trees) of the total 14.5 acres (298 individual trees) of coast live oak woodland on the project site. However, the proposed 299 unit project would impact only 5.7 acres (175 individual trees). A total of 123 oak trees (approximately 41 percent) occur outside the remedial grading zone and are considered preserved. Mitigation measures related to preservation and enhancement of the impacted coast live oak woodland habitat have been carried forward from Certified SEIR 566 to the Addendum.

E. **Riverside Fairy Shrimp:** As stated under Riparian Resources above, all but two of the ephemeral ponds, habitat supporting the Riverside fairy shrimp, will be directly impacted by both the approved and the proposed projects. Mitigation measures relating to the relocation and establishment of a mitigation plan designed to mitigate impacts to Riverside fairy shrimp/pond habitat have been carried forward from Certified SEIR 566 to the Addendum.

F. **Coastal California Gnatcatcher:** Previous field surveys have determined that on-site coastal sage scrub habitat is not occupied by coastal California gnatcatchers.. However, on-site coastal sage scrub habitats must be considered occupied by coastal California gnatcatcher until proven otherwise. Mitigation measures relating to

conducting adequate studies to determine the presence of the coastal California gnatcatcher have been carried forward from Certified SEIR 566 to the Addendum.

The applicant submitted a recent Gnatcatcher Survey report from the Chambers Group that claims that the site is not occupied. However, the NCCP biologist forwarded a report from another biologist (RB Riggens), working for the monastery, that indicates that the site is occupied by two gnatcatchers in the southeast corner of the property. USFWS and CDFG are most likely in possession of this report and probably accept it as evidence that the site is occupied.
USFWS is about to publish a new biological opinion for the Interim 4(d) take authorization process that concludes that the amount of gnatcatcher take available within the southern subregion has increased slightly due to new data that shows the base population of gnatcatchers as somewhat larger than previously thought. However, that increase in authorized bird take is negligible and may be used up by other projects that have already been filed with USFWS and CDFG. Consequently, this project has not been processed by the County as an Interim 4(d) take permit.

The following Mitigation Measures have been included in the Addendum to ensure that impacts to biological resources are reduced:

- ***FISH & GAME CODE***
  SC 7-1 Pursuant to Section 711.4 of the Fish and Game Code, the applicant shall comply with the requirements of AB 3158, prior to the filing of the Notice of Determination for the project, in a manner meeting the approval of the Manager, PDS/Environmental and Project Planning Services Division.

- ***STREAMBED ALTERATION***
  SC 7-2 Prior to the issuance of any grading permits, the applicant shall obtain a Streambed Alteration Agreement covering the affected water courses and wetland areas within the proposed project area from the California Department of Fish and Game. A 1603 Streambed Application has been submitted to CDFG. All Streambed alteration activities shall be carried out in accord with the requirements of an approved Streambed Alteration Agreement.

- ***WETLAND MITIGATION***
  SC 7-3 Prior to the issuance of any grading permits, the applicant shall obtain the necessary individual or nationwide permit (pursuant to Section 404 of the Federal Clean Water Act) covering all affected wetland areas from the U.S. Army Corps of Engineers, Los Angeles District. All wetland areas shall be subject to the specifications of the 404 permit as determined by the Corps of Engineers. A copy of the 404 permit shall be submitted with the first grading permit application for the proposed project to the Manager, PDS/Subdivision and Grading Services Division.

- ***NCCP AGREEMENT***
  SC 7-4 Prior to the issuance of a grading permit, as required by participation in the Natural Community Conservation Planning/Coastal Sage Scrub (NCCP)

agreement signed by the County on May 1, 1992, the project applicant shall provide an accounting summary, in acres or portions thereof, of coastal sage scrub scheduled to be impacted by removal through grading in a manner meeting the approval of the Administrator, Planning & Zoning. (See Section 4.7.3.)

- *COASTAL SAGE SCRUB HABITAT*
  SC 7-5 Prior to the issuance of a grading permit, the applicant shall provide proof that the appropriate Federal approvals required for impacts to Coastal Sage Scrub have been obtained from the U.S. Fish and Wildlife Service, in a manner meeting the approval of the Administrator, Planning & Zoning and Manager, PDS/Grading Services Division, in consultation with the Administrator, Planning & Zoning.

- *NCCP ENROLLMENT AREA*
  SC 7-6 Notwithstanding the tentative map, no grading shall occur within the Natural Community Conservation Plan (NCCP) enrolled area except as in a manner meeting the approval of the Administrator, Planning and Zoning.

- *NATIVE VEGETATION*
  SC 7-7 Prior to the issuance of any grading permit, approval of any activity that involves removal of any native vegetation from subject site including clearing, grubbing, mowing, discing, trenching, grading, fuel modification, or other related construction-related activities, the applicant shall obtain written proof from the U.S. Fish and Wildlife Service that said activity complies with the Federal Endangered Species Act. This evidence shall be submitted to the Manager, PDS/Subdivision and Grading Services Division, for review and approval, in consultation with the Administrator, Planning and Zoning.

- *TREE PRESERVATION PLAN*
  SC 7-8 Prior to the issuance of grading permits the applicant shall submit a landscape and tree preservation plan to the Manager, PFRD/Harbors Beaches and Parks Division, for review and approval in accordance with the following guidelines:

  A. To the maximum extent feasible, all existing native and exotic trees and other significant vegetation shall be preserved in conjunction with any development activity.

  B. A tree preservation plan shall be prepared by a landscape architect for all development projects which identifies the location, size and species of all trees having a trunk diameter of 5 inches or greater (measured at four and one-half feet above ground level) and shrubs having a trunk or branch diameter of 3 inches or greater. The plan shall show which plants are proposed for removal and where transplanted and/or replacement plants will be located. Tree preservation plans shall be approved prior to issuance of grading permits, or where grading permits are not required, prior to issuance of building permits.

C. Trees removed in accordance with an approved tree preservation plan shall be replaced by a combination of transplanting to another location on the subject property and/or replacement by a combination of 1 and 15-gallon plants at a minimum ratio of 5:1.

The following sliding scale shall also be used for trees to determine if more than the minimum number of replacement trees are required.

Tree Replacement Scale

Trunk Diameter (inches) of Tree Removed At 4½ Feet Above Ground Level	*Total Number of Replacements*
5 to 11	*5(1-15 gal / 4-1 gal)*
12 to 17	*7(1-15 gal / 6-1 gal)*
18 to 23	*10(2-15 gal / 8-1 gal)*
24 to 35	*12(2-15 gal / 10-1 gal*

Any oak exceeding 35 inches in diameter should be preserved, transplanted or replaced in accordance with the provisions outlined in Section E of the mitigation measure. In the event that all required replacement trees will not fit on the property, increase in container size will be considered in conjunction with reductions in replacement quality.

D. Significant shrubs removed in accordance with an approved tree preservation plan should be replaced by a combination of transplanting to another location on the subject property and/or replacement by 5-gallon plants at a minimum ration of 3:1.

E. All other plants not specified in Guidelines C and D above that are removed in accordance with an approved tree preservation plan should be either transplanted to another location on the subject property or replaced by 15-gallon plants for trees and 5-gallon plants for shrubs at a minimum ration of 1:1. The two 35" + oak trees impacted by project implementation, will be mitigated by an enhanced replacement ratio (5-15 gal/10-1 gal) to the satisfaction of the Manager, PFRD/Harbors Beaches and Parks Division.

F. All transplanting of trees shall be performed by an experienced nursery or other landscape contractor, who shall care for the trees for at least six months after transplanting.

G. Prior to issuance of final certificates of use and occupancy, all transplanted or replacement trees and shrubs shall be installed in accordance with the tree preservation plan.

H. Oak trees shall not be subjected to increased runoff from irrigation systems, impermeable surfaces, storm drain discharge, etc.

I. Natural drainage courses and natural grades in proximity of, and providing seasonal irrigation to oak trees shall not be altered.

J. Grading, placement of fill, storage of building materials and heavy equipment, structural development, and hardscape (e.g., roads, sidewalks, patio slabs and pool decks) shall be prohibited within the drip line (outer edge of branches) of any tree. During grading and construction operations, all trees shall be temporarily fenced off with chain link fencing to protect such areas.

K. Use of pre-emergent weed killers shall be prohibited within 10 feet of the drip line of any individual tree and within any natural drainage course which seasonally irrigates trees.

L. Use of soil sterilizes shall be prohibited because they kill everything in the soil.

- ***RESOURCE PRESERVATION***

SC 7-9 *Specify areas/lots to be dedicated or irrevocably offered to the County in fee or easement for landscape maintenance purposes, scenic or resource preservation purposes or resource replacement shall be landscaped, equipped for irrigation, and improved in accordance with an approved plan as stated below:*

Preliminary Plan -An agreement shall be entered into and financial security posed guaranteeing landscape improvements and the maintenance thereof based on a preliminary landscape plan showing major plant material and uses, with a cost estimate for the landscape improvements. The preliminary plan and cost estimates shall be reviewed and approved by the Manager, PDS/Subdivision and Grading Services Division, in consultation with the Manager, PFR/Harbors Beaches and Parks Division. Said plan shall take into account the previously approved landscape plan for AP 95-7, the EMA Standard Plans for landscape areas, adopted plant palette guides, applicable scenic and Specific Plan requirements, Water Conservation Measures contained in Board Resolution 90-487 (Water Conservation Measures), and Board Resolution 90-1341 (Water Conservation Implementation Plan).

- ***PRIVATE LANDSCAPING***

SC 7-10 *Prior to the issuance of precise grading permits, landscaping for privately maintained areas shall be designed in accordance with a plan. The plan shall be certified by a licensed landscape architect or a licensed landscape contractor, as required, as taking into account approved preliminary landscape plan (if any), EMA Standard Plans, area plan 95-7, scenic corridor and Specific Plan requirements, Grading and Excavation Code erosion control requirements, Subdivision Code, Zoning Code, and conditions of approval, Water Conservation Measures contained in Board Resolution 90-487 (Water Conservation Measures) and Board Resolution 90-1341 (Water Conservation Implementation Plan). Said plan*

shall be reviewed by the future homeowners association and be reviewed and approved by the Manager, PDS/Subdivision and Grading Services Division.

- ***COASTAL SAGE SCRUB***
  SC 7-11 *Prior to the issuance of grading permits, the applicant shall provide additional evidence that the on-site coastal sage scrub habitat is not occupied by California gnatcatchers, in accordance with current USFWS protocol (7 in season/9 out of season pass surveys) to the satisfaction of the USFWS and the Administrator, Planning and Zoning. Should occupied coastal sage scrub habitat be identified on-site by the surveys consultation shall be initiated with the USFWS, and a coastal sage scrub/gnatcatcher mitigation plan shall be developed to the satisfaction of the USFWS and the Administrator, Planning and Zoning prior to the issuance of grading permits.*

- ***NCCP PARTICIPATION***
  SC 7-12 *Prior to the issuance of grading permits, the applicant shall provide assurances to the satisfaction of the County NCCP coordinator and the Administrator, Planning and Zoning, that the proposed project will participate in the NCCP planning process and not preclude the finalization of the Southern Subregional reserve component of the NCCP.*

- ***RIVERSIDE FAIRY SHRIMP RELOCATION PLAN***
  SC 7-13 *Prior to the issuance of grading permits, the applicant shall prepare a relocation and establishment mitigation plan, designed to mitigate impacts to Riverside fairy shrimp/pond habitat, wetlands, and southern sycamore woodland, to the satisfaction of the Administrator, Planning and Zoning, consistent with any permits issued by USFWS, ACOE and CDFG. Mitigation shall consider on-site as well as off-site mitigation options, as well as, established fee programs.*

4. ISSUE - COUNTY'S INTERFACE WITH WILDLIFE AGENCIES

The issue has been raised that in violation of CEQA and the CEQA Guidelines, the California Department of Fish & Game and the U.S. Fish & Wildlife Service (collectively, the "Wildlife Agencies") were not properly and adequately consulted by the County in connection with the Saddleback Meadows Contingency Plan. Furthermore, comments have been made that the PDSD Department has disregarded the comments of the Wildlife Agencies, particularly with respect to an appropriate wildlife corridor.

PDSD RESPONSE:

This issue has been previously addressed in written and oral PDSD Reports to the Planning Commission, the Subdivision Committee and the Board of Supervisors.

On August 25, 1998, the PDSD Department reported to the Planning Commission that the Addendum had not been distributed to the U.S. Fish and Wildlife Service and the California Department of Fish and Game (Wildlife Agencies) prior to that hearing. Public testimony indicated that the concerns and position of the Resources Agencies had

changed regarding the proposed project and site. Following the Planning Commission's hearing and over 30 days prior to its final decision on the Area Plan, on October 7, 1998, PDSD staff took two steps to ensure that the concerns of the Wildlife Agencies were identified and disclosed. First, copies of the Addendum were provided to the Wildlife Agencies; and second, PDSD staff met with representatives of the Agencies. The purpose of the meeting, held on August 31, 1998, was to discuss Addendum PA980103 and the CEQA process as it relates to the proposed Contingency Plan. This meeting was constructive in clarifying the process and alleviating their concerns regarding the relationship of the Contingency Plan to Certified Final Subsequent EIR 566.

As noted elsewhere in this discussion, the Contingency Plan, as it relates to key issues of concern, has been previously reviewed by the Wildlife Agencies in conjunction with Proposed Final EIR 561 and Certified Final Subsequent EIR 566.

Although based on the advice of the County's NCCP biologist, the County is of the opinion that the proposed project will not preclude adequate NCCP reserve design, the mitigation offered by the applicant is still considered inadequate. Further, the County cannot support the mitigation package currently offered by the applicant. The relevant mitigation measures and conditions of approval placed on the Area Plan AP98-2 and Tentative Tract Map TT15230 stipulates that the applicant must obtain clearance from U.S. Fish and Wildlife Service and California Department of Fish and Game prior to the issuance of grading permits. Under this condition, the applicant would use either the 10(a) permit or Section 7 consultation process with USFWS to obtain their endangered species clearance. The County would not need to process the CSS take authorization through a 4(d) permit.

In their correspondence to the County, the Wildlife Agencies have always expressed a preference for the lower density Alternatives contained within the previous EIRs. And notwithstanding their verbal concurrence with the basic design parameters of the 400 foot wide Corridor as featured in the proposed Contingency Plan, the Wildlife Agencies have expressed a preference for a much wider corridor. The Corridor placement and design featured in the proposed Contingency Plan was also featured in Proposed Final EIR 561 and Certified Final Subsequent EIR (CFSEIR) 566. Alternative 4 of CFSEIR 566 as well as Alternatives 8 and 9 of Proposed Final EIR 561 all reflect the placement of the corridor at this location. The design and dimensions of the Corridor were derived through previous consultation with the Wildlife Agencies during the environmental review process associated with these two previous EIRs.

Accordingly, the Wildlife Agencies' position regarding the Wildlife Corridor featured in the Contingency Plan remains the same in that their previous comments included consideration of an identical corridor. With regard to the Southern Subregion, NCCP related comments have been evaluated in both Certified Final Subsequent EIR 566 and Proposed Final EIR 561. The 299-unit Contingency Plan has incorporated many of the concern identified in the two previous EIRs relative to the NCCP, including a central wildlife corridor, preservation of, or replacement measures to ensure the continued sustainability of, valuable biological resources.

In summary, the proposed project will not proceed without appropriate state and federal permits. All relevant information necessary for the Board of Supervisors to act pursuant to the requirements of CEQA is available, and the impacts of the project have been disclosed and, to the extent possible, mitigated.

5. ISSUE - CEQA CONSISTENCY

The issue has been raised that the proposed Contingency Plan is not in conformance with CEQA Statutes and the CEQA Guidelines.

PDSD RESPONSE:

Between 1994 and 1998, the Saddleback Meadows site has undergone detailed environmental reviews for planning compliance with CEQA on two separate previous occasions:

- Proposed Final EIR 561 was prepared in 1995-96 for a 318-unit, conventional SFD development on lots averaging 5000 sq. ft. The application, which included a Zone Change, Area Plan and Tentative Tract Map, was not approved by the Board of Supervisors; and

- Certified Final Subsequent EIR 566 was prepared in conjunction with Grading Permit Application GA960048 for recorded Tract 10692 for a 705-unit manufactured housing subdivision. This EIR was certified by the Planning Commission on December 3, 1997 and, upon appeal, the EIR certification was upheld by the Orange County Board of Supervisors on January 27, 1998.

The currently proposed Contingency Plan for 299 residential units was examined previously for this site in the form of alternatives contained in Proposed Final EIR 561 and Certified Subsequent EIR 566, although with slightly differing site plans. The alternatives contained in the Appendix of the Addendum are Alternative 4 from Certified SEIR 566 and Alternatives 8 and 9 from Proposed FEIR 561, which were previously evaluated. The Contingency Plan results from an extensive evaluation to address environmental concerns previously analyzed by reconfiguring the proposed project density, land use and location.

The CEQA Guidelines provide guidance for use of previously certified EIRs with a subsequent activity. Specifically, where a previous EIR has been certified for a larger project, the later activity or project is examined in light of the previously certified EIR. The Guidelines also provide that a Tiered EIR may be incorporated into an Addendum to an EIR to address significant and cumulative program impacts analyzed and considered in the Tiered EIR (Section 15164). None of the conditions described in Section 15162 calling for preparing a Supplemental or Subsequent EIR have occurred, and changes related to the proposed project are of a minor nature.

The PDSD Department has determined that only minor technical changes to FEIR 566 are necessary in order to properly address the current Project, that FEIR 566 adequately

analyzes all of the major impacts of the proposed project, that no major changes are proposed with respect to the circumstances surrounding this project, and that no new information of significance has become available that would substantially affect the validity of FEIR 566. Therefore, an Addendum is appropriate for the proposed project in order to provide project specific analysis, to provide clarification, and address minor changes to FEIR 566.

In approving the proposed project's Area Plan and Tentative Tract Maps, the Planning Commission and the Subdivision Committee, respectively, each made a finding that the proposed project was covered by Addendum PA980103 and Certified Final Subsequent EIR 566. In so doing, both approval bodies adopted the Mitigation Monitoring Program of EIR 566, the Findings and Facts in Support of the Findings and the Statement of Overriding Considerations.

It should also be noted that Section 15164 of the CEQA Guidelines does not require circulation or response to comments received on an Addendum. However, it is the County's policy to fully inform all parties who have expressed interest in a given project. Accordingly, in addition to sending all commentators on the Addendum a copy of the Response to Comments and staff reports, PDSD has gone beyond the requirements of CEQA, with regard to Addendum circulation, by informing all commentators on the parent document (CFSEIR 566) of the Addendum's status.

6. **ISSUE - GRADING IMPACTS**

The issue has been raised that the Contingency Plan involves massive and unacceptable grading impacts, which would subject the residents of the Trabuco Canyon area to several years of excessive noise, dust, and traffic delays associated with excavating and recompacting approximately nine million cubic yards of soil. This soil will remain exposed to the wind during dry seasons and the rain during wet seasons over the course of several years before the rough grading is completed.

According to the commentators, the Contingency Plan poses unacceptable geotechnical hazards and risks which would endanger and adversely affect the safety, usability, or stability of the land holdings immediately adjacent to the Saddleback Meadows property (the "Property"), including St. Michael's Abbey and the Ramakrishna Monastery, both of which are currently experiencing structural damage due to soils subsidence and instability. These impacts have not been adequately addressed and mitigated in the CEQA documentation prepared for AP98-2.

PDSD RESPONSE:

Grading impacts and geological concerns related to the Saddleback Meadows site have been addressed in numerous reports to the Planning Commission in conjunction with both Proposed Final EIR 561 and Certified Final Subsequent EIR 566. The grading impacts of the proposed project site have been exhaustively studied and reported.

With regard to the Saddleback Meadows Contingency Plan, a grading plan update has been prepared for Addendum PA980103. Grading for the proposed project is entirely on-site; i.e., no trucking of material on-site or off-site will be required. All grading for the proposed project is required to be in compliance with the Orange County Grading and Excavation Code, Grading Manual and conditions of approval of AP 98-2 and related Tentative Tract Map. In addition to addressing this issue in AIT Attachments L, M, and N, an additional review for CEQA compliance will be required before the issuance of any grading permits.

The conclusions of the Addendum are as follows:

- Due to its larger scale and greater intensity, implementation of the previously approved project for 705 units would require 2.6 million cubic yards of conventional grading to achieve planned elevations and profiles and associated access roadways and 8.9 million cubic yards of remedial grading to stabilize the proposed slopes through the creation of buttresses, shear keys, and stabilization fills for a total grading quantity of 11.5 million cubic yards.

- In comparison, implementation of the proposed project for 299 units would require approximately 2.1 million cubic yards of conventional grading and 6.8 million cubic yards of remedial grading for a total grading quantity of 8.9 million cubic yards. Accordingly, the required grading for the proposed project would require 2.6 million cubic yards less than that required to implement the proposed project.

- Grading quantities decrease under the Contingency Plan as a result of the reduced earthwork required to create the landform grading along the visually prominent project edges. In addition to the foregoing, prior to the development of the proposed project, the applicant must obtain the approval of a Use Permit by the Planning Commission, thereby triggering additional environmental analysis.

Implementation of the proposed project would result in a positive impact regarding the geological stability of the adjacent St. Michael's Abbey site. The extensive remedial grading required on the subject site will stabilize and/or remove ancient landslides which currently threaten the Abbey site.

Extensive review has occurred regarding the geotechnical features and impacts of the proposed project site in conjunction with Proposed Final EIR 561 and Certified Final Subsequent EIR 566. In addition, a geotechnical update has been prepared as Appendix H to the Addendum.

The conclusions of the geotechnical update are as follows:

- The proposed Contingency Plan will not result in the creation of new substantial impacts, not previously considered or analyzed;

- The Contingency Plan will result in a reduction in geotechnical impacts from those identified in conjunction with the 705-unit manufactured housing project analyzed in Certified Final Subsequent EIR 566; and

- The imposition of Mitigation Measures will reduce impacts to below a level of significance.

The following Mitigation Measures contained in the Addendum have been carried forward from Certified Final Subsequent EIR 566 and placed on the proposed project:

- ***GEOTECHNICAL REPORT***
  SC 2-2 *Prior to the issuance of a grading permit, the applicant shall submit a geotechnical report to the Manager, PDS/Subdivision and Grading Services Division for approval. The report shall include the information and be in a form as required by the Grading Manual.*

- ***GRADING COMPLIANCE***
  SC 2-3 *Prior to the issuance of any grading permits, the Manager, PDS/Subdivision and Grading Services Division, shall determine if the proposed grading complies with the grading illustrated in the plans approved by the decision-maker with regard to grading concepts, slope heights, slope ratios, and pad elevations and configuration. Significant deviations shall be reviewed by the decision-maker for a finding of substantial conformance. Failure to achieve such a finding will require processing a revised application per Orange County Zoning Code Section 7-9-139 and 7-9-150.*

- ***OFF-SITE GRADING/DRAINAGE***
  SC 2-5 *Prior to the issuance of any grading permit, off-site grading and/or drainage shall be conducted in a manner meeting the approval of the Manager, PDS/Subdivision and Grading Services Division.*

- ***GRADING CERTIFICATION***
  SC 2-6 *Prior to the issuance of a grading permit, substantial compliance with the following shall be certified by a registered engineer in a manner meeting the approval of the Manager, PDS/Subdivision and Grading Services Division:*

  a. Fill soils shall be placed in layers that are less than 8 inches thick and moisture-conditioned generally 1- to 2-percent above optimum moisture content. The existing diatomaceous soils should be moisture-conditioned to 125-percent of optimum moisture content.

  b. For preliminary earthwork computations, the following shrinkage/bulking factors are recommended for the on-site material (these do not include handling losses): Bedrock - 5% bulking; slopewash - 5% shrinkage; and Other Soils - 15% shrinkage. Grading plans shall include an area where finish grades can be raised or lowered to accommodate changes in actual material quantities.

c. *Dewatering shall be achieved using sumps and pumps located strategically within the excavated area. However, the excavation shall be carefully observed; if the conditions warrant, supplementary dewatering provisions shall be made. It is the responsibility of the contractor to provide an adequate dewatering system during construction.*

- ***SEISMIC SAFETY***
  SC 2-7 *Conformance with the Uniform Building Code and Orange County codes will insure that seismic considerations are incorporated into the structural designs. All recommendations of the geotechnical report shall be incorporated and utilized in the final construction plans for the parcels in a manner meeting the approval of the Manager, PDS/Building Permit Services Division. Larger buildings, structures with extraordinary architectural configurations, or those of tilt-up construction may require seismic analysis.*

- ***GEOLOGIC INSPECTIONS***
  SC 2-9 *Geologic inspections shall be required during site grading for each parcel to confirm the absence of major faults in the local area in a manner meeting the approval of the Manager, PDS/Subdivision and Grading Services Division.*

- ***SUBSTANTIAL COMPLIANCE***
  SC 2-10 *Prior to the issuance of any grading permits, if review of the grading plan for this property by the Manager, PDS/Subdivision and Grading Services Division, indicates significant deviation from the proposed grading illustrated on the approved tentative tract map, specifically with regard to slope heights, slope ratios, and pad elevations and configuration, the plan shall be reviewed by the Subdivision Committee for a finding of substantial conformance. Failure to achieve such a finding will require processing a revised tentative tract map; or, if a final tract/parcel map has been recorded, a new tentative tract/parcel map or a site development permit application per Orange County Zoning Code Section 7-9-139 and 7-9-150. Additionally, a new environmental assessment and determination is required. to the issuance of any grading permit, whichever comes first.*

- ***WATER QUALITY MANAGEMENT***
  SC 2-13 *Prior to issuance of grading permits, a Water Quality Management Plan (WQMP) shall be submitted to and approved by the Manager, PDS/Subdivision and Grading Services Division. The WQMP shall identify, at a minimum, the application and incorporation of those routine structural and non-structural BMPs outlined in the Countywide NPDES Drainage Area Management Plan (DAMP) Appendix G detailing implementation of BMPs not dependent on specific land uses, in a manner meeting the approval of the Manager, PDS/Subdivision and Grading Services Division.*

- ***NATURALIZED GRADING***
  AM 8-9 *Prior to issuance of any grading permit, the project proponent shall provide evidence to the Manager, PDS/Subdivision and Grading Services Division*

indicating that graded areas will be compatible with natural landform characteristics to the greatest extent possible. Criteria to achieve the desired effect shall include:

a) Recontouring the existing landforms to provide a smooth and gradual transition between graded slopes and existing grade while preserving the basic topographic character of the site.

b) Variation and combination of slopes 2:1, 3:1 and 4:1 to create a more natural character wherever possible within the graded areas.

c) Attempting to balance cut and fill within the overall project area to eliminate off-site and import/export related grading operations.

d) Obscuring slope drainage structures with a variety of plant materials.

e) Preservation of visual opportunities from hillsides by providing for panoramic views from selected locations (e.g., view corridors, sensitive landscape placement).

Notwithstanding the rigorous standards and procedures inherent in the County's normal system for permitting and inspecting grading activities, the Planning Commission added a special requirement to this project to provide a higher-than-normal degree of certainty that, once started on the Saddleback Meadows site, grading activities would be completed. Specifically, Condition of Approval No. 15 reads as follows:

- ***PERFORMANCE BOND***
  Prior to the issuance of a preliminary grading permit, the applicant shall provide a performance bond and related agreement to the satisfaction of the Manager, PDS/Subdivision and Grading Services Division.

7. **ISSUE - CONSIDERATION OF ALTERNATIVES**

The issue was raised that two alternatives which reduce the proposed development area should have been identified and analyzed in Addendum PA980103 as alternative to the 299-unit contingency plan zone change, area plan and tentative tract maps. These consist of the "44-acre, Reduced Development Plan", referenced in Tom Mathews memo to Supervisor Spitzer, dated November 23, 1998, and the "44/178 Alternative" noted in Mr. Connor's letter to the Board of Supervisors dated November 24, 1998.

PDSD RESPONSE:

This issue has been previously addressed in written and oral PDSD Reports to the Planning Commission and the Board of Supervisors. The Contingency Plan has been presented as a stand alone project. It has been analyzed as such. Proposed Final EIR 561 and Certified Final Subsequent EIR 566 analyzed a full range of alternatives, ranging from the No Project/No Development Alternative to the 705-unit manufactured housing project. No other alternative has been submitted to the County for environmental review.

An Addendum was determined to be the appropriate environmental documentation for the proposal based on CEQA Guidelines as discussed above and in the previous submittals to the Board of Supervisors. Should the identified alternatives be submitted for consideration by the the County, they will be subjected to the same CEQA environmental documentation requirements as the proposed project.

8. ISSUE - COMPLIANCE WITH CEQA GUIDELINES CHANGES

The December 1, 1998 letter from Connor, Culver, Blake & Griffen, LLP, Counsel for the Vedanta Society of Southern California, the Norbertine Fathers of Orange, and the Saddleback Meadows Land Conservancy LLC, indicates that opposition and objections to the Contingency Plan incorporates sections of the CEQAGuidelines Revisions dated October 26, 1998.

PDSD RESPONSE:

As an ongoing project in process at the time the New and/or Revised CEQA Guidelines became effective on October 26, 1998, the Saddleback Meadows Contingency Plan is not currently affected by the changes noted by Mr. Connor. In accordance with the CEQA Statutes, lead agencies are not required to comply with the referenced Sections, some of which are revisions and some, new Sections of the Guidelines, until February 23, 1999. During the interim period, lead agencies may voluntary implement the amendments.

In summary, the Planning and Development Services Department is confident that no issues were raised which alter the recommendations that are before the Board of Supervisors. The requirements of State and County Zoning and Development Laws and Ordinances and CEQA have been met.

ORANGE COUNTY BOARD OF SUPERVISORS

MINUTE ORDER

The following is action taken by the Board of Supervisors on December 8, 1998

APPROVED AS RECOMMENDED ☐ OTHER ■

APPROVED AS RECOMMENDED (RA 1-3) IN MEMO DATED 11/24/98 FROM THOMAS MATHEWS, DIRECTOR, PLANNING & DEVELOPMENT DEPT.

ORDINANCE NO. 98-17

AN ORDINANCE OF THE COUNTY OF ORANGE, CALIFORNIA ADOPTED PURSUANT TO THE STATE PLANNING AND ZONING LAWS, AMENDING THE FOOTHILL/TRABUCO SPECIFIC PLAN FOR SADDLEBACK MEADOWS (ZC98-3)

The Board of Supervisors of the County of Orange, California, does ordain as follows:

SECTION 1. Ordinance Nos. 3177, 3398, and 3468, which established regulations for the Saddleback Meadows (a.k.a. Bridlewood) Planned Community, are hereby repealed.

SECTION 2. The Foothill/Trabuco Specific Plan Section III.D.3, "Bridlewood Residential District," is hereby amended per Zone Change 98-3 as shown in Exhibit 1.

///

///

EXHIBIT 1

3.0 Bridlewood Residential (BWR) District

3.1 Purpose and Intent

The Bridlewood Residential District is established to provide for the development and maintenance o low density detached single-family residential neighborhoods in steep hillside areas in such a manner that generous open space areas are featured.

3.2 Uses Permitted

Per the Residential Estates (Planned Development) District Regulations: Zoning Code sections 7-9-68 and 7-9-110.

3.3 Site Development Standards

Per the Residential Estates (Planned Development) District Regulations: Zoning Code sections 7-9-68 and 7-9-110.

3.4 Special Provisions

a. The maximum number of dwelling units for this District shall be 299.

b. The minimum amount of open space shall be 70% (155 acres). Such open space shall be defined as follows: The open space area remaining after approved development is completed that has a natural appearance and will remain undisturbed thereafter except for possible approved fuel modification. Such areas may include, depending on design and landscaping, parks, manufactured slopes, and recreation trails.

c. Any development shall be in compliance with every regulation of this District (BWR) and shall be exempt from all of the Regulations and Guidelines included in this Specific Plan other than those provided for by this District.

d. Prior to the approval of any tentative subdivision map, an area plan addressing the entire District shall be approved.

e. A preliminary grading permit may be issued in compliance with the Grading & Excavation Code subsequent to the approval of an area plan and tentative tract map which creates residential building sites. The Grading Official shall require a performance bond prior to the issuance of the grading permit.

f. Prior to the issuance of any building permits for residential structures, a use permit shall be approved by the Planning Commission per Zoning Code section 7-9-150.

This ordinance shall take effect and be in full force thirty (30) days from and after its passage and before the expiration of fifteen (15) days after the passage thereof, shall be published once in an adjudicated newspaper in the County of Orange.

The foregoing was passed and adopted by the following vote of the Orange County Board of Supervisors on December 8, 1998, to wit:

AYES: Supervisors: TODD SPITZER, WILLIAM G. STEINER, CHARLES V. SMITH

NOES: THOMAS W. WILSON

EXCUSED: JAMES W. SILVA

ABSTAINED:

VICE-CHAIRMAN, Orange County Board of Supervisors

STATE OF CALIFORNIA)
) ss:
COUNTY OF ORANGE)

I, DARLENE J. BLOOM, Clerk of the Board of Supervisors of Orange County, California, hereby certify that a copy of this document has been delivered to the Chairman of the Board and that the above and foregoing Ordinance was duly and regularly adopted by the Orange County Board of Supervisors.

IN WITNESS WHEREOF, I have hereto set my hand and seal.

12-8-98
Date

DARLENE J. BLOOM
Clerk of the Board of Supervisors
County of Orange, State of California

Ordinance No: 98-17
Agenda Date: 12/08/1998
Item No. 75

I certify that the foregoing is a true and correct copy of the Ordinance adopted by the Board of Supervisors, Orange County, State of California.

DARLENE J. BLOOM, Clerk of the Board of Supervisors

By: Sandy Champine
Deputy

RESOLUTION OF THE BOARD OF SUPERVISORS OF

ORANGE COUNTY, CALIFORNIA

December 8, 1998

On the motion of Supervisor Spitzer. duly seconded and carried. the following Resolution was adopted.

WHEREAS, on December 10, 1991, this Board certified Final EIR 531 for the Foothill/Trabuco Specific Plan, which designated the Saddleback Meadows site as a residential site in the Upper Aliso District; and

WHEREAS, Grading Permit application GA940031 was submitted to the County in April 1994. for Phase I of Tract 10692, a 705-unit manufactured single family residential project. for which the County required the preparation of an EIR, which was subsequently appealed in August 1994; and

WHEREAS, the applicant set aside the appeal on January 31, 1995, whereupon the Planning Commission directed the applicant to revise the project for one more compatible with surrounding land use; and

WHEREAS, after discussions with nearby residents, the applicant submitted a revised, 318-unit, conventional single-family residential project, including zone change, area plan and tentative tract map for which EIR 561was prepared; and

WHEREAS, the Board of Supervisors denied the revised project zone change and area plan on October 22, 1996; and

WHEREAS, applicant submitted Grading Permit application GA960048 for the entirety of recorded Tract 10692, consisting of 705 manufactured housing lots, for which the County required the preparation of EIR 566; and

WHEREAS, the Orange County Planning Commission reviewed all documentation comprising proposed Final SEIR 566 for the proposed project, as of December 3, 1997, certifying Final SEIR 566 as complete and adequate and in compliance with all requirements of the CEQA Statutes, the State CEQA Guidelines and County of Orange procedures; and

WHEREAS, the Board of Supervisors upheld the certification of Final Subsequent EIR 566 on February 24, 1998; and

WHEREAS, following negotiations between the County and private parties concerning the possible purchase of all and/or portions of the Saddleback Meadows site, the applicant submitted a Zone Change and Area Plan application for the subject 299-unit Contingency Plan, for which the Planning & Development Services Department required the preparation of Addendum PA980103; and

WHEREAS, Addendum PA980103 incorporated Certified Final Subsequent EIR 566, including its Mitigation Monitoring and Reporting Program, its STATEMENT OF FINDINGS, FACTS IN SUPPORT OF FINDINGS and the STATEMENT OF OVERRIDING CONSIDERATIONS; and

WHEREAS, on October 7, 1998, the Planning Commission concurred with the recommendation of the Planning & Development Services Department for the Contingency Plan to be found within the scope of Certified Final Subsequent EIR 566, and approved Addendum PA980103 as the appropriate environmental documentation for the Zone Change and Area Plan; and

WHEREAS, the Planning Commission considered the comments and concerns of all reviewers and commentators on Addendum PA980103, including the US Fish & Wildlife Service and the California Department of Fish & Game and the organizations that later appealed the Area Plan and Subdivision Map approvals, and concurred in the recommendation of the Planning & Development Services Department that the noted concerns be found to be adequately addressed in the Addendum and Certified Final SEIR 566; and

WHEREAS, the Orange County Subdivision Committee approved Tentative Tract Map Nos. 15230 and 15784 on October 21, 1998, finding Addendum PA980103 as the appropriate environmental documentation for the subdivision maps in compliance with the Subdivision Map Act; and

WHEREAS, the Board has reviewed the Appeal of the Planning Commission's approval of Area Plan 98-2, dated October 22, 1998, and filed by Edmond Connor on behalf of the Vedanta Society of Southern California, the Norbertine Fathers of Orange and the Saddleback Meadows Land Conservancy, LLC, as it relates to the claims that the environmental documentation for the project is inadequate; and

WHEREAS, the Board has reviewed the Appeal of the Subdivision Committee's approval of Tentative Tract Map Nos. 15230 and 15784, dated November 5, 1998, and filed by Edmond Connor on behalf of the Vedanta Society of Southern California, the Norbertine Fathers of Orange and the Saddleback Meadows Land Conservancy, LLC, as it relates to the claims that the environmental documentation for the project is inadequate; and

WHEREAS, the Board has reviewed and considered correspondence from the California Department of Fish & Game and US Fish & Wildlife Service expressing concern regarding the Saddleback Meadows Contingency Plan.

NOW THEREFORE, based upon Addendum PA980103 and Certified FSEIR 566, this Board makes the following findings:

1. The Board finds that Certified Final Subsequent EIR 566 identified all significant environmental effects of the Contingency Plan, as set forth in the STATEMENT OF FINDINGS, FACTS IN SUPPORT OF FINDINGS AND STATEMENT OF OVERRIDING CONSIDERATIONS, in the certification of the Final Subsequent EIR.

2. The Board finds that, per the criteria of Section 21081.6 of the Public Resources Code, the mitigation monitoring responsibilities of the County as the Lead Agency for the Contingency Plan have been met, as exemplified by the incorporation of appropriate mitigation measures from Certified Final Subsequent EIR

566 into conditions of approvals on the Zone Change, the Area Plan and the Tentative Tract Maps.

3. The Board finds that, per the criteria set forth in Section 15162 of the CEQA Guidelines, the proposed Contingency Plan does not trigger the preparation of a subsequent EIR.

4. The Board finds that, per Section 15164 of the CEQA Guidelines, the proposed Contingency Plan meets all the criteria which would allow the preparation of an Addendum to Certifed FSEIR 566.

5. The Board finds that, based upon the administrative record of the project, including the report of the Planning and Development Services Department, as put forth in Attachment II to Item 52, Supplemental to Agenda Item Transmittal dated November 3, 1998 and postponed to November 24, 1998, the Appeal of the Area Plan approval has no merit.

6. The Board finds that, based upon the administrative record of the project, including the report of the Planning and Development Services Department, as put forth in Attachment II to Item 53, Supplemental to Agenda Item Transmittal dated November 24, 1998, the Appeal of the approval of Tentative Tract Map Nos. 15230 and 15784 has no merit.

7. The Board finds that, together, Addendum PA980103 and Certified FSEIR 566, satisfy all requirements of the State CEQA Statutes and Guidelines and County of Orange procedures for the Saddleback Meadows Contingency Plan.

8. The Board finds that, pursuant to Section 711.4 of the California Fish and Game Code, although there is evidence that the proposed Contingency Plan has a potential for adverse effects on wildlife resources, and thereby is subject to F&G fees, the fees for the proposed project site have been previously paid in conjunction with Certified Final SEIR 566.

9. The Board finds that, although the proposed project will have a significant impact upon Coastal Sage Scrub habitat, because of proposed mitigation measures imposed on the project and project design features, the project will not preclude the ability to prepare an effective Subregional Natural Communities Conservation Planning (NCCP) Program.

The foregoing was passed and adopted by the following vote of the Orange County Board of Supervisors on December 8, 1998, to wit:

AYES: Supervisors: TODD SPITZER, WILLIAM G. STEINER, CHARLES V. SMITH

NOES: THOMAS W. WILSON

EXCUSED: JAMES W. SILVA

ABSTAINED:

VICE CHAIRMAN, Orange County Board of Supervisors

STATE OF CALIFORNIA)
) ss:
COUNTY OF ORANGE)

I, DARLENE J. BLOOM, Clerk of the Board of Supervisors of Orange County, California, hereby certify that a copy of this document has been delivered to the Chairman of the Board and that the above and foregoing Resolution was duly and regularly adopted by the Orange County Board of Supervisors.

IN WITNESS WHEREOF, I have hereto set my hand and seal.

DEC 08 1998
Date

DARLENE J. BLOOM
Clerk of the Board of Supervisors
County of Orange, State of California

Resolution No: 98-466,
Agenda Date: 12/08/1998
Item No. 75

I certify that the foregoing is a true and correct copy of the Resolution adopted by the Board of Supervisors, Orange County, State of California.

DARLENE J. BLOOM, Clerk of the Board of Supervisors

By: Deputy

3071

RESOLUTION OF THE BOARD OF SUPERVISORS OF ORANGE COUNTY, CALIFORNIA

December 8, 1998

On motion of Supervisor Spitzer, duly seconded and carried, the following Resolution was adopted:

WHEREAS, the Planning Commission conducted public hearings on Zone Change (ZC) 98-3 and Area Plan (AP) 98-2 for the area known as Saddleback Meadows (aka Bridlewood); and

WHEREAS, the Planning Commission has considered EIR Addendum PA980103 and found that it satisfies the requirements of CEQA for this project.

WHEREAS, the Planning Commission approved AP98-2 subject to 32 conditions and recommended that this Board approve ZC98-3; and

WHEREAS, the Planning Commission's action on AP98-2 was appealed to this Board; and

WHEREAS, this Board has conducted a noticed public hearing on ZC98-3 and AP98-2; and

WHEREAS, this Board has reviewed and considered the action of the Foothill/Trabuco Specific Plan Review Board; and

WHEREAS, this Board has considered EIR Addendum PA980103 and, by separate Resolution, found that it satisfies the requirements of CEQA for this project; and

WHEREAS, this Board, by separate Ordinance, has approved ZC98-3.

NOW, THEREFORE, BE IT RESOLVED that this Board makes the following findings:

1. AP98-2 is consistent with the objectives, policies, general land uses and programs specified by the General Plan.
2. AP98-2 is in substantial compliance with, the Foothill/Trabuco Specific Plan.
3. AP98-2 is consistent with the provisions of the Zoning Code.
4. The location, size, design and operating characteristics of AP98-2, as conditioned, will not create conditions or situations that may be incompatible with other permitted uses in the vicinity.
5. AP98-2 will not result in conditions or circumstances contrary to the public health and safety and the general welfare.
6. AP98-2, as conditioned, satisfies the requirements of section 7-9-711 regarding public facilities.
7. The RE (PD), "Residential Estates (Planned Development)," site development standards regarding building site areas, building site coverage, area per unit, and number of dwelling units have been satisfied by AP98-2.
8. Condition of Approval No. 27 requires a use permit be approved which is consistent with AP98-2. A use permit may be approved for the entire project site or portions of the project site.

9. AP98-2, as conditioned, will provide significant public benefits in the form of major recreational trails, an important wildlife corridor for the Natural Communities Conservation Program and a large addition to O'Neill Regional Park.

10. That the issues raised in the appeal letter by Edmond Connor dated October 22, 1998 have been adequately addressed in the supplemental staff report dated October 7, 1998. Those responses are hereby incorporated by this reference.

BE IT FURTHER RESOLVED that this Board denies the appeal and upholds the action of the Planning Commission approving AP98-2 subject to the following conditions:

1. CP NA NA TIME LIMIT
Area Plan 98-2 is valid for a period of 48 months beginning with the effective date for ZC98-3. If the preliminary grading permit is not issued within such period of time, this approval shall be terminated and Area Plan 98-2 shall thereafter be null and void.

2. CP CP NA REVOCATION
Failure to abide by and faithfully comply with any and all conditions attached to this approving action shall constitute grounds for the revocation of said action by the Orange County Planning Commission.

3. CP CP G TENTATIVE TRACT MAP
Prior to the issuance of any grading permits, Tentative Tract Map 15230 shall be approved by the Subdivision Committee after a public hearing. Said tentative tract map must be found consistent with Area Plan 98-2.

4. CP CP G GRADING REVIEW
Prior to the issuance of any grading permits, the Manager, Current Planning Services, shall determine that the grading plan is consistent with Area Plan 98-2 and the approved tree preservation plan.

5. HP HP G TREE PRESERVATION PLAN
Prior to the issuance of any preliminary grading permit, a tree preservation plan shall be prepared which identifies the location, size and species of all trees having a trunk diameter of 5 inches or greater (measured at four and on-half feet above ground level). The tree preservation plan shall be consistent with the Area Plan 98-2 and the Foothill/Trabuco Specific Plan and approved by the Manager, Harbors Beaches, and Parks. The plan shall be signed and certified by a biologist or arborist.

6. EP SG/EP G FED ENDGD SPEC ACT
Prior to the issuance of any preliminary grading permit, approval of any activity that involves removal of any native vegetation from subject site including clearing, grubbing, mowing, discing, trenching, grading, fuel modification, or other related construction-related activities, the applicant shall obtain written proof from the U.S. Fish and Wildlife Service that said activity complies with the Federal Endangered Species Act. Additionally, the applicant shall obtain approval of a mitigation plan to replace lost ephemeral ponds at a 2 to 1 ratio or at such greater ratio as may be required by the U.S. Fish and Wildlife Service. This evidence shall be submitted to the Manager, Subdivision and Grading, for review and approval, in consultation with the Manager, Environmental & Project Planning.

7. SG SG G GEOLOGY RPT
Prior to the issuance of any grading permits, the applicant shall submit a geotechnical report to the Manager, Subdivision and Grading, for approval. The report shall include the information and be in a form as required by the Grading Manual.

8. SG SG G DRAINAGE
Prior to the issuance of any grading permits, the applicant shall, in a manner meeting the approval of the Manager, Subdivision and Grading, provide:

A. A drainage study determining the effect the proposed development and associated drainage patterns will have on existing drainage facilities.

B Mitigate either by on-site retardation or by providing improvements appropriately to impacted existing drainage facilities.

9. SG SG G CROSS-LOT DRAINAGE
Prior to the issuance of any grading permits, and if determined necessary by the Manager, Subdivision and Grading, a letter of consent, in a form approved by the Manager, Subdivision and Grading, suitable for recording, shall be obtained from the affected property owners for offsite grading and/or drainage. The owner/applicant shall record said letters of consent for offsite drainage and/or cross-lot drainage prior to the issuance of any grading permit. Acceptance of cross-lot drainage on lots within the tract map boundaries shall be noted on the recorded map.

10. SG SG G VECTOR CONTROL
Prior to the issuance of any preliminary grading permits, the subdivider shall provide evidence to the Manager, Subdivision and Grading, that the Vector Control District has surveyed the site to determine if vector control measures are necessary. If warranted, the developer shall conduct such measures in a manner meeting the approval of the Manager, Subdivision and Grading.

11. HP HP G ARCHAEO OBS & SALVAGE
Prior to the issuance of any preliminary grading permit, the project applicant shall provide written evidence to the Manager, Subdivision and Grading, that a County-certified archeologist has been retained, shall be present al the pre-grading conference, shall establish procedures for archaeological resource surveillance, and shall establish, in cooperation with the project developer, procedures for temporarily halting or redirecting work to permit the sampling, identification, and evaluation of the artifacts as appropriate. If the archaeological resources are found to be significant, the archaeologist shall submit a follow-up report to the Manager, Harbors, Beaches & Parks, which shall include the period of inspection, an analysis of any artifacts fond and the present repository of the artifacts. Excavated finds shall be offered to the County of Orange, or designee, on a first refusal basis. These actions, as well as final mitigation and disposition of the resources, shall be subject to the approval of the Manager, Harbors, Beaches & Parks.

12. HP HP G PALEO OBS & SALVAGE
Prior to the issuance of an preliminary grading permit, the project applicant shall provide written evidence to the Manager, Subdivision and Grading, that a County-certified paleontologist has been retained to observe grading activities and salvage and catalogue fossils as necessary. The paleontologist shall be present at the pre-grading conference, shall establish procedures for paleontological resource surveillance, and shall establish, in cooperation with the project developer, procedures for temporarily halting or redirecting work to permit sampling, identification, and evaluation of the fossils. If major paleontological resources are discovered, the paleontologist shall determine appropriate actions, in cooperation with the project developer.

which ensure proper exploration and/or salvage. Excavated finds shall be offered to the County of Orange, or its designee, on a first refusal basis. The paleontologist shall submit a follow-up report for approval by the Manager, Harbors, Beaches & Parks, which shall include the period of inspection, a catalogue and analysis of the fossils found, and present repository of the fossils. These actions, as well as final mitigation and disposition of the resources, shall be subject to approval by the Manager, Harbors, Beaches & Parks.

13. SG SG G GRADING NOTES

Prior to the issuance of any grading permits, the following guidelines shall be included in the "Notes Section" of the grading plans meeting the approval of the Manager, Subdivision and Grading.

A. During all grading and construction operations, all oak trees on the site, located adjacent to the approved limits of grading and identified in an approved Tree Management/Preservation Plan as trees to be preserved, shall be adequately fenced and protected from encroachment by grading and construction equipment. Grading, placement of fill, and storage of building materials and heavy equipment, shall be prohibited within the dripline of any tree identified for preservation as part of an approved Tree Management/Preservation Plan.

B. If required, retaining walls shall be used to protect the existing grades of oaks identified for preservation from surrounding cut and fill. However, these should not alter drainage from around the trees.

C. No type of surface, whether pervious or impervious, shall be placed within a six-foot radius of oak tree trunks. Where surfacing cannot be avoided, alternative types of paving should be utilized, such as gravel or porous brick with sand joints.

D. Oak trees shall not be subjected to increased runoff from irrigation systems, impermeable surfaces, storm drain discharge, etc.

E. Natural drainage courses and natural grades outside the remedial grading impact area in proximity to and providing seasonal irrigation to oak trees shall not be altered.

F. In proximity to oak trees, only one trench should be dug to accommodate all utility lines. Where necessary, the impacted trees should be carefully pruned by an arborist in proportion to the total amount of root zone lost.

14. BP BP G CONSTRUCTION NOISE

A. Prior to the issuance of any grading permits, the project proponent shall produce evidence acceptable to the Manager, Building Permits, that:

1. All construction vehicles or equipment, fixed or mobile, operated within 1000' of a dwelling shall be equipped with properly operating and maintained mufflers.

2. All operations shall comply with Orange County Codified Ordinance Division 6 (Noise Control).

3. Stockpiling and/or vehicle staging areas shall be located as far as practicable from dwellings.

B. Notations in the above format, appropriately numbered and included with other notations on the front sheet of the grading plans, will be considered as adequate evidence of compliance with this condition.

15. CP SG G PERFORMANCE BOND
Prior to the issuance of a preliminary grading permit, the applicant shall provide a performance bond and related agreement to the satisfaction of the Manager, Subdivision and Grading.

16. HP HP G RE-ROUTING
Prior to the issuance of a preliminary grading permit, which includes the utilization of either the Aliso Creek Class I Off-Road Bikeway or the Live Oak Canyon Regional Riding and Hiking Trail, a re-routing plan shall be submitted by the applicant and approved by the Manager, Harbors, Beaches and Parks.

17. CP SG R
Prior to the recordation of any subdivision map which creates residential building sites, the preliminary grading activity for all of Area Plan 98-2 shall be completed to the satisfaction of the Manager, Subdivision and Grading.

18. HP HP R OPEN SPACE
Prior to the recordation of any subdivision map that creates residential building sites, the applicant shall dedicate to the County of Orange a minimum of seventy (70) percent of the project site as open space in a manner meeting the approval of the Manager, Harbors, Beaches & Parks. The open space dedication shall be for: (1) regional park, and (2) restricted scenic preservation purposes. The Manager, Harbors, Beaches & Parks shall determine the final boundary between these open space areas.

Within the regional park area, the Manager, Harbors, Beaches & Parks shall determine what improvements, if any, shall be made. If determined appropriate by the Manager, Harbors, Beaches & Parks, the applicant shall be required to provide those improvements as shown and discussed in the Area Plan 98-2.

Within the restricted scenic preservation easement area, after dedication, no grading, structures (including stables and corrals), or commercial agriculture activities shall be permitted in this area. River rock walls not to exceed three feet, approved Loffel walls, and open fencing shall be permitted. An entry gate and identification sign shall be permitted subject to approval of a site development or use permit for such use. Future fuel modification, landscaping, and tree preservation shall be permitted if consistent with Area Plan 98-2 and conditions of approval No. 28 (fuel modification), No. 21 (landscaping), and No. 5 (tree preservation).

19. HP HP R RECREATIONAL TRAILS
Prior to the recordation of any subdivision map that creates residential building sites, the applicant shall dedicate a recreation easement for those bikeways and regional riding and hiking trails shown and discussed in Area Plan 98-2 in a manner meeting the approval of the Manager, Harbors, Beaches & Parks. Also, the applicant shall design the necessary improvements and enter into an agreement, accompanied by financial security, with the County of Orange to install the necessary improvements in a manner meeting the approval of the Manager, Harbors, Beaches & Parks.

20. HP HP R CLEANING UP
Prior to the recordation of any subdivision map that creates residential building sites, the existing old ranch house and all abandoned automobiles shall be removed in a manner meeting the approval of the Manager, Harbors, Beaches & Parks.

21. HP HP R LANDSCAPE PLAN
Prior to the recordation of any subdivision map which creates residential building sites, the subdivider shall enter into an agreement and post financial security guaranteeing landscape

improvements and the maintenance thereof based on preliminary landscape plan showing major plant material and uses, and a cost estimate for the landscape improvements. The preliminary plan and cost estimates shall be reviewed and approved by the Manager, Subdivision and Grading, in consultation with the Manager, Harbors, Beaches & Parks. Said plan shall take into account the County Standard Plans for landscaped areas, adopted plant palette guides, applicable scenic and Foothill Trabuco Specific Plan requirements, Water Conservation Measures contained in Board Resolution 90-487 (Water Conservation Measures), and Board Resolution 90-1341 (Water Conservation Implementation Plan).

22. EP EP FIRE STATION FACILITY
Prior to the recordation of any subdivision map that creates residential building sites, the applicant shall enter into an agreement with the Orange County Fire Authority to pay pro-rata capital facility fees for Fire Station No. 42 in a manner meeting the approval of the Manager, Environmental & Project Planning. Said agreement shall be accompanied by financial security.

23. EP EP LIBRARY FACILITY
Prior to the recordation of any subdivision map that creates residential building sites, the applicant shall enter into an agreement with the County of Orange to pay development fees for the South County Canyons Library as provided in Sections 7-9-700 through 7-9-713 of the Codified Ordinances of the County of Orange and Board Resolution 87-1684 in a manner meeting the approval of the Manager, Environmental & Project Planning. Said agreement shall be accompanied by financial security.

24. EP EP SHERIFF STATION
Prior to the recordation of an subdivision map that creates residential building sites, the project proponent shall enter into a secured agreement with the County of Orange, subject to approval of the Sheriff-Coroner, to participate on a pro rata basis in funding (a) Sheriff substation facilities and (b) the initial costs of providing additional patrols plus support necessary to serve the project in a manner meeting the approval of the Manager, Environmental & Project Planning.

25. EC F F FUEL MODIFICATION
Prior to the recordation of any subdivision map that creates residential building sites, the applicant shall demonstrate to the satisfaction of the Fire Chief that necessary fuel modification in off-site locations will be maintained in perpetuity.

26. EP EP R AFFORDABLE HOUSING
Prior to the recordation of a subdivision map that creates residential building sites, the landowner shall provide a cash contribution to the County's General Plan Trust Fund. The specific methodology and amount of said contribution shall be subject to the approval of the Manager, Environmental & Project Planning. These funds shall be directed to support the County's overall efforts toward providing affordable housing, including but not limited to, future updates of the Orange County Housing Element and related programs for maintaining existing affordable housing and providing new affordable housing opportunities.

27. CP CP B USE PERMIT
Prior to the issuance of any building permits for residential structures, the applicant shall submit a use permit application for review by the Foothill/Trabuco Review Board and approval by the Planning Commission after a public hearing. Said use permit shall include, but not be limited to, the location of all structures and uses, precise landscaping plan, precise fuel modification plan and program, grading plan, and architectural plans for all structures. Said use permit must be found consistent with Area Plan 98-2.

28. F F GBU FUEL MOD PLAN
Prior to the approval of the use permit to construct residential structures, the applicant shall obtain the Fire Chief's approval, in consultation with the Manager, Environmental and Project Planning, of a precise fuel modification plan and program. The plan shall indicate the proposed means of achieving an acceptable level of risk to structures by vegetation. Include the method (mechanical or hand labor) for removal of combustible vegetation and the planting of drought tolerant fire resistant plants. However, only the minimum necessary fuel modification shall be approved by the Fire Chief. All practical mitigation measures to minimize the need for fuel modification shall be recommended by the Fire Chief such as use of non-combustible construction materials, interior fire sprinkler system and double-glassed windows. The required fuel modification shall be performed in a manner to minimize impacts on the natural environment as much as possible. The fuel modification plan shall then become effective after the Planning Commission approves the use permit.

29. SG SG B ROAD REE PROG
Prior to the issuance of building permits for residential construction, the applicant shall pay fees for the Major Thoroughfare and Bridge Fee Program listed below, in a manner meeting the approval of the Manager, Subdivision and Grading.

A. Foothill Circulation Phasing Program
B. Foothill/Eastern Transportation Corridor
C. El Toro Road
D. Santiago Canyon Road

30. HP HP R LOCAL PARK FEES
Prior to the issuance of building permits for residential construction, the applicant shall pay in-lieu fees per the Local Park Code Requirements.

31. FTSP CP B SCHOOL FEES
Prior to the issuance of any building permits for residential construction, the applicant shall provide written verification from the School District, in a manner meeting the approval of the Manager, Current Planning, that he has reached a mitigation agreement with the District for the subject project proposal.

32. CP NA NA INDEMNIFICATION
Applicant shall defend at his/her sole expense any action brought against the County because of issuance of this permit. Applicant will reimburse the County for any court costs and attorney's fees which the County may be required by a court to pay as a result of such action. The County may, at its sole discretion, participate in the defense of any such action, but such participation shall not relieve applicant of his/her obligations under this condition.

RESOLUTION OF THE BOARD OF SUPERVISORS
ORANGE COUNTY, CALIFORNIA

December 8, 1998

On motion of Supervisor Spitzer, duly seconded and carried, the following Resolution was adopted:

WHEREAS, the Orange County Subdivision Committee conducted a noticed public hearing and approved Saddleback Meadows Tentative Tract Map (TTM) 15784 which creates no building sites; and

WHEREAS, the action of the Subdivision Committee on TTM 15784 was appealed to the Board of Supervisors; and

WHEREAS, this Board, by two separate Resolutions and an Ordinance, has approved related Zone Change 98-3, Area Plan 98-2, and EIR Addendum PA 980103; and

WHEREAS, this Board has conducted a noticed public hearing on TTM 15784.

NOW, THEREFORE, BE IT RESOLVED that this Board makes the following findings:

I. That the proposed map is consistent with the Orange County General Plan.

II. That the design and improvement of the proposed subdivision are consistent with the Orange County General Plan.

III. That the proposed site is physically suitable for the proposed type of development.

IV. That the proposed site is physically suitable for the proposed density of development.

V. That the design of the subdivision or the proposed improvements are not likely to cause substantial environmental damage or substantial and avoidable injury to fish or wildlife or their habitat.

VI. That the design of the subdivision and the type of improvements proposed are not likely to cause serious public health problems.

VII. That the design of the subdivision and the type of improvements proposed will not conflict with easements of record or established by court judgment acquired by the public-at-large for access through or use of property within the proposed subdivision.

VIII. That the proposed subdivision complies with the requirements set forth in the Orange County Subdivision Code and the Orange County Zoning Code.

IX. That the Board of Supervisors has considered Final EIR 566, previously certified on 6/2/98, and Addendum PA 980103 prior to project approval. Together they are approved for the proposed project based upon the following findings:

1. Together, these documents are adequate to satisfy the requirements of CEQA by the decision-maker;

2. The additions, clarifications, and/or changes to the original document caused by the Addendum do not raise new significant issues which were not addressed by the EIR; and

OFFICE OF COUNTY COUNSEL ORANGE COUNTY

F0192-210 (5/77)

3. The approval of the EIR and Addendum for the proposed project reflect the independent judgment of the Subdivision Committee.

X. That pursuant to Section 711.4 of the California Fish and Game Code, this project is not exempt from the required fees as it has been determined that adverse impacts to wildlife resources will result from the project. The required fees will need to be paid.

XI. That the development of this project will not preclude or prevent the preparation of the Southern Subregion NCCP.

XII. That the issues raised in the appeal letter by Edward Connor dated November 5, 1998 have been adequately addressed in the supplemental staff report dated November 17, 1998. Those responses are hereby incorporated by this reference.

XIII. That the Board, by two separate Resolutions and an Ordinance has approved related Zone Change 98-3, Area Plan 98-2, and EIR Addendum PA980103, the findings from which are incorporated herein by reference.

BE IT FURTHER RESOLVED that this Board denies the appeal and upholds the Subdivision Committee action on TTM 15230 subject to the following conditions:

(G) 1. SG SG G — GRADING RESTRICTION
(S) Notwithstanding any grading/elevations that are shown on the tentative tract map, or the provisions of Orange County Zoning Code Section 7-9-139 (Grading and Excavation), approval of this tentative tract map does not authorize the issuance of any grading permits.

(NA)2. SG NA NA — INDEMNIFICATION
(S) Subdivider shall defend, indemnify, and hold harmless the County of Orange, its officers, agents and employees from any claim, action or proceeding against the County, its officers, agents or employees to attack, set aside, void, or annul an approval of the Board of Supervisors, Planning Commission, Zoning Administrator, or Subdivision Committee concerning this subdivision, which action is brought within the time period provided for in Government Code Section 66499.37. The County shall promptly notify the subdivider of any such claim, action or proceeding and shall cooperate fully in the defense. This condition is imposed pursuant to Government Code Section 66474.9(b).

(R) 3. SG SG R — CONVEYANCE MAP
(SS) Prior to the recordation of the final tract map, a note shall be placed on the final tract map stating, "This tract map is for conveyance purposes only and the lots created by this tract map are not legal building sites" in a manner meeting the approval of the Manager, Subdivision and Grading.

(SS) 4. CP — NOTIFICATION
This condition of approval is intended to give you notice that the fees, dedications, reservations or other exactions imposed on this project are as described in this approval and the reports and actions accompanying this approval.

You are also on notice that the 90-day approval period in which the applicant may protest pursuant to Government Code Section 66020 has begun.

OFFICE OF COUNTY COUNSEL ORANGE COUNTY

F0192-210 (5/77)

3082

The foregoing was p. ed and adopted by the follo. ng vote of the Orange County Board of Supervisors on December 8, 1998, to wit:

AYES: Supervisors: TODD SPITZER, CHARLES V. SMITH, WILLIAM G. STEINER

NOES: THOMAS W. WILSON

EXCUSED: JAMES W. SILVA

ABSTAINED:

VICE- CHAIRMAN, Orange County Board of Supervisors

STATE OF CALIFORNIA)
) ss:
COUNTY OF ORANGE)

I, DARLENE J. BLOOM, Clerk of the Board of Supervisors of Orange County, California, hereby certify that a copy of this document has been delivered to the Chairman of the Board and that the above and foregoing Resolution was duly and regularly adopted by the Orange County Board of Supervisors.

IN WITNESS WHEREOF, I have hereto set my hand and seal.

DEC 08 1998
Date

DARLENE J. BLOOM
Clerk of the Board of Supervisors
County of Orange, State of California

Resolution No: 98-468
Agenda Date: 12/08/1998
Item No. 76

I certify that the foregoing is a true and correct copy of the Resolution adopted by the Board of Supervisors, Orange County, State of California.

DARLENE J. BLOOM, Clerk of the Board of Supervisors

By: Sandy Champine
Deputy

3083

RESOLUTION OF THE BOARD OF SUPERVISORS
ORANGE COUNTY, CALIFORNIA

December 8, 1998

On motion of Supervisor Spitzer, duly seconded and carried, the following Resolution was adopted:

WHEREAS, the Orange County Subdivision Committee conducted a noticed public hearing and approved Saddleback Meadows Vesting Tentative Tract Map (VTTM) 15230 to create 299 residential building sites; and

WHEREAS, the action of the Subdivision Committee on VTTM 15230 was appealed to the Board of Supervisors; and

WHEREAS, this Board, by two separate Resolutions and an Ordinance, has approved related Zone Change 98-3, Area Plan 98-2, and EIR Addendum PA 980103; and

WHEREAS, this Board has conducted a noticed public hearing on VTTM 15230.

NOW, THEREFORE, BE IT RESOLVED that this Board makes the following findings:

I. That the proposed map is consistent with the Orange County General Plan.

II. That the design and improvement of the proposed subdivision are consistent with the Orange County General Plan.

III. That the proposed site is physically suitable for the proposed type of development.

IV. That the proposed site is physically suitable for the proposed density of development.

V. That the design of the subdivision or the proposed improvements are not likely to cause substantial environmental damage or substantial and avoidable injury to fish or wildlife or their habitat.

VI. That the design of the subdivision and the type of improvements proposed are not likely to cause serious public health problems.

VII. That the design of the subdivision and the type of improvements proposed will not conflict with easements of record or established by court judgment acquired by the public-at-large for access through or use of property within the proposed subdivision.

VIII. That the proposed subdivision complies with the requirements set forth in the Orange County Subdivision Code and the Orange County Zoning Code.

IX. That the proposed subdivision, together with the provisions for its design and improvement, is in substantial compliance with the Foothill/Trabuco Specific Plan.

X. That the design and improvement of the proposed subdivision are suitable for the uses proposed, and the subdivision can be developed in compliance with the applicable zoning regulations pursuant to Section 7-9-254 of the Subdivision Code.

XI. That the tentative map is consistent with both Area Plan (AP) 98-2 and Zone Change (ZC) 98-3.

OFFICE OF COUNTY COUNSEL ORANGE COUNTY

F0192-210 (5/77)

XII. That the Board of Supervisors has considered Final EIR 566, previously certified on 6/2/98, and Addendum PA 980103 prior to project approval. Together they are approved for the proposed project based upon the following findings:

1. Together, these documents are adequate to satisfy the requirements of CEQA by the decision-maker;

2. The additions, clarifications, and/or changes to the original document caused by the Addendum do not raise new significant issues which were not addressed by the EIR; and

3. The approval of the EIR and Addendum for the proposed project reflect the independent judgment of the Subdivision Committee.

XIII. That pursuant to Section 711.4 of the California Fish and Game Code, this project is not exempt from the required fees as it has been determined that adverse impacts to wildlife resources will result from the project. The required fees will need to be paid.

XIV. That the development of this project will not preclude or prevent the preparation of the Southern Subregion NCCP.

XV. That the discharge of waste from the proposed subdivision into the existing sewer system of the Trabuco Canyon Water District will not result in violations of existing requirements prescribed by the California Regional Water Quality Control Board, San Diego Region.

XVI. That the design of the subdivision and its improvements do provide, to the extent feasible, for future passive or natural heating or cooling opportunities as specified in Section 66473.1 of the Government Code (Subdivision Map Act).

XVII. That the following determinations apply to fees required by Sections 7-9-700 through 713, Codified Ordinances of Orange County:

A. Purpose of fees: Fire protection, paramedic, law enforcement, library, and general County services.

B. Use of fees: Construction of new fire station, sheriff substation, library, and general County facilities in newly developing areas which have inadequate service.

C. Relationship between use of fees and type of development: Dwelling units and commercial/industrial structures and their occupants require fire protection, paramedic, law enforcement, library, and general County services.

D. Relationship between need for facilities and type of project: Project is located in newly developing area which has inadequate fire protection, paramedic, library services, and sheriff substation and general County facilities.

E. Relationship between amount of fees and cost of the portion of the facilities attributable to the development: Fees represent project's pro rata share of the cost of the fire station, sheriff substation, library, and general County facilities.

XVIII. That because of participation in fee programs for off-site improvements, this project will qualify for consideration under Section 66452.6 of the Subdivision Map Act.

OFFICE COUNTY COUNSEL ORANGE COUNTY

F0192-210.(5/77)

3085

XIX. That the deviations from the standards of design set forth in the Subdivision Code Subdivision Committee Report were considered and found to be justified based upon the reasons set forth in the Subdivision Committee Report or special circumstances which apply.

XX. That the Local Park Code Requirement can be met by the payment of in-lieu fees.

XXI. That the monitoring requirements of Public Resources Code Section 21081.6 (AB 3180) will be considered as having been met in that the design of the subject project, the satisfaction of the requirements of the County's building, grading, fire, and other codes and ordinances and the satisfaction of the conditions of approval applied to the project will implement the mitigation measures contained in EIR No. 566 an Addendum PA 980103.

XXII. That the applicant is hereby provided notice that the fees, dedications, reservations or other exactions imposed on this project are as described in this approval as well as the reports and actions accompanying this approval and that the 90-day approval period in which the applicant may protest pursuant to Government Code Section 66020 has begun

XXIII. That the issues raised in the appeal letter by Edward Connor dated November 5, 1998 have been adequately addressed in the supplemental staff report dated November 17, 1998. Those responses are hereby incorporated by this reference.

XXIV. That the Board, by two separate Resolutions and an Ordinance has approved related Zone Change 98-3, Area Plan 98-2, and EIR Addendum PA980103, the findings from which are incorporated herein by reference.

BE IT FURTHER RESOLVED that this Board denies the appeal and upholds the action of the Subdivision Committee subject to the following conditions:

1. CP NA NA SPECIAL

Approval of Vesting TTM 15230 is subject to final approval of Zone Change 98-3 and Area Plan 98-2. Prior to recordation of VTTM 15230, the Manager, Current Planning shall determine that it is in substantial compliance with final approved Zone Change 98-3 and Area Plan 98-2. Otherwise, a revised tentative map approved by the Subdivision Committee shall be required.

2. Prior to the issuance of any grading permits, the applicant shall satisfy the following conditions from the Board of Supervisors Resolution for Area Plan 98-2.

4. Grading Review
5. Tree Preservation Plan
6. Federal Endangered Species
7. Geology Report
8. Drainage
9. Cross-Lot Drainage
10. Vector Control
11. Archaeo Observation & Salvage
12. Paleo Observation & Salvage
13. Grading Notes
14. Construction Noise
15. Performance Bond
16. Re-Routing Trails

3. Prior to the recordation of a subdivision map which creates residential building sites, the subdivider shall satisfy the following conditions from the Board of Supervisors Resolution for Area Plan 98-2:

OFFICE OF COUNTY COUNSEL ORANGE COUNTY

F0192-210 (5/77)

17. Preliminary Grading Completed
18. Open Space Dedication
19. Recreational Trails
20. Ranch House Clean Up
21. Landscape Plan
22. Fire Station
23. Library
24. Sheriff Station
25. Off-Site Fuel Modification
26. Affordable Housing

4. SG SG G — LOFFEL WALLS

Prior to the issuance of a grading permit, a letter of justification and design plans for the proposed loffel walls shall be presented to and approved by the Manager, Subdivision and Grading Services.

5. BP BP RGB — RESIDENTIAL ACOUSTICAL REPORT

All residential lots and dwellings shall be sound attenuated against present and projected noise which shall be the sum of all noise impacting the project so as not to exceed a composite interior standard of 45 dba CNEL in all habitable rooms and a source specific exterior standard of 65 d.b.a. CNEL in outdoor living areas. Evidence prepared by a County-certified acoustical consultant, that these standards will be satisfied in a manner consistent with Zoning Code Section 7-9-137.5, shall be submitted as follows:

A. Prior to the recordation of a subdivision map or prior to the issuance of grading permits, as determined by the Manager, Building Permits, the applicant shall submit an acoustical analysis report to the Manager, Building Permits, for approval. The report shall describe in detail the exterior noise environment and preliminary mitigation measures. Acoustical design features to achieve interior noise standards may be included in the report.

6. SG SG RG — DRAINAGE STUDY

Prior to issuance of any grading permits, the following drainage studies shall be submitted to and approved by the Manager, Subdivision and Grading:

A. A drainage study of the subdivision including diversions, off-site areas that drain onto and/or through the subdivision, and justification of any diversions; and

B. When applicable, a drainage study evidencing that proposed drainage patterns will not overload existing storm drains; and

C. Detailed drainage studies indicating how the tract map grading, in conjunction with the drainage conveyance systems including applicable swales, channels street flows, catch basins, storm drains and flood water retarding, will allow building pads to be safe from inundation from rainfall runoff which may be expected from all storms up to and including the theoretical 100-year flood.

7. SG SG RG — DRAINAGE IMPROVEMENTS

A. Prior to the issuance of any grading permits, the applicant shall in a manner meeting the approval of the Manager, Subdivision and Grading:

1) Design provisions for surface drainage; and

OFFICE OF COUNTY COUNSEL ORANGE COUNTY

F0192-210 (5/77)

2) Design all necessary storm drain facilities extending to a satisfactory point of disposal for the proper control and disposal of storm runoff; and

3) Dedicate the associated easements to the County of Orange, if determined necessary.

B. Prior to the recordation of a subdivision map (except maps for financing and conveyance purposes only) said improvements shall be constructed in a manner meeting the approval of the Manager, Construction.

8. SG SG R MPD PARTICIPATION

Prior to the recordation of a subdivision map (except maps for financing and conveyance purposes only), the subdivider shall participate in the applicable Master Plan of Drainage in a manner meeting the approval of the Manager, Subdivision and Grading, including payment of fees and the construction of the necessary facilities.

9. SG SG R EASEMENT SUBORDINATION

Prior to the recordation of an subdivision map (except maps for financing and conveyance purposes only), the subdivider shall not grant any easements over any property subject to a requirement of dedication or irrevocable offer to the County of Orange or the Orange County Flood Control District, unless such easements are expressly made subordinate to the easements to be offered for dedication to the County. Prior to granting any of said easements, the subdivider shall furnish a copy of the proposed easement to the Manager, Subdivision and Grading, for review and approval.

10. SG SG G GRADING DEVIATION

Prior to the issuance of any grading permits, if the applicant submits a grading plan and the Manager, Subdivision and Grading, determines that it shows a significant deviation from the grading on the approved tentative tract map and Area Plan 98-2, specifically with regard to slope heights, slope ratios, and pad elevations and configuration, the plan shall be reviewed by the Subdivision Committee for a finding of substantial conformance. Failure to achieve such a finding will require processing a revised tentative map and/or area plan application per Orange County Zoning Code Section 7-9-139 and 7-9-150. Additionally, a new environmental assessment and determination is required

11. CP HP R ACCESS

Prior to recordation of any subdivision map that creates residential building sites, a 400 foot wide access easement across Lot A (Spine Street) from Lot MM to Lot LL shall be dedicated to the County of Orange in a manner meeting the approval of the Manager, Harbors, Beaches & Parks in consultation with the Manager, Subdivision and Grading. The primary purpose of the access easement is to provide for continuity of the wildlife corridor and O'Neill Regional Park.

Signs identifying a wildlife crossing area shall be posted within 100 feet of each point where the street transverses the wildlife corridor.

12. Master Plan of Regional Recreation Facilities:

Regional Park Dedication:

Lots LL and MM shall be dedicated to the County as an addition to O'Neill Regional Park, exclusive of manufactured slopes, which should be retained in separate lots. Regional park dedication shall be in done in compliance with the following conditions:

A. Prior to the recordation of the first subdivision map that creates residential building sites, the subdivider shall make an irrevocable offer of dedication in fee to the County of Orange, or its

OFFICE OF COUNTY COUNSEL ORANGE COUNTY

F0192-210 (5/77)

designee, of Lots LL and MM, exclusive of manufactured slopes, for regional park purposes in a form approved by the Chief, Harbors, Beaches and Parks, Program Management & Coordination suitable for recording. Said offer shall be free and clear of money and all other encumbrances, liens, leases, fees, easements (recorded and unrecorded), assessments and unpaid taxes, except those meeting the approval of the Chief, Harbors, Beaches and Parks, Program Management and Coordination. Until such time as the offer is accepted by the County or its designee, the subdivider or assigns and successors shall be responsible for maintenance and upkeep of the above-referenced lots.

B. Prior to the recordation of any subdivision map that creates residential building sites, the subdivider shall survey and monument all lots dedicated for regional park purposes, and stake the property line of the dedication area(s) with durable, long-lasting, high visibility markers at all angle points and line of sight obstructions to the satisfaction of the Manager, Harbors Beaches & Parks.

C. Prior to recordation of the regional park dedication, the existing old ranch house sited within future regional park land shall be demolished except for the rock work subject to the approval of the Chief, HBP/Program Management & Coordination.

13. Master Plan of Regional Riding and Hiking Trails/County Bikeways:

Regional Trail Dedication:

A. The Live Oak Canyon Regional Riding and Hiking Trail is depicted within the Recreation Element aligned through Lot R, adjacent El Toro Road, through the proposed project. A recreation easement for this riding and hiking trail shall be dedicated to the County which includes trail improvements, including trail improvements just offsite along El Toro Road, north to the intersection of El Toro Road and the community spine road, as well as north to the existing under crossing of El Toro Road, in compliance with the following conditions:

1. Prior to the recordation an applicable subdivision map that creates residential building site the subdivider shall:

   a. Irrevocably offer a recreation easement for the Live Oak Canyon Regional Riding and Hiking Trail in a manner meeting the approval of the Chief, HBP/Program Management & Coordination. The subdivider shall not grant any easement(s) over the property subject to the recreation easement unless such easements are first reviewed and approved by the Chief, HBP/Program Management & Coordination.

   b. Design the necessary improvements(both onsite and offsite) for the trail, including, but not limited to grading, erosion control, signage and fencing, as applicable, in manner meeting the approval of the Chief, HBP/Program Management & Coordination, in consultation with the Manager, Subdivision & Grading. Further, the subdivider shall enter into an agreement, accompanied by financial security, with the County of Orange, to insure the installation of the necessary improvements.

2. Prior to the issuance of a grading permit, the grading plans shall be reviewed by the Chief, HBP/Program Management & Coordination, to ensure that the proposed grading provides for, will not interfere with, or preclude the installation of the riding and hiking trail in a location and in a manner meeting the approval of the Chief, HBP/Program Management & Coordination.

3. Prior to the issuance of final certificates of use and occupancy and the release of financial security guaranteeing the riding and hiking trail improvements, the applicant shall install the riding and hiking trail improvements in a manner meeting the approval of the Chief, HBP/Program Management & Coordination, in consultation with the Manager, Construction.

OFFICE OF COUNTY COUNSEL ORANGE COUNTY

F0192-210 (5/77)

B. Local Riding and Hiking Trail Dedication:

A local riding and hiking trail is described within Area Plan 98-2 text to be dedicated to the County within a recreation easement aligned east-west through the proposed project.

A recreation easement for the local riding and hiking trail shall be dedicated to the County for those areas not included within future dedicated regional park land. Moreover, trail improvements shall be made for this trail, *both* within and outside the future regional park, in addition to a connection from the staging area along the community spine road *offsite* to the regional riding and hiking trail at El Toro Road. Improvements for the staging area shall also be made including the ability to accommodate parking equestrian trailers as well as vehicle only parking. Dedication of the recreation easement and the improvements, including the staging area shall be done in compliance with the above.

C. Trail Reroutes/Bikeway and Riding and Hiking Trails:

1. The Aliso Creek Class I, paved Off-Road Bikeway, as well as the Live Oak Canyon Regional Riding and Hiking Trail will require re-routing plans during construction of the proposed project. Therefore, the following condition shall apply:

   Prior to any grading and/or construction activities which precludes the utilization of either the Aliso Creek Class I Off-Road Bikeway or the Live Oak Canyon Regional Riding and Hiking Trail, a re-routing plan shall be submitted subject to the approval of the Chief, HBP/Program Management & Coordination.

2. The same condition shall also be applicable to the Class II On-Road Bikeway aligned along the north bound lane of El Toro Road contiguous the proposed project.

14. Master Plan Local Parks (Local Park Code):

The Local Park Code requirement is 2.392 acres of park land based upon a proposal to build 299 residential units at a gross density of 1.35 du/ac (299 x .008 ac/du).

Prior to issuance of building permits the Local Park Code requirement shall be met by *payment of in-lieu fees*.

15. Resources Element (Open Space Component):

A. Dedicate Restricted Scenic Preservation Easement:

Fuel modification areas, manufactured slopes and remedial grading areas sited between the regional park dedication area and residential development, the fuel modification and native enhancement transition area contiguous El Toro Road, and northerly most fuel modification and native enhancement transition area, shall be placed within restricted scenic preservation easement areas. These areas include Lots R, CC, DD, EE, FF, GG, HH, II and JJ. *(NOTE: Manufactured slopes now depicted within Lots MM and LL the regional park, should be depicted within separate open space lots and restricted scenic preservation easements placed over them).* Restricted scenic preservation easements shall be dedicated to the County of Orange in compliance with the following conditions:

1. Prior to the recordation of any applicable final tract map which creates residential building sites, the subdivider shall make an irrevocable offer to dedicate an easement to the County of Orange or its designee over Lots R, CC, DD, EE, FF, GG, HH, II, and JJ, for restricted scenic preservation purposes in a manner meeting the approval of the Chief, HBP/Program Management & Coordination. in consultation with the Manager, Current Planning.

OFFICE OF COUNTY COUNSEL ORANGE COUNTY

F0192-210 (5/77)

Maintenance, upkeep and liability for said easement area shall remain the responsibility of the subdivider or assigns and successors (i.e., homeowner's association) or current underlying owner(s) of said easement area and shall not be included in said dedication offer. The subdivider shall not grant any easement over any property subject to said easement unless such easements are made subordinate to said easement offer in a manner meeting the approval of the Chief, HBP/Program Management & Coordination.

2. The subdivider shall note limitations and restrictions for said easement by a reference on the final map to a previously recorded document or by the recordation of a separate document concurrent with the recordation of subject map in a manner meeting the approval of the Chief, HBP/Program Management & Coordination.

3. Prior to recordation of any applicable final tract map or as determined by the Chief, HBP Program Management & Coordination, the subdivider shall survey and monument all parcels of the land to be dedicated for restricted scenic preservation easement purposes, and submit plans showing how the development boundaries of the restricted scenic preservation easement parcel(s) is marked to be visible for monitoring purposes by Grantee to the satisfaction of the Chief, HBP/Coastal & Historical Facilities.

B. Public Area Landscaping:

The areas to be irrevocably offered to the County of Orange for restricted scenic preservation purposes shall be landscaped, equipped for irrigation, as applicable, and improved in accordance with an approved landscape plan as stated below:

1. Preliminary Plan

Prior to the recordation of a subdivision map (except maps for financing and conveyance only), the subdivider shall enter into an agreement and post financial security guaranteeing landscape improvements and the maintenance thereof based on a preliminary landscape plan showing major plant material and uses, and a cost estimate for the landscape improvements. The preliminary plan and cost estimates shall be reviewed and approved by the Manager, Subdivision and Grading, in consultation with the Chief, HBP/Program Management & Coordination. Said plan shall take into account Area Plan 98-2, County Standard Plans for landscape areas, adopted plant palette guides, applicable scenic and specific plan requirements, Water Conservation Measures contained in Board Resolution 90-487(Water Conservation Measures), and Board Resolution 90-1341(Water Conservation Implementation Plan).

2. Detailed Plan

Prior to the issuance of any building permits, the applicant shall submit a detailed landscape plan for approval to the Manager, Subdivision & Grading, in consultation with the Chief, HBP/Program Management & Coordination. Detailed plans shall show the detailed irrigation and landscaping design.

3. Installation Certification

Prior to the issuance of final certificates of use and occupancy and the release of the financial security guaranteeing the landscape improvements, the applicant shall install said improvements and have the installation certified by a licensed landscape architect or licensed landscape contractor, as having been installed in accordance with the approved detailed plans. The applicant shall furnish said certification, including an irrigation management report for each landscape irrigation system, and any other required implementation report

OFFICE OF COUNTY COUNSEL, ORANGE COUNTY
F0192-210 (5/77)

3091

determined applicable to the Manager, Construction, and the Manager, Building Inspection, prior to the issuance of any certificates of use and occupancy.

C. Urban Edge Treatment Plan/Viewshed Analysis:

Prior to the approval of any use permits for residential structures, an urban edge treatment plan/viewshed analysis shall be submitted to the County subject to the approval of the Chief, HBP/Program Management & Coordination. The Urban edge treatment plan/viewshed analysis shall comply with the following criteria:

1. Establish building height and setback limits (i.e., Building Envelope Formula) and grading treatments to preserve views attained from within existing and proposed parks and open space areas as well as from along designated scenic highways (i.e., El Toro Road) as identified by the Master Plan of Regional Recreational Facilities (Recreation Element), Open Space Component (Resources Element) and Master Plan of Scenic Highways (Transportation Element) respectively. Moreover, views from St, Michaels Abbey, the Ramakrishna Monastery and neighboring Hidden Ridge Community shall also be addressed. Viewshed analysis cross sections should be provided as seen from these areas to proposed residential structures.

2. Eliminate and/or reduce to the greatest extent possible conflicts which may impact the existing and future recreational utility of a regional recreation recreational facility and open space areas.

3. Eliminate and/or reduce to the greatest extent possible potential operation and maintenance problems resulting from encroachment, unauthorized entry, private development fuel modification requirements, flood control facilities, and maintenance of privately landscaped manufactured slopes and maintenance roads as they relate to future and existing regional recreational facilities.

4. Establish appropriate landscape/fuel modification treatments and wall and/or fence treatments including berms to provide appropriate transition from regional recreational facilities and open space areas to private development areas.

5. Establish smooth and gradual transition between graded slopes and existing slopes within the park and open space areas using variable slopes (2:1-4:1).

6. Obscure slope drainage structures with a variety of plant materials.

7. Incorporate architectural and design techniques into the project in order to enhance off-site views attained from within parks and significant open space.

8. All landscaping of manufactures slopes interfacing significant open space areas should be exclusively native, as applicable, to preserve the biological and scenic integrity of regional corridors, open space and park lands.

16. FF GBU FIRE HYDRANTS

A. Prior to the recordation of a subdivision map which creates residential building sites, the applicant shall submit a fire hydrant location plan for the review and approval of the Fire Chief.

OFFICE OF COUNTY COUNSEL ORANGE COUNTY

F0192-210 (5/77)

3092

17. FF RBU AUTOMATIC FIRE SPRINKLERS

A. Prior to the recordation of a subdivision map, which creates residential building sites, a note shall be placed on the map stating that all structures shall be protected by an automatic fire sprinkler system, in a manner meeting the approval of the Fire Chief.

18. FF RG FIRE ACCESS ROADS

A. Prior to the recordation of a subdivision map which creates residential building sites, the applicant shall obtain approval of the Fire Chief for all fire protection access easements and shall dedicate them to the County.

B. Prior to the issuance of any grading permits, the applicant shall submit and obtain approval of plans for all roads, streets and courts, public or private, from the Fire Chief in consultation with the Manager, Subdivision and Grading Services. The plans shall include the plan view, sectional view, and indicate the grade and width (28-ft. minimum) of the street or court measured flow line to flow line. All proposed fire apparatus turnarounds shall be approved by the Fire Chief and if needed, clearly marked when a dead-end street exceeds 150 feet or when otherwise required. Applicable CC&R's, or other approved documents, shall contain provisions which prohibit obstructions such as speed bumps/humps, control gates or other modifications within said easement or access road unless prior approval of the Fire Chief is granted. Grade shall not exceed 10%. Up to 15% is allowed when all structures served by the road are protected by automatic sprinklers.

C. Street signs. A note shall be placed on the fire protection access easement plan indicating that all street/road signs shall be designed and maintained to be either internally or externally illuminated in a manner meeting the approval of the Fire Chief.

19. FF BU STREET MARKINGS

Prior to the recordation of a subdivision map which creates residential building sites, the applicant shall submit plans and obtain approval from the Fire Chief for fire lanes on required fire access roads less than 36 feet in width. The plans shall indicate the locations of red curbing and signage. A drawing of the proposed signage with the height, stroke and coloring of lettering and the contrasting background color shall be submitted to and approved by the Fire Chief.

20. F F R TRAFFIC SIGNAL PREEMPTION

Prior to the recordation of the applicable subdivision map which creates residential building sites, as determined by the Fire Chief in consultation with the Manager, Subdivision and Grading Services, the subdivider shall enter into an agreement with the County for the installation of traffic signal preemption equipment for the surrounding controlled intersections. Said agreement shall be accompanied by financial security.

21. F F RRB FIRE HAZARD NOTIFICATION

A. A Special Fire Protection Area Notification. Prior to the recordation of any final tract map which creates residential building sites, the subdivider shall place a note on the map meeting the approval of the Fire Chief that the property is in a **"Special Fire Protection Area"** and must meet all requirements for development within the area or file for an exclusion with the Fire Chief.

OFFICE OF COUNTY COUNSEL ORANGE COUNTY

F0192-210 (5/77)

B. Special Fire Protection Area Development. Prior to issuance of a building permit, the applicant shall meet all requirements for development and construction within a Special Fire Protection Area as identified in Orange County Ordinance 3960, including increased street widths, Class A roof assemblies, fire sprinklers, etc.

22. F F G — FUEL MODIFICATION

A. Prior to the issuance of a preliminary grading permit, the applicant shall obtain the approval of the Fire Chief, in consultation with the Managers, Environmental and Project Planning Services, Current Planning Services and Subdivision and Grading Services of a conceptual fuel modification plan and program.

B. Prior to the issuance of any precise grading permit, the applicant shall obtain the approval of the Fire Chief, in consultation with the Managers, Environmental and Project Planning Services, Current Planning Services, and Subdivision and Grading Services of a precise fuel modification plan and program. The plan shall indicate the proposed means of achieving an acceptable level of risk to the structures by vegetation, the CC&R's, or other approved documents, shall contain provisions for maintaining the fuel modification zones including the removal of all dead and dying vegetation subject to triennial inspections.

23. F F G — ACCESS GATES

Prior to the issuance of any grading permits, the applicant shall submit and obtain the Fire Chief's approval for the construction of any gate across required Fire Authority access roads/drives. Contact the Orange County Fire Authority at (714) 744-0403 for a copy of the "Guidelines for Fire Authority Emergency Access".

24. SG SG B — FOOTHILL/EASTERN TRANSPORTATION CORRIDOR

Prior to the issuance of each building permit, payment of fees will be required as prescribed in the Major Thoroughfare and Bridge Fees Program for the Foothill/Eastern Transportation Corridor.

25. SG SG B — FOOTHILL CIRCULATION PHASING

Prior to the issuance of each building permit, payment of fees will be required as prescribed in the Major Thoroughfare and Bridge Fee Program for the Foothill Circulation Phasing Program.

26. SG SG B — SANTIAGO CANYON ROAD

Prior to the issuance of each building permit, payment of fees will be required as prescribed in the Major Thoroughfare and Bridge Fee Program for Santiago Canyon Road.

27. SG SG B — EL TORO ROAD

Prior to the issuance of each building permit, payment of fees will be required as prescribed in the Major Thoroughfare and Bridge Fee Program for El Toro Road.

OFFICE OF COUNTY COUNSEL ORANGE COUNTY

F0192-210 (5/77)

28. SG SG B — ARTERIAL RIGHT-OF-WAY

Prior to recordation of a subdivision map that creates residential building sites, the applicant shall dedicate ultimate half-width road right-of-way to major arterial highway standards across the property frontage in a manner meeting the approval of the Manager, Subdivision and Grading Services.

29. SG SG R — SANTIAGO CANYON ROAD

Prior to recordation of any subdivision map that creates residential building sites, the applicant shall pay a cash fair share contribution for the design and construction of improving Santiago Canyon Road from Live Oak Canyon Road to Jamboree Road, in a manner meeting the approval of the Manager, Subdivision and Grading Services.

30. SG SG B — EL TORO ROAD

Prior to recordation of a subdivision map that creates residential building sites, the applicant shall design and construct a northbound right turn lane and a southbound left turn lane on El Toro Road at the project entrance in a manner meeting the approval of the Manager, Subdivision and Grading Services.

31. SG SG B — EL TORO ROAD

Prior to recordation of a subdivision map that creates residential building sites, the applicant shall provide a cash deposit to pay the cost of designing and constructing the ultimate configuration of El Toro Road as determined by PFRD/Program Development Division, all in a manner meeting the approval of the Manger, Subdivision and Grading Services.

32. SG SG G — TRAFFIC SIGNAL

Prior to recordation of a subdivision map that creates residential building site, the applicant shall design and construct a traffic signal at the intersection of El Toro and the project entrance in a manner meeting the approval of the Manager, Subdivision and Grading in consultation with the Manager, Program Development Division.

33. SG SG G — SIGHT DISTANCE

Prior to issuance of a grading permit, adequate sight distance shall be provided at all intersections per Standard Plan 1117, and at all driveways, in a manner meeting the approval of the Manager, Subdivision and Grading Services; this includes any necessary revisions to the plan to remove slopes and other encroachments from the Limited Use Area.

34. SG SG G — "C" STREET

Prior to the issuance of a grading permit, the applicant shall design "C" Street 40' in width, curb to curb, with sidewalk on both sides.

35. SG SG G — UTILITY EASEMENT

Prior to the issuance of a grading permit, the applicant shall design both sides of all of the private streets with a 3' public utility easement.

OFFICE OF COUNTY COUNSEL ORANGE COUNTY

F0192-210 (5/77)

36. SG SG G — GATED ENTRY

Prior to the issuance of a grading permit, the applicant shall design the gated entry area to facilitate vehicular turnaround movements prior to reaching the gate in a manner meeting the approval of the Manager, Subdivision and Grading Services.

37. SG SG R — LOT 296

Prior to recordation of a final map, the applicant shall design Lot 296 with 20' minimum of property frontage.

38. SG SG G — EMERGENCY ACCESS

Prior to the issuance of a grading permit, the applicant shall design the emergency only access between "B" Street and existing Valley Vista in a manner meeting the approval of the Manager, Subdivision and Grading Services.

39. SG SG R — PVT STREET NOTIFICATION

Prior to the recordation of a subdivision map (except maps for financing and conveyance only), the subdivider shall place a note on the map that states:

"The private streets constructed within this map shall be owned, operated and maintained by the developer, successors or assigns. The County of Orange shall have no responsibility therefore unless pursuant to appropriate sections of the Streets and Highways Code of the State of California, the said private streets have been accepted into the County Road System by appropriate resolution of the Orange County Board of Supervisors."

40. SG SG R — STREET IMPROVEMENTS

Prior to the recordation of a subdivision map (except maps for financing and conveyance only), the subdivider shall design and construct the following improvements in accordance with plans and specifications meeting the approval of the Manager, Subdivision and Grading:

A. Streets, bus stops, on-road bicycle trails, street names, signs, striping and stenciling.

B. The water distribution system and appurtenances which shall also conform to the applicable laws and adopted regulations enforced by the County Fire Chief.

C. Underground utilities (including gas, cable, electrical and telephone), streetlights, and mailboxes.

41. HP HP R — ACCESS EASEMENT

Prior to, or concurrent with the recordation of Tentative Tract 15230, an Official County Vehicular Road Access Easement shall be recorded by separate instrument which notes limitations and restrictions for this easement subject to the approval of the Chief, PFRD/Harbors, Beaches and Parks, Program Management & Coordination. It shall permit access over Spine Street (Lot A) of Official County vehicles for regional park management purposes.

42. The following Mitigation Measures from Addendum PA980103 are added as conditions of approval:

SC 2-4	SC 2-5	SC 2-6
SC 2-12	SC 2-13	SC 2-14
SC 7-2	SC 7-9	SC 9-2
SC 9-10	AM 8-15

OFFICE OF COUNTY COUNSEL ORANGE COUNTY

F0192-210 (5/77)

43. CP CP INDEMNIFICATION

Applicant shall defend at his/her sole expense any action brought against the County because of issuance of this permit or, in the alternative, the relinquishment of such permit. Applicant will reimburse the County for any court costs and attorney's fees which the County may, at its sole discretion, participate in the defense of any such action, but such participation shall not relieve applicant of his/her obligations under this condition.

44. CP CP

Subdivider shall defend, indemnify, and hold harmless the County of Orange, its officers, agents and employees from any claim, action or proceeding against the County, its officers, agents, or employees to attack, set aside, void, or annual approval of the Board of Supervisors, Planning Commission, Zoning Administrator, or Subdivision Committee concerning this subdivision, which action is brought within the time period provided for in Government Code Section 66499.37. The County shall promptly notify the subdivider of any such claim, action or proceeding and shall cooperate fully in the defense. This condition is imposed pursuant to Government Code Section 66474.9(b).

45. CP NOTIFICATION

This condition of approval is intended to give you notice that the fees, dedications, reservations or other exactions imposed on this project are as described in this approval and the reports and actions accompanying this approval. You are also on notice that the 90-day approval period in which the applicant may protest pursuant to Government Code Section 66020 has begun.

OFFICE OF
COUNTY COUNSEL
ORANGE COUNTY

F0192-210 (5/77)

The foregoing was passed and adopted by the following vote of the Orange County Board of Supervisors on December 8, 1998, to wit:

AYES: Supervisors: TODD SPITZER, CHARLES V. SMITH, WILLIAM G. STEINER

NOES: THOMAS W. WILSON

EXCUSED: JAMES W. SILVA

ABSTAINED:

VICE CHAIRMAN, Orange County Board of Supervisors

STATE OF CALIFORNIA)
) ss:
COUNTY OF ORANGE)

I, DARLENE J. BLOOM, Clerk of the Board of Supervisors of Orange County, California, hereby certify that a copy of this document has been delivered to the Chairman of the Board and that the above and foregoing Resolution was duly and regularly adopted by the Orange County Board of Supervisors.

IN WITNESS WHEREOF, I have hereto set my hand and seal.

ADDENDUM PA980103

Mitigation measures

SOILS AND GEOLOGY

MITIGATION MEASURES

Standard County Conditions and Mitigation Measures

SC 2-4 Prior to the issuance of the first grading permit, for projects located immediately adjacent to or including portions of regional parks, significant open space corridors, or other environmentally sensitive areas, the project proponent shall provide evidence acceptable to the Manager, PDS/Subdivision and Grading Services Division, in consultation with the Manager, PFRD/Harbors Beaches & Parks Division, that graded areas will be compatible with natural land characteristics of the adjacent open space areas including techniques to enhance a smooth and gradual transition, urban edge treatment plans and incorporating view enhancement through architectural and design techniques.

SC 2-5 Prior to the issuance of any grading permit, off-site grading and/or drainage shall be conducted in a manner meeting the approval of the Manager, PDS/Subdivision and Grading Services Division.

SC 2-6 Prior to the issuance of a grading permit, substantial compliance with the following shall be certified by a registered engineer in a manner meeting the approval of the Manager, PDS/Subdivision and Grading Services Division:

- Fill soils shall be placed in layers that are less than 8 inches thick and moisture-conditioned generally 1- to 2-percent above optimum moisture content. The existing diatomaceous soils should be moisture-conditioned to 125-percent of optimum moisture content.

- For preliminary earthwork computations, the following shrinkage/bulking factors are recommended for the on-site material (these do not include handling losses): Bedrock - 5% bulking; slopewash - 5% shrinkage; and Other Soils - 15% shrinkage. Grading plans shall include an area where finish grades can be

raised or lowered to accommodate changes in actual material quantities.

- Dewatering shall be achieved using sumps and pumps located strategically within the excavated area. However, the excavation shall be carefully observed; if the conditions warrant, supplementary dewatering provisions shall be made. It is the responsibility of the contractor to provide an adequate dewatering system during construction.

SC 2-12 Prior to the issuance of any preliminary grading permits, the subdivider shall request that the Vector Control District initiate the survey process of the tract/parcel map site to determine if vector control measures are necessary. If warranted, such measures shall be conducted by the developer in a manner meeting the approval of the Manager, PDS/Subdivision and Grading Services Division.

SC 2-13 Prior to issuance of grading permits, a Water Quality Management Plan (WQMP) shall be submitted to and approved by the Manager, PDS/Subdivision and Grading Services Division. The WQMP shall identify, at a minimum, the application and incorporation of those routine structural and non-structural BMPs outlined in the Countywide NPDES Drainage Area Management Plan (DAMP) Appendix G detailing implementation of BMPs not dependent on specific land uses, in a manner meeting the approval of the Manager, PDS/Subdivision and Grading Services Division.

SC 2-14 Prior to the issuance of any grading permits, the applicant shall provide, in accordance with criteria supply by PDS, a "Hazardous Materials Assessment" and a "Disclosure Statement" covering the property (both fee and easement) which will be offered for dedication to the County of Orange, for review and approval by the Manager, PDS/Subdivision and Grading Services Division, in consultation with the Manager, PFRD/Monitoring Programs Division.

BIOLOGICAL RESOURCES

MITIGATION MEASURES

SC 7-2 Prior to the issuance of any grading permits, the applicant shall obtain a Streambed Alteration Agreement covering the affected water courses and wetland areas within the proposed project area from the California Department of Fish and Game. A 1603 Streambed Application has been submitted to CDFG. All Streambed alteration activities shall be carried out in

CULTURAL / SCIENTIFIC RESOURCES

MITIGATION MEASURES

Standard County Conditions and Mitigation Measures

Archaeology

SC 9-2 Prior to issuance of any grading permit, a county-certified archaeologist shall be retained by the applicant to perform a subsurface test level investigation and surface collection as appropriate. The test level report evaluating the site shall include discussion of significance (depth, nature, conditions and extent of the resources), final mitigation recommendations and cost estimates and shall be approved by the Manager, PFRD/Harbors Beaches and Parks Division. Excavated finds shall be offered to the County of Orange, or designee, on a first refusal basis.

Paleontology

SC 9-10 Prior to the issuance of any grading permit, the project applicant shall provide written evidence to the Manager, PDS/Subdivision and Grading Services Division, that a County-certified paleontologist has been retained by the applicant to conduct pregrade salvage and prepare a catalogue of the exposed resources. Excavated finds shall be offered to the County of Orange, or designee, on a first refusal basis. The paleontologist shall submit a follow-up report for approval by the Manager, PFRD/Harbors Beaches and Parks Division, for review and approval, which shall include methodology, an analysis of artifacts found, a catalogue of artifacts, and their present repository. This mitigation measure has been completed.

DEPUTY

SUBJECT: Filing of Notice of Determination in Compliance with Section 21108 or 21152 of the Public Resources Code

Project Title: Saddleback Meadows Contingency Plan Zone Change 98-3, Area Plan 98-2, Addendum PA980103	Type of Document Addendum to FEIR
State Clearinghouse Number: 96121072	Previously certified or adopted? If yes, provide document number and certification date :Addendum to FEIR No. 566, certified on February 24, 1998.
Contact Persons: Project Manager - Frank McGill CEQA Project Manager - Bill Grieman	**Telephone:** (714)834-2089 (714)834-5175
Project Location: Easterly side of El Toro Road, approximately one-half mile south of the El Toro Road/Live Oak Canyon Road intersection, in east-central unincorporated Orange County.	
Project Description: Development of 289 single-family detached dwelling units on a 222.23 acre site. Average lot size for the project is approximately 6,872 square feet, with a minimum lot size of 5,000 square feet. Project features a wildlife movement corridor, an extension of O'Neill Regional Park and riding and hiking trail connections. Total project open space exceeds approximately 70%.	

Notice is hereby given that the County of Orange as lead agency, Site Planning Section , has made the following determination on the above-described project:

1. The project was approved by Board of Supervisors on 12/8/98
2. The project will have a significant effect on the environment.
   - ☒ An Environmental Impact Report was prepared for this project pursuant to the provisions of CEQA.
   - ☐ A Negative Declaration was prepared fore this project pursuant to the provisions of CEQA.
3. Mitigation Measures were incorporated into the project through conditions of approval and project design.
4. For this project a Statement of Overriding considerations was adopted.
5. Findings were made pursuant to CEQA Guidelines 15091 (Statement of Facts and Findings).
6. A copy of the EIR and the record of the project approval is on file and be examined at:

December 17, 1997

Members, Board of Supervisors
County of Orange
10 Civic Center Plaza
Santa Ana, CA 92702

Dear Board Members:

During hearings on October 22 and December 3, 1997, this Commission has considered the environmental documentation required for implementation of the project known as Saddleback Meadows (Subsequent Environment Impact Report (SEIR) No. 566). As you know, this project involves the implementation of a previously-approved subdivision allowing 705 units of manufactured housing as well as a small commercial site.

The property in question is one of the most difficult sites with which this Commission has ever dealt. The site's geology is complex; biology sensitive; and compatibility with the adjoining land uses (St. Michaels Abbey and the Ramakrishna Monastery) is extremely problematic.

After exhaustive (and exhausting) testimony and deliberations on the topic, our Commission certified SEIR No. 566. We concluded that the document has merit and that it conforms with the California Environmental Quality Act. We did not conclude that the project addressed in the SEIR has merit, however.

As a result of our efforts to review land use issues associated with this project, we as a Commission would like to recommend in the strongest possible terms that your Board revisit an alternative zoning designation for Saddleback Meadows. Specifically, a majority of this Planning Commission feels that Alternative 4, as portrayed in SEIR No. 566, has far fewer negative environmental impacts.[1] Commissioner Moody, while not supportive of that particular alternative, does agree that the 705-unit development is an inappropriate land use for this location.

Our understanding, based on advice from County Counsel and planning staff, is that our options to deviate from the project as described in SEIR No. 566 were limited to modifications solely within the CEQA frame work. Further, we believe that your Board has the authority to reconsider the previously-denied zone change. We urge you to do so.

Very truly yours,

Shirley Common Long

Shirley Commons Long, Chair
Orange County Planning Commission

cc: Members, Planning Commission
Tom Mathews, Director P&DSD

[1] Please note that this is the alternative which was recommended to your Board on October 22, 1996, by the Planning & Development Services Department and was more fully addressed in Proposed Final EIR No. 561. The zoning associated with that alternative was denied at that point and that EIR was not certified.

INTRODUCTION

1.0 INTRODUCTION

1.1 INTRODUCTION / SUMMARY

This Response to Comments document has been prepared in accordance with the California Environmental Quality Act (CEQA) as amended (Public Resources Code Section 21000 *et seq.*), and *CEQA Guidelines* (California Administrative Code Section 15000 *et seq.*). The Final EIR contains the following components:

- Final Revised Subsequent EIR including Response to Comments (June 2002) (SCH No. 1996121072)
- Incorporated revisions and minor additions into the Draft Revised Subsequent EIR based upon public and agency comments
- Draft Revised Subsequent Environmental Impact Report (April 2002) (SCH No. 1996121072)

The above outlined documents are incorporated by reference into the Final EIR and are available for review at the Orange County Planning and Development Services Department and the following Orange County Public Libraries:

Orange County Library - Rancho Santa Margarita Branch
30902 La Pramera
Rancho Santa Margarita, California 92688

Orange County Library – El Toro Branch
24672 Raymond Avenue
El Toro, California 92630

Orange County Library – Silverado Branch
281922 Silverado Canyon Road
Silverado, California 92676

Orange County Library – Mission Viejo Branch
25209 Marguerite Parkway
Mission Viejo, California 92691

California State University, Fullerton
Library Documents Section

UC Irvine
Main Library – Government Publications/Microforms Department

The above outlined CEQA documents are collectively referred to as the Final EIR. Environmental Findings have been prepared for the Final EIR in accordance with Section 15091 of the *CEQA Guidelines*, and are contained in a separate document.

The Draft EIR was distributed to various public agencies, citizen groups and interested individuals on April 26, 2002 for a period of 45 days (see Appendix A.1 for a distribution list). The comment period closed June 10, 2002. However, the comment review period was extended an additional two-weeks per requests from California Department of Fish and Game (CDFG) and U.S. Fish and Wildlife Service (USFWS) (see Appendix A.1). Thus, the comment review period closed on June 24, 2002. Orange County Planning and Development Services Department received a total of 27 letters from responsible agencies and special interest groups (see Appendix A.2). This Response to Comments document contains responses to comments received on the Draft Revised Subsequent EIR during the public review period.

Comments have been retyped, numbered in sequential order, and are followed by responses. Copies of all comment letters are included in Appendix A.2 of this document.

In accordance with Public Resources Code 21092.5 of the *CEQA Guidelines*, this Response to Comments document will be provided to commenting public agencies, organizations, and individuals for a minimum of ten days prior to certification of the EIR.

SECTION 2.0

CORRECTIONS AND ADDITIONS

2.0 CORRECTIONS AND ADDITIONS

This section contains revisions to information included in the Draft Revised Subsequent EIR based upon: (1) additional or revised information required to prepare a response to a specific comment, (2) updated information which has become out-of-date as a result of the passage of time, and/or (3) typographical errors.

1. Page 1-4, Section 1.4.2 "Draft Revised Subsequent EIR": Add the following text to the second paragraph: "*The Initial Study identifies "Hazards" as a potentially significant impact which may result from project implementation. However, issues surrounding "Hazards" involve fire hazards, emergency response plans, as identification of unavoidable and cumulative hazard impacts. These issues are discussed and analyzed under Section 4.12 Fire Protection and Section 4.13 Police Protection rather than a separate section exclusive to Hazards.*"

2. Page 2-16, Section 2.3.2 "Project Phasing": Change "*However, project grading would be completed in one phase and require approximately 13 months to complete.*" to read "*However, project grading would be completed in one phase and require approximately 15 months to complete.*"

3. Page 3-5, Table 3.1: The following table reflects current information and shall replace "Table 3.1 – Related Projects" as found in the Draft Revised Subsequent EIR:
